The mere recognition of the Confederates as lawful belligerents might have passed off without exciting much ill-feeling, if any; but when the leading newspapers began to hold Northern society and the Northern army up to scorn as the scum of the earth; when

the *Times* earnestly urged the Orleans princes to leave the Federal service, on the ground that they were disgracing themselves by associating with Federal officers; when the news of every Federal defeat was received with the greatest joy, and that of every Federal victory treated as an impudent lie; when the men the North held in most honor were daily painted in the darkest colors, as drunken ravishers and marauders; the commonest incidents of war treated as evidences of inconceivable barbarity, and the continued prosecution of the war, even in the private correspondence of English men and women with American friends—often bereaved fathers, mothers, or sisters—as proof positive that the whole community was under the domination of a ferocious and bloodthirsty instinct; when the vulgarity, and cowardice, and meanness of everybody Northern was often taken for granted at English dinner-tables, in the presence of American guests, as the basis of conversation, and this not in positive unkindness, but in apparent unconsciousness that Americans had feelings either individual or national to be hurt by any imputation; above all, when the exploits of the *Alabama* began to be talked of as a matter for national pride, and her builder was cheered in the House of Commons—of course Americans were confirmed in their suspicion that the original recognition of the Confederacy as a belligerent was an indication of a really unfriendly feeling. If there was no "sentiment" at the bottom of English treatment of the American question, why in the name of all that is wonderful was it pursued? There was no material gain expected from it. It was in fact purely "sentimental," a prolonged piece of indulgence in passion.

English journals and English society have never ventured to speak of any continental people in any such fashion. It would never enter into the head of an English journalist or legislator to keep up similar abuse, through four weary years, of Frenchmen and their army, no matter how decided his opinions might be on the wrongfulness of their wars. If any set of men of prominence in England attempted it, they would be indignantly cried down, first, because it would be considered indecent; and secondly, because it would be considered certain to excite in the breasts of Frenchmen the deepest hatred of England, and lead to international difficulties—in other words, because Frenchmen would take a "sentimental" view of the matter, and probably act on it. In fact, in expecting Americans to treat the *Alabama* matter as *simply* a question of dollars and cents, and act and talk as if nothing had happened, Englishmen are again treating the American man as an exceptional animal. Suppose the manner and language and policy of English journals and society towards Prussia had been during the late war what it was to Americans during their war, or Prussians had known as well what was passing in England as Americans knew; will any candid Englishman say that Englishmen would at this hour be safe on the streets of Berlin, or could travel in any Prussian railway, without running imminent risk of having their noses pulled as soon as their nationality was known, without, in short, finding in every man who fought at Königgrätz, or had a son or brother who died there, a kicker and reviler? Would the Prussian or any European government, under these circumstances, be in haste to settle the matter up for a small amount in sovereigns? If a friend soundly kicked me, it would of course, from one point of view, be absurd for me to continue to look gloomy whenever he came in sight, and refuse to transact business with him for a long while afterwards, and would of course lay me open to the charge of taking a womanish and sentimental view of a very regrettable incident; but my reply would be a good and sufficient reply—that I was human, and had been so created that I did not like being kicked, and that the insult rankled in my breast long after the physical pain had disappeared from my back; and it is to the knowledge of this fact—that men have feelings to be hurt, and that wounds to the feelings do not heal in a day—that we owe a large portion of the self-restraint and decorum which govern the intercourse both of individuals and nations. To expect Americans to treat the language of the English press and of English society as of no consequence, and to treat their present "sulkiness" as something peculiar and morbid, is simply to judge them by a standard such as we are sure the *Spectator* would not think of applying to any other people. Of course it would be foolish and unpardonable to fight for the gratification of sentiment, but what is there so reprehensible in refusing for the present to negotiate when nothing is lost by delay?

THE PARDONING POWER.

When Mr. Johnson began to issue, or when attention was first drawn to his practice of issuing, pardons to the right and left, it was assumed by the Republican leaders that his motive was a political one, and the public was assured in the fall of 1866, on all sides, that the elections of that year were to be carried in the interest of the Administration by a horde of counterfeiters, some twenty or thirty in number, liberated through the clemency of the President during the months of July and August. And we were repeatedly informed from that time till the issue of the Dupuy pardon, two weeks since, that they were all "Democratic" pardons, a statement proved by the well-known fact that all swindlers, forgers, thieves, and counterfeiters are accustomed to vote the Democratic ticket. The argument was pushed even much further than this; the final step was to show that the amnesty proclamations, and the pardons, and the failure to bring Davis to trial, were all parts of a grand scheme not merely to bring about a triumph of Mr. Johnson's policy, or to trample Congress under the heel of the Executive, but to ensure the general success of villany in every direction, and give the finishing thrust to unlucky Virtue. The natural result of this sort of criticism was to make the whole thing ridiculous, and we might have considered ourselves guaranteed against any calm discussion of the true nature and extent of the pardoning power, had it not been that the great increase of lawlessness, both in this city and throughout the whole country, and especially the increase of corruption in all places connected with the Government, has at length attracted public attention to the whole subject of criminal law. It certainly makes very little difference whether the two Dupuys, who were pardoned the other day by Mr. Johnson, and whose reprieves Grant has since revoked, go free or not. Judge Hoar must determine the question whether their pardons are good or not. What is really of importance is that the pardoning power, as an executive function, should receive some examination. It has hitherto been taken for granted that, however evil the effects to which such a power might lead when in the hands of bad men, no valid objection could be made to its theory. It seems to us that whether or not the power be of itself a valuable aid in the attainment of justice, the veil of mystery which is thrown about it is very mischievous. The President and the Governors of all the States have power to pardon, absolutely, all criminals convicted within their jurisdiction. They are not obliged to give any reason for their act. Up to this point the proceedings in the case have all been public; the examination of witnesses, the argument of counsel, the rulings of the court, the verdict of the jury, all take place in open court; the doors can no more be closed than a verdict can be rendered by the judge. And we Anglo-Saxons, the world over, are in the habit of pluming ourselves on this feature in our judicial system as one of the great safeguards of liberty, and of condemning, in our usual off-hand way, all those slavish nations which permit any other practice.

As soon, however, as the sentence has been pronounced, and the convict removed from the court-room, the enactment of a very different scene begins. The counsel for the defence now exerts all his powers. He draws up a petition narrating the peculiarly heart-rending character of the case, the facts on which this statement is based being mainly those which were ruled out on the trial, or those which were disproved by the witnesses on the other side; he dwells upon the happiness of the home which it is proposed his unfortunate client shall exchange for a felon's cell, and he dwells upon this as if what might be called the "home circle" side of criminal law was not properly provided for under our harsh system; he refers in feeling terms to the affliction of the "victim's" mother, as if mothers in general rather preferred seeing their sons in prison than anywhere else; he alludes incidentally to the father so strangely "bowed down with grief," to the sleeplessness of the brothers and sisters—such peculiar people the whole family invariably turn out to be. If the convict has a wife, it is hinted that her husband's sentence is driving her to madness; if he

has children, a horrible picture is drawn of their unhappy lot in "case they are deprived of their father's protection and support—and indeed of his guidance, for have not his relations with his family always been of the most exemplary kind?" The petition is then signed by numbers of clergymen, politicians, and friends, who affix their names to this as to any other paper on the assurance that nothing is said which is untrue, and the siege immediately begins. Armed with his petition, the counsel proceeds to the State capital or to Washington, and is at once received in private by the Governor or President. He presents his petition, states his facts, rehearses his arguments; the executive is astonished; he never dreamt that the case was of this character; he always had thought the accused was a simple felon; he had not thought of his wife and children. This new view of the case requires consideration. Meanwhile every attempt is made to influence his feelings; wife and mother and children all present themselves, and wife and mother and children in abject grief are very apt to influence the feelings. No one is present to point out the facts and arguments which brought about a conviction. The final judge remembers too, for he is human, that no justification of a pardon will be required of him, that no reasons need be stated. On the whole, it seems a hard case, and the pardon is issued. In other words, society has discovered that some one is violating the obligations imposed upon him as a member of society; society arrests, prosecutes, and convicts him, but though he be the most atrocious villain alive, and though publicity may give his confederates just the warning they most desire, society is throughout obliged to lay everything open to the light, to invite criticism from every quarter; as soon, however, as it is discovered that he has without doubt committed the crime with which he is charged, a secret tribunal is prepared before which society is not allowed to appear at all, where there are no witnesses, no judge, no jury, no reporters, nothing but an irresponsible dictator. Hitherto everything has been done to protect the liberty of the individual. What is done now, we should like to know, to protect the rights of society?

The origin of this mystery to which we object is not far to seek. We took the pardoning power directly from England, where it is a royal prerogative, and where it is endued with an almost religious sanctity. To force from a monarch who is still, in theory of law, the Lord's anointed, who is the fountain of mercy, and whose function of pardon is his not by a constitutional provision, but because his prerogative is above all law—to force from such an executive a statement of his reasons for granting a pardon would be as illogical as to exact a reason for the impartial shining of the sun. Blackstone's remarks on this subject are full of instruction as to the old views of the power. "The last and surest resort," he says, "is in the king's most gracious pardon; the granting of which is the most amiable prerogative of the crown." "The great operation of his sceptre is mercy." "To him, therefore, the people look up as the fountain of nothing but bounty and grace; and these repeated acts of goodness, coming immediately from his own hand, endear the sovereign to his subjects, and contribute more than anything to root in their hearts that filial affection and personal loyalty which are the sure establishment of a prince."

We, having transplanted this prerogative, not as a prerogative but as a judicial power to review criminal sentences, have nevertheless transplanted with it a notion perfectly unsuited to our system. According to the American idea of government, no act for which reasons cannot be given ought to stand; yet we have established an authority which has the right of annulling the sentences of courts of law without explaining, save to his own conscience, why he annuls them. After making a presumption in all cases of innocence, after throwing around convictions such difficulties that a prosecutor needs the skill of a juggler and the learning of a judge to be successful, after giving, in a very large number of cases, a discretion to the court over the amount of the penalty, we give the convict liberty to persuade the executive in any way he can to forgive him, and, in order that he may have the largest opportunity for unfair argument and corrupt influence, we demand that if his prayer be granted no reason shall be given for the act. And this, too, at a time when pardoning criminals has become part of the regular machinery by which prosecutions are rendered worthless, and are as regularly resorted to by counsel as motions in arrest of judgment or to quash the indictment—when counsel who do not apply for a pardon are held to have failed in duty to their client just as much as if they had omitted to argue before the jury.

"PROVINCIAL FOLDS."

Our two best and oldest universities stand, at the present moment, as beggars openly before the public. At Harvard, the rise of prices, together with the increasing burden of insufficient endowments, has gradually eaten up the general fund at the disposal of the college, and compelled it to raise its board and tuition rates simply to keep the institution from falling to pieces. And this has been accompanied with starving the professors, and stopping the purchase of books and class-room apparatus. At Yale, the state of things is quite as bad. It is officially announced that the oldest professors receive lower pay than do the youngest Congregational ministers in New Haven; that many of the endowments are positive taxes upon the general treasury, and that the college "has not a dollar on hand to buy books with for the next two years, its scanty library income having already been expended in advance." So that the recent discussion about removing the college to another site must, from an inside point of view, have seemed practical only so far as it was likely to call attention to the poverty of the college. While this expectation, or hope, was not realized at Yale, the Harvard alumni have organized a system of class contributions which promises to bring some relief to the destitution of their Alma Mater. The fact that these colleges derive their students from all parts of the country, while at their side flourish or exist smaller colleges of the same kind, but inferior, and the founding of others goes on in old and newly-settled districts alike, suggests the enquiry whether we have not reached a point at which the number of our colleges is seriously in excess, and whether States should impartially encourage all those within their borders; whether, also, they should be educational centres for States at all, and not for population, and whether there is a determinable ratio between population and the proper number of colleges.

Some of these questions have arisen in Germany, under changed conditions, since the last effort towards unity; and it has been proposed, for example, to transfer the universities of Kiel and Marburg to Hamburg and Frankfort respectively, and generally to abolish the small in favor of the larger and metropolitan universities. A similar plan has been entertained with regard to the gymnasia, robbing Tübingen for the profit of Stuttgart, etc. These radical measures have of course their opponents as well as supporters; and aside from the disturbance of ancient establishments and the relegation of the small university towns to insignificance, it would at first sight seem that the denser the population became, and the greater the wealth and intelligence of the country, the more need would there be of the universities already existing. On the other hand, a sparsely settled country like ours would be judged incapable of sustaining many first-rate universities, and might wisely throw all its strength into two or three, while waiting for a fuller growth and a diffusion of capital.

The eminent statesman, Robert von Mohl, has, in his latest work, argued the cause of the small universities, and decides in favor of retaining them, in spite of the manifest evils which they breed. But his objections to both large and small are not of universal application, and are, for our purpose, too much taken from a political point of view. Some of them relate to the comparative temptations for young men of town and country, and the easy discipline of the metropolis, in which the student caste is swallowed up, and there is no time nor occasion for those corrupting societies which, in the small towns, produce a disheartening swarm of beer-swilling, duelling good-for-nothings. His strongest argument is one which in this country will sound comical; and that is, that the professor, once transferred from his obscure post at a small university to the capital, becomes an aspirant for public office, and is liable to be taken into the government, to the destruction of his usefulness as teacher. Finally, in all the universities he complains of the want of some medium between the lecture and the student's note-book—"Mangel einer Vermittelung des Lehrvortrags vom Katheder mit dem Verständniss des einzeln Studirenden." As this connection is rendered impracticable by a very large attendance, such as would result from the overflow of the small universities into the greater, it is of course an argument in favor of the former. But this also does not wholly meet our case, because our colleges are a mixture of the gymnasium and the university, and thus answer best, it may be, the peculiar needs of our national development.

Whatever the distress of Harvard and Yale may indicate as regards the East, in this State and in Pennsylvania one could easily prove that the colleges are too numerous, and have greatly hindered the progress of high

culture, while in the States farther West there is, we may say—remembering President Sturtevant's persistency on this subject—almost hourly complaint of the same misfortune. Apropos of a recent resolution, by a Convention of Colleges, at Columbus, Ohio, to dispense with Greek as a condition of matriculation, the Cincinnati *Gazette* declares that this was simply a bid for patronage, and the cause of it the fact "that there are in Ohio at least four times as many schools claiming to be colleges, or universities, as the necessities of the people demand or can be sustained." In this struggle for life, the standards both of admission and of scholarship tend constantly to be lowered; no college is "willing" to be sacrificed, and so they mutually agree to be somewhat less colleges and somewhat more high schools or academies, in the expectation of obtaining additional, although inferior, students." The poorer colleges thus drag down the better, and the evil consequences "extend downward through all grades of schools within the region of country from which the students of these colleges come. The college is at the top of our school system, and it determines the standard and aim of all the schools which are tributary to it. The less the college requires, the less the academy and high school need supply." And the writer concludes that the colleges of Ohio, having ceased from the pretence of emulating those on the seaboard, have "leagued themselves together in a petty conspiracy to defraud academies of their senior class."

How this tendency appears to a foreign observer may be learned from the inaugural address of President McCosh, at Princeton, last October:

"I believe that excessive multiplication of small and ill-sustained colleges in a district may be an enormous evil. In these days of rapid locomotion, it is of little moment to a student whether he have to go ten or twenty miles to a college, one hundred miles or five hundred. I believe that there is always more of stimulus, more of life, less of conceit, less of narrowness, of sectarianism, of knottiness, in large classes and large colleges than in small ones. Care should certainly be taken that, in the excessive competition, the food do not become adulterated; that the new colleges do not drag down the old till all sink to a Dead Sea level. We should rather strive that the old be bringing up the new to a higher standard; and that we have a number of colleges thoroughly equipped by able men, by extensive apparatus, and by chairs for teaching every high branch of literature and science. We must not yield to the temptation, to which we are exposed, of sending unripe fruit into the market; or, to vary the metaphor, of resting contented with *lumber* fabrics."

These are wise words, and they deserve to be weighed, especially at a time when it is the fashion—and a very honorable one—for rich men to found academies and colleges in their latter years or by testament; when colleges are founded exclusively for the education of women, and others for the joint education of the sexes; and when the spirit of sectarianism North and, in a wide field, at the South is fruitful in mushroom establishments having the ambition to be colleges. It would be unjust not to allow worthy motives in their founders, or to overlook some positive advantages that may come out of them. Scattered through the country, they serve, possibly, as breakwaters to the steady rush towards the cities which the present age is witnessing in every civilized state. They may elevate the standard of education in their neighborhood. They attract—especially the sectarian colleges—endowments that might not otherwise have been devoted to education, and which their very feebleness elicits, when stronger institutions would have been neglected on the ground of needing no aid. By furnishing a supply, they may create a local desire for liberal education which would not have been evoked by more distant colleges. But, on the other hand, they work much mischief. Started in close vicinity to others already in operation, they inevitably draw off students from the latter, while the chances are, that the instruction they can afford is much below the average of that given elsewhere. This is offset by making easier the terms of admission and the course of study; in time compelling their rivals, for want of patronage, to descend to their level and become still more exposed to similar reductions. Nevertheless, whether assuming the name or not of university, all strive to become such, or are willing to become such, even with the certainty of being imperfect and inefficient, and of crippling at the same time the really possible universities—which are not many. Renan has said that the university conquered at Sadowa; yet in Europe the university has greatly declined in importance, both intellectual and political, for manifest reasons. Here, on the contrary, the university is only in the beginning of its usefulness; and while struggling against the materialism of a youthful and still pioneer population, and against a certain slightly contemptuous public sentiment, it needs a rich and prompt development in all its parts in order to accomplish its high mission, and justify itself to all who support as well as all who oppose it.

Whether there should be a university in every State might easily be settled on abstract grounds; but it is likely that each State will feel a jealousy on this point which may save us the need of an argument. Rhode Island would hardly abandon Brown University for either Harvard or Yale, though it is outranked by both and probably will ever be; and though other considerations might prevail, theology would prevent a fusion in many instances where it is still held to be possible to have a sectarian university. As to two or more universities in a single State, we think there should be no doubt: the present condition of Yale and Harvard, neither being dependent on local patronage, is an irrefutable argument against such a duplication. And this being granted, it follows that as many colleges as exist within the same State should have no higher ambition, and should discountenance any wish to have them or attempt to make them universities, or anything more than the best of their kind. This abnegation would be no ultimate loss. Testators would respect it, and be content to augment old endowments in place of founding new ones; while a general agreement on the part of the colleges to decline inappropriate gifts in favor of the university, might lead to the success of the very sensible project which would unite all State colleges as equal members and tributaries of the university. It would perhaps be found that such an arrangement was the one best adapted to the spirit of our Government, allowing the State as a whole to produce the purest specimens of its citizenship, and the parts of the State to contribute each its individual character to the common product. The highest advantage is reached in a Federal Government, when each separate commonwealth brings to it the ripest expression of its progressive development.

We conclude, therefore, without by any means concluding our subject, that the duty of States is, as between universities of some standing and colleges straining to be universities, to foster the former only; as between two or more universities, or several colleges, to foster the stronger, giving to that which hath rather than to that which hath not. The duty of individuals is not different, except to abstain from founding colleges or universities, or even academies, where they can help it. We do not believe there was ever an academy thus erected that did not have beside it a primary or grammar school which had much better have been strengthened or—what is a much more general need—rendered decent and wholesome. And we would counsel the rich who appreciate the importance of popular education, and are sincerely desirous of doing something for it, to spend their money twice on an established school to once in starting a new one; to help the common schools before the academies, and the university before the colleges (except as colleges); to macadamize roads as an equivalent for founding a superfluous academy, or high school, or college; and to contend against the centralizing influences of the city by bestowing public libraries and reading-rooms on their native towns. Finally, as a substitute for an endowment that cannot stand on its own legs, or for a college that would be better without legs, let them found scholarships, subject to examinations, that shall make it possible for the most remote dweller from the college or the university to obtain education as easily as if he were next door to them.

Correspondence.

GENERAL GRANT'S APPOINTMENTS.

To the Editor of the Nation:

Sir: Your article upon the Cabinet this week hints in very mild language that which, for General Grant's own good and for the interests of the country, needs to be plainly stated. The President has made a great mistake, and is following it up with a series of mistakes which, if persisted in, will involve him in difficulties and disasters.

Neither Grant nor any other man knows enough to manage this Government without advice. It was very well for Grant to keep out of the ordinary struggle for Cabinet places; but the total failure of his first arrangement has shown that he needed the counsel of a few well-chosen persons upon that subject.

The mistake about Mr. Stewart's appointment is only one error among more serious ones. The nomination of Mr. Stewart the day after he had presented General Grant with a check for $65,000, for a house given to him by a number of gentlemen, of whom Mr. Stewart was one, was very *mal apropos*. The appointment of Mr. Borie, who subscribed to the purchase of a house for General Grant in Philadelphia, is open to similar comment. The appointment of Mr. Washburne to the State Department was a compliment that could only have made him ridiculous, if he had not been sensible enough to ask for a change which, while it will put him in a place

for which he is marvellously ill-fitted, will not make him so conspicuously absurd as he would be in the State Department.

The appointment of Mr. Boutwell to the Treasury is a politician's choice. He is a very weak though well-meaning man. His administration of the Internal Revenue Bureau was a failure; and the most flagrant corruptions grew up in the system under his eye, and without any attempt on his part to remedy them. Indeed, the revenue officers in this vicinity, when detected by his successor in charging their assistants with fees for their places, and drawing salaries for their wives' and sisters' pretended services as clerks, did not hesitate to refer to Mr. Boutwell as having given his sanction to these petty swindles, and I have understood that this plea saved them from removal.

What we have thus far seen of the disposition of minor offices is not encouraging. General Grant's avowed determination to bestow a number of valuable offices upon his personal friends is not wise or just, and will necessitate compromises with other men having personal friends, and power to support them, in which the public interest will suffer. And it is with some curiosity that I ask whether Mr. Montgomery Gibbs is one of Grant's personal friends; for I see him among the early favorites for a fat office. Binckley was a poor specimen of Presidential favorites, but Gibbs will make the memory of Binckley honorable. Indeed, I do that honest, though very incapable, gentleman sore injustice in putting his name and Gibbs's together.

I am sorry to speak thus, for I had hoped better things of Grant. Some one must speak, however, while there is time to correct these errors; and while I ask no editorial endorsement of my views, I have a right to refer to you as able to assure your readers that these views are held by one who is not only no office-seeker, but who could not afford to take any office, and whose interest is only that of every honest CITIZEN.

NEW YORK, March 12.

THE ALABAMA CLAIMS.

TO THE EDITOR OF THE NATION:

SIR: "Integrity" misstates a proposition in his attempt to make it more simple.

It is admitted that many of our countrymen are in favor of accepting the English theories and precedents of neutrality; of paying our own ship-owners for losses occasioned by Anglo-Confederate piracy, closing the door of negotiation, and, by a gigantic reprisal of American ship-owners upon British commerce, at some future opportunity, of compensating American commerce for the fears and injuries of the past. He joins no issue upon this.

But to pervert this proposition into another, that the citizens of the United States should go into the *privateering* business, *the Government winking at their occupation*, is not the part of intelligent integrity. To supply ships to a recognized belligerent in spite of the efforts of a government, to privateer under its commissions, and to privateer with its connivance, are three different things. Neither our privateering, nor any governmental breach of the neutrality laws, need be assumed by the statement of "America." English precedents fully justify a premature recognition of belligerency, and may excuse the most fatal honest delay in determining the neutrality of any procedure which involves the right of our citizens to pursue their industrial and commercial occupations.

To reiterate, England may be assured that a large number of Americans, weary of her bad faith, quibbles, and delay, are prepared for exact retaliation, and ready to do, delay, permit, obstruct, foster, and abet belligerents against England, precisely as she delayed, permitted, obstructed, fostered, and abetted the proceedings of Mr. Laird.

Whatever of official or private wrong she did, unless she will make frank and free reparation to the direct sufferers, who are a very small representation of the vast injury done, few persons—except our own rebels, the sympathizers with them as wayward sisters, the blockade-runners of Nassau, the friends of British interests, weak-kneed enthusiasts for non-resistance, the purchasers of *Alabama* claims at a discount, who fear Congressional discrimination against usurious assignees, and men who, like "Integrity," misunderstand a statement—are likely very poignantly to regret some grand national occasion, in the far future, of meting out to England the exact measure of neutrality that she meted out to us. A recompense born of British fears, and which, by scaring British commerce from the seas, should transfer the cruel gains of England to the vastly injured commerce of America, would be deemed by many Americans of integrity a national compensation worth half a century of patience. Whether it comes by an open issue of American letters of marque, or by giving a maritime status to the Fenian cruisers of a recognized belligerent, no duplicity is to be imputed to our Government. Belligerency once recognized, the whole detective force of the United States cannot prevent the hostile use of American ships by the wearied holders of *Alabama* claims.

It is not the part of integrity to misstate "America's" position, and present this wearied attitude as that of refusing an adequate proffered legal compensation. England has never proffered it.

Bis dat qui cito dat, said the Roman proverb. He pays twice who pays quickly. And a frank atonement from England for her wrong would have been accepted with a friendly disposition to condone the irreparable injury. Hope deferred has made the heart sick; and many Americans are ready to say to England, unless she at once acts like the gallant old England of the first Lord St.Germain's times and temper: "We were strong and you hated us; we became weak, and you insulted and assailed us as the 'late United States of America.' You prematurely recognized our rebels, who by your own precedents in regard to Rochelle were your enemies on land and your pirates at sea, because they were such to us, a friendly power. Your hasty act of unfriendliness gave a maritime status to pirates and encouraged blockade running, prolonged a disastrous war, filled our homes with a hundred thousand more of dead, swept our commerce from the seas, and brought our flag under the deep humiliation of seeking British cover to avoid corsairs that your own loudly-cheered member of Parliament had built. We were too much oppressed by a gigantic rebellion to do more than protest against your wrong doing. It might have been 'manly' and 'chivalric' to add you to our open enemies at your strongest, and our weakest hours. But this nation knew too much of war to court defeat. We are not a nation of fools. 'One war at a time,' said Lincoln. It might be Christian to turn our unsmitten cheek to the rough British hand. But the sermon on the mount prescribes a rule of forgiveness applicable to individuals, not to nations, and one incompatible with the maintenance of a flag for a single hour—a nation must repel insult and avenge injury, or die. We had to stifle our open resentment of your mercenary, cowardly, agonizing wrong. Even now, loaded with debt, smarting with the unhealed wounds of war, we should deem ourselves improvident to present a hostile *ultimatum* to Great Britain. But you have done us a grand pecuniary wrong; and at some time, sooner or later, during our national life, you must atone for it. We have filed our claims; you have entered every plea of denial, justification, set off, and delay, known to the most higgling debtors or trespasser in a petty court. The sufferers by your depredations are weary and poor. Their claims are thrown on the market, and bought at a sacrifice by men whose integrity revolts at anything but the speediest and most noiseless reimbursement on your own terms. But the country, having no interest in these speculations, and deeply injured in its great progress, is weary of negotiation; and a large part of it is ready to tax itself to pay the men whom you have ruined.

"Of course we 'hold Great Britain responsible,' but we require time to recuperate from one tremendous war; and Americans do not desire to read the history of the decline and fall of the British Empire. Immortal in all the traditions of individual and national glory, she will be respected by us, even in her avaricious old age, as a great friendly power, but one winking at our destruction. If Ireland should revolt, we will sympathize with 'the late United Kingdom of Great Britain and Ireland.' Ministers of England, our citizens may forgive, but will never forget your cabinet views of neutral obligations; your slow ideas of despatch in business, where the just rights of envied nations are involved; your own reverence for red tape in cases where neither Fenians nor Chartists are concerned; your own tenderness as to the sacred civil liberties of commercial and ship-building citizens; and we will certainly stop our procedure when we see no British Merchant vessel on the sea, and learn from our own returning ships of commerce that you are confined, like Napoleon, to an island. Our Government will be more honest than you. God grant that it may honestly try to prevent the thirty millions of our citizens from selling *Alabamas* and *Sumters* to your recognized belligerents! And God knows that it will honestly fail!

"Perhaps this shadowy fear of American improvement on your precedents may secure the peace of the world, preserve grand old England from some warlike experiment fatal to her existence as the bulwark of Christian civilization, and secure to our posterity, through half a century of industrial peace, the best reparation that insolent Great Britain can give to cruelly injured AMERICA."

Notes.

LITERARY.

Mr. T. Ellwood Zell announces two essays, by Mr. James Mott, on "Education" and on "Civil Government."——Messrs. John E. Potter & Co. announce a compilation, by the Rev. Mr. S. Pollock, entitled "Living Thoughts of Leading Thinkers"—a work that might be made a good one. ——Mr. P. Donahoe announces a translation of Mgr. Dupanloup's "Studious Woman," and a fourth edition (of 10,000 each) of a translation of Mgr Segur's "Plain Talks."——Whoever read in *Harper's Magazine*, of a year or two ago, the clever and funny "Dodge Club, or Italy in MDCCCLIX.," will be pleased to learn that it is to appear in book form. The Harpers publish it, and the author is Mr. James De Mille, who, we believe, is a Nova Scotian. He is an amusing magazinist, wherever he was born.——Messrs. Leypoldt & Holt—who announce themselves as the authorized American publishers of Auerbach's novels—have in press, and in a few days will publish, the first part of "The Villa on the Rhine." There will be two editions of it: one in four volumes of the size of the Tauchnitz books, and in similar paper covers; the other in two cloth bound volumes, uniform with Messrs. Roberts Brothers' edition of "On the Heights." The same house will publish Mr. Sutherland Edwards's "Life of Rossini"—a book of which the author says that it was not put together at the news of the maestro's death, but has occupied his attention for years. Another book that Messrs. Leypoldt & Holt add to the growing list of books relating to musical composers is "Meyerbeer's Letters," collected by his widow. They announce also a new novel, "Synnöve Solbakken," by that true and very charming genius, the Norwegian, Björnstjerne Björnson—good news for all who have been delighted with the poetry and pathos of "Arne" and "The Fisher Maiden."——The Catholic Publication Society will publish Guizot's "Las Casas," "St. Francis de Sales," and other biographical studies, and Lady Herbert's "Impressions of Spain," a work which with valor, if not with discretion, says good words for Isabella, Father Claret, Sor Patrocinio, and the rest of the Spanish exiles. ——Mr. Loring announces a new war story, by Mr. Justin Jones, which, since Mr. Loring is the publisher, may very likely be better than its title, which is "Virginia Graham, the Spy of the Grand Army." The same gentleman will issue Miss Thackeray's "From an Island," and a work by another lady whom, perhaps, we need not be so glad to meet—"The Girls of Feversham," by Miss Marryat.——Littell & Gay publish a volume composed of the essays on the prominent figures of the reign of George the Second, which have been appearing, to the number of a dozen or more, in *Blackwood's Magazine*, and some of which have already appeared in the *Living Age*. They deal with Walpole, Queen Caroline, Chesterfield, Commodore Anson, Pope, John Wesley, Lady Wortley Montagu, and other famous people of a very interesting though inglorious era, and without being essays of the first rank, whether regarded as critical or historical, or even of the second, they are, nevertheless, pleasant reading; will freshen one's old knowledge of these subjects; will give almost every one some new knowledge, the most of which will be accurate, and now and again will throw a flash of real light into dark places.——Messrs. Roberts Brothers announce "Historic Nine-pins," by Mr. John Timbs; the "'Bab' Ballads," which first appeared in *Fun;* they are by Mr. William S. Gilbert; a continuation of Miss Alcott's "Little Women"—a pleasing little book, and one which has had a real success—not merely a success in wild newspaper stories about the number of copies sold; Eugene Peon's "Life of Thorwaldsen," translated by Miss Luyster; and a republication of an English book, by Miss Mary Ann Kelty, entitled "The Solace of a Solitaire: a Record of Facts and Fancies." Messrs. Roberts Brothers, as some of our readers are aware, are publishing (in a double-columned octavo pamphlet) an edition of Auerbach's new novel. They call it "Villa Eden: the Country House on the Rhine." The novel will be complete in four or more parts, and the first part has already appeared.

—If Mr. Walsh, of Philadelphia, who made such an onslaught on the Edinburgh reviewers were still among us—or Mr. J. K. Paulding, or almost any American of the old days of the famous query about the readers of American books—from one part of the *Saturday Review*, if from no more, they would get a sacred pleasure. It is in the columns of advertisements.

"American Books.—A copy of the Monthly Bulletin of American Books imported by Sampson Low & Co. will be forwarded to any address for one year on receipt of Twelve Postage Stamps, or a single number on request. Orders for works not in stock supplied in six weeks. London: Sampson Low, Son, & Marston, English, American, and Colonial Booksellers and Publishers, Crown Buildings, 188 Fleet Street."

—All friends of learning in America, who recognize the truth that however admirable an educational system may be it usually is of the first importance that there should be an admirable man behind it, will be pleased with a paper now in circulation in the proper quarters which deals with the question of the presidency of Harvard College. It is entitled "Draught of a Statement of Views Relating to Harvard College, in the Form of a Memorial to the Governing Boards." The time has now come, the writer says, for making some important changes in the constitution of the College. Within the last fifteen years there have been changes of importance, and all in the right direction: such are the introduction of the system of written examinations; the distribution of honors and rewards according to a more definite standard than formerly obtained; the great increase in the amount of personal instruction given by many of the professors; the diminished weight allowed to "marks" for the performance of daily tasks; the great extension of the elective system, under which the student has some voice in the choice of his intellectual pursuits; the distinction now made between the ordinary degree of Bachelor of Arts and the degree with honors; the provision for the award of special honors for distinguished excellence in certain groups of studies, and the opportunity now offered for the scientific study of English and the thorough study of French, Italian, and German. But these changes are mainly changes of detail; they make an excellent college, one at any rate excellent in comparison with the college of twenty years ago, but they do not give us something that the country begins to demand, and will get from some other source if Harvard denies it—"something in which an excellent college will be included—the American University," in the government of which the principle shall be admitted and acted upon that the business of the college is not with a limited curriculum, but with the whole field of intellectual culture, so that all may resort to it—"and for the best use of their time must resort to it"—who desire to lay deep the foundations of their knowledge, no matter to what field of literature, science, philosophy, or art their leading aims may be directed, and no matter how decidedly, even narrowly, they may be so directed. Once make Harvard such a nursery of culture as this description indicates, and it is probable, the writer believes, that there would be no need of soliciting "pecuniary contributions." But to make her so it is absolutely necessary that now, at this time of change, the reins of government should not fall into the hands of men who have but little sympathy with the modern elements that have been introduced. "To appoint to the presidency," the writer vigorously says, "any one who can be suspected of a tendency to favor the party of reaction, or any one who could allow the substitution of learning lessons by rote for the higher scholarship which is too slowly working its way within the walls of Harvard, or who would be likely in any way to magnify the lower functions of the college at the expense of the higher, would be a great public wrong. The new president must be one who is prepared to take up the question now impending at Cambridge fairly, soberly, and practically, but in the interests of the liberal tendency. And his liberal position must be recognized by that large body of men, within the college and without, who are themselves the well-known adherents of the reform movement." The appointing powers are therefore to be begged not to fill the office of president till they can put into it some man who can command the general confidence of the friends of learning, and "especially who, either by national reputation, known ability, and liberal principles," or else—and we find ourselves inclining to this second sort of future president—"one who by the strength and zeal which belong to the prime of life will attract the support of that younger generation on whose active interest the prosperity of the college for the next twenty years must largely rest." Doubtless a "national reputation" is a good thing for a college-president to have, and he is none the worse for having a pleasant manner and a good social position; but the main thing is, that he be a man of learning, of wide intellectual sympathies—and this is of more importance than the mere weight of his learning—of masculine judgment, and a true believer in the University system of education for young men more than twenty years old, as distinguished from the high school system. Unless some such man is found, we shall see the practical schools and the German universities taking more and more of our American young men—or, at all events, we shall not see Harvard preventing such a state of things.

—It is well known that Columbus did not discover America; that a dozen people before Fulton's time invented steamboats; that Morton was the inventor of ether and Jackson was not; that Jackson invented ether, and Morton had nothing to do with it; that Faust and Guttenburg's invention of printing was an old story thousands of years before they were born—that, in short, nobody really ever did anything that the world gives him credit for doing, but always, if the truth is sought for carefully, it turns

out that quite another person is the person who really did the thing. It is not surprising then to hear that the first conflict between our forefathers and the British soldiery which resulted in the shedding of blood did not take place, as the school-books say, at Lexington, on the 19th of April, 1775. Nor did it take place, as some Bostonians vainly imagine, in King Street, in Boston, on the 5th of March, 1770. Nor yet, as the Vermonters say, and as they set down in their authorized History of their State, at Westminster, in Windham County, on the 13th of March, 1775. Nor yet again can the claim of the North Carolinians be allowed, that in Alamance County, in their State, on the 16th of May, 1771, there was a battle between the so-called "Regulators" and the royal troops, commanded by Governor Tryon, who had oppressed the hardy farmers. "The first blood shed in defence of the natural and legal rights of the colonists in the great struggle known in history as the American Revolution" was shed, says Mr. Henry B. Dawson, in the Battle of Golden Hill, fought here in New York city, on the 19th of January, 1770. Golden Hill is the old name of a declivity in John Street near Pearl Street, and there, on the day above mentioned, the citizens, aided by some sailors and armed with sticks and "sleigh rungs"—whatever they are—had a street fight with a party of soldiers, who, using their side-arms, spilled some blood and had some of their own spilled. No one was killed; but locally the fight was called the Battle of Golden Hill; and Mr. Dawson, on whom all praises of Massachusetts have a most irritating effect, is determined that, so far as he has any power, history shall no longer honor King Street or Lexington. It will be seen by the passage we have quoted, that he gives a sort of definition of "the first battle of the Revolution." Now in King Street, he says what happened was, that a sentry on duty being insulted by a mob, the main guard was turned out to support him, and the "Boston Massacre" that ensued he evidently looks upon as a justifiable exercise of power by the legal guardians of the public peace, and one that on the whole we should be rather glad of. He cites the acquittal of the soldiers when put on trial as being a conclusive proof that they were not blameworthy. At Lexington, again, the collision between the troops and the people had not the right character to justify its claim to honor. The soldiery were on a legal errand, and were lawlessly attacked. More than that, he declares the "minute men" at once dispersed. This is obviously the argumentation of a man who lets his feelings blind him. The story of Concord Bridge and the roadside fighting—preceded by the collection of war material in Concord village and the organization of militia—is not to be dismissed as the story of a mere riot. For the Battle of the Alamance, something is to be said; it grew out of the same spirit that animated the men who mark the Revolution: the "Regulators" were vindicating local as opposed to royal authority, and were meeting tyranny as much as ever Washington was; but their action was of a local character and did not spread, it was a premonitory sign of the Revolutionary war, but is hardly to be considered as a part of its history. So too, and more emphatically, of the street fight in John Street, to which Mr. Dawson seeks to give such magnificent proportions. The citizens were extremely angry—as the Boston people were—with the soldiers stationed amongst them; and the Provincial assembly paid their charges—as the Massachusetts assembly did—with a very bad grace; and there were constant fights between civilians and soldiers, here as in Boston, and the opposition to the presence of the troops always and everywhere proceeded from the same motive. But for all that, the Battle of Golden Hill is not a part of the definitive history of the American Revolution. It came too soon, it was not big enough when it did come, and it came on too small a cause. The protest necessary to be made—which Mr. Dawson makes—against a tendency observable in the New Englanders to make perhaps a little too much of their early history, is one that we like to see made. Mr. Dawson has plenty of knowledge and ability to make it well, and to do very good service; but his bitterness is a great drawback to his usefulness.

—Number four of the fourth volume of the admirable *Zeitschrift für Bildende Kunst* contains a somewhat Germanized portrait of the late lamented Sir Charles Eastlake, accompanied by an interesting sketch of his character and career by one who for ten years had familiar access to him. The writer announces that the artist's widow has completed for publication the unfinished second volume of her husband's "Materials for a History of Oil-Paintings" (Vol. I. was published in 1848), and will also print selections from several elaborated essays found among his papers, partly technical, partly concerning the philosophy of the æsthetic in art—like his "Contributions to the Literature of the Fine Arts." The well-known art-critic, W. Bürger, describes Rembrandt's family picture in the Brunswick Gallery, one of his latest and best works, though little known, and till last year supposed to represent the painter's own family. The mother in this picture, and the Venus in the "Venus and Cupid" of the Louvre, appear to have been drawn after the same person. The text is illustrated by an unusually fine etching, by Wm. Unger, from the original painting, and is said to be the first copy ever published. Scarcely less fine in its way is the lithograph of a casque of Charles V. preserved in the armory of the Royal Artillery Arsenal Museum at Vienna. This casque, with the exception of the cheek-plates, consists of a single piece of iron, and is ornamented in relief with subjects taken from the Æneïd. In the supplements to the *Zeitschrift*, there is a great deal of entertaining reading,—correspondence, etc.—of which we may signalize the article which considers a bill now in the hands of a committee of the North German Parliament, to protect artists in the ownership of their ideas. The measure as submitted was very sweeping in its provisions, and if passed would cause consternation in the picture trade. As it is likely to be modified, however, we omit further account of it here. Among the art news we see it stated that Joseph Albert, photographer to the Count of Bavaria, has discovered a mode of producing positive pictures without the intervention of sunlight, and of course directly upon the card. While waiting for this invention to "develop"—to use the language of the profession—we are glad to learn that the Arundel Society has determined, for the people's sake, to photograph its entire series of art reproductions at one-fifth of their original size. They will be issued in quarterly parts (five in all, probably), at a guinea a part.

—In our last notice of this art-journal we spoke of a forthcoming pamphlet by August Glaeser, Secretary of the United States Consul-General at Frankfort, which promised to contain a "translation of Mr. Sumner's speech in opposition to Miss Vinnie Ream's pretensions, together with sketches of American artists of both sexes." We have since received this pamphlet, which does not, however, quite meet our expectations. In the first place, only those artists are treated of whose names were mentioned by Mr. Sumner, and then Mr. Glaeser has simply translated their biographies from the *New American Cyclopædia*, so that, as in the case of Story, for example, we do not get the latest intelligence. Even Mr. Sumner's life is a translation from the same source, with a very slight interpolation. Of independent knowledge or critical judgment we get nothing. An appendix gives the list of art-exhibitors from this country at the Paris exposition. The pamphlet is called "Das Lincoln-Monument," and we are reminded by it to say that the St. Petersburg correspondent of the *Zeitschrift* speaks of a spirited statuette of Mr. Lincoln by Mehnert, at the art-exhibition in that city. Of Russian pictorial art the same correspondent says in a word that it is either realistic to the last degree or else melancholy in sentiment; and the instances of the latter which he cites appear to have a very immediate connection with the social life of the Russian people.

PROFESSOR PORTER'S "HUMAN INTELLECT."*

The Rev. Dr. Porter, of Yale College, has published an important work upon that branch of psychology which relates to the faculties of cognition. Whatever be the judgment pronounced upon this treatise, no man can withhold his respect for the self-denying labor, both in the way of study and of composition, which has been devoted to its production. The size of the book is something stupendous. It is a large octavo of nearly seven hundred pages (printed, we regret to say, upon that harsh, cottony paper in which New York publishers seem to delight), in three sizes of print, of which the largest would not be unusual for a duodecimo while the smallest is painful to read. The work is designed primarily for a text-book, and the part in the largest type "is somewhat technically phrased and formally propounded in order that it may be learned more readily for the examinations of the class-room." But as the philosophical world was also to be addressed and the discussion must accordingly be carried in many places beyond the depth of learners, and inasmuch also as the author wisely thought it well to put more information into the hands of his scholars than they were to be positively required to master, the book has been more than doubled by the addition of matter in two sizes of small print, that in the middle-sized type being suitable for general students, and that in the smallest consisting chiefly of historical and critical notices.

General readers in metaphysics will hardly find the book to their taste. The appearance of it is not inviting; the type is too small, the volume too large, and the paper disagreeable. A style studiously technical and formal, even if it were not stiff and awkward and of a magisterial tone, would not attract them. Nor is a compendium of 699 numbered sections, with scarcely any unity of conception developing through them all, precisely what such readers desire. But it is admirably fitted for a college text-book. The formal and bald manner in which the arguments on either side are laid down is eminently adapted to nourish the logical power of the student. Great pains have been taken to give a full and rigidly precise ac-

* "The Human Intellect; with an Introduction upon Psychology and the Soul. By Noah Porter, D.D., Clarke Professor of Moral Philosophy and Metaphysics in Yale College." New York: Charles Scribner & Co. 1868. 8vo, pp. 673.

count of the meaning of the principal terms employed, thus inculcating one of the most essential requisites for accurate thinking upon abstract subjects. The author's talent for explaining words is well illustrated in the chapter upon consciousness. He shows somewhat more favor to modern German terminology than we should approve. For example, "sense-perception," instead of external perception, seems to us to have little to recommend it. The scholastic terminology forms a system at once precise and elastic. New terms can be constructed in accordance with the principles of it which may be understood by any one who is acquainted with these principles. This system, together with the accretions which it received in the seventeenth century, has the character of a somewhat obsolete but yet universal language; it is not confined to the philosophers of any particular nation, but is equally the possession of all. It is the basis of the actual English terminology, and has even passed in great degree into ordinary English speech. The modern German terminology, on the other hand, is unsettled and unsystematic; most of its single words correspond precisely to no single English words, and its method of compounding them is foreign to our conceptions of grammar. For these reasons, we think that the basis of English terminology should be allowed to remain as it actually is, scholastic; and certainly no one who favors a movement in the direction of Aristotelianism, as Dr. Porter partly does, should oppose this position. But once admit that such should be the basis of our terminology, and no doubt we should adhere to it consistently, except in cases in which it altogether fails us. In the present case it has not failed us. The phrase "external perception" would be quite intelligible to any educated person, even if it were a newly invented term. But in point of fact it is quite familiar both in English and in German. If it be objected that some persons believe in an external perception not through the senses, still Dr. Porter is not one of these; but even if it were judged proper to take account of that mystical and fictitious faculty, the term external sensuous perception might be adopted. Dr. Porter's using "representation" for imagination and memory appears to be another case of borrowing from the German. Representation is wanted in a general unpsychological sense, and as a psychological term it has already been used in two other senses besides that in which Dr. Porter takes it. Either "the representative faculty" or the "imagination" might have been employed advantageously in the last sense, as they were, in fact, by Hamilton. In using words cognate with "activity" we are inclined to suspect that Dr. Porter has been somewhat influenced by German usage, although we do not find that he anywhere defines any of these words, the ambiguity of which has often led writers into fallacies.

Another character of the work which makes it suitable for purposes of instruction is the impartiality with which the whole ground is gone over, no one or more faculties or phenomena being dwelt upon at such inordinate length as to encroach upon the space due to the others. The student will consequently receive the best armor against plausible theories which answer well for the facts that concern one mental process, but which may conflict with those that concern another. Another merit is that in the smaller type the student will generally find some notice of doctrines not contained in the text he is required to learn, and some references to the books in which those doctrines are maintained. Accordingly, when he has once become thoroughly familiar with this treatise by a year's study of it, it will always serve him as an invaluable index of reference in any further psychological studies which he may choose to pursue. We must not omit to say that the doctrines which it teaches are entirely conformable to orthodox theology, and quite free from any materialistic leanings. A young mind thoroughly imbued with Dr. Porter's teachings will be likely to get its philosophy so bound up with its religion that it cannot part with either unless it parts with the other.

The historical notices are full and valuable. They do not cover every important question, and in some places, as where psychology trends upon logic, are comparatively meagre; but some account is given of most of the more prominent discussions. These notices, considered as criticisms, will be thought by some to carry but little weight and to present no very noticeable characteristics. Considered as statements of fact, they are learned. The accounts of ancient opinions have evidently not been written without a study of the latest commentaries. In what relates to the history of the Scotch and English schools, even professed students of philosophy will find much that is fresh and instructive. The great defect of this part of the book is that, as a general rule, no account whatever is given of recent works, these being cited only by title. This omission detracts very seriously in some cases from the value of the book. Twenty-five pages of the finest print are devoted to an account of the various theories of perception without the least mention, except by title, of the writings of Fechner, Wundt, Trendelenburg, George, Lotze, and others, whose investigations may truly be said to be of more value than all the others put together.

Mediæval doctrines, which are seldom intelligibly treated, are not treated intelligibly here. The reader is for the most part expected to gather the opinions of the masters and doctors from single quoted sentences, which are often utterly meaningless or even misleading to those who have not given special attention to scholastic philosophy. Take for example the account of nominalism and realism on pages 405–407. What is a person not already acquainted with the subject to make of the statement that a certain master taught that a universal is "indifferenter" in all the singulars under it? How correct a notion is he likely to form of Abelard's doctrine from being told that he "*sermones* intuetur et ad illos detorquet quicquid alicubi de universalibus meminit scriptum"? Will he understand, as he should, that the *sermo* means a word actually in application by the mind as a predicate? Considering the historical importance of Roscellin, and considering the fact that, though an extreme nominalist, his doctrines were associated with those of Scotus Erigena, who was a sort of Platonistic idealist, is it quite sufficiently explaining his views to quote that sentence of Anselm's in which he is said to have thought that universal substances are the breath of the voice, that the wisdom of man is the soul, and that color is the colored body? It would have been easy to explain, first, that the *vox* was regarded by grammarians of that age as something incorporeal, because it is *produced* by the percussion of the palate and the air, but *is* not either, and because a natural motion cannot produce a new body, and also because the *vox* is in several ears at once, whereas a body can only be in one place at one time; that we have positive reason to think that Roscellin believed this; that, in the second place, reasoning (as we may suppose) like others in that age from such facts as that the same line which, when measured by one measure (a foot) is equal to *two*, when measured by another (an inch) is equal to *twenty-four*, and that the wall of a house is on the one hand a whole in itself and on the other a part of a house, he came to believe (as we are positively informed) that all mathematical relations—that is, all relations of parts and whole—exist not in the body itself, but only in the incorporeal words which may be applied to it; and that, thirdly, he thence inferred that those universal essences of things, genera and species, since they essentially have parts and are parts, themselves are not things, but incorporeal *voces*. Of any interruption in the course of the controversy between the twelfth and thirteenth centuries our author tells us nothing, although the discovery of all the works of Aristotle except the two short treatises already known, and of the writings of the Arabian commentators, had in the interval between Abelard and Albertus so changed the whole face of scholasticism that it is rarely indeed that any writer of the twelfth century except Peter Lombard and Gilbertus Porretanus is quoted at all in the thirteenth. The facts that Albertus had properly no opinion of his own and that that of St. Thomas was very vacillating (as was notorious in the fourteenth century) are not mentioned. Scotus's realism is said to be identical with that of these writers except as to the *hæccеity*; but the difference is more important. The Thomistic view was that of the two elements of the individual thing—that is to say, the matter and the form, or that which makes it to be, and that which makes it, if it is to be, to be *as* as it is—the form is always universal, the matter, or at least signate matter (this or that matter), is always singular. Their union is an individual, but it is a union in which the form is as such actually universal in itself. Scotus admitted that in the singular thing there is nothing actually universal; all generality results from a relation of reason. Nevertheless, when a general predicate is attached by the mind to a thing, the proposition so formed may be true, and since the *same* predicate may also be truly asserted of other things, it is true that there is something in the thing which, though actually contracted to the grade of singularity, is in its own nature not repugnant to being predicated of many. There is, then, a distinction between a predicate predicated of many and the singular forms in the several things by virtue of which the same general predicate is true. Yet since this general predicate *is* true, it really is in the several things, although it is there in the grade of singularity and identified with these singular forms. Thus there is a really, but only potentially, general form in the singular thing which yet in that thing in itself does not differ from the singular thing. This is the famous doctrine of formal distinctions, which is the central idea of the whole Scotistic philosophy. This formed also the very point of Occam's attack, for his whole notion of a reality was that of a thing which is in itself whatever it really is. This he was able to see must be something devoid of all quality and all relations. All qualities and relations, according to him, are *terms*, subjects and predicates of written, spoken, or thought propositions; and the qualities and relations of things can consist in noth-

ing except that the mind naturally applies to them such and such *terms*. Prof. Porter says the controversy came to a close early in the fourteenth century, but Occam did not die until 1347, and it certainly raged with the greatest fury after his death.

The Scotch school of philosophy, to which this work belongs, is too old a tree to bear good fruit. Its method consists in an appeal to consciousness—that is to say, to what all men know and know that they know (p. 113)—supported by some familiar facts and occasional anecdotes. Such a procedure is not wholly useless. The common sense of mankind has so little impulse to seek explanations of facts that it is hardly tempted to twist them, and he who busies himself with reproducing ordinary beliefs is free from so deep an absorption in laborious experiments and observations as to overlook what lies upon the surface. The great mistake of writers of this sort has been that they have had an ambition to be more than accurate describers of common beliefs and unanalyzed facts. That natural self-consciousness, when heightened by direct effort, becomes a scientific knowledge of the soul, is not the doctrine of modern psychology. This opinion is disappearing, and with it will probably disappear some of that morbid tendency to introspection, the prevalence of which justified the advice given by the editor of a magazine to a contributor, "Should you ever be drowned or hung, be sure and make a note of your sensations; they will be worth to you ten guineas a sheet." The efforts which Dr. Porter recommends, "to hope and fear again and again, simply that we may know more exactly how it seems or what it is to perform [*sic*] or experience these states," to say nothing of their double futility (for we cannot so hope and fear, and if we could it would teach us little of the essence of these emotions), are very unwholesome.

Within the Scottish school we should suppose that this book must take a very high rank. Indeed, as long as Mr. Mansel (even if he properly belongs to that school) produces nothing more, we do not see what living writer, unless it be Dr. McCosh, is to dispute with Dr. Porter the honor of the very first place. In the character of his genius and learning more like Dugald Stewart than any of the other *coryphæi* of that philosophy, Dr. Porter's relation to Scotch psychology is somewhat similar to that of Hamilton, inasmuch as he modifies the pure Scotch opinions by an admixture of the prevalent German views. As Hamilton treated high metaphysics upon modified Kantian principles, so Porter imports into the same branch of philosophy considerations which have been derived in large measure from the study of Trendelenburg. His metaphysic starts, as it ought, with a theory of inductive reasoning. He holds that the reason why an innumerable number of instances will not justify the inference that all swans are white, while a single instance would suffice to show that all men's heads are placed upon their shoulders, is because a failure of the latter induction, unlike a failure of the former, would be "entirely incompatible with the ideal of beauty and convenience to which we assume that nature would certainly conform." Since then the validity of induction rests upon certain assumptions of this sort, these assumptions are not themselves demonstrable either by induction or otherwise, but are original and self-evident truths. These intuitions are as follows: 1st, that an object is either substance or attribute; 2d, that objects originate by a causative energy; 3d, that objects are in space and time; 4th, that properties and laws which are known *indicate* and *signify* other properties and laws; 5th, that *nature adapts objects and powers to certain ends;* and 6th, that the *rational methods of the divine and human minds are similar*. These ultimate facts and relations are not learned by the ordinary processes of thought, imagination, and perception. They are "not *apprehended by*, but *involved in*, these processes," and must, therefore, be referred to a separate faculty. They are first apprehended in a concrete, not in an abstract, form. We do not set out with the universal belief that every event has a cause, but as we apprehend each separate object by perception or consciousness we apprehend it as caused. Such apprehension is a proposition, and from such propositions are derived the various concepts, substance and attribute, cause and effect, means and end, etc. These concepts being apprehended abstractly and compared with the processes of cognition are found to be essentially involved in them all. Finally, it is perceived that over against all objects of experience, as having these various relations of dependence, there must be some independent correlates upon which they depend. Thus all things being extended, there must be a space; in correlation with all things as being caused there must be a First Cause, etc. The whole argument upon this subject, which occupies some two hundred pages, is followed out with great ability. It will be perceived that this theory of intuition has a general resemblance to that of Dr. McCosh.

It is easy to see upon what side such a theory may expect attack. Its essence is that the process by which we attain our first knowledge of these fundamental ideas is essentially different from the other processes of the mind. Now, if it were shown that all the other mental processes, whether of cognition, emotion, or action, were essentially one, it would be hard to prevent men from believing that this process alone did not conform to their common formula. Accordingly, it is not surprising that we find throughout Dr. Porter's work a tendency to exaggerate the distinctions between the faculties and to overrate the importance of these distinctions, and to explain facts by the general supposition of a peculiar faculty even when such a supposition requires it to be as complex as the facts themselves, in order to explain them in detail. But though the reader of this book would scarcely suspect it, there is a movement which is steadily coming to a head towards identifying all the faculties. It is the motive of all sensualism, it is the latest mood of psycho-physical inquirers, and it is beginning to be consciously felt even in this country. If that doctrine should once be established, it would not avail Dr. Porter's theory that he had correctly answered the question why the inference that all men carry their heads upon their shoulders is so strong, because it would appear that the principle of design which effects this inference is only a derivative one, and that the only assumption which can enter into every induction is no assumption about the things reasoned upon at all. Dr. Porter's opinion is, that the assumptions involved in induction are the only basis of religion; but the only assumption which can be essentially involved in scientific inference is the assumption of the validity of scientific inference. But to make the validity of scientific inference the only possible basis of religion approaches very near to pure rationalism—a doctrine that is not in the interest of religion, because it subordinates religion to science. We are inclined to suspect that the metaphysician, whether spiritualist or materialist, is in this dilemma; either he must look upon his problems with the cold eye of science, and have no other feeling for the eternal interests of man than the curiosity with which he would examine a trilobite; and then, being in a state of mind essentially irreligious, he can arrive at no result that would really help religion, for at most he can only say to mortal man that it is most likely that there is a God, which is no assurance; or he must bring the feelings of a religious man into the inquiry, and then he is as incompetent to treat the problem as a physician is to judge of his own case. Can it possibly be, that the directest and most uncritical faith in the object which commands one's adoration—the faith of a little child—is the only actual motive to religion which there ever has been or ever will be, and that all reasonings *pro* or *con.* upon the fundamental proposition of religion must be entirely irrelevant and unsatisfactory?

CURRENT FRENCH LITERATURE.*

THE author of "La Vie de Christophe Colomb," the Abbé Eugene Cadoret, was for many years a chaplain in the French navy, and appears, from his own statements, to have been attracted to the subject of his present work through tastes and associations partly maritime, partly ecclesiastical. He undertakes to prove that the clerical influences of Columbus's day, both Roman and Spanish, so far from being inimical to him and his projects were, on the contrary, decidedly and strongly in favor of them. M. Cadoret addresses himself more especially to the task of writing the biography of the discoverer than the history of the discovery. Consequently, the book gives us more of Spanish than of American incidents. One point in particular he essays to clear up from every possible doubt that could obscure it—a point affecting the morality and integrity of the great Genoese. It is the question of his marriage with his second wife, the mother of his son Fernando. Irving was partially and unwillingly led astray by Navarette on this subject; and Humboldt, with a levity of phrase ill-befitting him or his subject, gave additional currency to the false accusations against Columbus. M. Cadoret has produced a conscientious and interesting work. But we do not find that he has changed an opinion which we have long held—namely, that neither he, Robertson, Navarette, Muñoz, Napione, Spotoruo, Humboldt, Irving, the Marquis de Belloy, Count Rosselly de Lorgues, nor Mr. Arthur Helps has done the subject full justice. The life of Christopher Columbus is yet to be written. We trust it may yet be written, for the names are not very many that are more deserving than his of all that research, erudition, and talent can effect to place it fairly in the light of truth.

"Les Villes de Thuringe," by Edouard Humbert, is a handsome imperial octavo volume of 568 pages, on the Thuringian cities, Weimar, Erfurt, Jena, Gotha, Altenburg, Coburg, and Meiningen. The author appears to have devoted himself enthusiastically to the exploration not

* The books noticed may be had at F. W. Christern's, New York.

only of the great natural beauties that make picturesque Thuringia attractive to the tourist, but also to the resuscitation of the political, religious, military, and literary souvenirs that have all contributed to make Weimar, Erfurt, Gotha, and Jena special centres of attraction for the artist, the poet, and the historian. That M. Humbert should have made a large volume on such a subject is not surprising. He could as well have made five or six, so inexhaustible is the wealth of historical and literary associations, even those of the present century, not to mention those of the Middle Ages and the Thirty Years' War—France and Prussia at Jena, Napoleon at Erfurt, Talma playing to a pit full of kings, Wieland, Herder, Goethe, and Schiller at Weimar, and the numberless illustrious men and women who made pilgrimages to Weimar as to a literary Mecca. First comes Bettina Brentano, "The house lies opposite the fountain: how deafening did the water sound to me! I ascended the simple staircase; in the hall stand statues that command silence: at least, I could not be loud in this sacred hall. All is friendly but solemn. In the rooms simplicity is at home. Ah! how inviting! 'Fear not,' said the modest walls, '*he* will come and will be—and more, he will not wish to be—as thou art,' and then the door opened, and there *he* stood, solemnly grave, and looked with fixed eyes upon me. I stretched my hands towards him—I believe. I soon lost all consciousness. Goethe caught me quickly to his heart. 'Poor child, have I frightened you?'" Then we have Heine. He says that Goethe had been compared to Jupiter. "Verily, when I visited him in Weimar, and stood in his presence, I involuntarily turned my eyes on one side, to see if the eagle, with the thunderbolts in his beak, were not attendant upon him. I was just on the point of addressing him in Greek, but when I perceived that he spoke German, I told him in that language, 'That the plums upon the road between Jena and Weimar had an excellent relish!' Many a long winter night had I thought with myself, how much that was lofty and profound I should say to Goethe, if ever I should see him; and, when at last I saw him, I told him that the Saxon plums were excellent!"

The "Révolutions de l'Espagne Contemporaine," by Charles de Mazade, is a work of solid merit. We recognize in its chapters a series of articles that from time to time, for some years past, have appeared in the *Revue des Deux Mondes*. They cover a period of fifteen years (1854 to 1868) and vividly relate the leading incidents and portray the principal personages of political Spain during that time. To those who are interested in the actual march of events in the existing Spanish revolution this book is more than desirable, inasmuch as it places them in possession of essential preliminary information not easily attainable elsewhere. From among the few passages that are of especial interest to Americans we cite the following: "During the long congressional session of 1859 (at Madrid) no accord could be obtained among the conflicting parties, except on such exterior questions as brought the national sentiment into play. When, at the commencement of that year, Mr. Buchanan's Presidential Message was promulgated, a message in which, with the cool daring (*tranquille hardiesse*) of a speculator accustomed to successful operations, he proposed to renew negotiations for the Island of Cuba, and gave a distant hint of the possibility of an appeal to the omnipotent law of force, the instinct of Spanish nationality burst forth in a spontaneous and unanimous expression both in the Senate and the House. All opinions and all grades of opinion enthusiastically rallied round the Government and presented an unbroken front of the union of every shade of patriotism against the audacious projects of the American Republic." The interesting episode of the Spanish war with Morocco and the question of the Dominican Republic are clearly presented, and the leading celebrities of Spain—Bravo Murillo, Espartero, Martinez de la Rosa, Narvaez, O'Donnell, Salazar Pacheco, General Prim, and others, are well portrayed.

The "Histoire de la Justice Criminelle au Seizième Siècle," by Alberic Allard, is a learned, thorough, and exhaustive work. A prize for the best treatise on the criminal law and practice of the sixteenth century, offered by the French Academy of Sciences, was awarded to the author of this work. It presents the condition of criminal law and legislation in France, Italy, and Germany during the sixteenth century, and the results of profound study of the works of the best writers on criminal jurisprudence for the same period. The fifth chapter, "De la Question," is particularly full and interesting. It shows the extent to which the use of torture as a means of eliciting testimony was recognized by all codes and systems of the jurisprudence of that day. Universally recognized, and universally practised, its employment was not the special cruelty or tyranny of this or that ruler, but the cruelty and tyranny of the age. It is for the want of such knowledge as this work gives that so many modern writers of history have taken such very false views of the men and events with which they had to deal.

"La Poésie," by Paul Albert, consists of twenty-one lectures on poetry upon a method well conceived and well carried out. Epic, lyric, dramatic, and satiric poetry are treated of, and the author gives explanations of their principles and illustrations of their history and beauties. The book is an excellent one for the advanced student.

The "Anémie des Grandes Villes et des Gens du Monde," by Dr. Raoul le Roy, is a treatise on a very important if not a new subject for able medical pens. Dr. Bourguignon's treatise, "Malaria Urbana," is well known to the profession, as also the "Cachexie Urbaine" of Dr. Bertillon. This anemia, although clearly recognized by the faculty, is somewhat difficult to define except by the descriptive title "Malaria Urbana." It is the modern disease resulting from city life, the special ailment of high civilization in temperate climates. Accompanied by negative manifestations, without febrile symptoms, allowing its victims entire liberty of movement, encouraged and kept alive by the ordinary incidents of city life, it is a disease whose presence is almost unsuspected until, suddenly, its subject becomes alarmed at the fatigue resulting from trifling physical efforts, even that of a short walk. Then follow violent palpitations of the heart at the slightest unlooked-for noise, a difficulty of breathing, indigestion, and a succession of multiform nervous affections. Its special and most serious injury falls upon women. Even the unprofessional reader finds this work highly interesting.

The "Voyages en Pantoufles" of M. Emmanuel Gonzalès (if that is his real name) offers us a style of title in flagrant imitation of Xavier de Maistre's admirable "Voyage autour de me Chambre." Nor does the plagiarism of this slip-shod book end with the name of it. From his earliest youth a devourer of the narratives of Captain Cook, Bougainville, and other hardy circumnavigators, M. Gonzalès was always eaten up, we are to understand, by a passion for travel. In point of fact, however, his most distant and adventurous journey was from Paris to Baden-Baden. Seeking to gratify his "*malheureuse passion pour les voyages*," he falls upon the plan of narrating the peregrinations he would have desired to make, and which others have had the fatigue of executing in his place. And so he tells us what his friends have seen of the interior of Africa, of Norway (Louis Enault), of Lapland and Tartary (Huc and Gobet), of Modern Greece (About), of the Cretans and Candiotes (Perrot), of Mexico (Désiré Charnay), and the United States (Oscar Commettant). M. Gonzalès advises us that on Mrs. Stowe's "Uncle Tom" no reliance is to be placed, but in Oscar Commettant's description of the United States one may put full faith. So it would appear, for M. Commettant informs us that in New York the most frequented theatre is that of the "Blacksminstrels," that the principal amusement of the New Yorkers is found in "fires," and that the firemen and the fire-engines are the principal ornaments of the "imperial city."

"The Histoire de l'Eglise Catholique," (in 16 imperial octavos) is by the Abbé Rohrbacher. The decidedly Teutonic tinge in this author's name might lead many persons to take him for a German. He is a Frenchman, born in the diocese of Nancy, a part of old Lorraine, a province which was German in every respect up to the middle of the last century. This great work is the result of the Abbé Rohrbacher's almost life-long labor. He died in 1856, and the history is brought down to 1860 by Chantrel, accompanied by a copious index by Jean Gautier, and an admirable historical atlas by Dufour. The Abbé Rohrbacher was long in intimate and sympathetic friendship and correspondence with such men as De Maistre, De Bonald, and Chateaubriand. He was, moreover, a cherished disciple of the great Lamennais. By some critics in France he is reproached with a strong democratic tendency that leads him to portray in somewhat lively colors the faults and vices of kings.

Emile Burnouf's is a name well known in France in connection with the literature of Ancient Greece. His new book, "Histoire de la Littérature Grecque," is a full and satisfactory history of Greek literature from its infancy down to the year 553 of the Christian era. Previous studies and a long residence at Athens have given M. Burnouf unusual facilities for his work. We are pleased to see that he does not cling to the old Pelasgic theory on the development of which so much valuable time and erudition have been wasted. He of course recognizes the fact that the names of cities, mountains, rivers, and provinces of Ancient Greece are in a non-Hellenic language. This is merely saying, in a certain way, that these names existed before the Hellenic race in the land since known as Greece, and that they were used before the Greeks by an unknown people who occupied that soil, "*soit qu'on lui donne le nom de Pélasges ou tout autre nom*"—call them Pelasgi or whatever else you please. And this is, substantially, the conclusion reached by Grote: "If any man is inclined to call the unknown ante-Hellenic period of Greece by the name o

Pelasgic, it is open to him to do so." The productions of the Homeric ages, Elegiac, Iambic, Æolian, Dorian, and Ionian poetry, the literature of the period of Pericles and of the Peloponnesian War, the poets and historians of the Macedonian and Alexandrine periods, have already been so profusely and so admirably commented upon, that M. Burnouf adds but little to what knowledge has long been accessible. But, commencing with the Græco-Roman period and coming down to the sixth century, he presents many interesting details not easily attainable elsewhere.

M. Léon de Rosny's "Variétés Orientales" are a series of essays upon Oriental history, geography, science, and literature. M. de Rosny is already known in Europe as the author of a Japanese and French dictionary (3 vols. 8vo) and a history of the Chinese language (2 vols. 8vo). Among the most remarkable chapters of the book before us are those on Siamese literature, Chinese philosophy, Japanese and Chinese porcelain, Tunis, Corea, and a description of the Japanese works in the libraries of London and Oxford.

The Study of Languages brought back to its True Principles; or, The Art of Thinking in a Foreign Language. By C. Marcel, Knt. Leg. Hon. (New York: D. Appleton & Co. 1869.)—This is a brief summary of a larger work by the author, entitled "Language as a Means of Mental Culture and International Communication," which appeared in London, in two volumes, sixteen years ago. A French edition of the summary was published in 1867; each edition being adapted to the wants of the respective readers, and written by Mr. Marcel himself, may be regarded as original, especially as the perfect purity of idiom and the rare vigor of diction which distinguish the present elaboration cannot fail to convince us that the writer has fully mastered the art which he proposes to teach—that of thinking in an adopted language. His views are the ripe fruits of philosophical reflection on the laws of linguistic imitation and abstraction, and of rich experience as a student, though not as a teacher. His observations embrace the whole field, the study of ancient as well as modern languages, "whether the learner be a child or an adult, a beginner or a proficient, whether he learns with or without a teacher, in private or in a class," with the aim of attaining perfection in speaking or in writing. His main tenets are: Follow nature in its teachings; adults, like children, learn by imitation; good models and plenty of exercise are the principal requirements; "custom is the law of language, grammar is only its generalization;" rules must be abstracted, not studied; good books are the best teachers of words, phraseology, and grammar; disconnected words are but half understood; learning by rote narrows the power of expression; translating into the foreign language by beginners vitiates the style; let the reading matter at every stage be easy, pleasant, and interesting; oral instruction is required only for the pronunciation. The whole might perhaps be summed up more briefly thus: Examples before precepts, practice before theory; listen to correct speaking, read many good books. This theory the author is far from regarding as original; on the contrary, he supports it by many felicitously chosen sayings of the great masters in the art of writing. These quotations add no little charm to the solid and almost too closely reasoned pages of the book, which, on the whole, is perhaps too speculative for the object aimed at, to wit, the propagation through wide circles of sound practical ideas on the study of languages, useful to both learners and teachers. Without subscribing to every one of its conclusions, we cannot but recommend it to our readers as a highly instructive and elaborate treatise on a subject in our times universally interesting.

NEW SABBATH-SCHOOL BOOK.

Just Published:

"THE MORNING STARS."

A Collection of Religious Songs for SUNDAY-SCHOOLS and the HOME CIRCLE.

This book of religious songs for children was undertaken because the authors could find no Book which appeared to them to be well adapted for the use of Sunday-Schools, and the choir of children whose musical instruction they have in charge. Great care has been taken in this selection that the words might faithfully reflect the sentiment of the music as well as equal it in elevation of tone. Price in boards, 35 cents; paper, 30 cents. Sent post-paid on receipt of price. OLIVER DITSON & CO., Publishers, 277 Washington St., Boston. CHAS. H. DITSON & CO., 711 Broadway, New York.

The American Wheat Culturist.

A PRACTICAL TREATISE UPON THE CULTURE OF WHEAT. By S. Edwards Todd. 432 pages large 12mo, illustrated, price $2 50.

"No well-appointed Agricultural Library can be without it. If a poor farmer can buy but one book relating to his art, let him buy this."—*New York World.*

"We commend it to all intelligent farmers, and believe its careful reading will be one of the first steps towards the raising of a successful crop of that from which comes the staff of life."—*Maine Farmer.*

"The chapters on 'Preparation of the Soil,' 'Varieties' and 'Means of Preventing Ravages of Disease and Insects,' are worth very many times the price of the book."—*Rochester Express.*

"It is a thorough treatise on the subject of Wheat-growing."—*New York Observer.*

"Its common sense and practical statements, together with its excellent pictorial illustrations, will make it a favorite and useful work in the farmer's library."—*New York Tribune.*

Tales of the Living Age.

A HOUSE OF CARDS.

BY MRS. CASHEL HOEY.

Price 75 Cents.

This story is by a new writer, but is felicitous in style and has very great interest in character and plot. *The London Review* says:

"A new novel, written by an unknown author, will always excite a certain amount of interest in the reader's mind. There is no knowing what may be in store for him. It is somewhat like an investment in mining shares—the chances are a thousand to one against receiving any return, but then the one in a thousand is fortunate indeed. We confess to having opened these volumes with despairing resignation, *but before we closed them we found we had drawn a prize.* . . . .

"We shall look with great interest for another novel from Mrs. Cashel Hoey's pen."

The foregoing was first published in this country in *Littell's Living Age*, a magazine issued once a week, and containing the best Stories, Reviews, Criticisms, Poetry, Scientific, Biographical, Political and other articles, gathered from the entire body of foreign periodical literature.

LITTELL & GAY, Publishers,

30 Bromfield Street, Boston.

THE CHRISTIAN, 60 Cents!

A large, live, 8-page monthly religious and family Paper, containing incidents, records of providences, sketches, music, poetry, true stories, pictures; reading for young, old, saints and sinners. No sectarianism, controversy, politics, puffs, pills, or patent medicines. 60 cents a year; 10 copies, $5. For Sunday-schools, 10 copies, $4. Send 10 cents for 3 specimens before you forget it. Vol. IV. begins January, 1869. More than 1 000 pages new, live tracts for $1. Address H. L. HASTINGS, Scriptural Tract Repository, 19 Lindall Street, Boston, Mass.

CONYBEARE & HOWSON'S

Life and Epistles of St. Paul.

THE ONLY COMPLETE AND UNABRIDGED EDITION.

The Two Volumes of the London Edition in One, with the Text and Notes entire, and the Maps and Illustrations, at the reduced price of

THREE DOLLARS.

Buy this Edition of the nearest Bookseller, and do not wait for Agents to visit you.

The appearance of two abridged, and otherwise incomplete, editions of CONYBEARE & HOWSON'S LIFE AND EPISTLES OF ST. PAUL has induced the publication of the original work, in a form and at a price which must bring it within the reach of every one who may desire to possess it. This volume, which is sold at the unprecedentedly low price of

THREE DOLLARS,

contains over ONE THOUSAND pages, giving the text of the original London edition entire, as well as all the notes. These notes, which are essential to the full understanding of the text, are greatly abridged, and frequently altogether omitted from the editions already referred to, thus seriously impairing the value of the work. The COMPLETE and UNABRIDGED edition moreover contains

17 Maps (several of large size) and 82 Engravings,

nearly double the number given in any other edition produced in this country. Published at less than half the price of the original two-volume American edition, and at just one-seventh the present price of the London quarto edition, this work, which has so long been regarded as one of the noblest contributions ever made to the literature of the New Testament, may be commended anew to all Biblical Students.

NOTICES OF THE COMPLETE AND UNABRIDGED EDITION.

From T. D. Woolsey, D.D., LL.D., President of Yale College.

"I should regard the ORIGINAL WORK as far better than the most skilfully executed abridgment."

From Rev. Prof. H. B. Hackett, D.D., Baptist Theological Seminary, Newton Centre, Mass.

"It is superfluous to speak of the merits of this work. The full edition contains nothing which the authors did not regard as important to the illustration of their subject, and nothing can be left out without impairing the value of the work."

From Rev. W. Adams, D.D., Pastor of Madison Square Presbyterian Church, N. Y.

"It would be injustice to the authors and to their subject to attempt any abridgment of such a work."

From the New York Independent.

"This edition includes the entire work, unabridged, and we should prefer it thus rather than Howson's own abridgment (People's Edition)."

Sizes and Styles of the Complete and Unabridged Edition.

Two volumes in one, with all the Maps and Illustrations.

One volume 8vo, cloth,	$3 00
Half calf,	5 50
Morocco extra,	8 00

N. B.—This same edition, with an Introduction by Rev. Bishop Matthew Simpson, may be procured through the Agents of Messrs. E. B. TREAT & CO., New York.

THE TWO-VOLUME LIBRARY EDITION.---REDUCTION IN PRICE.

The two-volume edition of CONYBEARE & HOWSON'S LIFE OF ST. PAUL, printed upon heavy white paper, and produced in a style fitting it for the library, is now published at the following prices:

Cloth,	$5 00
Half calf or half morocco,	9 00
Morocco extra,	12 00

SINGLE COPIES SENT, POST-PAID, UPON RECEIPT OF PRICE.

ADAMS, BLACKMER & LYON,

CHICAGO, ILL.

670 pages, large 12mo, Cloth, Price $1 75.

HARPER & BROTHERS, NEW YORK,

HAVE JUST PUBLISHED:

Guiccioli's Recollections OF LORD BYRON.

MY RECOLLECTIONS OF LORD BYRON; AND THOSE OF EYE-WITNESSES OF HIS LIFE. By the COUNTESS GUICCIOLI. Translated by HUBERT E. H. JERNINGHAM. With Portrait. 12mo, cloth, $1 75.

This work is strikingly able, with a keen appreciation of the subject, and with remarkable discrimination of the authoress's special traits.—*Daily Telegraph.*

This book is of great value; for it collects the various opinions of Lord Byron's biographers, presents them at one glance, illustrates them by the letters and journal of the poet himself, and subjects them to a final criticism.—*Pall Mall Gazette.*

Never before has Byron been so vividly portrayed and his character so thoroughly analyzed. The reader's interest never flags.—*Morning Post.*

No greater proof could be given of the renewed interest which is being felt with respect to Byron, his life, his character, and his works, than this publication.—*Athenæum.*

*** HARPER & BROTHERS *will send the above work by mail, postage prepaid, to any part of the United States, on receipt of* $1 75.

JUST READY, VOL. I. OF A

Complete Uniform and Standard Library Edition

OF THE COLLECTED WORKS OF

THOMAS CARLYLE.

Thoroughly Revised by the Author, and Published under his Direction.

MESSRS. SCRIBNER, WELFORD & CO.

Have the gratification of announcing that they will immediately commence the publication, in conjunction with Messrs. CHAPMAN & HALL, London, of a complete and uniform edition of the Works of THOMAS CARLYLE. Each one of these volumes will receive the thorough and careful revision of its distinguished author, thereby making this the final and standard edition of his collected writings; and they will be printed throughout in a clear and open-faced type, upon an octavo page, fitting them specially for the Library; and, wherever opportunity is offered, the different volumes will be ILLUSTRATED.

As the volumes will necessarily vary in size, they will differ in price; some will be $3 75, others $4 50, and a few possibly $5 25. When bought singly, the volumes will be sold at these prices, but names of subscribers to the entire series will be received at the uniform rate of

$3 75 per Volume.

The entire series will comprise about Thirty Volumes, and they will be issued singly, on or about the 15th of each month.

Vol. I now ready, comprising:

SARTOR RESARTUS:

THE LIFE AND OPINIONS OF HERR TEUFELSDROCH.

BY THOMAS CARLYLE.

With a Portrait of the Author by Watts, R.A.

NOW READY.

THE BOOK FOR EVERYBODY.

THE

ANNUAL OF SCIENTIFIC DISCOVERY,

OR,

Year Book of Facts in Science and Art, for 1869.

Exhibiting the most important Discoveries and Improvements in Mechanics, Useful Arts, Natural Philosophy, Chemistry, Astronomy, Meteorology, Biology, including Zoölogy, Physiology, and Botany—Mineralogy, Geology, Geography, Antiquities, etc., together with a list of recent Scientific Publications, obituaries of Eminent Scientific Men, etc. Edited by

SAMUEL KNEELAND, M.D.,

With a fine likeness of Professor JAMES D. DANA.

12mo, cloth, price $2.

This volume of the Annual is an unusually valuable and interesting one, embracing as it does a record of a vast number of remarkable discoveries, important facts—curious, entertaining, and highly instructive—for the Farmer, the Mechanic, the Merchant, the Lawyer, the Physician, the Statesman, the Clergyman, the Scientific Man, the Artist, the Teacher. And no School, no Academy, no College, no Town, no State, nor *any* well selected private library should be without this work.

*** A few complete sets of this work can be furnished embracing years from 1850 to 1869 (nineteen volumes), with the Likeness of some distinguished Scientific or Literary man in each, bound in uniform style, with a neat substantial box, price $34.

*** Copies sent by mail, *postage paid*, on receipt of the price.

Published by **GOULD & LINCOLN,**
59 Washington Street, Boston.

AUERBACH'S

VILLA ON THE RHINE.

AUTHOR'S EDITION.

With the Author's Portrait, and a Biographical Sketch by Bayard Taylor.

Part I., containing 14 chapters more than the Boston edition, now ready. Price 50 cents.

The whole work will be issued IN TWO STYLES.

I. CHEAP EDITION—Four parts, paper, of which the first is now ready. These can be bound in two volumes, uniform with the American Edition of "On the Heights;" or, by a little cutting, with the Tauchnitz Edition. The other parts will follow in rapid succession.

II. STANDARD LIBRARY EDITION—Two volumes, cloth, fine tinted paper, uniform with the American Edition of "On the Heights." The first volume of this edition and the second part of the cheap edition will appear in a few days.

These Editions, translated from the Author's advance sheets, will be issued complete before the story finished in the *Vienna Presse*, and consequently long before the completion of the Boston edition, which is translated from *Die Presse*, in defiance of the author's rights.

JUST PUBLISHED:

The Fisher Maiden. BY BJORNSTJERNE BJORNSON. 16mo, $1 25.

English Authorities on Björnson.

"Björnson possesses the splendid virtue of concentration, and paints with sharp, decided truths on a tiny canvas. An artist, not a photographer, he draws souls more than faces, and although his manner is as expressive as can be, he gives you a good deal of thinking to do on your own account."—*Athenæum.*

. . . "There was room for a true genius, one with poetic insight and thorough faith in the simple element at his command, and surely such a man has recently arisen in Björnson. . . . The exquisite emotions, apprehension of beautiful truths combined with musical sympathies, constitutes sometimes a faculty in itself, and yields to mankind a lyrist like Tennyson and an idyllic thinker like Björnson."—*London Spectator.*

THE GAIN OF A LOSS. By the author of "The Last of the Cavaliers." 12mo. $1 50.

A novel of English life, containing a good delineation of character, stirring incidents, and a moral well impressed. The novels of this author are attracting attention in England.

IN RAPID PREPARATION:

BIOGRAPHICAL SKETCHES. BY HARRIET MARTINEAU.

REMINISCENCES OF MENDELSSOHN. BY ELISE POLKO.

LEYPOLDT & HOLT,

451 BROOME STREET, NEW YORK.

THE NEW WORK BY THE DUKE OF ARGYLL.

GEORGE ROUTLEDGE & SONS,

416 Broome Street, New York,

HAVE NOW READY,

In 16mo, extra cloth, price $1 50,

PRIMEVAL MAN:

AN EXAMINATION OF SOME RECENT SPECULATIONS.

By the Duke of Argyll,

Author of "The Reign of Law."

ALSO NOW READY:

A new Edition (the Fifth) of

THE REIGN OF LAW.

BY THE DUKE OF ARGYLL.

With additional notes and a complete index by the Author.

Crown 8vo, cloth, $2 50.

"We think it would be a profitable enterprise for some American publisher to reprint this book. It is one of the best of its class published in recent times. Of the scientific merits of the work we have but a word to say. The author contributes to the illustrations of design in nature an interesting discussion of the 'machinery of flight' in the wings of birds, and by this and other scientific matters makes his book a very readable one."—*The Nation.*

"This volume is a remarkable work, in which the logical sufficiency of the arguments is equal to the perspicuity with which they are stated. The style is simple and clear, and not without eloquence, and the aptness and variety of the illustrations are striking."—*Evening Post.*

"This is a very great book; great because, while treating of the most profound subject of human thought, it can be read with comfort by those whom Mr. Lincoln called plain people."—*The Round Table.*

NEW LAW BOOKS.

LITTLE, BROWN & CO.,

110 Washington Street, Boston,

Have just issued:

Subscription, $5 per annum, in advance.

MR. STEDMAN'S NEW VOLUME.

BROWNING'S "RING AND BOOK," COMPLETE.

The Blameless Prince, and Other Poems.

BY EDMUND CLARENCE STEDMAN.

In one elegant 16mo volume, with vignette by Hennessey, $1 50.

The leading poem, which gives the name to the volume, is Mr. Stedman's most elaborate and carefully finished work. It is a story of human passion, and, while somewhat mediæval in theme, the incident—which is dramatic and unexpected—is confined to no age or land, but is such as may and must happen in all. In the strength and sweetness of the versification the reader will find a proper setting for the subtle and original plot of the romance. The minor poems in this new volume are noticeable for their variety and for that fine quality which has gained for their author so high a place among our lyric poets.

THE RING AND THE BOOK.

BY ROBERT BROWNING.

Second and concluding volume. 16mo, $2.

Both vols., half calf, $7 50.

"Crossing the old square where stands the Palazzo Vecchio, in Florence, Robert Browning paused at a bookstall and found and purchased there an old yellow book, where in a curious trial is reported, with all the facts, charges, arguments, and incidents. The poem before us is elaborated from this antique record. The power of language, the effectiveness of words, has rarely been exhibited more freely than in parts of this narrative; Browning's vocabulary is exhaustless; moreover, there is an audacity of expression seldom encountered; there are passages of singular terseness and point; sometimes a Dantesque energy, sometimes an Anglo-Saxon sense, sometimes a Southern European flow and freedom, at once striking and combined with original emphasis."—*New York Times.*

*** *For sale by all Booksellers. Sent post-paid on receipt of price by the Publishers,*

1,000 MILES
OF THE
UNION PACIFIC
RAILROAD
ARE NOW COMPLETED.

As 500 miles of the western portion of the line, beginning at Sacramento, are also done, but

267 MILES REMAIN

To be finished, to open the Grand Through Line to the Pacific. This Opening will certainly take place early this season.

First Mortgage Bonds
AT PAR.

By its charter, the Company is permitted to issue its own FIRST MORTGAGE BONDS to the same amount as the Government Bonds, *and no more.* These Bonds are a First Mortgage upon the entire road and all its equipments.

THEY HAVE THIRTY YEARS TO RUN AT SIX PER CENT., and both PRINCIPAL AND INTEREST ARE PAYABLE IN GOLD.

The entire amount of the mortgage will be about $30,000,000, and the interest $1,800,000 per annum in gold. The present currency cost of this interest is less than $2,500,000 per annum, while the gross earnings for the year 1868, FROM WAY BUSINESS only, on AN AVERAGE OF LESS THAN 700 MILES OF ROAD IN OPERATION, WERE MORE THAN

FIVE MILLION DOLLARS.

As the supply of these Bonds will soon cease, parties who desire to invest in them will find it for their interest to do so at once. The price for the present is par and accrued interest from January 1, in currency.

Subscriptions will be received in New York

AT THE

Company's Office, 20 Nassau St.,

AND BY

JOHN J. CISCO & SON, Bankers,

59 WALL STREET,

And by the Company's advertised agents throughout the United States.

Bonds sent free, but parties subscribing through local agents will look to them for their safe delivery.

JOHN J. CISCO, Treasurer,

NEW YORK.

Jan. 20, 1869.

The First Mortgage Bonds of the ROCKFORD, ROCK ISLAND AND ST. LOUIS RAILROAD COMPANY pay both the Principal and Seven per Cent. Interest—1st Feb. and 1st Aug.—in GOLD COIN, Free of Government Tax.

A limited amount only of these Bonds may be had at par and accrued interest in currency, of H. H. BOODY, Treasurer, 12 Wall street: or of HENRY CLEWS & CO., Bankers, 32 Wall street.

MARVIN & CO.'S

NATIONAL
LIFE INSURANCE CO.
OF THE
UNITED STATES OF AMERICA,
WASHINGTON, D. C.

CHARTERED BY SPECIAL ACT OF CONGRESS.

CASH CAPITAL, $1,000,000,
PAID IN FULL.

BRANCH OFFICE:
First National Bank Building,
PHILADELPHIA.

To which all general correspondence should be addressed.

OFFICERS:
CLARENCE H. CLARKE, President.
JAY COOKE, Chairman Finance and Executive Committee.
HENRY D. COOKE, Vice-President.
EMERSON W. PEET, Secretary and Actuary.

This Company, National in its character, offers, by reason of its Large Capital, Low Rates of Premium, and New Tables, the most desirable means of Insuring Life yet presented to the public.

JAY COOKE & CO., of 216 Broadway, new Park Bank Building, are General Agents for this vicinity, with D. C. Whitman and J. U. Orvis, Managers, where applications for insurance on the most favorable terms will be received.

ÆTNA
INSURANCE COMPANY
OF HARTFORD.

INCORPORATED 1819.

CAPITAL, - - - - - $3,000,000

NEW YORK AGENCY:
62 WALL STREET.

Assets January 1, 1869, - - -	$5,150,931 71
Liabilities, - - - - - - - - - -	289,553 98

FIRE AND INLAND INSURANCE.
Policies Issued PAYABLE IN GOLD when Desired.
JAS. A. ALEXANDER, Agent.

STAMFORD INSTITUTE FOR BOYS.

A family school founded 1850. With a limited number, special encouragement is given to backward or timid pupils, and unusual attention to individual peculiarities. Physical culture a specialty, including Military Drill, Gymnastics, and Boating. Ample grounds, with buildings and appointments complete, in every respect. Boys fitted for College, business, West Point, or Annapolis. Circulars with references sent on application.

W. C. WILLCOX, M.A., PRINCIPAL, Stamford, Conn.

COLGATE & CO.'S
FRAGRANT TOILET SOAPS.

A variety of kinds of superior excellence for sale by first-class druggists and family grocers, and by all dealers in fancy articles.

The Nation.

The Week.

ON Wednesday week the Judiciary Committee of the Senate reported, with amendments, the bill, which, as we know, has not the approval of the chairman, for the enforcement of the Fourteenth Constitutional Amendment in Georgia. It was allowed to lie over. On Thursday everything was Tenure-of-Office Act, and the same thing is pretty nearly true of Friday. But on the latter day there was some discussion of a bill, introduced by Mr. Sumner, directing the payment of claims by British shipowners for vessels illegally seized during the rebellion, and so declared to be by our courts. Mr. Stewart, of Nevada, expressed opinions in regard to the impropriety of taking this action which one would hardly expect from a grown man. On Saturday Mr. Casserly, of California, made his first appearance on the floor, delivering what from the synopsis seems to have been a creditable speech in favor of repealing the Tenure-of-Office Act. Messrs. Schurz, Carpenter, Thurman, and Scott have also spoken on the same bill, and are the new senators who have acquitted themselves best—Mr. Carpenter perhaps leading. On Monday, nothing of consequence was done. Mr. Fessenden reported a joint resolution ordering the correction of an error which somehow crept into the Civil Appropriation Bill last session. It seems that a certain provision of the bill—one directing that owners of bonded warehouses must reimburse the United States for the salaries of store-keepers—was omitted in the engrossing. This was a provision which it is not very doubtful that the Whiskey Ring was willing enough to keep out of the statute-book.

This same affair of the engrossing of the Civil Appropriation Bill was the cause of an altercation in the House in which the prominent figures were Mr. Schenck, Mr. Butler, and Mr. Holman. Mr. Butler, having possessed himself of the facts, proceeded at once to make statements which in substance amounted to these charges: that the engrossing clerk had been bribed by the Whiskey Ring to leave out the omitted clause; that, if that were not the case, he at any rate got his orders to do as he did from some superior who had been bribed; that in all probability Mr. Holman, the chairman of the Enrolment Committee, was corrupted; that very likely the chairman of the Committee of Ways and Means was at least cognizant of the crime, if not a principal in it. All these things, and more, Butler said with his accustomed gentleness. Mr. Holman remarked that he did not know by what authority, or by command of what position, the gentleman from Massachusetts indulged in such false insinuations, but finally came to the conclusion that they "could only have been suggested by a willingness" (on Mr. Butler's part, apparently) "to perpetrate just such a fraud on the legislation of the country." Mr. Schenck, for his part, asked to see Mr. Butler reduce his flings to definite charges against anybody if he durst; and Mr. Butler told Mr. Schenck that he knew all Mr. Schenck's ins and outs, and would yet investigate them fully, and so on.

The House took the usual course on such occasions, and the joint resolution for rectification was agreed to. As to the insertion of the omitted provision when the law was first passed, it appears certain that it was only done by some of that manœuvring which is so common in the last stages of an appropriation bill. Mr. Sherman seems to have hinted as much when the resolution came up for consideration in the Senate. On Wednesday week was the time of this fracas. The clause, in reality, operates as an increase of the whiskey tax, and its proper place was the Tax Bill. On Thursday, Mr. Butler's Committee on Reconstruction reported in favor of extending for a month the time during which an "unreconstructed" Southerner may retain his Government employment. This was the Senate's scheme. Mr. Butler opposed it, and succeeded in getting the resolution repealed in spite of the favorable report. As the day of the failure of the House to concur was the last day of grace for them, the bill of last session is now in operation. On Friday and Saturday, the House was not in session. On Monday, Judge Lawrence made a furious onslaught upon the Indian Ring, and incidentally upon the Senate, because that body, under cover of the treaty-making power, takes land and gives it away to Indian "nations" with which we have been at war. This is as much as to say that some senators have found out a way of trading in land which they get for nothing, for everybody knows that land in an Indian's hand is on its way to the hands of the white speculator. Judge Lawrence was called to order, but not till he had told some truth. On the same day it was decided that a committee should be appointed to study the decay of American commerce.

For the whole week the Tenure-of-Office Law has kept the Senate busy, and the debates in the chamber and in caucus have kept the office-seekers on tenterhooks. Some of them have senators' promises, which will do them little good if Grant remains as fixed as he seems to be now in his determination to make no appointments, except to vacant places, till the obnoxious statute is repealed, and some again, but these not of the baser sort, are waiting for Grant's hands to be untied. What with both classes together, the city has been the abode of heart-burning and anxiety, and senators have had no rest. Some of the debates have been unusually acerb for the dignified Senate; Mr. Morton and Mr. Conkling especially—but that was in caucus—became extremely bitter and personal. Mr. Morton may stand for the senators of whom their enemies say that they are toadying Grant, while Mr. Conkling may represent those of whom their enemies say that they selfishly oppose the repeal of the act because they want to keep in their own hands a power which enables them to buy neutrals, pay friends, and punish foes. The House is, of course, not particularly well pleased to see all the rich pastures in the full possession of Mr. Butler's "interlopers," and their interloping is no more to his taste, we imagine, when they invade this field than when they invade the chamber of the House. Grant, meantime, takes the ground, which we may be sure does not overmuch delight some of our senators who are so zealous for the "principle of the bill," that he is morally as much

bound by the law when the Senate is in session as when there is a recess; he cannot remove from office for the reason that he himself may feel sure he could fill the place better than it happens to be filled, and if he does not see his way clear to making a legal case against the person, he prefers, on the whole and for the present, to ask but little of the Senate's help for making and filling vacancies. It seems to be very largely a question of which side can hold its breath longest; and as the House is obstinate and Grant is not distinguished for vacillation of character, it seems not highly improbable that the Senate may be obliged to give up its idea of suspending or amending the law and allow its repeal. We should then, at least, have something like responsibility on the part of the appointing power. We do not see that any of the anti-repeal senators point out to us how we are going to hold them to any responsibility.

But there has been up to the present moment no real debate in the Senate on the repeal of the Tenure-of-Office Act, and, judging from present appearances, there will not be any real debate on it. The "previous question," under which so many legislative monstrosities are saved from examination in the House, is not known in the procedure of the Senate, but its purpose is served nearly as effectually by the secret party caucuses. Two of these meetings have been held by the Republicans during the past week, to decide on the course to be followed by the majority (reporters are excluded from them); and here the arguments are used, and the reasons given, and the displays of personal feeling made, by which the fate of the measure is to be finally decided. The position of the Senate in this matter is peculiar, inasmuch as it is in a certain sense a personal matter. The Senate, as a body, is believed by a large portion of the public to have taken, and to be taking, advantage of the recent troubles to appropriate to itself a larger share of authority than is its just due; and the reluctance of a great many individual senators to vote for the repeal of the Tenure-of-Office Act is ascribed to their desire to share as largely as possible in the corrupt use of Government patronage. Open debate is the only way of meeting and disposing of these injurious suspicions, to say nothing of the moral obligation to debate openly, as a means of diffusing popular instruction and maintaining legislative responsibility, which rests on every legislative body in a free country. The Senate is getting more and more into the habit of doing its talking in secret, and reserving nothing for the public sessions except blind votes and the reading of long essays on general questions. Now, the country ought to know not only how a senator votes, but why he votes. Every senator cannot be expected to give his reasons for his opinions, but a few leading members of the party ought to give *in extenso* the arguments which have weighed most with the main body. Caucuses are, no doubt, useful and necessary, but only when confined to the arrangement of the general plan of operations and the distribution of parts amongst the leaders. The debates ought to be public, and the press throughout the country ought to insist on it. The tide of jobbing and corruption is running higher and higher, and the "previous question" and the secret caucuses help to swell it.

The United States bonds are mostly, as everybody knows, held as an investment by people who want a steady income from a reliable source. It is as much the duty of the Government to pay the interest on the day named, or as soon thereafter as called for, as it is to pay the full amount. Mr. Boutwell has just addressed a letter to Congress asking for legal authority to anticipate the payment of the interest by one year, using the surplus gold in the Treasury for that purpose; and a bill has been introduced into the Senate by Mr. Sherman allowing the Secretary, whenever he makes such prepayments, to make a rebate of interest at the rate of six per cent. per annum. There can be no objection to this, if it is to be left optional with the bondholders whether or not they will accept prepayment; but the wording of the bill seems to indicate that they are to have no choice in the matter. If so, all we can say is that anybody who finds interest he does not want and cannot invest forced on him before it is due, with six per cent. discount taken off it, may rightly consider himself cheated. On persons of small means the process will be a very great hardship in various ways, and it will be, in fact, a direct breach of faith on the part of the Government. The time and manner of paying the interest are part of the contract.

The passage of the Public Credit Bill, and its prompt signature by Grant, is having an excellent effect on the public credit at home and abroad, and it really seems as if there was at last a prospect of getting out a loan at four or five per cent. But even if we had one out, we should still not be back to specie payments without using the borrowed money to pay our bills, and it is difficult to see what better use gold accumulated in the Treasury could be turned to than preparing for the redemption of greenbacks. The accumulation of surplus gold in the Treasury in sufficient quantities to pay United States promissory notes on demand is the only mode in which we shall ever get back to a specie basis; and what difference does it make whether it comes into the Treasury by loan or by taxation? But there seems to linger in some quarters still a strong faith in the metaphysical mode of paying public debts known to Mr. Greeley and Mr. Sumner as "*willing* specie payments." We hope Mr. Boutwell is not afflicted with this form of delusion, but it looks as if he was.

General Grant is, it is said, about to do a very creditable and hopeful thing, in selecting his Indian agents from amongst the Pennsylvania Quakers. Quakers have, like other men, their faults, but amongst their virtues are found the capacity and will to deal fairly with the ignorant and the weak, and the finest chapter in the history of the sect is that which tells of its upright treatment of the Indians. If Grant succeeds in carrying out his plan, it will be one of the many proofs he has given, and we have no doubt will yet give, of the advantage of having a man in the Presidency who "has had no political experience," and has not learned, therefore, "to take care of his friends." There are few offices over the withdrawal of which from the list of political prizes so many rascals will gnash their teeth as these Indian agencies. We have, however, while upon the subject of appointments, to express our regret that Mr. Montgomery Gibbs is still even talked of for the Secretaryship of the Paris Legation. Mr. Gibbs may be a very estimable gentleman, but with a large and worthy and perspicacious portion of the public he is not in good odor. One thing against him is that he was sent abroad in 1863 to report on the mode in which foreign imports into this country were valued in the invoices, and that a Congressional committee, which investigated his doings after his return, reported that he was not considered in New York "a desirable exponent, advocate, or representative of an individual enterprise requiring responsibility, integrity, and veracity;" that he had while abroad "made for himself an unenviable reputation," and that he had while there "resorted to shifts, disguised names, constant misrepresentations, purposely to mislead, deceive, and entangle," from which the Committee not unnaturally infer that it was well-nigh "impossible he could be a gentleman and man of honor." We may guess, therefore, the effects upon the American name, and the efficiency of American diplomacy, of the appearance of a Secretary of Legation at Paris with this kind of reputation, and of whom a Committee of Congress has spoken in this fashion.

The *New York Times* has published this week a résumé of the operations actual and prospective of the leading railroad operators in this State, showing that they are already, by an ingenious and audacious system of combination, almost, and soon will be completely, in possession of the government of the State; that they control the Legislature, have apparently cowed the Attorney-General, and have at least some of the judges in their possession. Of the character of these great operators, and of the politicians with whom they have lately entered into a league and with whom they are now sharing the spoils, we need not speak. The same paper contains a letter on the composition and behavior of the present Board of Education in this city, which we also commend to the attention of those excellent gentlemen who are getting up a movement in favor of the Cubans. We may mention as another subject worthy of their consideration the revelations daily making about the condition of our prisons. Everybody engaged in the work of reform is mourning over the lack of public spirit which he encounters on all sides, and it is therefore somewhat discouraging

to find money and enthusiasm which might do so much good at home expended on Cretans, Cubans, Hellenes, Haytians, and other nations, tribes, and races about whose wrongs and rights not more than one of us in a million knows anything at all, and this one probably only just enough to make him vehement and noisy.

The last despatches from Commander Abbott, who is cruising off Hayti in the United States steamer *Yantic*, contains some amusing details with regard to one of the civil wars now raging in that island, owing, as Mr. Banks would have us believe, to want of good advice from outsiders as to the utility of the ballot in the settlement of political differences. It appears that, early in February, President Salnave had a rebel named Domingue shut up in the city of Aux Cayes, and on the 4th ult. announced his intention of bombarding it unless at once surrendered. The American Minister had an interview with Domingue and his "cabinet" to see whether some arrangements could not be effected that would put an end to hostilities, but found this band of sages ready to fight it out to the last. One plan of a pacific nature they were ready to adopt, but one only. Domingue said he had written to Mr. Seward offering to "cede to the United States *that portion of the island under his control*," and he asked the Minister to use his influence to keep Salnave from bombarding "till Mr. Seward could be heard from." This the brutal Minister refused to do. A few more "reports" from Mr. Banks, and we shall have every little rebel in the West Indies and South America offering to cede to the United States the ground he squats on, and asking for a suspension of hostilities till an answer can be received from Washington. The principal duties of Domingue's "cabinet" seem to consist in the execution of disaffected persons; and the population of the island appears to be divided into grades of rebels—every rebel having rebels of his own, from the head down, and the hangings and shootings go on through all grades, and each grade is ready to sell the island over to us for a small sum in ready cash. The Banks theory seems to be, that if it were once in our possession the inhabitants would suddenly take to town-meetings, Sunday-schools, lyceum lectures, church building, and monthly magazines; and that when anybody did anything wrong he would shut himself up in prison, and pay the expenses of his own trial.

The late news from France consists principally of the death of Troplong, another old and faithful servant and supporter of the Emperor, and perhaps the most respectable, and the Haussmann trouble about the debt of Paris. Troplong was an old lawyer of high character and considerable ability, who was both president of the Senate and of the Court of Cassation at his death, and the Emperor is likely to feel his loss severely, as the new men who are stepping into the places of these departing followers by no means hold the Imperialist ideas in their original purity. In the Haussmann case the Emperor has sustained the worst defeat of his reign. M. Rouher only defended the baron in a half-hearted way, and promised that his exploits should not be repeated, although the great restorer and beautifier is known to be a special pet of the crown. In fact, it is said that some of the most expensive bits of demolition were due to little dashes of red pencil made by the Imperial hand on the Haussmann maps. The excitement over the baron's prodigalities has been increased by the circulation of an appeal to charitable ladies from a Paris curé, who says "the erection of new and magnificent buildings has driven all the poor into the outskirts;" that in his arrondissement there are 10,000 persons inscribed on the relief-lists; and that in his parish of 25,000 inhabitants there is not a single family who can help him in the work of charity. In fact, a state of things is showing itself in the Paris suburbs, as the result of the Haussmann operations, not far removed from that to be witnessed in the East end of London.

Lamartine, as Emile de Girardin cruelly says, "ceased to survive himself" on the same day on which M. Troplong died. His chief title to fame as a politician was his success, by one happy speech, in staying the violence of the mob in February, 1848, when it was proposed to hoist the red flag. His epigrammatic eulogy of the tricolor, "the flag of liberty and glory," was a great hit, and raised him out of the rank of a dreamy poet into that of a statesman. But he did nothing afterwards to justify his reputation, and his closing years were clouded by a curious mixture of generosity and mendicancy. He was overwhelmed with debts, which he was very willing to have other people pay, but this did not prevent him from giving (for him) enormous sums in charity. His friends calculate that he must have disposed of $60,000 or $70,000 in this way. An attempt is making to raise money for a monument, but the number of the disgusted is so great that the work goes on slowly.

In spite of the growth of poverty in Paris, and the rapid increase of the national debt, and the peaceful talk of the Government, it shows no sign of any desire to cultivate a pacific spirit amongst the people. The leading military paper, the *Moniteur de l'Armée*, which is the official organ of the Minister of War, recently had an article strongly eulogizing war as the best friend of mankind, the great civilizer, purifier, and regenerator, and denouncing the Bourse, and the "gentlemen of the pen," as the great enemies of the race. France, it says, is well armed and well fortified, and will remain so, in the interests of civilization as well as of honor and patriotism. The Erckmann-Chatrian novels are, however, acknowledged on all hands to have almost destroyed amongst the middle classes the old love of military glory. The old sergeant and the bluff general who had made the retreat from Russia are fast vanishing from the stage in Paris, and when they appear are laughed at. But any real diminution in the army under the Empire is clearly hopeless.

There is as little known about the future Government of Spain as ever there was. When the provisional governments resigned their power to the Cortes three weeks ago, Serrano, Prim, and Admiral Topete made speeches in which they severally spoke with great frankness of the part they had played in bringing about the revolution, as well as of the motives which had actuated them. Prim in particular denied that he ever had had any intention of putting the Prince of Asturias or any other candidate on the throne, and said that his sole desire and that of his colleagues was the good of the country, and that all he claimed was the right of every citizen to the free expression of his opinions. During the debate which followed, he and his colleagues had to stand during three days incessant vollies of vituperation from all the malcontents and disappointed and offended persons, but a vote of thanks to the Provisional Government was nevertheless passed by 180 to 62. The main difficulty of the Government now is financial, as we have pointed out elsewhere. If the insurrection in Cuba is to be repressed, it will take, according to the most favorable accounts, 50,000 men and a great deal of money; and heavy drafts of men and money will naturally provoke discontent. If Cuba is lost, it will be owing to royalist misgovernment in the past; but the present rulers will, nevertheless, have to bear the blame.

Upon the question whether Cuba will or will not be lost, it is almost impossible to form an opinion. The reports of insurgent successes which appear in the New York papers, will be found on examination to have no basis to which anybody who has had any experience of the way news is manufactured in the earlier periods of an armed conflict, especially if the theatre of hostilities be a thinly settled and partially civilized country, will attach much importance. In fact, a person who asserted that no combat or battle had as yet taken place in Cuba at all, and that the insurgents have no organized force at their command, would be entitled to a respectful hearing. It would pay any New York daily paper well to send a correspondent to the scene of action, charged to describe what he saw, and strictly forbidden to serve "the cause of human freedom" by any reflections of his own. Those who most strongly desire the independence of the Cubans, amongst whom our ignorance of the people and of their political capacity prevents us from numbering ourselves as yet, are perhaps more interested than anybody in knowing the real prospects of the insurrection. As regards the annexation of the island to the United States, we shall advocate it vigorously as soon as we see this State a little better governed. In the meantime, we are by no means anxious to provide fresh hunting-grounds for the members of American "rings."

THE DEMOCRATIC OPPOSITION.

Those who had hoped that the Democrats would learn wisdom from their defeat last fall, and show themselves after Grant's inauguration and the increase of their forces in the House more fit than they had heretofore proved for the part which a political party has to play, must by this time see their mistake. The best policy for them was clearly to have abandoned the extreme positions on which they based their July platform, and to discover some moderate ground which might cause a division among their enemies. From any point of view, what could be plainer than that the negro question and open repudiation were settled by the election of Grant; that the two points of equality before the law and payment of the debt were precisely the ones which gave the Republican party its strength; that the field of battle selected by the other side, and on which the other side had just been victorious, was not precisely the one on which to renew the fight. These things, one would say, lie upon the surface.

Clear, however, as this may be to an indifferent spectator, it does not seem to have occurred to the minds of those chiefly interested. The two chief acts of the party since the election have been a vehement opposition to the Fifteenth Amendment, and a solid vote against the bill to strengthen the public credit. While this has been going on in Congress, affairs have been managed no better outside. The *World*, a journal to which one naturally looks for an intelligent view of the situation of the party which it represents, appears to believe still that the negro question may be reopened, and the reconstruction laws annulled at any moment, and conducts its opposition to the Republican party in exactly the same way, so far as we can see, as it did in the year 1865. We have looked with a good deal of interest to see what the view of such a paper as the *World* would be as to the proper course for its party after the elections; but beyond unmitigated abuse of the Administration, we do not see that anything new is proposed. To-day we find a whole column of extracts from Washington, Jefferson, Adams, and other worthy statesmen, to prove that Grant is a conceited man, and that when he said, "I accept the position without fear," a modest man would have said, "Overwhelmed as I am with the enormous responsibilities of the position to which the suffrages of my fellow-citizens have so unexpectedly exalted me, and totally inadequate to the task as I feel my humble powers to be, yet, nevertheless," etc. The next day Grant is accused of selling the offices in his gift, and we are informed that Stewart and Hoar were given seats in the Cabinet for value received. But the most amusing thing of all is, that the *World* feels called upon to make a manful stand against the establishment of a monarchy on the ruins of our distracted republic. We are asked to consider the satrapesque appointment of the monster Rawlins, and the ominous selection for private secretaries of myrmidons such as Comstock and Porter. If an indignant public would like to know what all this means, they may as well sooner or later be informed that "the radical party has set a train of causes at work which tend irresistibly to the establishment of a monarchy, and by the shortest and speediest route by which that result could be reached." Mr. Brooks, at his best, never achieved hits so happy as these. The melancholy side of this is, that it confirms the dominant party in their foolhardy belief that they have nothing to fear from opposition, that any argument urged against their measures must be without weight, that the world is really divided already into sheep and goats, and that no sane man can doubt which are which. It may be safely said that no Republican journal, not even the *Tribune*, would make use of tactics such as we have been describing against a Democratic President of Grant's calibre. It is not considered necessary for Republicans to quarrel with Hoffman's vetoes of private bills merely because he is a Democrat; on the contrary, these vetoes have been wisely commended by the Republican press as dictated by a sound policy. If the governor had been a Republican, we should have been assured by the opposition that the veto power was used to affect the price of stocks, and that "this was Republicanism!"

The difficulty with the Democratic party during the last few years has been not unlike that with which the Tories in England have been oppressed: the trouble is, as Mill says, not that every Democrat is a stupid person, but that every stupid person is a Democrat. The leaders do not appear to understand the difference between what is possible and impossible. Their absurd position during the war, now bitterly opposing it as the work of fanatics, and now gravely insisting that they should be entrusted with its prosecution, their fatuous attempt at the close of the war to dictate the terms of peace in the interest of the South—an attempt which resulted in unrestricted negro suffrage and absolute military government for the people whose fortunes they undertook to protect, their futile attacks on the public credit, their alliance with Johnson, their selection of Seymour and Blair, their obstinate refusal to be guided by moderate men, their stanch adherence to those points on which they had suffered defeat, and apparent inability to choose new positions—all these things have made those who would really like to see a strong opposition party, despair of any such good chance.

What people who have the interests of good government at heart really desire is, that the Democratic party should be of such a character that it may serve as a check on the Republican. It has been almost impossible during the last few years for any conscientious man to vote except with the latter, although there have been many occasions when conscientious men have sincerely wished some such course were open to them. The great value of a minority lies in its acting as a check upon the majority, and in being able to inspire the majority with the fear that that force may change sides; but that this good object may be attained, it is absolutely necessary that the minority should behave like a party of grown men

Now suppose the Democratic leaders—such of them as are sensible men—were to ask themselves in sober-serious earnest what could be done for the success of the party? Surely attacks upon the Reconstruction laws would not seem to be the key to the situation. At any rate, they have been tried for four years and have for four years failed. Is the antipathy of race any better? It is clear that the negro is to vote; and as he is to vote, the old quarrel would seem to rational persons at an end. At any rate quarrelling will not disfranchise him. It is a corollary clearly deducible from this, that abuse of those godless men the Abolitionists is out of place. What then would it be worth while to attempt? As a guess, which we hazard for what it is worth say Reform, or even a pretense of reform. Let the Democrats even pretend that it is their first object to get fit men for such offices as are in their gift, to expose corruption and inefficiency wherever they see it, to defend the public credit, to assist Grant in keeping the revenues of the Government out of the pockets of the "rings." Let them abandon the defence of lost positions, forget Dr. Morton's craniology, and the long hair of the friends of freedom, and in a year they will be what they desire to be, a party really dangerous to its enemies. But we have very little hope.

THE WINDING-UP OF RECONSTRUCTION.

A bill has been reported in the Senate providing for the abolition or suspension of civil government in Georgia, and the relegation of the State once more to military rule. The committee which has reported the bill has, however, been unable to agree upon any recommendation with regard to it, and has consequently confined itself to presenting it, and leaving the Senate to do as it pleases about it. The present position of the State is, it must be admitted, even worse than anomalous. It has fulfilled all the conditions prescribed by the Reconstruction Acts for readmission to the Union, and its admission has been officially announced; but the Senate has refused to allow its senator to take his seat, because certain other things, for which the Reconstruction Acts made no provision, have taken place. The legislature, for instance, in the exercise of a right which has never been denied to a legislative body, and which was expressly conceded to it by the Reconstruction Committee of the House of Representatives, have expelled the negro members, and have not shown the smallest desire or intention of reinstating them. Now, this is very bad; but then Congress did not stipulate that negroes in the reconstructed States were to be capable of holding office: it would, doubtless, have been well if it had done so, but its failure to say anything about it of course left it open to the white men to exclude negroes from office. What Congress and its supporters throughout the country said was, that if you gave the negroes the ballot, all other rights and privileges would follow; that politicians would not dare to subject so large a

body of voters to any disability based on color. In fact, this argument did service all through the reconstruction controversy in the forefront of the battle; we frequently made use of it ourselves, and it formed the principal point for two whole years in most of the speeches in defence of the Congressional policy. So much stress indeed was laid on it that a great many people begun to look on the ballot as a panacea, and do still talk of it as a panacea. At a meeting about the Indians a few months ago, in this city, one speaker called on the Government to give the savages the ballot, and all would be well; and we hardly ever hear now of a woman being beaten by a drunken husband or seduced by a false lover, that the ballot is not loudly demanded for women, in order to prevent the recurrence of such calamities. The question of the care and education of the children of divorced persons will, in many parts of the country, should divorcing go on at the present rate, soon become a serious question; and we should not be at all surprised to be told to give the unfortunates the ballot and they would take care of themselves.

Now, we do not see what has occurred to shake the faith which any thinking man has ever had in the ballot as a means of protecting negroes against political disability. Anybody who supposed that its effect would be *immediate* can never have given much attention to the subject, and ought never to have opened his lips about it. The ballot is to the negro a weapon of defence, but it was very foolish to suppose that it would prove an effective weapon till he had learned to use it. As soon as negro voters have learnt to combine as the Irish or Germans have, and have developed mutual confidence and collusion, and have agreed on the marks by which they are to distinguish their enemies from their friends, we feel satisfied that there will be very few white politicians bold enough to deny them "any office in the gift of the people." To cheat and oppress them in other ways, plenty of politicians will doubtless be ready; but we no more expect to see Southern politicians preaching ten years hence the incapacity of negroes to hold office than we expect to see Fernando Wood or James Brooks denying the fitness of Irishmen for seats in the New York Common Council. In fact, when we read, the other day, of Mayor Hall reviewing the St. Patrick's procession in a suit of green with a green necktie, we felt that the day was not far distant when the governor of South Carolina or Georgia would prepare for the reception of colored deputations by giving his face a good coat of yellow ochre and having his hair dyed black and curled.

What Congress ought to do now, it seems to us, after talking so much about the efficacy of the ballot, is to give the ballot a fair chance. Let the negroes learn to use it by actual experience of political life. We have no hesitation in saying that we believe it will be in the long run infinitely better for the negro race in Georgia to be excluded from office now, and only to secure office in the American way, after years of hard-fought agitation, than to be thrust into office at once by the aid of Congressional coercion, and coercion, too, involving a complete nullification of the terms of reconstruction as set out on the statute-book. The negro must, if he is to be a citizen in truth and in deed, begin to be a citizen at once. He cannot be a citizen and a ward at the same time. There is no permanent peace in the American system of government for a body of persons who are allowed first of all to vote for what they want at the elections, but who, if they do not secure it by voting, are to be put in possession of it by the arm of military authority. If Irishmen were excluded from the New York Legislature by a vote of both houses, the result would be that the Irish voters would band together for the defeat of their enemies at the next election, and for the exposure to the public at large of the injustice of which they had been the victims. Is there any political future open to the negroes if they cannot make up their minds to do likewise? And how can we expect their political education to go on favorably when their first thought after a political defeat is not renewed agitation, but an application to Washington for military aid, and when they find a majority of the Senate ready to supply them on demand with this most delusive and dangerous of all medicines, and this, too, in positive violation of Congressional enactments?

The argument that the State ought to be relegated to military government because there are so many unpunished outrages committed in it on negroes and white Unionists is one which, in view of the fact that the supporters of Congressional reconstruction confidently asserted that if the negroes had the ballot such outrages would cease and military government would not be necessary, they ought now to be ashamed to use; but waiving this objection, we may fairly ask, What is to be gained by setting up a military government once more, which will have no attribute of a military government except its not being a civil government? Military government is a better means than civil government of suppressing crime and outrage only in so far as its agents are more numerous and watchful and its processes swifter and surer. But the United States army has been reduced to such a degree that what Congress proposes to substitute for the existing State organization would be a military only in name. The governor would be called a general and wear a blue coat instead of a black one, the legislature would cease from troubling, but here the change would end. The police, which is the essence of military government, would be no better than before. The general would, in default of soldiers, have to keep the peace and punish crime through the sheriffs, and the sheriffs would be just as efficient as they are now, that is to say, the operations of the Ku-Klux Klan would continue, and the hates and divisions to which the Ku-Klux outrages are due, instead of dying out, would every day gain in force. For the establishment of real military government—that is, a military force large enough to cover the State with posts and render crime difficult and punishment certain and terrible—there is, in a community in the condition of the South, much to be said; but a sham military government, such as Congress talks of setting up in Georgia, can only aggravate the social disease from which the State is suffering.

It is becoming plainer every day that the time for makeshifts by way of governing the South has gone by. With a President firmly resolved to execute the law, and with officials in sympathy with the law, and a powerful public opinion at their back, and with a constitutional amendment pending which will place their rights finally out of the reach of local legislation, the Southern Unionists are either, if they have any political value at all, fit to enter the ordinary political arena and hold their own, or the whole process of reconstruction was a mistake and is a failure. The latter proposition we do not admit, and the only course open to the Republican party, it seems to us now, is to adopt the former. It appears to be generally agreed that we are "to have peace," but peace we cannot have in the United States except under normal civil government working by ordinary processes, and liable to be reformed in the ordinary way. Military control of the States once relinquished, it will have to be given up for good. It will never do to leave civil government over half the continent liable to be suspended for an indefinite period, whenever the majority in Congress thinks the Courts have not done their duty or legislative bodies have not taken just views of their powers.

Harper's Weekly said the other day, in reply to some utterances of ours on this subject, that the question between Congress and Georgia was, who was judge whether the contract on which reconstruction rests had been fulfilled by the State. We admit fully Congress is the judge; but we know of no contract between it and the States lately in rebellion except the one to be found in the statutes. It is proposed to turn Georgia out of the Union for doing things which she never agreed and was never asked to agree not to do, and which are not mentioned in any law providing for her restoration to the Union. The fact is, the idea that the South can be suddenly "regenerated" by bill or resolution, which has been so sedulously preached during the last few years, must be given up. Its absurdity was always demonstrable from history and principles of human nature. It has now been demonstrated by actual experiment. The regeneration must be the work of time, of education, of material prosperity, and the active participation of all classes in political life.

ECONOMIC RESULTS OF THE SPANISH REVOLUTION.

THE public attention has naturally been so much absorbed by the purely political side of the Spanish revolution that there has been little or none to spare for what has been on the whole one of its most

interesting, and will in the long run prove one of its most important, features, the economic one. The downfall of the monarchy left Spain with a debt of about $1,000,000,000. The excess of outlay over income from 1859 to 1864 was officially reported at $57,051,995, and in the period between 1850 and 1864 it amounted to $105,300,000. This was a pretty rapid contraction of debt for a country with less than 17,000,000 of population, in peace, with the exception of the short war with Morocco, and with no internal improvements going on. Since 1866, the disparity between the receipts and the expenditures has gone on increasing, but, strange to say, without any sensible increase in the taxation, so that public attention was not seriously called to the condition of affairs. Increase of taxation ministers were enabled to avoid, not as in France by resorting to public loans every five or six years, but by drawing on the bank of deposit, a kind of trust institution connected with the Ministry of Finance, established half a century ago, for the reception of property in litigation or belonging to legal trusts, as well as money of voluntary depositors, and paying on all a moderate interest. The funds of the institution ought to have been sacred, but as the difficulties of the Government increased the ministry got into the way of dipping into the deposits, and taking from them whatever was necessary to meet current demands for which the Treasury was not prepared. When the revolution broke out, therefore, there was due by the Treasury to the bank $65,000,000, and there was a deficit of nearly $3,000,000 in the revenue; in short, the Provisional Government found that they owed $70,000,000, and were bound to provide for it within a few weeks, in order to avoid bankruptcy, and knew very well that to attempt an increase of taxes in the midst of a revolution would have been madness. M. Figuerola, the new Minister of Finance, therefore, first of all resolved to issue a popular loan of $100,000,000 at 80, bearing interest at six per cent., the notes (of $100 each, to be redeemed yearly by lot, during the twenty years next ensuing. Of this sum he got just one-quarter—or a little over $25,000,000. He then, under an arrangement made by the defunct Government, borrowed $20,000,000 from M. Rothschild, on Treasury notes at three per cent.; and as a last resource, tried to raise money on the annual subsidy of $7,000,000 payable by Morocco, by way of indemnity for the expenses of the late war. What has been the success of this last-named operation we are unable to say.

M. Figuerola issued an address soon after he came into power, in which he made no attempt to make things look pleasant; he acknowledged the gravity of the situation, as Isabella left it and, of course, the revolution aggravated it. The collection of taxes was in a measure suspended, and in Madrid and some other large towns the "national workshops" had to be opened, in imitation of the mad French experiment of 1848, to prevent outbreaks amongst the poor; and as to the tariff, it was impossible to get anything more out of it, or to touch it except to lower it. Under it duties were levied on 736 articles, and the custom-house regulations were so vexatious as, in effect, to increase the burden by one-quarter. As soon as the "juntas," which in a former article we described as equivalent to American vigilance committees, sprang up on the overthrow of the royal authority, one of the first things they did was to attack the tariff, which they cut down by about 33 per cent.; but this mode of reform the Provisional Government could of course not countenance, and the duties were restored as soon as the juntas disappeared. But M. Figuerola formed a commission of scientific economists to aid him in the work of revising the tariff, and in fact the whole revenue system, with the view of submitting some carefully considered plan to the first Cortes. Amongst the reforms which he announced his intention of proposing to the Commission were a reduction of pensions, which would save about $2,000,000 a year, the pension-granting power, as might have been expected, having been grossly abused under Isabella, and the omission of about four hundred articles from the tariff, and a reduction of the enormous duties levied on the remainder. The Commission has resolved to recommend a reduction of duties to a maximum of twenty-five per cent.; but the change, as we understand it, is to be made gradually, taking three years for its completion. The only strong opposition to this free-trade policy comes from the Catalamans, amongst whom the bulk of Spanish manufactures are to be found; but if the Cortes adopts the report of the Commission, the reduction will begin at once.

Some more pressing reforms, however, M. Figuerola instituted himself, the first by a decree of the Provisional Government issued in October of last year, three days after he came into power. By it he abolished the octrois, or duties levied at the entrance of towns and cities in aid of the municipal expenses, and prohibited all internal custom-houses and custom-house lines, and substituted a capitation tax, to be levied on all persons of both sexes over fourteen years of age, in aid of the municipal expenses. Some weeks later he abolished, also by decree, the navigation laws—which are the oldest in Europe, being nearly three hundred years older than Cromwell's, from which ours are copied — prohibiting the levying of the differential duty on all merchandise brought into Spain under a foreign flag, as regards most articles, and reducing it greatly on others. Other decrees, issued the same day, removed the existing restrictions on the provisioning or repairing of Spanish ships in foreign ports, or mortgaging of Spanish ships to foreigners, and left Spanish captains free, which they had not previously been, to fix the number of their crews, and to take men of whatever nation they pleased. Under the old law, a Spanish captain could not ship any but Spaniards, even in foreign ports, let his wants be what they might. Of the multitude of dues levied on ships in port, on all sorts of pretences, he abolished a great number, and consolidated and simplified the rest.

In spite of the absolute protection against foreign competition which Spanish producers of all kinds have so long enjoyed, Spanish production amounts to very little, and in calculating the political and social prospects of the kingdom we have to bear in mind that it stands in the very lowest scale of civilization, and has nearly as much to do to get abreast with France or Germany, or even Italy, as Turkey herself. In the first place, Spain has no ordinary roads, so that the few railroads there are in existence, built by French capital, and miserably built at that, and worked most abominably, are of little use, except as means of getting to Madrid from three points on the coast and two on the French frontier. For the country through which they pass they do little or nothing, because there is no means of reaching them with goods. The stations are literally unapproachable; and the strange spectacle of roads constructed in haste, to enable the sovereign to make a journey in one of the principal provinces, with which the French were familiar under Louis XIV., has been witnessed in Spain within a year or two. The consequence is, that the commerce and industry are confined almost entirely to the sea-coast. There are mines both of iron and lead, copper, silver, and quicksilver, of considerable value; but fuel is scarce, and it is only when situated close to the sea that they can be profitably worked. Coal has to be carried inward, and ore as well as all products carried outward, on the backs of asses; and of course there are not many bulky products will bear much transportation of this kind, as it would, according to M. Casimir Delamarre, writing in the *Journal des Economistes*, take eighty-eight asses to load one wagon of eight tons capacity. Lead mines, in fact, are not workable at a profit at more than forty miles, and the iron mines at not over two miles from the sea. Of course this obstacle to the development of the mineral resources of the country is a still greater obstacle to the growth of its agriculture. The Spanish farmer has literally no market, unless he pursues his calling in the immediate vicinity of a large town, and even then only a very poor one, for scanty producers are always scanty consumers. Fuel is everywhere the great want of the country, as there are no forests, and the supply of native coal is scanty; but under the tariff, from 25 to 50 per cent. duty is clapped on foreign coal, thus rendering the growth of manufacturing industry almost impossible. There is, as might be expected, no working-class, properly so called, in Spain; and no middle class, and no nobility, possessing the least social or political weight. There is a peasantry, a professional and an official class, but no commercial or industrial class; and M. Delamarre produces from the official census of 1860 the astounding fact that out of a population of 16,673,000, only 3,130,000 are able to read and write; in other words, eighty per cent. of the people are grossly ignorant. It is easy to see from all this that the rise of Spain will necessarily be a slow process.

IS VACCINATION EFFICACIOUS?

A FEW centuries ago, when the Black Death, the Sweating Sickness, and the Plague made their occasional rounds through Christendom, it was customary for a people, depressed by something more than usually wrong in the public health, to relieve its feelings and restore public tranquillity by burning the Jews. The steady growth of Christian disabilities has deprived us of that cheap and obvious hygienic measure. The average American citizen has still the privilege of remarking, when driven to extremes by imminent cholera, that the last street-cleaning contractor is no better than —his predecessors, and of wondering, when he reads of small-pox such as now rages in California and in a dozen other parts of the country, why people are not vaccinated, and whether it be true, as he may have heard, that vaccination no longer exhibits its old efficacy. Probably, at the same time, he congratulates himself that he lives in a most respectable and salubrious neighborhood and is quite out of the way of exposure to that disease. It does not occur to him, any more than to that young mother with "her first," to whom that excellent lady, "the best of blessings in a sick-room," is hastening, that Mrs. Gamp, whose seat in the street-car he has just scrambled for, has come from vigils with this most portable of infections. He admires the dexterity with which the conductor deals out damp paper currency from one side of his mouth and slimy nickels from the opposite, but, though that functionary swears at him more hoarsely than usual, he does not suspect him of having small-pox pustules in his throat which, while they do not as yet impair his usefulness to his employers, make his distribution of change to the public more than ordinarily undesirable. When the American citizen, some two weeks afterwards, finds himself a most unpleasant patient, without a smooth square inch of surface, whom can he blame for it? Least of all men, living or dead, Doctor Edward Jenner, as these few facts and figures that follow, taken from a great accumulation of similar ones, may testify.

It is about seventy years since Jenner, after an exhaustive course of study and experiment extending through twenty-five years, published his great discovery of vaccination, with a religious faith not only that the process would be to every one subjected to it a perfect protection against the small-pox, but that this disease, then the most dreaded and destructive of all that afflict mankind, would be fairly exterminated from the earth. At that time the annual death-rate from small-pox in England was estimated at 3,000 in the million of population. In other countries of Europe the rate varied, in some cases rising to 4,000, and probably in no instance falling so low as 2,000 in the million. These, the fatal cases, should be multiplied by five or six, as nearly as we can compute, to give the entire number of subjects annually attacked by the disease. This loss of life is appalling. The loss of time, in cases not fatal, is something harrowing to the mind of the economist. But this is not the whole of the black story. It was estimated that two-thirds of the indigent blind in London had lost their sight by small-pox. The number of hopelessly deafened ears, crippled joints, and broken-down constitutions from the same cause, perhaps, cannot be reckoned, but it was certainly very large. Anybody who escaped from the disease without painful disfigurement of the face was called fortunate. Although it may seem unworthy to be mentioned in this connection, the mere destruction of clothing and utensils for the prevention of infection in so many thousands of cases must have formed no inconsiderable part of the waste of a nation. In those days, whatever a man might do, whether he would abide at home or travel abroad, by land or by sea, in summer or in winter, so long as he had not paid toll to the great pestilence and bought his freedom from it, it rose as a bugbear before him in every direction. Now it is well to recall such facts as these; the nineteenth century, in the comparative immunity it has enjoyed, is apt at once to forget the horrors from which it has been delivered, and to neglect the only means of protection against their return. Let us see what change has been effected by vaccination, where it has been most thoroughly done and its results have been most carefully observed and recorded.

This summary of English experience does not exhibit an extreme case, but it is specially instructive by its progressive character:

Periods compared.	*Annual Deaths by Small-pox in England and Wales.*	*Annual rate per million of the Population.*
1. Average of 30 years previous to introduction of vaccination, estimated by Dr. Lettsom and Sir Gilbert Blane	....	3,000
2. Average of three years (1838-40) when vaccination had become to a great extent diffused, but before any public provision was made for its gratuitous performance	11,944	770
3. Average of nine of the years (1841-53) when public vaccination was gratuitously provided, but vaccination was not obligatory	5,221	304
4. Average of the 12 years (1854-65) during which vaccination has been to a certain extent obligatory	3,967	202

In some countries where vaccination has been compulsory, and has been performed with conspicuous thoroughness, a very much nearer approach has been made to the fulfilment of the Jennerian aspiration, the extinction of small-pox.

"In Copenhagen, in twelve years before the introduction of vaccination, 5,500 persons died from small-pox; from the year 1802 to 1818, a period of sixteen years after vaccination had been peremptorily insisted upon, only 158 persons died of small-pox over the whole of Denmark."

In Copenhagen, for thirteen years, not one fatal case of small-pox occurred; the same was true, for eight years, in so large a population and territory as that of the Grand-Duchy of Baden.

For a striking example, look at the experience of the well-vaccinated British army for twenty years, from 1817 to 1836 inclusive. In dragoon regiments and Guards, with an aggregate strength during that period of 44,611 men, and a total mortality of 627, only *three* deaths were from small-pox.

Among the troops at Gibraltar, the aggregate strength being 44,611 men during that period, with a total mortality of 1,291, only *one* death from small-pox occurred.

In the West Indies several epidemics of small-pox prevailed during the period, but there were *no deaths* either among the British or white troops, of whom the aggregate strength was 86,661, and with a total mortality of 6,803. Among the black troops on the same station, with an aggregate strength of 40,934 and a mortality of 1,645, there was not *one case* of small-pox.

At Bermuda, ova Scotia, New Brunswick, Cape of Good Hope, and the Mauritius, not a death from small-pox occurred during the twenty years mentioned; and the white troops of Western Africa wholly escaped this disease, while the black unprotected population were dying by hundreds. These may serve as samples of statistics that might be multiplied by hundreds. Let it not be supposed that this amazing saving of human life has been at the expense of an increased mortality from any other disease. On the contrary, and notwithstanding the dire threats of "*Lues Bovilla*" and "*Facies Bovina*" fulminated by the early opponents of vaccination, the better we become acquainted with that discovery, the more purely beneficent does it appear to be. Thus it is noticeable in those countries where vaccination has been most thoroughly practised, that, leaving small-pox out of the question, there is a diminution of the death-rate from other causes; and this is so striking in the case of two of the most important classes of diseases, viz., scrofulous affections and continued fevers, especially typhoid, that some medical statists have attributed to vaccination an indirect protective agency in this regard.

Why is it, then, in the face of these facts, that small-pox still, occasionally and within certain limits, rages to the extent of an epidemic, so that, in popular esteem, vaccination has ceased measurably to afford its old protective power? Some of the best of the heads that study—like that, for instance, of John Simon, "Medical Officer of Her Majesty's Privy Council" —have been for years working insatiably at this question, and have answered it completely, with an array of figures which to doubt would be to fly in the face of the multiplication table. "Wheresoever vaccination falls into neglect," cries Mr. Simon from his mountain height of statistics, "small-pox tends to become again the same frightful pestilence it was in the days before Jenner's discovery; and wheresoever it is universally and properly performed, small-pox tends to be of as little effect as any extinct epidemic of the middle ages." Dr. Jenner inculcated, and his immediate disciples observed, certain conditions of thorough and successful vaccination, which have of late been forgotten or neglected, to the great detriment of the public health. The apparently trivial character of the operation has led to its slovenly and ineffectual performance. The most important of these conditions is that the vaccine lymph, just at the period of its perfect elaboration, should be transferred directly from the yielding arm to the receiving arm. In this country this plan is followed in probably an insignificant proportion of cases. The use of dried lymph, of varying degrees of activity down to complete inertness, is the rule, and here, apparently even more than in England, is Mr. Simon's assertion true, that millions of vaccinations have been performed with lymph which had lost its original power, with a resulting partial or total failure of protection.

Here, the medical practitioner, especially outside of large cities, is often at a loss to obtain any form of vaccine lymph. In England the National Vaccine Establishment has been, ever since 1808, a trustworthy and accessible reservoir of the virus, and its beneficent operations are well marked in the statistics already referred to. Our governments, if not our laws, in this country, leave us substantially without protection against small-pox.

There has been, it is true, a considerable amount of State legislation on this subject, but it generally looks to the commission of discretionary powers to town officers who may safely be relied upon as ignorant and piddling, and sure not to act, except in a momentary spasm induced by an unusual scare; town officers too often of the sort that maintains a pig in its backyard, and carries a bit of camphor in its pocket when cholera is said to be about.

We need, probably more than any other people of Christendom at present: First, a steadily working system which shall secure the proper vaccination of all infants at an age early enough to prevent any large accumulation of these most susceptible subjects of small-pox (the English law fixes three months as the proper age, except in special cases); and second, in view of the neglect and inefficient performance of vaccination in past years, especially of the fact that dark-skinned races, who form a considerable part of our people, are a favorite quarry of small-pox—a thorough inspection of adolescents and adults wherever, in schools and public institutions, they may be got at, to the intent of revaccination in that large proportion of cases in which it would assuredly be found necessary. It is perhaps expecting too much to look to Washington for help in a matter of this kind, but if the Central Government would

"All germens spill at once"

of that sanguine geoponic who scatters fossil seeds from the Patent Office, and instead set some competent officer to supply, with thoroughly trustworthy lymph in hermetically sealed glass-tubes, all reasonable demands from all quarters of the country, it would be much to the purpose.

It has taken England sixty-eight years to get her present system of vaccination enacted. How long shall we be in getting one as good?

ENGLAND.

London, March 5, 1869.

The great secret has been revealed: we know what Government intends to do in the matter of the Irish Church, and we look forward with interest to the battle which will soon begin to rage. I need not give at any length the details of the measure which Mr. Gladstone described on Monday last in a speech of three hours and a half. The Irish Church is to cease to exist as an establishment in the beginning of 1871. Its property, estimated at about £16,000,000, will pass into the hands of commissioners, who will have to carry out within about ten years the arrangements made necessary by the change. The Irish bishops will immediately cease to sit in the House of Lords, and the members of the Church in Ireland will be invited to form a new governing body, representing the clergy and the laity, which, on being approved by the crown, will be, as it were, the heir of the Established Church. It will receive that part of the property which is still to be left to the Church, as for example, everything that has been received from private endowments since the year 1660. The very large sums which have to be paid for compensation to the present incumbents of livings will also be handed over to this body. Every such person will have a right to an annuity during his life equal to the amount which he has hitherto received, and to be paid so long as he discharges the same duties. These compensations will swallow up a very large part of the capital of the Church, and the new body will start independent of the state with a very handsome property of its own. The Church will thus be reduced to the position of the Episcopal Church in America or of any of the dissenting sects in England. It will be a purely voluntary body, and the principle of a state church will be thus finally abandoned in one part of the British Islands. The measure is sufficiently thorough to leave no room for complaint on that score. The question remains, What is to be done with the revenues thus set free? and the answer, it must be admitted, sounds very insignificant—after all claims have been discharged and the concern is finally wound up, there will remain a revenue of from £300,000 to £400,000 a year. There was a considerable difficulty in determining how this should be spent. It could not, for example, be divided amongst the different religious bodies, because Government had pledged itself, partly by way of soothing certain Protestant antipathies, to do nothing in the way of endowing Roman Catholics or other sects, nor could it be given in aid of poor-rates, for such a plan would simply amount to making a handsome present to the land-owners. The scheme which has been finally discovered is to use the money in supporting deaf and dumb asylums and county hospitals, and in training nurses, and in similar purposes, which will help persons not in actual receipt of poor relief, but a degree or two above it. There is, it is said, a certain congruity in this plan to the original destination of the money—charity coming next door to religion. It seems to be generally agreed that this is, on the whole, the best arrangement that can be made, though the result is rather suggestive of the mountain bringing forth a mouse. After all the excitement that has been produced by what Mr. Gladstone calls a gigantic measure, the net positive result will be the handing over to charitable purposes a sum formerly employed in paying clergymen—the sum being in itself a mere trifle to that which is annually distributed in London from voluntary contribution. Whether the scheme, such as it is, will escape mutilation, is more than I can say, but to all appearance Government should have a decisive majority in the House of Commons. The Lords will hardly dare to do more than nibble at details, unless they are urged by their desire to gain importance into a spasmodic display of rather dangerous energy.

The scheme, however, suggests some remarks which have a considerable bearing on the future politics of this country. It is, I hope, a good omen that we have at least the prospect of carrying a measure dictated simply by considerations of justice to Ireland, even though the immediate practical results be small and the labor of carrying it somewhat disproportionate. In another sense, it is impossible not to see that it enormously increases the probability of a similar change in England. If a branch of our own establishment is to be separated from us, and we are constantly to have the spectacle of a free church, managing its own affairs and deciding on its own doctrines, the reaction upon English opinion cannot but be extremely vigorous. The prestige of our own establishment will be materially injured by the fact of such a measure being carried, and the subsequent working of the Church will be full of interest. Yet our Government, and especially Mr. Gladstone, continue to proclaim in the strongest terms their loyalty to the Church of England, and to refuse to draw the inference which every one else sees to be inevitable. Thus, for example, a bill has been introduced session after session for admitting English Dissenters to a share in the endowments of English universities, from which they have hitherto been excluded. Every Liberal is in favor of this measure, for which there would undoubtedly be a large majority in the House of Commons. Government has only to adopt it to make sure of its passing. Yet Mr. Gladstone has always looked askance upon it, and it is constantly allowed to be hustled out of the way and postponed till so late in the session that it dies a natural death before the Lords have considered it. The meaning of this is, that Government is still very anxious to keep on terms with the Church party. They are, as every one well knows, introducing the thin end of the wedge, or applying the first match to the powder-magazine, or, whatever metaphor may be preferred, initiating a process which cannot but end in a powerful attack upon the Church of England. Yet they dare not openly avow it, and the air of half-hearted reserve which this gives to their proceedings is only too significant of a certain feebleness in more important subjects. Our statesmen are still afraid of adopting the policy of "thorough;" they shrink from the logical consequences of their own actions, and they open up great questions with which they are unwilling really to grapple. They are like magicians raising the devil, but assuring themselves and their audience that when he comes he shall behave himself with the strictest propriety and moderation.

It is perhaps significant in a smaller way, that the House of Lords has lately been getting decidedly uncomfortable. Some ingenious gentleman wrote the other day to the *Pall Mall Gazette*, to propose that they should reform themselves by getting up interesting debates, and generally by being more lively and entertaining. This naive proposal is something like recommending the Ethiopian to change his skin, and the leopard his spots. If the Lords are dull and decorous, it is simply because, to quote the words of the poet, "God has made them so." However, they are beginning to betray a certain disquiet, an uneasy suspicion, that if they do nothing and say nothing, people will begin to think them of no use. Lord Salisbury—better known as Lord Robert Cecil, and afterwards as Lord Cranbourne—is one of their most recent acquisitions, and is a man of real power and high character. He has been fretting sadly under the comparative calm of the aristocratic region to which he has been raised, and has already made some efforts to remove the cause of the evil. The Lords are generally left to do nothing till near the end of the session, when bills come up to them from the Commons. Lord Salisbury proposed certain reforms which would enable the Lords to take a more active share in legislation, and to help to work off that monstrous accumulation of arrears which weighs upon the energies of the House of Commons. He may do something for a time, but the evil lies too deep for such remedies. The House of Lords represents the huge dead-weight of comfortable conservatism. Whatever importance its decisions may possess in a constitutional sense, they have no power of public opinion behind them. There are, indeed, many able men amongst the peers, chiefly amongst those who have risen from the

other House; but the simple fact is, that nobody cares very much for the opinion of three or four hundred very rich and comfortable gentlemen, a large proportion of whom know much more about horse-racing than about legislation. The energy of individuals cannot leaven the general heaviness of the mass. Theoretically, you may call them what you please; but practically, the opinion of so small a class, with such an overwhelming personal interest in the conservative view of things, bears no weight. They cannot throw themselves across the path marked out by reformers without the most imminent danger, and they are prudent enough to keep pretty carefully out of harm's way. As a rule, they confine themselves to petty bits of mischief in the way of arresting legislation, and sometimes they make some useful modification in proposed measures as suggested by one of the legal peers. Their power to do more will be pretty accurately tested by their action on Mr. Gladstone's bill. Political manœuvring is so uncertain, especially when an acute tactician like Mr. Disraeli is opposed to an enthusiast like Mr. Gladstone, that it is premature to speculate on the precise issue that may come before them.

Amongst merely personal events, it is perhaps worth notice that "Historicus," or, as he is known to men, Mr. Vernon Harcourt, has made his first, and it seems to have been a very successful, appearance in the House of Commons. He poured out some grand constitutional maxims for three-quarters of an hour on what seems to me to be an infinitesimal point of law—the question, namely, whether members of the House who take office should be compelled to vacate their seats unless re-elected—and spoke like a combination of Hallam and Tocqueville. He is a man of imposing presence, and his magniloquence seemed to please the House of Commons as much as the readers of the *Times*. He will probably be a successful man, though I fear that Mr. Carlyle might possibly suspect him of being more or less of a "wind-bag."

The convent case of which I spoke in a previous letter lasted for about three weeks, until the patience of every human being concerned must have been nearly exhausted. It has given rise to endless discussion in newspapers and private conversation; but the whole dispute turned on such petty quarrels that it would be useless to do more than just mention it as one of our most popular *causes célèbres*. The general opinion was that Miss Saurin, the oppressed nun, was rather badly treated but extremely provoking, that Miss Star, the superioress, was rather spiteful but not wantonly cruel, and that convents generally, if this be a fair specimen, must contain exaggerated repetitions of the little squabbles in a badly-managed kitchen. The Chief Justice, Sir A. Cockburn, summed up very decidedly in favor of the superioress, but a British jury, possibly animated by a certain *à priori* prejudice against papists, priests, and nuns, but more probably moved by a really noble speech from the most eloquent of our living advocates, Sir J. Coleridge, gave Miss Saurin £500 damages; and so the papers were freed from a burden of reports which filled several columns daily with the accumulated gossip of ten years of convent life.

The bill for our Abyssinian expedition has just come in. It has not, indeed, been completely made out even yet; but within a few hundreds of thousands of pounds we probably know the worst. The grand total of the charges for marching four hundred miles and back, killing Theodore, dispersing his army, and releasing the captives, comes to nine millions sterling. We are engaged in persuading ourselves at present that it was well worth the money. Meanwhile, by energetic cheeseparing, scraping, and screwing, the estimates for the army and navy have been reduced this year by over two millions, which proves that in four years of energetic economy we can allow ourselves the luxury of a small war.

Correspondence.

THE "ALABAMA" CASE AGAIN.

RUGBY, ENGLAND, March 5, 1869.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "America" argues that because "a long-lived nation can wait for justice," the United States are to accept the English theories of neutrality, and imitate "unjust Great Britain's" course of action in your late war. Will you allow me to ask your correspondent not to obscure the real issue by such vindictive advice, but to consider a little the feelings of those Englishmen to whom, like myself, the *Alabama* affair is a cause of real pain? The most able exponent of the real state of American feeling at present, "A Yankee," asks triumphantly what we should say, supposing, in the event of Liverpool and its neighborhood revolting from England, the United States were to recognize the belligerent rights of that port. I do not suppose any English lawyer would ask America to do otherwise. Either we can govern Liverpool or we cannot. If we can, it is the duty of a friendly power to recognize our government; if we cannot, and proclaim our inability by announcing a blockade, surely it is most unreasonable for us to expect any other state to recognize as existing a government which we ourselves do not profess to be able to maintain.

Your government proclaimed a blockade, and we accepted the state of things as they declared them. You are angry because we took you at your own word.

As regards the mere *Alabama* claims proper, England has fully consented to pay them, and "America" must not leave that fact out of sight.

As regards the irritation arising from the whole business, it is very important really to know the cause of complaint. What, for instance, is it which has prompted the Senate to reject the Reverdy Johnson convention? Your own accredited minister is allowed to come over here with the express object of settling a dispute of long standing. What are we to do? Are we to receive him with open arms, as the representative of old friends and near relations from whom we have been temporarily estranged, or are we to say that we will not make a treaty with a man who obviously does not represent the real feeling of his country? If the latter, we insult your representative; if the former, we run the chance of being snubbed in our turn by the rejection of our treaty. We run the chance of hearing the English philo-Southerners say, "We always told you so; they always meant to let you down." Sir, if you have time in your next number, do tell England, once for all, what she should have done; tell the friends of America what they should have recommended. "Quo teneam vultus mutantem Protea nodo?" Let me once more relate my dilemma. Either Mr. Reverdy Johnson was your representative, and we were right to press for a convention, and the Senate were bound to accept it or else to have recalled him during its operation, as he must have telegraphed for instructions; or he was not sent out in good faith, and those English who accepted his drivelling compliments, merely because he was your representative, have been purposely insulted.

That is my position, sir; and I hope you will explain to me where I am wrong. Perhaps an illustration will help our mutual understanding. The United States are not only at peace with Spain, but have only quite recently expressed strong sympathy with its present Government. Yet before Spain proclaims the blockade of Cuba, you have hastened to promise recognition of belligerent rights to the rebels there. Is this justice? "A long-lived nation can wait for ample justice," as your correspondent says. But justice is not ample unless it is immediate and consistent.

Sir, I am a constant reader of the *Nation;* I admire its tone exceedingly, and I sit humbly at its feet, as I await its reply, remaining always

Yours faithfully, H. LEE WARNER.

[Mr. Warner can hardly have followed the *Alabama* controversy very closely, or he would know that the main reason why Americans have been so much irritated by the recognition of the Confederates as belligerents was that it was premature. Lord Russell did not wait for the official notification of the blockade, nor even for an interview with the new American minister, nor for any exact information as to the condition or prospects of the insurrection. The Queen's proclamation of neutrality was issued when all that the ministry knew of the blockade was derived from rumor, and from the announcement of the British minister that it would be established shortly. That the proclamation would have had to be issued eventually, we have ourselves no doubt; but the unprecedented haste in issuing it was, or is taken as, a proof of animus; in other words, as an indication of unfriendly feeling.

Mr. Warner may reply that the British Government had a legal right to choose its own time in formally recognizing the existence of a state of war: this Americans do not deny; but they rejoin that Americans have a right to take offence if the time chosen be a manifest sign of hostility. The recognition of Liverpool as a belligerent would doubtless, in the case put by Mr. Warner, be accorded at Washington, but not without hearing from the American minister in England, or the British minister in Washington. We are not angry because "we were taken at our word," but because England did not wait to hear what our word was.

Mr. Johnson's foolish talk in England has, no doubt, caused a good deal of irritation here, but Mr. Warner has no ground for the assumption that his foolish talk has had everything to do with the refusal of the Senate to confirm the convention. The instrument, we are sure,

has been judged on its own merits. It has, in the opinion of a majority of the Senate, and of a large portion of the public, the fatal defect of not providing proper machinery for the redressal of what Americans consider, and Englishmen now acknowledge, to have been a great wrong. Whether that wrong can be atoned for by the payment of pecuniary damages, or whether any other atonement is possible, are questions we need not here discuss. We must remind Mr. Warner that the building, arming, and despatch of the *Alabama* from an English port was followed by four years of pillage of American commerce, to the accompaniment of loud applause from the English press, and the most influential portion of English society, and hearty abuse of the North. We hate to recall these things; but when pressed for an explanation of American irritation, we have to do it. There was no calm observer of the course pursued by leading Englishmen on this question, in the years 1862–3–4, who did not foresee years and years of mutual hate and recrimination as the consequence of the ignorant rant of the Lairds, Roebucks, Spencers, Beresford Hopes, and of the *Times* and *Saturday Review*, and the like. The less said about the matter now the better. We must remind Mr. Warner, too, that the Senate is not "bound" to accept any treaty no matter by whom negotiated. Every foreign power negotiating with the United States knows, or ought to know, that no treaty or convention with them is valid till the Senate has approved of it, and that in the matter of approving or rejecting it the Senate enjoys, under the Constitution, absolute discretion. As regards the fêting of Mr. Johnson, it is in reality a small matter. All that we need say of it is, that considering the attitude of English society towards the American representative five short years ago, when America was in real difficulties and when words of kindness and sympathy would have been really welcome, the laborious adulation of the present Minister has been in very bad taste. The strong man who has come victorious out of a fray, in which you have hooted him, betted against him, and encouraged his adversary, is hardly likely to take your offer of wine and your pattings on the back very kindly.

If the United States has promised "recognition of belligerent rights" to Cuban rebels one minute before Cuba shall have afforded good evidence of her ability to carry on an organized armed struggle with Spain, and the Government at Washington shall have received proper reports on the subject from their agents on the island, Mr. Warner must be in possession of information on the subject which has not reached us.—Ed. Nation.]

GENERAL GRANT'S APPOINTMENTS.

To the Editor of the Nation:

Sir: "Citizen," in your issue of March 18th, expresses dissatisfaction with the new Cabinet. This is a natural and an undoubted right of every American citizen. Omniscience could not pick, from thirty millions, seven men to whom many individuals among these millions would not fiercely object.

But the propriety of one of "Citizen's" objections is fairly open to sharp criticism in turn. "Citizen" says, "the nomination of Mr. Stewart the day after he had presented General Grant with a check for $65,000 for a house given to him by a number of gentlemen, of whom Mr. Stewart was one, was very *mal apropos*." The taste and temper of this paragraph, flung thus early against the great victor to whom the country owes an immeasurable debt of grateful respect, are unquestionably bad. The fling revives the memory of Washington's letter to Jefferson, in which the general complains that he had been assailed in a manner which could only be deserved by a common pickpocket or a notorious defaulter.

But why was General Grant's "nomination of Mr. Stewart the day after," etc., *mal apropos?* Does "Citizen" impute bribery to the latter? Of course not. What then? Does he mean gently to instil into the national mind the subtle venom of a hint that, not Mr. Stewart's vast financial reputation, but his attractive association with the gift of a house to General Grant, had seduced the General from that pure, unerringly honest judgment which, through the long years of the agony of his glory, had seized upon the fittest men before?

> "Work on,
> My medicine, work;" thus credulous fools are caught;
> And many worthy and chaste dames, even thus,
> All guiltless meet reproach."

So soliloquizes *Iago*.

But why was "the nomination of Mr. Stewart the day after he had presented General Grant with a check" for the purchase money of his house *mal apropos?* If "Citizen" had agreed with General Grant that Mr. Stewart was the fittest nominee for a great national duty, would it have seemed "*apropos*" to reject him and deprive the country of his services for such an absurd reason as the matter of the house and check? What language of contempt and indignation would be strong enough to lash the selfish, cowardly egotism of an Executive who would subordinate the interests of the country to his own personal fear that somebody might think he had sold the birthright of personal and official integrity for a mess of nine days' old pottage? Purity of heart, steadfastness of purpose, reliance on the great, patient, well-intending heart of the people, as opposed to a politician's cunning, a vacillating timidity, and a subjective distrust of human nature, are manifested by the very act which "Citizen" condemns.

Fair Play.

[We beg to say that we shall surrender no more space to the discussion of this question. Nobody has more confidence in Grant than we have; we no more believe his appointments to have been influenced by the gifts of which he has been the recipient than we believe him to have stolen a Shetland pony in Mississippi. But we agree with "Citizen," nevertheless, in thinking the appointment of a large subscriber to a testimonial in some respects unfortunate, because we believe Presidents like judges should not only avoid evil, but the appearance of evil. It is constantly forgotten that nearly every act of a high official is a precedent. Lincoln did a good many doubtful things, harmless enough in Lincoln; but when Johnson came to imitate him we did not at all like it. Suppose Grant should be succeeded by Johnson and some great "operator" were to present him with $100,000 just before inauguration, and were to be nominated immediately afterwards for the Paris Mission, or the Collectorship of the port of New York; we know very well what *he* would say, but what should we say?—Ed. Nation.]

"IS BEING DONE."

To the Editor of the Nation:

Sir: Mr. Richard Grant White's own English is particularly good, and there are few Americans to whose instincts and habits one who had a question in that way might so safely trust. If I could afford more than the five dollars a year and one night a week which I expend on the *Nation*, I should like to take the *Galaxy* for the sake of his articles on "Words and their Uses"—and for other purposes, as our law-makers say. As yet, I have seen only the March number, in which Mr. White comments on the phraseology "is being done." This method of speech he condemns for many reasons, and with much passion. It is monstrous, absurd, pestilent, incongruous, ridiculous, meaningless; "indeed the most incongruous combination of words and ideas that ever attained respectable usage in any civilized language." Now, I agree that the phrase is nearly intolerable, and I respect a generous animosity; but it seems to me that Mr. White, like many another excellent judge, ought, in giving his opinion, to have left out half of his reasons.

The phraseology in question, though employed by good writers—Ruskin, for instance—has not sufficient authority. Then, it is not only a novelty, but an awkward novelty, of which we have no need, as Mr. Marsh and Mr. White have said. Nothing is good English which lacks authoritative usage, and nothing that is unhandy and that displaces something better should be allowed to establish itself if we can prevent. This is firm and familiar ground. We shall get into trouble in a moment if we require all usages to justify themselves by reason. This also Mr. White says, and it is one of the fundamental principles of his paper. "Ruin comes of laying presumptuous hands on idioms." Nothing is plainer than that a phrase which has authority cannot be challenged because it is or looks irrational, unless it be this, that no amount of reason dispenses with the necessity of authority; an axiom which Mr. White (probably through a printer's error) appears, on p. 335, to deny. It is of no use, and inconsistent besides, for him to argue the essential absurdity of this phrase, except in the way of protest against its admission. It is not more absurd than *I had rather*, at the worst. But, indeed, it is not absurd at all.

Mr. White finds a "fatal absurdity" in the combination of *is* with *being*, for *to be* expresses mere existence, and *is being done* is equivalent to *exists*

existing done. Now the substantive verb has had two significations from the beginning of our language. It means sometimes *esse* and sometimes *fieri*, and it is only by virtue of this second meaning that we English are able to make out a passive voice at all. When I say "my article is printed in the *Nation*," my *is* means exists; but when I say "the *Nation* is published on Thursday," my *is* means becomes. The use of the substantive verb as an auxiliary of the passive voice is not a peculiarity of English. Modern German has cleared itself of ambiguity by appropriating *werden* for this purpose; but in the Old High German *wesan* and *werdan* are both so employed, *wesan* being commoner in the oldest. In Anglo-Saxon *weordhan* (become) may have been commoner than *wesan* (be), but both are used as passive auxiliaries; as, they did eat and were (wurdon, became) filled, or, they went out to him and were (wæron, became) baptized. The verb *be* was not only a passive auxiliary, but a passive auxiliary for both present and future, *I be found* signifying both *invenior* and *inveniar*. Where, then, is the absurdity, the unreason, of *the house is being* (that is, becoming) *built?*

There are several considerations upon which I would recommend those who say *is being built* to mercy, though not to approbation or imitation. Our English passive is a very imperfect affair. We are not as well off as the Germans with their *werden* or the French with their *on*. To be sure, *is building* or *is a-building* is as good as *wird gebaut* or *on bâtit*. But perspicuity is the first object in language, and there are many cases in which we cannot without ambiguity use the participle in -ing or the noun with a-. Would Mr. White, coming back from a walk in an Indian country, say "I found an emigrant cooking (a-cooking) at a slow fire?" He would not say *being cooked*, at any rate; neither would I. I like a short cut, but I had rather go a little about than bemire myself. C.

[We had been intending to consider the case of this offending idiom at greater length, but a valued correspondent has saved us the trouble and put the gist of the matter into a small space. He is a little harder, however, on the people who say "is being done" and the like than we should have been. The excellent excuse which such offenders have seven or eight times in ten is the one mentioned by "C."—namely, that they must be offenders or be mute.—Ed. Nation.]

Notes.

LITERARY.

To our list of announcements previously made we have but few titles to add. Sever, Francis & Co. will publish Björnson's "Happy Boy," and a "Memoir of Jared Sparks," by the Rev. Mr. George E. Ellis.——Turner Brothers & Co., of Philadelphia, announce "Beautiful Snow, and Other Poems," by Mr. John W. Watson, and "Broken Fetters," by F. Trollope.——People who know "that highly successful book, 'The Woman in Black,'" may be glad to hear that it is to have a companion volume in "The Woman in Red," which is to be issued soon by Messrs. T. B. Peterson & Brothers. The same house announce "The Curse of Gold," by Mrs. Ann S. Stephens, and a work by another author who has outlived herself, "The Changed Bride," by Mrs. Emma D. E. N. Southworth.——Allen Brothers announce a long and good list of books for children: there is the "Life of John James Audubon for Boys;" a "Boy's Book of Gymnastics;" a "Boy's Book of Magic;" "Rob Roy's Adventures," by James Grant; "Five Years Before the Mast," which seems to have been christened, with doubtful morality, "Australian Crusoes;" "Adventures of Gerard, the Lion-Slayer;" "The Wolf Boy of China;" "The Joyful Gates," by Miss Alice Hawthorne, and half a dozen other works.——Messrs. Cassell, Petter & Galpin announce "The Three Kingdoms of Nature," by Dr. Houghton; "Illustrated Travels," a compilation edited by Mr. Bates, of the Royal Geographical Society; "The World of Wonders, comprising the Marvellous in Nature, Science, and Art" (illustrated); "The Captive Missionary," by the Mr. Stern whom Theodorus shut up, and Arnold's "Poets of Greece."——Messrs. A. Roman & Co. announce a volume of sermons by the Rev. Mr. Charles Wadsworth, of San Francisco.——Mr. Widdleton has in press a second edition of Alger's "Future Life."

—We spoke last week of Miss Mary Godolphin as the originator of the one-syllable literature. Messrs. Cassell, Petter & Galpin have published for her an "Æsop's Fables" and a "Sandford and Merton" written in words of one syllable, and both have been well received by the public, as also was the monosyllabic "Robinson Crusoe" of which Messrs. George Routledge & Sons are the publishers. Miss Godolphin has recently been negotiating with Messrs. Cassell, Petter & Galpin for the publication, in the same form, of "The Swiss Family Robinson" and "Evenings at Home," but not with success. Indeed she has been obliged to appeal to the public for redress for the treatment she has received at the hands of the firm in question. Last fall she offered them the "Sandford and Merton," she says, but found herself unable to agree with them as to terms, and after they had had her manuscript five or six weeks she felt compelled to withdraw it. Thereupon the firm notified her that they would "proceed with their series" at once, and that it "would doubtless include 'Evenings at Home' and 'The Swiss Family Robinson' done" by another person, though "they would prefer their being done" by Miss Godolphin. The affair is not one in which, to judge by thus much of the lady's statement, the publishers make a very good figure; but she goes on to make her case stronger. The two new books of the series have been brought out by Messrs. Cassell, Petter & Galpin in a very hurried manner, for the apparent purpose of forestalling Miss Godolphin's version, and the haste with which they have been prepared has injured, she says, their literary execution, and therefore, to a certain extent, injured her literary reputation. In proof of the former of these assertions she cites the occurrence among the monosyllables of polysyllabic words—iguana, india-rubber, porcupine, albatross, kingfisher, nightingale, and others—to the number of two hundred. The book-buying public has an unfortunate resemblance to other publics, and buys where it can buy cheapest; we can only hope that in this instance Messrs. Cassell, Petter & Galpin's books are so much poorer than Miss Godolphin's that nobody may be much tempted to forget what seems to be his duty in the matter. The authentic volumes of the series are in the press of Messrs. George Routledge & Sons.

—A publishers' quarrel, of a kind that we shall never see the end of until we have an international copyright arrangement with the principal book-producing nations, is now going on between the Harpers and the Lippincotts. On the first day of this year, Messrs. Lippincott & Co. wrote a letter to the London *Athenæum*, which that paper printed, in which they said, in order to set themselves right before the public, that Messrs. Harper & Brothers had put on the market an edition of Mr. C. W. Dilke's "Greater Britain," and were selling it at a merely nominal price; for which reason the sale of the *authorized* edition, which Messrs. Lippincott issue and from which Mr. Dilke was to have drawn some profit, had been very greatly injured; and this, said the Philadelphia firm, although as long ago as May of last year public announcement had been made of their intention to publish the work. The Messrs. Harper, in reply to this *Athenæum* letter, print in their *Weekly* some correspondence that passed between the two firms in December of last year, and, in addition, some correspondence that passed between Messrs. Macmillan & Co. and themselves in the latter part of 1868 and the first two months of this year. Briefly, the American letters are intended to show that when the Harpers began printing "Greater Britain" they had no knowledge whatever that the Philadelphia house had announced it. The *Commercial Advertiser*, of this city, they declare to be the recognized organ of "the trade" for announcing claims to reprints. But the fact of the matter is, we believe, that this character is not conceded to it by all of the publishing firms here in New York even; and is denied to it by many of the outside firms. The *Publishers' Circular* was the journal in which Messrs. Lippincott & Co. announced their "Greater Britain," and the Messrs. Harper therefore had (for them) no "official information" of that edition, and, as we are bound to believe, had no information of any kind, for so they explicitly say. Furthermore, the latter firm offered to withdraw their edition if the former would pay the expenses already incurred in preparing it, and would give an answer in the negative to the question whether the stereotype plates for the authorized edition were made in England. To this question Messrs. Lippincott made no further reply than that they had bought the advance sheets of the book from the author. And there was another question contained in the Harpers' letter which may as well be mentioned, for it shows the cause of an angry feeling which runs through all this part of the correspondence: "While we think of it," said they, "allow us to ask whether your edition of Bulwer's novels is printed in this country." Bulwer the Harpers considered their property (and they now announce that he so considered himself), till all of a sudden the "Globe Edition" appeared, the Lippincotts apparently holding in regard to Bulwer the doctrine said to have been laid down by a Boston house in regard to Dickens—that, like Shakspeare and the Bible, he is common property. It appears, we may remark here in passing, that the "Globe" Bulwer is printed from plates made in this country. Inasmuch as the Lippincott edition of "Greater Britain" was not to be printed in this country, and inasmuch as Messrs. Lippincott did not feel inclined to pay the expense which Messrs. Harper & Brothers had incurred in preparing their edition, the latter firm resolved

to go on, and, as everybody knows, have done so. Considerations which the Bulwer matter above spoken of will probably suggest to the reader sufficiently account for the fact that when the Harpers' "Greater Britain" did come, it came at the fighting price, so to speak, of a dollar. The war having begun, it did not end with one engagement. The Harpers charge, and so do Macmillan & Co., that in October last the Lippincotts knew perfectly well that the Harpers had bought of Macmillan & Co. the plates of Sir Samuel Baker's "Cast up by the Sea;" that by an error of shipment the plates were sent to the Lippincotts, who received them in December; that in February the Lippincotts sent word to them to this effect: "Some time since we received, without advice, a box containing electrotypes. Believing it came from Messrs. Macmillan, we advised them of its arrival, and asked them to give us an explanation. We are now advised by them that the box was intended for you." But, then, while the letter asking advices was going to London and the answer coming back, Messrs. Lippincott & Co. issued a cheap edition of "Cast up by the Sea." It is necessary to add that the latter have not been heard in reply on this last issue.

—Mr. John Sabin of this city has just issued, as the seventh of his reprints, Rev. Thomas Prince's edition of Major John Mason's "Brief History of the Pequot War," an original and the principal source of our knowledge of the remarkable campaign which the author himself conducted, and which left the Pequots in much the same relation to the neighboring tribes as the Aduatuci were left after they had been reduced by Cæsar. The short-sightedness of the Narragansets in favoring this expedition, and allowing it a free passage through their country, was repaid, as is well known, nearly thirty years later, when Philip's power was broken by Winthrop, among whose captains was a son of the Ensign Davenport, mentioned by Mason on p. 13, who afterwards commanded the Castle in Boston Harbor. Of Nathaniel Davenport and the Narraganset fight in which he fell, Mr. Upham gives many interesting particulars in his "History of Salem Witchcraft," those relating to the mode in which Philip's warriors fortified their camps being identical with what Mason tells us of the Pequots. The latter's account, including Mr. Prince's introduction, is curious reading for the mixture of religion and business, and it is good exercise for the imagination to deduce from it the Connecticut settler as he was, both at home and in the field.

—From the press of the Essex Institute we have the first of the "Memoirs of the Peabody Academy of Science," organized last year in Salem—a town which is constantly improving on its traditions, and has become one of the most active scientific centres in the country. The form of these memoirs, an imperial octavo, seems to us well chosen. The typography, paper, and illustrations are of the best. Mr. Samuel H. Scudder has the honor of contributing this initial memoir, which consists of a "Revision of the Large, Stylated, Fossorial Crickets." The Essex Institute has for its part resolved to discontinue its quarterly "Proceedings," and to substitute for it a monthly "Bulletin," composed of "such portions of communications made to the Essex Institute at its semi-monthly and other public meetings, as are of popular interest," together with a bare summary of *all* the proceedings as a matter of record. This publication will have at least sixteen octavo pages (fit to bind with the *American Naturalist*), and will be sold at $1 per annum or ten cents a copy; which, to judge from the first number, it will be well worth. There will be occasional illustrations.

—General Butler's recent pamphlet read by him to the House of Representatives in denunciation of gold and silver coin, and in advocacy of the substitution for it of paper tokens as a circulating medium, furnishes one more illustration of the way in which old and often-exposed fallacies and follies are reproduced from age to age by ignorant or designing persons, for the confusion of the simple and unwary. Butler's arguments were in great part a repetition of those used by Law and his friends in France, early in the last century, to keep at work the famous Mississippi scheme, in its later days. St. Simon says, in his Memoirs, that after the issue of paper money had gone on for a while, people became so greedy for it and it was given away in quantities so enormous that the very paper fell short, the mills being unable to supply it with sufficient rapidity. Of course this could not last very long. The notes began to fall in value, and then all confidence in them began to vanish. "Then," says St. Simon, "it became necessary to keep up their value by force; and, as soon as force began to be used, a regular panic ensued. An attempt was made to abolish all use of gold and silver coin, and even of precious stones, and to persuade people that from the time of Abraham, who paid in cash for Sarah's sepulchre, down to our own day, *people had been plunged in the grossest illusion and error in all the civilized nations of the world, with regard to money* and the metals of which it is made; that paper was the only useful and needful money, *and that we could do no greater harm to our neighbors jealous of our greatness and our advantages than to pour out and send over to them all our specie and precious stones.*" Of course this preaching produced very little effect, and the panic increased. Authority was given to the agents of the India Company to search private houses for coin, and seize all pieces of over twenty sous, and persons in whose possession it was found were severely punished. This brought a certain quantity into the bank from persons who were afraid of their servants betraying them, but ruin spread among all classes of society. At this stage a swarm of financial doctors began to appear on the scene, each with a plan for restoring confidence, most of them resembling Senator Sherman's, and consisting principally in forcing people to exchange one kind of paper for another, and threatening them with heavy penalties in case they refused to believe that they were better off with the new paper than with the old. St. Simon says the number of tricks of this kind practised was very great, and the result of each was of course to leave the holders of the notes a little worse off than before. The end is known to most readers of history—the final collapse, and the flight of Law, spread more ruin through France than the march of an invading army, and yet seventy-five years later another rise of ignorant adventurers and fanatics into power caused another issue of paper money with similar results; and here in America, in our day, we find demagogues by the dozen producing the doctrines of Law's days as new and remarkable discoveries, and "working-men's conventions" hailing the demagogues as benefactors of mankind.

—We find in the *Western Collegian*, of Delaware, Ohio, "an account of the receipts and expenditures, and the present condition of the Treasury, of the Lecture Association." We have certainly known a more cheering exhibit than this makes; for seven lectures cost the Association $172.18 over and above receipts, and left the treasury with barely enough for two more courses in subsequent years. Mr. J. G. Saxe and Miss Dickinson alone took less money away than they brought; and if Mr. Saxe's charges had not been modest, even he would have made the Association poorer by his visit. Yet he had the third largest audience on the list, Miss Dickinson's and Mr. Henry Vincent's being more numerous still. Mr. Tilton did not pay at $100. Mr. Vincent, in spite of the good attendance, did not pay at $150. Professor M. C. Tyler could not save from loss at $75, nor General Howard at $100. Judge Cox appears to have charged nothing but his expenses for a free lecture. As this would undoubtedly be esteemed a "strong" list, it would seem as if the lecture system were in a bad way, and if it is, it is what we have frequently surmised. We should, if called upon for reasons, assign as one the excess of "strength" in making up courses, the superabundance of great names, and the transfer of interest from the subject of the lecture to the lecturer himself. It is this personal feeling, we venture to think, which has sustained the lecture system hitherto, especially at the West; but as the novelty wears off, it is not strange that curiosity should flag, the field not being supplied rapidly enough with new and at the same time distinguished or "promising" lecturers. Five out of the seven we have referred to would be called "brilliant;" that is to say, they are sought after for their rhetoric more than, or at least sooner than, for their ideas: and this being the case, we may be sure that unspiced discourse, however sound or learned, would draw even emptier benches than they did. In short, not to go too deeply here into a subject which well deserves philosophic handling, we are afraid that the lyceum as at present carried on is hardly to be reckoned among the educational instrumentalities of the country. All during the war it would listen to nothing else but what everybody was saying in the newspapers or in conversation on the street; and that alone is a sufficient reason why it should be now so largely a social occasion, to which every swain invites the lady of his choice, certain of so much pleasure whatever may be uttered from the platform of wise or foolish or commonplace. The extent to which lectures, concerts, and other places of amusement are indebted for their audiences to the tender passion is a topic by itself.

—The editor of the *Publishers' Circular* has received a letter from nearly a dozen firms who had transactions with the Mr. Shaw of whom we spoke a week or two since, as having been the principal in a scheme for smuggling English books, and English editions of American copyright books, from Canada into the United States. They "emphatically repudiate the slightest knowledge" of Mr. Shaw's intention, and pronounce "utterly false" an inference which some people have drawn (or might draw, from a statement of the facts) namely, "that the English publishers were cognizant that the purchases made last autumn by Mr. H. J. Shaw, of Montreal, were to be smuggled into the United States." The firms which address

the letter to the editor are Messrs. W. & R. Chambers; George Routledge & Sons; William Tegg; Frederick Warne & Co.; A. Strahan & Co.; Charles Griffin & Co.; Reeves & Turner; William Collins, Son & Co., of Glasgow; A. Fullarton & Co., of Edinburgh; James Duffy, of Dublin, and Charles Jefferies, Jr., of Bristol. There is a sentence or two that we ourselves should have wished, we think, omitted from the letter if we had been expected to sign it. The signers say at the end that "they conceive it unnecessary to intrude upon your valuable space to explain why they were induced to believe in the *bona fides* of Mr. Shaw." Perhaps Messrs. Bell & Daldy could most easily explain that; but apparently they were not asked to join with the other publishers in signing, or else they declined to do so. So it still remains unintelligible how Mr. Shaw—a person who talked more or less openly in London publishing circles about the "facilities" he had for getting books into the United States on payment of far less than the legal duties; who seems to have had so little money and credit that, ordinarily, he would have been unable to get anything like seventy thousand dollars' worth of books from English houses—could have led so many reputable and presumably clever business men into such an affair as that in which he has involved these gentlemen above mentioned.

—Of new English books we have, of poetry, a very highly praised book by an author who has been obscure and, indeed, unknown till now. After her death, there is published a small volume entitled "Sunlight Hours," edited by Professor Plumptre, and written by Miss Sarah Williams. To such as think that perhaps the truest poetry written in England just at present is not written by men, Miss Williams's poems will not, we should say, furnish insuperable evidence of the truth of their belief; but still we should say, from what we have seen of her work, that there is no doubt of her having been a much more than ordinarily good poet of a distinctively female type. She died before her powers were matured. Whoever knows the "Poems Written for a Child" will not be surprised to hear of a new edition of that very nice little book. Praise is bestowed, too, on Miss Sophia M. Eckley for her "Minor Chords." Miss Eckley, however, is not English, we believe, but a New Englander, who has ventured on authorship first in London. Of course, the largest, if not the greatest poetical event of the moment is the appearance of the last volume of Mr. Browning's "Ring and the Book," the American edition of which Messrs. Fields, Osgood & Co. have issued with such promptitude. The Odyssey is translated into blank verse by Mr. Edginton. It is a remark that the mention of Mr. Edginton's book has suggested to us to make—but which we do not at all apply to his work, for we have not seen it—that it may be questioned if, when the enemies of verse-making as a part of English education, are enumerating the evils which that practice brings about, they should not say something concerning an effect it apparently has of setting scores of elegant versifiers to flooding the world with translations of Greek and Latin classic poets—translations that would never see the light if it were not for the manual dexterity, so to speak, which the translators acquired in youth. This is certainly an evil under the sun. A new "Iliad," too, is announced we see; but as for the "Iliad" it is long since Wolf's view became true of the modern Homer, (however it may have been with the ancient); that he is not one but many—and all pretty blind. A book that is hardly to be spoken of among books of poetry is a new edition, with illustrations, of Pollok's "Course of Time," which still lives, it seems. Sir Francis Doyle's lectures delivered in the chair of poetry at Oxford are just published and are well worth attention. Of theological works, we have but few to mention. Perhaps as interesting as any of them is Sir John Coleridge's "Life of Keble," which will bear study because of Keble's relations to contemporaries who have played an important part in the English and American religious world, to say nothing of a certain effect they have had upon the Romish. Mr. T. W. Allies, whose "See of Peter" is not the most uninteresting of the books which have been written by converts from Protestantism to Romanism, goes on with his work on "The Formation of Christendom." In connection with this work, which is said to be "of the reflective rather than of the narrative school of history," it may be profitable to read Mr. Lecky's speedily forthcoming work on the morals of Europe in the centuries between Augustus and Charlemagne. The Rev. Mr. William B. West puts forth first the second of six volumes which he will edit of the works of Archbishop Leighton—an author hitherto unedited, or, at least, never critically edited. The first volume, which will contain a biographical introduction and an index, will be the last one to appear. In science there is nothing of importance, we believe, since we last spoke of new scientific books. Professor Huxley's recent paper in the *Fortnightly Review*, on "The Physical Basis of Life," might well enough be reproduced in this country by some of our eclectic publishers who have not, we think, yet paid it the attention it deserves. Coupled with the able reviews of it that have appeared in other English periodicals, it would make an instructive and readable pamphlet of no great size. Of history and biography we may mention, as of particular interest to Americans, Cannon's "History of Grant's Richmond Campaign." The "Life of Richard the First," by Professor Aytoun, has reached another edition, but whether because it is a "history" of that prince or a "biography" of him it would not be easy to say. Perhaps not because it is either, but because it treats in a school-boy manner of a school-boy's hero. A work fitter for schoolboys' hands is the Rev. Mr. Cox's "Tale of the Great Persian War." Probably there is no living English writer who is more successful than Mr. Cox in arousing in the minds of youthful students of classical authors an interest in the men and events with which boys preparing for a liberal education are called upon to deal. Norton's "History and Constitution of the City of London," of which there is now a third edition, is of less value to the general reader than a new book, prepared by Mr. William Howitt, and constituting a third series of his "Visits to Remarkable Places," entitled "The Northern Heights of London" (Hampstead, Highgate, Islington, Hornsey, and Muswell Hill). These are names rich in associations, and history and biography have seldom been more agreeably mingled than in Mr. Howitt's book. Among miscellaneous works we observe a new edition of the perennial "Lavater," and a life and works, with selections from her letters, of Mary Lamb.

—Among new English books the one that perhaps will receive the widest welcome is the Tischendorf New Testament. Dr. Constantine Tischendorf, as is well known to most of our readers, is a very learned Biblical scholar, the business of whose life has been to make himself familiar with the original text of the Scripture. With this purpose in view, he has not only studied in their minutest features the Biblical manuscripts which were known to the world when he began his labors, but has ransacked the monasteries and libraries of Europe and also of the African and Asiatic East for new ones; and in 1844 and 1859 he had the signal good fortune of discovering what is the oldest as it is the best of all extant Greek versions of the scriptural books—the "Codex Sinaiticus." It was found in the monastery of Saint Katharine, on Mount Sinai, and very probably it had been there since the time of the Emperor Justinian, the founder of the house, whom we may suppose to have sent to the monks, as a present, one of the fifty correct copies of the Bible, which his predecessor, Constantine, had caused to be executed under the editorship of Eusebius, in the year 331. The discovery having been made by Dr. Tischendorf, while he was travelling under the auspices of the Czar, to him naturally fell the possession of the manuscript which has thus had the curious fate of having been the gift of an emperor to a community of the learned, and then, after many centuries, of being a gift from a student to an emperor—and, we may add, of being edited in the fourth century by one of its most distinguished scholars, and again, in the nineteenth, by a chief ornament of the most learned country in the world. Alexander the Second at once directed that a splendid edition of the whole manuscript should be prepared by Tischendorf; and this being done, in 1862, in 1863, and again in 1865, we have had cheaper, but as literally exact editions of the New Testament part of it. Baron Tauchnitz having last year come to the nine hundred and ninety-ninth volume of the series of books which he printed in Germany in the English language, resolved to make the thousandth volume a most noteworthy one, and with happiness of selection took the English New Testament as it stands in our "King James's" version and engaged the discoverer of the Sinaitic text to furnish it with marginal notes, giving the readings of the Alexandrine, the Vatican, and the Sinaitic versions. The volume is dedicated by the Baron "To my English and American authors as a token of esteem for the living and a tribute of remembrance to the dead"—a dedication which (if there must be dedications) nobody will find fault with. There is prefixed to the text a brief essay by the editor, written to be sure in the English of a German, but possessing the charm which belongs to the writing of a simple-minded scholar; for the value of the introduction alone, with its full and succinct information and its agreeableness of tone, the volume would be worth owning. It may be had in two forms—that is to say, there is a part of the edition which the London agents or the Leipzig house have put into an unsatisfactory binding of thin pasteboard covered with muslin; and there are the ordinary paper-covered copies in the shape with which the others of the thousand "Tauchnitz's" have made everybody familiar. Whoever buys the book will, of course, want it in some substantial binding, and very likely in some binding of his own choosing. As regards typography and paper, the volume is of the usual excellence of the series to which it belongs.

—Some figures from the "General Address Book of the German Book Trade for 1869," published last month at Leipzig, will show the vast extent of the business as carried on by the Germans, at home and abroad. This directory contains the names of 3,506 firms and branches, divided as follows: Publishers and dealers in books only, 750; in art only, 154; in music only, 82. Those whose chief business it is to keep an art assortment are 38; music assortment, 168; antiquarian assortment, 81; an assortment embracing all these and maps besides, 2,162; leaving 71 unclassified, as being either miscellaneous or dependent on some other business. Leipzig is the great centre of publication, and 1,282 houses from without have camped there and issue works with that imprint. Ten cities are principally resorted to by the commission trade: Augsburg, which has 9 commission houses, Berlin 46, Leipzig 100, Munich 8, Nürnberg 7, Pesth 20, Prague 12, Stuttgart 18, Vienna 31, Zurich 5—or 256 in all. Adding to the total first mentioned 76 branch establishments not contained in it, we have a grand total of 3,580 houses in 894 towns, viz., 2,159 in 483 towns of the North German Bund; 562 in 135 towns of South Germany; 4 in one town of Luxemburg; 413 in 149 towns of Austria; and 387 in 104 towns at large in Europe. Abroad, there are 52 German houses in 20 towns of America, and 3 in 2 towns of Asia. These external houses are in many cases truly missionary, and even in some parts of Europe partake of that character. They have done a great deal, for instance, in Italy to strengthen the interests of native authors and publishers, and build up a hitherto languid business; and, as one result, the influence of German ideas on Italian literature in these days is very perceptible.

DRAPER'S AMERICAN CIVIL WAR.*

THE first volume of Dr. Draper's "History of the American Civil War" formed the subject of an article published in the *Nation* in September, 1867, in which the author's theory of the influence of isothermal lines on the character of mankind received particular attention. That volume formed, as it were, a philosophic introduction to the history proper, which may be said to begin in the book before us.

Its appearance is prepossessing—shape, size, binding, print, and paper, are all good—and, as one reads, he finds much to praise in selection and arrangement of matter and in the method of statement. And yet, when the end is reached, and the question of the general merit of the book presents itself, one is surprised to find how far from easy it is to answer the question. It is seldom that so respectable a book can be read attentively, without leaving deeper impressions on the mind, and it requires some thought to be able to assign the cause. It is not a book to be saluted with a salvo of praise, nor one to be dismissed with indifference. It cannot be pronounced eminently interesting, still less can it be stigmatized as dull. It is probable that its failure to rivet the attention is owing in some degree to its being less a military history than its title would indicate. The period of which it treats includes Bethel, Bull Run, Ball's Bluff, the Peninsular Campaign, Pope's battles, the Maryland campaign, and Fredericksburg, in the East; the capture of Forts Henry and Donelson, the battles of Shiloh and Murfreesborough, and other operations, in the West; and the capture of New Orleans, and the fight between the *Monitor* and the *Merrimac*, and numerous other exploits, by sea—and so supplies abundant materials for a purely military history. But such a history Dr. Draper has not undertaken to write. Moreover, it is not likely that, if he had, he would have achieved more than a *succès d'estime*, partly because we are perhaps just a little surfeited with that sort of thing at present, but still more because there is nothing in what he has written to indicate that he is a match for those who are already distinguished in that department. The task he proposed to himself was the composition of such a history of the civil war, as should not merely tell the story of the creation and use of armies, but should be largely statistical, political, and philosophical as well. Such an enterprise is a difficult one, and he who undertakes it runs the risk of failure or imperfect success, not only from his own deficiencies, but from the defects of his subject. The first year of our civil war is interesting, from the enthusiasm that then burst forth, and for the number and severity of engagements in which the citizens of States long used to peace then took part, but it is very much wanting in the personal interest with which the possession of acknowledged genius by individuals invests an epoch. There was little to come out in most of the men prominent at that period, and what there was to come out in Lee and Jackson, and still more in Sherman and Sheridan and Thomas, and most of all in Grant and Lincoln, was known to none, and suspected, if at all, by very few. It was a period of uncertainty of purpose among our rulers, of extreme readiness on the part of politicians to meddle with what they did not understand, of sanguinary war waged without definite aims, of magnificent enthusiasm that was at the same time vague and ignorant, and a time of disappointment and apprehension, before our people had yet grasped the great principle of the struggle, that the battle must be fought with slavery, and the new Union built upon its ruins. The labor of the historian is lightened when he has to deal with settled purposes, and his work is surer to interest when he has only to depict the swell and movement of great waves of popular sentiment. Dr. Draper had not such good fortune, and the very completeness of his plan deprives his history of the charm of flow and motion, and invests many of its chapters with the character of a manual of reference.

The present volume is divided into seven sections, which treat of the progress and culmination of the Southern conspiracy, of the vast development of the warlike operations, and the corresponding legislative and military preparations, of the prelude to the great campaigns, of the campaigns for opening the Mississippi and piercing the east and west line of the Confederacy, of the campaign for the capture of Richmond, of the blockade and operations connected with it, and of the foreign relations and domestic policy of the Republic. It is doing the author no more than justice to say that this division is judicious, and the subordinate arrangement of his material is well managed, and the little *argument* which he prefixes to each chapter is always well done, and a help to the reader. Some of his general views are striking, as when he declares that the South, in the autumn of 1861, was a despotism and a camp, and that she was thrown on the defensive and effectually beleaguered early in the struggle, and that her four great offensive movements present the aspect of sorties. His assertion that the North was guided throughout by what it conceived to be right, the South by what it conceived to be advantageous, is a strong and well-put statement of what would be true, if he could also assert that no honest Southern men were blinded by passion or deceived by sophistry. And this sweeping assertion does not stand alone. The author permits himself the freest indulgence in the most positive statements, not only as to matters which may be conceded to be within his range, but also as to questions in regard to which men of the greatest wisdom and knowledge differ, or hesitate to pronounce a positive opinion. A taste for epigrammatic expression leads him to declare that "democracies never betray their country. That is done only by privileged classes." In another place, that "history furnishes no parallel to the midnight treachery of the cabinet (of Buchanan), except in the dark and bloody mysteries of the palaces of oriental monarchs." Such declarations do not come with a good grace from a man who has not established his claim to a familiar acquaintance with all the annals of recorded time; but they are not matters of substance, and it is not of much consequence whether they are believed or not, or, indeed, whether they are true or false. The same, however, cannot be said of such assertions as that the army of McClellan was "transported one hundred and eighty miles by water at a cost of nineteen days of time and an enormous expenditure of money, *to avoid one day's march by land*," or that Mr. Chase's financial measures were "of a singularly able and decisive kind," or, worst of all, the offensive assertion that "it was the man in the overcoat, *with the lock of his rifle tied on with a string*, who won victories, not the pampered, neatly-uniformed soldier." The first is calculated to mislead; the second states what may be true, but is not to be proved by the testimony of the author; and the third is written in the spirit of pandering to the lowest newspaper conception of the composition of an army. And here we may well call the attention of the philanthrophist and Christian to Dr. Draper's estimate of the religious status of the Southern slave at the commencement of the war. He declares that "through the benevolent influence of the white women of the South, and not through any ecclesiastical agency, was the christianization of this African race accomplished—a conversion which was neither superficial nor nominal, but universal and complete. . . . The annals of modern missionary exertion offer no parallel success." (?)

From the soldier in the overcoat, the transition is easy to an examination of the author's merits as a painter of battle-pieces. The first gem is to be found in a description of the night before Bull Run. After speaking of "the misty, yellowish haze, which so often pervades the summer nocturnal atmosphere for many thousand miles," and so leading us to strain the mind's eye to the utmost extent of vision, he suddenly contracts it, and concentrates it upon the woods of Manassas, over which the "arch-fiend Slavery, poised on his sail-broad vans, was glaring on the genius of Freedom, and making ready for a death-clutch with her on the morrow." In

* "History of the American Civil War. By John William Draper, M.D., LL.D., Professor of Chemistry and Physiology in the University of New York; Author of 'A Treatise on Human Physiology,' 'A History of the Intellectual Development of Europe,' etc., etc. In Three Volumes. Vol. II. Containing the events from the Inauguration of President Lincoln to the Proclamation of Emancipation of the Slaves." New York: Harper & Brothers, Publishers, Franklin Square. 1868.

quoting this sentence first among our illustrations of Dr. Draper's skill as an artist, we have followed the order of the text, but violated a rule of composition, for it must be acknowledged that it is without a rival, and to proceed to say that he tells of the "whir of glancing bullets" (as if bullets that glance whirred more than others), of "guns, double-shotted, pouring forth a fire-storm," of "cloud-walls of sulphury smoke," of a "double-shotted iron-fire" and a "sirocco of lead," is to lead down from a climax instead of up to one. There is a whimsical contrast in one place between the text and the marginal note indented exactly opposite. The subject is the battle of Pittsburg Landing, or Shiloh, and the time is the close of the first day's fighting. The text reads, "The ravine had become a hell of human agony and passion, hidden in smoke, and filling with dead. It was a valley of the shadow of death." The indented margin reads: "Grant successfully resists them." If the author had ever, to use an expressive colloquialism, "been there," he would understand the absurdity of the language he uses, as nothing short of actual experience of the perilous edge of battle could make him; but it must be freely confessed that he does not always sail with such strength of pinion, but sometimes contents himself with an humbler flight. In the description of the same battle is a simple sentence of real merit: "The fallen leaves, soaked with rain, and deprived of their crispness, emitted no rustling sound under the footsteps of the men."

It is not only in matters of taste that our author has defects that seriously detract from his merit as a historian. He betrays a want of a just sense of proportion in sometimes describing insignificant enterprises with much detail, and again using severe compression in his narration of more important and interesting matters. He is sometimes obscure to the point of incomprehensibility, and oftener inaccurate or careless. Thus he speaks of General Sumner's getting a "battery of twenty-four Napoleon guns" across the Chickahominy, and taking it into action at Fair Oaks. The truth is, that the gallant Kirby, who received his death-wound a year after at Chancellorsville, succeeded, by great exertions, in getting five of his six pieces across the morass on the Richmond side of the river, and used them with great effect in checking the flanking movement of the enemy, and his were all the guns of Sumner's corps that took part in that engagement. They were not twenty-four in number, they were not twenty-four pounders, and Napoleon guns are not twenty-four pounders. He says that Farragut, in his movement on New Orleans, "fought walls of stone" with a wooden fleet. The walls of Fort St. Philip and Fort Jackson, the only forts which Farragut then fought, were of brick. His description of Virginia as standing "like a vast bastion to the Confederacy, its *flanked angle* projecting towards the Free States," is a false metaphor of which the most superficial knowledge of the meaning of the terms employed would have taught him the vice. In describing the battle of Glendale he says: "Longstreet and Hill encountered the retreating line about 4 P.M. at Frazier's Farm. It was McCall's division *which happened to be passing their front.*" McCall's division, with its artillery, was arranged in order of battle on the Richmond side of the Quaker Road—the line of retreat of our army—hours before it was attacked, and it received the attack in line, instead of being taken *en flagrant délit*, as the historian describes it. He makes many assertions which are tempting subjects for discussion, but space forbids proper treatment of the questions they raise, and we must therefore content ourselves with stating that he declares that "to General Halleck must be given the credit of the solution of the Mississippi problem;" that "it was in the West that the army first became what an army ought to be;" that Hancock's troops (he had two brigades and a battery) did no fighting at Williamsburg, and "receded" as soon as they were pressed by *two* rebel regiments; that Lee's Maryland campaign of 1862 was "conceived in Richmond," was owing to the "terrible energy of the Richmond Government,' was resolved upon as one of the "offensive operations which the Confederate Government determined on resorting to;" that Longstreet's troops did not arrive on the field of the "Second Bull Run," on the 29th of August, 1862, till sunset; that Grant's troops, on the second day of Shiloh, "waited . . . . . until after 10 A.M., by which time Buell's troops were abreast of them"—and with the further statement that we believe every one of these allegations to be untrue, and that it would not be difficult to prove them, or most of them, to be so. We think that Dr. Draper does injustice to Franklin in his account of the battle of Fredericksburg, and that he not only does injustice to McClellan, but is guilty of a grave perversion of the truth of history when he writes (p. 445): "When, from the midst of the fire converging upon him (Pope), he cried out for more ammunition to enable him to keep his foothold, how was he answered? 'I know nothing of the calibres of Pope's artillery.'" The truth is that McClellan telegraphed from Alexandria, not to Pope in the presence of the enemy, but to Halleck at the War Department: "I know nothing of the calibre of Pope's artillery. All I can do is to direct ordnance officer to load up all the wagons sent to him. I have already sent all my headquarters wagons. You will see that wagons are sent from Washington. I can do nothing more than give the order that every available wagon in Alexandria shall be loaded at once. . . . ." The historian so uses his material as (without directly saying so) to convey the idea that the despatch was sent by McClellan to Pope, and that, too, in the very crisis of battle, and that McClellan refused or neglected to supply Pope with ammunition; and he thus attributes to McClellan not only inhuman disregard of the necessities of a brother-officer, but also faithlessness to his duty as a soldier—the whole envenomed by a cold and cruel irony. The despatch, as printed in full in the appendix to the Report of the Committee on the Conduct of the War, tells a very different tale.

It may not be worth mentioning, but the author's statement that "Colonel Corcoran . . . was handcuffed, placed in a solitary cell, and attached to the floor by a chain, in the Libby prison, at Richmond," is not correct. Colonel Corcoran never was in Libby prison, and there were no cells in Libby, which was a tobacco warehouse, in Richmond, used as a prison. Colonel Corcoran, with several others, whom the author does not name, were held by the Confederate Government as hostages for the crews of Southern vessels, captured by us and held as pirates; but the hostages were selected by the drawing of lots in Richmond, and the drawing took place on the 10th of November, 1861, and Colonel Corcoran had been removed from Richmond to Charleston some weeks before.

The chapter on the origin and history of the Mexican expedition is a very remarkable one. It is extremely interesting, but it reads like a dream, and leaves the mind in a curious mood of questioning, which is complicated by the bewilderment which attends the following singular use of language: "As it was, things were done in Mexico which, could they have been brought to a [*sic*] knowledge of the French, would have thrown that great people into a profound reverie." That the effect on the spirited French people of giving them fuller knowledge of this "shameful expedition" should have been to throw them into a reverie, is hard to understand.

This book of Dr. Draper's is not so good as it ought to have been, and not so good as he might have made it with a little more pains; but it has many merits, after all deductions are made, and among them may be numbered, besides those already mentioned, a certain clearness of perception of national characteristics, breadth of view, considerable power of generalization, the successful enunciation of philosophical propositions, and, often, the use of expressive and vigorous language.

THE MAGAZINES FOR APRIL.

THE article in this month's *Putnam's* which will probably be found most interesting is the one entitled "A Political Romance"—a paper in which Mr. W. F. G. Shanks, a well-known journalist, treats of Senator Brownlow and ex-President Johnson. Mr. Shanks talks of these two gentlemen with what seems to us intelligence and discrimination. It is unlikely that it is still possible for Mr. Johnson to fall very much in the estimation of most magazine readers; so far as we have observed, nobody is doing him reverence now except the editor of the Louisville *Journal;* but Mr. Brownlow appears in Mr. Shanks's report as a person with real claims to respect. "A Curiosity of Literature," by Mr. Theodore Johnson, asserts boldly that Wolfe, the author of "The Burial of Sir John Moore," has no right to the credit hitherto accorded him—of being a poet who produced at least one genuine poem. Our famous ode is almost a literal translation, says Mr. Johnson, of a French poem written in commemoration of a Colonel De Beaumanoir, who was killed at Pondicherry, in 1749; and the French poem, he further says, is almost a literal translation of a German poem, which dates from the second half of the seventeenth century, and was written in honor of the Swedish General Torstenson, who fell at the siege of Dantzic. All three of the poems, or all three of the versions of the one poem, Mr. Johnson quotes in full. If any one is desirous of finding proof of this little story, we may refer him to these two works, which we have not examined, but which our essayist cites as his authorities—the tenth number and the three hundred and ninety-second page of the Leipzig *Europa*, and M. Lally Tollendal's "Memoirs of the Rehabilitation of My Father." Mr. R. B. Kimball's novel—or romance, as it is designated—grows no better as it grows older. Mr. Robert Morris Copeland's campaigning sketch, "My Man Antony," is truer in its generalities than in its details; and while it is not a literary success, has a certain value, we should

say, as a contribution to the history of the civil war. The department of "Home Literature" in *Putnam's* is of late more than tolerably well managed; at least it contains none of the dishonestly vague and non-committal criticism, and none of the laudatory-at-all-costs criticism, which makes most of the reviewing that is done in America and elsewhere worse than worthless to the author, to the reader of it, and to the writer of it. We may say, before taking leave of the magazine, that people who have been disliking General Prim, for the sake of his physiognomy, will be pleased with the article concerning that chieftain by "A French Republican"—M. Elie Reclus.

The April *Atlantic* has in it nothing to which we need feel bound to call the attention of readers who demand to be instructed; but there is very little of it that may not be read with pleasure. Mr. Howells makes a charming essay, of a sort which nobody makes so well, concerning his "Doorstep Acquaintance"—vagrants, namely, Italians with hand-organs, venders of images, pretended peddlers, odd-jobbers—the more or less disreputable people who even in logical New England contrive to persuade the world that it owes them a living, and who take for their natural prey the householder with some unwisdom and with a sense of the humorous. Very good, too, is the critical notice of Admiral Semmes's book. It is not equally good with the essay; a little of the human warmth of temper which not many of the humorists are without, but from which the ideal humorist keeps himself pretty free, Mr. Howells is apt to make manifest whenever the late unpleasantness comes up for consideration.

Part First of the "Autobiography of a Shaker" is such as to make one wish for more. Elder Evans's naive straightforwardness makes his writing very pleasant reading, to say nothing of the light which his statements throw upon the mental characteristics of the kind of men who become what may be called mystagogues. The account here given by the Elder of his conversion from infidelity to the faith as it is in Mother Ann might with advantage have been made a trifle more full and definite; but as it stands it is typical, and perhaps definiteness is not the virtue of accounts which describe the bursting on the soul of an inward light which instantaneously satisfies a man—and satisfies him beyond a possibility of doubt—in what must after all be an almost wholly inexplicable way, that there is a God, and that the Shakers receive direct revelations from him. "I was not required," says Mr. Evans, "to believe the imperfectly recorded experiences of spiritual men and women, but to attain to an experience of my own. I had received a revelation as truly as ever did Peter, or Paul, or Jesus, or Ann; and I therefore believed, not from the word of others, but (like the people of Samaria) because I had seen and heard and felt for myself." The first "evidence," he says in another place, that began to produce this faith in him was the seeing of "a brother exercised in a slight way outwardly" at one of the meetings. Soon after that, evidence of a far more convincing kind—of a kind such as to preclude any subsequent discussion of the question of the existence of a God, and the immortality of the soul, and the intercommunication of spirits—was granted to him as he lay in bed; angels came to him soon after retiring, and remained with him till it was nearly one o'clock in the morning. "I knew," he declares, "that intelligences not clothed in what I had called matter were present reasoning with me, more purely and logically than hitherto had any intelligences in the body ever done." Together with this dreaming there is evidently a great deal of sound sense and natural strength of mind and character. Considered as literature, there is something refreshing in the work of a man who, in telling you that he has a very retentive memory, so that whatever he reads is at once pictured on his brain, and can be recalled at any time in its minutest particulars, stops by the way in this fashion: "And (as Lincoln would say) this reminds me of what a woman I met on a Hudson boat said: that on coming from California she was nearly drowned; but before consciousness was gone, all the sins of her life were present to her view—not one, however small, was missing."

"A Strange Arrival" is a tale by Major De Forest of how the brig *Betsey Jane*, of New Haven, Glover, master, was boarded by the veritable *Flying Dutchman*, which celebrated vessel, with Captain Glover and his daughter Mary Anne on board, was afterward taken into Amsterdam, where she suddenly crumbled to pieces and vanished as soon as she had touched the pier. The story is well imagined, and is well carried out in its details, Captain Glover especially being admirably done, though he is here and there a shade too fine in his speech. "Our Inebriates Classified and Clarified" is a painful article, which purports to have been written by a person now resident in an asylum, and which has about it enough of unrestraint not only to make the supposition of its authorship seem a probable one, but also to suggest some expectations not very agreeable. It has cleverness, and otherwise has value; for a good many people will like to read it for names, which have something to do with good magazine literature perhaps, though nothing to do with good literature in the higher senses of the term; still there seems to be a decidedly regrettable impropriety in the publication of such articles. "The Foe in the Household" continues to be a good story of a peculiar sort. Its anonymous author reminds one more of Mrs. Harding Davis than of any other writer; but as yet there is none of Mrs. Davis's morbidness, or only more or less shadowy indications of it, and there is as much vividness and force in the picture presented as even that able writer displays when she is doing her best. The unnaturalness of the conversation between the two girls, or rather Edna's way of telling Mary her story, is, however, not a thing to be much praised. "A Ride with a Mad Horse in a Railroad Car" is effective but too floridly written. "A Carpet-Bagger in Pennsylvania," and "How we Grow in the Great West," are spirited and readable articles; both contain some good and new anecdotes, and the latter is to be called remarkably fresh, considering its hackneyed subject. Of this month's *Atlantic* poetry, Mr. Taylor's "Run Wild" is the best; though "To-day" is as graceful and nearly as forcible a rendering of a thought not more common than the one which we get in "Run Wild."

"Put Yourself in His Place" is extremely readable, and none of its devourers will say that the interest flags, or that the author does not know how to make up monthly instalments of novels. Not many heroes were ever left in a more precarious and exciting situation than that in which Mr. Henry Little is left at the end of the fifth chapter in this month's *Galaxy*. It is a comfort to know that he is what Sir John Ellesmere calls an "indispensable;" and that though he has just been blown up with gunpowder, and has on his hands at one and the same time a deadly feud with a most vicious trade union, and a desperate love affair with an heiress all but hopelessly beyond his reach, and is himself the object of the hopeless affection of a country girl, and, moreover, is at this moment hanging by one maimed arm between heaven and earth—forty feet from the ground, we believe it is—he will nevertheless come up smiling in the next round. "Pyramus and Thisbe" is a pretty little flirtation piece by Mr. Henry James, Jr., in dialogue, that does not strike one as being too much like ordinary life. There is an occasional good stroke, however, and nobody will say no to the young lady and gentleman at the end of it; their talk is sufficiently to the purpose after all. The novel of "Cipher" is concluded in this month's number of the magazine. Its author, Mrs. Jane E. Austin, is certainly cleverer by much than most of our women who write stories; and if the intensity of feeling which she possesses in a high degree—fine feeling, too—were united with a franker willingness to throw herself on herself, to disregard sensational models furnished her by writers not really so capable as herself, to trust to nature a little more—the nature immediately about her (by which we do not mean New Englandism merely)—there seems to be no reason why very good things should not be expected of her. Mr. Justin McCarthy, Professor J. C. Draper, Mr. C. W. Elliott, Mrs. Edwards, and Mrs. Piatt, are the principal contributors, besides those already mentioned, to the April *Galaxy*, which is an average number. Dr. Draper has bad stories to tell of "Animal Food." Mr. Elliott's article on "The Milk-makers" is easy to read; but we observe that the authorities as regards horse breeding are not all of them agreed that he did not fall into a good many mistakes in his last month's article.

Lippincott's has for its chief article the second of a series of pieces in which Mr. Leland is depicting for us the political career of the famous, and we may almost say the immortal, Hans Breitmann; who, having distinguished himself in war, is now, as his friend Birdofredum Sawin did before him, seeking office at the hands of an enlightened constituency. He seems just now to have what is known as "the inside track." That he has some knowledge of the political nature of his German friends—or rather enemies; for he is cautiously addressing a crowd of the adherents of the notorious Schmit, his opponent—seems to be tolerably evident from this passage which we take from the speech referred to:

> "Und to mine Sherman liperal I might mention in dis shpot,
> Dat I hear an confoundet rumor dat der Schmit peliefe in Gott;
> Und also dat he coes to shoorsh, mit a brayer-book for salfadion:
> I vould not for die welt say dings to hoort his repudadion.
>
> Und noding is more likely dan dat it all a shlander pe,
> So also de rumor dat ven young he shtoody divinidy:
> I myself, as a publican, moost pe a sinner by fate,
> Und in dis sense, I denounce myself ash Re-publi-candidate!
>
> Und dat ve may meed in gommon, I deglares here in dis hall—
> Und I shvears menself to hold to it votefer may pefall—
> Dat any man who gifes me his fote—votefer his boledics pe—
> *Shall alfays pe regartet ash bolidigal friendt py me.*"

Mr. Leland, after having long had a reputation among his friends and, indeed, among a good many people who only knew him by name and by some of his productions, as a man of wit and humor, has had the good

fortune, which does not always, nor often, fall to the lot of such men, of proving conclusively to the world that his friends' partiality was by no means overstrained. The Hans Breitmann ballads are a genuine addition to American literature. Those who best know the "Biglow Papers" will be most willing to give the "Dutchman" a place near Mr. Hosea Biglow and Mr. Sawin. There is, to be sure, less in the new-comer—less wit and mother wit—than there is in the two everlasting representatives of the everlasting Yankee and their clerical adviser; and there is no poetry in Hans or his biographer except so far as sentimentality soaked with seas of lager is poetic: undeniably, for these reasons the new claimant for honors must be satisfied with less than belong to his predecessor; but, nevertheless, the Breitmann ballads are a wonderfully good and amusing portraiture of a real and very amusing creature. We hope Mr. Leland may not make too many of them too rapidly. To cram them a little more full of meaning, and to finish them with a little more elaborateness, would not hurt them. The picture which Dr. Primrose thought might have been better if the painter had taken more pains was neither the first nor the last of its kind. For the rest, this number of *Lippincott's* is better than usual. Mr. Calvert's article on "College Education" goes a good deal deeper than most of the countless articles that are now being made on that subject, and almost anybody may read it with profit. Sidney Hyde, who may be a man or may be a woman, but whom we suppose to be a woman, is the author of a story and a poem, the latter showing study of Miss Ingelow, and the former being newer and more clever. Its title is "The Prince's Surprise." Mr. W. W. Crane takes up the "Traditional Fish Stories" (so called) and shows that the Arabian Nights' tales of rocs and Old Men of the Sea, and valleys of diamonds, were not the mere fablings that not long ago they were universally taken to be; but were as well founded on fact as the accounts we all now believe of dragons and giants and anthropophagi. "Sam's Sermon" is a very comical sketch by a new writer, S. W. Tuttle. "Beyond the Breakers" goes on, and the part of it before us ends with a more spirited scene than we have had hitherto.

If any one is too much bothered by the question of why the earth and the world were made, one might suggest to him as an answer—till he gets a better one—for *Harper's New Monthly Magazine*. Nothing happens anywhere that does not get into it sooner or later; and there is even a drawer for things, which, it may be suspected, or some of which, may perhaps have never really happened at all. This month we have an article (borrowed from the English translation of De Fonvielle's "Thunder and Lightning") containing a dozen illustrations of the freaks of electricity. Next follows some extracts, with pictures, from Mr. Frederick Whymper's "Alaska." The third illustrated paper is an apparently original account of the great South American earthquakes of last year. Then follow on a dozen pieces, unborrowed, borrowed, and "lifted"—Mr. Justin McCarthy's clever story being the best of them, and somebody's "Catherine the Second" being the worst, and a reproach to the editor. We do not know what our friends over in Jersey and up the river will say to Mr. Curtis this month; he appears to be full of envy and jealousy, and to have almost no critical ability whatever.

In *Hours at Home*, Count Tolstoi's "Sevastopol in May" is as interesting as ever—indeed, more so. In one of these chapters there is a very remarkable description of the death of a man who is instantly killed—as the living say, "instantly killed"—by a piece of a shell which strikes him. But to him, the dying man, his death seems a different affair. This surely is extremely powerful writing:

"Michailof looked behind him. The shining point of the bomb seemed to stand at the zenith—in that position where it is impossible to tell its direction. But that lasted only a minute; the bomb came quicker and quicker, nearer and nearer, so that you could see the sparks from the tube and hear the fatal whistling, and directed its course straight at the middle of the battalion.

"'Lie down,' cried a voice.

"Michailof and Praskukin lay down on the ground. Praskukin, tightly closing his eyes, heard only how the bomb fell heavily somewhere very near on the hard ground. A second passed—it seemed an hour—and the bomb did not burst. Praskukin began to be afraid that he had done a cowardly act without any reason, that perhaps the bomb had fallen far away and that he only thought he heard the fuse fizzing. He opened his eyes and saw with satisfaction that Michailof lay immovable on the ground near his legs. But his eyes at that moment met the sparkling fuse of the whirling bomb not a yard from him. A horror—a cold horror excluding all other thoughts and feelings—took possession of him. He covered his face with his hands.

"Another second passed—a second in which a whole world of feelings, thoughts, hopes, and recollections passed through his mind.

"'Whom will it kill; me or Michailof? or both together? If it hits me, where will it hit? in the head, then it's all over; if it hits my leg, they will cut it off and I shall ask them to do it by all means with chloroform—and I can still get through alive. But perhaps it will only kill Michailof—then I can tell how we were walking together, and he was killed and I was spattered with blood. No, it's nearer to me—it will kill me!'

"Then he recollected the twelve rubles that he owed Michailof; he recollected also another debt at Petersburg that he ought to have paid long ago; a gypsy air that he had sung in the evening came into his head. The girl whom he loved appeared to his imagination in a cap with lilac ribbons; he remembered a man whom he had insulted years before and who had never paid it back, although at the same time with these and a thousand other remembrances the feeling of his present circumstances—the expectation of death—never for a moment quitted him. 'However, perhaps it will not burst," he thought, and with despairing decision wanted to open his eyes. But at that instant through the still shut lids he saw a red fire, and with a horrible noise something hit him in the middle of the breast.

"'Thank God! I am only bruised,' was his first thought, and he wanted to feel of his breast, but his hands seemed to be bound down, and a weight to keep down his head. The soldiers shone in his eyes and he unconsciously counted them: 'one, two, three soldiers, and that one whose overcoat has slipped down is an officer,' he thought. Then he saw flashes, and he thought, 'what are they firing from, mortars or cannon? Probably cannon. They are firing again; and there are more soldiers: five, six, seven soldiers, and they all go past.' He all at once became afraid that they would leave him there. He wanted to cry out that he was wounded; but his mouth was so dry that his tongue stuck to his palate and a horrible thirst tormented him. He felt how wet he was about the breast. 'Really I fell into some blood when I lay down,' he thought, and yielding more and more to the fear that the soldiers who were going past would leave him there, he collected all his forces and tried to cry out, 'Take me along,' but instead of that he groaned so horribly that it was awful to hear his own voice. Then some red fires danced in his eyes, and it seemed to him that the soldiers were laying stones on him; the fires danced quicker and quicker, the stones which they laid on him oppressed him more and more. He made an effort to throw off the stones, stretched out, and then neither saw nor heard nor thought nor felt. He was killed on the spot by a fragment of shell in the middle of his breast."

Professor Evans writes clearly about Bismarck's career, and Doctor E. C. Wines makes a succinct but comprehensive and agreeable essay on the "Present State of the Prison Question in the United States." Professor Seelye's article on "Punishment" we do not advise any reader to begin upon: and what the reader will get if he begins upon "Spiritual Problems" and gets as far as we got, he may judge from this brief extract, which relates to the upholders of what is called the theory of development: "The so-called philosopher, who adopts this theory, has deliberately made up his mind to be a fool." Anything so indecent as this we have not seen for a long time in any respectable periodical.

OUR NATIONAL CEMETERIES.*

WHOEVER receives the "Executive Documents" accompanying the President's Message for 1866, 1867, and 1868 will find inthe reports of Quartermaster-General Meigs to the Secretary of War, and in those of Gen. J. J. Dana and Col. C. W. Folsom, accompanying them, on our National Cemeteries, many suggestive facts and figures. He will learn from them that Government has assumed the charge of the graves of 316,233 Union soldiers in 72 special or "National" cemeteries, and in 320 of the local cemeteries of the country.

The names of 175,761 (more than one-half) of the dead have been preserved and attached to the graves. Of the rest it is only known that they died fighting in the Union armies; their graves marked with the sad inscription—"Unknown United States Soldier." Of the whole number less than one-fifth now repose in their original graves. 257,520, or more than four-fifths, have been removed from the rude trenches of the battle-fields, or from their roadside graves, to the orderly enclosures where the national flag floats over their long rows. This has involved a vast deal of labor. First put in practice at Chattanooga in 1864, a general system of removal and protection was adopted by Mr. Secretary Stanton, and carried out with much devotion by Quartermaster-General Meigs and his assistants; especially by Gen. Donaldson and Col. Whitman in Tennessee, and by Col. J. M. Moore in Virginia. Three years have been spent in the work. Often the bodies were carried many miles in wagons over rough roads; and the search in tangled swamps and obscure mountain passes was attended with much difficulty. Every pains was taken to preserve all memorials of identity, from the scrap of a letter hastily pinned on the breast or buried in a can or bottle with the remains, up to the rudely-ornamented headboard which comrades provided where more time was allowed.

The sites of the cemeteries have been generally well chosen. Many of them may eventually become, with taste and care, equal in beauty to Greenwood or Mount Auburn. At Arlington, one mile across the Po-

* "Reports of the Quartermaster-General to the Secretary of War, for the years 1866-'67-'68." Washington: Government Printing-Office

"'Roll of Honor.' Names of Soldiers interred in National Cemeteries." [Vols. I. to XVII.] Washington: Government Printing-Office. 1865-'68.

"Statement of the Disposition of the Bodies of Union Soldiers removed to National Cemeteries." [Vols. I. to III.] Washington: Government Printing-Office. 1867-'68.

tomac, in view of the City of Washington, nature and the former owners have done much. A noble Virginia mansion, embowered in ancestral trees, keeps guard over the endless ranks and files of headboards which, for thirty acres, tell of an army of 15,000 men slumbering beneath. On a moonlight night the visitor is irresistibly reminded of Zedlitz's beautiful poem of the "Midnight Review," where the dead Napoleon, in his grey surtout and little cocked hat, reviews the shadowy host, "die blutigen alten Schwadronen," whom the Nile mud and the ice of Russia have released for an hour of ghostly homage to their dead leader, on the Elysian fields. At Pittsburg Landing, on a bold bluff which commands a view for many miles up and down the beautiful Tennessee River, and shaded by magnificent old oaks, repose the remains of 3,600 soldiers of the North-west, who fell fighting under Grant and Buell in the battle of Shiloh. An almost patriarchal stillness broods over the scene; it is but rarely that a passing boat breaks the glassy quiet of the river; and the rugged knolls, where for the two terrible days of April 6 and 7, 1862, the tide of battle rolled stubbornly backward and forward, are now as lonely as a moor in the Scottish Highlands. At Chattanooga, immediately after the battle of September 20, 1863, the thoughtful care of Gen. Geo H. Thomas selected, as a burial-place for the Union dead, a hill commanding a view of the whole battle-field, and with the bold outline of Lookout Mountain, where Hooker fought his "battle above the clouds," looming in the distance. Careful hands have laid out the whole forty acres with great beauty; and when the young trees now growing shall have replaced the original forest destroyed by the armies, it will be a fitting resting-place for the 13,000 heroes who lie there.

But our space forbids further mention. Suffice it to say, that whoever is interested in our late struggle for nationality will find ample repayment for a tour to the principal battle-fields, and to the cemeteries which now form the most visible memorials of the conflicts there. Beginning at Louisville or St. Louis in the month of March or October, let him visit Nashville, Murfreesboro', Corinth, and Shiloh, and pass down the Mississippi by Memphis, Vicksburg, Natchez, and Port Hudson to New Orleans. Thence to Chattanooga, Marietta (near Atlanta), Andersonville, Beaufort, S. C., Wilmington, Raleigh, Petersburg, Richmond and its neighborhood, Yorktown, Fredericksburg, Arlington, Antietam, and Gettysburg. (Or he may reverse the order of the journey; taking, so far as possible, the warmer stations in the cooler months.)

What remains to be done in the future? Only that the country make these sacred grounds her care for ever. The perishable wooden headboards and fences must soon be replaced by marble, granite, or iron; and for this Congress has made adequate appropriations. But that is not enough. The grass must be made to grow its greenest, and flowers to bloom their freshest, over these graves; trees must be planted now, that the next generation may sit in their shade; care is needed that weeds and brambles shall not spring up and hide the mounds. For these and similar purposes a direct appropriation by Congress of $50,000 annually for the next five years is desirable. If the spirit of our institutions does not countenance any *national* expenditures for mere artistic decorations, it becomes the fitting duty of our State legislatures to erect suitable monuments to testify their respect to those of their sons who sleep a thousand miles away from home. These brave men died for us: most of them in the bloom of youth, with the joys of home before their eyes, and the rewards of industry and talent within their reach, they sacrificed all for the benefit of us, their survivors. Let us begrudge no expense to place the lesson of their self-devotion so attractively before the eyes of American youth as to give the surest earnest of American liberty.

A Manual of General History; being an Outline History of the World from the Creation to the Present Time. Fully illustrated with maps. For the use of academies, high-schools, and families. By John J. Anderson, A.M., late Principal of Grammar-School No. 31, New York City, author of an Introductory School History, a Common-School History, a Grammar-School History, and a Pictorial School History of the United States. (New York: Clark & Maynard. 1869.)—This book is designed to supply a "convenient manual of general history, with the necessary geographical and chronological accompaniments." Maps, brief explanatory notes, map questions, "questions designed to draw attention to single facts," "review questions," tables of contemporaneous events, and the pronunciation of names, are some of the features by means of which the author has endeavored to make his compendium an easy companion to both teachers and pupils. He has achieved this, obviously not without painstaking. The external appearance, too, of both text and maps is rather satisfactory. So, in the main, is the style, and so also the subdivision of matter. We say *sub*division, for the division and arrangement of the whole according to countries, which the author has preferred to the chronological or mixed order, we must decidedly condemn, and especially in modern history, the very part in which he has consistently adhered to his plan. But the manual before us has greater defects than this. "The most important facts to be learned in history"—we read in the "Introduction"—"are those that refer to the progress of mankind in civilization—in the arts, sciences, literature, political freedom, social culture, and religious truth. Whatever events have no immediate bearing upon these, though often affording matter for curious reflections and interesting research, are of little value." This is, in the main, a very sound maxim, but has the writer observed it? He finds room in his sketch of Grecian history to speak of the capture of Amphipolis and Olynthus, of the battles of Cnidus and Coronea, of Craterus, Polysperchon, Ptolemy Ceraunus, and Antigonus Gonatas, but he has no room for even a bare mention of Hesiod, Pindar, or Euripides; of Thales, Pythagoras, or Zeno; of Phidias, Euclid, or Apelles. The entire mythology of the Hellenes is passed over in silence. The legislation of Lycurgus is delineated in the following colorless words: "Lycurgus by his laws designed to perpetuate the primitive simplicity and hardihood of the people, by preventing the spread of luxury, and by educating the youth so as to make them brave and patriotic soldiers;" and this is all we learn about the laws, social institutions, and customs of the Lacedæmonians! There is not even an allusion to either Spartan semi-communism or Spartan slavery. Of the "social culture" of the Babylonians, of the "arts and sciences" of the Chaldees, of the agricultural and industrial development of the Euphrates region, we hear *absolutely nothing* — though there is enough room for "Nimrod, the son of Cush, and grandson of Ham," the "mighty hunter," who "is supposed to be the same as the Belus of whom the historians speak," "or the Bel," and whom "the constellation Orion is thought to represent" [*sic.*] Of the ancient Etrurians we hear that they were "the most important and the most advanced in civilization" of the pre-Roman tribes of Italy, but this is *all* we read about them. Of ancient Hindostan or China there is no mention. Neither is there a single word about the laws of Moses, or about the "literature, political freedom, social culture and religious truth" of the Hebrews. Their early history in Palestine is thus related: "Into this region they had been led by Joshua, Moses being only permitted to catch a distant glimpse of the promised land. After the death of Joshua, followed the period of the Judges, which lasted about five centuries. The last of the Judges was Samuel, who, when the people demanded a king, anointed Saul." So much and no more is said about Moses, Joshua, the Judges—including Samuel—and Saul; Isaiah, Jeremiah, and all other prophets remain unmentioned. The post-Babylonian history of the Jews is equally poor. It contains no mention of Sanhedrim, Pharisees, or Sadducees; of Mishna, Talmud, or Rabbis. Moslem culture is treated in the same way. We must be satisfied with learning that Mohammed "pretended to have a divine mission, and a new revelation from God;" that the cardinal principle of his creed was, "There is but one God, and Mohammed is his prophet," and that the collected fragmentary writings of "the impostor" are "called by his followers the Koran." The cardinal principles of the Reformation are perhaps even less fully explained. Of wars and warriors, kings and empires, there is, of course, incomparably more given; parts of the political history are well told; the long lists of reigns are certainly ample enough, and still more ample are the chronological dates. But even the purely political narratives are disfigured by want of historical symmetry, by grave omissions, and here and there by blunders, not to speak of the general paleness of delineation. Thus, for instance, we can find no reason for giving the reigns of such mediæval German monarchs as Henry II., Conrad II., Conrad III., Henry VII., and Albert II., and omitting the incomparably more interesting reigns and names of the modern Emperors Maximilian II., Rodolph II., Mathias, Ferdinand III., and even of Joseph II. The predecessor, in Austria, of Francis Joseph is forgotten, together with his Metternich. The history of Hungary may be said to be totally wanting, though this name occurs here and there in connection with Austria or Turkey. Of Russia and Poland in the Middle Ages we have a few lines. Servia, Roumania, Montenegro, are not even alluded to among the recent events of Turkey. Nor is Ypsilanti, or the destruction of the Janizaries by Sultan Mahmoud, though Navarino is three times spoken of. The whole history of struggling and independent South America is given on half a page, without a mention, of course, of such names as San Martin, Paez, Francia, Rosas, or Lopez. Nor can it be learned that there is a republic in that part of our continent. The narrative of the secession war, though designed to be comparatively fuller than most others, contains

no mention of the battles of Shiloh and Williamsburg, of the sieges of Yorktown and Charleston, or of Stonewall Jackson. The dates of the events stated are in several cases incorrect. The battle of Fair Oaks was not fought on "May 31" alone, but also on the following day; the "seven days" before Richmond were not "June 25—July 1," but June 26—July 2; McClellan was not superseded by Burnside "in October," but in November; the latter was not repulsed at Fredericksburg on "Dec. 12," but on the 13th; Atlanta was not taken on "Sept. 20," but at the beginning of that month. Similar mistakes occur in other parts of the book, though less frequently. Such are "215 B.C.," "206 B.C.," and "189 B.C.," as the respective dates of the battles fought by the Romans at Cannæ, on the Metaurus, and at Magnesia—all post-dated by one year. Erroneous or lame statements of facts are equally abundant. Thus Persia, under Cyrus, is said to have been "a vast empire extending from the Ægean Sea to the Euphrates River, and including, besides the original territory, Media, Assyria, Babylonia"—all of which territories lay to the east of the Euphrates, that is, beyond the limits stated. The passage on the religion of the Persians is almost equally incorrect. Palestine is both falsely bounded and defined. Of the Philistine cities, one of the foremost, Gaza, is forgotten. The number of the Messenian wars is reduced from three to two, but the sway of Sparta is extended over the whole of Peloponnesus. Prussia and Austria, by wresting Schleswig and Holstein from Denmark, are said to have "thus confined her sway to the peninsula"—as if Schleswig were no part of the Cimbric peninsula, and Denmark no longer mistress of her islands, her chief possession. Garibaldi is made to overthrow the reign of "Ferdinand II., nicknamed King Bomba," instead of that of Francis II., nicknamed Bombino, the son and successor of the city-bombarder. Of the two last Frederick Williams and the present King of Prussia we learn that they "have ruled with despotic power, steadily resisting all efforts on the part of the people to obtain a representative government." These few specimens may suffice. Of the maps we must state that we find them more useful than correct, and more correct than many similar productions attached to our historical school books, which, as far as universal history is concerned, are, we are sorry to say, rarely better, and often much worse, than the manual before us.

The Sacred City of the Hindus: An Account of Benares in ancient and modern times. By the Rev. M. A. Sherring, M.A., LL.B., London; with an introduction by Fitz Edward Hall, Esq. Pp. xxxvi., 388. (London: Trübner; New York: John Wiley & Son. 1868.) — The ancient architecture of the Buddhist races of India is one of the most interesting studies now offered to Europe. It will hardly do to say "to Europe and America;" the study of architecture for its own sake, or for the sake of questions of race and of history, has hardly become a recognized branch of American scholarship. It is not bearing very hard upon our *savans* when we say so; perhaps the newest branch of study even in Europe is this investigation of problems of ethnology by means of lithic remains. The historians have not been eager to consult other documents than written ones; and the students of the buildings, pencil and measuring-rod in hand, have not been inspired with the historical spirit. It is only within a few years that critical enquiry has been turned to the enduring tablets which are only less great and less permanent than the "great stone book" of the geologists. India especially—occupied by British troops and perforce obedient to British law, crowded with architectural remains of remote antiquity and with most noble and suggestive buildings of more recent ages, unexplored except by stray sketchers of the picturesque and roving officers with no more than time enough to measure a detached monument, its populous and wealthy cities as little known to the history of art as the most obscure outlying districts—is a rich field for the admirers of good building, the lovers of graceful ornament, the students of the history of mankind and of religion. Systems of building differing in their primal forms and principles of construction from anything familiar to European art, and combining with these strange devices great boldness and skill in the use of the arch, the dome, the corbelled cornice, and other forms familiar to us; these systems stand embodied in temples, tombs, gateways, palaces, mosques, and unexplained monuments, scattered thickly over a land not so very much smaller than the settled part of the United States. Rich and varied ornament, representing a hundred styles and twenty centuries, carved, painted, and inlaid; the grave and masculine early architectural sculpture; the more fanciful and ephemeral but admirably well-managed later carving, associated as perfectly, and subordinated to, yet ruling, the architectural forms as harmoniously, as in Gothic church building; all the strong and creative art of the past out of which has grown that modern Indian designing of unsurpassed gracefulness and variety which is familiar to us in shawls, muslins, and lacquered and inlaid toys—that refined and powerful art inspires and completes the structural triumphs of the vast peninsula. What the architects might learn from India is tolerably visible, or at least can be guessed from that which is visible. What the ethnologists and historians might learn from architectural examination and critical analysis can only be inferred.

The Holy City of Benares is rich in modern architecture—that is, in Hindoo and Mohammedan buildings of the past four hundred years. It is not in sacred buildings alone that the art of these schools is embodied, but in important civic buildings as well. The water-gates, with steps and tanks for convenience of bathers, the Ghauts as they are called, are the finest in India. All the rivers as they pass through the great cities are lined with these luxuries of a hot climate, many of them stately and beautiful in design, and consecrated by the temples that are united with their mass; but the Ghauts of Benares are the model structures of their kind.

On the other hand, there are not known to be many very ancient monuments within the limits of the city; but in the immediate vicinity are some most ancient and mysterious Buddhist remains, which have been examined and described for us, and photographed in detail.

The book before us seems to be valuable principally on account of the descriptions of buildings, and of Buddhism and its attendant mysteries and ceremonies. It is not well arranged, it is hard to trace the course of reasoning in each chapter, and the different subjects treated of succeed each other about as they happen to come. But a great deal of important information is scattered here and there through the book, and careful perusal, note-book in hand, would be found to pay very well. The illustrations are large woodcuts taken from photographs; the subjects well chosen, and the designs not wholly obscured by the rather careless engraving. The author does not pretend to have been an original investigator, nor is there any technical information, or antiquarian or artistic criticism, attempted. It is a book of traveller's experience of better than the usual character, and in a most interesting region. A very good index helps one's studies; it is a pity, as it is a wonder, that we have to say that this necessary adjunct is very rare in such books of travel and special study.

The Search for the Grāl. By Julia Goddard, author of "Joyce Dormer's Story," "Adriana," etc. (London and New York: Cassell, Petter & Galpin.)—Honora Wentworth, the heroine of Miss Goddard's story, is a young English girl who, being filled with a good deal of somewhat commonplace romance, which leads her to dress in picturesque but becoming costumes a little out of the fashion, to spend much time in solitary reverie and in reading poetry, and in speculating upon the beauty and mysterious sacredness of life, happens to light upon Wolfram von Eschenbach's poem of "Parzival," and to conceive it to be a mystical allegory of the conduct of life. Like Parzival, she proposes to herself the quest of the Grāl—the search, that is to say, of the secret which shall make plain the riddle of life, empty it of commonplace, and make the world a place worth living in. As she falls in love about the same time that her acquaintance with the poem commences, she naturally concludes that her search has very soon proved successful; and love stands to her for the Grāl for the space of some six months, at the end of which time she finds that she has been flirted with, and that the Grāl has evidently eluded her. She suffers, of course, but has an advantage over most people in like circumstances in that her reading comes to her help, and she finds a certain consolation in noting the resemblance between her case and that of Parzival, whose quest was also in the first instance unsuccessful. She gets a fruitful hint as to new ways of pursuing her search, from the fortunate accident of the failure of a stock company in which the bulk of her mother's property had been invested. She has a chance for a little heroism, and goes to Germany by herself to get an opportunity to forget her heart troubles, and also to try a plan she has formed of becoming a famous author and earning money enough to redeem the house at home which had been mortgaged. While engaged in this laudable enterprise an old lover of hers turns up in an extremely opportune manner, and Honora, after rejecting him once in one of those fits of pride and pique which are, perhaps, rather commoner in fiction than out of it, discovers that she loves him heartily, marries him in due season, and so accomplishes her quest in a satisfactory manner. There is nothing new in the story, except the fantastic parallelism which it keeps up between the ordinary events of an ordinary life and the imagery of the poem to which it constantly refers. Like Honora, Miss Goddard seems to have read more and observed less than is altogether good for her in her capacity of novelist. Honora's despairing question, "If I can't write what can I do?" appears to have perplexed Miss Goddard also, and like her heroine she has "written what was in her heart"—and a little also of what was in her

memory. She describes everyday life and character like one who has walked in a dream all her days. There is a youthful innocence in her way of using the stock incidents of fiction, and in her unsuspecting confidence in the reader's inability to recognize either them or her characters as old acquaintances. But, barring a certain feebleness in delineation which blurs the outlines of most of them, there is not one of the personages of the story who is not perfectly familiar to every one who reads novels.

In conclusion, let us say that whatever else this novel lacks, it is never wanting in perfect purity and in good-heartedness; and its aspiration after the ideal, though strained and youthfully romantic, is refreshing, and in its way is even admirable, when one thinks of the tone of most of the fiction that is produced for us. It is proper to say to Miss Goddard that painstaking, hard labor, and a knowledge, not of what ought to be—or not of that only—but also of what is, and of what is outside us, as well as of what is inside us, are essential to success in the field in which she has chosen to work.

Cast Up by the Sea. By Sir Samuel W. Baker, M.A., F.R.G.S. With illustrations by Huard. (New York: Harper & Bros. Philadelphia: J. B. Lippincott & Co.)—With each fresh boys' story the question recurs to our mind: Does any harm come from these tales of violence and bloodshed, and ought they to be expurgated as Cruikshank has sought, on temperance principles, to expurgate "Puss in Boots" and other folk-lore? Should we banish brutality and vice, as he would banish wine, from juvenile literature? Or may we freely, within the limits of the probable, depict life in all its repulsiveness for the amusement and instruction of the young? Locke complained, in language nearly applicable to the case in hand, that "all the entertainment of talk and history is of nothing, almost, but fighting and killing; and the honor and renown that is bestowed on conquerors (who for the most part are but the great butchers of mankind) further mislead growing youths, who by this means come to think slaughter the laudable business of mankind and the most heroic of virtues."

However this question may be settled, it is certain that it has not troubled Mr. Baker, who introduces, as often as he thinks necessary to the interest of his story, the most shocking catastrophes, and describes them with even painful fidelity. The life of the wreckers and smugglers is full of horrors; Mother Lee meets an awful fate in the midst of her fiendish treachery; there are desperate and bloody naval engagements, and wholesale slaughter among savage tribes. The good Dr. Jones is murdered in his parsonage; the villain of the story hangs himself after an attempt to fasten the guilt of this crime upon the hero; and the negro Tim, the most faithful of companions, is allowed to perish of thirst in the desert under the most harrowing circumstances, though not without a certain relief in his high devotion to his friend, and deliberate self-sacrifice. In such portions of his narrative we recognize the *sang-froid* which characterized the author in his "Albert N'yanza," a quality which is perhaps indispensable in a good observer, especially when travelling among barbarous peoples with his life in his hands. Nevertheless, in neither work is it difficult to perceive Mr. Baker's goodness of heart and native humanity, and in both he is a capital narrator. "Cast up by the Sea" is, up to the time of the shipwreck in the Indian Ocean—by the way, let us commend particularly the description of the cyclone—a model of counterpoint; everything happens about as you expected, and as is often hinted in advance. But when our adventurers touch the African coast, Mr. Baker is at home, and forsakes the beaten track of other story-tellers. Without offering to sketch the plot or save any one the trouble of reading the book, we may be permitted to speak of the uncommon intelligence and prowess of Ned Grey, who knows how to take observations of the sun when wanted, and what is the best spot to aim at in an elephant when hunted for the first time, and the names of tropical fruits and vegetables as soon as seen, and generally all that it is necessary to know in any given emergency, and does what is necessary to be done; a crack shot like Mr. Baker himself, etc., etc. Artistically considered, the story is creditable to the writer, though not always exact in its endeavors to be realistic. So long as we must have a sea-fight, it was well to borrow an official account of one that actually came off, with due acknowledgments.

Ecce Cœlum; or, Parish Astronomy. By Rev. E. T. Burr, D. D. (Boston: Nichols & Noyes. 1869.)—This book consists of a series of lectures giving the leading facts and discoveries in astronomy in an attractive and familiar form. It is not offered as a text-book, but as a means of awakening a more general interest in this branch of science. We have rarely examined a popular work on a scientific subject in which so much real instruction has been given in a form so well calculated to secure and retain the interest of the reader. Many who are repelled by the close reasoning of a scientific treatise will read with pleasure a more popular presentation of the heavens, and may obtain some conception of the reasoning processes by which the wonderful results of Newton's law have been worked out. The accounts of the immense masses, the inconceivable distances and velocities, with which astronomy deals, are often received with incredulity, or regarded as speculations by those who will not give sufficient attention to the subject to convince themselves of the truth of these revelations. The reader of this book cannot avoid the conclusion that the truths of astronomy are as firmly established as anything in the whole world of science.

We do not like the classification introduced into the Fifth Lecture, of "Sun Systems, Group Systems, Cluster Systems, Nebula Systems, Ulterior Systems, and Ultimate Systems." The existence of "satellite systems" forming part of "planet systems" is certain, and there is strong ground for the theory that suns with their attendant planets form parts of more comprehensive systems, which may be called "sun systems"; but it is purely fanciful to continue this classification, regarding "sun systems" as parts of a still more comprehensive system called "group systems," these to be followed by "cluster systems," and so through the entire list. The Sixth Lecture, on "The Author of Nature," might well be omitted. It does not strengthen the impression previously produced of the reality and grandeur of the wonders of the heavens, and the effect of the argument for the existence of a Supreme Being is much weakened by an exceedingly wearisome repetition of it.

THE PUBLISHERS' TRADE LIST DIRECTORY FOR 1869 contains a complete Catalogue of all the Books published by nearly every publisher in this country. As a work of reference for BOOKSELLERS and BOOK-BUYERS, LIBRARIANS and LITERARY MEN generally, its value will be incalculable. It saves time in making up or filling orders by suggesting other books or articles; indicates where to buy certain classes of books or stationery advantageously; gives the prices, etc.

All the lists of Juvenile and Religious Books are in Section 1st. All Belles-Lettres, Fiction, etc., are in Section 2d. All School-books are in Section 3d. Law, Medical, and Scientific Works are in Section 4th. STATIONERS and FANCY GOODS are in Section 5th.

The entire work costs $5, or each section can be obtained separately at $1 each. Address,

HOWARD CHALLEN, Publisher,
1308 Chestnut Street, Philadelphia.

Zell's Popular Encyclopedia:

A UNIVERSAL DICTIONARY OF HISTORY, BIOGRAPHY, GEOGRAPHY, SCIENCE, ART, AND LANGUAGE, to be issued in from 200 to 250 weekly numbers, at 10 cents, and also in monthly parts, composed of five weekly numbers in one cover, at 50 cents. Specimens sent post-paid upon receipt of price.

T. ELLWOOD ZELL, Publisher,
Philadelphia.

CLARK & MAYNARD,

5 Barclay Street, New York.

D. APPLETON & CO.,

PUBLISHERS,

90, 92 & 94 Grand St., New York,

Commence, on the 27th of March, the publication of

APPLETONS' JOURNAL,

A WEEKLY PAPER,

Devoted to Literature, Science, and Art.

APPLETONS' JOURNAL will be devoted to popular current Literature, an organ of advanced opinion with respect to all the great interests of society, of popular Science in its best sense, and of Art.

The department of Literature will embrace:

Fiction, in the form of both Serial Novels and Short Stories;

Essays upon Literary and Social Topics;

Sketches of Travel and Adventure;

Discussions upon Art, Books, and kindred themes;

Papers upon all the various subjects that pertain to the pursuits and recreations of the people, whether of town or country; and

Poems by our foremost poets.

A distinctive feature will be a fuller treatment of Science than is prevalent in popular journals. In this branch the Publishers have secured the services of the ablest and most authoritative thinkers, men who combine large and accurate knowledge with the power of clear and impressive statement.

Education, in its various aspects, personal and public, at home, in the school, and in the college, in its principles as a science and in its practice as an art, will receive the full consideration to which it is undeniably entitled.

Illustrations will form an important feature in the plan of the JOURNAL. Each number will be accompanied by either an

Illustrated Supplement on some popular theme, a Steel Engraving in the best style of the Art, or a large Cartoon engraved on wood.

Novelty, freshness, and continual change will be aimed at in this department. The Illustrations will usually be valuable as works of art; those on steel, and the Cartoons, consisting of views of American scenery, by our most distinguished painters, and illustrations of character and life, by our foremost draughtsmen. *They will be printed with extra care on separate sheets*, and may be either bound in the volume at the close of the year, or framed to hang upon the wall.

APPLETONS' JOURNAL will aim to be vigorous, earnest, and capable; valuable as an organ of thought, and pleasing to all the members of the household on account of its varied, sound, and entertaining literature.

Arrangements have been made to secure original contributions from distinguished writers, both of Europe and America.

In the first number will be commenced

THE NEW STORY,

By the great French writer,

VICTOR HUGO,

Under the general title of

"THE MAN WHO LAUGHS."

PART I.—THE SEA AND THE NIGHT.

PART II.—BY THE KING'S COMMAND.

For which the French publishers paid the distinguished Author 300,000 francs.

This novel has been in the author's workshop for twenty years, the idea of it having arisen in his mind contemporaneously with that of "Les Miserables." M. Hugo here tries his powers in a new field, that of English history and English character, of which he has been a student and observer during his Guernsey exile.

Price 10 Cents per number, or $4 per annum, in advance.

For sale by all Newsmen.

Terms for clubs may be obtained of the Publishers. Specimen copies sent gratis upon application.

The postage within the United States for the JOURNAL is 20 cents a year, payable yearly, semi-yearly, or quarterly, in advance, at the office where received. Subscriptions from Canada must be accompanied with 20 cents additional, to prepay the United States postage.

In remitting by mail, a post-office order or draft, payable to the order of D. Appleton & Co., is preferable to bank notes, as, if lost, the order or draft can be recovered without loss to the sender. In ordering the JOURNAL, the name should be clearly given, with the post-office, county, and State in full.

ADDRESS, PUBLISHER OF "THE NATION," BOX 6732, NEW YORK.

PUBLISHING OFFICE, 3 PARK PLACE.

The Week.

ON Wednesday week as noticeable a thing as occurred in the Senate was a remarkable speech by Mr. Sprague, who denounced many woes on the country on account of the immoral character of the people, expressed great fear that Grant would turn out but badly, and finally ended by giving "an interesting biographical sketch of himself," the *Associated Press* says. There have been some attempts made to give to this utterance a deep political significance, and rumor said that Mr. Sprague and Mr. Fowler had gone over to the Democrats. The cause of the performance was probably not so far to seek, however. On to-day week, Senator Rice introduced a bill to enforce the Fourteenth Amendment and to regulate affairs in Georgia. It seems likely that Senator Edmunds' bill on the same subject may pass; the Reconstruction Committee of the House is understood to be in favor of it, but there is a report current that a good half of the latest troubles in Georgia are due not more to malcontent Democrats than to Republican politicians who have their own reasons for desiring that the State may be remanded to provisional government. This story may or may not be true; but we should hesitate to pronounce it probably false; Governor Bullock's message submitting the new amendment to the Legislature was admirably conceived if what he wished was to cause the rejection of that provision. But we suppose that there will be provisional government again in Georgia, or rather military government—though for the matter of that the two things are nearly one. On the same day Mr. Sprague was busy again with his bill authorizing a "Council of Finance," to lend money at interest on good security whenever the gold in the Treasury exceeds $75,000,000. He predicted the happiest results to American industry if this bill should become a law. On Friday the supplementary currency bill was discussed, and at the end of the day an adjournment till Monday took place. On that day the principal business of importance was the Senate's refusal to agree to the House's reiterated demand for a repeal of the Tenure-of-Office Act; it appointed as a committee of conference Mr. Trumbull, Mr. Edmunds, and Mr. Grimes—two enemies of repeal and one friend.

In the House on Wednesday week, General Paine, who is a Republican of the extreme sort, introduced a bill which provides that an unreconstructed Southerner who, being ineligible to an office, does not take himself out of it, and every official, civil or military, who, having the power to remove such Southerner, does not do it, shall be held to be guilty of a misdemeanor and shall be punishable by a fine not exceeding $5,000 and not less than $500 and by imprisonment for not less than sixty days and not more than five years. What is to be done with people who, knowing the formerly disloyal character of the office-holders, do not go with information to the removing power, General Paine does not tell us, though of course he knows. In justice to the soldiers and civilians who will be in danger of jail and of being mulcted when the bill is enacted, there ought to be some provision made in it for the punishment—with death, say—of the inhabitants of the county in which the offenders are resident, and who fail to come forward as secret witnesses. But Mr. Paine's bill will not pass, we imagine.

On the same day Mr. Butler reported a bill to put Mississippi through the reconstruction process, and it is altogether likely that, as the President the other day said, we shall see Mississippi within the Union before next February. There is to be a convention, of course, and a new constitution is to be ratified. On the following day the case of Georgia was discussed, but the Tenure-of-Office Bill prevented any exhaustive debate. On Friday Mr. Banks with a resolution of sympathy for Cuba began the day; and next came the report of the Committee on Elections to the effect that Mr. Covode has the *primâ facie* evidence in his favor, and that the seat which he claims in his contest should be allowed him pending the inquiry. This is the beginning of what the Democratic papers charge is going to be an unscrupulous foisting of the Republican claimants into all the contested seats. Finally the Tenure-of-Office Act came up for brief discussion, and the House, 99 to 70—the latter all Republicans—refused to pass the modified bill. On Monday Mr. Bingham offered a resolution which was adopted, and which charges ex-President Johnson with having used his last few moments of power in ordering the issue of $2,400,000 worth of bonds, $1,400,000 of which were to be paid to the Central Pacific Railroad for a road which, as it now seems to appear, was never finished as the law demands. It will be remembered that it was one of Grant's very first acts as President to remove some of Johnson's railroad commissioners and inspectors. On Tuesday, by a vote of 106 to 60, the House refused to recede from its rejection of the Senate's Tenure-of-Office bill.

The indications now are that the Senate will be defeated, and that the law will be expunged. That would certainly be the result if attention were paid to the wishes of the people outside of Washington. The President is said to have given his assent to the modified form of the present law by means of which Mr. Trumbull, Mr. Edmunds, and their friends hope to escape the necessity of repeal; but nobody knows how much of truth there may be in this report, and the probabilities are that there is much more falsehood than truth in it. Mr. Morton, in his speech on the modified bill, declared that the proposed enactment contained nothing of consequence, and expressed great satisfaction withit; for all that, the President cannot, under its provisions, remove an office-holder while the Senate is in session except by and with the advice and consent of that body: and if he suspends an office-holder during the recess, the Senate after thirty days of the new session are passed may, by vote, affirm its refusal to consent to the suspension. It is true, the suspended officer whose place the Senate thus gives back to him is not to step into it till the *end* of the session. So, then, the President may let the man he has suspended resume his office on the day that the session closes and then at once suspend him again. In this bill the Senateseems to give up

much, and no doubt it does give up something. Nevertheless, practically, it thus would still keep in its own hands the appointment and removal of all officers, and the President would have to do a great deal of "truck and dicker" either to get into office the men that he thinks should be there, or to get out the men that he believes should not. The members of the House whose interests in this matter are not coincident with those of the Senators, are fighting Grant's battle, and the Republicans who are for repeal are aided by the Democrats, or the Senate's modified bill would have already been enacted.

About the "investigation" into the "corruption of the seven senators" conducted by General Butler last summer we expressed our opinion freely at the time. The investigation in indecency and absurdity was only equalled by the "report," in which it was mentioned, as one of the grounds for suspecting Trumbull, Fessenden & Co. of having been bought up by "the greatest criminal of the age," that not a particle of evidence against them had been discovered, the inference being thus suggested, with truly Butlerite impudence and humor, that the cunning rascals had successfully covered up their tracks. It leaked out, however, that some evidence *had* been discovered which did seriously implicate certain senators who voted *for* conviction; but this was disposed of by suggesting that the wicked fellows on the other side had "put it up," as they say in the police-courts, in order to bring the patriotic Wade men to shame. In the course of Butler's rummagings amongst the telegrams which he seized and was allowed to examine privately (another of the impeachment scandals), he doubtless lighted on a good many which afford a man like him plenty of means of annoying his enemies. There are very few whose private correspondence will bear laying before the public, particularly with Butler's gloss and commentary.

He is accordingly now said to be keeping many members of the House of Representatives in a state of abject terror by obscure allusions to what he might tell about them if he chose. A Washington correspondent of the *Cincinnati Gazette*, whom we know to be a trustworthy writer, recently explained the whole matter in a letter to that journal, throwing some very curious light on the influences by which legislation in the House is moulded. According to him, Butler has been bitterly disappointed, as might have been expected, at not getting the chairmanship of the Committee of Ways and Means—the care of the black man in the Reconstruction Committee being, in his opinion, a very poor substitute for the duty of doctoring the tariff and "reporting" against the bondholders. He has accordingly vowed vengeance against Speaker Blaine, and looks at Mr. Schenck with a hungry eye. In the row last week over the omission made in the engrossing of the Appropriation Bill, he gave Mr. Schenck to understand that he could, if provoked, tell terrible things about him, alluding to the barrel of telegrams; and evil-disposed persons at Washington are daily hoping that matters may come to a crisis, and the two foes be induced to make a clean breast of it. We do not suppose Butler has anything to tell which in the hands of any other man would frighten anybody; but he evidently frightened Mr. Schenck, who dropped out of the fray in rather a pusillanimous manner. There is, by the bye, something like poetic justice in having the barrel of telegrams used against those who, like Mr. Schenck, helped to spread the impression that any senator who refused to convict Andrew Johnson failed in his duty, and telegraphed all over the country for prayer-meetings, private letters and public meetings in aid of "the eleventh article." We do not like to have the great trial forgotten, and mean that, as far as our small means go, it shall not be forgotten, because it furnishes an excellent illustration of what comes of letting the "men inside politics" have full swing. The party on that occasion completely lost its head, and joined with the worst men in politics in reviling the best; and the result has been the introduction into political life of a new element of corruption and degradation—and there were enough such elements in it already. To vote and speak with the consciousness that an Old Bailey lawyer has his eye on them, has been examining their private correspondence, and will, if they vex him, do whatever occurs to him as likely to make them seem infamous, must be a new sensation for the legislators of the House, and we wish them joy of it. General Butler is the creature of the majority; they put him in his present position, and when he begins his cudgel-play he can hardly hit amiss.

We believe that if the new Collectors of New York and Philadelphia are willing to try the competitive and probationary system when making their appointments, they will not only have no difficulty in getting the President's permission to try it, but have his hearty approval in doing so. By trying it, too, they would have a chance not only of rendering the State much service, but of saving themselves an immensity of trouble. Apropos of this subject, or at least one nearly related to it, the *Sun* and the *Evening Post* have been having a discussion about the suitableness of "politicians" for Government offices, the *Sun* insisting that the *Post's* objection to these gentlemen as public servants is too "theoretic" and "transcendental" for practical life, that the Government cannot be carried on without "politicians," and that the roguery and incapacity so constantly laid to their charge "find their counterpart in trade and commerce." The fact is that the controversy is here in part one about words. Politicians you must have in the conduct of any government, of course, but there are all kinds of politicians. The *Post's* position, we presume, is that the "politicians" who have grown up since Jackson established the spoils system are not only not fit to carry on a government, but not fit for any employment requiring either industry, honesty, or capacity. Washington was a politician, and so was Jefferson, and so was Madison, but they were not the kind of politicians produced in our day. The old breed has carried the country along tolerably well till now, but it is rapidly disappearing, and where the new breed will land us anybody can guess who consults the reports of Congressional committees or the heads of Departments.

It is true that the rogueries of politicians find a counterpart in trade and commerce, but it is in that portion of the trade and commerce of the country which is carried on by fraudulent bankrupts and "confidence men." The operations of these gentlemen are brought speedily to a close by the exhaustion of their supplies and of public credulity, but if they had the nation to keep them in funds they would carry on business just as successfully as the politicians carry on the government instead of going to the State prison. Society could not hold together if trade and commerce generally were conducted as the government is conducted, and the government is kept going in spite of the politicians by the patience, honesty, and hard work of the people. The *Post's* doctrine, that there can be no reform till the present tribe of office-holders and seekers are thrown out of the business and their places filled by men trained in the ordinary morality and ordinary habits of American life, we believe to be strikingly true, and its truth is becoming more glaring every day. The theory of the *Sun* that the men who now run after government employment have any special aptitude for government work, is one of those bits of imposture from which the country is daily suffering more and more. They have no aptitude for any useful form of human labor, and the sole reason for their seeking office in most cases is their rejection in every field of industry in which character and ability are indispensable. The great duty of every reformer now is to get the public to realize how ignorant and dishonest and how incompetent they are.

There is a movement on foot in this city in favor of having the reading-room of the Mercantile Library, as well as any other reading-rooms that are available, open on Sunday. The question which this raises is an old one and has been much discussed, and there is little that is new to be said on it. The main opposition to the proposal, of course, comes from those who fear the disappearance of the "Sabbath" as a day ostensibly devoted to religious worship. We say ostensibly, because the fact is that it is not really devoted to religious worship, or religious thoughts, or exercises by any but a very small minority of the population. The young men whom the opening of the libraries would most affect spend their Sundays in bed or in suburban taverns, and the alternative which the religious world has presented to it with regard

to them is not whether they shall be allowed to choose between reading-rooms and church, but between reading-rooms and sloth or vice. The Young Men's Christian Associations, however, as well as a good many other missionary and reformatory agencies, are gradually though slowly becoming convinced of the fact that all kinds of refining and cultivating influences increase people's susceptibility to religious influences, and that a man who even reads newspapers on Sunday is, in nine cases out of ten, a far more hopeful object of the missionary's teaching than the man who spends it loafing or drinking. We doubt if there is any lot more pitiable, and on Sunday especially, than that of young clerks in New York, and there is no class for which society does less. They are packed three in a room in wretched boarding-houses, and for their amusement, recreation, and company are left pretty much to their own devices.

The financial excesses of Baron Haussmann are still the principal topic of French news. The Minister, M. Rouher, as we mentioned last week, found himself unable to bear up under the attacks of the opposition led by M. Thiers, and to the astonishment of everybody, after a short effort to brazen the matter out, by maintaining that the city having got good value for the money the violation of law was of little consequence, suddenly succumbed, acknowledged the Baron's errors to have been grave, and promised that if the bill of indemnity on which the discussion has arisen were passed, the thing should never happen again. The minority against him on the decision, however, reached the unprecedented number of ninety-seven, which was, of course, equivalent to a heavy defeat. It was the opinion of some of the shrewdest of the Liberals that if this force could have been kept together, and the attack followed up unrelentingly, M. Rouher would have resigned, and the resignation of the Minister under an adverse vote of the Chamber would, of course, have been equivalent to the re-establishment of parliamentary government. He, however, tried his luck once more by a private canvass of the members, in which he made such strong personal appeals that when the subject came up for debate again he succeeded in reducing the minority to sixty-nine; which seemed to give him relief. One of the strongest arguments he is said to have used privately with the members was, that if he resigned the Emperor would probably put a very reactionary man in his place —such as Persigny. The largeness of the minority, even at the lowest, is said to have increased the Emperor's perplexity; of course it strengthens the hopes of the Liberals. One of the good signs of the times is the sudden and arbitrary release and delivery to the publisher of the Duke d'Aumale's "History of the House of Condé," the sheets of which were seized by Persigny six years ago, when on the point of publication, without assigning any reason. The work contained nothing bearing on contemporary politics, and in fact did not come down beyond the beginning of the seventeenth century. The supposed reason was, M. Persigny's dislike to having an Orleans talked of or admired. Permission to sue the Duke or his agents in the courts was steadily refused by the Council of State; but wiser counsels now prevail, and though no compensation for the loss inflicted on him will be made to the publisher, the restoration of his property indicates a better state of mind in what is called "the highest quarter."

The impossibility of prosecuting a public functionary for any act he may commit, however wrongful, from the ministry of the interior down to the policeman, without the permission of the Council of State, must, of course, render all constitutional rights in France a mockery and delusion. All liberty in every country rests on the power of the citizen to bring the officers of the government into court to answer for their acts. If he cannot do this, his other privileges are of little value, and yet this fact has never been recognized by any régime in France. It has always seemed to French legislators—under Louis Philippe and the Republic as well as under Louis Napoleon—that if everybody who pleased were allowed to prosecute officers of the law, anarchy would ensue. The Liberals are beginning to recognize the absurdity of this idea, and M. Laboulaye, who is a candidate for election from the Department of the Seine and Oise, lays great stress on it in his address to the electors. "Above all things," he says, "we must have equality before the law, and do away with the monstrous privilege which now exempts public functionaries from its jurisdiction. On the day when every agent of authority, from the prefect to the garde champêtre, shall be made responsible before the tribunals for a violation of the law, we shall be in possession of that indispensable liberty which every civilized country should have." Grant's phrase in his inaugural address—"future commanding influence among the nations"—has been mistranslated by the French papers "influence prépondérante," and the result is some very amusing forebodings. The *Débats* sees in this phrase "the germ of many future wars," and utters a piteous lament over the French interference in Mexico which taught the Americans the disagreeable trick, which they are clearly going to practise, of meddling in other people's business. The *Moniteur* says, the "prépondérance" of which Grant speaks "may be big with storms," but hopes he will be more prudent than his words seem to indicate.

The chances seem to be, if we may credit the latest news from Spain, that the Duke de Montpensier will, after all, get the crown. The members of the old Provisional Government, and particularly Prim and Serrano, appear to have come out openly in his favor, while declaring their readiness to submit to the decision of the Cortes; but the decision of the Cortes had probably been ascertained before this declaration was made. Very little is known of the Duke. He has led a very retired life as a country gentleman for many years, but both he and his wife are known to have been disgusted with the court and its doings, and the Duchess's plain-speaking on the subject at last led to their exile the last year. Like all the other Orleans princes, he is believed to be a sensible man, and to have profited not only by the bitter experiences of his father and grandfather, but by that of his brothers. In view of the feelings of the French Emperor towards the Orleans family, however, the Duke's election to the throne can hardly fail to be looked on in Paris as a bit of defiance; it is absurd, perhaps, in these days of sovereigns "by the national will," that it should be so, but when the refusal of the Belgian parliament to allow Belgian railroad companies to sell their lines to foreigners was treated as an insult to France, it is difficult to believe that the French press will allow the Spaniards the right of choosing their own king when their choice falls on an enemy of the house of Bonaparte. The news from Cuba continues to be about as valuable as ever. The kind of incidents reported in detail are skirmishes in which one or two men are wounded, and small street riots. The rest consists simply of rumors of marches and "battles" in the interior, and prophecies of terrible things to come, based on the prophets' high opinion of the chief of the insurrection, both personally and professionally.

The Irish Church Bill has been read a second time and passed by a large majority, which decides its fate in the House of Commons. That the House of Lords should pass it without a struggle seems very unlikely, and yet it is also unlikely that it will venture to take ground on so important a question against the Lower House and the public. The debates over the bill in the House have not been very weighty or interesting, the work of discussion having been done and very thoroughly done out of doors, and everybody's mind being already made up. The main ground of the Tories is, that to take Church property is confiscation, a point which is now hardly worth arguing, and the mere statement of which is almost ridiculous in what is known as a "modern" community—that is, a community such as all civilized communities are or are becoming—in which the rationalistic or realistic treatment of political questions has become the fashion. The measure, as submitted by Mr. Gladstone, seems on the whole well received by the Catholic clergy. One of them, the Bishop of Derry, has written a temperate letter, arguing against the withdrawal of the grant to Maynooth, and the refusal to disturb Trinity College, Dublin, in its possessions. The Trinity College property is, however, mostly landed property, held for nearly three hundred years, and its diversion to some other purpose now could only be justified by the allegation that it is devoted to unworthy purposes or was wanted more for something else—an allegation which nobody makes.

THE DANISH MUDDLE.

Mr. Seward opened negotiations with the Danish Minister in Washington, General Raasloff, in January, 1865, for the purchase of St. Thomas, the want of a naval station in the West Indies having been severely felt by the Government during the war. The idea, if it did not originate with Mr. Lincoln, was approved and encouraged by him. The Danish Minister was taken by surprise when the subject was first broached to him, and when he communicated the proposition to his Government it was by no means favorably received. The King was opposed to it; the Danish people, it was well known, would receive it very unfavorably, and all the leading Danish statesmen were opposed to it for reasons partly of sentiment, partly of policy. The kingdom had been much reduced in size and resources as a result of the war with Prussia, and a further diminution of territory would therefore bear the appearance of increasing weakness and humiliation, and the King had a strong personal repugnance to casting off any body of subjects, however small, who were sincerely attached to his rule. Moreover, it was feared that the cession of Danish territory in the West Indies to the United States would give offence to the two great maritime powers, France and England, and their displeasure Denmark could ill afford to incur.

The negotiations were, nevertheless, carried on at greater or less intervals during nearly three years; our Government pressing for the purchase of the island, the Danish Government holding off, excusing itself, seizing every occasion of delay, and giving every indication short of a point blank refusal, of its unwillingness to sell. Mr. Seward's persistence was at last, however, crowned with success, and the Islands of St. John and St. Thomas were ceded to the United States for $7,500,000 by a treaty signed at Copenhagen in October, 1867, conditional, however, on the assent of the inhabitants to the transfer, to be taken by vote. The vote was taken, and was nearly unanimously favorable. The value of the islands to the United States has been nowhere seriously contested, but the Senate failed to ratify the treaty and the House to vote the money. The time within which the ratification was to take place expired February 24, 1868; Mr. Seward then obtained an extension of the time, and this extension expires in October of this year. In the meantime Denmark has publicly proclaimed the transfer of the islands. The Rigsrad has ratified the treaty, the inhabitants have formally transferred themselves to the United States, and it is the United States which has all along sought the transfer; nevertheless, the United States now refuse to accept the delivery of their purchase. Was there ever a stranger transaction, and can anything be said in defence of the conduct of the Senate and House of Representatives?

The greater portion of the loss and embarrassment of course falls on the Danes. They are in that stage of decayed gentility in which the smallest slight entails a great deal of humiliation, and in which humiliation prepares the way for further material decline. Morally, the position of Denmark has throughout the whole affair been perfect. She has shown no disposition to sell her territory; before finally agreeing to do so, she firmly insisted that the formal consent of the inhabitants to the transfer should be obtained—our democratic minister doing all he could to obtain the inhabitants without their consent, and treating the feelings of the people as of no account whatever; and she has stood ready ever since the treaty was signed, and now stands ready, to execute it loyally. But her situation is, nevertheless, well-nigh intolerable.

By way of bringing the facts of the case before the public in a taking form, the Danish agents in this country have employed Mr. James Parton to write a pamphlet which now lies before us, containing a history of the entire transaction, followed by some comments of Mr. Parton's own on the law and morality of it. For the narrative portion of the work they could not have made a better choice, for a better popularizer of long and complicated stories than Mr. Parton probably does not exist. There is hardly anything he would not make readable. But they should, we beg leave to say, have laid strict injunctions on him not to make inferences from, or in any way philosophize on, his facts. Whenever he attempts work of this kind, and he has of late attempted it frequently, he not only comes to grief, but brings to grief that large body of simple and unwary people throughout the country whose confidence he has won by his power as a story-teller.

The mere history of the negotiations between Mr. Seward and the DanishGovernment is as powerful an argument for the ratification treaty as Mr. Parton is competent to make; the summing up, and the application to the facts of the great principles of morals and of international law, should have been committed to more skilful hands. For instance, Mr. Parton shows frequently in the course of the narrative that Denmark was unwilling to sell, and caused it to be distinctly understood that it was money only that would tempt her to do so, and that this money was in fact to compensate her in part for the risk of offending her allies, France and England; that General Raasloff gave Mr. Seward to understand at the outset that "the preliminary question for Denmark was: Will the United States give us money *enough* to compensate us for the injury which the cession of the islands will certainly do us—the loss of prestige, the loss of property, the weakening of ties which bind us in alliance with powerful neighbors? Finally, that Denmark had, as all nations have, and as all individuals have, objects, desires, dreams, which the possession of a certain sum of money would enable her, as she hoped, to realize. It was, therefore, essential to her, as a preliminary, to have some idea of the amount of pecuniary advantage which she would derive from a transfer of her West India possessions." Mr. Parton himself points out, too, that seven millions and a half in gold is to Denmark what three hundred million dollars in currency would be to the United States—in other words nearly a year's revenue.

The cause of Denmark is not helped, therefore, but hindered by offering us, as one of the inferences to be drawn from the facts of the case, that in selling the islands to the United States "Denmark deliberately preferred a closer alliance with the United States to a closer alliance with England and France." There is not a particle of foundation for this assumption in Mr. Parton's own narrative, or in fact anywhere else. The relations of the Kingdom with the United States were perfectly friendly and cordial when the negotiations began; during the negotiation no pretence was made by either party that there was a sentimental side to the transaction; it was conducted throughout as one of dollars and cents, and as one of dollars and cents it ought to be fulfilled. It ought not to be necessary for the Danish Government to employ a popular writer to tell the American public, as Mr. Parton does, that they ought to pay what their minister promised they would pay, for value received, because Denmark is a constitutional country; because she abolished the slave trade in 1792 and slavery in 1848, and takes excellent care of her black population; and because the King has performed, to use Mr. Parton's words, "the very difficult task of rearing a large family so well that his children reflect honor upon their race and country wherever they go." It is well-nigh disgusting to hear such considerations urged on a great people to induce them to pay what the writer considers a lawful debt. We can hardly wonder at it, however, when one of Mr. Parton's idols whom he eulogizes in this pamphlet as "an efficient member"—"than whom no man in Congress would go farther in fulfilling the conditions of a just compact between the United States and a foreign power"—deliberately made and defended in 1867 a proposition to cheat the foreign creditors of the United States, on the ground that they had not lent their money through "affection"—"with the view of aiding us in our great struggle," but with "an eye to the proceeds." Of course, on this ground, Denmark is entitled to nothing, unless she can show that she sold her islands out of love, and that the King is a good man, and has brought up his family respectably. That a foreign power should think it advisable to address such arguments to the American people, on such a subject, shows the extent to which sloppy sentimentality is supposed to regulate our mode of dealing with some of our gravest concerns.

There is only one question in this matter which needs an answer; only one question that an honorable people should permit to be argued before it, and that is, Do we owe Denmark seven millions and a half for the Islands of St. John and St. Thomas? The case is, in some respects, very like the case of the bondholders who, a year ago, were threatened with payment in paper dollars, according "to the letter of

the law," but then it is weaker. The representations by which the bondholders were led to lend the money, and to expect repayment in coin, were made openly through a period extending over four years. Everybody, in and out of Congress, was cognizant of them; but while the money was needed and was coming in, no one raised his voice in protest and explanation. The result was, no matter what the letter of the law might be, a moral obligation of the strongest kind on the part of the whole of the community to make good the promises of the authorized agents of the Government. The negotiations with Denmark were, on the other hand, conducted with the greatest secrecy, for the purpose, as Mr. Seward said, of preventing the interference of France and England with the bargain. The result was, however, that not only France and England, but Congress and the people, were kept in ignorance of the transaction till it was completed. Mr. Seward, to be sure, was the authorized agent of the nation, and his representations, and the arguments by which the purchase of Alaska was defended and approved in the Senate, furnished the Danish Government with plenty of excuse for believing that there was no danger that the bargain would not be carried out. It cannot then be said to the Senate or the country, "You knew during two whole years that Mr. Seward was engaged in the negotiation of this treaty, and why did you not warn Denmark against trusting him?"

Mr. Parton quotes some passages from the text-books on international law, which he imagines support a theory of his own, that the Senate is morally bound to ratify Mr. Seward's treaties, ratification never being refused to a Minister "with full powers" unless where he has departed from his instructions. No Minister of the United States is, however, a Minister with "full powers" in the sense in which that phrase is used in the text-books, inasmuch as his work has always to be submitted for approval to another power than the one which instructed him. The President may give instructions of which the Senate knows nothing, and the Minister may adhere to them to the letter, and yet the Senate feel bound to disapprove. For the Senate to give its approval as a matter of course might be an improvement on the present system, but the present system is the law of the land, and was established after grave consideration. Nothing concerning the origin of the Constitution is more certain than that it was intended by its founders that the Senate should form an active part of the treaty-making power, and that it was believed by them that the restriction of this power to a President alone, elected for four years, would be in the highest degree dangerous. Hamilton in the *Federalist* in fact disposes completely of the analogy between the American government and monarchical governments, in the matter of treaty-making, which Mr. Parton fancies he has discovered. There is none, and there ought not to be any such analogy. The Senate would be guilty of a grave dereliction of duty if it ever regarded its assent to a treaty as a matter of form merely. Every government which negotiates with the United States is or ought to be perfectly familiar with the constitutional limitations to the "full powers" of all American negotiators, and take note of them in carrying on the negotiations; and although we admit that in this instance the non-ratification of the treaty by the Senate would be a cause of great hardship to Denmark, and some discredit to the United States, we think the Senate has by its delay done the state some service. If there be any species of treaty which enterprising Presidents and Secretaries of State need to be warned not to make lightly it is treaties for the purchase of new territory. A more monstrous doctrine than that which claims for any one man or pair of men the right secretly and suddenly to saddle the people of the United States with fresh territorial acquisitions, inhabited they know not by whom, to be governed they know not how, and to cost they know not how much, has probably never been propounded. We have evidently entered once more on a period of annexation, and our new annexations on the Southern side at least are pretty sure to be semi-civilized additions, whose absorption may exercise a serious influence on our polity. No annexation, therefore, ought to be made till the public has had an ample opportunity to discuss it, and express its opinion on it. We do not want to wake up in the morning and find that the Secretary of State has over night bought us two or three millions of fellow-citizens to be paid for out of our earnings, and provided work for forty or fifty thousand soldiers; and yet if the Senate is bound to ratify all the Secretary's doings this is what we shall see. The temporary failure—we hope it is only temporary—of the Danish purchase, will therefore act as a thorough, a needed warning to our enterprising statesmen, both at home and abroad. It will not be amiss, too, for foreign powers to take careful note of the Senate's place in the Government, and to satisfy themselves as to the relations of the President with the majority of that body before beginning bargains with him. The position of the House with regard to the voting of the money is totally different. A treaty concluded by the Senate and President legally as well as morally binds the nation at large; and to refuse to pay money thus promised is simple repudiation, nearly as heinous as a refusal to repay borrowed money, all of which was ably and conclusively argued *apropos* of the Alaska purchase, in the *Nation* of April 20th, 1868, by a valued and well-informed correspondent.

LATEST PHASE OF THE LABOR TROUBLE.

The spread of combination and the increasing skill in combination which are visible amongst all classes of laborers, and the strong signs which are visible of a tendency amongst the various trades to make common cause against the capitalists, even here, in what is supposed to be the fairy-land of working-men, are gradually convincing people that no political changes will give modern society repose. This is another way of saying that the movement which began in 1776 in this country, and was taken up and continued by the French revolution of 1789, was not a political movement simply, but a social one; that the political reforms which have marked its progress have been welcomed by the working classes rather because they brought with them or seemed to promise radical social changes, and above all a change in the relations of labor to capital, than because the masses in any country share the love of Roman or political "liberty" which brought about the English revolution of 1640, and which Tocqueville in his latest work treats as one of the highest and noblest of earthly objects of adoration. Working-men and women, whether working or not, are in fact, all over the civilized world, trying in a vague and somewhat blind way to get at the fundamental bases of their condition in this life; or, in other words, trying to find out what are the limits which human nature has placed to its amelioration. The working-class meeting in this city last week was a remarkable illustration of their unrest. They will have it that all or nearly all the hardships and inconveniences from which they suffer now are the results of faulty social arrangements, and that if somebody or other would only take his hands off, their lot might and would be indefinitely improved, the good things of life more evenly distributed, and the comforts and exemption from the lower forms of anxiety, now enjoyed only by a very small number, be shared by nearly everybody. A good many of the experiments they are trying have been tried and have failed. Several others do not need to be tried because the certainty of their failure is deducible from existing facts; but there still remains a vast field of unexplored possibility into which they are pushing vigorously, and in which they absolutely refuse to be guided by either historians or philosophers.

A portion, and a very tempting portion of this field is the position of the working-man towards the capitalist. The economical view of these relations we need not here state; nearly everybody is familiar with it. The economists maintain stoutly that "the interests of labor and capital are identical," and that both have to be paid out of the same fund; to which the working-men reply, that the *fact* is, that capitalists, both by combination amongst themselves and the power of resistance which wealth gives them, do endeavor to cut the laborer's share of the fund down to the lowest possible point, and are able, by withholding information from him or positively deceiving him, to deprive him of his just share of the fund even under their economical "law;" and that, however true it may be that both capital and labor are interested in making the results of production as large as possible, it is also true that when labor and capital come to divide the results of production between them, no natural or economic law practically regulates the division, that each tries to get all he can, and that the capitalist's greater knowledge, skill, and

power give him more than his due proportion. The struggle between the holders of these opposing views grows more and more bitter every day, and the laborer's means of asserting his views more and more powerful. The trades are organized into unions. The trades of different countries, as well as of the same country, are making common cause, for the purpose of forcing not only capitalists, but society at large, to accept the working-man's view of the working-man's rights. The working-man has since the overthrow of the Roman Empire risen from the slave into the serf, and from the serf into the free laborer; but he has until now been treated as, in some sense, a servant or hireing. Against this, too, he has revolted with more or less success, and in this country at least is now treated really as what the economists have long affected to consider him, a dealer in labor offering his wares like any other dealer, and entitled to the same amount of consideration.

But he is not content with this either. He refuses to acknowledge that brain labor is of any more value to society than the labor of the hands, and he sees in the greater amount of leisure and greater number of pleasures of the more refined kind enjoyed by brain laborers an unjust discrimination, established by society and not by nature, and against this he is now fighting. But, after all, at the bottom of the whole quarrel lies the question, On what principle, or by what rule, shall the results of production be divided? There are two or three ways proposed of solving this problem. The old one, which may be called the capitalists' way, is to find out in open market, by competition between laborers, the market price of labor, and make that the laborers' share of the profits; but then, capitalists do not abide by this rule themselves; as, if the price of labor thus ascertained does not suit them, they lock up their workshops and wait; and the laborers, in their turn, when they find the price offered for labor by the capitalists does not suit them, leave the workshops and wait, or, in other words, strike. In fact, the rate of wages is now fixed in practice in most countries by a trial of physical endurance, fearfully destructive of property and fearfully productive of bitter feeling. Another plan, and the more modern one, is to make wages, partially at least, bear a certain fixed proportion to profits; and the third is the combination of laborer and capitalist in the same person by means of co-operation. The first of these plans may be said to have failed, and the two last, and especially the last, seem to require an amount of intelligence and self-restraint on the part of the working-men to which they have not yet attained.

One of their best friends, Professor Beesley of London, who has for years been an active supporter of all movements for the improvement of the condition of the laboring classes, has recently delivered an address to a meeting of working-men in England, which has been republished in the *Fortnightly Review*, in which he took strong ground against co-operation, maintained that it had failed, inasmuch as all existing co-operative associations had, whenever they succeeded, become themselves employers of labor; that the hiring of labor by capital at fixed wages was an immutable relation, from which there was no escaping; that the natural organization of industry is like the military organization, and requires for success the working of many hands under a single head; and that, therefore, there is nothing more unreasonable in the demand of trades unions that all in the same trade should be paid the same wages, than in the custom which prevails in the army of paying all soldiers in the same regiment the same wages—a custom of which nobody ever questions the justice. The regiment, he maintains, is and must remain the type and model of the factory and workshop; that the growth of intelligence amongst the workmen will no more do away with the necessity of secrecy, discipline, and single headship than the growth of intelligence amongst soldiers does away with this necessity in the army. The citizens who served under Grant and Sherman, he says, had to obey orders without knowing why they were given, just as much as the most ignorant peasants who serve in any European army.

For all improvement in the working-man's condition he looks to the organized action of trades unions on capitalists, and the growth among capitalists, partly under this influence and partly under the general progress of society, of a stronger feeling of responsibility to society, and a stronger feeling of trusteeship in using their money. He says the working classes must have certainty in their lives—that this is of more importance to them than anything else, and this they cannot have as long as capitalists use them as mere counters in the game of speculation. In other words, he relies partly on coercion and partly on moral suasion to make the capitalists better men, and on the capitalist's becoming better men he relies for the improvement in the working-man's condition. But his great reason for thinking that co-operation will not succeed is, that he does not believe working-men will ever be wise enough and good enough to make it work. If, however, we have to look to somebody's moral and mental improvement for the final and equitable adjustment of the relations between labor and capital and not wholly to "the laws of political economy," we do not see why we should place any more dependence on the capitalist than on the laborer, or even so much, and do not therefore even see what the value of Professor Beesley's specific is.

Before his lecture appeared in print, curiously enough, a French lady, Madame Clémence Auguste Royer, had taken the field against the moral right of working-men to engage in organized strikes, treating the various trades as what she calls "collectivities," whose first duty is to society, and whose duty to themselves is only secondary. She denies *in toto*, apart from the material objections to it, which are weighty, the moral right of any large body of persons to stop working, or, in other words, of doing their duty to the community, on any pretext whatsoever; and maintains that whatever the natural working of the law of supply and demand fails to do in fixing the rate of wages or regulating the hours of labor must be effected, as most social improvements are, by agitation, by education, and appeals to public opinion and the individual conscience. In other words, she relies in the last resort on the same agency as Professor Beesley, but repudiates *in toto* his intermediate agency of strikes and trades unions; and, singularly enough, accepting the analogy between the military organization and the industrial organization which he uses, she says, "But suppose soldiers were to 'strike' in the presence of the enemy, it would not be called a strike, but desertion or mutiny, and the strikers would be shot. But why this severity? Is not the soldier a free man? Is he not a citizen, like other men? Has he not the same rights? Why, then, may a regiment not refuse to serve until its pay has been raised?" The answer is of course obvious, that "the interests of society require that it should do its duty, and it is therefore forced to do it. And Madame Royer brings the various trades and professions under the same rule, and argues that if the practice of combining against the community to extort more pay, now so common, should continue and grow, its disorganizing effects will be so great that society will, in the interests of civilization, have to take the same high ground against it that it now takes against mutiny in the field or on shipboard. Her article is on the whole a powerful and suggestive presentation of an original view of the subject.

THE WAR AGAINST ALCOHOL.

For forty years the temperance agitation has been going on in this country and in England, and the end seems almost as far off as ever. Newspapers have discussed it, lecturers have made their living out of it, and philosophers have settled it. But every year it turns out that the conclusions reached during the year before are not satisfactory to all concerned, and accordingly every year sees some new scheme foisted upon the statute-books. Still, there are some signs that a conclusion is one day or other to be arrived at. In the early days of the agitation, the so-called friends of temperance insisted on one thing only, and that was total abstinence. They had no idea in the beginning of controlling legislation; their intention was to effect a moral reform. They had discovered by a process satisfactory to themselves that the drinking of fermented liquors was *per se* sinful, and that total abstinence was a duty. The church joined forces with the teetotalers. The cause of abstinence was so strengthened by moral and numerical support that a new move was made. Legislation was determined upon. Drinking, it was said, must be prohibited by law. This brought the subject out of the moral into the political arena; and if only the character of the discussion had changed as well as the form

in which it was to be carried on, the problems which surround the question might before this time have received some intelligent solution. But the character of the discussion did not change. The arguments which had been found so effective in pulpit and lyceum were thought to be well adapted to the intelligence of political bodies. Prohibition was insisted on as a moral necessity; and all who opposed it were denounced as men in league with the retail liquor-dealers and through them with Satan. As most people are agreed that the solution of political questions depends on considerations connected with the greatest good of the greatest number, and not upon any inner light, it was evident that sooner or later the high abstract side of the question must be abandoned, and the subject be approached in a different way.

There are indications that the Prohibition party are at length beginning to see this, for they have lately shifted their ground greatly. Those who have no moral ideas are given to understand that prohibition is advocated for the sake of the *security of society* through the suppression of crime. The security of society, say the prohibitionists, demands that alcohol, a substance the noxious qualities of which experience proves, should not be left "lying around loose." If it finds its way to the human stomach, pauperism, theft, and murder are the consequences; it is the business of society, therefore, to see that it shall not find its way to the human stomach. This reasoning is perfectly utilitarian, therefore it is legitimate. It is not proposed any longer to prevent the drinking of intoxicating beverages on the ground that all potation is sinful, but to prevent it as we do the ravages of carnivorous beasts or the poison of venomous reptiles. It is hardly necessary for us to go into a refutation of this argument. What we desire to call attention to here is the use of the style of reasoning by the prohibitionists. That they find it necessary to abandon their early dogmatic method and resort to this seems to show that they begin to feel the real weakness of their position. Moralists who wish to be politicians must use politician's tools.

The kind of treatment which the temperance question received, and the character of the people who manage it, are well illustrated by the history of the question in Massachusetts. The Republicans of that State are at present engaged in enacting their biennial prohibitory law to take the place of the license law of the last legislature. Previous to the election of last year the statutes contained a law which in terms absolutely forbade, but in fact universally permitted, the unrestricted sale of intoxicating drinks. This fact became at length so notorious that the prohibitionists determined to put an end to the scandal it occasioned, and as the difficulty was supposed to be caused by the negligence of the local police, called into existence a new force, the "State Constabulary," responsible to the central authority and charged primarily, in the words of the act of 1865, with the duty of using "their utmost endeavors to repress and prevent crime by the suppression of liquor-shops, gambling places, and houses of ill-fame." So well did they perform their duty that the voters of the State became for the first time aware that prohibition could be enforced; and so forcibly did the fact strike them, that they forthwith forsook the Republican party, united with the Democrats, and elected a legislature pledged to pass a license law. The license law of 1868 was accordingly passed; but the friends of license, for reasons best known to themselves, made it of such a character that it proved to be no more and no less than an empty form of words. The licensing statute was no more enforced than the prohibitory statute had been. Unrestricted sale, and according to the temperance people unrestricted drunkenness, became the order of the day.

The natural result followed; a pledged legislature was again elected, this time a prohibitory one. This legislature is now sitting, and the sober-minded people of the State confidently anticipate that the prohibitory law which it is about to enact will cause the election of a legislature pledged to license next year. Indeed, a periodical revolution of feeling on this subject has come to be regarded in the light of a natural phenomenon. House-cleaning, the changes of the season, and a license or prohibitory bill are among the things which every Massachusetts householder annually anticipates. And as we have already hinted, the last of the three gives him the least trouble of all; because, except in very hard years, the last thing in the world which these statutes affect is the sale of liquors. For a short time the State Police did, as we have said, throw obstacles in the way of the wicked; but in ordinary times public bars or licensed victuallers or licensed inn-keepers or retail dealers furnish whatever is required of them. This solemn farce has been going on for years, each year bringing politics and law into greater and greater contempt.

Now it is certainly a great pity that this state of things should continue indefinitely. The problem which Massachusetts annually blunders over is one in the solution of which the whole English-speaking race takes a profound interest. No intelligent man denies that the evils caused by drink are among the most enormous with which our modern civilization has to contend; that the amount of beggary, theft, murder, and ruin the dram-shops breed is enough to make the most enthusiastic believer in the progress of the age shudder with doubt; or that any community which in serious earnest sets about discovering a remedy for the evil will confer a lasting benefit on mankind. There is good reason, too, why Massachusetts should be regarded by the rest of the States as the best field for experiment in this matter; for in none has there been a more animated discussion of it, and in none have so many experiments been already tried. That moral and intellectual pre-eminence of hers, also, the praises of which have been sounded so long and so industriously, have rather inclined people living in less favored parts of the country to look upon Massachusetts as the most fit State to give them a lesson in temperance legislation.

Massachusetts, however, has after all thrown little light on the subject, and her failure has been mainly owing to the supineness of the intelligent classes. They have been accustomed to laugh at the whole business, to sneer at the prohibitionists as visionaries, and to chuckle over the license agitation as mere humbug. The leaders in the battle hitherto have been clergymen, women, and moral agitators on one side, and liquor-venders on the other. The result has been that the "men inside politics" have got hold of the question, and nice work they have made of it. Secret organizations, caucuses, conventions, and pledges have had their legitimate result in laws passed that they may be broken, laws made for the purpose of gratifying one sentiment and allowed to stand unenforced to conciliate another. The prohibitionist politicians know that in half the State their measures cannot be carried into effect without bringing other politicians into place; therefore they frame a law with the understanding that it shall be broken. The license men, shrewdly suspecting that their constituents in electing them rather sought a means of giving vent to their anger than of getting a good law passed, pass anything which occurs to them, without any more earnest intention of enforcement than the prohibitionists had before them. The politician's view of a law is, that it shall not spoil his chances of re-election; and laws they invariably frame with this end in view, unless the community is in earnest. The people in Massachusetts have gusts of passion on this subject, but a serious determination they have for a long time lacked. The great interests of national politics have drawn their attention from considerations of internal reform, and these questions have therefore fallen into the hands of those least able to deal with them—the professional managers. The most signal proof of this was given by the awakening of public interest when for the first time a man of high political standing engaged in the contest; we mean, of course, when Governor Andrew appeared as counsel for the remonstrants against the old prohibitory law. It seemed for a short time then as if the moment had really come when intelligent legislation might be expected; but those who thought so counted without their host; the license legislature of last year ousted every attempt made by the real friends of temperance to create an efficient board of license, and in the end made the Commissioners elective—a proceeding which, as the office is really quite as judicial in its nature as any judgeship in the State, was a singular anomaly to be permitted by a community which prides itself on the non-political character of its judiciary. Massachusetts will confer a real boon on the rest of the country whenever she will make up her mind to put an end to this child's play, and, after discovering what is really wanted, will legislate with a view of obtaining it.

Judging by the light of her failures, it would seem as if two or

three points were pretty clearly proved, and the first of these is that no prohibitory law can be enforced. The prohibitionists in 1865 took every precaution in their power—what could be stronger than creating a special police force?—and actually did, for a very short time, make the sellers and buyers of liquor uncomfortable. But the result was, the law was swept away like chaff. The great fact that man has natural appetites would not be ignored. It may be considered proved that prohibition is impossible. If the prohibitionists were practical men and women they would, on discovering this, do one of two things, either give up their attempt altogether and return to moral suasion, or else do their utmost to obtain a really effective license law. Certainly, a stringent license law would do a great deal for the prevention of crime. But, on the contrary, neither in Massachusetts, nor in England, nor anywhere else, do they show the slightest intention of doing anything of the kind. They still demand the "abolition of sin," and appear to believe that the next best thing to a prohibitory law which is enforced, is a prohibitory law which is a dead letter. A statute of some sort they must have. On the other hand, the license party might by this time have discovered that a rigid enforcement is their only reliance. A license law which is not enforced is precisely what the prohibitionists want.

THE PRESS AND THE ADVERTISERS.

THERE is before the Legislature at Albany what has been called, from the persons supposed to be most interested in having it pass, "the advertisers' bill." Its object is to compel publishers of newspapers to declare in each issue the number of copies printed of the preceding issue. If, as is assumed, this enactment would be for the protection of advertisers, there is no reason why it should not include magazines and all other periodical mediums for advertising, about whose actual circulation the same uncertainty exists, and which have similar motives for concealment and misrepresentation. The opinions of the daily press on this subject have not been remarkable for frankness, but, as might have been expected, papers of unquestionably large circulation have paraded their willingness to comply with the proposed regulations; while some whose circulation is by no means commensurate with their reputation, and which depend for their advertising on a traditional prestige (which often clings to the last to a moribund journal), have argued more or less wisely in opposition. And still others, of limited circulation, have sought to impose on the public by taking sides with the *Tribune* and the other supporters of the bill. In short, each party to this discussion has spoken with a view to the probable consequences to itself of the regulation in question, or to some immediate advantage to be gained by appearing to welcome it.

Now the publishers against whom the advertisers ask for protection are divisible into two classes—those who refuse to tell, or at least avoid telling what their circulation is; and those who, either directly or through their agents, magnify it without scruple. Against the former the advertiser already has his remedy in his own hands; he can simply decline to advertise where the necessary information is refused him; and even now we believe that in most cases if he were to present this alternative he would effect his object—perhaps in all cases, under a pledge of confidence. For it must be considered that making public the circulation of a paper affects subscribers as well as advertisers, both preferring to train with the heaviest battalions, and to follow the fashion; the former, also, running a greater risk of losing their investment because, as a rule, required to pay in advance. However much, therefore, the publisher may desire to oblige the advertiser, he cannot afford to do so at the expense of his subscription list, on which, of course, the disposition to advertise depends. This is especially the case with newly-started publications, whose success hinges much more than is commonly imagined on public opinion in regard to their prospects, quite apart from what their merits deserve. In the infinite catalogue of things that might have been, the list of periodicals which would have lived if the public had felt sure of their living occupies no insignificant place. Moreover, the circulation which would induce an advertiser to patronize any given publication might be far too small, if known, to encourage subscriptions. For instance, in the present competition, a magazine which has less than 20,000 subscribers can hardly feel that it has a hold on life; and yet an advertiser who could be assured of reaching 10,000 readers might be very willing to pay the rates demanded for advertising.

Scarcely any newspaper or periodical is uniformly prosperous; and at the times when least so, there is none to which a public announcement of the fact, in figures decreasing from day to day or from week to week, would not be highly prejudicial and often fatal. Rumor is very efficient in creating a panic, but official information is more demoralizing still. If the *Tribune*, during the period of dissatisfaction in regard to Mr. Greeley's action towards Jefferson Davis, had been obliged to report each day's defection of indignant subscribers, no doubt the number would have been greater than it really was. The letters to "stop my paper" would have grown more and more insulting as each subscriber felt himself part of a mob, and could trace the result of throwing his particular brick. But is there any reason why the newspaper business should be subjected to such a contingency, and not every other? The capital and standing and amount of business of a mercantile house are, or may be, matters of pure conjecture to nine-tenths of those who deal with them, who take their paper, and whose fortunes and happiness in this world depend on their ability to pay their notes when due. Yet nobody thinks of procuring a law that every firm shall post in its counting-room or in some public place the number and amount of its daily transactions for the inspection of customers and others, whether friends or rivals and enemies; or shall publish its daily bank balance, or the amount of paper it has out. Yet this is much what the Albany bill requires of publishers, whose receipts are from two sources mainly—subscriptions and advertisements. The value of the latter can be always calculated pretty accurately from known rates: the value of the former, if their number were made known, could be exactly estimated; the cost of paper and printing is also no mystery; and the affairs of the paper would thus be exposed to a scrutiny such as merchants would be the last to submit to.

On the same principle advertisers might have demanded a constant account of the local circulation of newspapers—a consideration of some importance to them; and an ingenious mind could suggest many other modes of relieving them of all the uncertainty and risk, and all the judgment and forethought, which enter into all other business transactions, where the greatest protection that has yet been invented—the so called "Commercial Register"—is held in odium even by those who make use of it, and looked upon as a necessary evil. In their turn the public might ask to be protected against advertisers, who certainly do not unbosom themselves with absolute sincerity, and who as certainly both keep back what their customers ought to know, and assert what they themselves know to be utterly false. They would hardly relish a law compelling them to affix to each advertisement containing representations of goods or other property offered for sale, an affidavit that they had spoken the truth.

But in all we have said we have not meant to shield those dishonest publishers who thrive by inflating their circulation beyond the reality, and so do deceive many into advertising. But the ingenious plan of obliging publishers of newspapers to make and publish a weekly or daily affidavit as to the amount of their circulation, which the *Tribune* and some other journals advocate with so much heat, is, as a protection against fraud, about as valuable as their comparison of the newspaper frauds on advertisers to shopkeepers' frauds through false weights and measures. The only certain result of compelling publishers to swear to their circulation will be the seduction of the knaves into the crime of perjury. Of honest publishers, advertisers can now obtain the amount of their circulation by asking for it. Dishonest publishers, who lie when asked for it, and permit advertising agents to go about lying on their behalf, will swear to false figures nearly as readily as state them without an oath; and the affidavit will suit them admirably by giving an air of formality and solemnity to assertions which would otherwise be treated as loose or doubtful. A test oath in this case would serve about the same purpose that test oaths usually serve—that of catching the honest men, and furnishing the rogues with an additional means of preying on the public. If the State be under the same obligation to see that advertisers are put in possession of the exact circulation of the journals in which they advertise, as to see that dealers in other commodities use just weights and measures—an idea of which the fallacy must be apparent to anybody who gives it, what the writer who propounded it in the *Tribune* probably did not give it, five minutes' consideration—the proper remedy for existing frauds is the appointment of state inspectors, to go to the various offices and inspect the books, or take such other evidence as to them may seem desirable. Who would be satisfied with a grocer's affidavit that his weights and measures were true? If the legislature really wants to meet the difficulty fairly, it will appoint such officers; if it wants simply to furnish the leading blatherskites and knaves of the editorial profession with additional means of puffing their wares and annoying their rivals, it will pass the bill now before it. But if it appoint the inspectors, we warn it that ten thousand dollars a year will not be one cent too large a salary for each officer; because his virtue will be exposed to trials such as the gentlemen who usually get such offices make no

pretence of resisting, and can hardly be expected to resist except under the stimulus of high pay. Even with ten thousand a year, their struggles would be fearful; and we have little doubt the newspaper "ring" would end in out-doing the whiskey ring, and the innocent advertisers find themselves at the end of two years or so the victims of one of the most ingenious and yet simple cheats of an ingenious and cheating age.

DR. ELLIS ON THE FOUNDERS OF MASSACHUSETTS.

THE two lectures repeated two weeks ago before the New York Historical Society, by Dr. George E. Ellis, of Boston, the first on "The aims and objects of the Founders of Massachusetts," and the second on "Their treatment of intruders and dissidents," had already been read in a course delivered during the winter before the Lowell Institute, in Boston, on the "Early History of Massachusetts," by gentlemen of that city and vicinity, well reputed for legal and historical learning. The entire course is now in press, making one octavo volume, and soon to be published. No subject could be less novel than this, which has furnished matter for a very large proportion of our historical and critical literature. Its freshness is preserved by its visible connection, in the sequence of cause and effect, with a large part of all the social and political action which has succeeded it in this country. Yet, by reason of this very connection, it has been exposed to distortion in its general treatment. The foundation of Massachusetts has often been related by writers professedly either "friendly" or "hostile," and alike ignorant of critical methods in history, or too strongly prejudiced to use them. It may be anticipated from the reputation of the other lecturers in this course that with them, as with Dr. Ellis, the veneration which as citizens of the Commonwealth they must cherish for their forefathers is compatible with scholarly and critical judgment.

It is to be regretted that Dr. Ellis's essays were not heard in this city by larger audiences than the rooms of the Historical Society can accommodate. The purpose of the first lecture was to demonstrate how contrary to the original record of the facts is the idea so commonly received and so persistently maintained by both the "friendly" and "hostile" historians, that the founders of the Massachusetts Bay Colony either really desired, or even professed to desire, to make their settlement a refuge for liberty of conscience or for civil and religious liberty, in any sense in which those words are now understood by ourselves or by any who use them. As was shown by Dr. Ellis from the declarations of Winthrop and others, and from the statute law, judicial sentences, and political action of the actual founders of that colony—that is, of those who transferred the chartered company government from England to Massachusetts—they came over with the hope above all others of escaping from what they considered the disastrous consequences of the liberty of conscience which at that very period was exhibiting itself in England in as many forms and aspects as it has ever since assumed in this country. While they proposed to deny such liberty to others, they, in form and theory at least, repudiated it for themselves by recognizing the Scriptures of the Old and New Testaments as containing a rule of positive law applicable by the magistrate in all matters civil and religious. It was their honest and avowed purpose, from the beginning, to identify church and state in the person of their chartered corporation, under which every person and every thing, even thought, so far as possible, should be controlled by law. Their scheme failed in due time. But the founders could hardly have been pleased if they had foreseen that what was failure to them would be called their design. Strangely enough both the "hostile" and "friendly" historians have agreed in ignoring this failure, and in attributing to the fathers a purpose entirely different from the one they avowed and endeavored to carry out; and accordingly one set of critics interpret their acts on the theory that they are hypocrites, and another set so color their policy so as to make it harmonize with the tendencies of our own day and generation. The Puritan fathers tried to turn back the current of civil society to a station it had left two thousand years before. They despised forces against which they were as helpless as a swimmer in Niagara. The stars in their courses fought against their purpose. Nothing can be more senseless than the common recognition of Providence as exhibited in the designs of the Puritans. Providence showed itself against their purposes, even when it brought great things out of their purposes. The dealings of Providence with the Puritans were like those of the confessor with the Italian lady who painted her face. She said she did it to attract the admiration of the young men, and he gave her absolution because the effect was directly the contrary.

What is wanted is, that the history and philosophy of this failure should be truly written. Dr. Ellis's treatment of the subject was incomplete owing to his not giving more attention to its legal aspect. Perhaps some of the distinguished jurists who participated in these lectures have supplied the deficiency. The operation of English common law, as a law personal to the English subject throughout the countries of the New World held by the British Crown, was an important element in their situation, which the founders of the colony appear to have almost ignored. The historian must notice it as the great obstacle which stood in the way of their purposes, and which by its powerful but almost unobserved action finally brought the colonists into harmony with their fellow-subjects in the other colonies, as it brought them all in the fulness of time to national unity in the moment of separation from Great Britain.

The object of the second lecture was not, as unfortunately misrepresented in one of our daily papers, to reiterate "the trite charge of intolerance;" on the contrary, Dr. Ellis endeavored to show how unavoidable and even justifiable this intolerance was in view of their whole plan. This subject—the treatment of the dissidents by Massachusetts—can never be properly understood without consideration of the rights, public and private, of all parties under the common law of England. It was shown that the words of the charter seemed to sanction the arbitrary powers claimed and exercised by the corporation. But the question always was, whether a British-born subject might not have some rights of person and property on the soil of Massachusetts even though he had no part or lot in the privileges of the charter. It was to be explained how he might lawfully think, speak, and act in England as he might not in the colony. This part of the subject hardly received adequate mention in these interesting lectures.

But Dr. Ellis could not have left the Hall of the Society without serious misgivings as to the possibility of ever dispelling the cherished illusions popularly associated with this oft-told tale. When at the close of the second lecture the thanks of the Society were moved, as usual on such occasions, a reverend and doubtless learned member, who unfortunately had not heard the first, spoke of the settlement of Massachusetts as an instance in which government had visibly and historically been founded on the much disputed "social compact," and moreover that the Puritans recognized no sovereignty and no embodied political personality as lawgiver, but succeeded in being governed by law in the abstract, by law not traceable to any political authority; and these theories, in absolute contradiction of all they had just listened to, mixed up with some popular rhetoric about the late rebellion, were received by the learned society and its friends with more applause even than had been accorded to the lecturer. The Puritan government, vested in corporators named in a royal charter and such persons as they might choose to admit, would seem as unlike the idea of social compact as anything imaginable, unless it is their treatment of the so called "old Planters," who had been on the ground years before them, whose proposal to become members of their association they contemptuously spurned. The lecturer had related how the Founders, relying on the charter, treated these fellow British subjects as squatters on the company's estate, refused them a voice in the government, deprived them of house and lands, and turned them adrift. It is in connection with this that the historian must ask: What became of the common law so much talked of afterwards as accompanying every colonist, and as an inheritance of which his children could not be deprived even by King and Parliament?

It will seem sacrilege in the ears of many people to say it, and yet the truth is, that the "Pilgrims" located ten years before at Plymouth were nothing better than similar "squatters" in the estimation of the "forefathers" of the Bay Colony, who in fact told them so often enough and who would undoubtedly have treated them as such when strong enough, if they had not fortunately happened to be moderately well agreed on points of faith if not on theories of civil and church government. It would be well for every speaker on the Massachusetts colonial history, before a miscellaneous audience, to indicate that the founders of the Massachusetts Colony of 1630 are not in his mind identified with the Pilgrims who settled Plymouth in 1620, even though the two settlements are within the later province of Massachusetts. In all probability the famous compact of the Pilgrims on the *Mayflower* was inextricably involved with the idea of founders of Massachusetts in the minds of Dr. Ellis's audience. There was no more authority derived from "social compact," however, in the case of the Pilgrims than in that of the "old Planters" whom the Puritan corporators expelled from the headlands of the bay. Without patent or charter there could be no legal authority in the settlements except the admiralty jurisdiction, including the military jurisdiction of the crown—an authority which has been strangely ignored by all the historians. All other local authority must be referred to necessity and the sanction of later recognition. But that Rousseau's "social compact" should be made to play any part in the story of the Puritans and their chartered authority, shows that the subject treated in these Lowell lectures is not yet incapable of being benefited by historical criticism.

Correspondence.

THE BELLIGERENT RIGHTS.

To the Editor of the Nation:

Sir: It is with unfeigned hesitation and diffidence that, as a stranger resident in this country, I say a word on any question connected with its public affairs. But I am moved to do so by your reference to the impression prevalent among Americans, and apparently shared by you, that the time chosen by the British Government for the recognition of the Confederates as belligerents was a manifest sign of hostility to the Union, and may be taken as evidence of animus in interpreting the conduct of the same Government on other occasions.

That an irresponsible though large and powerful party in England was actuated by the bitterest hostility to the Union of course cannot be denied. But I speak of the responsible Government of the country. As one of those who believed that the cause of English liberty was bound up with that of the Union, I jealously watched, in the interest of both causes, the actions of our Government. Though perfectly independent of it, and on many questions opposed to it, I had personally good opportunities of informing myself as to the real disposition of its members. And it is my firm conviction that its settled policy from the outset and throughout the struggle was strict neutrality, practical as well as legal; and that if it erred (as I am myself inclined to think that it did) in its choice of the time for the recognition of the Confederates as belligerents, the error was the result not of any sinister bias, but of misconception alone. Of this I assure you upon my honor.

My testimony is that of an Englishman. But it is that of an English man whose feeling on this subject was as keen as that of any American, and who has as little inducement as any American can have to defend against truth and right the conduct of the governing class of England.

I am your obedient servant,

Goldwin Smith.

Cornell University, Ithaca, March 27.

[We did not ourselves believe that the hasty recognition of the Confederates was due to animus. We have always supposed that it was one of Lord Russell's little bursts of blundering impetuosity; but it can surprise nobody that it should, when English society went over to the Confederate cause a year later, have been set down as the first expression of a prevalent feeling of hostility. Americans naturally, and indeed inevitably, viewed the first official act of the Government in connection with its subsequent official acts, and viewed all acts of the Government in connection with the state of public feeling, as revealed by the more influential portion of the press, and by the tone of conversation in society. As far as our own limited experience went, the English public was in a state of doubt and bewilderment until the battle of Bull Run; by that time the despatches of Mr. Seward, and the articles of a portion of the New York press, showing first that slavery had nothing to do with the contest, and secondly that the right of the Federal Government to coerce was at least doubtful, coupled with the appearance of Mr. James Spence's "great work," showing the rottenness of Northern society and the madness of the Northern enterprise—his statements, too, receiving a kind of confirmation from Federal reverses in the field—turned the scale against the North, and prepared the way for the insane demonstrations of hostility which marked the years 1862–3–4. Already in 1862, a man who ventured to maintain in most English circles that the cause of the North was a justifiable one and would probably succeed, was apt to be set down as a mixture fo the silly creature and low fellow. The best he could hope for was to be treated as an amiable enthusiast. Now, those who were on the spot, as Mr. Goldwin Smith was, and, above all, who enjoyed as he did exceptional opportunities of watching the various stages in the growth of English opinion about the war, and the influence of "society" on the Government in its dealings with the belligerents, can readily draw the line between the mistakes of the Government and its wilful wrongdoing. But it is easy to see how and why the American public, looking on from a distance, saw in the whole course of the Government and people one transaction only, and found in the hasty recognition of the state of war an explanation of the escape of the *Alabama;* and in the enthusiasm for Semmes, and the toleration and even applause of Laird, and the monument-building to Stonewall Jackson (a foreign general fighting for slavery), support for the belief which to-day is as strong as ever that the *Alabama* was employed by Liverpool merchants, with the connivance of the Government, to sweep American shipping from the seas, and transfer the American carrying trade to English bottoms. A more maddening belief could hardly get into the heads of a commercial people, but there it is. Professor Goldwin Smith did his part in fighting against the folly which put it there; but we doubt if he, or anybody else who has the faculty of seeing the two sides of a question, can think the present state of mind of the American public anything wonderful. It is not, we admit, the most exalted or philosophical or Christian frame of mind; but there is something thoroughly human about it, and, in our opinion, time only will change it.—Ed. Nation.]

THE AUERBACH CONTROVERSY.

To the Editor of the Nation:

If we have read the *Nation* understandingly, one of its principal purposes is to influence public opinion in favor of legislation to protect all rights and interests which the law does not now cover. Therefore, although this note takes its rise in a mere "publishers' quarrel," we feel justified in asking room for it in your columns.

We have just published the first two parts of Auerbach's "Villa on the Rhine." In each copy we placed a slip containing the following:

A STORY IN A NUTSHELL.

From Hon. George Bancroft to Friedrich Kapp, Esq.

Legation of the United States,
Berlin, December 10, 1868.

Rev. W. R. Alger, of Boston, proposed to Mr. Auerbach to take Roberts Brothers for his publishers. They, without Mr. Auerbach's consent or knowledge, published one of his works, and filled the country with advertisements of their intention to publish the next which he should bring out. Messrs. Roberts Brothers then made Mr. Auerbach an offer, which he refused to accept without a modification. They, on their part, refuse to accede to his proposal. So that matter stands. Messrs. Roberts Brothers have received from Mr. Auerbach neither manuscript nor proofs of his new work, nor have they from him authority to advertise or to publish.

George Bancroft.

From Herr Berthold Auerbach to Messrs. Roberts Brothers.

[Translation.]

Baden Baden, October 22, 1868.

Messrs. Roberts Brothers:

Gentlemen: I have before me a copy of your letter to Messrs. Leypoldt & Holt, dated Boston, October 3. The statements you make therein are absolutely incomprehensible to me. Let me recapitulate the facts. You reprint the translation of my novel "On the Heights," published by Tauchnitz, without my knowing a word of it. Mr. Alger, in sending me his own book, writes me a highly pleasing letter. In thanking him, I enquire whether he can find a publisher there who will pay me a satisfactory *honorarium* for my next book. I then receive a copy of your American edition of "On the Heights," and see that you already state in your announcement that you are going to publish my new novel, when up to that time no word of negotiation, much less of agreement, had passed between us.

A good while after, you make me a proposition. In my letter of July 15th I make my proposition in return, demanding a fixed *honorarium,* to which you object. I telegraphed you that only on condition of a fixed *honorarium* will I close a bargain with you, *else the new novel is otherwise disposed of.* You don't answer by telegraph but by letter, persisting on your previous propositions, though I had decidedly declined them. Herewith *the matter was completely finished between us,* and I really cannot comprehend whereon you base any lawful claim to the new book, "Das Landhaus am Rhein." All attempts at coming to terms having failed, I legitimately made over my new novel to Messrs. Leypoldt & Holt, of New York. This is the way matters stand. . . .

I have nothing more to add, and will be confident that you now will not interfere with the authorized publishers, Messrs. Leypoldt & Holt, of New York.

In this confidence, I subscribe myself, most respectfully,

Berthold Auerbach.

Messrs. Roberts Brothers are now publishing an edition of the novel.

Messrs. Roberts Brothers at once issued a similar slip containing the same matter, with the following rejoinder. We italicize certain passages, for which we invite comparison with the statements of Messrs. Bancroft and Auerbach.

"ANOTHER 'STORY IN A NUTSHELL.'

"[*Extract from a private letter of a foreign author to his friend in America.*]

"'You have taken such a strong interest in my literary work that I place in your hand, with entire trust, the conditions for the publication of

my book in the New World. . . . . And it is to me a refreshing assurance that I know you are a good and true deputy for me.'

"There was once an author who lived in Germany, and he wrote a book *which he wished to have published in America. And he wrote to a friend in America*, who was also an author, asking him as a favor to secure him a publisher who would be willing to pay him something. And his friend *secured him publishers who agreed to pay the foreign author more for his book than native authors receive.*

"Now, after many months had expired, and the publishers *had by their money and means assisted to make the foreign author famous in America*, the foreign author, who had hitherto made no objection to the bargain concluded for him at his request by his friend, *bethought himself of different and preposterous terms for his book.* But the publishers declined to accept those terms, having, as they thought, a right to the book according to the arrangement originally made with the foreign author's friend; and *in defence of their rights* published an original translation of their own, in a perfectly legal manner. And the foreign author found another publisher who was willing to take the book, *without saying the customary 'by your leave' to his neighbor.*

"This is a true 'Story,' founded on fact: the names purposely omitted, that private rights may be respected. *And the moral of it is, that foreign authors, without legal rights, should be contented with a compensation which native authors, with legal rights, consider satisfactory.*

Published by ROBERTS BROTHERS, Boston."

Before making our comments, we wish to illustrate by examples the method of interpretation necessary to apply to the written statements of Messrs. Roberts Brothers.

On February 6, 1868, we announced a revised translation of "On the Heights." We received from Messrs. Roberts Brothers the following letter:

"BOSTON, February 7, 1868.

"GENTS: We notice your announcement of "On the Heights" in the *Commercial Advertiser* of the 6th inst.

"We beg to say that we announced our edition in The *Commercial Advertiser* of January 23.

"Our edition is now printing, and when we add that we are publishing under a direct arrangement with Mr. Auerbach, we know you will, with your usual courtesy, withdraw. Yours very truly,

"ROBERTS BROTHERS.

"*Messrs. Leypoldt & Holt, New York.*"

We found out afterwards that (although nothing but 'On the Heights' had been mentioned between us up to the writing of the above letter) they had reprinted that book without Mr. Auerbach knowing anything about it. We drew their attention to this fact. Their reply was:

"We did not say that we were publishing *it*" (namely "On the Heights") "by arrangement with the author."

Now, not forgetting the principles of interpretation indicated by the above illustrations, we have a word to say in regard to their reply to the statements of Messrs. Bancroft and Auerbach.

They say that they "agreed" (*offered* would be more correct) "to pay the foreign author more for his book than native authors receive," and terminate their statement by the "moral"—"that foreign authors, without legal rights, should be contented with a compensation which native authors, with legal rights, consider satisfactory."

These considerations do not in any way touch the value of Mr. Auerbach's book; he *did* succeed in getting publishers to give him satisfactory terms, and it is notoriously true that Hugo, Reade, Dickens, and others are constantly receiving inducements from American publishers which few if any American authors lay claim to.

Messrs. Roberts Brothers imply a claim on Mr. Auerbach because they "had of their money and means assisted to make the foreign author famous in America." They did this through publishing and advertising "On the Heights," out of which they made a very handsome profit.

They say that they publish an opposition edition of "The Villa on the Rhine" "in defence of their rights." What these "rights" are has already been shown. It is a queer way to "defend" them, though, to publish a book out of which (considering our facilities for finishing the book before them) they certainly cannot make enough to pay for their trouble, and their only possible motive for publishing which is to draw off towards their expenses a portion of the profit which Mr. Auerbach and ourselves would otherwise realize.

They intimate blame to us for not "saying the customary 'by your leave.'" Could we be expected to ask their leave to buy from its owner a thing to which they had asserted a claim which we had every reason to believe they never had?

Now, to our rejoinder let us append our "moral."

I. If the American people owe Berthold Auerbach anything for what his books have done and are to do for them, it would be only simple justice for such as know of this case to do what comes in their way to promote the enactment of a law to defend him and others like him.

II. If the same people care anything for respectable translations of foreign authors, instead of the detestable travesties which now generally go under that name, they had better put it in the power of such authors to select their own publishers, and to get their books on this market at a rate leisurely enough to obviate the necessity of that supervision of translations which few publishers will or can give, and which nothing but our exceptional enthusiasm for Auerbach would have induced us to give, as we have done, day and night for weeks. (We do not mean by this to cast any slur on the translation of "The Villa on the Rhine," which Messrs. Roberts Brothers are publishing.)

III. If society owes any protection to the individual, it owes us, and Messrs. Roberts Bros., and all other publishers, some sanction of law under which we can neither misunderstand nor pretend to misunderstand our rights, and under which we can be protected in the legitimate prosecution of a business which has at least as much to do with human happiness and progress as anything in which mere dollars and cents can enter.

Yours respectfully, LEYPOLDT & HOLT.

BROOME STREET, March 30, 1869.

Notes.

LITERARY.

MESSRS. FELT & DILLINGHAM announce what we take to be the Cassell, Petter & Galpin edition of the monosyllabic "Swiss Family Robinson" and Mrs. Barbauld's "Evenings at Home." They are now all but ready. We may properly refer our readers to a literary note of last week, in which we spoke of an obvious injustice done by Messrs. Cassell, Petter & Galpin to Miss Mary Godolphin, the originator of the one-syllable literature, whose versions of "Evenings at Home" and "The Swiss Family Robinson" will be published by Messrs. George Routledge & Sons.——Mr. George S. Wilcox, of this city, announces as ready for delivery a work in one hundred and fifty pages, by Mr. E. W. Martin, containing "complete, authentic, and entertaining biographies" of the members of President Grant's cabinet.——On April 10, Messrs. J. W. Schermerhorn & Co. will issue "The Diadem of School Songs," a work by Professor William Tillinghast. "Its beautiful illustrations," the publishers say, "make it a decided novelty," and—what is more to the purpose—they announce that it will contain songs "adapted to every possible occasion in every kind of school"—as, for example, "quiet songs," "boatmen's songs," "skating songs," "sunset songs," "rain songs," "May songs," "morning songs," "keep-in-the-right songs," "parting songs," "graded-school songs," "visitors' songs,"—in short, as we have said, songs for every possible occasion. ——In most, indeed we believe all, American editions of "The Old Curiosity Shop," the chapters entitled "Master Humphrey's Clock," in which figures the infant son of Mr. Samuel Weller, are omitted—for reasons best known to the author. In Messrs. Hurd & Houghton's Dickenses—in what is the fourteenth volume of the "Globe" edition, twenty-seventh of the "Riverside," and the fifty-fourth of the "Household" and the "Large Paper,"—this pleasant little last view of Tony and his offspring is restored to its original place. The volume in which it appears contains also some of the later Christmas Stories, a list of "Familiar Sayings" from Dickens's works, and an "Index of Characters and their Appearances," which have been prepared expressly for the editions above mentioned. The latter is a catalogue of all the fictitious personages to be found in Dickens's, characterizing each of them by a word or two, and giving references to all their appearances on the scene of the story. The same house announce that they have in preparation a new edition, revised by the author, of Hans Christian Andersen's works. It will be in five volumes, which respectively will contain his novels, "Winter Stories and Tales," "Sketches of Travel," "Selections from Dramatic and Poetical Works," "The Story of My Life." The last-mentioned book will now be published for the first time in an unabridged form, and the author will supply additional chapters. Hurd & Houghton also announce "Woman in Prison," by Caroline H. Woods, for some years a matron in a state prison; "Among the Trees," by Mary Lorimer; "Stories from an Attic" by the author of "Dream Children," with six illustrations; "An American Family in Paris," profusely illustrated; X. B. Saintine's "Dame Nature, or Talks and Stories about Natural History," "A Little Boy's Story," from the French of Julie Gouraud, by Laura C. Redden; and another work by the same author, "The Little Peddler," "William Gay, or Play for Boys," by Jacob Abbott; a complete and revised edition of "Mother Goose's Melo-

dies," with eighteen full-page illustrations by Mr. H. L. Stephens, and ten smaller ones by Mr. Gaston Fay, and "Country Sports and Scenes," by an anonymous author, with designs by Mr. H. W. Herrick and others.

—We have received too late for previous notice a large volume containing a catalogue of the library of the late Hon. A. G. Greene, of Providence, R. I., which Messrs. Bangs, Merwin & Co. are now selling at auction, and which it will still take some days to dispose of. This library is, or was, rich in "Americana"—a class of works to which the majority of collectors in this country can hardly direct too much of their attention, the market for such books being a sure one, and most of our collectors being willing enough, when they buy, to purchase works relating to the history of their native country, and willing enough—as their heirs are, too—when they sell, to get a remunerative return for what money of theirs has been invested in books. Then, too, this branch of collecting is for many reasons an inviting one to the collector who has in his mind no thought of gain. It is not so well gleaned and thoroughly known a field that the gleaner in it may not feel hope and fear, encouragement in the search, and frequent triumph at the successful result of his pursuit. Mr. Greene—no doubt for the gratification of his historical tastes, although he was a lover of poetry, too—had made an unusually full collection of the writings of American poets and poetesses—"Feathers from a Moulting Muse," as says one of the male singers themselves. It is curiously melancholy to read over the long list of these unfortunate flutterers which might better have been moulted far away from the ink pot, which has served the most of them only as a means of recording their oblivion, of making eternal their transitoriness and evanescence. It is not a cheerful thought that in 1826—a year that somehow seems to have gone further back than most among the years beyond the flood—Mr. Robert Stevenson Coffin, "The Boston Bard," gave the world his "Oriental Harp;" and there is an odor of dusty mortality in the information that in 1843 Mr. Henry Rowe Colcraft brought out "Alhalla, or The Lord of Talladega." Three years before was the date of "The Captivity in Babylon," the admired work of the Rev. Mr. Joseph Clinch. So they go on—two thousand of them, more or less—still-born and dead and dying, which feelingly persuade us what we are, and teach any of us who are in danger of forgetting it that for the *genus irritabile*, also, there is profound rest. Altogether, poetry and all, the collection includes about seven thousand volumes.

—On Saturday evening last Mr. James Harper, the aged head of the world-famous house of Harper & Brothers, died of injuries received in a fall from his carriage. His death was practically instantaneous, for he was unconscious from the time of the fall till his life was wholly gone. He thus ended by what has been called the most fortunate of deaths a life that had been fortunate and happy, long, healthy, cheerful, and laborious. Yet fortunate is hardly to be said of him, his success was so certainly the reward of his industry, which raised him from very low beginnings to affluence and to the possession of a business with which that of only one other American book-selling firm can be at all compared. If we take into account the large number, immense circulation, and high character of the periodicals which the Harpers publish, we shall be obliged to consider them as the most powerful of our publishing firms; more than that, we shall recognize in them some of the most influential men in the whole country. That the influence of the house has upon the whole always been upon the side of good is in great part due to the character of the gentleman just deceased. The other publishers of the city have taken proper measures to show their high respect for the veteran of "the trade," and the day of his funeral was observed as a *dies non* by all the booksellers.

—For reasons best known to himself, the valedictorian at the recent Commencement exercises of the Medical Department of Georgetown College divided his address into three parts, one of which he wrote in what he calls "Anglo-Saxon English," another, shorter, in "Latin English," and a third—so short that we may quote it—in "Greek English." The result of his labors is, that he has produced an oration which is not English at all, his Anglo-Saxon English being no better and hardly nearer our tongue than his "Latin" and "Greek English"—both of which are very much mixed with words of Teutonic origin. The sentences that we spoke of quoting are these:

ARCHIATERS: For the phalanx of giants, PHYSIC, which you, by your zeal, enthusiasm, and energy, have organized with technical hellenic tactics, they, whom you have eclected to be the polemarchs, ever must hymn pæans to you, not, however, in eulogistic rhapsodies in a theatre of the metropolis, but rather in their practice as physicians. An eutrophy and euthanasia to you all.

This nonsense illustrates—of course, in an extremely exaggerated way—the folly of a well-known sort of purism which would assert too exclusively the claims of this or that element of our composite language. And it does it no more forcibly than the two unquoted divisions of the speech. Furthermore, we may be excused for saying that it illustrates pretty well the truth that in some of our American institutions of learning it is not impossible for a man who graduates with honors to make a sort of display which in a thoroughly well-regulated college would neither be permitted nor attempted.

—There are a good many reasons why the graduates of Harvard may look with pleasure on the nomination of Professor Eliot to the presidency of the college. The fact that he is but thirty-eight years old has been spoken of as if it should be a bar in the way of his advancement to an office of so much dignity—to the duty, too, of presiding over the deliberations of men some of whom are old, as well as over the oldest and probably the best of all our American institutions of learning. But some of our most successful college presidents have been young men—as, for example, Nott, and Wayland, his pupil. Professor Eliot will bring to the discharge of his labors great energy, activity, and decision. Very likely he may be something of a strict disciplinarian, but the difference between his government of the college and that of a mere pedagogue will be—we were going to say, infinite. For he is thoroughly in sympathy with the modern views as regards education, and it is beyond a doubt that, so far as he can have his way, Harvard will be put on the road to becoming a true university. It easily might have happened to her to be remanded to the limits of the high-school system. Mr. Eliot's mind is, as we suppose, inclined rather to scientific than to what may roughly be called more liberal studies; but his mind is not one-sided, although his attainments may be of a special rather than a general character. All the graduates of the college, we should hope, will expect of him what most of the younger ones certainly do, a very useful and honorable term of office, and will be devoutly thankful, we should say, that so "available" a man should be so good a one for the place.

—A New England "minister" of the days of 1750 and thereabouts did not necessarily or probably look on marriage as a holy sacrament, and judging from the practice of slaveholding Catholic countries, perhaps there is not much authority for believing that if he had so considered it he would have felt obliged to insist on its sacredness in the case of a colored couple. But still it is a little startling, even to the reader who regards marriage as a civil contract merely, to read a "form of marriage" which was drawn up and used by the Rev. Mr. Samuel Phillips, a pastor in Andover, Mass., for sixty years, from 1710 to 1771. It appears that the negro bride and groom and the witnesses having been gathered together before the clergyman, the latter used first to address the intending husband and require him to promise that "*so far as shall be consistent with the relation which you now sustain as a servant*, you will perform the part of a husband toward her; and in particular you promise that you will love her; and that, as you shall have the opportunity and ability, you will take a proper care of her in sickness and in health, in prosperity and adversity." The bride for her part was then required to promise the same things, and—as was also required of the groom in respect of her—to say that she would be "true and faithful to him and cling to him, *only so long as God, in His Providence, shall continue his and your abode in such place or places as that you can conveniently come together.*" The minister then declared to them that for such time as God should continue their place or places of abode as aforesaid, and for so long as they "should behave and conduct themselves as obedient and faithful servants"—"not as eye-servants, men-pleasers"—"toward their respective masters and mistresses" they might consider themselves man and wife. "And finally," he used to say them, "I exhort and charge you to beware lest you give place to the devil"—who, when he finds men and women in very prosperous circumstances, is apt to stir them up without distinction of color to great heights of vainglory and haughtiness—"so as to take occasion from the license now given you to be lifted up with pride, and thereby fall under the displeasure not of man only, but of God also; for it is written that God resisteth the proud but giveth grace unto the humble." Prayer used to conclude the ceremony, which seems to have been a tolerably recognizable part of "the great missionary scheme" that used to be spoken of, for bringing the benighted children of Africa to a knowledge of the gospel light.

—In connection with Mason's "Brief History of the Pequot War," we omitted to mention the elegant "Catalogue of the American Portion of the Library of the Rev. Thomas Prince. With a memoir and list of his publications, by Wm. H. Whitmore" (Boston: Wiggin & Lunt, 1868), which

also furnishes a portrait of the distinguished preacher and antiquarian. The whole of his library, left as a public trust in charge of the Old South Church, whose pastor he was for forty years, has been deposited in the Boston Public Library, and by special arrangement the catalogue there made of it has been selected from with a view to uniting the titles which relate to the early history of this country—the most valuable of the collection, numbering 1,519, and a monument to the sagacity of their former owner. Among these is, of course, his own "Chronological History of New England in the form of Annals" (1737), which was reprinted in 1826. "It remains as a standard authority," says Mr. Whitmore, "and can never be superseded." The author's original publications herein enumerated amount to some forty, chiefly sermons, and most of these funeral or thanksgiving. He was able to preach, too, on earthquakes, namely, the "late dreadful Earthquake," 1727, and the "dreadful Earthquake felt in Boston, New England, Nov. 18, twenty minutes past four in the morning," 1755. The latter had two discourses devoted to it, both designed to prove the phenomenon, wherever occurring, the work of God and a token of his just displeasure, but also employed to convey—the one, "A Brief Account of the natural, instrumental, or secondary Causes of these Operations in the Hands of God;" the other, "An Historical Summary of the most remarkable Earthquakes in New England, from the first Settlement of the English here, as also in other parts of the world since 1666." The "distressing drought" of 1749 called for similar moral reflections and a reference to others "which have been known among us in the Memory of any Living." The value of Mr. Whitmore's catalogue may be judged from the list it affords of Cotton Mather's writings alone: they occupy twelve pages.

—A reasonable curiosity may be indulged to learn the price fetched by a small "Raphael"—believed to be, prior to the auction of March 15, the only one that has not been absorbed by the great galleries of Europe—offered last month with the Galerie Delessert in Paris. This little painting, about 12 by 8 inches, on cedar wood, is an unhackneyed study of the Virgin and the Child Jesus, and brought at auction in London £500, but when bought by the late owner in 1843 brought 24,000 francs—nominally twice as much. Nowadays the latter price would be a bagatelle. There have been many engravings made of this "Raphael," and a not unpleasing half-size wood-cut is given in the *Zeitschrift für Bildende Kunst*, No. V., Vol. IV., with correspondence in relation to the picture and the then prospective sale by W. Bürger. The same number contains an excellent etching of a small painting by Metzu, the "Woman with the Beer-pitcher," slightly reduced from the proportions of the original. The accompanying text throws light on the hitherto obscure and neglected history of this industrious Dutch artist, tracing the influence of Rembrandt upon him as teacher (in all probability), and changing the commonly accepted date of his birth from 1615 to 1630, with a corresponding postponement of his death. In the Supplement for the 5th of March is an account, by a St. Petersburg correspondent, of numerous objects of Greek art found among the burial tumuli in South Russia, especially those uncovered last summer in the neighborhood of the peninsula of Taman. The excavations there are constantly pursued, under the auspices of the Imperial Government, who carefully preserve the relics thus obtained in the museum of the Hermitage. The recent discovery of ancient remains at Palermo promises to keep alive the interest excited by the discovery of silver ware at Hildesheim, and, together with the Russian and Pompeiian revelations, to add much to our knowledge of the domestic life of both the Greeks and the Romans.

—A good story is just now going the rounds of the press in North Germany in relation to the Bismarcks. The count's son is a pupil, it seems, in one of the Berlin schools, when recently, in accordance with an established custom, the scholars had to deliver orations on a theme selected by the teacher—who in this instance may have leaned a little to toadyism, though one who dislikes to see the elders snubbed by youth will hope not. The subject which he set for declamation was this: "What man has rendered the greatest service to Germany within the last three or four years?" And when he had announced it, he said, "Mr. Von Bismarck, will you speak on this question?" The young gentleman mounted the platform, and amid much silence began speaking with these words: "Not a few men have rendered great services to Germany during the last few years—some in one way, some in another. But one man in particular deserves mention—a man who has promoted a variety of useful undertakings, who has furthered industrial pursuits, increased the facilities for intercourse," and so on, to the surprise of his hearers. "That man," the orator continued, "is Doctor Stronsberg." Doctor Stronsberg is a railway projector and contractor who of late has been very successfully active in constructing railroad lines of importance. Von Bismarck's readiness, and courage, and inclination to sarcasm and superciliousness seem to have descended to his son.

—The best Russian writers are all hard at work this year. Turgenef has just published in the *Russian Messenger* a pretty little novel called "The Unfortunate," a German translation of which is about to appear in the journal *Der Salon*. He is also getting through the press in Moscow a new edition of his works, which will contain his Autobiography and Literary Recollections, the appearance of which is looked for with great anxiety. The number of the *Russian Messenger* which contains Turgenef's novel has an article on the United States Agricultural Department, and a translation in verse of one of the tales in Morris's "Earthly Paradise." Count Leo Tolstoi has finished the fifth and last part of his great novel "War and Peace," and it will be published in a few days. This includes the occupation and fire of Moscow and the Vienna Congress. He is said to be busy on a second part of the "Cossacks," which Turgenef calls the best book in Russian. Gontcharoff, after a long silence, contributes a long novel to the *Messenger of Europe*, with the name of "A Fragment." Pisemsky is writing for the new monthly *The Dawn* a novel called "People in the Forties." It is one of his excellent descriptions of upper middle-class life. One of the latest publications in Russia is a translation of Boynton's "History of the United States Navy during the War." An article on Turgenef will appear in the next number of the *North British Review*, written by Mr. W. R. S. Ralston, who recently published an English translation of Krilof's fables (George Routledge & Sons), and who wrote the article on Ostrofsky in the *Edinburgh Review* of July, 1868. He has recently finished a translation of Turgenef's "Nest of Noblemen," which will be published under the name of "Lisa."

MR. STEDMAN'S "BLAMELESS PRINCE."*

NOTHING is more common than to hear American materialism insisted upon. And this, let us make bold to say, although it is probable that there is no contemporary people better furnished with ideas, and at all events none that sacrifice more to what they have, be they moral, religious, or other, than the sublimated Englishmen who have just fought out the war for "the Union" and for "State Rights," and among whom there will very likely come into existence during this week and next—coming with the usual attendant obloquy and self-devotion—one or two new sects founded on some fine-spun elaboration of Christian dogma, and one or two others founded on some refined idealistic or socialistic principles. It would be curious to trace the origin of the widely extended belief in the materialism of Americans. In the older criticism of "the States," it used to be assumed by the unfriendly critic that we were all so busy in (sybaritically) chopping down trees in the untamed wilderness, and in afterwards greedily sawing them up for "the almighty dollar," that, necessarily, we must care vastly more than other people for the gross things of this present life. Our friendly critic, too, as well the unfriendly, were wont to make much of "the wilderness." Forgetting that a good half of us, or three-quarters of us, used to give up one day in seven and two or three evenings of every week to pursuits about as far removed from materialism as any occupations of rational men can be, he used to make for us the excuse that really we had no time for idealism—an excuse which (considering what the fathers of the country came here for, and what they did when they got here) seems about as necessary for John the Baptist and *his* wilderness as for the men and their descendants who came over in the *Mayflower*, and with fasting and prayer founded towns in their wilderness. Then, there is no denying it, our "chosen people," as seems characteristic of chosen people under both dispensations, were always reasonably sharp at bargaining; it was not usual for the heathen to despoil them much: so quite generally it happened that such persons as came over here from European countries with the intention of weaning us from our almighty dollar went away without any extremely large part of it, and not unnaturally such persons spread abroad the theory that we were thorough-going materialists who cared for nothing but lucre.

But the truth is, we suppose, that neither our foreign nor our native critics took much pains accurately to settle, before they began to talk about it, what was and what was not the true materialism of their day. When Irving invented the one phrase of his which is still current in men's mouths, and charged against his countrymen that the dollar was all powerful among them, he rested content, it would seem, in a pardonable boyish belief that for him and his literary companions immaterialism consist-

* "The Blameless Prince and other Poems. By Edmund Clarence Stedman." Boston: Fields, Osgood & Co. 1869.

ed in admiring and imitating the men who had written books in the Augustan age of Anne; and that for other Americans it consisted in admiring the imitations of his favorites which were put forth by him and his companions. And yet during the lifetime of him and his companions, the West carried churches and schoolhouses along the track where he had hunted buffaloes; hundreds of thousands of emigrants crossed thousands of miles of ocean as to a land of promise, because they knew that here among his materialist countrymen the idea of freedom, religious and political, had full scope to work out its last results; and, to say no more, it was during the time of all the sighing about our earthiness that the work was begun, and after a generation of labor was finished, of emancipating a nation of slaves.

In those days we were not, to be sure, producers of literature to any great extent. And yet who of our race and time is much surer of life than Hawthorne, born "in the year of the Independence of the United States" the twenty-eighth? and whereabouts in English-speaking countries shall we find two poets side by side, who, all things considered, can be admitted to be so genuine and durable as Emerson and Lowell? or a poet of so wide acceptance as Longfellow? Yet the life of each of these men covers more than half the period of the national life. There is Bryant, also, to be thought of. So we have not done so ill by liberal letters after all. And in the case of minor poets—the number of whom in a country is a better measure of its general culture than is afforded by the number of their greater brethren—we are beginning, it seems, to be particularly well off in them, that is to say, for a people "engaged in a struggle with wild nature, whose hands are better acquainted with the axe than the pen, whose sledges are frequently pursued to the centre of the hamlets by troops of ferocious wolves," and so forth. The *Saturday Review*, we observe, has recently felt compelled to devote some columns to an American poet—American or of the Dominion of Canada—with whose works, as the Boston *Advertiser* properly insists, none of us over here are very familiar. And besides Mr. Dagnall—whom the reviewer mumbled, to be sure—we have living and active among us Doctor Thomas Parsons, whose name is dear to every lover of true poetry who has become acquainted with his works; Whittier, the greatest literary name that illustrates the history of the Society of Friends; Mr. Leland, the father of "Der Breitmann;" Mr. Brownell, from whom too little has been heard since he wrote battle poetry not unworthy of a place beside any in the language;—and Mr. Forceythe Willson, who died too soon, and whose "Old Sergeant" is as good in its way as Mr. Brownell's "Bay Fight" and "River Fight," is not long dead, as also are "Private Miles O'Reilly" and the promising John Dorgan. Dr. O. W. Holmes, too, we hear, whose poetical works will last as long as there shall be collections of "humorous poetry;" and Mr. R. H. Stoddard, a writer who—though perhaps he has not, or has, worked it out—has sufficiently proved that he had in him once a vein of poetry; and the Misses Cary; and Mrs. Helen Hunt; and Mrs. Akers; and Miss Larcom; Mr. Bayard Taylor; Mr. Boker; Mr. G. W. Curtis; Mr. Weeks; Mr. Sill; Mr. Piatt; Mr. Aldrich; Mr. Howells, who will one day write poetry again, we suppose; Mrs. Julia Ward Howe; Mrs. Piatt; and dozens more whom we might mention, of whom not the least is Mr. Stedman, and all of whom beside what other praises we may give them deserve one and all this praise, that they all without exception work honestly and with some success in the cultivation of a liberalizing art, and to a certain extent protect their tuneless fellow-citizens from the particular scoff of which we have spoken.

"The Blameless Prince" is the longest poem in Mr. Stedman's little volume, and is not, we should say, the best. We like better the simple and natural little piece called "The Doorstep," in which Mr. Stedman is fully on a level with his subject, and which is interesting and pleasing not only as a spirited picture of "manners" in New England in the old times, and now, perhaps, but also appeals to sentiments pretty universally diffused wherever young men and young women are to be found walking together in the evening.

"Pan in Wall Street" also we liked; it is a pretty, fanciful little poem, graceful and true in conception, as not all Mr. Stedman's poems are apt to be—for sometimes he reaches after a subject that he can hardly handle or get a good hold upon—and it is characteristically well finished.

"The Blameless Prince" is the heir apparent to a small principality which adjoins the far more powerful and wealthy realm of a youthful queen who chooses the prince, her old companion, for king-consort. As he rides to his future wife's dominions, he halts awhile at the estates of an old nobleman, with whose wife he suddenly finds that he is in love, as she with him. They part understanding each other's hearts, but blameless; and the prince makes a good husband, a good statesman and soldier, and is in all respects a mirror of knighthood, till unfortunately the old nobleman dies, the widow comes to court, and the lovers fall. Years follow, not without their pleasures for the pair, who, however, are after all so dissatisfied with the life of guilt and concealment that they are obliged to live that they agree to separate. Riding away from their last meeting the prince is killed by the fall of a tree, and the queen and the whole kingdom mourn for him. But the queen, after her first shock of grief is over, visits a nunnery where she is told of a novice who desires to speak with her. It is of course the paramour. If this lady had not been represented as a penitent, we should have supposed that her action as regards the queen was dictated by certain so-called feminine feelings not much to her credit. She lets out the secret, and of course makes the queen excessively angry at first, and excessively miserable all her remaining days; and for her only excuse she has the very lame one that she thought God would have her "make confession and to you." The queen shows a proper spirit while she is in the room with this singular convert from the ways of the world, but nevertheless goes home to die—not at once, but afterwards—on occasion of the ceremony of unveiling a grand mausoleum for the dead prince, on which is this inscription:

> "Of all great things this Prince achieved his part,"
> Yet wedded love to him was worth them all."

On reading these words, sardonic enough certainly under the circumstances, the poor queen falls dead; and her loving subjects lay her relics beside the body of the man "she must have loved so much." This final scene is well managed; but the preceding one in which Mr. Stedman seems to have laid out more of his strength is very weak in itself, and in its relations to the plot of the tale. There should have been, and easily could have been, contrived some better way of bringing the queen's wrongs to her knowledge. For example, it is not at all unsupposable—in fact, considering the age at which he was captivated and his after disgust, it would have seemed very plausible—that the blameless prince might have been infatuated with a woman quite capable of telling the queen for the sake of avenging herself upon the lover whose uneasy conscience made him desert her, and of planting a thorn in a successful rival's heart.

But it is not especially for coherent and forcible conception nor for strong thinking that we look to Mr. Stedman, but for the sort of feeling for nature that a man has who is in the country for a month's vacation, for a pretty fancy, for an outward elegance of finish, and, when he can content himself with being simple, for an occasional delicate expression of genuine, common sympathies.

By the way, with such mastery of many metres as he has, it is a wonder that Mr. Stedman's ear could allow him to print many of the hexameters which occur in his translations from Theocritus. As these translations with others are by and by to make a book, unless we are misinformed, we say no more of them in this place.

A CYCLOPÆDIA AND DICTIONARY COMBINED.*

A somewhat grandiloquent and, therefore, loosely written prospectus gives us fuller information about the range and scope of Mr. Zell's cyclopædic publication than would be given on its provisional title-page. The design of the work is "to incorporate into a compact and concise form the vast information hitherto found only in numerous books, such as gazetteers, biographical dictionaries, the numerous volumes of encyclopædias, and the large dictionaries of our language." It will be issued in parts, "at a price so low that it will be within the reach of all," the parts to be nominally weekly or monthly. We say nominally, for the two hundred or two hundred and fifty "weekly" numbers—at ten cents—are to be issued in two years. The whole is to form two large royal quarto volumes, embracing no less than one hundred and twenty-five thousand articles. It is needless to say how useful and convenient an all-embracing and yet compact book of reference like this must be to every more or less educated man, if well executed. Our "well" means here, of course, only "tolerably well;" for vast compilations like the one before us cannot be expected to be done with the thoroughness and accuracy which we justly demand of writers on special subjects, nor to show that symmetry of proportions and correctness of arrangement for which the editors of a collective publication of limited range may be held responsible. The first ten numbers of the "Popular Encyclopedia and Universal Dictionary," which we have scanned with the attention of an often disappointed eye, have rather surpassed our

* "Zell's Popular Encyclopedia and Universal Dictionary of History, Biography, Geography, Science, Art, and Language, brought down to the present time, and illustrated with over two thousand engravings. Edited by L. Colange, assisted by eminent scientific and literary gentlemen." Numbers 1-10 (A—America). Philadelphia: T. Ellwood Zell. 1869.

expectation. For a book which on one column has to give us information about the biblical personages Ahimaaz, Ahimelech, Ahinoam, Ahiram, Ahithophel, and Aholibamah; about Ahlwardt, "the founder of the Abelite society;" the Eastern princes Ahmed-khan and Ahmed-shah; Ahuitzol, the Aztec emperor, and Ahriman, the Persian deity; about the German towns of Ahlen, Ahrberg, and Ahrweiler; the East India districts of Ahmedabad and Ahmednuggur; Ahnepec, a post village in Wisconsin, and Ahoghill, a village of Ireland; about the nautical terms "ahold," "ahoy," and "ahull;" the botanical species "ahouai;" the Ahrian group in geology, and the "ai, the three-toed sloth"—we find it in the main both full and correct. By this we do not mean to say that it would require a particularly close search to discover omissions, inconsistencies in orthography, or errors. Some such defects, though of the slighter kind, are perhaps but too easily discoverable. Neither the mineral "allochroite," nor the fish "alphest," nor the ancient geographical names of Acherontia and Acte, nor Acoris, king of Egypt, ought to have been omitted, and still less the river Alazon. "Alloquy," the Shakespearean "allottery" and "alnight" might have been given, as other obsolete words are. "Mɛmoir[e]s de la Duchesse d'Abrantɛs" (under "Abrantes"), "Farignana" and "Levango" for Favignana and Levanso ("Ægades"), "Gulio" for Giulio ("Alberoni"), "Tagan rok" for Taganrog ("Alexander I. of Russia"), "Alfonzo" and "Alphonzo" for Alfonso and Alphonso, "Logrona" for Logroño ("Alfaro"), "Cloinias" for Clinias ("Alcibiades"), "Amer" for Omar ("Alexandria"), and "1513 B. C." for 503 B. C. ("Agrippa Menenius"), belong to a class of misprints which a careful revision ought to exclude, and criticism must rebuke. The articles "Alexander Newskoi," "Alexis Michaelowitch," and "Alexis Petrowitch," in which *w* (after the German) and *v* are alternately used to express the Russian *v* and *ff*, ("Newskoi," "Michaelowitch," "Petrowitch," "Wladimir," "Jaroslav," "Novgorod," "Romanov"), and in which both *witch* and *witz* ("Feodorowitz") replace *vitch*, which alone is correct, show that the writers and revisers are still in a perfect muddle concerning Russian names. "Kamtschatka," after the German, is also used (under "Alaska") to the exclusion of the correct English form. "Heb. *almugîm, algûmîn*" (under "Almug") stands very incorrectly for Heb. *almuggim, algummim*. By a very strange anachronism, or rather by a careless process of condensation, the Amalekite, King Agag, who "was hewn in pieces in Gilgal" by Samuel, is made identical with the unknown commander of that people who "on the Israelites coming out of Egypt attacked them in the wilderness and slew all stragglers." The article "Amalekites," however, knows the dates of the two events, separated by four centuries ("B. C. 1491" and "B. C. 1093"), and knows them but too well, for we are at a loss to understand how the precise year of the death of the Amalekite can be ascertained. The date of the death of King Ahab is given, quite exceptionally, according to the era of the world. The Ahasuerus of the Book of Esther is identified with Artaxerxes, contrary to the opinion of most modern critics, who see in him Xerxes. Some of the historical articles are strikingly defective. Such are "Adams, John Quincy," "Ali Pasha," "Alberoni," and "Alexander I. of Russia." In the last named article, the invasion of Russia in 1812 is thus mentioned: "In the latter year hostilities were again commenced between France and Russia, and were actively continued until the downfall of Napoleon." Under "Alexander II." we read the erroneous statement that "peace was concluded the same year" in which "the allies obtained possession of Sebastopol." Most of the narrating or descriptive articles, however, are ample and well-written, no other, perhaps, being as awkwardly done as the sketch of Abd-el-kader, which begins thus without any reference to standing, country, or time: "Abd-el-kader, very renowned by the persevering courage with which he opposed the aggressions of the French against his country, was the third son of a Marabout of the Arab tribe of Hashem, who had risen to influence through his rank coupled with a great sanctity of demeanor. The early days of Abd-el-kader are lost in obscurity; but by 1826 he had not only acquired the reputation of a scholar, but that of a saint," etc. Defects like those we have enumerated are far from being vital, but we believe that they are the more unhesitatingly to be pointed out in the first parts of an extensive work, the editors and publishers of which, as we see in this case, are well able to make it more and more perfect in its continuation. While eagerly repeating, as he does on the covers of the book, the flattering expressions of purely laudatory newspaper notices, Mr. Zell, we trust, will not allow the scanty remarks of criticism to be thrown away, and in this expectation we wish his enterprise full success.

Western Windows, and other Poems. By John James Piatt. (New York: Hurd & Houghton. 1869.)—Mr. Piatt is seen at his best in one of his earliest poems, "The Pioneer's Chimney," which is closely modelled on Tennyson's shorter idyls, but the subject of which is not only such as to make a touching appeal to universal sentiments, but also is such that the painter is able to give us a distinctively Western picture, one with which his life in the West has made him so familiar that he is able to present it with the force of truth, and thus attain to a higher degree of what seems like originality than he has reached in any other of his pieces. It is only—or almost only—in the movement of his blank verse that, in "The Pioneer's Chimney," he distracts our attention from himself to other poets; as regards other things we are in that piece left pretty much alone with him and his subject—very much to his advantage in respect of our estimation of him, and to our own advantage in respect of the pleasure he gives us as readers. A part of the life of the pioneer of half a century ago is given us well and poetically in these verses:

> "He was an elder in the land, and held
> His first proprietary right, it seem'd,
> From Nature's self; for, in an earlier day,
> He came with others, who of old had reach'd
> Their neighbor hands across New England farms,
> Over the mountains to the Western Land—
> A journey long, and slow, and perilous,
> With many hardships, and the homesick look
> Of wife and children backward; chose his farm,
> Builded his house, and cleared by hard degrees
> Acres that years ago were meadows broad,
> Or wheat fields rocking in the summer heat."

After a life of labor, the farmer loses his homestead because of the failure in business of one of his sons for whom he had become surety. He is about to be turned out on the world in his old age, when opportunely and naturally his troubles kill the old man, and he dies peacefully as he falls asleep in the sun at the house door, after wearily contemplating the necessity of going further West and beginning life anew:

> "Perhaps within his sleep he seem'd again
> Journeying far away for evermore,
> Leaving behind the homes of other men,
> Seeking a newer home for those he lov'd,
> A pioneer again. And so he slept—"
>
> "And still he sleeps; his grave is one of those."
>
> "His wife soon joined his sleep beside him there."
>
> "Their children time has taken and the world,"
>
> "The chimney shows enough for memory,
> The graves remain; all other trace is gone,
> Except the apple-trees that linger, loth
> To end their blossoming."

We were thinking more of the general description of the feelings with which the New England family of fifty or sixty years ago took their slow way to the Ohio Valley than of anything else, when we spoke in praise of this poem as a good presentation of pioneer life. Considered as a whole, "The Pioneer's Chimney" describes, sentimentally, but with genuine sentiment, a not necessary episode in the pioneer life—an incident in the life of one family. It would be hard for Mr. Piatt to be anything but sentimental; and it would be making a mistake to look to him for any very powerful handling of the subject which his title suggests. This we say not because he makes any claim in this or other instances, of being more than sentimental, but because it is as well to say here as in another place that graceful sentiment is the field in which he works with the highest success—we were going to say it is the only field in which he works with any success. With what good result he works in this field the reader may judge from the passages quoted above. They seem to us to answer the author's intention; to be faithfully expressive, or at any rate very suggestive, of the pensive feeling which possesses one when in some lonely and silent place, which the sunny day and the near neighborhood of busy haunts cause to seem more desolate still, one comes upon the humble ruins of what once was a human dwelling-place. The tall grass has overgrown the shallow cellar; the dismantled chimney crumbles away in the midst; the tansy covers the ruined fire-place with its yellow blossoms, and near the melancholy hollow the apple-trees of the little orchard, neglected and diseased, blossom ineffectually.

For the rest, it may be said of Mr. Piatt's poetry that it is always refined and full of small graces, and that it is never strong; that if it is nearly sure to be pretty, it is just as sure never to be beautiful. It is the sort of poetry that makes it very evident that its author gets great delight from the poets; and that makes one wish he would content himself with

getting delight, and not himself endeavor to give it by poetical compositions of his own. There are hundreds, thousands, perhaps, of writers in verse of whom this may be said, and Mr. Piatt is one of the best of them; but it is, after all, as true when said of him as when said of any of the poor ones. Say that a given poetical-minded man, with the accomplishment of verse making, is much pleased with Emerson; is that a reason which ought to seem good to him, or which can seem good to any one else—except himself perhaps, and those whom he should disregard—for producing verses like these?

> "Nature gives with freest hands
> Richest gifts to poorest lands;
> When the lord has sown his last,
> And his fields to desert pass'd,
> She begins to claim her own,
> And—instead of harvests flown
> Sunburnt sheaves and golden ears—
> Sends her hardier pioneers
> Barbarous brambles, outlaw'd seeds,
> The first families of weeds," etc., etc.

All of the "Blackberry Farm" is but the most servile echoing; and though there may be cases when that may pardonably be done, yet to do it voluntarily is to become a witness against one's self and to secure certain condemnation. So, too, of the diluted Longfellowism which makes up a good part of this volume. There are some flowers which outside of their own, original, carefully tended garden very easily become the merest weeds, and Mr. Longfellow's poetic blossoms are very decidedly of that sort. Smooth and elegant as Mr. Piatt is, we never as we read him credit him with more than a part of his work, and this would constitute a fatal objection to much solider and more valuable things than any he has hitherto produced. The charge of plagiarism which we were going to bring against "Western Windows," in virtue of certain passages on pages 113, 115, 132, 165, 142, and other pages, it is as well not to bring; for to say nothing of chance coincidences, an essentially imitative writer must more or less unconsciously take from others; his taking of special lines and forms is caused by the same infirmity which necessitates his taking his colors from others; usually plagiarism need not be alleged when general imitativeness has been asserted.

A Summer Vacation in the Parks and Mountains of Colorado. (By Samuel Bowles. Springfield, Mass. 1869.)—Here is a little book descriptive of a short tour in the Switzerland of America. It is one of the first half dozen of very many works destined to be written on a charmingly picturesque region—a region which for American travellers must eclipse by its attractions the Adirondacks, the Alleghanies, and the White Mountains. Colorado possesses all that these well known resorts can offer, with a wealth besides of far higher mountains tipped with snow, and gigantic natural parks, the like of which few travellers have seen elsewhere. Imagine a level stretch of rich country—a plain "green with grass, dark with groves, bright with flowers"—as large as Delaware or even Massachusetts, set up some eight thousand feet above the sea level, surrounded by an irregularly circular wall of mountains, four thousand feet still higher, black with weather-worn granite and white with virgin snow—all bathed in that clearest and purest of atmospheres peculiar to New Mexico and Colorado, and you have the outline features of a Colorado park. Nor is it mere scenic beauty. There are a fertile soil, game in abundance, beautiful streams full of trout, mineral springs, among which you may duplicate the rarest in the world, from the coldness of ice to the temperature of hottest Geyser, from crystal drinking water to liquids of wonderful chemical combination—and all this overlying an incalculable wealth of minerals. Of these wonderful parks there are four; the North, Middle, South, and the St. Louis. Our author spent from two to three weeks in the Middle and South, but did not see the other two. He gives a graphic and pleasantly readable account of what he saw, but the interest of his work for the general reader would have been greatly enhanced by a map. On some points, too, he might have furnished more accurate information. Thus, in speaking of the Colorado Mountains, he says that the wildest estimates are made by the local population of the high peaks; Gray, Lincoln, Pike's, and Long's, which are all, he thinks, "about 14,000 feet high, but none goes higher than 14,500." Now, information could readily have been obtained to the effect that Pike's Peak is 14,125 feet high, that Long's has an elevation of 14,506 feet above the sea level, and Velin's Peak, one of its points, 13,456 feet. There is one remark of Mr. Bowles concerning the parks which we cannot consent to pass without comment. He says, "most of these parks are of course petite." The affectation of calling an under-sized pretty girl "petite" may pass, though with great difficulty; but "petite" in the use and connection here made is very bad, and we hold it up as a dreadful example. It is to be regretted on Mr. Bowles's account and that of his readers that he did not visit the "Garden of the Gods," of the general features and nature of which he has evidently, from the accounts of others, received a totally incorrect idea. It is an attractive and romantic spot; and Mr. Bowles would, doubtless, have done it ample justice.

Der dritte Deutsche Protestantentag. (Elberfeld: R. L. Friderichs.)—This is an octavo pamphlet of 120 pages, containing the proceedings of the German Protestant Union which assembled at Bremen last summer. Among the delegates to this "Protestant Diet" were some of the most distinguished scholars of Germany. The celebrated jurist, Dr. Bluntschli, of Heidelberg, and Professor Holtzendorff, of Berlin, were chosen presidents. Dr. Bluntschli presented sixteen "Theses on the relation of the modern state to religion," which he exemplified and defended in a speech of remarkable force and clearness. Then followed a general discussion of the same topics, in which Holtzendorff of Berlin, Baumgarten of Rostock, Schenkel of Heidelberg, Schwarz of Gotha, and many other gentlemen took part. The fundamental idea underlying the theses, and advocated in the speeches, is that of a free church in a free state. Most founders of religions have been at the same time law-givers. The Mosaic injunctions for the worship of one Jehovah were the pillars of the Jewish state; the laws of Menu, Zoroaster, Confucius, and Mohammed are not less civil and political than religious; only Buddha and, in a still greater degree, Jesus abstained from all civil legislation in order that the purity of religion might not be impaired and debased by the admixture of political interest. All attempts to construct a specifically Christian theory or structure of state from St. Augustine to Bossuet, De Maistre and Stahl, have proved signal failures. No religion can hope to become universal that is not capable of harmonizing with every kind of political constitution; this capability is one of the features of Christianity which makes it cosmopolitan. The professed aim of the German Protestant Union is "to renovate the Protestant Church in the spirit of evangelical freedom, and to bring it into accord with the higher culture of the present day;" and one of the great problems now thrust upon it for solution is to regulate the political and ecclesiastical affairs of Germany in this broad and liberal sense. Not inferior in interest to Bluntschli's propositions are the eleven "Theses on the authority of the Bible," which were elucidated and vindicated by Professor Hanne, of Greifswald. These theses, though reverent in tone, are very radical in substance, and do not differ essentially from those which Lessing embodied a century ago in his "Education of the Human Race." The spirit of the whole is well expressed in the eighth and ninth theses, which affirm the "purely human" origin of the Bible and its amenability to the same canons of criticism as other documents of the past; adding, however, that "notwithstanding the many human errors and defects that appear in it, it still remains the most venerable vehicle of divine revelation, and as such may claim the highest authority." Professor Hanne's speech in defence of his theses reviews the whole subject of revelation and inspiration, and shows the various stages of supernaturalism, deism, rationalism, pantheism, etc., through which it has passed. In the subsequent discussion, Rev. Dr. Schweitzer referred to the boldness with which Luther asserted and exercised the right of untrammelled Biblical criticism, and cited several striking examples of it, *e. g.*, where he stigmatizes the Epistle of James as an "epistle of straw," or is willing to "bet his cap" (*sein Barett wetten*) that Paul and James contradict each other. Dr. Schenkel then answered with much acuteness the question how the Protestant theologians of the seventeenth century came to regard the Bible as a "sacred literary petrifaction." "Having renounced the authority of the Pope of Rome, they made themselves a paper Pope, a new infallible authority—the Bible." A second question, how far and in what sense the Bible is an authority, he answered in the spirit of Lessing, whom he characterized as *einen unserer weltlichen Kirchenväter*—one of the lay fathers of the Protestant Church. We have neither space nor desire to discuss the principles enunciated by the "Protestant Diet" of Bremen, but have endeavored merely to give our readers an idea of their general tendency. To those who wish to study the diversified phases of religious thought, and the metamorphoses of ecclesiasticism in Germany, we recommend a careful perusal of this spirited pamphlet.

Madame de Staël: An Historical novel. By Amely Bölte. Translated from the German by Theodore Johnson. (New York: G. P. Putnam & Son. 1869.)—This novel, which forms the second volume of Messrs. Putnam and Son's "Popular Library of European Literature," seems to us,

notwithstanding certain merits which it possesses, hardly to deserve a place in a series with so suggestive a title. It is the average novel reader, we suppose, who determines the popularity of any given novel; and it is safe to say that it is not the amount of history which they contain which draws that discriminating person to such historical novels as have been most widely read—to Scott's works or to the very amusing stories of M. Dumas—and certainly the current of popular liking which for a while set so strongly toward the Mühlbach series was not attracted by their stern adherence to historical verities. As to the book at present in question, it is a translation of a tolerably uninteresting German novel into quite inelegant English. Madame de Staël is its heroine, and the reader is carried through the various scenes of her life, introduced to most of the celebrities of her time—to Voltaire and Goethe and Wieland, to Condorcet and Constant and Bonaparte, and in fact given a general sense of having taken an improving but not altogether exhilarating stroll through the biographical dictionaries. Madame Bölte has the desire so common and so natural to the makers of historical novels, to present her heroine in an attractive light and to make the most of such elements of romance as were in her life and character. It has been out of her power, however, to draw a pleasant likeness of so unpleasant an original. She does full justice to Madame de Staël's affection for her father, to her enthusiasm, and to her "gifted mind;" and, obliged to concede her ungainliness and her lack of beauty, never loses an opportunity of mentioning her "radiant black eyes" and her beautiful hands. Nevertheless, we think that even readers who will get from this novel their only knowledge of its heroine will be likely to agree with the general verdict which finds her to be perhaps the most unpleasantly unwomanly of famous women.

Messrs. LEYPOLDT & HOLT'S

NEW BOOKS.

AUERBACH'S VILLA ON THE RHINE. Author's Edition. With a Portrait and Biographical Sketch by Bayard Taylor. In two styles.

I.—Four parts paper, can be bound uniform with Tauchnitz Edition of "On the Heights." Two parts are now ready. Price 50 cents per part. The rest will follow in rapid succession.

II.—Two volumes cloth, uniform with American Edition of "On the Heights." The first volume will be issued in a few days.

This Edition, translated from the author's advance sheets, will be issued complete before the story is finished in the *Vienna Presse*, and consequently long before the completion of the Boston edition, which is translated from *Die Presse*, in defiance of the author's rights.

BIOGRAPHICAL SKETCHES. By Harriet Martineau. 8vo, cloth, $2 50.

Probably no book of the same interest and value was ever issued in the field of contemporary biography. No library of any pretensions can afford to be without it. There are over fifty eminent persons "sketched" in the volume. Among them are Professor Wilson ("Christopher North"), Miss Mitford, Charlotte Brontë, Rogers, Hallam, De Quincey, Macaulay, Mrs. Jameson, Landor, Humboldt, Miss Berry, Father Mathew, Lady Byron, Lyndhurst, Palmerston, Brougham, Metternich.

CRITICAL NOTICES.

"Miss Martineau's large literary power, and her fine intellectual training, make her little sketches more instructive, and constitute them more generally works of art than many more ambitious and diffuse biographies."—*Fortnightly Review.*

"Her criticism is often acute, for she has a woman's way of feeling character, and a good deal of a solid judgment not hitherto thought so common among women as among men."—*The Nation.*

"A charming book. . . . There are no names in her list not worth knowing well."—*N. Y. Evening Post.*

REMINISCENCES OF MENDELSSOHN. By Elise Polko. With a Portrait. Uniform with "Polko's Musical Sketches," "Mendelssohn's Letters," and Messrs. Leypoldt & Holt's other musical publications. 16mo, gilt top, $1 75.

Polko's Musical Sketches have had (with the single exception of Mendelssohn's Letters) a wider sale than any standard volume of musical literature published in America. The same merits may be expected to procure for the new book the same success. The style of the articles is rich, eloquent, and impressive.

THE FISHER MAIDEN. By Björnson. 16mo, $1 25.

"There was room for a true genius, one with poetic insight and thorough faith in the simple element at his command, and surely such a man has recently arisen in Björnson. . . . The exquisite emotions, apprehension of beautiful truths combined with musical sympathies, constitutes sometimes a faculty in itself, and yields to mankind a lyrist like Tennyson, and an idyllic thinker like Björnson."—*London Spectator.*

THE GAIN OF A LOSS. A Novel of English Life. By the author of "The Last of the Cavaliers." 12mo, $1 50.

Containing good delineation of character, stirring incidents, and a moral well impressed. The novels of this author are attracting attention in England.

ABRISS DER DEUTSCHEN LITERATURGESCHICHTE. By Professor E. P. Evans, of the University of Michigan. 12mo, cloth, $1 50.

A History of German Literature, written in German, for schools and private students.

LIPPINCOTT'S

ILLUSTRATED STANDARD EDITION

OF

CHARLES READE'S NOVELS.

Now complete in ten vols. 12mo.

Extra Cloth, $15 the set. Extra Cloth, Gilt Top, $17 the set.

Messrs. J. B. Lippincott & Co., by their arrangement with the English publishers, are enabled to issue *the author's* complete and uniform edition of the well-known and interesting novels by Charles Reade.

The volumes are 12mo, printed from clear type on fine paper, with engraved Frontispiece and Vignette Title to each, and handsomely bound, forming the most desirable edition published.

Sold separately, bound in extra cloth, as follows:

1. HARD CASH, $1 75.
2. FOUL PLAY, $1 50.
3. GRIFFITH GAUNT, $1 50.
4. IT IS NEVER TOO LATE TO MEND, $1 75.
5. WHITE LIES, $1 50.
6. LOVE ME LITTLE LOVE ME LONG, $1 50.
7. PEG WOFFINGTON, $1 25.
8. THE CLOISTER AND THE HEARTH, $1 75.
9. CHRISTIE JOHNSTONE, $1 25.
10. TRUE LOVE NEVER RUNS SMOOTH, $1 25.

Now Ready:

I.

PULPIT GERMS.

LET US HAVE PEACE.

THE MUSIC

To be performed at the

Grand National Peace Jubilee,

To be held in BOSTON, June, 1869. Comprising 15 Choruses from Oratorios and Masses.

JUST PUBLISHED, AND READY FOR SALE.

Price 50 cents. Sent postpaid on receipt of price. OLIVER DITSON & CO., Publishers, 277 Washington Street, Boston. CHARLES H. DITSON & CO., 711 Broadway, New York.

PUBLISHED THIS DAY:

Chips from a German Workshop.

By MAX MULLER, M.A.,

Fellow of All Souls College, Oxford; Author of Lectures on the Science of Language, etc.

Reprinted from the Second London Revised Edition, with copious Index. Vol. I. Essays on the Science of Religion. Vol. II. Essays on Mythology, Traditions, and Customs. 2 vols. crown 8vo, $5.

Among the subjects discussed in these volumes are The Vedas, or Sacred Books of the Brahmas; Christ and other Masters; Buddhism; the Works of Confucius; Semitic Monotheism; Comparative Mythology; Greek Mythology and Legends; the Norsemen in Iceland; Folk Lore; Zulu Nursery Tales; Tales from the Norse and from the West Highland; Manners and Customs; Caste, etc., etc. All these subjects are discussed with a wealth of learning and an attractiveness of style at the command of no other living scholar.

"This book of Professor Müller would afford no end of interesting extracts; 'chips' by the cord, that are fuel both to the intellect and the imagination; but we must refer the curious reader to the volumes themselves. He will find in them a body of combined entertainment and instruction such as has hardly ever been brought together in so compact a form."—*N. Y. Evening Post.*

ALSO, JUST PUBLISHED:

CONYBEARE AND HOWSON'S

Life and Epistles of St. Paul.

TAINTOR BROTHERS, Publishers,
678 Broadway, New York.

A LIBRARY OF EDUCATION,

Selected from the Best Writers of all Countries.

This attempt at bringing within the reach of all the thoughts of the best minds on a most important subject is meeting with high appreciation.

What recommends it apart from its subject-matter and its cheapness is its convenient form—permitting of being carried about the person and read at spare moments, and so light as not to fatigue the hand—and the fact that each work will be complete, and, as far as possible, standard.

The following enumeration will give some idea of the field to be occupied: *Locke*, Thoughts on Education; *Bacon*, Advancement of Learning; *Milton; Ascham*, The Schoolmaster; *J. S. Mill; Carlyle; Prof. De Morgan; Sir Edmund Head*, Shall and Will; *Rousseau*, Emile, *Mme. de Genlis*, Adelaide and Theodore; *Montaigne*, On the Institution and Education of Children; *Fenelon*, On the Education of Girls; *Pestalozzi*, Leonard and Gertrude; *Jean Paul Richter*, Levana; *Horace Mann; Dr. Channing; Franklin; Plato*, Republic; *Xenophon*, Cyropædia, etc., etc.

Vols. 1 and 2, containing Locke's "Thoughts on Education," and minor essays on Study, Reading, etc., together with Milton's Epistle on Education, and lives of both authors, are now ready. They will be mailed to any address for 20 cents each.

J. W. SCHERMERHORN & CO.,
14 Bond Street, New York.

JUST PUBLISHED.

ANDERSON'S MANUAL OF GENERAL HISTORY!

NATIONAL
LIFE INSURANCE CO.

OF THE
UNITED STATES OF AMERICA,
WASHINGTON, D. C.

CHARTERED BY SPECIAL ACT OF CONGRESS.

CASH CAPITAL, $1,000,000,
PAID IN FULL.

BRANCH OFFICE:
First National Bank Building,
PHILADELPHIA.

To which all general correspondence should be addressed.

OFFICERS:

CLARENCE H. CLARKE, President.
JAY COOKE, Chairman Finance and Executive Committee.
HENRY D. COOKE, Vice-President.
EMERSON W. PEET, Secretary and Actuary.

This Company, National in its character, offers, by reason of its Large Capital, Low Rates of Premium, and New Tables, the most desirable means of Insuring Life yet presented to the public.

JAY COOKE & CO., of 216 Broadway, new Park Bank Building, are General Agents for this vicinity, with D. C. Whitman and J. U. Orvis, Managers, where applications for insurance on the most favorable terms will be received.

The Week.

THE Republicans have carried Connecticut—Governor, Legislature, and three Congressmen. The vote was small, probably ten thousand smaller than last year, as there is nothing very exciting going on in the political arena, and people were wearied by the Presidential campaign. But the triumph will, it is certain, secure one thing which is very important—the passage of the Fifteenth Amendment, for which people have hardly ventured to count on Connecticut.

A week from Tuesday last, in the Senate, Mr. Sprague made another of the speeches with which he has recently been surprising everybody who knows how silent he has been for a good many years, during which he might have spoken with as much effect as now. He deplored the corruption and misery of this country in such a way that he stands a chance of being quoted in several leading British journals. On the following day by a vote of 48 to 8—seven Democrats and Mr. Sprague making the 8—the Conference Committee's Tenure-of-Office Bill was agreed to. On to-day week Mr. Sumner introduced a bill to facilitate telegraphic communication with Europe. It lays down certain conditions with which all companies must comply before they can be permitted to land their cables on our shores. The principal conditions are that Congress shall have power to fix the tariff of charges for telegrams, and that this Government shall have certain privileges in the matter of transmitting official messages. On Friday nothing of much consequence was done. On motion of Mr. Fessenden, Mr. Harlan's amendment to the bill in relation to the appointment of ten unpaid Indian Commissioners was thus far modified that the new commissioners exercise not an absolute power over the removal of Indian agents and the disbursements of Indian appropriations, but only a joint power which they share with the Indian Bureau. Meantime the Society of Friends are to furnish a certain number of agents, and will probably furnish a certain number of the commissioners; for Grant, whether he learned it in Philadelphia or elsewhere, has evidently been much smitten with the Friends, who, by the way, are not altogether dependent on William Penn, as some of the correspondents seem inclined to suppose, for contemporary respect. On Monday the Senate agreed to adjourn on Monday next. Previously Mr. Wilson had made a motion, of which we may some time see the fruits, to the effect that the Judiciary Committee be directed to report a bill defining the right construction of the eight-hour law. A "workingman's friend" rabidly in earnest might almost have felt inclined to urge the passage of a new law, instead of asking for a dilatory report on an old one upon which Mr. Evarts has already exhausted his ingenuity, without apparently finding out whether or not it was meant to mean anything in particular—after election.

On the last day of March—Wednesday—the House was busy with the bill for reconstructing the State of Mississippi, but no conclusion was reached until the following day, when the debate was very lively—if that is the term to be used in describing a debate in which Mr. Butler shone with an almost morbid naturalness. He was remonstrated with by some of his fellow-members for an unprovoked and savage attack on Mr. Dawes. Mr. Dawes, by the way, got very much the better of Mr. Butler in the struggle for important places on the House Committees. The vote for deferring action on the Mississippi case until next December stood 103 to 62. On to-day week Mr. Noah Davis, of this State—a gentleman who has at once taken a forward place among the new members and bids fair to be a valuable member—introduced a bill defining vacancies in office and regulating resignations. It covers a little bit of the ground which Mr. Jenckes's bill would cover, and which it would cover all the sooner if members such as Mr. Davis would work for it. On Friday nothing was done but discuss Mr. John Covode's case, which, however, was not disposed of. On notice of General Paine the whole subject was recommitted to the Committee on Elections, who were directed to report on the merits of the case. The previous report had been that "the *prima facie* evidence" was in Mr. Covode's favor. Judges in the United States Courts have too much to do, and judges in Pennsylvania, where Mr. Covode happens to come from, are elective, as they are in too many States, or it would seem a good thing to send Mr. Covode and his competitor with their charges and counter-charges of bribery and intimidation before a judicial commission who might try their cause without political partiality. As it is, we hear now from the Democrats—what ten years from now we may be hearing in the sad tones of Republicans—that there is no chance of a claimant who belongs to the minority, getting justice or much pretence of justice from committeemen who are members of the dominant party. And it is so natural that this should be so that it would be highly useful if some legislation on the subject could soon be had. When it is remembered how greatly larger is the power of a two-thirds majority than of a mere majority, and how few votes may make all the difference between a mere majority and a majority that shall be able to overrule a President, the importance is seen of not leaving it in the hands of violent partisans to say which twenty out of forty men shall occupy seats in the House. On Saturday Mr. Butler reported from the Judiciary Committee a bill likely to pass, and which, it is to be hoped, the States may soon severally embody in their statute books, permitting husbands and wives to be witnesses against each other (except as to private conversations between themselves) in criminal cases in all United States Courts, and permitting criminals also in the same courts to testify in their own cases if so disposed. On the same day the House concurred in the Senate's proposal to adjourn next Monday.

The long trouble about the Tenure-of-Office Act came to an end, so far as Congress was concerned, on yesterday week. On that day both the Senate and the House agreed to a bill which had been decided as a sort of a compromise between keeping the present law as it stands and the total abrogation of it. In truth, however, the compromise is of such a character that the Senate still retains much more influence than it ever had previous to ex-President Johnson's time; and the people have less, and the politicians have more power over office-holders than they had when, as formerly, one man singly could be held responsible for the use and abuse of the authority to appoint to office. Under the new bill, which the President has signed, he cannot permanently and unconditionally remove from an office a man incompetent to fill it, or a man who disgraces it, unless first he gets the leave of a majority of sixty-odd senators doing "executive

business," in "secret session," and who give or withhold the reasons of their votes and the record of their votes just as may seem to them best.

Still, if the President is not anxiously desirous of having the public service properly done, if he is not unwilling to be in a state of chronic warfare with another branch of the Government, there is a chance afforded him by the new bill to make use of a legal fiction which may serve the purpose well enough. The "suspension" of office-holders during the Congressional recess is freely permitted him. And when the Senate meets again there is nothing in the law to prevent the President's proving to Mr. Fenton, say, and to Mr. Conkling, if he can, that it is for the political, pecuniary, and all other interests of these gentlemen, and for the public interest besides, that the person whom he has appointed to the place of the suspended person shall be allowed to stay in it. And then, should Mr. Fenton and Mr. Conkling be of opinion that their political and other plans for the future would be better subserved by their inducing the Senate to decline to give its assent to the removal and appointment, and should the Senate so be induced—why, then the President is permitted by the new bill to watch for the adjournment of the Senate, put in the Senate's man for a day or two, and immediately afterwards, at the cost of more or less confusion and expense, resuspend him and reappoint the man of his own choice. In brief, the new scheme gives him power, first, to acquiesce in what appointment Mr. Fenton and Mr. Conkling—to stick to the case of this State—may choose to dictate; or else, secondly, to spend his official term in a succession of more or less profitless suspensions and appointments and resuspensions and reappointments—that is, in a fight with senators about money-making offices; or else, thirdly, it gives him unlimited power to go into office-trading, into secular simony with the two gentlemen who have served us by way of illustration and with senators generally. We should have been gratified to hear that the House had stood out for unconditional repeal; and failing that, it would have been good news, we think, that the President's signature to the bill was unobtainable; as it stands it is an office-seekers' measure.

Senator Sprague's speeches have called forth rather more comments than they seem to merit. The value of his criticisms on the moral and commercial condition of the country seems to have been settled, without any help from the public, by his proposal that the Government should go into the free banking business, and supply the "poor man" with capital in the shape of small loans on good security. Any business man who seriously brings forward a suggestion of this kind in the present year of grace disarms hostility. Mr. Sprague turns savagely on the press of his own State, and has written a letter to the editor of the Providence *Journal* which shows that his opinion of that gentleman, which has long been low, is now rapidly declining. The sole good quality, it would appear, for which he gives him credit, is courage, the existence of which he discovers, strangely enough, in the editor's voluntary revelation of his "dastardliness" and "cowardice." He concludes his letter with the somewhat mysterious phrase, "Show this to Ives & Co.," which, as interpreted by the *Journal*, is simply an insidious stab at "the widely-known house of Brown, Ives & Co." of Providence. "Why those estimable citizens should be thus referred to in such a communication is," says the *Journal*, "beyond our comprehension." We hope our contemporary will not throw the subject aside in despair.

Mr. D. A. Wells has replied to Judge Kelley's attacks on him, producing a large body of the evidence on which the statements were made in his reports with regard to the comparative increase in wages and in the cost of living since 1860. He showed by the returns of the United States Commissary-General that the army rations of flour, which cost $6.77 per barrel in gold in 1859–60, in New York, has cost during the past year $12.72 in currency, an increase of eighty-eight per cent.; that the fisheries of North Carolina had been kept down since the war by the high price of salt, which had risen from eighteen or twenty cents a bushel to seventy cents; that by the table of wages paid to the workmen employed on the Treasury extension in Washington, who are certainly not the worst paid men in the country, the average increase in the wages of workmen has been fifty-eight and one-half per cent.; that, taking Massachusetts as an illustration, while the savings bank deposits in that State were $45,054,000 in gold in 1860, they were in 1867 $59,579,000 in gold also, the increase not being sufficient to cover the simple interest on the amount in bank in 1860, thus showing that the working classes have, during the last seven years, not only not saved, but have actually been eating into the savings of previous years. Judge Kelley, by shrewdly comparing the gold deposits of 1860 with the currency deposits of 1867 of course made out a very fine case for his side of the question. We have here only selected one or two of the points in Mr. Wells's statement. His evidence is equally overwhelming as regards house rents and the price of provisions; and some of his exposures of the small snares in which his opponents have tried to entangle him, are as nearly amusing as anything in a controversy of this kind can well be. He very properly thanks Mr. Kelley, at the close of his letter, for giving him an occasion for writing it.

The *Tribune*, which supported Mr. Kelley in contradicting Mr. Wells, and accusing him of dishonesty of the grossest kind—"jugglery," for instance—carefully refrains from publishing his reply. To his proof about the price of flour, which, it maintained stoutly, was, if anything, lower now than in 1860, it rejoins simply that although the Government paid $12.72 a barrel for flour for the soldiers last year, "*we must say* any shrewd merchant who had wanted as much flour as the Government bought here in 1867–8, and had had cash to pay for it, would have bought it considerably below $12.72 the barrel." This curiously enough reminds the journal of Mr. Edward Young, Mr. Wells's assistant, whose work it once more pronounces "smart" and not "creditable to himself or his master." This too will suggest to most respectable readers a question or two of a disagreeable nature as to the quality of the *Tribune's* performances in this matter. To Mr. Wells's figures touching house rents, it replies that he takes no account of the fact "that the means of cheap conveyance for the masses to and from the outskirts of the large cities have been largely multiplied and diffused." A more ludicrous termination to a rather discreditable controversy is not often witnessed.

A good many appointments have been made during the week, to which—the propriety of making changes being conceded—there is no serious objection to be made. We doubt, indeed, if so many respectable men have been put in government offices at once for many a long day. But they are all inferior officers. The great ambassadorial prizes, except that of Paris, are still undistributed. Mr. Motley is talked of most for England, and Horace Greeley is put up as his rival, but more by newspaper wags than "practical men." Horrible uncertainty still hangs around the New York Post-office, and it is not at all impossible that this goal of his desires, on which his eye has been fixed for so many weary years, Mr. Greeley may eventually reach. Mr. Grinnell has taken possession of the custom-house, Mr. Smythe taking his departure in the usual cloud of mutual compliments. To what extent Mr. Grinnell will adhere to the old custom of giving a fresh batch of citizens a chance to serve their country, we are unable to say; but he has a chance of doing the Government and the country a great service, by appointing nobody without subjecting him to a fixed test, the same for all candidates. He has already delivered a little speech against the acceptance of bribes by custom-house clerks; "in his humble judgment," he says "the practice is wrong and improper." He need not be so modest about his opinion, however, as it is one which he shares with all the noblest members of the human family. He might nearly as well say, that after much anxious consideration he was strongly inclined to the conclusion that burglars and assassins were bad men.

Those who agree with the *Sun* in thinking the government business is done on the whole about as well as private business, and that anybody who declaims against "the men inside politics" is "transcendental," would do well to read the report recently published by the Congressional Committee appointed last year to examine the bond and

note-printing department of the Treasury. We have no space at present to enter into details, but the substance of what the Committee say is this —that they have found, with regard to nearly every description of government securities, discrepancies in the accounts between the number printed and number issued, showing that some of them disappeared after leaving the printing-press; they have found the books kept in the most careless way, no record at all being preserved of many very important transactions, and a very imperfect one of others; that no pains whatever have been taken to secure the proper numbering of the government bonds, the work being actually left, without verification, largely to the memory of the person in charge of the printing machine. The testimony tends to show, the Committee say, that "the numerical registers of issue are rather theoretical than actual records of transactions; that is, that the clerks in charge did not compare each issue of the bonds by their consecutive numbers with the registry entries, or make the entries in the register from such comparison; but that they made up the entries in the register, as a rule, by taking the first and last number of any particular lot of securities, and making the entries from those, and assuming that all the numbers between were consecutive regularly, and not duplicate. It is also suggested as to the duplicate coupons, that as they are numbered at a different time from the number on the bond, they may have been duplicated and the bond not."

A more disgraceful state of things in a large public office charged with the handling of immense sums of money has, we venture to say, never been revealed in a civilized country within the present century; but what is, if possible, more remarkable than the disorder of the revenue is the mild language used by the Committee in describing it. To the grossest ignorance, incompetency, and neglect of duty, they hardly venture to apply any stronger epithet than "unsatisfactory." But they wind up with a sentiment worth quoting, and which we commend to the attention of that large and growing body of persons who are convinced that the present state of things cannot last:

"On a general survey of the operations covered by the investigation of the Committee, they could not fail to be struck with the difference in the management and details, both personal and otherwise, between such operations carried on by paid officers, having certain fixed hours of labor, and feeling no other responsibility at best than that of doing their duty from 9 o'clock in the morning until 4 o'clock in the afternoon, and similar operations carried on by private persons or corporations, where the individual property and success of the persons managing the same was involved, and where no other motive for employing subordinates existed than that of obtaining those persons who could bring to their duties the greatest amount of capacity and fidelity. It must be confessed that such a comparison is decidedly unfavorable to the Government engaging in any operations of this character where it can possibly be dispensed with. Of course the committee do not mean to intimate that all or even the majority of the persons employed by the Government in these affairs are either incapable or unfaithful; but, from political and other causes, so large an element of incapacity, carelessness, and unfaithfulness is introduced into the operations as in a considerable degree to derange and paralyze the efforts of those who are sincerely desirous of doing the best possible for the Government."

General Longstreet's nomination for the Collectorship of New Orleans has been confirmed, after some fierce opposition in the Senate from Parson Brownlow, who read a paper against him based on the incidents of the General's campaigns in East Tennessee. Another senator read extracts against him from an old article in *Blackwood's Magazine*, but all in vain. The hostility to the appointment on the part of the Unionist element at the South is of course intense, but it is nevertheless perhaps the wisest and most statesmanlike Grant has made. The principal duty of the Government at the South is not, as many people imagine, to "pay off" transgressors and keep the best offices for the faithful, but to do what it can to make the South peaceful, prosperous, and contented, and there is only one way of doing this, and that is by reconciling the disaffected white population to the new order of things. The objection hitherto usually made to forgiving or forgetting the misdeeds of the rebels has been that they would not "repent," but General Longstreet has humbly "repented," and the very best way of building up a real Union party at the South, composed of the influential portion of the people, is to show that "repentance" really does find acceptance at Washington, and is likely to be followed not merely by pardon, but reward. Of course this is not exact "justice," but then exact justice is not within our reach, while scientific government is. If everybody got his due, Parson Brownlow would certainly not be in the Senate, as he spent a great many years of his life in helping to bring the war about, and a good many Southern Unionists would be engaged in work better suited to their character and capacity and antecedents than legislation for Southern rebels.

We have followed the Cuban news of the past week with such perspicacity as we can command and in a spirit of perfect candor. The accounts of the extent and progress of the insurrection which we have perused in the columns of our contemporaries, as well as the Banks preparations for recognition at Washington, have led us to expect, and very confidently we admit, the overthrow of the Spanish power in the island, not later than the first of April. What the delay is due to, we are unable to say. We have seen, it is true, in one of the illustrated papers, a sketch of a furious battle in a dark and lonesome glen, between the royalist and rebel forces, by "an officer of the Cuban staff," but on the other hand a large body of respectable persons persist in denying the existence of either Cuban army or "staff," and the New York *Times* speaks of "an English gentleman—an impartial observer" —who has been riding through the island in search of the rebellion; but he writes to his friends that at each village they declared it to be raging a few miles off, like the fever and ague in the country districts here, and he never came up with it. He at last got back to Havana without seeing a shot fired. But then he was perhaps a Spanish sympathizer. The Spaniards, however, occasionally report a sharp set-to with insurgents, but where, when, or under what circumstances, never comes out. The news of the last week is that "information from reliable sources" has been received at no less a place than Key West, that two Peruvian monitors are really in the service of the revolutionists; that an English captain had been thrown into jail; two volunteers sentenced to exile; that seven incendiaries had been executed for destroying plantations; and that a revolutionary steamer had been wrecked. We looked with interest for fuller details, too, from Rear-Admiral Hoff's report to the Navy Department, but all he seems to know about the rebellion is that the Captain-General has issued a proclamation directed against blockade runners and sympathizers, and that there had been a disturbance at Havana on Sunday the 21st ult., when several persons were killed; that an American citizen was in prison, and that the election of members to the Cortes would probably not be held till the insurrection was over.

We strongly suspect that the Cuban revolution, like the Irish Republic, is quartered in this city, and that most of the military operations are carried on, as nearly as we can make out, in the neighborhood of the New York City Hall. The insurgent troops converge on the open space in horse-cars about ten o'clock at night, without uniform, and with their arms concealed carefully, and then open vigorously on the Spanish power from several of the adjoining houses, keeping up the attack till the small hours of the morning. How long it will take for the Spaniards to be driven out of the island in this way, it is not for an unprofessional bystander to say positively, but if any faith is to be reposed in military history, it will be a good while. The movement down-town is vigorously supported by Cubans of the upper classes, in the parlors of the up-town hotels, by the utterance of the noblest and most patriotic sentiments. The Cuban committee here have issued an address, setting forth their grievances, which are numerous, as the world already knew. They have also agents in Washington hard at work for recognition, and they have either developed or are availing themselves of the strong annexational fever which now rages there. There is a strong party of politicians in favor of helping the Cubans to achieve their independence as a step towards absorption. The "Dominican Ring" is also busy, for a more promising enterprise than the acquisition of Hayti has not offered itself for many a day.

"CONFIDENCE."

PROMINENT among the senators who really debated the Tenure-of-Office Repeal Bill was Mr. Fessenden. The others, as we pointed out two weeks ago, made orations about it for the benefit of their constituents and the sacred "record," but as for debating, that had already been done in caucus. Mr. Fessenden, however, who has the natural repugnance of an independent man to secrecy and artifice, stood up in his place like those of old time, and gave his real reasons in favor of voting for repeal. His speech contained more of general interest than that of any of his colleagues, and not the least interesting part of his argument was that in which he deprecated the reasoning employed by certain senators who had maintained that the Tenure-of-Office Act ought to be repealed because of the Senate's "confidence in Grant." This confidence, Mr. Fessenden in effect urged (though he did not use just these words), however excellent as a ground for lending money to the general on his note of hand, or for trusting your minor children in his company, or for allowing him to know the key to your burglar-proof safe combination lock, was no reason at all for passing laws affecting the administration of a great country for generations to come. If Congress was to be asked to change its legislation whenever it felt nervous, general laws might as well be given up, and private bills be used in all cases. Mr. Fessenden said that he should vote for repeal for the same reason that he had voted against the original bill, because he had then thought, and still did think, the law a bad one. We need hardly say that we fully believe in the necessity of basing legislation on general principles; that the most dangerous disease that can beset popular government is the passion for basing it on personal or temporary considerations. Nay, we are willing to go much further, and to say that one of the greatest dangers of this particular government at this particular moment is precisely this kind of law-making; it having become the fashion for Congress and for the legislatures all over the country to make use of their powers in the interest of any man or measure in which they "have confidence." Now, they have confidence in a discredited railroad corporation, and show their feeling (just as an indulgent mother would) by "tipping" it. Now, it is a bankrupt steamboat company, now it is some wild-cat philanthropist on behalf of a Western "university," now it is a decayed political artist with a bad picture to sell.

In all this there is not even the pretence of a system; one bill is left and another bill is taken; one petitioner is subsidized and another has leave to withdraw, as the great legislative heart has been attracted or repelled. It is like the granting of favors by an Eastern despot; no man knows why or wherefore. So universal has the practice become that it is now of the greatest consequence to corporations, colleges, and institutions of every sort to have some one in their employ who has the art of inspiring "confidence." In the same way Congress, having full faith in Mr. Lincoln, let him remove any one he pleased from office; doubting Mr. Johnson, it refused him the same privilege, and now half doubting Gen. Grant, it gives him a tether. There can be no doubt that personal considerations were in reality the only ones which governed the two Houses in their recent action; or that the number of those who, like Mr. Fessenden, thought it necessary to vote in accordance with settled political principles, was very small. But, although it is perfectly clear that acts which regulate matters of such gravity as the tenure of office should not be made and unmade on personal grounds, there is another side to this matter. It is not only the President and Senate and House which are interested in this question—there is a fourth estate as vitally concerned in it as any of the other three—we mean the Public. And although confidence or want of confidence in particular persons is in general the poorest of all reasons for making or changing laws, still it remains true that "confidence in Grant" is one of the most potent political agencies at work among the public at present, one which will neither be ignored, nor laughed out of the way; one which may become, and is not unlikely to become, the strongest of them all.

It must be pretty evident to any one who has been observing the course of politics for the last few years, that the political class have lost their hold on the confidence of the people to a very extraordinary degree. Eight years ago, if any one said that politics were running down, that the character of public men was deteriorating, and that honest men could not find a career any longer in political life, he was treated either with good-natured contempt as a constitutional grumbler, or else was denounced as a base-hearted Sybarite. He was requested to look at the imminent downfall of Slavery, and to consider the devotion to country shown by the thousands of patriots rushing on to Richmond. If he urged that the reply did not meet the complaint, and that corruption in the governing class might perfectly well coexist with great nobility of soul in the body of the governed, he used to be silenced for ever by a hint that he had probably been in Paris or else reading the "philosophers" too much of late, and that if he had been attending town-meetings and supporting the institutions of his country instead of filling his head with foreign notions, he would not have sunk so low. Nay, it even went further than that: when the bitter lessons of the war had taught us conclusively that the politicians were not fit for the task assigned them, the upholders of our "institutions" invented, after the usual manner, a theory, which was to explain the peculiar character of our situation, and show to the satisfaction of our friends and the confusion of our enemies that the one need not be so downcast, nor the other so triumphant. And this was—that it was rather a beneficial thing for a republic to have men of inferior capacities and doubtful honor in office, because it increased so much the public watchfulness and interest in politics. To know the history of Fernando Wood was a liberal education to any ordinary voter.

But the theory has not turned out what its authors expected. Strange to say, the idea has been steadily gaining ground that the "epicureans" and grumblers were in the right after all, and that our political class was a very degraded one, and that the popular estimate of a "politician" as being the typical rogue of our day and generation was correct. How long it would have taken in the ordinary course of things for this truth to prevail, it is impossible to say; but the event which more than any other hastened the moment of its triumph, and was the immediate cause of it, was the accession of Grant. When it turned out that Grant was really awake to the importance of getting a new kind of man into positions of political trust, he furnished a rallying point for the vague feelings of distrust and discontent which had been so long growing, and which had hitherto found no means of expressing itself. Colonel McClure's rebuff, and the original choice of his Cabinet put it beyond question that Grant did really mean to see whether somewhere in America there could not be found a kind of statesman better than the sort produced by the caucus system. And the moment it did become evident, the President was assured from one end of the country to the other that he would be supported in his endeavors, and that the country confided in the strength of his desire to purify the public service, to introduce into it efficiency and honesty. This is that "confidence in Grant" which, as we just now said, is one of the most important political sentiments in the country, and may, if Grant pursues as wise a course as he promises to pursue, materially change the aspect of politics and the relations of parties. During Johnson's administration, Congress was the body which public trusted, and that trust was by no means misplaced, as events showed. A Congress elected for the express purpose of maintaining a certain well-defined policy in opposition to another equally well-defined policy, might be trusted to do it. Johnson was to get all the States in that he could, and Congress had been instructed to prevent his getting States in; and they did prevent him. But reconstruction is at an end, and on the new questions which now arise, Congress is not known to have any policy at all. There has been a great deal of talk in both House and Senate about the necessity of reform, but in the nature of things, what is said cannot be meant. It would be as absurd to expect any genuine desire for good government among most of the members of Congress as it would be to expect any genuine attempt at reforming the railroad system from a convention of stock operators. Their constituents have indeed to watch them, from hour to hour, lest some new swindle of annexation, or financiering, or subsidizing, or "claim" of some kind, be foisted upon the country against its will. Can any one have any confidence in the passage by the House of Jenckes's Civil Service Bill, when its enactment would deprive the House of half its corruptest power? It is true enough

that the House and Senate are with the newspapers and the public at large in declaiming about the necessity of purity in the administration of government. But this great point should not be lost sight of, that by "purity" they mean Republican administration, and by "impurity" the holding of offices by their opponents. Now, this is not what the public or Grant means, and the result is that the public distrust more and more the House and Senate, while they confide more and more in Grant. The most curious evidence of the growing importance of this fact is the conduct of the Opposition. The Democrats long ago divined that their greatest danger lay in the chance that the Republicans might by some accident find a leader who would be something more than a mere party man, and accordingly after doing their utmost to draw Grant over to their side, have been spending their energies since their failure in covering him with the vilest abuse—the only possible reason being that they are most profoundly afraid of his reputation for high character. They labor to show that he, too, is a mere politician, that his professions of desire for reform are a hollow mockery, that corruption and intrigue are his tools, as they are those of the party managers. The *World* appears to believe the old reconstruction question a trifle, compared with the question of the villany of the new President.

NATIONAL BANKING LEGISLATION.

Congress is again at work making new laws and amending old ones with a view to regulating that most important financial and commercial machine, our bank system. The bill recently passed in the Senate, best known as the bill to redistribute the National Bank currency, is in reality intended to correct several evils and injustices in the existing laws; but it owes its importance almost exclusively to the last section, which provides that all banks having a note circulation in excess of certain specified amounts, varying according to capital and locality, shall reduce that circulation, in a certain proportion, and that in exchange for the circulation so withdrawn by banks in the great cities and in the Eastern States, a similar amount of notes may be issued by banks in smaller cities and in the Western and Southern States.

The many exciting questions agitating the public mind since the inauguration of the new administration have prevented the proposed bank measure from receiving the public attention that it is entitled to. Many persons have also thought, that it was a measure concerning the banks alone, and hence have not seriously examined it. But it is in truth a very important bill, not so much on account of what it is designed to accomplish, as on account of its being the first serious attack on what have long been considered the vested rights of the national banks, and as the first indication of the coming reaction which must remove from the whole system much of its injustice and monopoly, or lead it to entire destruction.

The bill sets forth, that the object to be accomplished is "to secure a better distribution of the national banking currency." Now the national banking currency has, like every other currency, a very remarkable faculty of distributing itself, without the aid of Congress or any other power. Currency will always go where valuable property is for sale cheap, and it obstinately refuses to go anywhere else. If the South has a large amount of surplus products and offers them for sale at a lower price than the same products can be bought at anywhere else, and is not willing to sell them except for cash, the cash or currency will go to the South just as inevitably as water will run down hill. If the South, after getting this currency, wants silks and satins, or ploughs and wagons, or teas and coffees, from the North, and the North is not willing to sell them except for cash, the currency will come back to New York with as unerring certainty as it first went in the opposite direction. If the South, instead of wanting Northern products and foreign products imported at Northern ports, is satisfied to save, and consume only its own domestic productions, it will retain the currency received for its surplus sold, and will keep it just as long as it pleases, and neither Congress nor its laws can make that currency come North or go West or leave the South, except by downright spoliation. It is precisely the same with the East and the West. It makes no difference how much currency the East has; if the West has plenty of wheat and beef to sell, and will not sell it except for cash, the Eastern currency will go West after the wheat and beef, in spite of everything and everybody. But if the West will not sell its wheat, but, on the contrary, piles it up in barns and store-houses and elevators, or fuses to sell it at the prices at which it can be bought elsewhere, of recourse no currency will go to the West. If the West, looking at these vast accumulations of produce, and valuing them at an imaginary price, thinks itself rich and spends accordingly, and buys of the East large quantities of manufactured goods and imported luxuries, it has to pay for them, and of course not only will no Eastern currency go West, but the West will have to send its own currency to the East to settle its accounts. Can Congress alter or hinder this? Of course it cannot.

The currency movement going on at the present time, which lends a faint show of sense to the new Congressional enactment, is just this: At the close of the war the North had, leaving out of view the interest-bearing currency of the Government and the amount since contracted by Mr. McCulloch, about seven hundred millions of currency. The South had *none*. The limited supply of gold tenaciously hoarded during the struggle, and the few greenbacks smuggled across the lines by the far-sighted, at once came North to pay for absolute necessaries of life and keep an exhausted people from actual starvation. What the cash did not suffice to pay for was sent down on credit, in the anticipation that the cotton on hand and the next year's crop would speedily enable the South to repay these advances. But neither the first nor the second year's crop was at all equal to expectation, and the South has, ever since the war, continued in a state of extreme poverty, which has entirely prevented it from accumulating a supply of currency of its own. But this extreme of poverty taught the South a lesson, once known of all, but apparently long since forgotten, and which the North and West will only re-learn when taught by the same stern teacher—the lesson of economy. Working and saving, the South started last spring on a new career. Favored by a combination of happy influences, it opened the current year with a light indebtedness and a large stock of cotton selling at high prices. The consequence was inevitable. Currency has been going South ever since. At the same time the West, deluded with the belief that the war and famine prices of the last few years could be maintained forever, has refused to part with its grain and has continued to purchase luxuries. The currency of the West has consequently been coming East. In 1865 the South had no currency. It is impossible to ascertain how much it has now, but it unquestionably has an important amount. This currency has been drawn from the North, East, and West, *but mainly from the West*, for the reason that the West, more than any other part of the country, has been unwilling to recognize and accept the changed condition of affairs, and has refused to sell its products at their diminished market value. This loss of currency by the West and North has been the first and best recognized, though not by any means the only or even the most important, cause of the recent stringency in the money markets, a stringency so severe and long continued as to threaten a severe financial collapse. It is one of the most natural, healthful, and intelligible financial movements of the time; but, of course, it presses hard upon all people trading with borrowed capital or dependent upon bank facilities for the transaction of their daily business. It presses hardest of all upon the speculative holders of merchandise, stocks, and real estate all over the country. Just now, as already indicated, the West is most largely engaged in such speculations, and consequently needs its currency most at the very time when it is doing everything to drive it away, and at the very time when the South is doing everything to obtain it. This natural course of the currency movement Congress is called on to stop and correct. It is not the South that asks for the so-called re-distribution, it is the West; and Congress, with its usual sublime faith in its own omnipotence, actually decrees that the laws of nature shall stand in abeyance, and that currency shall flow, not where its owners choose to send it, but where Congress dictates.

It must be evident to every one, not only that Congress cannot possibly accomplish what it pretends to undertake, namely, to secure a better distribution of the currency, but, also, that the measure proposed must be totally barren of the results anticipated. If any of the

districts, States, or Territories, which are to obtain a fresh supply of currency under this bill, have the means to obtain currency under its provisions, they must have precisely the same means to obtain the same amount of currency now, without the aid of the bill. Congress does not *give away* currency, it only gives the privilege of obtaining currency on the pledge of United States securities. If the people of a Territory or of one of the States have the United States securities, they can get the currency for them at any moment in New York or elsewhere, no matter how tight the money market may be. But if they have not the United States securities, the new bill of Congress will not help them to get one single dollar of currency beyond what they have now. If they have not the securities, and still want to take advantage of the new law, they must take the currency required to buy the bonds to one of the money centres, and, after buying the bonds, deposit them in Washington, when they will receive back somewhat less currency than they invested in bonds. Surely the people of that Territory or State gain no additional currency by that operation. It is precisely the same if the bonds are paid for in grain or cotton or produce of any kind, for by the direct sale of the produce the same amount of currency would be obtained. The more closely the question is examined, the more clearly will it appear that nothing that Congress can do will add one dollar to the circulation or currency of any State or Territory beyond what the people of that State or Territory have to-day the ability to obtain without the slightest aid from Congress.

But if the measure of Congress will not give to these districts a larger supply of currency than what they now have, what good will it do them? It gives them the privilege *to issue* the currency, but it does not thereby add to the supply at their disposal, or have the slightest tendency to make money easier or to increase their borrowing facilities. Now as long as this privilege of issuing currency does not make currency cheaper, it must be a matter of absolute indifference to the people using it, by whom or whence this currency is issued. You cannot borrow currency issued by New York banks any cheaper in New York than currency issued by a New England bank or a Western bank. Nor is the money issued by a Chicago bank lent any cheaper in Chicago than that issued by a bank of Philadelphia. If a private banker in Omaha to-morrow acquired the privilege under the new act of Congress of issuing one hundred thousand dollars of new currency, he will not lend the currency thus issued any cheaper than the greenbacks or New England bank-bills which he had been lending heretofore. The people who use the currency do not therefore care one straw where the currency is issued. It is only the people who issue the currency who have an interest in the question. It is only the people who want to issue the currency, that desire to see this bill become a law, that desire to see the "better distribution of the currency secured" by act of Congress. Designing men, taking advantage of the prevailing ignorance on this and similar subjects, have sought to represent the high price of money at the West as due to the imperfect distribution of the currency, and have misled Congress into adopting a bill which can only lead to fresh disturbances of the currency market without accomplishing one object for which it was designed.

The reason why men are anxious to obtain a re-distribution of the currency, and to secure to themselves the privilege of issuing a part of the circulation that is to be withdrawn from the existing banks, is simply, that the issuing of national bank currency is extremely profitable. The person who holds to-day one hundred thousand dollars in United States bonds, draws six per cent. gold interest on them, or nearly eight per cent. interest in currency. If he acquires the privilege of a national bank, and deposits his bonds in the United States Treasury, he receives the eight per cent. interest on his bonds all the same, and has further ninety thousand dollars in currency, which he can lend at six or seven or more per cent., thus making from fourteen to fifteen per cent. interest on his investment. Or, to put it in another shape, the holder of one hundred thousand dollars of United States bonds, if he wants to borrow ninety thousand dollars on them in the open market, cannot do so without paying at least seven per cent. interest on the borrowed money; but if he has a national bank charter, he virtually borrows the same amount free of interest. This evident and palpable advantage that the owner of a national bank charter has over all other holders of bonds, naturally makes the privilege a desirable one, and has had a great deal to do with securing the passage of the bill. A number of individuals in the large cities and in the Eastern States have secured national bank charters, which were granted and received in perfect good faith, but which have since been proved to be very valuable monopolies. There are plenty of people in all sections of the country, both where there are banks and where there are none, who would like to possess a share of these same valuable monopolies. In the sections where banks abound, there is no opportunity to do so, but under the pretence of the unequal distribution of the currency, Congress is about to give that opportunity, to a limited extent, to some individuals in the States where banks are least numerous. This is virtually nothing more than an attempt to take away from the present *bonâ-fide* possessor a portion of monopoly, and to bestow it on some one else, whose only title to it is the activity and loudness of his clamors against the injustice with which the monopoly was originally distributed; as though a monopoly could be evenly divided.

MR. WELLS AND HIS ASSAILANTS.

Mr. David A. Wells has published his reply to his assailants, and the spectacle of their discomfiture, besides gratifying morbid curiosity, furnishes matter for a good deal of profitable reflection. The feature of the attacks made on him which was probably most repulsive, was their presumptuousness, inasmuch as they consisted in simple contradiction on matters of fact, of which he had made a laborious examination, and of which his opponents had not made and never pretended to have made any examination whatever. That Mr. Wells had "juggled," and "misrepresented," and "manipulated figures," and was bribed by "British gold" to make a false report, was simply a deduction made by Messrs. Carey, Kelley, and Greeley from certain doctrines of political economy held by them, and the soundness of which is denied by the vast majority of those who have made economical questions their serious study. Mr. Wells's assailants believe that high tariffs conduce to the prosperity of the working classes; therefore any man who says that in a particular country possessing a high tariff, the working classes are not prosperous, must be a knave, and has probably been bribed to lie by persons interested in the importation of foreign goods. This would be a tolerably cool and impudent piece of inference coming from anybody, but coming from these gentlemen who, whatever else they have done, have not during the last four or five years devoted any systematic attention to the examination of the questions of which Mr. Wells treated in his report, it is hard to know how to characterize it. Mr. Kelley's fitness for scientific investigation of any subject, it is hardly necessary to expatiate upon to anybody who is familiar with his public speeches; and whatever the extent of Mr. Greeley's powers and attainments may be, they have during the last seven years been expended almost exclusively on the popularization, in the columns of magazines and weekly papers, of the question of Reconstruction, which he has examined from every mortal point of view. Mr. H. C. Carey has a theory of the duties of governments and the causes of national prosperity, which has the merit of originality, and which has both here and in Europe obtained considerable circulation and attention. The number of his auditors or disciples amongst men of education may now almost be counted on one's fingers, and his later contributions to social science have been marked by a most remarkable incapacity for the simplest work of logical inference. But he has always enjoyed the reputation of being a gentleman on paper, as well as in private life; and it was therefore a shock both to those who believe in him as an economist and those who do not, to find him using against Mr. Wells one of the rustiest and clumsiest of the wretched collection of weapons with which the *New York Tribune* carries on its warfare. All these gentlemen were placed, for the purposes of the discussion, in the very unfortunate position of having no knowledge, or next to none, of the subject on which they attacked Mr. Wells's accuracy, while he happened to be the only

man in the country who thoroughly understood it. Their venturing under these circumstances to attack him at all was a striking illustration of the growing confidence inspired by glibness and the habit of being listened to by large audiences. If it were not that the public is gaining steadily in its appreciation of thoroughness and accuracy, we should before long witness a state of things in which anybody who for any reason could gather a crowd about him, would pretend and often believe that it was only want of time which prevented him from disposing of the most famous unsolved problems of the higher mathematics.

Another remarkable and repulsive feature of the controversy has been the theory, on which most of Mr. Wells's opponents act and talk, that there is something sacred about the theory of protection, and that any person who attacks it, or even brings to light facts which are likely to weaken its hold on the popular mind, must be a bad man, and ought to have his influence destroyed, like that of a gambler or libertine, not simply by argument but by social persecution, or any other weapons within reach. One Pennsylvanian sage, or saint, was so shocked by Mr. Wells's conclusions, that he gravely, and even with much show of pious wrath, sought to have the wretch's salary stopped in the House, so that the legislature of "our common country" might not be responsible for the diffusion of his pestiferous utterances. Now, protectionists may as well make up their minds that neither their opponents nor the public at large will submit to this kind of assumption It was tried in the slavery agitation, and failed. There was hardly a defender of the institution in the height of its prosperity who did not take refuge behind the Bible, or the marriage relation. It was tried, too, in the reconstruction process, and failed; and in the impeachment process, and failed. Hardly a question of importance comes up in politics, that one side or other does not entrench itself behind religion or humanity or "eternal justice," and proclaim that anybody who assails the position is guilty of sacrilege. But the age for successful performance of this thoroughly profane trick is gone by. Anybody who wants legislation in our day in aid of his schemes, whether his object be his own private aggrandizement, or the regeneration of mankind, must come down into the political arena and maintain his cause, on the same level and with the same weapons as everybody else. We have no privileged opinions in politics any more than privileged classes in society. All opinions and theories are assailable; nay, if anybody knows any reason for thinking that a dominant policy, no matter in what department of public affairs, is injurious, he is bound to declare it.

The pretence to which the protectionists seem to cling, that protection is amongst the settled questions—for some such pretence must be at the bottom of the personal abuse with which they assail their opponents—is a pure delusion. Whether fortunately or unfortunately, there is no question at this moment occupying the attention of the civilized world more unsettled, or more likely to be settled against the advocates of the doctrine. There is no country in which any changes which are taking place in the mode of raising revenue are not made in the direction of freedom of trade. In fact, protection is getting to be looked on everywhere as an ancient abuse, like Church establishments and vendible offices and entails, to be borne with, if at all, out of regard to vested interests and settled habits, but not to be borne with very long under any circumstances. If anybody says that this is a dreadful state of things, he raises a question of opinion; what we here assert is a fact which admits of no denial, and it becomes the adherents of a decaying faith, no matter how respectable, to be, above all things, meek and modest. It is only on the preachers of new and spreading creeds that intolerance and virulence sit well.

Another circumstance which makes it peculiarly improper for protectionist advocates to impute corrupt motives to their adversaries is, that there is no body of men so open to the same imputation. One of the great objects and great results of protection is the creation of monopolies—the closing of the markets to all but a few persons. It is, therefore, one of the peculiarities of a protectionist policy that, however much good, even from the stand-point of its friends, it may do the many, there are always a few who benefit by it immensely, and whose fortunes depend on its maintenance. The English manufacturer is, no doubt, interested in having the American markets opened to him, but so are all other manufacturers on the globe. Anybody who entered our ports with goods to sell, under a free-trade policy, would enter them in competition with the whole human race. Under a protectionist policy, on the other hand, a few dozen manufacturers here—a very small list would contain them—do make great profits which they would lose if the ports were opened. Even if we grant what they will claim, that in making these profits they greatly benefit the country, it is none the less true that the reduction of the tariff would instantly put a stop to them. Their personal selfish interest, therefore, apart from their patriotic interest, in the maintenance of the tariff is immense. They have a reason for bribing people to speak and write in favor of its maintenance, such as nobody has in bribing people to write and speak against it. Nay, many of the tariff writers and speakers—Mr. Carey for one, who degraded himself by his imputation on Mr. Wells—are themselves manufacturers, and interested in protected industry of some kind; and, in preaching protection, are aiding in the increase of their own profits just as much as if they were keeping their books, and superintending their workmen. Now, we do not say they are all actuated by selfish motives in defending the tariff. We do not say that Mr. Kelley gets so much a column for the long discourses in defence of native industry with which he fills the *Congressional Globe*, or Mr. Greeley for the luminous expositions of protectionist doctrine which he contributes to the *Tribune;* but we do say, that a man may believe that they do, and say that he believes it, without showing himself to be a very uncharitable or very suspicious man, or a man very ignorant of human nature. Any one who would say so might consider himself a kindly, tolerant, and pure-minded person compared with the gentlemen who have deduced Mr. Wells's baseness from his writing things which they happen not to like, or find inconvenient. Unfortunately, too, for the Greeleys, and Careys, and Kelleys, the list of preachers of free trade—a list on which such names as Turgot, and Adam Smith, and Cobden, and Bright, and Chevalier, and Bastiat, and Garnier are inscribed, is one on which no man need fear to see his name, because there is no man whom association with such men would not honor; and this not simply on account of their intellectual achievements—though these certainly none of Mr. Wells's assailants can very well pretend to despise—but because for purity of character and devotion to the interests of mankind it would be very difficult for any school of economy or philosophy to produce their match.

THE LYCEUM LECTURE.

In a recently published biography we may read that on a certain June morning in 1864, after having met the late Mr. Halleck in one of our New York streets, the late Mr. Willis went home and, according to his custom, utilized the notable thing of his day's experience by addressing to his younger associate in the management of the *Home Journal* one of his well-known editorial letters. In this instance his performance contained an expression of the writer's keen regret that "the author of 'Marco Bozarris'" had never seen fit to deliver lyceum lectures. "With such advantages of physiognomy and manner, so winning a look and voice, how is it," Mr. Willis enquires of Mr. Phillips, "that Fitz-Greene Halleck has never let himself be known to audiences?" . . . . "Halleck's genial countenance," he goes on to say—in those days everybody and everything was genial—"and still more the full and genial cadences of his voice, suited him especially for a lecturer. What a pity that so admirably formed a creature should die without the eye and ear homage for which nature gifted him!"

From these remarks of Mr. Willis, who lived when lyceum associations were in fulness of glory, it is easy to deduce one or two theories of the aim and end of the "courses of lectures" which constitute an American institution, and easy to see something of the reason of their popularity. One cause, then, of their existence would seem to be, that by means of them the general public gets opportunity to gratify a natural curiosity as to the personal appearance of the men and women who have in one way and another attracted its attention. "The author of 'Marco Bozarris'" no doubt could once have drawn a "paying house" in every town to which the "Academic Speakers" and "First Readers" had introduced him. And from what is said of the graces of Halleck's manner and the charm of his elocution, his ability to please and amuse, and from what is not said

of his ability to teach anybody anything, we may infer that Mr. Willis was not in the habit of thinking of lyceum lectures as being to any great extent a means of instruction.

As regards that matter, few people, we imagine, ever differed with him. Most people will admit that so far as concerns learning anything, listening to lectures is pretty surely a waste of time. They never come very near to being profitable except when, as in the case of college professors and students, the lecturer talks to hearers who are interested in the subject in which he himself is interested, and all of whom are so nearly alike as regards ability that the speaker need not entertain the lecturer's common fear—the fear that turns most lectures into twaddle or commonplace not far removed from it—the fear that unless he points out things which are beneath the regard of the best part of his audience he must point out things beyond the vision of most of it. And in order to learn much from the lecturing of university professors even, it is necessary we should say, so far as our experience goes, that the hearer should transfer it to paper; it is the lecture in the note-book rather than the oral lecture that is of any service to the student.

But if it has no great claim to respect as a means of instruction, which is what it has usually pretended to be, the "lecture" once had a considerable value and still has some value, in certain parts of the country, as a social instrumentality. The days are not yet wholly gone in which some of our friends in Boston and the immediate vicinity betake themselves now and then of an evening to the Tremont Temple to listen to Mr. Phillips while he makes his instructive political epigrams, or attend at the Lowell Institute or the Music Hall to hear Mr. Emerson, and to absorb, not without a sense of profit and a degree of self-complacency, some small quantity of the transcendental philosophy, taking in (to borrow a hint from Miss Bremer and the Fresh Pond Company) their three or four pounds of ice for the purposes of "æsthetic teas" and other parties, and pleasantly fancying that thus they have something of the eternal snows of Concord; and in the remoter rural districts of the valley of the Mississippi, where schools are scarce and good newspapers and books are few, it is possible that not only the political lecturers, but the others, exert a sensible intellectual influence. We doubt it, however; and incline strongly to the belief that throughout the whole country "the platform" is hopelessly decaying as "the stump" has begun to decay, and like "the stump" tends each year to go further towards the setting sun. When Mr. Emerson goes West again, if he ever goes again on a lecturing tour, it is very likely that he will have to go further than before to find the enterprising committee who shall secure him a full attendance by advertising the tickets of admission as good also for a subsequent dance in the hall and "an elegant collation."

In those parts of the country where the social means and appliances are few, where the young people of the two sexes are debarred from seeing each other as often as they would like, our lecture system is pretty sure to flourish. In the Atlantic States, or at any rate on the seaboard, and in all the large cities of the East and West alike, a thousand ways are open for the meeting of that part of "society" for whose sake it is after all that "society" exists. In the smaller Eastern towns there is the stated preaching of the word several times in every seven days; and nobody who hears the continual outcries about the overdressiness of women in church will deny that it is not always nor wholly for worship that congregations gather themselves together. We hear of a young lady in Connecticut who, in feeling it to be improper that she should dance during Lent, rigorously denied herself that enjoyment; she was saved from spiritual pride, however, by the discovery one day that she was "engaged" for evening services for three weeks ahead. So, too, it is remarked of the young ladies of St. Louis, that when they have made a "retreat" and come home again under prohibition to dance round dances, they are observed to be exemplary in the matter of taking constitutionals, and that their patronage of concerts is of a kind to gratify managers. Then in the East there is the singing-school of the villages, and the choir meeting; while in the larger towns the theatre is no longer under ban, nor are balls looked on with anything like the horror that they used to excite, even in the near neighborhood of Boston, so short a time ago as ten years. The chances for "Edward and Almira" to blush in each other's presence are indefinitely greater this side of the Alleghanies than those young persons would find them in the West. In that region, then, the lyceum lecture is eking out the services rendered to the estate of matrimony by the itinerant preacher, the rare troop of actors, the occasional violinist or "minstrel." Some of the young bachelors form the committee of arrangements; and all the other young bachelors take "season tickets;" lecturers are engaged, some of whom, as we know, are men of the most brilliant talents and the most varied attainments, but some of whom also, it is much to be feared, are heard not so much for their powers and acquisitions as because the young ladies and gentlemen wish to do a certain amount of talking with each other, as well as to listen to some part of what the authorized speaker of the evening may be saying.

There comes, however, every now and then from that region—there has come, in fact, within a week—a dismal wail of committees over the winter's receipts, which show that even the bodily presence of the best-looking and most winning and most famous lecturers on the list has failed in many instances to draw full and paying houses, and has left the young bachelors and the "live men" of many rising communities agonizing over a deficit of greater or less dimensions which they will probably have to meet out of their own pockets. No confidence, however great, in the lyceum lecture as an instrument of culture can of course very long survive the frequent recurrence of a pecuniary loss, and what renders the prospects of the institution all the more gloomy is that a certain portion of the Western press, led by that cynical sheet the *Chicago Tribune*, now regularly about this time of the year counsels the committees to cut down their list almost to nothing; in fact—we hate to write it—to give no more invitations to the rising beauties of the platform, and confine themselves to a very few men of established brains and reputation who are sure to have something to say. With this cold, calculating view of a tender and delicate subject, we need hardly say we have ourselves little sympathy; but as lecturers require pay and as somebody has to supply it, we suppose that to the business point of view even the most spiritual of us must come at last. To any committee, therefore, which finds itself seated on the cold "hard pan," as the miners say of a dead loss, owing to misplaced confidence in the power of "advantages of physiognomy and manner," we would advise, in making arrangements next year, to restrict their invitations to specialists of established reputation, men who either have completely mastered some subject and speak on it with generally recognized authority, or men who are gifted with great powers of statement and apply them successfully to a particular class of subjects; and to eschew the simple rhetorician who is ready to treat any theme at a hundred dollars an hour. The body to which he belongs is one which is growing prodigiously, and its influence, whether exerted through the platform, the magazine, or the wholesome and independent family paper, is producing the worst effects on the tender and susceptible minds of both Edward and Almira. His personal charms, instead of heightening his attractions, ought to put a prudent committee on its guard against him, and cause it to question itself straitly as to its motives in asking him to hold forth.

ENGLAND.

LONDON, March 19, 1869.

IF I were to write upon the topics which most excite the British mind at the present moment, I should hesitate between the two questions of the Irish Church debate and the University boat-race. The latter will, I presume, scarcely retain much interest on the other side of the Atlantic. I will, therefore, spare you any enquiry into the causes which have led to nine consecutive defeats of Cambridge by Oxford, or into the present state and prospects of the art of rowing in this country. I will merely note in passing that the extraordinary interest which the race now excites is a characteristic and regular phenomenon. Every London cabman ties a bit of light or dark blue ribbon to his whip, according to the direction of his sympathies; the little ragged boys in the streets shout, "Oxford and Cambridge for ever!" and the whole of London turns out to see the contest in crowds nearly if not quite equal to those which attend the more renowned celebration of the Derby. I will turn, however, to the official subject of discussion. The grand debate on the second reading of Mr. Gladstone's bill began last night. These debates are amongst the most wearisome of proceedings to those who attend, or to the few who do an Englishman's duty by plodding through the reports in the next morning's *Times*. So many of the inferior tribe of orators are anxious to speak for the benefit of their constituents, that the leading speakers are swamped in a mass of inferior eloquence, and the leading speakers themselves are apt to be dull when they attempt to make what are called by their admiring critics "luminous and exhaustive" statements of the arguments. Last night, for example, Mr. Disraeli opened the debate in a two-hours speech, and the remainder of the evening was devoted to the efforts of the members whom no one cares to hear, and to a short official reply from Mr. Chichester Fortescue. There is often ten times as much interest in a debate which springs up unexpectedly, and gives occasion for a few of the best speakers

to go in and strike a few rapid and telling blows, as in the prolix and dismal discussions in which men go prepared in cold blood to listen to the delivery of spoken pamphlets. Nothing, of course, was said, and I may safely anticipate that nothing will be said in Parliament or elsewhere calculated to throw the smallest light upon the subject. Everybody knows all about it and has long ago made up his mind, and this parade of oratory amounts to little more than a kind of conventional ceremony for doing honor to the importance of the subject. Mr. Disraeli seems to have been more than usually brilliant; he began by some of the flaming generalities in which he takes so much delight, but afterwards got on to his own strong ground of sarcasm, and made a very satisfactory onslaught upon his opponents. He got well home and drew first blood in thoroughly workmanlike style. But, to say the truth, the punishment which he administered to the ministry was of just as little importance as the Brummagem philosophy with which he prefaced his speech. It will make them angry, but it will not change a vote or throw a new beam of light on the subject. When he expatiated on the importance of religion and the fact that governments ought to be guided by religious considerations, he was as much and as little to the point as when he called the measure confiscation, and insisted that the state was a trustee for the Protestant Church and was stealing the trust-money, or as when in conclusion he taunted Mr. Gladstone with the inevitable reaction upon the Church of England. Perhaps his best point, and it is one which is really of some importance, is that the effect of the bill will be to hand over a large share of the spoils of the Church to the landlords. Mr. Gladstone proposes to spend the proceeds upon lunatic asylums and secular institutions. Now it is admitted that the effect of this will be in some degree to reduce the county cess, which is paid in the first instance by the tenants but which must ultimately fall more or less on the rents. Take off the burden and the landlords will be able to raise their terms. We should be very sorry to hand over the Church property to the landlords, though it may be doubted whether this particular argument will tell very strongly upon the landlords themselves. Mr. Disraeli, indeed, tried to prove that the effect of confiscation would be to raise further questions as to the security of landlords. Plunder the Church, he said, and you encourage other people to plunder you. If the disendowment of the Church leads to a serious consideration of the land question, I, for one, shall be sincerely gratified; but it is decidedly a blot in the measure that one of its first effects will be to offer what may be delicately called a pecuniary inducement to the landlord interest.

Be this how it may, the measure is in the main well designed, and especially for the great purpose of all, namely, to pass. No one can doubt that it will go through the House of Commons by very large majorities, and the only question is as to its fate in the House of Lords. Whether that body, which has lately been giving signs of impatience under its growing insignificance, will venture to assert itself by throwing out the bill, is a matter on which speculation is premature. Should it venture to do so the result will probably be the raising of some deeper questions than are just now in the field of politics. I confess that the one wish which I can distinctly form is, that the bill may be passed in some shape, so that Parliament may have a fair chance of devoting itself to the incomparably more important matters for which the road is now hopelessly blocked. To mention only one, and that one of secondary interest, a measure has been lately introduced for regulating the endowed schools of England. These schools enjoy a revenue considerably larger than that which will be set free by the disendowment of the Irish Church, but they have been allowed to fall into that helpless state of muddle which is only too characteristic of English institutions at the present moment. The endowments are wasted, misapplied, and put to actually prejudicial uses of every kind. To put them right would be the first step towards providing the country with that of which it is most urgently in need, a good system of secondary education. No one can put them right but Parliament, and Parliament is so taken up with squabbling over a question upon which every sensible man in the country has long ago made up its mind, that we have no hopes of anything but a mutilated and, at best, preparatory measure. Other matters of still more importance, such as the poor-laws, are left on one side altogether; and it is not surprising that some enthusiasts are getting rather disgusted with our system of parliamentary government. The House of Commons insists upon being omniscient and omnipotent; to this one cannot reasonably object; but it ought to hit upon some mode of using its power and its knowledge towards doing business instead of frittering away time of the utmost value on party struggles. That the Irish Church should be put down is right enough; but it is grievous that so much labor should be spent on mere abolition of old grievances, when there is such urgent need of measures for reconstruction. Some greater impulse is required than appears to have come from our advance up to the present time in a democratic direction.

I am, to some extent, talking the language of a school of thought, which, if I am not mistaken, will have great influence on our future politics, and I would call your attention to it the more, because, though generally treated with ridicule, I am convinced that it really deserves serious notice. The followers of Comte, to whom I refer, are a very small and a much abused body. There are perhaps not more than half a dozen genuine disciples prepared to go all lengths; and it has been said that half of them are suspected of heresy. This statement, however, gives a very inadequate impression of the extent to which their characteristic theories have leavened the thoughts of the rising generation. Small as the body may be, it includes men of great ability, of remarkable powers of expression, and, what is most important under present circumstances, of profound faith in the truth and importance of their own opinions. The organ through which they chiefly preach to the world is the *Fortnightly Review*, a journal on the model of the *Revue des Deux Mondes*, which for a long time led a very precarious existence, and has been compelled to suspend half its issues and to be content with a monthly appearance. The February number, however, ran through five editions; and as a symptom of the present currents of opinion it is worth noticing the articles which gave it so large a circulation. They were chiefly two: one was by Prof. Huxley, in which he started from physiological grounds to prove certain conclusions which would generally be called materialist. It is true that he entirely repudiates the name and saves himself from the supposed consequences of his theory by a remarkable argument into which I have not space to enter. It is enough to say that the general bearing of the essay was to prove that all the phenomena of life would in no remote future be explained by the same scientific principles which we apply in the case of chemistry or astronomy. He went rather out of his way to deny any sympathy with Comte as a scientific authority, but he would obviously agree with Comte in putting theology and metaphysics altogether out of consideration. The other article was a very clever parallel drawn by Professor Beesley, one of the thoroughgoing Comtists, between the French statesmen who preceded the revolution of 1789, on the one hand, and Mr. Gladstone and Mr. Disraeli on the other. There is a still more remarkable article by Professor Beesley in the current number, in which he advocates the positivist theory as to the future of the working-classes, expresses his sympathy with trades unionism, and declares that the solution of our present difficulties is to be found in that curious variety of democratic despotism which forms the Positivist's ideal. Of the merits of these opinions I have not room to speak, but it is worth notice that opinions of this nature should be currently expressed, and meet, if not with general approbation, at least with very widely spread sympathy. It proves, I may say, this, that the men who at present exercise a very powerful—perhaps the most powerful—influence on the able minds of the rising generation, may be divided into two classes: first, the men of science who utterly repudiate all theology, and laugh at the pretensions of all existing religious systems to any authority in the world of thought; secondly, the Comtists, who proceed to build up on the same foundation a new theory of society, the partial realization of which would involve a complete revolution of the whole established order of things; the formation of a new spiritual power; the destruction of the political influence of the present governing classes, and the advent to authority of an entirely new class. It may be said that this second class, at least, are of a wild and visionary order and have few thorough-going supporters; but the influence of a very earnest sect with a definite object and a fanatical faith is not to be measured by the number of its open adherents. Its direct influence is considerable and increasing, and, as a symptom of widely spread discontent with all official creeds, it is a matter of really great importance. It is rather as symptomatic of some future change than as indicating the direction which changes are likely to assume, that I think it is worthy of serious notice. It may suggest some serious reflection when we may fairly say that the cultivated young men are divisible into three classes: those whose creed is simply retrograde, those whose creed is simply negative, and those whose creed is radically revolutionary; yet I think this is a tolerably exhaustive account of the opinions prevalent amongst the rising generation.

In presence of the wider questions that are daily coming to the surface, I look upon the Irish Church measure, "gigantic" as Mr. Gladstone is pleased to call it, as important chiefly because it will in all probability lead to agitations of a far more serious kind; one of those questions is treated with great completeness in a report just issued by the Commission on Trades Unions, of which I hope to give you some account in my next letter.

Correspondence.

VIRGINIAN PEDIGREES.

To the Editor of the Nation:

Sir: Ordinarily genealogies are exempt from criticism in the daily journals. The public is not interested in the question as to whether Brown claims his rightful great-grandfather or not. In a few cases, however, where families have for generations acted a prominent part in the history of their country, the public has a right, and feels a desire to know something of their history. This investigation becomes the more necessary when the supposed existence of a body of families with far-reaching pedigrees is made an important element in the settlement of great political and social questions. During the late rebellion the claim of Virginian families to represent ancient families of the English gentry was undoubtedly an important aid to the Southerners in obtaining British sympathy and assistance.

Under these circumstances and in the case of so prominent a Virginian family as that of General Robert E. Lee, there can be no impropriety in reviewing a genealogy published and sold in New York. A Mr. Edward C. Mead has prepared a Lee Genealogy which has been published in a very handsome form by Richardson & Co. of New York.

The author undertakes to show that Colonel Richard Lee, the emigrant founder of the family in Virginia, belonged to a family of the English gentry, resident at Cotton in Shropshire. We are constrained to say that he has not produced the slightest evidence of any such affiliation, and that, *so far as this book goes*, the famous Lee family possesses no pedigree beyond that which the descendants of all the early colonists possess, the record of the family after it became American.

As Mr. Mead's book shows a lack of familiarity with genealogy and heraldry, it may not be unfair to point out that the Richard Lee, son of Launcelot Lee, of Cotton in Shropshire, whom he identifies with the emigrant, could not have been the Virginian. The extract from the Herald's Visitation of 1663, which is the foundation of his book, seems fatal to the identification. In that document Richard Lee is called of the parish of St. Olave's in London, and his wife, Elizabeth, is recorded as alive; at least there is no mention of her death. The age of that Richard was not over forty-two years. It so happens that Colonel Richard Lee, of Virginia, made his will in the same year, in which he mentions his wife *Anna* and eight children, and the extracts printed give us no reason to doubt that she was the mother of them. It is highly improbable that the Herald's Visitation would have omitted such important items in the description of Richard of London as the fact of his living in Virginia, his being a Colonel, his having a second wife and eight children, if these applied to him.

For these reasons, if others were wanting, it is evident that more proof than a coincidence of names is necessary. There may be other proofs accessible to Mr. Mead, but at present the weight of evidence seems against the affiliation. If the family here had used the arms of the Lees of Cotton on their seals, their silver, or their tombstones, such evidence might go far to substantiate the claim.

The earliest authority cited by Mr. Mead is a paper of a date later than 1770, drawn up by William Lee, of London, a great-grandson of the emigrant. It is possible that the copy of the Herald's Visitation was also obtained by him; certainly, as the copy was made in 1750, it is of no particular authority.

I have felt the less reluctance to call for some evidence in support of the pedigree as I believe I can indicate the true origin of the family. The most interesting question is this: Are Virginian pedigrees in general based upon such documents as genealogists of the present day esteem indispensable, or are they largely composed of unsubstantiated traditions? The Washington pedigree, after being accepted for over half a century, has totally disappeared under the scrutiny of competent critics. I do not intend to place this Lee Genealogy in the same class, but as it stands, it certainly requires much more support than this book affords.

W. H. W.

QUANTITY IN VACCINATION.

To the Editor of the Nation:

Sir: As you have a very good article published last week on the efficacy of vaccination, will you allow me to touch upon one very important point omitted in that article? It is in regard to the *amount* of vaccination necessary to afford almost complete protection against small-pox.

In the article "Vaccination," in "Reynolds's System of Medicine" (Vol. I., page 496,) Dr. Edward Cator Seaton (after stating Jenner's views) says, "Observations made since Jenner's day, with remarkable care and ability, and on a scale which gets rid of all sources of fallacy, by Mr. Marson, of the Small-Pox Hospital, have conclusively established that, for *thoroughly* infecting the constitution, a certain *amount* of local affection is as necessary as a perfect *character* of vaccine vesicle. We must therefore so far extend the words 'due and efficient' performance of vaccination, as to make it include *amount* as well as quality of vaccine influence."

He cites statistics to show how much vaccination protects from future attacks of small-pox, and also the following table to show that *the degree of modifying power is in exact ratio of the excellence and completeness of the vaccination as shown by the cicatrices:* in other words, that it is directly as the amount of vaccine marking and as the character of the marks.

Classification of patients affected with small-pox.	*No. of deaths per cent. in each class respectively.*
1. Unvaccinated	37.
2. Stated to have been vaccinated, but having no cicatrix	23.57.
3. Vaccinated, a. having one vaccine cicatrix	7.73.
" b. " two " cicatrices	4.70.
" c. " three " "	1.95.
" d. " 4 or more " "	.55.

And at the present time when most physicians are content to raise one, and at most two, vesicles, it is well to note his remark that "No practitioner will have done his duty in any case in which he is called upon to vaccinate, unless, besides all requisite precautions with regard to the genuineness of the lymph employed and the means of insuring success, he has also taken care to vaccinate sufficiently, *i.e.*, to produce, so far as in him lies, four or five good-sized vesicles, such as result from separate punctures, or if vaccinating otherwise than by separate puncture, to produce equivalent local results."

The same rule will hold true in regard to scars left on those who get small-pox as we stated above. Dr. Seaton quotes several examples to show the greater freedom from the disease, small-pox, by the practice of *re-vaccination*. In regard to the age of vaccination, allow me to say, while three months is the best age, other things being equal, as a child of two months is not *too young* to die with small-pox, so he is not too young to be vaccinated; and I have often vaccinated babies nine days old, without waking them from sleep, and they seem to bear it much better than when older. I would approve a re-vaccination at puberty, and again if desired.

S. G. C.

March 30, 1869.

MR. AUERBACH'S ENGAGEMENTS.

To the Editor of the Nation:

Sir: Mr. Bancroft, the historian, has been making a little "history" for the book-publishing firm of Roberts Brothers, which we feel called upon to explain and correct, it not being necessary in this instance to entail that duty upon posterity.

The following communication was printed in the *Nation* of April 1:

Legation of the United States,
Berlin, December 10, 1868.

Rev. W. R. Alger, of Boston, proposed to Mr. Auerbach to take Roberts Brothers for his publishers. They, without Mr. Auerbach's consent or knowledge, published one of his works and filled the country with advertisements of their intention to publish the next which he should bring out. Messrs. Roberts Brothers then made Mr. Auerbach an offer, which he refused to accept without a modification. They, on their part, refuse to accede to his proposal. So that matter stands. Messrs. Roberts Brothers have received from Mr. Auerbach neither manuscript nor proofs of his new work, nor have they from him authority to advertise or to publish.

Geo. Bancroft.

If Mr. Bancroft had said that Mr. Auerbach *first* "proposed" to Mr. Alger to secure him a publisher, he would have stated the exact truth.

It is true that we "published one of Mr. Auerbach's works" ("On the Heights") "without his consent"—it was not necessary that we should have it—but not "without his knowledge," as we notified him of our intention to do so, accompanied with a voluntary proffer of a portion of the profits.

It is quite true, also, and we thank the United States Minister Resident at the Court of Berlin for the compliment, that we "filled the country with advertisements," by means of which, to quote from Mr. Bayard Taylor, "Berthold Auerbach was first introduced to the knowledge of most American readers" and his name made famous from the Atlantic to the Pacific. Previous to our bringing out "On the Heights," which book had been in the portfolio of several publishers for publication but rejected, Mr. Auerbach was slumbering in the security of a "Tauchnitz" edition, and for waking him up, clothing him in an American dress, and aiding him to become famous—this is an "outrage" for which we voluntarily offered him payme

We have *never* "made" Mr. Auerbach a *direct* "offer," but modified the original proposition made by Mr. Alger; a proposition we had good reason to suppose he accepted and was bound by, considering that he offered no objection to it for a period of six months, with a full knowledge of all our efforts during that time to advance his interest.

We may, in conclusion, fitly express our surprise that the distinguished historian should have given his name to such a communication, intended for publication; indeed, as humble citizens of the Republic, and, with due deference to his greatness, we question the propriety of the act. He is the servant of a people which has persistently denied to foreigners any literary rights. The right to republish foreign books is common to all, while a translation from a foreign language is recognized by law as an original work and granted the same protection. Our offence, for we consider ourselves arraigned by Mr. Bancroft, is in publishing an original translation, procured and paid for by us, for which we have the sanction of the United States by its official seal. Why, then, should a Minister Resident of the United States lend the weight of his name and the sanction of a diplomatic post, which he holds for the public good, for the obvious purpose of benefiting other parties by injuring American citizens engaged in what the law deems not only lawful but commendable pursuits?

Your obedient servants,

ROBERTS BROTHERS.

BOSTON, April 2, 1869.

DOCTOR'S ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 1, I notice that you very justly reprobate the execrable valedictory address delivered at the recent commencement exercises of the Medical Department of Georgetown College. The person who produced so extraordinary a composition did not "graduate with honors" as you assume, but, owing to a local custom, was elected by the graduating class to represent them. Under such an arrangement, scholarship and good taste have very little to do with the selection of our valedictorians.

The proper use of the English language as a qualification for graduation is practically unknown in nearly all our medical institutions; Georgetown College in this respect is no worse than any other. Every year scores of young gentlemen are sent out into the world, armed with medical diplomas, and licensed to heal mankind, butcher their mother tongue, and torment every sensible ALUMNUS.

WASHINGTON, D. C., April 3, 1869.

Notes.

LITERARY.

MESSRS. HURD & HOUGHTON announce "The Velocipede: its history, varieties, and practice, with illustrations."——Messrs. John Wiley & Son will publish "Elements of Machine Construction and Drawing on a New Plan," by Prof. S. E. Warren, of Troy Polytechnic Institute; and a thoroughly revised edition of "Downing's Fruits and Fruit Trees of America," which has the repute of being the very best work of its kind.——Messrs. J. B. Lippincott & Co. have nearly or quite ready a reprint which will give pleasure to the many hundred readers who, having made the acquaintance of Sir Samuel Baker in his two great works on the Nile and its tributaries, will like to get a glimpse of the preparation which made him so accomplished an explorer. We refer to his early work, entitled "Rifle and Hound in Ceylon."——Dr. Daniel G. Brinton is preparing a "Guide-book for Florida and the South," his competency for which will not be doubted by those familiar with his scientific researches in that interesting peninsula.——The Rev. Gilbert Haven publishes, through Messrs. Lee & Shepard, his discourses, lectures, and speeches on slavery and the war, calling them "National Sermons." The same house intend issuing Mr. N. S. Dearborn's "Scrolls, Monograms, Ornaments, Crests, etc.," for the use of artists, designers, and art workmen; also, a new series of children's books by Mrs. Caroline H. Dall, linked together as "Patty Gray's Journey to the Cotton Islands.' The first takes the little girl "From Boston to Baltimore," in either of which cities Mrs. Dall is quite at home.

—Messrs. J. B. Lippincott & Co. have replied to the representations of the Messrs. Harper, as set forth in the *Nation* of March 25. In regard to the main issue—the republication of Dilke's "Greater Britain"—they repeat in substance the charge already brought through the *Athenæum*: that the Harpers, after a double notification, through the *Publishers' Circular* in May, 1868, and by letter "immediately on their own announcement," still persisted in reprinting the book in question. They repeat, also, their companion complaint that the same house had previously reprinted Trollope's "North America," although duly informed "through a personal interview" of Messrs. Lippincott's arrangements with the author; and add as a still later grievance their reproduction of Hepworth Dixon's "Her Majesty's Tower" "in an inferior style, at a nominal price." The Trollope, it appears, is at the bottom of the difference between the two houses, for Messrs. Lippincott & Co. now declare that they were bent on making a reprisal for the discourtesy of the Harpers in regard to it. With this in view, they say, they selected "Cast Up by the Sea," which the Harpers had announced—on the strength of sheets purchased in advance, as was supposed by the Philadelphia house. The whole book had been made in their establishment, including the wood-cuts, and was nearly ready when the box containing "ten electrotypes of illustrations, without letterings, for 'Cast Up by the Sea,'" arrived, by mistake, from Macmillan & Co. This was on the 1st of January, not in December, as alleged by the Harpers. On the 8th the book was published by the Lippincotts, who waited till the 13th before writing for an explanation to Macmillan & Co.—on the ground that they surmised a break in the arrangement with the Harpers; and of course being not unwilling to have it so, or to remain in doubt. When word came as to the proper destination of the plates, the Harpers were informed they could have them on receipt of the expenses already incurred. The Bulwer difficulty is disposed of by denying that the "courtesy of the trade attaches to a series of books reprinted by two houses"—viz., Messrs. Phillips, Sampson & Co. (now defunct) and the Harpers, and extending as far back as 1828. A review of the Dickens controversy would probably throw light on this last question. Messrs. Lippincott & Co. conclude by an urgent appeal for an international copyright law; in which both we and, we hope, most other readers of this disagreeable controversy are glad to join.

—No one can read without instruction and delight the admirable "Memoir of Jared Sparks, LL.D.," by Rev. George E. Ellis, which formed a part of the proceedings of the Massachusetts Historical Society in May 1868, and which has just been elegantly printed by John Wilson & Son, of Cambridge. Dr. Ellis was a co-laborer of Mr. Sparks in his "Library of American Biography," and in many other ways was intimately associated with him, as a friend and as a scholar of history. He was therefore well qualified to prepare this memoir, which, having had the benefit of access to the private papers and journal of Mr. Sparks, will serve the public at large all the purposes of a biography, containing in the compass of one hundred octavo pages all the information necessary to a just conception of the character of the deceased, his life-work, and the value of his example both as a man and as a historian. That example it would be difficult to overrate on either side; and certainly as a historian, in diligent application and research, sound judgment, delicate conscientiousness, absolute fidelity, and productive industry, he has had no peer among American writers. Dr. Ellis makes the striking remark that "the most expressive tribute of confidence and deference paid to Dr. Sparks for the qualities just ascribed to him, is found in the fact that might be richly illustrated here if space allowed, that in some sharp controversies and personal disputes between later historians and biographers and those who, as representatives of public men, have challenged them for alleged misrepresentations of their ancestors, Dr. Sparks has in every case been recognized as an impartial arbiter. I have read a pile of pamphlets touching the deserts and fame of Generals Green, Sullivan, and Schuyler, and President Reed, and others, as perilled by some judgment of Mr. Bancroft's, brought under question by grandsons and friends of champions, and in every case have noted how valuable to either side is the judicial estimate anticipated in the pages of the editor of Washington." In other fields, too, Mr. Sparks rendered great services: as pastor of a church in Baltimore, and afterwards as professor and president at Harvard College. At a period of intense theological controversy between the followers of Channing, of whom he was one, and the evangelical denominations, his contributions to the literature of the subject were models of temperateness and open dealing, of calm reasoning and earnest devotion to the truth. As president of Harvard, he greatly simplified the office, and impressed upon the college the enlarged views which he held with regard to the functions and proper management of such an institution.

—The originality of Mr. Robertson's comedy "School," now performing at Wallack's and in other cities, after first appearing on the London stage, has been stoutly affirmed by the successful author and his friends. The most that they will allow is, that merely the skeleton of the plot has been borrowed from Roderich Benedix's play, "Aschenbroedel" (Cinder-

ella.) Any one, however, who examines the text of the latter in the Leipzig edition will perceive that Mr. Robertson is much too modest in his acknowledgments, and that the differences between his play and the German original are due less to him than to the stage carpenter and scene painter. He has, with a few "reductions," followed closely the action, characters, incidents, and (in most of the scenes literally) the dialogue of "Aschenbroedel." He introduces no new character, but leaves out one—Elfrieda's (Bella's) foster-mother. Other variations we have noted are these: (1) The bull story and the lost slipper in the first act bring about the meeting of hero and heroine in a different but not more interesting manner than in the original; (2) a more elaborate flirtation between the two "second" characters; (3) Beaufoy's uncle an old fop, instead of the old fogy of the original; (4) the scenery of the first act is "on the glade" instead of in the school-room, and in the last act the "grounds of the seminary" are substituted for Lord Beaufoy's castle; the "realization" having taken place between the third and fourth acts (which causes a corresponding change in the dialogue of the latter); (5) the teacher's bombardment with books by the girls is original with Mr. Robertson; (6) a few witticisms and remarks by Mr. Robertson, mixed *à la salade italienne* with those scenes which he has wholly appropriated from Mr. Benedix.

—The March *Bulletin* of the Boston Public Library mentions the acquisition by that institution, through the liberality of Mr. Thomas G. Appleton, of "the excellent collection of engravings which formed part of the estate of the late Cardinal Tosti. . . . It is understood to contain 10,000 plates, many of them of the rarest kind—600 of them handsomely framed, the rest in richly bound volumes. They are expected to arrive during the spring, along with an antique bust presented by the representative and heir of the Cardinal. As a reinforcement of the valuable collection in the Harvard College Library they will provide the Bostonians with a rich store of material in this branch of art. The use of the library is said to be increasing in a remarkable ratio. In February last, 4,694 books were issued from the upper, or Bates, Hall, and about twice as many from the lower, plus 12,235 periodicals.

—Out and out novel readers will be as much pleased with one of Messrs. Tinsley Brothers' forthcoming books as with anything else that is just now promised by the English publishers. That firm will shortly issue "Breaking a Butterfly: or, Blanch Ellerslie's Ending," which is by no less a person than Mr. George Lawrence who sired "Guy Livingston" and "Maurice Dering." Nothing else of much interest seems to be doing at this moment in English fiction; but we must mention the fact that "Alice's Adventures in Wonderland," Mr. Lewis Carroll's most admirable book for children—only the children care little or nothing for it, and it is to grown people that it is so charming—has been translated into German, with the design of making it a lesson-book for students of that language, and a story-book for the young German folk. In theological and religious literature, first in importance is a translation of Professor Ewald's "Prophet Isaiah." Next come two volumes of "Sermons Preached in a Religious House," by that remarkably versatile, able, industrious Anglo-Catholic, Dr. John Mason Neale, who died at forty odd years of age, after having done more, and done it better, in history, poetry, controversy, and other branches of literature, than is ordinarily accomplished by two good writers in the course of four longer lives. A third edition is published of the work by the Lord Chancellor (Lord Hatherley, Sir W. Page Wood), entitled "The Continuity of Scripture as declared by the Testimony of Our Lord, and of the Evangelists and Apostles." It is a work of which its author says that he wrote it to strengthen others as he himself had been strengthened by a comparison of scripture with scripture. In poetry the Breitmann ballads seem to be having better success than anything else. Mr. Trübner announces "Hans Breitmann's Christmas," and "Hans Breitmann as a Politician," which, with "Hans Breitmann's Poetry," make three volumes, each accompanied by an introduction and a glossary. An edition copiously illustrated with etchings by Miss Anna M. Lea is promised. "A very clever and cutting pasquinade on Critics" is the description given of Mr. A. E. Hawkins's poem "The World, the Press, and its Critics,"—the two latter being topics which poets leave alone. Still another new volume of poetical selections is to be made by Emma, Lady Wood, who has chosen the title of "Leaves from the Poets' Laurels." In History and Biography nothing very noticeable presents itself. Mr. Motley's "United Netherlands" goes into a new edition. Another volume, covering the two years from 1595 to 1597, of the "Calendar of State Papers" is published. Mr. Norman MacColl is the author of a prize essay entitled "The Great Sceptics, from Pyrrho to Sextus," which makes a thin volume of 118 pages. Lord St. Leonard is the author of a work which will very likely prove entertaining and instructive reading, it is "Misrepresentations in Campbell's Lives of Brougham and Lyndhurst, corrected by St. Leonard." We hardly know whether or not we ought to place among books relating to Science and Art a "Domestic Edition" of the sumptuous "Royal Cookery Book," written by M. Jules Gouffé, who is the chef-de-cuisine of the Paris Jockey Club, and translated by his equally, or even more renowned brother M. Alphonse Gouffé, who is Head Pastry Cook to her Majesty the Queen. We feel the same doubt as regards another work—Mrs. Georgiana Hill's treatise on the art of "How to Stew, Hash, and Curry Cold Meat in a hundred different ways." This is a little sixpenny book, and housekeepers wanting it may get it for twenty-five cents, we suppose, of Messrs. George Routledge & Sons. Of greater nominal importance than either of the above-mentioned aids to good life and good living, and sound thinking, is "The Origin of the Seasons Considered from a Geological Point of View," in which the author, Mr. Samuel Mossman, undertakes to point out and account for the remarkable disparities that exist between the physical geography and natural phenomena of the Northern and Southern hemispheres. A work that the scientific man, if not the general reader, will very probably find superior in point of interest to Mr. Mossman's, is Mr. Cuthbert Collingwood's "Rambles of a Naturalist on the Shores and Waters of the China Sea, with Observations in Natural History during a voyage to China, Formosa, Borneo, and Singapore, in 1866–7." Mrs. Somerville's new work on "Molecular and Microscopic Science" we believe we have mentioned before—it is, however, no harm to mention it again as a work honorable to the learned writer of it, and of special value just now to the reader whom Professor Huxley, or somebody else, has incited to the enquiry as to the bases of life. On Mrs. Somerville's labors rest, it is understood, much of the more popular discourses on this vexed subject. Under the head of Art proper may be placed a new edition, the second, of the Bibliophile Jacob's (the late M. Paul Lacroix) "Les Arts au Moyen Age et à l'Epoque de la Renaissance," illustrated with seventeen full-page chromos and four hundred wood-cuts. Messrs. Sampson Low, Son & Marston, in announcing this second edition, make the promise of important and valuable additions, and of some new and better chromos in place of such as were not perfect in the first edition. Virtuosi, perhaps, rather than students of art will be interested in an enterprise in which Messrs. Trübner & Co. are engaging—that of reissuing the late William Marsden's "Numismata Orientalia Illustrata." We say reissuing; but the new edition will contain no letterpress, but simply the fifty-seven beautifully executed engravings of the Oriental coins which Mr. Marsden so enthusiastically collected, and the copperplate representations of which in his celebrated work were so diligently and vigilantly superintended by himself and his wife that the pictures have a world-wide renown among numismatists. The work has been selling at prohibitive prices, and this edition without letterpress is intended as a means of testing "the predilections of the antiquaries of the present age." Should they take up copies enough to make the experiment a success, Messrs. Trübner & Co. will put forth a complete and exhaustive compilation in which the work at present in hand will reappear accompanied by "a complete *corpus* of all the Kufic mintages of the Moslem dynasties hitherto made public, an undertaking to be still further extended (always supposing that the public approve), by the publication of a final volume in which shall be given "a more perfect compendium of the latter, or Indian, section" of Mr. Marsden's original work. Among miscellaneous works that almost refuse classification, we observe no less than four editions of the famous "Saurin Trial," which is advertised by some firms with the phrases that were to be expected, such as "startling recollections of convent life," etc. The best edition, and one worth owning, even to people who care nothing at all about the religious aspects of the case, is that published by Messrs. Sampson Low, Son & Marston, for it contains the very clever and readable speeches, revised by himself, of a very able speaker, Sir J. D. Coleridge, the Solicitor-General. It is said in the English papers that Mr. Deutsch, who made such a sensation a year or so since with his "Talmud" article in the *Quarterly*, has recently gone to Palestine and Egypt on business connected with the study of his favorite subject, and that Mr. Murray will before very long publish a monograph from his hand, in which the relations between the Christian religion and morality, and that of the Jews before Christ, will receive full discussion. Mr. Henry Morley is busy with a continuation of his "Tables of English Literature," which shows all contemporary authors, and all books of note, of any given year. "The Wedding-day in all Ages and Countries," by Edward J. Wood, will please the curious. We do not know how exact its information is.

—We find in the *Weser Zeitung* an amusing account of a book entitled "Moniteur des Dates," by Edward Maria Oettinger, said to be a convert

from Judaism to Catholicism, and author of a number of laborious works of reference, of an historical and biographical character. In the present—a huge quarto, that sells for thirty-five thalers—he pretends to give the origin and nativity, date of marriage and death, of more than 100,000 historical personages of all times and nations, from the creation of the world to the present time, interspersed with curious notes, etc., etc. These notes are indeed curious, as where the compiler, under the title "Locke," names twenty-one distinguished men who like Locke remained single, and adds—with great frankness, considering his own married condition—"These twenty-one *garçons* outweigh at least 21,000 married chaps." "Peace to thy blessed ashes, wise raven!" he says to the bookseller Murray, after relating the anecdote of his doubling for Campbell the price demanded for one of his works. In the difficulty of choosing which every dictionary-maker experiences, Mr. Oettinger has not always selected or omitted wisely, nor is his accuracy in details such as to render his work of much value to anybody. Thus, in one instance out of many, he says, of a mineralogist still living: "date of death unknown." Raphael he describes merely as an "historical painter." And perhaps as ludicrous a mistake as any that could be found is the location of the Galatian Ancyra—where in 1402 Tamerlane and Sultan Bajazet came to blows so terrifically—in Sicily!

—A recent number of the *Zeitschrift für Völkerpsychologie und Sprachwissenschaft*, of Berlin, contains an essay entitled "Zur Moralstatistik: Der Einfluss der Wohnung auf das Betragen," by Dr. Etienne Laspeyres, to which we call the attention of all those who take an active interest in the social welfare of the poorer classes. The author says in the introduction: "Among the various endeavors of our age to better the condition of the lower classes, that of reforming dwellings should be considered first in order by all those who do not chase after chimeras or pursue political aims. This reform should stand first, because here already more than in other attempts to elevate the lower classes the right idea has penetrated, that the principal evil under which the lower, but not the lowest, classes suffer is not a failure in acquiring, but wrong modes of consuming. Seneca says: 'Si quem volueris esse divitem, non est, quod augeas divitias, sed minuas cupiditates.' But it is not so important to increase wealth or to diminish wants as to increase wants, especially those which are most desirable from a moral point of view. Among the wants to be increased stands first the want of good dwellings, for a pleasant home is the mother of all domestic and public virtues. The humanity of our day does not endeavor to obtain for the lower classes such dwellings as they have had hitherto, at a cheaper price, but to awake in them a desire for dwellings which are, it is true, dearer than the former ones, but better by a far higher degree than they cost. The economy attained lies in the fact that a good dwelling prevents the inmates from many expenses outside the house, to which they have been hitherto driven by the discomforts of homes which were scarcely worthy the name. A higher moral condition is seldom reached by a preaching of morals, but by external advantages; and such an external advantage, through which one should aim at the internal, is the procuring of dwellings suitable for men." What is the influence of dwellings on morality, the author points out by means of statistics gathered in the city of Paris. The results gained from the research show that "the greater the number of good dwellings, the more unfrequent becomes immorality; the less the number of good dwellings, the more frequent is immorality." Of course there is here the difficulty of such arguing—the possibility of mistaking cause for effect and effect for cause; bad dwellings as surely come from the immorality of the people dwelling in them, and perhaps much more surely, than the immorality is caused by the bad dwelling. Still it is beyond a doubt that the consideration suggested by the author is a very weighty one. In the number before us are two other highly interesting articles: "Mythological Ideas of God and Soul," Part II., by H. Cohen, and "The National Epos of Russia," by W. Bistrom.

—The idea is mooted of uniting the Universities of Marburg and Giessen and transferring them to Frankfort-on-the-Main. Interesting facts have been adduced relative to the latter university, which seem to show that some such step would become a necessity. In 1847 Giessen had 570 students, of whom 159 were not natives of Hesse-Darmstadt, and who were mainly attracted thither by the high reputation of Liebig, then chemical professor at the university. At that time also there was a complete Roman Catholic theological faculty, which drew its quota of young men. In 1850 Liebig received a call to Munich, but would have staid where he was had the Government consented to certain changes and improvements, which he deemed necessary to the maintenance and heightening of the reputation of the scientific, and especially of the chemical department. He was allowed to remove to Munich. This was the first blow. In 1854 the government of Herr von Dalwigk, a great truckler to the ultra-montane priesthood, allowed the Bishop of Mainz to open a theological seminary in Mainz, and to subject all Catholic students who studied at Giessen to difficulties next to insurmountable. The result was that the Catholic professors in Giessen had to lecture to empty benches, and that the faculty had eventually to be dissolved. This was the second blow. Accordingly, we find, in 1861, only 335 students at the university; in the summer of 1868, only 319, and in the winter semester 1868–'69, only 309, of whom 3 were non-Hessians—the lowest number for the last 46 years. Considering that there are 59 tutors of all ranks: 6 theologians, 6 jurists, 13 medicals, and 34 in the philosophical department, or one professor for between 5 and 6 students, it would seem high time that some change were made.

—We see from a letter of Dr. Petermann's that the second German North Pole expedition is as good as secure, and will probably leave Bremerhaven in the first week of June—if possible, on the 1st of June. It will consist of two vessels—a screw steamer of 120 tons and 30 horse-power and the sailing yacht of 80 tons employed in the last expedition. The end in view is the same as before, namely, to explore the Arctic region, from seventy-five degrees north latitude onwards, keeping along the East Greenland coast. The command of the whole will be entrusted again to Captain von Koldeway. Two astronomers, Börgen and Copeland, of the observatory at Göttingen; the Alpine traveller, Julius Payer, from Vienna, who will make geological and related observations; and a medical man, who will note the zoölogical phenomena that may present themselves, are to accompany the expedition. It is interesting to find that a love of sea-life and adventure seems to be taking hold of the German youth to a degree hitherto unknown. We are informed, for example, that all the vacancies for sailor boys on board the fleet of the North German Confederation, are filled up till 1871, and that Hamburg, Stettin, and other sea-ports, are crowded with youths wishing to join trading vessels. This is significant; it is at all events a healthy omen for the future of Germany.

THE PROSPECTS OF THE WORKING CLASSES.*

Mr. Thornton, who is already well known in the world of economists for his book on peasant proprietors, has in the volume before us made a very full and lucid summing up of the discussion touching the condition and prospects of the laboring classes. He begins by admitting, as nearly all who treat the question calmly and intelligently now do, that the laborer's position is one of terrible hardship and discomfort. Probably nothing has done more to sour the temper of the working classes, and widen the breach between them and the more fortunate members of society, than the persistent attempts made by preachers, moralists, and philosophers, to persuade the laborer that his lot was one of "dignity," and might be sweetened by content if he would only look at it in the right way—and that working in a mine or factory was, after all, no worse than working in a bank, or law office, or study. None of those who promulgate these theories ever recognize their soundness, however, in practice. Nobody leads a life of manual labor who can help it, and nobody treats the laborer in social intercourse as a man whose career is one of "dignity." In America these matters have been and are now made worse by the pretence constantly put forward, that not only is the laborer's position an attractive one, but that anybody who pleases can rise out of it; that such is the nature of our institutions that a mechanic has only to be prudent and diligent to become himself a capitalist and employer, the fact being, that the rise of laborers into capitalists is rare, not of course nearly so rare here as in Europe, but rare enough to make the talk of it as a thing on which the laborer may reasonably count, not only misleading but exasperating.

We are glad to see both from Mr. Thornton's book and Professor Beesley's recent lecture, that those economists who discuss the laborer's condition in a purely philosophical spirit, and without putting themselves forward as in any special manner his champions, are laying the foundation of a good understanding with him, by frankly acknowledging that his life is a hard one, and that the chance of ceasing to be a laborer, which is constantly held up before the eyes of "the sons of toil," by way of reconciling them to their toil, is not sufficiently great to be worth consideration by the mass; that, moreover, what is wanted now, as Professor Beesley has well said, is such an arrangement of the relations between labor and capi

* "On Labor. Its Wrongful Claims and Rightful Dues; its Actual Present and Possible Future. By W. Thomas Thornton." London: Macmillan & Co. 1869.

talist, as will enable not the energetic, pushing, and sagacious laborers to become capitalists—for the energetic, pushing, and sagacious must always and in every class be but a handful—but the common run of laborers to lead healthier, more comfortable, and more *secure* lives. Mr. Thornton in reply to Mr. J. S. Mill's observation that he does not "recognize as either just or salutary a state of society in which there is any class which is not laboring . . . except those unable to labor, or who have fairly earned rest by previous toil"—well says that "what to him appears so deplorable, is not so much that there should be a class exempt from the necessity of labor, as that there should be one to whom it is necessary to be incessantly laboring." This really touches the kernel of the labor question. The problem before society is not to convert a few dozen more laborers every year into employers or men of leisure, but to give the whole laboring class a larger share of the leisure which in the present state of science the world has at its disposal.

Mr. Thornton in discussing the influence of supply and demand on prices and wages, repudiates the received theory, and maintains that both prices and wages are in practice fixed by competition—as regards prices, between dealers, and as regards wages, between laborers—and maintains that the doctrine of the economists, that the rise in either case is the product of a certain amount of haggling between the purchasers and sellers of either goods or labor, is a figment of the imagination. The chapter on this point is original and striking. He makes a good deal of fun of the "wages fund," of which the economists talk so much, and pronounces it a "will o' the wisp," which has no existence. He says, by way of a *reductio ad absurdum*, that if there be such a fund in existence, it must be composed of small sums in the hands of individuals, and asks triumphantly, where are these sums to be found? By "wages fund," however, is usually meant simply that portion of the capital of a country which is available for the employment of labor, and that is not so difficult to discover as Mr. Thornton seems to think. Nobody keeps "capital" by him in his house, so that it will never be found in the hands of individuals; but everybody who has money invested, or lying at his bank, in reality has made a contribution to the wages fund. Every workingman who puts five dollars in the savings bank, thereby puts five dollars in the hands of somebody who will use it to hire labor in some form or other, because otherwise the bank could not afford to pay interest on it, and, in fact, its yielding interest is one of the signs that a sum of money is somewhere and somehow used as part of the wages fund.

The doctrine of Mr. Thornton with regard to the rights and duties of labor and the rights and duties of capital is as far removed from the Socialist view as the most ardent supporter of competition could desire. He shows conclusively that the laborer has no right to anything but the product of his labor; that to claim for him a right to employment, is simply to claim for him the right to use a part of the product of other people's past labor; that the capitalist owes him nothing but what he agrees to give him, and that he is entitled to nothing except what he can bargain for; in other words, that individual liberty lies at the basis of all healthy social life, and that all theories which diminish it are anti-social in their tendency. But inasmuch as the laborer is entitled to all he can bargain for, and his poverty has always put him at a disadvantage in treating with the capitalist, Mr. Thornton defends vigorously his right to put himself as nearly on a level with the capitalist as possible, by combination. In other words he defends the trades unions, and his chapter about them, showing what good and what evil they have wrought, to what extent they have permanently raised wages, and aided in the moral and social training of the working classes, is one of the most interesting in the book. His exposure of the fallacy so constantly put forward that wages lost by a strike are always dead loss, even when the strike is followed by a rise, furnishes an excellent illustration of the acuteness he brings to the discussion, and his theory that the loss ought really be treated as money sunk in bettering the condition of the laboring class, and the rise in wages as interest on it, is worth everybody's attention.

But for real and permanent improvement in the workingman's condition Mr. Thornton looks, as a greater and greater number of calm observers look every day, to the extension of industrial partnerships and of coöperation only. To the extension of industrial partnerships there are two serious obstacles: one is that their existence must always depend on the will of a few individuals, and that their success is very difficult in any branch of industry in which the sum expended on labor does not bear a very large proportion to the sum expended on material, and machinery, and buildings. In only two instances have they been completely successful in England—the Briggs' Colliery and the Crossley Carpet Manufactory. To coöperative production, pure and simple, there are the old objections that it requires more intelligence and self-restraint than workingmen usually possess, and that a manager competent to take charge of great industrial operations cannot be obtained by popular election and retained by hire. But to this it must be replied that workingmen are every day gaining in intelligence, self-restraint, and skill in combination; that coöperative production has already succeeded in a great number of instances, and that whatever difficulties it now encounters in defects of human character, are no greater than have been encountered and overcome in other fields of activity; and that the difficulty in obtaining business managers for coöperative societies is no greater than the great joint stock companies have to deal with, and may be and will be met in the same way. If it be said that a manufactory is like an army, and has to be managed on the same plan, the answer is that some of the greatest generals the world has seen were picked out of the crowd by the popular estimate of their ability, were hired to do their work, and did their work well, partly for pay, partly from love of reputation, and partly from love of the cause. The coöperative army can surely find its generals in the same manner.

Anybody who desires a clear and candid statement of every phase of the labor controversy, a decidedly vigorous, though by no means dry treatment of all the points of political economy which this controversy raises, as well as a very full and interesting account of the working of the trades unions, industrial partnerships, and coöperative associations, both in England and on the continent, can hardly do better than read Mr. Thornton's book. There are several passages which we had marked as open to exception, but which want of space prevents our discussing; such for instance as that in which he accepts in its ordinary form the prevailing doctrine that high profits raise wages, by causing a flow of capital into the business in which they are made, leaving out of sight, what is to the laborer the most important element in the case, the element of time. Capital is attracted to a business by large profits, but it flows into it slowly, and rarely affects wages in less than two or three years. The rule therefore, as a consolation for laborers, or as an argument against strikes, is about as valuable as the old saying: "Live, horse, and you'll get grass."

TWO NEW BOOKS OF AMERICAN TRAVEL.*

In a pleasant letter prefixed to his recent volume, "By-Ways of Europe," Mr. Bayard Taylor tells the public in confidence that this is, probably, the last book of travels he shall publish. A few interesting portions of the globe remain unvisited, and circumstances may occur to draw him toward them; but this he does not anticipate and does not desire. He loves the repose of domestic life, on the spot where he was born. He is not a traveller by profession, though his profession as a journalist has made him a traveller. He is not a traveller by choice, though practice, in time, made travelling pleasant, and at moments the passion of the explorer came over him. He has no inordinate fondness for adventure; no restless desire for change; no over-mastering curiosity to behold all the aspects of nature; no ambition to be a discoverer of new worlds, or of new beauties in old worlds. He puts a modest estimate on the value of his journeyings, and on the pages that record them; regards the entire nomadic period of his career as incidental, not more than tributary, and hardly that, to his real work, which is that of a man of letters. Mr. Taylor's judgment of his eleven popular volumes of travel, evidently sincere, is far more just than such judgments usually are. The value of his books is not scientific in any sense; they do not aspire to be scientific; they are not written with any purpose to instruct mankind on any technical matters touching the globe or its inhabitants; they are made up mainly of newspaper correspondence, letters, diaries, and popular lectures, prepared by the way, or worked up from materials collected on the road, and are faithful records of incident, rather than labored productions of thought. But lest this should seem to be rating them lower than they deserve, it should be said that for books of their kind they are remarkably good. Few men take such pains to do secondary labor as well as they can. Had Mr. Taylor made travelling a profession, he could scarcely have done it better. His powers of observation have been cultivated; his style has been carefully trained; he has learned many languages; he has gathered the requisite information from authentic sources; he has read much about the countries he visited; he is awake, intelligent, ready and always capable of telling his readers whatever it may be interesting or agreeable for them to know. His pages are not learned nor brilliant, nor fascinating, nor remarkably suggestive. They contain no fine writing; no elegant passages; no highly wrought descriptions; no profound theoriz-

* "By-Ways of Europe. By Bayard Taylor." New York: G. P. Putnam & Son. 1869. "The Old World in its New Face. By Rev. Henry W. Bellows, D.D." Volumes I., II. New York: Harper & Bros. 1868, 1869.

ings. They give an even, steady flow of agreeable talk about things that come under the eye of an accomplished man. Careful, sober, business-like, they leave on the reader's mind an impression of entire accuracy. The author makes a point of painting details one by one, setting down each fact precisely as it existed, in form and color and relations. He dresses nothing up; he tosses nothing down. No intellectual vapors distort, cloud, or glorify his scenes. He is as fair as the photograph. To the romantic or sentimental reader this is not interesting; it is tame and monotonous, rather. But to the sober, rational reader it is satisfactory. We can understand what Humboldt meant when he said to the modest, self-depreciating traveller, "You paint the world as we explorers of nature cannot. Do not undervalue what you have done. It is a real service; and the unscientific traveller, who knows the use of his eyes, observes for us, always, without being aware of it."

The present volume contains a series of sketches of interesting places not commonly visited by the tourist or traveller. They are done in the author's painstaking manner. The reader detects in them a hardly perceptible trace of weariness, as if travelling had become an old story. But saving this lack of relish, the book is as good as any of the preceding ten. A few of the chapters are very engaging. We enjoyed especially the "Grande Chartreuse," of which one gets a different but more satisfactory impression from Mr. Taylor than from Mr. Matthew Arnold, and the "Island of Maddalena," with the distant view of Caprera, and the admirable portrait of Garibaldi. No one can read those two chapters and then charge the writer with being either an inaccurate observer, a careless narrator, or an incompetent critic. Indeed, it is because of his excellence in these cardinal respects and his conscientious adherence to what he deems the traveller's duty that to many he appears restrained and dull. He aims at presenting the simple truth, with pre-Raphaelite accuracy. His imaginative and speculative faculties find play elsewhere. As literary productions these volumes of Mr. Taylor may easily be surpassed. But as books of observation their value will be permanent.

On opening the second volume of Dr. Bellows's Letters from Europe, fancifully, and not very appropriately called "The Old World in its New Face," we find ourselves in another atmosphere entirely. The qualities that distinguish Dr. Bellows and shine all over his pages, Mr. Taylor either lacks or discards. Dr. Bellows is brilliant, Mr. Taylor is sober; Dr. Bellows speculates, Mr. Taylor observes; Dr. Bellows always has a theory to account for what he sees, Mr. Taylor keeps his theories to himself and contents himself with telling what he sees. Intelligent, eager, swift, his brain teeming, his mind running far in advance of his information, Dr. Bellows incessantly interposes his personal feelings and judgments between the reader and the scenes through which he takes him. Mr. Taylor, more careful and experienced, more conscientious as a narrator—more modest perhaps—keeps himself studiously in the background. One volume, therefore, is a magazine of facts, the other a collection of criticisms. Dr. Bellows's volume is the more fascinating of the two, but we are forced to pronounce it by far the less useful. It is composed of a multitude of letters written by a rapid traveller in great haste. The information his volumes contain must have been picked up by the way. The descriptions of natural scenery are of the slightest character, fleeting and shadowy; a hurried touch here and there is all we get; an immense reach of ground is traversed; but when we close the book, instead of a series of firm, well-wrought pictures of scenery, life, and manners, we have the remembrance of a flying figure with a trail of light behind him. The trail of light is remarkable. The chapters sparkle with good things. An ingenious fancy, a lively conceit, a bright surmise, a pious morality, a quick-witted explanation or conjecture, meets the reader in almost every sentence. The agile, discursive intellect so anticipates the sterner faculty that investigates, that when the latter arrives on the ground it finds its work all done—at least it finds its place preoccupied, and no time or patience for its methods. This evident preponderance of the speculative over the observing power, throws the historical and statistical portions of the chapters into the shadow of a perplexing distrust. Dr. Bellows's statements of fact may be entirely correct; but where correctness of statement is a secondary consideration, we soon learn to question it, and the bare suspicion of inadequate knowledge destroys the confidence that knowledge alone can justify. This suspicion crosses us so frequently in perusing these pages, that it at last becomes a permanent state of mind.

It seemed likely that a clergyman would supply some interesting information in regard to Jerusalem. But there also the same predominance of the speculative over the investigating faculty showed itself. We have but little description and no fresh knowledge. Robinson is once or twice referred to on matters of topography; but no reference whatever is made to Lieut. Warren, the able explorer who is employed by the Palestine Fund and whose excavations, opening a new era in Palestinian research, cast discredit on very much that has been discovered or surmised before. The chapter is interesting, but it certainly puts no new face on that portion of the Old World.

Remembering the author's zeal for the Cretan cause, we turned naturally to the chapters bearing on that question. But here, too, the same dazzling uncertainty of view confuses us. We read in one sentence: "What business has the Turk in Europe any longer? Two or three millions of Turks and Moslems govern, at present, all the rest (from eleven to thirteen millions), who not only have the intelligence but the enterprise and wealth of the nation in their hands." The question is partly answered in the next sentence, which admits that "the Christians have not as good a name for integrity, veracity, and frankness as the Turk himself, who, lazy and conceited as he is, slow to learn and dull at that, is proud, sticks to his word, and disdains to cheat. He loves and practises his religion, too, and despises Christians for neglecting theirs." In the next chapters the Greeks get no more praise for their civilizing, than has just been awarded them for their moral qualities:

"Beyond a circle of a few miles about Athens, there is no such thing as a public road in Greece, and of course there can be no development of commerce, no inducement to agriculture, no safety in rural districts, no home out of the towns." "Out of a few towns like Athens, Syra, Nauplia, Patras, Missolonghi, their houses are rude, unfurnished, and inconceivably comfortless; men, women, children, dogs, sheep, goats, pigs, often herding in a common sty—for their rude huts deserve no better name." They are so satisfied with what Greece has done and been, that they love their name and country, independent of what it now is, and respect themselves independently of what they now are. "They will fight for ever for their liberties, but they will not submit to the drudgery, the painstaking imitation of European customs, and slow, well-considered methods by which alone their country can be restored, their soil recovered, their houses improved, their finances reinstated, their mechanic arts and agricultural industry renewed. They import twice as much as they export, and are always running deeper in debt."

This is true, and it is well said; but is it quite consistent with indignation at the Turks abiding in Europe, or with enthusiasm in behalf of the Greeks as their antagonists and successors?

CURRENT GERMAN LITERATURE.

Heinrich Blankenburg's "Internal Struggles of the North American Union down to the Presidential Election of 1868" (*Die innern Kämpfe der Nordamerikanischen Union bis zur Präsidentenwahl von* 1868. Leipzig: Brockhaus) is another sign of the intense interest Europe has begun to take in the history of the United States, since the happy termination of the great civil war. The book is divided into three sections, headed respectively: The causes and development of the internal struggle till the Southern rebellion; the war of secession; the political struggles since the termination of the war of secession. An appendix contains a complete German translation of the Constitution with its amendments, and a clearly executed map of the States. The opening sentences give one a favorable impression of the author's spirit and intelligence; he refers to three historical phenomena as having determined the character and course of events during the present century; viz., Frederic the Great, the French Revolution, and the foundation of the United States. Of the last-mentioned event he rightly remarks that its significance was never fully estimated till after the late war. Friederich v. Raumer was the first to put it on a level with the French Revolution; but whereas the latter was mainly a negative movement, the foundation of the great Republic was a grand positive movement towards the solution of social and political problems, which for Europe are encompassed with almost unconquerable difficulties.

Attention should be called to two theological works which have just appeared, namely, "Christian Dogmatics" (*Christliche Dogmatik*) by Prof. Biedermann of Zürich, and "God, World, and Man" (*Gott, Welt und Mensch*) by Eduard Baltzer. Professor Biedermann may be regarded as the scientific head of what is known in Germany as the *Zeitstimmen* party. *Zeitstimmen* (Voices of the Time, is the name of a popular theological journal, edited by Lang, a Swiss pastor, the object of which is, in the main, to impregnate the public with the views of religion, Christianity, God, man, time, and eternity known as the Tübingen views. Professor Biedermann is the principal scientific theological co-operator of Pastor Lang. The system of theology to which we are here referring may loosely, if not strictly, be described as Hegelian in its philosophic basis, Straussian in its critical character and results, and practically Pelagian as opposed to Augustinian. The author of the second book is a preacher of the so-called *Freie Ge-*

meinde (Free Associations) and probably their ablest man. As to these *Free Associations* there is little difference between them and the English *Secularists*:—one might say that if the two were to exchange nationalities they would exchange characteristics also. Herr Baltzer believes that a new religion or, perhaps rather, a new form of Christianity has become necessary; and has written his book for the purpose of expounding and preparing the way for the adoption of what he holds to be the religion of the future; to wit, the religion of the *Freie Gemeinde*. In an introduction he discusses the nature of religion, and in six further chapters the doctrine of the Beautiful, or Æsthetics; the theory of the world, or Dogmatics; the doctrine of self-knowledge or the Philosophy of Religion, Ethics, Art; and the doctrine of work, or Biology.

A work praised as learned and impartial, though decidedly Protestant, is Barmann's "Politics of the Popes from Gregory I. to Gregory VII." (*Die Politik der Päpste von Gregor I. bis auf Gregor VII.* of which two parts have appeared. A good view of the Life and Times of the Emperor Diocletian is presented by Theodor Preuss in his *Kaiser Diocletian und seine Zeit*, just published by Dunker & Humblot. It is said to do violence occasionally to the sources for the sake of establishing harmony and certainty where they are not realizable; but light is also thrown on such events as the burning of the Egyptian books of witchcraft, on the exclusive persecution of the Oriental religions, and on the reasons of Diocletian's special antipathy to Christianity. Professor Dr. Wagner's treatise on "Russian Paper Money" (*Die Russische Papier-Währung*) published by Kymmel of Riga, in which he makes suggestions as to the best mode of returning to silver or gold payments, deserves the attention of all who understand German. The author stands high amongst German writers on banking and financial questions. The work consists of a theoretical and a practical part:—the former developing general principles; the latter relating specially to Russia.

The first volume of a new, and what promises to be a very full, history of the Seven Years' war (*Geschichte des Siebenjährigen Krieges*) by Arnold Schaeffer, has recently been published by Hertz of Berlin. It is divided into three books, the first discussing the origin of the war: the second, the war itself from its outbreak to the Austro-French treaty of spoliation; the third, the war-year 1757. The account given of the European state-system prior to the war; of the politics of the great powers after the peace of Aix-la-Chapelle, and of the general position of Europe at the time, is marked by great clearness, correctness, and judgment. The course pursued by France, in particular, is shown to have been decidedly influenced by Madame Pompadour, the mistress of Louis XV., who was irritated at Frederic the Great because, when Voltaire came to express the great respect she entertained for him, he replied, "Who is she? I don't know her,"—a contempt which forced from her the genuine woman's threat, "I'll make him know me!" Herr Schaeffer has had access to, and has made good use of, all sorts of archives. Among other important documents adduced by him is one whose existence has been repeatedly denied—recently, for example by the Hanoverian historiographer, Klopp, in his work on Frederic the Great—namely, the offensive treaty formed between Austria and France against Prussia: the Russian Government put him in possession of it. Those who wish for an able—though naturally Prussian—history of this eventful war cannot do better than consult the above work.

It has hitherto been popularly assumed that whilst the German language is greatly indebted to the French, the latter owes very little to the former. A German writer of the name of Brandes, in a work entitled, "Words derived from the German in the French Language," (*Die Wörter deutschen Stammes in der französischen Sprache*) and published by Meyer in Detmold, has undertaken to show that this is a mistaken notion, and seems pretty successfully to establish his position. Who would have thought that warlike, glory-hunting France owed so many terms relating to war, to peaceable, philosophic Germany? and yet such words as bataillon, brèche, garde, bivouac, blindes, guerre, can be traced to German roots. The same thing may be said of sea-terms, like avarie, ballast, bord, cajute, espaure, ètai, harpon, houle, mât, matelot, prame, rade, semaque, guinder, haler, hisser, toner; of many titles of office, as, *e.g.*, landgrave, marquis, maire, sénéchal, maréchal, sergent; of feudal expressions like barre, bourg, hameau, hanse, fief, félonie, vassal; of architectural terms, like balcon, bouge, digue, salle, seuil, stalle; of the names of animals, like bison, bècassine, caille, choucas, chouan, chat, écrevisse, escarbot, gerfaut, grillon, hamster, héron, mouette, rat, renard. One is not surprised to find that words for eating and drinking have passed from the German to the French side of the Rhine, as, *e.g.*, bière, bouteille, cruche, douve, fourrage, hanap, soupe, tonne, rôtir: but it is curious that the French, whom no one credits with the gift of keeping their tongues in order, should owe or get their designations for chattering, etc., to the solemn Germans; for example, chaqueter, causer, flaboyer, haranguer. It is not strange that the French mignon, with its compounds, is derived from that distinctively German term *minne*.

The following is a classified list of the books published in Germany during the year 1868 as compared with 1867. A similar list is published every year by the bookselling firm of Hinrichs in Leipzig—the publishers of the weekly, quarterly, and annual catalogues of all the new books that appear in every department of science and literature.

	1867.	1868.
1. Encyclopædias, Collected works, Bibliography	183	196
2. Theology	1365	1440
3. Jurisprudence, Politics, Statistics	920	970
4. Medicine, the Veterinary art	493	528
5. Natural Science, Chemistry, Pharmacy	575	636
6. Philosophy	85	126
7a. Pedagogics, German Schoolbooks, Gymnastics	932	966
7b. Children's books	228	246
8. Classical and Oriental languages, Mythology	470	440
9. Modern languages, Early German literature	320	323
10. History, Biography, Memoirs, Correspondence	648	710
11. Geography	249	290
12. Mathematics, Astronomy	119	134
13. Military matters, the Horse	272	281
14. Commerce and Trade	330	425
15. Architecture, Machinery, Railways, Shipping	168	190
16. Arboriculture, the Chase, Mining, etc.	88	83
17. Agriculture and Horticulture	245	280
18. Belles-Lettres (novels, poetry, etc.)	852	958
19. The fine arts (painting, music, etc.), Stenography	397	437
20. Popular works (tales, etc.)	212	237
21. Freemasonry	12	14
22. Miscellaneous works	422	381
23. Slavic and Hungarian literature	36	48
24. Maps	224	225
	9,855	10,563

According to this comparative list there were 708 more works published in 1868 than in 1867. It will be seen that the greatest increase has been in the department of belles-lettres—probably in consequence of the publication of a great many tales and poems of little value. The next largest increase is in books relating to trade and commerce—a circumstance which might be taken as a sign that the Germans are becoming less idealistic in their pursuits. Whether such a deduction would be right or not, I believe it is a fact; and the well-wishers of the nation cannot but rejoice if it take a more realistic turn. Next comes theology. If one were not aware that an awful number of pamphlets—each reckoning of course as a separate work—had been issued during the year on the subject "What will Prussia, the all-devouring, do with the Lutheran churches in the annexed provinces?" one would be inclined to exult, and say, "Surely the reports of Germany being over-run with materialism, atheism, deism, tendencies not favorable to theological productiveness, must be either groundless or exaggerated!" As might have been prophesied in view of the legal changes that have been going on in North Germany, the law department shows also a not inconsiderable augmentation. But the men of science have been still more active. There is one question the list does *not* suggest—how many of the above works are mere waste paper? We fear a larger proportion than most believe. It is impossible to answer the question, for the publishers bury their still-born offspring in the silence and dead of night. Of one thing, however, we are sure, that the *bookbuyers* bear no proportion to the *bookmakers*: *how*, this is not the place to explain.

Abriss der Deutschen Literaturgeschichte. Von Dr. E. P. Evans, Professor der neueren Sprachen und Literatur an der Universität von Michigan. (New York: Leypoldt & Holt. 1869. 12mo, pp. 235.)—The German language is now a regular study in all our respectable colleges, and in some of them a required study. After the first or second year of the collegiate course, students have their option whether they will keep on with Greek or substitute this modern tongue. A very large number avail themselves of this privilege, and probably two thirds of the Junior and Senior classes choose German as one of their principal studies. In the distraction of college society, and in the short time allowed for the study, it appears to be impracticable to teach students to *speak* the language with fluency or grammatical accuracy. What a wise teacher most cares for is, to give a general knowledge of the language and literature, and enable the student to see its treasures. Three months of residence in Germany will ensure more familiarity with the spoken tongue than three years of study in one of our colleges, even under a competent master. The most important aid to a teacher in giving a knowledge of German literature, its varieties, its growth, and its characteristics, is a good historical sketch of that literature, which shall be at once comprehensive, concise, well-balanced, and accurate in its judgments. Every experienced teacher feels the need of such a help

in his work. The model book for German teaching will be one which can be used as a text-book for study, while it tells the story of the language itself. Such a book, we are of opinion, Professor Evans has produced in his "Abridgment of the History of German Literature." He gives in it, without extracts, not only pleasant and easy reading in a clear and pure German style, but an amount of information concerning the German novelists, dramatists, and poets, from the earliest records of the people, that can scarcely be found elsewhere in the same compass. While there are in the book none of those pedagogue notes which mark the ordinary text-book, there are others embodying very useful references, as well as marginal guides to keep in mind the order of time and place, and hinder the student from confusion; though we think it would have been better if these last had been reserved for authors only, and not also for the titles of works. The table of contents is very full, and is much more than a bare statement of the subject. The index at the end is all that could be desired. A more useful book for practical instruction has not, for a long time, come under our notice.

But we should do injustice to Professor Evans if we should leave the impression that he has made here nothing but a school-book. On the contrary, many who consider themselves German scholars will thank him for this compendium of literary history in which there is not a word of irrelevant matter, and very few judgments to which any candid scholar will take exception. Some will perhaps be disappointed that more notice is not taken of their favorite authors. Others may find that names that they expected to see are wholly omitted. But in a work of this kind some names must be omitted—on a principle well defined in the introduction—and others must be passed with a bare mention. Every really important name in German literature will be found in the volume, and every significant author appears in his place. The book does not profess to be exhaustive. It is an "abridgment," which may easily be read in two months by a college class, and, of course, cannot have the completeness of such solid treatises as those of Koberstein and Gödeke, of Kurz and Gervinus. But many of the criticisms of these authors appear here in the sharp and clear sentences of the American professor. Instead, however, of the single long chapter of which the book consists, it seems to us that greater clearness would have been attained by distinguishing typographically the epochs which the author has adopted. It would have added nothing to the bulk or cost of the volume.

Our Charley, and What to do with Him. By Mrs. H. B. Stowe. (Philadelphia: J. B. Lippincott & Co. 1869.)—Mrs. Stowe discusses the question of childhood in the essays which give a name to this little volume with her usual good sense and good feeling. The book is not a new one, and its intrinsic worth was not probably the primary reason for reprinting it, although, to be sure, appropriate occasions for talks like these about Charley to Charley's mother and other natural guardians, are, we suppose, perennial. It is only of Mrs. Stowe's portion of the book, however, that we are inclined to speak with any praise. The little fairy tales contributed by a friend are rather sad examples of the ineffectual efforts of the imaginative faculty to blossom into luxuriance under chilling influences.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Alcott (Miss L. M.), Little Women	(Roberts Bros.)	
Auerbach (B.), The Villa on the Rhine, swd., Part II	(Leypoldt & Holt)	$0 50

A LIBRARY OF EDUCATION,

Selected from the Best Writers of all Countries.

This attempt at bringing within the reach of all the thoughts of the best minds on a most important subject is meeting with high appreciation.

What recommends it apart from its subject-matter and its cheapness is its convenient form—permitting of being carried about the person and read at spare moments, and so light as not to fatigue the hand—and the fact that each work will be complete, and, as far as possible, standard.

The following enumeration will give some idea of the field to be occupied: *Locke*, Thoughts on Education; *Bacon*, Advancement of Learning; *Milton; Ascham*, The Schoolmaster; *J. S. Mill; Carlyle; Prof. De Morgan; Sir Edmund Head*, Shall and Will; *Rousseau*, Emile, *Mme. de Genlis*, Adelaide and Theodore; *Montaigne*, On the Institution and Education of Children; *Fenelon*, On the Education of Girls; *Pestalozzi*, Leonard and Gertrude; *Jean Paul Richter*, Levana; *Horace Mann; Dr. Channing; Franklin; Plato*, Republic; *Xenophon*, Cyropædia, etc., etc.

Vols. 1 and 2, containing Locke's "Thoughts on Education," and minor essays on Study, Reading, etc., together with Milton's Epistle on Education, and lives of both authors, are now ready. They will be mailed to any address for 20 cents each.

J. W. SCHERMERHORN & CO.,
14 Bond Street, New York.

THE PUBLISHERS' TRADE LIST DIRECTORY FOR 1869 contains a complete Catalogue of all the Books published by nearly every publisher in this country. As a work of reference for BOOKSELLERS and BOOK-BUYERS, LIBRARIANS and LITERARY MEN generally, its value will be incalculable. It saves time in making up or filling orders by suggesting other books or articles; indicates where to buy certain classes of books or stationery advantageously; gives the prices, etc.

All the lists of Juvenile and Religious Books are in Section 1st. All Belles-Lettres, Fiction, etc., are in Section 2d. All School-books are in Section 3d. Law, Medical, and Scientific Works are in Section 4th. STATIONERS and FANCY GOODS are in Section 5th.

The entire work costs $5, or each section can be obtained separately at $1 each. Address,

HOWARD CHALLEN, Publisher,
1308 Chestnut Street, Philadelphia.

G. P. PUTNAM & SON

A. ROMAN & CO., Publishers,
27 Howard Street, New York.

MESSRS. LEAVITT, STREBEIGH & CO.

CLINTON HALL, ASTOR PLACE, NEW YORK,

Announce the following important sales of

AMERICANA.

Monday, April 19, and following days, will be sold by auction

THE PRIVATE LIBRARY OF MR. W. ELLIOTT WOODWARD, Roxbury, Mass. The Catalogue contains some 700 pages, and upwards of 7,000 titles, consisting almost

Exclusively of American Books,

and specially rich in scarce pamphlets. Of Local Histories there are nearly or quite 500 titles; of Washingtonians, upwards of 300 titles. The memorials of the death of the late President Lincoln comprise nearly everything published concerning that event in book or pamphlet form.

The collection contains a great number of books by early New England authors, fifty or more by the Mathers, several by Eliot, nearly a complete collection of the early works relating to Salem Witchcraft in New England, Indian Captives, Colonial Histories, etc., etc. Also, a Hebrew Pentateuch, written on sheepskin, before the invention of parchment—a roll nearly three feet wide and sixty feet in length—which is probably one of the most valuable manu scripts in the country.

Concerning a library so varied in character, but little idea can be given in the limit of an advertisement, but an examination of the catalogue will at once make manifest the fact that the collection is one of most remarkable character, consisting, in great part, of books which are seldom offered for sale.

Catalogue, price $1, is now ready.

A MASONIC PAPER FOR THE HALF-MILLION BRETHREN IN AMERICA!

THE AMERICAN FREEMASON,

Sixteen pages, same size page as *Nation*, monthly, at one dollar a year, is by one-third the cheapest Masonic paper in the world. It is not copied out of books or other papers, but every number is composed of Masonic information conveyed in correspondence, criticisms, and home and foreign Masonic intelligence, written and translated expressly for it. Address subscriptions to

J. FLETCHER BRENNAN, Editor,
114 Main Street, Cincinnati, O

Messrs. LEYPOLDT & HOLT'S

NEW BOOKS.

REMINISCENCES OF MENDELSSOHN. By Elise Polko. With a Portrait. Uniform with "Polko's Musical Sketches," "Mendelssohn's Letters," and Messrs. Leypoldt & Holt's other musical publications. 16mo, gilt top, $1 75.

Polko's Musical Sketches have had (with the single exception of Mendelssohn's Letters) a wider sale than any standard volume of musical literature published in America. The same merits may be expected to procure for the new book the same success. The style of the articles is rich, eloquent, and impressive.

AUERBACH'S VILLA ON THE RHINE. Author's Edition. With a Portrait and Biographical Sketch by Bayard Taylor. In two styles.

I.—Paper. Two parts now ready. 50 cents per part.
II.—Two volumes cloth, uniform with American Edition of "On the Heights." The first volume will be issued in a few days.

BIOGRAPHICAL SKETCHES. By Harriet Martineau. 8vo, cloth, $2 50.

"Miss Martineau's large literary power, and her fine intellectual training, make her little sketches more instructive, and constitute them more generally works of art than many more ambitious and diffuse biographies."—*Fortnightly Review.*

"A charming book. . . . There are no names in her list not worth knowing well."—*N. Y. Evening Post.*

THE FISHER MAIDEN. By Björnson. 16mo, $1 25.

THE GAIN OF A LOSS. A Novel of English Life. By the author of "The Last of the Cavaliers." 12mo, $1 50.

ABRISS DER DEUTSCHEN LITERATURGESCHICHTE. By Professor E. P. Evans, of the University of Michigan. 12mo, cloth, $1 50.
A History of German Literature, written in German, for schools and private students.

451 BROOME STREET, NEW YORK.

The Broadway, Ludgate.

NEW YORK:

416 Broome Street.

NOW READY IN THE

ILLUSTRATED LIBRARY OF WONDERS,

NEW EDITIONS OF

The Wonders of Optics.

Seventy Illustrations. 1 vol. 12mo, price $1 50.

Thunder and Lightning.

Thirty-nine Illustrations. 1 vol. 12mo, price $1 50.

CRITICAL NOTICES.

We greet the "Library of Wonders" with hearty welcome, and hope it may find in its further publication the success it so fairly merits.—*N. Y. Times.*

These volumes deserve careful attention, for the union they promise of scientific accuracy and popular simplicity of statement; for the unusual care with which, in every respect, they have been prepared and translated; for the remarkably attractive and often amusing selection of illustrations in them, as well as for that great conception of a sound popular education in scientific matters which has given rise to them.—*New York Evening Post.*

Will be ready in a few days:

The Wonders of Heat.

Ninety Illustrations. 1 vol. 12mo, price $1 50.

JUST PUBLISHED:

Chips from a German Workshop.

By MAX MULLER, M.A.,

Reprinted from the Second London Revised Edition, with copious Index. Vol. I. Essays on the Science of Religion. Vol. II. Essays on Mythology, Traditions, and Customs.

Two volumes, crown 8vo, uniform with "Lectures on the Science of Language," $5.

CRITICAL NOTICES.

The curious reader will find in these volumes a body of combined entertainment and instruction such as has hardly ever been brought together in so compact a form.—*Evening Post.*

Professor Müller is really one of the best English writers of the day. He employs our language not only with ease and vigor, but with conspicuous purity and good taste. He rises altogether above the fashionable vulgarisms of the day. We welcome every work of Professor Müller's as a real addition to English literature, in point of style no less than in point of matter.—*London Saturday Review.*

CONYBEARE AND HOWSON'S

Life and Epistles of St. Paul.

The only Complete and Unabridged Edition.

The two volumes of the London Edition in one volume 8vo, with the Text and Notes entire. 1,048 pages, maps, and 82 engravings, at the reduced price of

Three Dollars.

N.B.—This same edition, with an Introduction by Rev. Bishop Matthew Simpson, may be procured through the Agents of Messrs. E. B. Treat & Co., New York.

These books for sale by all Booksellers, or sent postpaid upon receipt of the price.

CHARLES SCRIBNER & CO.,
654 Broadway, New York.

PUBLISHED THIS DAY:

THE INGHAM PAPERS.

By Edward Everett Hale. 1 vol. 16mo. Uniform with "If, Yes, and Perhaps." $1 50.

The readers of "If, Yes, and Perhaps" will be pleased to learn that Edward Everett Hale has prepared another volume of his inimitable sketches and stories. The book is composed of "The Ingham Papers"—that famous and mysterious collection to which the public is already indebted for "The Man without a Country," "My Double, and How he Undid me," "The Last of the Florida," and several of the most striking magazine articles that have appeared in this country. The *Boston Advertiser* says: "Mr. Hale's stories are ingenious, picturesque, vivid, varied and delightfully extravagant."

POEMS, LYRIC AND IDYLLIC.

By E. C. Stedman. New Edition. 1 vol. 16mo, $1 50.

ALICE OF MONMOUTH.

An Idyl of the Great War, and other Poems. By E. C. Stedman. New Edition. 1 vol. 16mo, $1 50.

These are New Editions of Mr. Stedman's two previously published volumes, and are uniform with his new book, "The Blameless Prince."

JUST PUBLISHED:

FOUL PLAY.

By Charles Reade. Illustrated. Paper Cover. 25 cents.

GRIFFITH GAUNT.

Bits and Bitting; and the Prevention and Cure of Restiveness in Horses. By Francis Dwyer. Illustrated. 12mo, extra cloth, $2.

FORCE AND NATURE.

Attraction and Repulsion. The Radical Principles of Energy, graphically discussed in their relations to Physical and Morphological Development. By Charles Frederick Winslow, M.D. 8vo, extra cloth, $5.

DAMON ON THE SKIN.

The Structural Lesions of the Skin: Their Pathology and Treatment. Illustrated By Howard F. Damon, A.M., M.D., etc., author of "The Neuroses of the Skin," etc. 8vo. Tinted paper. Cloth, $3.

FOR SALE BY ALL BOOKSELLERS, OR WILL BE SENT BY MAIL, POSTAGE FREE, ON RECEIPT OF PRICE BY THE PUBLISHERS.

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

NOTICE TO TRANSLATORS.

The following extract, bearing the signature of a New York Publishing House, has been made public:

"If the same people (meaning the American people) care anything for respectable translations of foreign authors, instead of the detestable travesties which now generally go under that name, they had better put it in the power of such authors to select their own publishers, and to get their books on this market at a rate leisurely enough to obviate the necessity of that supervision of translations which few publishers will or can give, and which nothing but our exceptional enthusiasm for Auerbach would have induced us to give, as we have done, day and night for weeks."

Of course Mr. Harper, Mr. Appleton, Mr. Putnam, Mr. Scribner, Mr. Lippincott, etc., will immediately get rid of all their "detestable travesties," and as we propose, from conscientious motives, to decline translations, we offer for sale Miss Luyster's Translation of

Madame Recamier's Memoirs. 7th edition. Price $2.

Miss Preston's Translation of

Madame Swetchine's Life and Letters. 4th edition. Price $2.

Miss Preston's Translation of

Sainte-Beuve's Celebrated Females. 3d edition. Price $2.

Mrs. Hale's Edition of

Madame de Sevigne's Letters. 2d revised edition. Price $2.

Rev. Charles T. Brooks's Translation of

The Layman's Breviary. 2d edition. Price $1 50.

My Prisons. By Silvio Pellico, with an introduction by Epes Sargent. 2d edition. Price $1 75.

Miss Frothingham's Translation of

Edelweiss. 3d thousand. Price $1.

Mr. Shackford's Translation of

Villa Eden: The Country-House on the Rhine. Part I. Price 50 cents.

Any bookseller will supply these books, or the publishers will mail them post-paid.

The Week.

THE House on Thursday last defeated a bill to keep in existence the educational department of the Freedmen's Bureau until January, 1871; and that institution, which has done so much good, but which probably has now done pretty much all the good it can, comes to an end in June next. The bill in regard to Mississippi, Virginia, and Texas also was discussed on Thursday and passed, only 24 votes being given against it—all thrown by Democrats—and the Reconstruction Committee being unanimous in its favor; the Democratic members, however, approving of it only because they thought it "the best they could get." There will be, apparently, no real opposition to it anywhere, South or North. On the same day the Indian Appropriation Bill came up in its last form, and, the Senate having receded from all its amendments, the President now has power to expend two millions of dollars as he may deem best in giving peace to the Plains. The "ten persons eminent for intelligence and philanthropy" who, with the President, shall exercise joint control with the Indian Bureau in the management of Indian affairs will probably be chosen from the "Orthodox," as distinguished from the Hicksite, Quakers. This is the worst of bad news for the Indian Ring.

During Friday's session the House was treated to another of the little scenes with which the country is occasionally favored by Mr. Butler, Mr. Logan, and Mr. Schenck. Mr. Schenck, whom the "barrel of telegrams" seems not to frighten very much after all, took occasion to remark, in the course of a speech on the Whiskey and Tobacco Bill, that there is a class of people who are not fond of making open attacks on an enemy, "but insinuate lies, thus adding cowardice to falsehood." Upon this Mr. Logan, who is no less easily roused than fearful when roused, enquired of Mr. Schenck if "he alluded to him," and if he was the cowardly liar of whom Mr. Schenck was speaking. Mr. Schenck said that Mr. Logan was not. Then Mr. Butler, who must have been very much puzzled that there should be discussion of this point, wished to know "if it was not the Pharisee who said 'I thank God that I am not as other men are'"? He got no definite reply to this question, Mr. Schenck only feeling able to say that "he thought it very probable." He seemed to think, however, that his honorable friend would not languish in a state of ignorance. "Anything that hypocrisy may have uttered, I dare say," Mr. Schenck continued, "will be familiar to the gentleman in whatever form it may come"; and he went on to express his opinion that the imputations that had been cast on him personally, or on the Committee of Ways and Means, have in all cases been the coinage of base minds, which charge others with crimes of which they feel themselves to be capable. It will be remembered that Mr. Holman, of Indiana, holds a similar belief in respect of imputations that Mr. Butler not long since cast on him and another one of the House Committee. On Saturday, after having been up all night, the House passed a resolution expressive of sympathy with Cuba. Nearly everybody of both parties voted with Mr. Banks on the occasion, and that gentleman added another "gratifying trophy" to his other similar treasures.

The Brown family of Rhode Island occupied four hours of the Senate's attention on to-day week, Mr. Sprague on that occasion explaining at length to a large audience the meaning of the mysterious postscript to a recent letter of his which has been the subject of a good deal of conjecture. "Show this to Ives & Co." meant, it appears, that Mr. Sprague desired the Browns to understand that, rich and influential as they are, they do not terrify him, and that he intends still to resist them and their allies. Mr. Anthony's remarks in evening session may possibly keep Mr. Sprague quiet for the future, but it is hardly probable; the workingmen of Washington have serenaded him, as being, to their apprehension, a true enemy of aristocracy and a friend of toil and virtue. Furthermore, the Democratic press begin to hail him as a man whose course during the war was not what a patriot could approve, but who now shows indications of possessing a statesmanlike mind. This last speech closed with "a general statement of what he would do if he were President." On Friday the Senate, by a vote of 44 yeas to 9 nays, passed the sixth or seventh reconstruction bill. It was framed in compliance with Grant's last message, and reads as if it might lead to a speedy restoration of Virginia, Mississippi, and Texas to the Union. In brief, it authorizes the President to direct the military officers in command to enlarge and revise according to law the registration lists in the three excluded States, and to designate a day for the election of legislatures, members of Congress, and State officers of all kinds, and for the ratification of the constitutions already prepared.

Under an amendment offered by Mr. Morton and accepted by a majority of the members of the Senate, though opposed by some of the best heads among the senators, the legislatures must adopt the Fifteenth Amendment before the proceedings under the bill shall operate as "a complete restoration." That is not all, for Congress expressly reserves to itself the power to declare all the proceedings unsatisfactory. This threat will secure, it is probable, the ratification of the new constitutions and the selection at this first election of State officers and Congressmen with a reasonably good "record." After that, things will be as they may be. The hardship which Mr. Trumbull and others foresee in the Morton amendment consists in this, that it is not by the fault of the people of Texas and Mississippi, still more emphatically it is not the fault of the people of Virginia, that they did not pass on the terms of reconstruction offered, a year and more ago, to the South in general; and that, therefore, it is practically breaking faith with them to take advantage of this misfortune of theirs to impose on them new conditions. On the same day a bill was passed which provides for a thorough examination of the Pacific Railroad companies—an im-

portant measure, from which good results may the more reasonably be expected in that the President is empowered to appoint five men of probity to form a commission of general enquiry. Anybody who wants to know whether the commission will have anything instructive to say may turn to an article by Mr. Charles Francis Adams, the younger, in a recent *North American Review*. On Saturday the Senate adjourned *sine die;* but on Tuesday, in special session, after a two hours' speech from Mr. Sumner, rejected the Alabama treaty with but one dissenting vote.

The great diplomatic appointments have at last been made. Mr. Motley goes to England, Mr. Jay to Vienna, and Mr. Curtin to Russia. Mr. Bancroft, we presume, remains where he is, and so does Mr. Marsh. In favor of Mr. Motley's and Mr. Jay's appointment there is everything to be said; they could hardly have been improved on, taken for all in all, though, of course, it would be easy to suggest changes for the better in both gentlemen if human beings could be made over. Mr. Curtin labors under the disadvantage of coming from a State in which every prominent man is suspected of corruption. It may seem unbecoming to make this remark in a New York paper, considering the condition of New York morals, but the truth must be told. It is to be hoped that the Mr. Curtin who has been already figuring in the legation at St. Petersburg, and who is, we believe, a relative of the ex-governor, is not to figure in it again. If so, we protest in advance and ask for an enquiry. Amongst the minor diplomatic appointments are those of two colored men, one Mr. J. R. Clay, of New Orleans, who goes to Liberia, and the other Mr. E. D. Bassitt, of Philadelphia, who goes to Hayti.

The nominations are not remarkable so much for the persons who have got them as for those who have not. Mr. Greeley apparently is to have nothing diplomatic, but the New York postmastership is still amongst his possibilities, and the public will for more reasons than one heartily wish he may get it—or something of at least equal dignity and emolument. A good illustration of the way the President or anybody else is liable to be imposed on was afforded by the nomination of a Mr. Wadsworth for the United States marshalship of this district. He presented a recommendation signed by a great number of prominent politicians, but after his name had been sent into the Senate it came out that he was a bankrupt of a very doubtful kind—a large number of his debts being of the Jeremy Diddler order, and one or two cases of distinct swindling being produced against him. There is this, it is true, to be said in defence of the present system of appointments—the work of government has hitherto been done either by the strong and overbearing, or the upright, able, and generally respected; the weak, good-for-nothing, seedy, drunken, and shiftless, and knavish are now, at last, having a chance, and one has to have his heart cased in oak and triple brass to declaim against the poor fellows.

It is noticeable that in the distribution of the offices nearly every member of the Fortieth Congress who failed to be re-elected has been provided with a berth of some kind. Even the unhappy "original impeacher," Mr. Ashley, of Ohio, in spite of his poor "record," got the governorship of Montana, but by only one vote. There is hardly one of these unfortunates, however, who was not turned out by his constituents for excellent reasons. We should protest against this mode of consoling them, if there was the least likelihood that under the present system any better men would be put in their places. The Western men have got nearly all the South American appointments—the more polished European posts being reserved for Eastern "dilettanti" and "epicureans," as the War-horses are doubtless saying. Mr. Hale comes home from Spain. Mr. Sanford, of Belgium, takes his place. As Mr. Hale's diplomatic career is closed, we shall not go over the history of his troubles. He has behaved tolerably badly, and has subjected a very worthy man, Mr. Perry, to great humiliations and annoyances, and we are sorry that Mr. Perry cannot succeed him; but, after what has happened, his usefulness, too, is probably destroyed. One can hardly carry on warfare for several months with a War-horse on foreign soil without being shorn of a deal of dignity and respect, and thus a new man is needed. Mr. Meredith Reed, Jr., will, doubtless, turn the consul-generalship at Paris to good account for historical purposes. We cannot take leave of the subject without saying that thus far the newspapers have been shamefully treated. But a single editor or publisher, to our knowledge, has got the smallest office as the reward of his last summer's "working for Grant."

Mr. Boutwell, who, by-the-bye, began his administration of the Treasury by the issue of perhaps the clearest and most comprehensive quarterly statement we have ever had since the news from the Treasury became interesting, seems likely to be troubled with a plethora of gold in the Treasury. The opinions which have from time to time been put forward as to the use the Treasury should make of these accumulations of gold would, if collected, be interesting reading through all coming time. For a long while the Secretary was supposed to be making the proper use of them when he held them *in terrorem* over the heads of the naughty gold speculators. When the fellows were running the premium too high, he was to come into the market, and sell out like mad, as the boys say, and frighten the wits out of them. This view was really based on the curious economical theory that the discount on inconvertible paper is simply the result of human wickedness, like war risks on ships, and, when the means of resuming specie payments was under discussion last summer, and everybody was furnishing his "plan," it produced from one writer the suggestion that we should get back to specie payments if the Secretary would use all the gold he could get hold of to surfeit the gold brokers, cramming them with it day by day, till they had lost all heart and stomach for speculation. Then Mr. Boutwell himself came to the conclusion that the best thing he could do with the surplus gold was to pay the interest on the bonds before it was due, deducting a proper discount, and asked for legal authority to do so, which it was found he had already. It is proposed now that he should use the gold, of which he has or will soon have $80,000,000, in buying up Government bonds in open market. Would it not be well to apply to this, as to so many other problems of national finance, a few of the rules which regulate individual conduct? This accumulation of surplus gold is simply revenue over and above outlay. Now, a debtor should use his surplus income in paying his debts, and should pay them in the order in which they are due. The United States bonds are not due; the legal-tender notes are long past due, and the failure of the Government to take them up is believed by the most intelligent financiers to be one of the greatest evils of the day. What if the surplus gold were to be used in redeeming greenbacks? What is the objection to it? Who will lose, and what harm will be done by the Government honoring its own promises to pay to any extent it can? What excuse can it offer, when it has surplus gold in the Treasury, for not using it in this way?

The principal news of the "insurrection" in Cuba during the past week consists of an enquiry by Admiral Hoff into the seizure of the American brig *Mary Powell;* a report that several farms in "the interior" had been burned by the "insurrectionists;" the garroting at Havana of two insurgents, followed by a brutal onslaught on the crowd around the scaffold by the armed Spanish volunteers; and an assertion in a private letter received at Key West that the Government was going to "confiscate the property of all suspected parties;" a rumor that the rebels had decapitated one young girl and shot two others; a complimentary speech by the Captain-General; another rumor that the insurgents had set the woods on fire in the neighborhood of Puerto Principe; an assertion that the insurgent bands are "operating" Cinco Villas, and that their numbers are increasing near Santiago de Cuba, and a supposition that the Santiago de Cuba rebels are going to Cinco Villas, where they will "mass their forces." Our private opinion is—the grounds of it we shall not state—that the "massing" will not take place at Cinco Villas, but in another place—what place, it will be useless for the Spanish authorities to try to extract from us; the Cuban "staff" may count on us. But we do not mind saying that the operations of the insurgent troops in Washington and this city have during the week been as vigorous as ever. Several distinguished Cuban leaders expose themselves recklessly

every day on Pennsylvania Avenue and Broadway, to say nothing of Printing House Square, and some idea of the demoralization of the Spaniards may be formed from the fact that not a single attack has been made on them — showing that the acknowledgment of Cuban independence by the mother country cannot be very far distant. One great Cuban leader, Mr. Nathaniel P. Banks, is about this time "operating" on the line of the Jersey, and New York and Boston railroads, and the Spanish staff will probably hear of him during the summer along the Charles River.

The Supreme Court has pronounced—three judges dissenting—a very important decision during the week, in the case of the *State of Texas agt. White et al.*, being a suit by the State for an injunction to restrain certain parties from receiving payment of certain United States bonds belonging to the State, and to compel the surrender of the bonds. The first point was whether Texas was a State under the Constitution, and could therefore sue and be sued in the Supreme Court—in other words, whether the court had jurisdiction. The court decided that it had—that the union of States effected by the Constitution was indissoluble, and that Texas is now, and had been ever since her admission, a State in the Union, and that there was no way for a State to get out of the Union except by a constitutional amendment. Next, the court held that the state of things prevailing in Texas during the rebellion was a state of anarchy, that the setting up of a government by the President on the cessation of hostilities was a lawful act, and the government a valid government, though only provisional, and that the government substituted for it by Congress was also a valid government. The minority dissented on the question of jurisdiction. The famous McCardle case has been dismissed for want of jurisdiction.

The foreign news begins, after a period of great dulness, to be tolerably interesting. It is positively asserted in Paris, and in the best-informed quarters is believed, that a treaty has been concluded between France and Austria, and—though this less confidently—that Italy is included in the agreement; and that the object of the alliance is the humiliation or diminution of Prussia; Italy's reward to be, of course, Rome; that of France, the left bank of the Rhine; and that of Austria, any of the hundred possibilities which present themselves in Eastern Europe. Private advices represent the uneasiness of the Imperialists over the state of things in France to be much greater than the newspapers indicate, and a war as becoming every day more and more desirable. On the other hand, in the debate on calling out the new contingent of 100,000 men, Marshal Niel and M. Rouher, while saying one or two sharp things about Prussia, were very plain-spoken in their assurances of peace; and the Bourse seems to be tolerably tranquil. Among the smaller means of recovering his declining popularity to which the Emperor has resorted is the abolition of the workmen's "livret," a small book which each was obliged to carry, containing the record of all his previous engagements, and which is now held to be a badge of inferiority. The Emperor gave his views on the subject in very strong terms at the opening of a sitting of the Council of State, and the Council then went through the formality of discussing them and adopting them; and a bill abolishing *livrets* is accordingly to be introduced into the legislature. Unfortunately, the workingmen are said not to be grateful for the reform. They do not feel the degradation involved in carrying the book, and they do feel that it gives a man of good character a better chance than others.

With the middle classes the Emperor is adopting a different style of treatment, which can perhaps best be described as counter-irritation. The *Pays*, the semi-official Government organ, conducted by Paul de Cassagnac, the Imperialist bravo, has been reporting the wild speeches at the much-talked-of meetings at the "Redoute," but has reported them very much in the style in which the New York *Herald* used to report those of the Abolitionists in the old days before the war; and 100,000 copies of the report have been struck off, and are distributed by the Government for the purpose of frightening the owners of property and fathers of families in the country districts, preparatory to the general election. One statement made by M. Picard in the late debate on the army, however, speaks volumes as to the state of French politics and society and the nature of the Imperial régime: between 1853 and 1866 there have been eighteen hundred millions of dollars spent on the army and navy, and on education sixty-five millions.

In Italy the dominant questions of the day, apart from the Austro-Franco-Italian treaty, are social rather than political. Duelling has become so prevalent that even Nino Bixio, himself a duellist of some renown, has raised his voice in the Parliament for the enforcement of the law against it, and has vigorously denounced his own conduct in ever having fought a duel. The minister declared, and probably with truth, that it was useless to attempt to enforce the law as long as public opinion remained in its present condition. An offence which everybody in the community does his best to screen, of course can rarely, if ever, be punished; and it will only disappear either before a general sense of the sin of it or of the absurdity of it—or, in other words, before the spirit of religion or of rationalism. Both have played their part in putting an end to it in our Northern States and in England; how it manages to survive in France, in the presence of the French sense of the ridiculous, is one of the curious problems of French social life. On the other hand, the "forces of the age" are fighting for Italy. Commerce is growing, real estate rising; the Archbishop of Salerno has been summoned before a court of justice for a libellous and inflammatory pamphlet attacking the Government; a convention of "come-outers" has been summoned to meet at Naples on the 8th of December, the same day that the Œcumenical Council meets at Rome; and, though last not least, a public meeting of the English Bible Society has been held at Naples, at which a report was read stating that 276,000 Bibles and 55,000 portions of the Bible had been sold in Italy—$250,000 worth having been disposed of to Catholics alone. Even in Sicily, the colporteurs have been protected by the magistrates. We are so used to wonders that nothing seems wonderful. The Italy of to-day is not in all respects satisfactory, but to an Italian patriot of 1820 it would have seemed impossible that it should exist within half a century.

The news from England is all favorable to the early passage, even in the Lords, of the Irish Church Disestablishment Bill. The discussion of the principle of the bill had been kept up in a desultory way down to the departure of the latest mails, but without throwing any new light upon it. The Tories have really made no defence of any weight. The attack on the hereditary principle of the peerage, for so it must be considered, has been renewed by the introduction of a new bill, authorizing the creation of life peers. That the crown once possessed the right to create peers for life is not doubted, but when the attempt was made to exercise it in 1856, in the case of Lord Wensleydale, the Lords held that the failure of the crown to use the right for over 400 years amounted to an abrogation of it, and passed a resolution denying the new peer's right to take his seat. The Lords were so determined on the point that Palmerston had to give way, and make Lord Wensleydale's title hereditary. The subject has never since been revived, but the necessity for some change, owing to the laziness and neglect of their duty of the hereditary peers, has become more and more apparent, while the political weakness of the House of Lords has steadily increased. The main reason for the attempt of 1856 was the necessity of providing a decent supply of law lords to hear appeals; there is now an additional reason, namely, the necessity of providing some means of letting the Lords "down easy." The fear that the new constituencies will not very long stand the hereditary peers, coupled with the fact that the hereditary peers show no signs of growing more industrious, is satisfying the moderate reformers of the necessity of furnishing some show of justification for the existence of the upper House, by introducing into it a larger number of men able and willing to work. It is most probable that the revival of the practice of creating life peers will lead gradually to the conversion of the House of Lords into a Senate composed of men of distinction drawn from the various professions—law, army, navy, literature, and science, and holding their seats for life. The hereditary peerage will be lucky if it is not allowed to die out by successive extinctions.

THE CUBAN "INSURRECTION."

As our readers know, a resolution has passed the House of Representatives offering to "support" the President whenever he thinks it proper to exercise the discretion vested in him by the Constitution to recognize the Cuban insurgents as lawful belligerents; and we need hardly say that it was introduced by Mr. N. P. Banks, the chairman of the Committee on Foreign Affairs, and that it was voted for by an overwhelming majority, under the influence of much the same motives as secured the passage of a similar piece of bunkum two years ago, on behalf of the Fenian "Republic." As far as the President is concerned, of course the resolution is simple bosh. It will be the duty of the President to recognize the existence of a state of war in Cuba whenever there *is* a war; and in discharging this duty he will need the support of the House to the same degree, and no more, as he needs its support in signing bills or composing his annual message. It was not, therefore, to encourage him in using his own eyes and exercising his own judgment that the resolution was introduced, but to help the speculators who are now trying to persuade the American public that there is a desperate "struggle" going on in Cuba, and that it is their duty and interest to help it. These speculators—for there are speculators in politics as well as in stocks—of course went to Mr. Banks as their best and surest friend; and he, of course, "reported" a resolution that would be likely to increase the excitement about the "revolution," and diffuse the impression that something tremendous was shortly going to happen in Cuba. The resolution, too, was so worded that it committed the Government to nothing, and was, therefore, pretty sure to be voted for by everybody who did not care to have his "record" defaced by even seeming opposition to a "war of independence" anywhere, and above all in one of the West India islands.

Now we have not a word to say against the recognition of the Cuban insurgents as belligerents the minute that authentic intelligence is received at Washington that they have organized a government, and that the government has an army at its orders, and has armed vessels at sea, which have sailed from its own ports. Whenever this state of facts is perceptible, the President will owe it to American citizens, and to the Cubans and Spaniards, to proclaim the neutrality of the United States, and we hope he will do it without fear or favor. There are some people in Washington who oppose his recognizing the Cubans as belligerents, as soon as Banks & Co. would like to have him, lest it should prejudice the American case in the *Alabama* controversy. But this, with all respect be it spoken, is not a proper or a creditable reason for holding back. In the *Alabama* controversy, as any one may see who will take the trouble to read the Adams-Russell correspondence or Mr. Bemis's pamphlets, the United States Government stood firmly on the law of nations, and under this law now asks for judgment. Its conduct toward Cuba ought therefore, and we doubt not will be, to be governed by the same rule, and not by considerations of temporary advantage. If it only refrains from premature recognition of Cuba lest it should furnish the English with a strong *tu quoque*, the whole claim against England must be founded in humbug and not in right. The application of the cunning of practitioners in criminal courts to the regulation of international relations, is just as objectionable as Mr. Parton's sentimental method. Our duty to Spain and the civilized world remains the same whether we want Cuba or not, just as we ought to pay the King of Denmark for his West India islands if we have really agreed to do so, without any regard whatever to the fact, which Mr. Parton gravely urges on our consideration, that his Majesty has brought up a large family with respectability.

The known weakness of Spain, the nearness of Cuba to the United States, and the known desire of a large body of persons here to see the island annexed, and the high ground the United States has been taking with regard to the duties of neutrals, all render it, however, extremely important that the public here, as well as the Government, should be kept well informed with regard to the facts of the alleged insurrection. Even if it have not as yet attained the proportions of a civil war, it is desirable that we should have the means of judging whether it is likely to do so, and, if so, how soon, and govern ourselves accordingly. If there be an insurrection, but it is plain that it has no chance of success, it is criminal in writers or speakers here to encourage it, and thus drive hundreds of poor wretches to destruction, and keep the island in a state of turmoil; if there be no insurrection, or even the simulacrum of an insurrection, it is immoral, degrading, and ridiculous of Americans to play into the hands of Cuban adventurers and native filibusters, by pretending to believe that there is one. We lay no claim to special knowledge in this matter, and refrained for some weeks from expressing any opinion on the conduct of the performances of the Cuban refugees and sympathizers, in the expectation that they would, before long, produce some facts in support of their statements, and in justification of their attempts to drag this country into acts of hostility to Spain; but we have waited in vain.

We can now say with great, if not perfect, confidence, that the Cuban movement closely resembles the Fenian movement; that the seat of the "national" government is in the United States, and not in Cuba; that the leading "chiefs" of the revolution are to be found in the hotels and boarding-houses of Washington and New York, and not on blood-stained fields in the island; that they have furnished no evidence whatever that they are able, or even expect, to throw off the Spanish yoke themselves, and that the work they are now engaged in is an attempt to drag the United States into the quarrel; and that the sole support for their pretensions to be considered the representatives of a struggling nationality lies in the fact that the island is in a disturbed condition, that the bonds of authority are greatly loosened, and the interior a good deal disturbed by brigands and filibusters, or small parties of partisans, just as Ireland was while O'Mahony and Stephens were raising the wind amongst the servant-girls and laborers in 1866–7, and getting resolutions of sympathy from Banks. We venture to assert that in no official despatch, newspaper correspondence, or private letter from an intelligent and trustworthy source, is there anything to be found, thus far, to warrant a belief that the Cuban malcontents have either an army, or navy, or government, or revenue. Considering what desperate efforts Cuban sympathizers are making to put a good face on their affairs, one would expect to hear from them accounts of great slaughter of Spaniards, at least; but though we get occasionally highly foggy accounts of "victories" and "battles," we have looked in vain for a positive assertion from anybody that he has seen a single Spaniard who had been either killed or wounded in open fight. The "casualties" of the rebellion, thus far, appear to have occurred in riots in Havana.

The New York *Tribune* is one of the best friends the Cubans have, and it has within the last week felt bound to give some explanation of the non-appearance on the visible horizon of the Cuban troops and government, and it is so curious, and so strongly confirms all we have been saying, that we feel bound to quote it entire:

"Given, as a seat of popular insurrection, a long, narrow island, with unhealthy coast and a backbone of mountain fastnesses, with thousands of situations admirably adapted to an isolated defensive warfare, but without ready means of communication through a territory which, though not so large as New York, presents distances between its leading cities greater than from tide-water to Chicago—given a population ill-armed and too scattered for a close organization, but generally in sympathy with the insurgents—a power three thousand miles away, itself in the later stages of a revolution, with few troops and less money, straining its resources and its credit to the utmost in the effort to reduce this island to subjection—the government forces unacclimated, ill-fitted for active operations, and comparatively ignorant of the country, the insurgents hardy, familiar with the regions through which they move, and exempt from the terrors which the approaching unhealthy season brings to new-comers.

"With such conditions, what features would a campaign be likely to exhibit? The problem does not seem one of remarkable difficulty; the journals which complain so vehemently of the confusion in the Cuban news might almost, in Emersonian style, evolve its solution from their own consciousness."

Now, it is impossible to deduce "the *features* of a campaign" unless, amongst the data, there is a campaign, and at least two armies in the field. The *Tribune* here assumes the very thing in dispute, that there are insurgents "in the field." We say there are not. As soon as we are satisfied that there are, it will be time enough to construct a theory of the nature of their operations. The *Tribune* saves us the trouble of speculating further about what is going on now, however, by the following admissions:

"We have been treated of late to a great many sneers at the Cuban insurrection. That the ready organs of the Slave Power, while it lasted,

and of the bogus Democracy which now inherits its vices without its virtues, should make haste to oppose any struggle for liberty anywhere, was to be expected. But that journals which sympathized with the effort of Spain to secure popular government for herself should sympathize also with her effort to deny it to her richest and most important possession, is inexplicable. When these seek, therefore, to make light of the struggle in progress on our neighboring island, we are forced to believe that they cannot have sufficiently considered the conditions under which it is made. We have had no reason to expect great battles thus far, *and there certainly have been none.* We have had no reason to expect even a *fully organized insurrectionary army,* and *there is none*—no reason to look for the capture of important towns, or *for any effort,* save to nurse the flame of hostility to the Spaniard, and prolong the revolt into the unhealthy summer months. It is too soon yet to pronounce the insurrection a success; but it is not too soon to say that these aims have been attained, and that, with them attained, the prospect for Cuban independence was never brighter than now."

This ought to end the Cuban agitation for sensible men. To ask for sympathy and money, and even recognition as belligerents, for insurgents who have no fully "organized army," have fought "no great battles," and do not expect to "capture any important towns," or in fact to make "any effort," except to "nurse the flame of hostility," whatever that may mean—and it may mean anything from singing a revolutionary song to murdering sentinels—till the yellow fever comes and kills the Spaniards, is carrying coolness and audacity a little too far. The first duty both of "the organs of the Slave Power" and of "the journals which sympathized with the effort of Spain to secure popular government," is to truth; and the worst foe of states and men is humbug and pretension and falsehood. Those who are now blowing the Cuban bellows in this country would do well to read what we were all saying in 1861, when Messrs. Yost, Mann, and Yancey were asking Lord Russell to recognize the Southern Confederacy, after its organized army, in obedience to the orders of an organized government, had defeated the Federal troops within a day's march of Washington and put the capital itself in danger, and when the Confederate writs ran, and flag flew, over a third of the continent.

THE ANNEXATION FEVER.

Anybody who, with the condition of the civil service of the Government in every department, and with the condition of the courts and jails all over the North, fairly before him, and with even a faint conception of the magnitude of the problems now awaiting solution—known to us as the labor question and the educational question—still desires the speedy annexation of Cuba and St. Domingo, with their semi-barbarous populations, to the United States, is a person with whom there is perhaps not much use in arguing. His view of the mission and destiny of the American Republic, and even of the nature and objects of civil society, is so different from ours, that we should be unable to discover even that small piece of common ground on which men must stand, in order to differ rationally about any question whatever. That there should be plenty of people smitten with the fever of expansion, and ready to swallow anything bearing the name of new territory, no matter what the moral effect of the acquisition, is nothing wonderful. The accession to power of a new and much trusted President; the gradual disappearance of all fears of a financial convulsion; the prodigious growth of the country under the most adverse circumstances, are naturally producing that exuberance of hope and that satisfaction in material enjoyments which form the greatest difficulties in the way of political reform. It is hard to persuade people that there is anything wrong, and harder still to make them care whether there is anything wrong or not, when they are themselves well-fed and well-clothed, and find their balance in the bank swelling, the lines of railroad increasing, and the Government's receipts growing. It was this hope and satisfaction which made slavery so hard to kill, and which enabled it to flourish till it defied the world in arms, and it is this same hope and satisfaction which, now that slavery is dead, is making the work of rational reform in all other fields so difficult. Ask anybody who is laboring in it, in some other way than making speeches in defence of abstract propositions, what he finds the greatest obstacle in his path, and he will tell you it is the decline or absence of that public spirit which shows itself in righteous indignation, and makes public abuses to a certain extent private griefs; it is the growing familiarity with, and the growing disposition to accept as inevitable, the grossest abuses, and derelictions, and malfeasances, and the growing disposition to occupy one's self with remote evils, and treat the immediate and pressing ones lightly. It cannot be such a serious affair after all, young men are beginning to say, that judges should sell justice, that thieves and murderers should go unwhipped, and that convicts should be superintended by shoulder-hitters and pimps; that a fourth of the public revenues should be stolen by knaves and adventurers, and the public offices gambled for by the very worst portion of the community, if our incomes are growing every year, our comforts increasing, and our children healthy, our wives more and more gorgeous to behold, and our persons and property on the whole tolerably secure.

We find in this feeling, too, a partial explanation of the rise and progress of the bands of unscrupulous speculators which have within the last five or six years begun to seize on the railroads, and use them first of all as a means of enriching themselves, and secondly of corrupting the courts and the legislatures, and concentrating in their hands a kind and degree of political power such as no aristocracy has held in any civilized country since the seventeenth century. It partly accounts, too, for the increase of sensualism in the great cities—for the fact that New York is already drawing to it the most famous cyprians of the world, as the best market they can now find—that in which most money is found in company with most grossness and indecency. To increase the area of rich territory, inhabited by people far below the great body of the people of the United States in political and moral development, would certainly be to stimulate the rapacity and increase the power of the very class from whose performances whatever is good or promising in American life has most to fear. That they know this, there is little doubt. One has only to watch the way the Cuban "insurrection" rages in Washington and New York, to feel sure that if the "throwing off the Spanish yoke" were left to Spanish subjects, General Dulce would have little to disturb his peace. The loudest complaints of Spanish rule, and the threats against its Government, come, we suspect, from gentlemen who can lay nothing worse to its charge than that they themselves are "hard up," and are in need of a little excitement.

Of course these arguments, in the main, are not applicable to annexation on the side of Canada. The accession of British America to the United States would not only mean the addition of a vast extent of fertile soil, but of several millions of a hardy and industrious population, of the same origin as our own, speaking the same language, and imbued with the same social and political ideas, and already used to self-government. That they would gain by annexation far more than the United States we verily believe, for their gain would be real, while that of the United States would be largely in the imagination; and that the annexation would close up one great fountain of contention between the English Government and ours is also true. But then to make the annexation a gain to Canadians, their consent to it should be asked, and given; and to make it, as is proposed, a healer of the breach between this country and England, England should make it fairly and voluntarily, and not under compulsion. There is something a little comic in the position just now taken by those who are arguing for it, as a means of restoring a cordial relation between her and the United States. What they say to England is substantially this: "Your conduct has been villanous and depraved beyond description, and the amount of mischief you have wilfully and maliciously done is simply incalculable, and therefore we shall not allow you even to attempt to pay damages. We should give you a sound thrashing if we were not otherwise occupied just now, but our intention is to give you one at some future day, when we find you in a fix. However, if you make us a present of Canada—which we shall take from you by force if you don't—we shall look upon it as full satisfaction for all the wrongs we have suffered at your hands, and shall not only not lick you, but shall greatly esteem you, and shall live with you through all coming time on the most cordial terms."

Now, nations sometimes do make cessions of territory after being addressed in this way, but it is when they are in bodily fear, and Eng-

land may make a cession of Canada, on the protocol which is now laid before the public by the advocates of the scheme; but to say that the foundation of a cordial understanding with her can thus be laid is simply ridiculous. To give the negotiation for Canada a chance of success, as a healer of wounds, it should be conducted on its own merits, and, in form at least, separate and apart from the Alabama question. On its own merits, we think its success would be simply a question of time. Everything is in its favor but English feeling, and English feeling could, doubtless, be reconciled to it by a certain amount of talk, showing it to be no material loss, and a great moral and political gain to England. Arguments from this side of the water have a weight now they have never had before; but to be really effective, they need, like all political arguments, to be framed with a strict regard to the qualities of human nature, its weaknesses as well as its virtues. Between taking Canada by force, and insisting on having it given up as a penalty for bad behavior, there is no essential difference, and attempts to make it appear that there is will impose upon nobody, and will simply lessen the influence of American diplomacy. It ought to be remembered, however, that if Canada be annexed, Canadian goods will come in duty free, which, if we understand rightly the doctrines of the dominant school of economists, would be an unmitigated calamity, even if the Canadians were subjected to the same rule of taxation as ourselves. If the free introduction of Canadian lumber and Nova Scotian coal would now ruin us, calling the Canadians and Nova Scotians Americans, and parcelling their country out into Congressional districts, will not take the poison out of their commodities.

"THE RICH RICHER—THE POOR POORER."

Mr. Wells has drawn fresh attention, in his late report, to the rapidly-growing separation between the extremes of poverty and wealth, and the rapid accumulation of riches in the hands of the rich, and growth of poverty amongst the poor, and seems to ascribe it solely to the reckless tariff legislation, and the irredeemable paper currency. The same phenomenon is constantly dwelt on by the workingman conventions, and it was, during the late crusade against the public creditors, a favorite theme of the repudiators, and still furnishes Andrew Johnson with what he evidently considers the strongest point in his denunciations of the Radicals. In fact, every political party and school of economists takes notice of it, but each offers a different explanation of it.

Without disputing the general accuracy of Mr. Wells's conclusions as to the effect of the tariff and of the currency on the distribution of wealth, it ought to be borne in mind that the *natural* tendency of wealth is to accumulate in few hands. That is to say, riches draw riches after them inevitably. To acquire money is to acquire power, and one of the first uses, in a modern commercial community, which a man makes of his power, is to acquire more money. Everybody sees, within the range of his own observation, abundant illustrations of the truth of this. The more capital a man has, the greater the number of ventures he can make; the longer he can wait for the returns from them, the better agents can he employ; the more reliable the information he can procure, and the more frequently is he sought out by those who have promising speculations in hand, and the more force can he bring to bear to crush troublesome rivals. Therefore, let the tariff be ever so well regulated, or the currency ever so good, rich men will have an immense advantage in the field of trade over those who are not rich.

The tendency to the accumulation of great fortunes, too, is increased in our day by the widening of the area over which speculations can be carried on. What with the telegraph and the railroad, a New York or London capitalist can now invest with as much ease and safety in Mesopotamia as he could have invested in the last century three hundred miles from his home. There is really no way of preventing the accumulation of fortunes by legislation, and what we cannot prevent, it is the duty of wise men to stop whining over, and leave to the regulation of Providence, who orders all things wisely, and nothing more wisely, if only men would not meddle, than the flow, through the channels of human society, of the products of human industry. There is only one kind of property the amount or ownership of which legislatures can successfully control, and that is real estate.

The amount of personal property a man shall hold cannot be fixed, though, of course, his income may be diminished by systematic robbery or heavy taxation. But though there were fifty acts on the statute-book fixing the maximum amount of personalty one individual might possess, not one of them could be executed. What with covert trusts and divisions among relatives, and corruption and sympathy of officers, the amount of fortunes would remain about the same. Many persons would, doubtless, be led to invest abroad, and content themselves with a smaller amount of interest, in order to avoid annoyance; and then, to prevent them from dividing the income, we should have to open their letters. To make sure work, the foes of great fortunes would have to get possession of the government of every civilized country, a triumph which they are certain not to achieve. Every civilized country is, and always will be, governed in the interest of property, and indeed must be in order to remain civilized, because the family and property are the two bases of society. Moreover, in order to supply the great mass of mankind with a motive to exertion, you must let them accumulate as much property as they can by honest means. You may, indeed, and all states do, regulate the means of bequeathing it, but if you say a man shall not enjoy the fruits of his own toil, or foresight, or good fortune, you paralyze the whole community. Turkish pashas used to do this in one way, for the gratification of their own greed; some of the philanthropists who figure in the workingmen's conventions want to do it, in another way, by way of helping the poor; but it would not help the poor to have everybody poor. Even if cases occasionally presented themselves in which it would be possible, and might seem wise, to strip a very rich man of part of his wealth, no general rule could be devised that would not inflict grievous injustice on a vast number of others.

But then, it may be asked, where is all this to end? Is modern society going to be converted into a simple plutocracy, and every civilized country made the prey of great speculators? Has Providence left the race wholly without protection against that most odious form of tyranny—the tyranny of money? Not at all; Providence has made ample provision against this very evil, in gifting men and women with the greatest diversity of character, both moral and mental. The effect of this diversity, if governments would let men alone, would be that wealth would be accumulated in the hands of individuals, fast enough and long enough to stimulate human exertion; but large fortunes, after they had done their work, would break up under the thousand disintegrating influences which in a busy community constantly assail them. In the first place, the ordinary uncertainties of human affairs render them difficult to keep; idle, lazy, and stupid or dissipated heirs waste them; the energetic and industrious are constantly contending for a portion of the rich man's wealth, by offering temptations to his palate or his eye, or by outdoing him in skill, or foresight, or vigor. In short, a more perfect machine than a civilized community, producing and dividing wealth under the guidance solely of individual tastes and instincts, does not exist. Wonderful it is, as we see it, cramped, distorted, and disarranged by the blind legislation of blind men; but how wonderful would it be, if legislators had never taken it into their heads to improve on the Almighty's work!

It may be said with perfect safety that the accumulation of wealth in a few hands, to an extent to be really injurious, has never been witnessed except as the effect of ignorant or wicked human legislation. Among the ancients, great fortunes were built up and perpetuated by caste, or conquest, or slavery. In the middle ages, careful provision was made for their creation and preservation by the land laws of every European country. Everything was done that could be done, to concentrate and perpetuate the possession of the soil in a few hands, and always on grounds of public policy; so that the feudal aristocracy was, after the period of anarchy had passed away, simply and especially a wealthy class, its wealth consisting in land. Of course, as long as such a class monopolized all the wealth and power of a country, the trade or manufactures did not grow, and governments undertook to encourage them, and this they did by rigidly

copying the customs of feudalism. They fixed each man's place in the commercial hierarchy, the time he should devote to learning his trade, and the tests he should undergo prior to admission to the order in which he was to live, the kind of work he was to do, and the markets in which he was to buy and to sell. In other words, they extended to trade and commerce the monopoly system which they had established in the ownership of land. It is, in fact, only within the present century, that the doctrine that God made man an industrious and trading animal, and that legislators could no more teach individuals how to make money than teach beavers to build dams, has obtained currency. All through the seventeenth and eighteenth centuries every government in Europe was engaged in the creation of trading and manufacturing monopolies—that is, in preventing the natural diffusion of wealth through the community at large, and they finally succeeded in creating the type of society known as the manufacturing type, and which is to be seen all over the north of England, and in eastern and northern France and North Germany —and which we are only too faithfully reproducing in this country: large masses of work-people huddled together in cities, and living from hand to mouth on wages paid by great capitalists, engaged in branches of industry built up, in part, by the aid of legislation, and kept going still by legislative protection against competition; a society in which the power of capital grows in geometrical ratio, its natural tendency to accumulate being strengthened by incessant artificial stimulus. It is impossible for anybody who is familiar with this type of society to say that it is either superior or equal to the feudal and agricultural type which it is supplanting, and the evidence is every day accumulating which shows that whatever the big mills and forges may be doing to increase capital, they are not, in the present organization of industry, doing much, if anything, to increase the sum of human happiness.

THE DECAY OF THE "FAMILY AFFECTIONS."

So long ago as the 30th of April, in the year 1827, the Count Carlo Vidua, taking occasion to write to the Marquis Roberto d'Azeglio, on the subject of American manners, used these remarkable words:

"Paternal and filial affection is not much more lively among them. In a large family the sons gather together at meal time, each coming from his business; each enters the room, says not a word to father or brothers; opens not his mouth, in fact, except to put something therein; devours in a few instants the few ill-cooked dishes, and whoever is first satisfied, without waiting till the others have finished, rises, takes his hat, and is off. . . . A son who goes off. . . to establish himself in Kentucky or Missouri has no more to say in the way of adieu than if he were going to see a *festa* in a neighboring village. The father on his side, welcoming some other son returning from China, will say to him, cool as a cucumber, 'Good day, John,' and at the very utmost do no more than throw in a shake of the hand."

In short, the worthy Italian was extremely disgusted with that imperturbability of our character, of which he seems to have been one of the first observers, but which has since received so much attention from foreigners, and of late years been so much criticised even by ourselves. We have no need to write an article to prove the existence of the peculiarity, for every one, we take it, is willing nowadays to admit the general fact that the Yankee is a man with whom *nil admirari* is the great maxim for the conduct of life, and a dozen stories are known to every one which illustrate it. For example, that hackneyed story of the son who, for some reason, feeling aggrieved at the treatment he received under the paternal roof, on being sent out by his parent to bring in a birch-log for the fire, went out West, and returning some twenty years later, a grown man, and bethinking himself of the twenty years'-old errand, re-entered the homestead with a log in his arms, and resumed relations with his family by placing it in the ashes, without remark on either side. But what we do wish to call attention to, because we do not think it sufficiently attended to by poets, novelists, essayists, and others who deal with the problems of the soul, is this: that it may be very seriously questioned whether this imperturbability is not the indication of the much deeper and more important fact—that, owing to many causes, certain emotions which have heretofore played a great part in the history of the world are, in reality, on the decline. The emotions we refer to are the "family affections." Reserving all our inalienable right to differ from those who think so, we merely wish to say that an idea is abroad in the community that the ties of kinship—the relation of brother and sister, father and son, mother and daughter—are gradually losing their hold upon us, and that all involuntary bonds of this sort are growing irksome. And this notion has more to rest on than assertion. Ask your acquaintances, and you will find that all of them will admit the necessity of "cultivating the affections," an admission which seems to imply that their native strength is not found to be very great. Ask any one you happen to know intimately, and he will tell you that the most serious misgiving he feels is that he does not sufficiently love those with whom life has thrown him into involuntary contact. Read the literature of your time, and you find the most fascinating story your acquaintances have read for many a day, was that concerning one "Mme. de Neilhac," which touched the fortunes of a lady whose peculiarity it was that she could never discover that she had affections of any kind, "family" or other. To explain these curious facts, the advocates of the theory we are speaking of maintain that the "family affections" may as well be admitted to be on the wane.

The truth is, they say, that after doing all in our power to abolish "the family" altogether, we yet expect the affections which were incident to the relation to remain in full force. The old-fashioned *family* has just as completely disappeared as the old-fashioned stage-coach, or the old-fashioned periwig. The father at the head of the board, with his wife and twelve stalwart sons about him, and with the aged grand-sire and grand-dame in the corner, are as much an institution of the past as the wide-throated chimney round which they gathered after the day was over. If the twelve stalwart sons are good for anything, they are running machine-shops and mills, studying law or medicine in various quarters of the earth, and such of them as stay at home have a "study" to themselves, where they live such lives as pleases their spirit of independence. As for the aged grand-sire and grand-dame, they take the best care in the world, whatever else they may do, to have a home of their own, and the last place in which they would care to compose themselves for their final rest would be the "old homestead." It might be said that the only unhappy American homes were those in which three generations attempted to live together. The first thing the genuine modern man (can any one any longer doubt that the American is your genuine modern man?) ought to do is to get rid of "the family," to stand on his own legs, to work with his own head, to be independent. The first thing the genuine modern parent wishes is to have him go. Early adolescence, therefore, is the period when the family tie begins to be loosened. Happy are those households in which the new necessity is early recognized. If the door is opened, and the boy directed on his way into the wide world, ten to one but he will think his father a very good fellow, and remember him and mention him to his wife as a "splendid man;" otherwise, woe be unto him; he has shown a want of confidence in his son, and want of confidence is the unpardonable modern parental sin, and he straightway finds himself called "governor," and is fortunate if he does not discover some fine morning that his son is clandestinely married to one or other of his female acquaintance whom common philanthropy will not permit a father-in-law to allow to starve.

Then, again, there is marriage; that used to be a parental function, and children used to find themselves married by a family council and to consider it as much an operation which they had no authority to prevent as children under twelve now do vaccination. But we have abandoned that system, and introduced that of "natural selection." Now the direct effect of this is to weaken the dependence of children, and "family affection" was strictly the affection of dependence and support. The family was bound together as are the links in a chain, and each link felt the absolute necessity of each other link to the completed whole. But how is a modern father necessary to his son, or how is a modern son necessary to his father? They are mutual encumbrances. Each could make more way in the world alone. Each could make his separate deduction from his income-return. The opening of occupations to women must sooner or later have the same effect

on them; their individualism must increase, and their family tie be weakened. Whether the maternal instinct is going to die out altogether it is not necessary to enquire; but to suppose that the family tie of mother and daughter can be as strong when one is a telegraph operator and the other a treasury clerk, as in the good old times when they led one and the same life in one and the same room, taking turns at one and the same spinning-wheel, is absurd.

Nor does the practice of divorce strengthen family ties. The other day two people were married in one of our most flourishing Western States, and a local journal in announcing the fact stated that on such a day so-and-so and so-and-so had been by such a clergyman "united for life." This, a contemporary said, "was the first time, within their recollection, such a ceremony had been performed in that section of country." Now according to the theory which we are attempting to lay before our readers, one of the most substantial reasons for the existence of the old family sentiments was that the bond was indissoluble; but now that the contract of marriage is every year making a closer and closer approach to the ordinary civil compact, which can be broken on the consent of both parties, children who should accustom themselves to jeer at the "sacredness" of the relation ought not to be dealt with too severely; and in families where several divorces have occurred, fraternal affection cannot be expected to be of the most lively kind. Suppose, for instance that some progressive Westerner marries, has children, and is divorced, and keeping his children, marries again, has children, is divorced again, and this time the children go with the step-mother. She now marries again and has children; what do the children of the three marriages think about the "home circle"?

Hawthorne used to say that in his opinion the tendency to repress all feeling which was characteristic of our race might fairly be expected to result in a total extinction of feeling. The intellectual life of our age might be expected to swallow up and destroy the sentimental life. Hawthorne was unquestionably fearless of any conclusions to which his reflections might lead, and of all the melancholy fancies which he spun, this is perhaps the one which is most shocking to the average man or woman. In order, however, to support the theory of the decay of the family affections it is not necessary to go as far as he; we need only believe that there is one class of sentiments which has been materially weakened by the changed conditions of modern life. The complete independence of the individual in our system, the early separation of families, the ease of locomotion, the destruction of parental and conjugal authority, the laxity of the marital tie, all these things combine to make the idea of "family" rather conventional than real. With one member in Oregon editing a newspaper, another in Florida planting cotton, another in Central Asia studying Buddhism, the family tie is almost as little felt as that which connects each one of us with the great human family. But let no one despair. Suppose these ties be on the wane; it is not necessary on that account to adopt the misanthropic conclusion that the human heart is on the wane. May it not be that we are substituting for these old feudal feelings new and improved ones? An observing friend has suggested a solution of the difficulty which we think has a great deal of evidence in its favor, and is supported by excellent authority. This theory is that we are substituting for the old involuntary family affections of our forefathers voluntary affections, based on the infinite veracities; in whose precise language, people will, in the future, care for one another, not according to the fortuitous connection of a common ancestry, but will love or hate one another as they find one another amiable or detestable; that parents will care for their children as they are to their taste or not, and that children will ground their feelings toward their parents on the same circumstance. We shall no more see the disgusting complications which now arise in families from incompatibility of temper, but the most frank relations in the world will take the place of the false and hypocritical ones established by tradition. Friendship will come to occupy a more exalted place than she ever has before, and the "family tie" will be relegated to the limbo of exploded ideas. The conjugal relation, being now based on mutual esteem and natural affection, will continue only so long as that esteem and affection last, and it ought to continue no longer. Does not Laugel say, "With her, [the American wife] alone perhaps in the world, the conjugal is stronger than the maternal love"? Our friend was quite warming to his theme, in thus picturing the millennium of the American sentiments, when we interrupted him with what still seems to us a simple enough question, but which, nevertheless, brought his eloquence to an abrupt termination; our question was this: how soon he proposed introducing the new system into his own household?

ART-STUDY AT THE IMPERIAL SCHOOL IN PARIS.

My first feat on arriving had been to fly against the Arch of the Star, in a vague quest of the American Embassy, whose pressure I wanted in forcing my candidacy for the School of Fine Arts. When I had dropped my name into the feathered ear of a faint young secretary in a pale room that was little and wooden—not quite unlike a segar-box—I became an applicant, and my first concern was fulfilled. Then a good deal of time passed, Paris began to lose its rapidity and strong idiom, the days rarefied and became almost as long as untravelled days at home, I got nothing from the Minister but his ordinary card of ceremony, while as for *my* card—the name I had left got on tolerably without me, and amassed in the Legational pigeon-hole a little property of dust creditable to its proportions. I lost hope of admission, and had immersed myself in Celtic antiquities on the Biscayan coast, when, lately, an official note from a Chargé reversed me. I threw the Druids over, for the epoch of *La Lanterne*. The note said, with a certain free candor of margin, that upon some renewed urging from this Legation, my application had been accepted by the Ministry of the Imperial Household and of the Fine Arts, and gave color to the good news by an over-roasted but cogent red seal.

Paris, and especially La Rive Gauche, permits herself to be seen in marked demi-toilet by him who will stir by seven or a little after. As I crossed the Pont des Arts early on the following Monday, the only loungers upon it were the desperate and frosty Leporellos who make it their cloister for the meditation of the matin Grisette. The German sweeping-girls who described with lean-looking brooms their monotonous geometry in the paste of its asphaltum floor had no more figure, in their neutral-tinted wrappings, than has a stick of kite-line. The carved nymphs on the Pavilion of Flora looked into the nasty Seine and shuddered. The fog upon the river seemed a sponge of ice. Restaurant-waiters on the Rivoli or on the quay, without a trace of their professional nattiness, lounged in broken slippers and centrifugal hair among the heavily-splashed shutters. They are at such an hour totally unproductive of coffee and *petits-pains*, and when applied to by the fasting stranger yawn, I recollect, and indicate a crêmerie. Clean across the narrow footwalks of the Rue Bonaparte, fountains of mud were spouting from under the furious morning carts against the print-shop windows warmed with the sunniest pastorals of Watteau and Boucher. Finally, amidst all the architectural bric-à-brac with which Alexander Lenoir has begemmed the courtyard of the Palais des Beaux Arts, animals with blue blouses and faces were busy at quite a mountain of winter firewood for the schools; from the wall over their heads Raphael's *Galatea* in mosaic smiled—I know not how—with some sort of Mediterranean sense that she was not a dryad and had no congenital antipathy to wood-saws.

"C'est un nouveau," said the stout young porter. The observation, which seemed to discriminate my shiny portfolio as much as myself, was thrown by him, while in the act of mitigating the judiciary terrors of his uniform with a smock, to his potato-frying wife within the lodge. Through an outer and an inner courtyard, on whose inlaid marbles the stertorous saws were laboring through the firewood, and whose walls were encrusted with carved bits from all sorts of places, like an architect's delirium, I approached the dignified façade, where marble copies of a number of famous antiques were ranged like a line of sentries. Even at the outer gate, the bronze doors of this façade had their keepers —a brace of gendarmerie-dragons in arched hats, inside a great hall coldly furnished forth with Elgin casts complete on tables. The dragons partook of the society of Phidias without relish, and looked, as they made muffs with their overcoats, capable of exchanging the Theseus, the Ilissus, and the Parcæ together for a horn of the porter's fried potatoes. Through a vista was seen the inner court of all, with gigantic statuary and a crystal roof.

Mounting a broad stair (I am conscientious in graduating this imposing arrival step by step, that I may never have it to do again), I found myself on the first floor, entering upon a loggia whose essential beauty not even

the drab morning had power to disfigure. It wore for embroidery the pure authentic legend of the Renaissance. One side looked out upon the glass-roofed garden, between pilasters frescoed with the arabesques of the Vatican; the more solid inner parallel wall was pierced, between rich panels, with the doors of the three ateliers of painting; and the ceiling was nobly checkered with the divine epopee known as Raphael's Bible.

I walked down this considerable corridor in ignorance which of the three entrances to choose. My particular professor was Gérôme; the masters of the other schools are Cabanel, and Pils, the battle-painter. As I passed each successive door, a mixed murmur, as of great doings within, permeated the panels and reached the ear. How I have passed them since, and fancied that there was something special and characteristic in the noise from each—a warlike roar from the military school of Pils—something far and Grecian, as of bees in Tempe, from the disciples of Cabanel! As for us of the atelier Gérôme, I believe we make a riot equalling the others combined, which it may be my province to analyze hereafter. Through the palpable fog I dimly groped along, past these doors that severally roared like the by-way to hell in Bunyan; bearing for a shield the glossy portfolio, and watched over from above by the corpulent personnel of Raphael's Bible. Niched in the utmost extremity of the passage, and darkly bloated by the mist, I soon perceived a being in uniform whose hands went through the constant motion of twisting, like Lachesis with the thread. The singular existence of this functionary is passed in simultaneously nodding authority from the cocked hat, and twisting grey paper into little screws. He is by no means implacable, but is willing to vend the twine of fate at a gros sou the half-dozen *tortillons;* they are fine stumps used in chalk drawing. An acquaintance which has heaped upon me enough paper screws to spiralize all my future path-way in life was then and there commenced by a question to this honest fellow.

When, on his direction, the proper door-knob had turned in my hand, there was a striking change from the cloistral order and loneliness of what had just been passed. A scene of turbulence was passing in a naked hall, the air of which was blue with cigarette smoke, whose level webs could be everywhere traced settling upward. In barns, etc., may have been occasionally noticed the odd effect when a space is illuminated from one sole aperture; to this chamber the cataract of thickened light from the solitary arched window gave the broad, unifying results of moonlight. On a rotary platform in the focus stood an olive-skinned youth, balanced in the attitude of the Antinoüs of the Campidoglia. A descendant, maybe, of one of the Æneades, nature had dowered him with sleek Greek limbs and bosom, and then irresponsibly despatched him to make his fortune with that exclusive capital. In Paris, among the studios, he thrives well enough, with his nakedness for his best suit of armor.

The pictorial composition—and it was pictorial, quite satisfying and complete to the artistic eye—had for its high-light this statuary figure, floating above the floor in eddies of smoke, and bathed in a blue solid radiance shaped like a flying-buttress. Around, and partaking of the unfathomable obscurity which hung beneath the window, were vortexes of students, with silvery outlines and invisible faces. They were proceeding to range themselves, with the maximum of noise, in a crescent around the model. The nearest semicircle squatted, embracing their drawing-boards; those behind them sat, with the natural circularity of back, upon *tabourets;* another range were standing at easels; while over their shoulders loomed a number of isolated, daring spirits, based upon various pedestals of an impromptu and more or less precarious nature. Aware of the punctilios of student-life, I made a comprehensive salaam, (in which salute I believe I found it handiest to get my hat on to my portfolio and bow it round like lemonade,) and the constellation straightway sang together. "C'est un nouveau," was their song, an echo of the porter's; and a cheery yell it made, for it included all the possible joy of hazing a freshman.

The descent of a *nouveau* into the school was like that of the meal into the pot, which subsides for an instant, and then boils up a great deal higher (my phenomena are taken from Prof. Faraday, and are irrefragable). "*Un nouveau! un nouveau!*" arose, in the accent of thankfulness after manna, from the students; followed, on somebody's part, by "cependant, c'est un cornichon d'anglais." A sly little marmoset in spectacles, painting and singing within the door, who was a type of several others, interrupted Thérésa's song, "*Ça me chatouille,*" just at the sneezing refrain—sneezed in a pointed and affable manner at the new-comer—and resumed, "*dans le nez,*" with his chin an inch further out and his pitch rather higher. Though not much given to small revenges, I had a soothing feeling as I passed him, in directing with my elbow his own brush (loaded with blue) to the feature he had mentioned. He issued from the contact azure and crimson, and an appreciative youth who caught my eye the same instant took the trouble to show me the hat-room. Here an antique Faun was playing his solo in a tabernacle of overcoats, the silken *cache-nez* or neckerchief of a student hanging with decorum from his tail. This alcove was so grimy with ends of chalk and charcoal, that my new friend quite improved the part of Sir Walter Raleigh by offering his own cloak for my wrappings to hang over.

"Now we re-enter," said he. "Choose a view as quickly as possible for the good places are being occupied while we consume the time. The pose is strongest, to my taste, from the left quarter. The easels you will find in the corner, the stools are piled into yonder barricade, and the charcoal, when there is any, is in a little box on the ledge."

The easels, from having served in many Troys as instruments of aggression and defence, were little but a pile of inarticulate lumbe . After a rummage I found the front part of one, the shape of the letter A; and made it the initial of my career in the École des Beaux Arts, binding a spare prop and ratchet to it with a handkerchief. Choosing one of the few crevices visible in the close ranks of humanity around the model, I managed my wounded easel thither with care and sympathy, and finally got it to stand upright therein, though in a fluttering and hypochondriac manner; claiming location in the usual way by describing with chalk the triangle measured by its feet, I loaded it with materials and began to pro. file the classic attitude before me.

I had been triangulating and protracting for some time, and had lost the pervading hubbub in that utter abstraction which is one of the spells of art, when the model was suddenly displaced in my view by a darkly shaded object rising directly in front and intercepting it; if I had continued to copy mechanically, my line would have swerved into the oval of a large and swarthy face, full-bearded and capped with fur, which had come into focus apparitionally, like Robinson Crusoe in a magic lantern.

This was my friend Blanc—my whilom friend; poor fellow! I need not respect him, for he has married since—I will portray him remorselessly. His beauty had the idiom, derived from the lengthened nose and pinched nostrils of the goat, which gives so much of what we call the Hebrew character to the ancient statues of satyrs. His brown skin, huge form, rude rug of hair, unmannerliness, and grace would have convinced Keats that it was god Pan in person. Blanc had the mental thickness, dispersed in the abundant and dramatic gestures, of the South; his accent, too, was rustic and Southern. If the most Parisian Paris be indeed the Latin Quarter, I constantly find there the most real and circumscribed sort of rusticity; and the discovery of rusticity as the essence of Paris, of all cities, has ever gratified my sense of antithesis and of the picturesque. Blanc has been the best of fellows with me, returning incessant loans of six or ten sous with painful scruple; I presently found a pleasant way of satisfying this nice conscience by contracting an avidity for the "Rembrandts" and other rack collected in his portfolios. His dress had the peculiarity of a single button, imperishable and lonely, to the pantaloons, and the eternal fur bonnet, which out-watched the seasons; but his athletic figure was a favorite in the studios, and I know him best in the toilet used by his peers in the *chaparral* of Arcadia. Girt with a disappointing concession to modesty in the shape of a steel brace, he moves in my memory through the marked light and shade of the ateliers—not unlike the sylvan shimmerings—a guttural god wooing perpetual Antiopes and Syrinxes, which always turned out to be painted canvas.

"You will give us a good gross welcome, a hundred francs, a hundred and fifty francs, comme ça?" That was the way he opened acquaintance, rising to all appearance out of the ground and squatting flexibly on his hams. It was the rough, threatening coquetry of Arcadia. In reply I offered cigarette paper and *blague-à-tabac;* "Marchandons," I said, and it began to be, I fancy, quite like a bazar-scene in Cairo. He secured a liberal conveniency of paper and weed, and twisted up a cigarette like magic. The studio, apprised that the game had commenced, assisted the spokesman with suggestions that were loud in the ratio of distance and obscurity.

"That he sing his song!"

"That he pay a worthy *bien-venu*, the ideal *bien-venu*, the *bien-venu* that one dreams!"

"How does he draw, the Englishman?"

"That he go for wood!" (This from a small and frightened boy, who squeaked and ran to a corner. He had been replenishing the stove as I entered.)

"His song! His song! The English pater-noster! Got safe ze Queen! Dam!"

Rather confused by all these attentions, I found my best remedy in minding my work. Blanc got his head round, followed by its own private aureole of smoke, to the front of my easel. He complimented me by a narrow and patient perusal of what I had done, and reported a kind criticism to the rest.

"What is your name, *le nouveau?*" he said, in his oddly magisterial way. The chalk triangle at my feet was vacant of the letters with which each claim is usually marked. I wrote my name in it legibly, and Blanc made chaos and dreamland of it in interpreting it to the studio.

"Now you must sing us *Got-safe-ze-Ouine!*" said he.

The chalk being still in my hand, I stopped again and added "*Amérique*" to what I had written. The effect was pleasant, and far more marked than I should have imagined. "Why, it is an American!" he shouted. "Bring up the other American! Let us see the Americans kiss each other! They will say *Vive Vashington*, and their faces will melt together. We have not to do with the English coldness."

In the meantime the marmoset, who had been anxiously washing his face at the sink, approached with an empty Kirsch-bottle. He was nearly clean, and he put on a cunning and pleasant dryness of manner. "You will go out and buy two sous' worth of milk, and four sous' worth of black soap." I was not unprepared for this incongruous demand, and not too silly to have executed it literally at need. Milk is the cement used for fixing a charcoal design to the canvas; a soft black rosin soap is used for cleaning brushes: and the last *nouveau* is always the Mercury until relieved by a successor.

"Where is the money?" said I quickly. The poor vagabond searched pocket after pocket to no effect; he took it hard, even in that parliament of the impecunious, and blushed painfully. "Look, *mon petit*," he got then in his ear, "wait until the recess, when the model rests; then choose six of your friends, buy soap enough to last a week, and drink to America in a bottle of respectable champagne at the nearest *marchand's*. Then bring the milk in the bottle for a proof."

Meantime there was a commotion. They were dragging up the "other American." Lo! it was mine old familiar friend, Tom East, who had been watching, with a spice of viciousness, to see how I got on, from an obscure part of the room.

Tom is a cultivated creature, dressed like a fireman. This is a combination which pleases the Latin Quarter, and I found him high in favor. He is, however, a laconic companion, and, like Count Moltke, "silent in seven languages." Like all silent people, though, he has occasional bursts of talk, when no one can reduce him; and one of these explosions had occurred in my favor during the past summer. In the baking, blinding Paris heat, when I was rusticating by the Bay of Biscay, East had undertaken to manage the American applications for the Beaux Arts, of which his own was one. He had passed guard after guard with invincible determination and convenient misunderstanding of etiquette; had burst veil after veil, to find himself at length in the presence of Nieuwerkerke, the Minister. The Minister had yielded incontinently to East's merry eyes, his excessive perspiration, and a few of his seven languages, and Tom had passed me in passing himself. A second jet of his eloquence apprised me of all this now at the recess, when we streamed out for refreshment, leaving the room dull and vacant, with smoke hanging in a canopy over the poor model, who spread exhausted, like spilt cream, over his platform.

THE TALK OF THE UNLETTERED FOLK.

Our friend, the conscientious schoolmaster, made an excellent impression upon us the other day, when visiting his school. In what may be called the crisis of the session that afternoon, we are bound to say he bore himself well. His erudition over the digamma, called out by the question of the girl in blue, surprised us. His skill in detecting the whisperer on the back seat, and the well-sustained frown with which he awed him into silence, were fine. We are also bound to say, however, that in his dealing with the boy called Giles, our friend was either not wise or too wise. Giles rebutted the charge brought against him in the following terms: "I hain't hooked his handkercher neither. 'Twan't his'n. Ax Bill." In the wrath betrayed by the teacher it was plain that he felt far more keenly "the outrage upon the mother tongue," as he called it, than Giles's moral delinquency which presently became evident; and he threatened the lad with the ferule if he did not reform his language. We are moved to enter a plea in Giles's behalf. The theft was only for mischief, and we do not want him feruled for his English. Why we do not want it done, and what amount of discipline we consider proper, let us now state.

Our schoolmaster, we fear, knows more about the ancient tongues than about his own. Is he aware that many expressions which we set down as intolerable for their grammar or pronunciation were once strictly proper, and in many cases have been given up for poorer forms? Many a rough word, according to our ideas, or instance of uncouth syntax or bad orthoepy, is really like the vicar of Wakefield's good sturdy colt, which Moses has swapped for a most worthless lot of green spectacles in the shape of inferior expressions. Trench says, the uncouth popular talk has many forms once sanctioned by good usage, which may at the same time retain a freedom and freshness that are now lost from the more polite speech. Take poor Giles's double negative: "I hain't hooked it neither." It recalls Mrs. Gamp's "Mrs. Harris, I says, leave the bottle on the chimley piece, and don't ask me to take none." Perhaps, however, we shall be challenged to cite any other considerable authority to justify the redundant negative. Let us assure our friend that it may be paralleled countless times in our best old authors including Shakespeare, who does not scruple to employ it again and again. Here are two instances from Julius Cæsar:

"Yet 'twas not a crown neither; 'twas one of these coronets." (Act I. 2.)

"Publius, good cheer.
There is no harm intended to your person,
Nor to no Roman else." (Act III. 1.)

Professor Lowell says the double negative is so common in old authors that he does not think it worth while to cite examples, and he gravely doubts whether the language has not lost in giving it up. As to *handkercher*, too, the same high authority questions whether it may not be as good as *handkerchief*. Its second and third syllables may come from *couverture* as well as from *couvrechef;* and Giles's word is not without precedent of the best. As to the offence in the expression: "Ax Bill," our friend will blush when he comprehends how far out of the way his reproof was, "that no decent talker ever did or ever had said anything but *asked;*" for the word for centuries, in the best company, was *axed;* and that is much purer than its modern substitute. One may see any day in Bosworth the *axian, axode,* of Alfred's days. "'Twan't his'n." There are respectable scholars who conceive that even *his'n* may be merely a contraction of *his own,* once entirely in conformity with the habits of the best society; or possibly the relic of an old pronominal dative of similar sound formerly in universal use. Really, in view of Giles's shortcoming, one might do worse than quote to him the following couplet, ascribed to a London poet. We suggest it with enthusiasm as being the appropriate thing:

"Him what hooks what isn't his'n,
When he's cotched will go to pris'n."

As there is good reason to think that *his'n* is no vulgar corruption, we could show, with the help of Rask's Grammar, a better way of accounting for *ourn* and *yourn* than to suppose them the mere blunders of boors.

We have cited Mrs. Gamp; we believe the services of this great lady in behalf of British population are abundantly recognized at home and abroad, but the world has been too blind to her merit in a different direction. As a restorer of pure old English forms, she deserves a monument more enduring than brass. Aside from her happy revival of the double negative, she has rescued other venerable felicities that had fallen into decay. "But, Betsey Prig, try the cowcumbers, God bless you!" Appealing to the authority of our best American critic again, *cowcumber* is nearer the French *concombre*, the original of the word, than the pronunciation which has been allowed to gain currency, whether Mrs. Gamp arrived at the fact by a careful tracing of the word, or an inspiration of genius. But it is perhaps in her immortal use of the relative, that she has most claim upon the scholar's gratitude. "Mrs. Harris, I says, at the very last case as ever I acted in, which it was but a young person." Again: "Whether I sicks or monthlies, ma'am, I hope I does my duty; therefore I do require it, which I makes confession, to be brought reg'lar and draw'd mild." And still again: "If she had abuged me bein' in liquor, which I thought I smelt her when she come." Prof. Child, in his very learned "Observations," calls attention to the fact that this is strictly Chaucerian, and quotes in proof the following passages:

"Him whiche that wepith."
"The place whiche that I was inne."—(C. T. 10891.)
"'I have a brother,' quod Valirian tho,
'That in this world I love no man so.'"—(C. T. 12164.)

We recall still another enormity on the part of Giles, perpetrated later in the afternoon. When, after recess, the boys stood at the stove warming their fingers, red with snow-balling, we heard Giles—luckily the teacher did not—whisper to his neighbor: "Old fellow, we had a high old time, didn't we?" Now in that use of *old* there is something interesting. The observation was made to a hearty chap of fifteen—the impersonation of ruddy youth; yet, in the circumstances, he was not at all improperly

addressed. There is, in truth, an ancient, most respectable use of *old* in the sense of great. We may find it in Shakespeare, as:

"Here will be an old abusing of God's patience and the King's English."—(Merry Wives of Windsor, Act I. 4.)

"If a man were porter of Hell-gate, he should have old turning the key."—(Macbeth, Act II. 3.)

Let us trace the word back. In the Gothic, *old* was *alt*, which our Teutonic cousins still retain. Rub up your college German a little, and make out this short sentence from Grimm's "Wörterbuch": "Alt stammt von alan, Lat. *alere*, dessen part. *altus* ist." The old verb from which *alt* and *old* come, means the same thing with the Latin *alere*, to nourish; and no doubt was once identical with it. The course of development, we observe, in the Latin and Teutonic, has been different. *Altus* gives the quality of size—that which has been nourished until it has become big or tall. *Alt* and *old*, on the other hand, give the quality of age—that which has been nourished until it has become ancient. Yet side by side with the ordinary meaning of the Gothic adjective, there has come down in an obscure way, clear from the primeval time, no doubt, this other meaning, the very same which was preferred in the Latin derivative. When Giles said "old fellow," he meant "great fellow," a term of rough and ready endearment. When he said "old time" he meant "great time." He loved his friend and game, and magnified them.

While we are writing on these matters, we recall what happened in those old days (old in Giles's sense and in the ordinary sense) when the schoolmaster and we were rusticated together. He perhaps remembers the valentine from that merry mountain girl he took to the sleigh ride, and so deeply impressed. It ran thus, copied from somewhere, in painful chirography, with much trouble:

"By these four lines of metre,
I'd have you for to know,
That I to seek a lovyer
Am a goin' for to go."

The antithesis in which we then conveyed to him our congratulations, seemed to us so gracefully framed that we have not yet forgotten it. "How can a girl who shows so much taste in selecting an admirer, show so little in the selection of the language with which to address him?" All this we now retract, and propose to vindicate Patty's taste in English. There is not a thing in these lines that was not once held to be strictly correct. That *for*, in "for to know," "for to go," came in with the Normans, and is in the French to this day; as "pour savoir," "pour aller." If Chaucer had written otherwise than:

"On bokes for to rede I 'me delyte."—(Leg. of Goode Wom., 30)

or,

"He made his shippe a-londe for to sette."—(Ib., 2164)

or,

"The holy blisful martir for to seke." (C. T. Prologue)

can we suppose he would have kept his place in the court circles of his time? As for *lovyer;* a Saxon word for man was *wer*. It is said to be still in use in Scotland, where a lawyer is sometimes a *law-wer*, or law man. Many of our words ending in *er* originally had *wer*, and *yer* is the transition from *wer* to *er*.* Your *lover* then is the full-grown frog. *Love-wer* is the egg from which he came; and *lovyer* is the tadpole on his way forward to maturity. We could show, if we had leisure, a fine specimen of this interesting batrachian, disporting himself with his graceful tail in the limpid verse of the Prologue to the Canterbury Tales. Patty "builded wiser than she knew." As we remember our friend in those callow days, there was a wonderfully fine appropriateness in her application of the word. For the propriety of the *a* before *goin'*, and for the termination *in*, in the present participle as an interesting relic of the old ending *end*, we will only refer to Marsh's twenty-ninth lecture in his first series.

Truly the talk of the unlettered folk is for the most part very old; and where it differs from the polite speech, the advantage is not seldom in its favor. The authority that determines what is right and wrong in these things is simply the fashion of good society, as we hardly need say. From the dicta of this authority there is no appeal, and we suffer if we do not obey them. To be uncouth discredits a man with the influential part of the world; yet we do not fear to say that the fiat of good society in many a matter connected with language is capricious and out of place in the same way with many a prescription of fashion with regard to dress. Not that fashions in speech are unreasonable to the same extent as in dress; for it is good society whose prescriptions we seek to follow when we talk and write, and not good society that we heed when we adopt garments. Yet even good society is often enough changeable and unwise. Says a historian of the French language, with some qualification indeed, yet none that affects the declaration in any important way, the polite speech "n'est non plus qu'un patois ou dialecte élevé à la suprématie; et elle a, comme les autres, ses fautes et ses méprises"—is only a dialect which chances to be uppermost. "I'll ventur to do it," would almost shut one out of a polite parlor now, yet seventy years ago it was the only thing that was tolerable. If good usage seventy years from now commands that the letter *r* shall be ignored, as is possible, making people remark during these spring east winds, "Waw and wough weather, fwiends!" then for ears polite must the letter *r* die.

Quæ cum ita sint, (this trite old husk we throw into the teacher's trough for his especial satisfaction; for nothing is so distasteful, we know, to the race of pedagogues as to have Giles and his friends casting before them these pure pearls of old English) *quæ cum ita sint*, then, we counsel him to treat the enormities of Giles with patient correction by word of mouth alone. The boy has good points, though he cannot be called an elegant person in any but a Hibernian sense; and it will be too bad to have his inelegance hurt his success. We hope, however, we have shown that he does not deserve to come to any such grief as the ferule. We own that when his broad Yankee came twanging through his nose, as he repelled his accuser's charge, Lowell's verse began to run through our head:

"An' yit I love th' unhighschooled way
Ol' farmers hed when I wuz younger;
Their talk wuz meatier an' 'ould stay,
While book-froth seems to whet your hunger.
For puttin' in a downright lick
'Twixt humbug's eyes, ther's few can metch it;
An' then it helves my thoughts ez slick
Ez stret-grained hickory doos a hetchet."

It is not the part of good taste and high culture to see nothing in popular uncouthness but what is absurd. Many pure and strong old idioms, buckets of the sweet, good Saxon milk, lie up among the springs and coolness of the country farms, while usage peddles out in their place mere chalk and water to the urbane crowd, who swallow and swallow until the taste is perverted. We choose the poorer by preference, and come to loathe the unadulterated mother-tongue.

Here, in fine, are the words of a great scholar just dead, which are as true of the provincial dialects of English as of the great language of which he writes: "Die Mundarten nun sind die natürlichen, nach den Gesetzen der sprachgeschichtlichen Veränderungen gewordenen Formen der deutschen Sprache, im Gegensatze zu der mehr oder minder gemachten und schulmeisterisch geregelten und zugestutzten Sprache der Schrift. Hier ist eine reiche Fülle von Worten und Formen, die, an sich gut und echt, von der Schriftsprache verschmäht wurden; hier finden wir manches, was wir zur Erklärung der älteren Sprachdenkmale, ja zur Erkenntniss der jetzigen Schriftsprache verwerthen können." Or, to translate freely, we go for refreshment and instruction to the popular language, and find in the forms which grammarians and authors discredit an inexhaustible wealth of suggestion and illumination.

Correspondence.

"ALICE'S ADVENTURES IN WONDERLAND."

To the Editor of the Nation:

Sir: I beg leave to say that Lewis Carroll's "Alice's Adventures in Wonderland" is liked by many children who, according to the *Nation* of April 8, "care little or nothing for it." The copy which was brought into our family by means of a notice in your paper, more than two years ago, is a standing refutation of your statement, for its covers are al ost worn off, and it has been lent to at least twenty children. It was listened to eagerly, besides, in a school where the pupils were allowed, once a week, to read from books of their own choosing; and one little boy, who read it with great delight, and tried in vain to get a copy in Boston, has just been made happy by one from London. Almost every hour I hear the children quote it, or see a grin like that with which the Cheshire cat vanishes, or a milder and more kitten-like one, on the lips of a child too young to read.

Let me say, also, that Foote's "Grand Panjandrum," and the other guests at the barber's wedding, of whom you spoke as almost unknown characters, in a review of Bartlett's "Familiar Quotations," several months ago, are old friends of the same children. I cannot find the paper, and therefore cannot quote your statement in your own words.

Very respectfully,
C. M. H.

West Roxbury, Mass., April 9, 1869.

[We probably generalized from too limited an experience.—Ed. Nation.]

Notes.

LITERARY.

It is announced by the publishers of the proposed *Record of American Entomology*, for 1869 (Salem: Essex Institute), that the number of subscriptions warrants the publication of the work, but that the increased size of it will cause the price to be raised (for all except original subscribers) from 75 cents to $1.——Messrs. T. B. Peterson & Bros. will publish Mrs. Ann S. Stephens's novel, "The Curse of Gold," after it has run its course as a serial in the New York *Weekly*.——Messrs. G. P. Putnam & Son have nearly ready the "Life of Audubon," by his widow, already announced by us, and the following works: "Norman Leslie," a novel by Hon. Theodore S. Fay, late United States Minister to Switzerland; "On Color," from the French of Mme. E. Cavé; "Sacred and Constructive Art," by Calvin N. Otis, architect; "The Principles of Psychology," by Professor John Bascom, of Williams College; and "Our Admiral's Flag Abroad." The last-named describes the cruise of the United States flagship *Franklin*, in 1867–68, with Admiral Farragut, and is, say the publishers, to be handsomely printed and largely illustrated, so as to resemble in appearance the *Artists' Sketch Book*, published by the same house. For a frontispiece, we would suggest that a copy be made of Page's portrait of the Admiral, if the artist be willing.——Books which we may soon expect from Messrs. Lippincott & Co., are George Lawrence's "Breaking a Butterfly," of which we spoke last week; new editions of "Tom Brown's School Days at Rugby;" "Over Yonder," by the author of "The Old Mamselle's Secret." They have also in press: "The Stomach and its Difficulties," by Sir James Eyre, M.D., which is now in its sixth edition, and treats of a subject which ought to secure it an endless sale; three novels, namely: "The Quaker Partisans," of the Revolution; "The Gold Key," from the French, called a dramatic story; and "Busy Hands and Patient Hearts," from the German, translated by Annie Harwood. Finally, Mrs. Maria Webb's companion volume to her "Penns and Peningtons," "The Fells of Swarthmoor Hall, and their Friends, with an Account of their Ancestor, Anne Askew, the Martyr." We venture to predict that this will be found a readable and entertaining book, and well deserving its second edition.——Mr. Samuel Bowles is making a third book of his experiences beyond the Mississippi, to be called "Our New West," and to be sold only by subscription, by the Hartford Publishing Company.——Mr. Edward McPherson, Clerk of the House of Representatives, is preparing a "Political Manual for 1869," in continuation of his invaluable series. It will not appear before August or September, but will be strictly up to date. Mr. McPherson's leisure, if he has any, is devoted to a life of the late Thaddeus Stevens.

—It is a great question, in the race between books and periodicals, as to which shall prevail, and which is to contribute most to the diffusion and elevation of knowledge. However this may be, it often appears to us as if the most useful service we performed, in these notes, was calling attention to articles of moment in the monthly journals of one sort and another. The *American Naturalist* for April, for example, contains in its opening article on "The Aboriginal Mound Builders of Tennessee," by Dr. Joseph Jones, information which ought to be widely shared, and certainly by all who take an interest in the early settlement of this continent. The writer speaks from personal experience as an explorer of these pyramidal earth-mounds, and proves that the race which constructed them were yellow-haired sun-worshippers, allied to the Mexicans, and enjoying a considerable degree of civilization. It is a curious fact that this characteristic of yellow hair was determined from the remains of two bodies buried in a cave with the garments they had worn while living. As to the age of the mound-builders, Dr. Jones has assured himself that those whose works are still visible in Tennessee, "possessed the country with a numerous population, even as late as the exploration of De Soto." In confirmation of this belief he adduces the relics which have been discovered in these mounds, of the cross and other emblems of the Catholic religion. The article may be read in connection with Mr. Catlin's *O-Kee-pa*. It concludes that "the inhabitants of America have, at various times, come in contact with the civilization and religions of Europe, even before the recognized era of the discovery and exploration of the American continent." Professor E. D. Cope treats, with the aid of a plate, of the fossil reptiles of New Jersey. Of one of this group of monsters, it is said that New Jersey possesses six of the ten known species, and in relative abundance of individuals also "is much in advance of any other part of the world where excavations have been made"—a distinction between Jersey and the rest of mankind which is constantly cropping out. Persons who are familiar with the curious tracks on the sandstone of the Connecticut valley, will be glad to see figured here the creature that represents the transition from reptiles to birds, and was for a long time a puzzle to the palæontologists.

—The *Historical Magazine* for February contains an important document, contributed by Mr. William Swinton, and never before printed—General Lee's report of the Pennsylvania campaign and battle of Gettysburg, from the original manuscript. It is brief and modestly written, but in other respects we cannot speak for its merits. Mr. Swinton promises the editor "to follow it up with a paper by way of comment and elucidation." The weakness of the Confederates in cavalry is more than once referred to in this report, and undoubtedly had a great deal to do with deciding the fortune of the three-days' battle. General Meade's report of his operations on the Rapidan, May 4 to November 1, 1864, will be printed, for the first time, in the March number of the *Magazine*. Other papers in the present number relate to the everlasting Popham (Me.) controversy, the Rowan County (N. C.) controversy, and the Ethan Allen (Ticonderoga) controversy. There are entertaining letters, printed *verbatim*, from distinguished women of the Revolution. Mrs. Caroline Gilman contributes a pleasant account of her kinsman, Major John Lillie, a brave and intelligent Revolutionary officer. And finally, Mr. George H. Moore turns up, as we knew he would, and shakes Parson Phillips's slave-marriage formula, which we printed in part the other day, in the face of hypocritical New England. It is surprising what peculiar atrocity negro slavery assumes when practised north of Mason and Dixon's line; at least if Mr. Moore's fine frenzy is to be taken for genuine.

—The Boston *Advertiser* refers to a letter that lately appeared in the London *Times*, showing, from a recent record of all the English judges from the earliest times, the frequent instances in which eminence at the bar and on the bench has been attained by several members of the same family, often in direct descent. The *Advertiser* was led by it to examine the traditions of the Massachusetts Supreme Court, and the result was sufficiently remarkable to bear exhibiting. The list is, however, too long for us to reproduce except by specimen. Reckoning the whole period from 1692 to the present time, the Court has had seventy-five justices, and among them six Cushings—the last three related—together with their kinsman Robert Treat Paine; five Sewalls, of whom three were related, and three chief-justices; two Lyndes, chief-justices; two Hutchinsons, etc. The following are also striking examples:

"Francis Dana, the fourth chief-justice [after 1775] and minister to Russia, was the son of Richard Dana, judge of the provincial court of Common Pleas, and nephew of Edmund Trowbridge, the ablest and most learned of the judges of the provincial Superior Court; and was also father of Richard Henry Dana, the poet; grandfather of Richard Henry Dana, jr., one of the present leaders of the Boston bar; and uncle of General George Kinnaird Dana, of the English army.

"Daniel Dewey, judge 1814–15, was the father of Charles Augustus Dewey, judge 1837–66; and a son of the latter, Francis Henshaw Dewey, is one of the present judges of the Superior Court. The late Daniel Dewey Barnard, of Albany, minister at the court of Prussia, was their cousin."

It is impossible not to respect a judiciary which can point to such a succession; and it is equally impossible to expect anything of the kind from an elective judiciary.

—Prof. Goldwin Smith has presented to Cornell University his private historical library, just arrived from England, which numbers 3,000 volumes, and has been insured for $6,000—about half its value. The *Ithacan*, from which we borrow this intelligence, adds that the gift is peculiarly appropriate, inasmuch as President White's book-purchases in Europe were mainly of a scientific character. Of the act itself there can be but one opinion, and as a living legacy it will be all the more appreciated. What it may betoken in regard to the author's future studies and place of residence we do not know; so long as he remains in this country and at Ithaca of course his library is as available as if he still held possession of it, with the obvious difference that it is also accessible to the students of the University.

—There is abundant evidence of the progress making in regard to education, for both sexes, in England. The new college for women in London, whose object is what is now generally called secondary education, has set up a standard of examination for admission so high that it seems to have been regarded in some quarters as injudicious. Mrs. Davies, however, the honorary secretary, explains, in a letter to the *Pall Mall Gazette*, that examination is waived in the case of girls who have passed the Cambridge or Edinburgh local (senior) examination. For such candidates have already been tested, equally with the boys, in regard to their elementary knowledge—of arithmetic and grammar, for example; branches

which the women's college is not designed to teach, and therefore requires to be satisfied that they have been already mastered. The results of the senior examination at Cambridge prove the wide neglect which these simple studies suffer in the preparatory schools. Out of eighty-two "senior" girls who were rejected last year, Mrs. Davies says that fifty-nine failed in the preliminary examination, viz., forty-one in arithmetic, thirty-two in English grammar, twenty-nine in history, twenty-seven in geography. But the senior examination is passed by a large and increasing number of girls under eighteen. The boys, on the other hand, at the great public schools, are in a fair way to be sensibly relieved of some of their present burdens. At Harrow, at least, a so-called modern department is contemplated for the benefit of scholars whose destination is the military or the civil service. Only a limited proficiency in the classics will be required of them, and they can proceed to finish the practical training of which the foundations were laid in the schools of humbler grade. Heretofore Harrow has been resorted to on account of its facilities for cramming the classics, which of course have been insisted on by the examiners for military and civil places. The reform, therefore, will be a limping one unless the examiners alter their standards, and this the *Pall Mall Gazette* intimates will be the case. We have in this country an analogous state of things, the colleges setting the mark for the classical schools, and the high schools setting the mark for the grammar; and the evils of superficiality and cramming which have grown out of these relations are evidently not to be corrected from below but from above.

—Unpractical teaching was the theme of complaint of Mr. Froude's late address at the University of St. Andrew's. "What I deplore," said he, "in our present higher education is the devotion of so much effort and so many precious years to subjects which have no practical bearing upon life." Instancing the concentration of appliances at Oxford for producing clergymen, he spoke of the unexampled clerical activity for the last thirty years, and the astounding production of theological literature in every shape. Against this he set the corresponding increase of commercial immorality and its widespread infection, which the clergy view with absolute indifference while wrangling over vestments and doctrines of faith. In all this time, said Mr. Froude, among hundreds of sermons he had heard, he did not recollect ever to have heard one "on common honesty, or those primitive commandments, 'Thou shalt not lie' and 'Thou shalt not steal.'" The closing words of the historian on this subject are quite significant:

"What I insist upon is, generally, that in a country like ours, where each child that is born among us finds every acre of land appropriated, a universal 'Not yours' set upon the rich things with which he is surrounded, and a Government which, unlike those of old Greece or modern China, does not permit superfluous babies to be strangled—such a child, I say, since he is required to live, has a right to demand such teaching as shall enable him to live with honesty, and take such a place in society as belongs to the faculties which he has brought with him. And it ought to be the guiding principle of all education, high and low."

—The unprofitableness of the clergy finds a curious illustration in the extent to which the manufacture and sale of sermons have been carried in England. The advertisements of the venders of this ready-made orthodoxy have frequently been exposed, and the inference is irresistible—since advertisements cost money—that the enterprise has been a paying one. Perhaps, however, too many have entered the business, or the speculators, grown bolder, have aspired to vaster gains. At all events, a private circular has been sent to the clergy announcing the approaching issue of a periodical to be composed entirely of sermons, and to be sold exclusively to gentlemen in holy orders. The *Guardian* has been so shocked by this development that it repents ever having admitted this kind of advertisements to its columns, and solemnly resolves hereafter to exclude them, at whatever pecuniary loss to itself; rightly remarking that "if the laity once come to the conclusion that preachers are commonly indebted to others for their sermons, few clergymen will be above suspicion, . . . and a taint of insincerity will attach to hundreds of excellent clergymen who have done nothing to deserve it." This state of things lends additional piquancy to the anecdote borrowed by Mr. Froude of the late Bishop Bloomfield, who, on seeing at the University church at Cambridge a verger whom he remembered many years before when he was himself an undergraduate, congratulated him on his healthy appearance at so great an age. "'Oh yes, my lord,' the fellow said, 'I have much to be grateful for. I have heard every sermon which has been preached in this church for fifty years, and, thank God, I am a Christian still.'" We are not sure that the sermon periodical is not a "Yankee" invention. Certain is it that in this city a monthly publication, called the *National Preacher*, has reached some thirty volumes (unless we err), each number consisting of about four sermons, and these (hastily glanced at) seeming to be printed for no earthly reason except that perhaps they were furnished gratuitously and have a market among the clergy "exclusively." But perhaps we do the publication and the clergy injustice.

—It is easy to agree that intellectual stagnation is one of the worst results of a repressive government and one of the most powerful arguments against it. The extent to which this stagnation exists in France is seldom realized, owing to the fact that Paris is France for the outer world. Attention has recently been called in a German paper to the condition of Cette, a wealthy commercial town with 30,000 inhabitants, which has not a single newspaper of any kind, nor—what is certainly surprising—an advertising sheet. The bourse quotations it gets from a lithographic list (the common substitute for news enterprise on the Continent), and with this it is satisfied. Montpellier, the capital, has the only two political newspapers in the department of the Hérault, which contains 400,000 inhabitants. These are but echoes of the Paris press, one being a Government organ, the other an Opposition. And the city has but two non-political papers, which are described as "unspeakably silly and trivial." That the repressiveness of the Government is not traditional merely, but active, the case of M. Louis Ulbach too clearly demonstrates; and it is, indeed, as has been said, almost incredible that for a fanciful interpretation of the word "Napoleon" as meaning "Exterminator," this well-known and generally cautious writer was prosecuted, and fined three hundred francs for *lèse-majesté*. With this sentence of the police court, however, the authorities were not satisfied, and carrying up an appeal they got a new valuation of this "offence against the Emperor" in six months' imprisonment for the etymological editor, and severe fines for his printers; and, after all, it was Napoleon I. who was in question.

—It must be a very ordinary Frenchman of whom some good story cannot be told after his death. Of Lamartine the Paris *Public* tells the following, which is said to be authentic. He was a poet before he was a statesman, and so it happened that in 1848, when Minister of Foreign Affairs, he was still open to the divine afflatus, and never neglected the inspiration of the moment. If it caught him in the midst of his official duties, his habit was to note it down in his memorandum book, no matter how it consorted with the business entries which preceded and came after it. One day he had recorded a number of applications for subordinate offices in his department, from persons who had either been recommended to him, or in some way had recommended themselves. Soon after, he was seized with the idea that he would devote his "meditations" to King David, the psalmist, for whom, as an immortal poet, he had already expressed his rapturous admiration. He accordingly jotted down in his book, without minding where, the single word "David," which chanced, however, to fall among the applicants for consulships. In due course the list went to the bureau which made out the appointments, and finally the *Moniteur* announced that "Citizen David" had been made consul at Bremen. Naturally the lucky applicant failed to put in an appearance, or in any way to signify his acceptance of the post or his gratitude for the favor. It then became a question who had recommended him; perhaps the memorandum-book would tell. A single glance was enough for the poet-secretary. The next day the *Moniteur* had a fresh announcement: "Citizen Marchand has been named consul at Bremen, *vice* Citizen David, transferred to other duties."

—The Asiatic Society of Bengal is doing a great work for the historians of India and for Oriental scholars in general. The Sanskrit publications of this society in its *Bibliotheca Indica* since 1848 are well known to have had an important influence on Sanskrit studies in Europe. In 1862, at the instigation of its president, Mr. A. Grote, and Mr. Thomas, the numismatist, it published the first volume of a series of Persian chronicles which throw contemporary light on the periods of which they treat, and cover the Mogul and the pre-Mogul rules. Seven volumes have thus far appeared, the first three in close chronological sequence, and the reigns they describe reach from the beginning of the eleventh to the middle of the seventeenth century. Some Beejapoor MSS. recently found in the India Office probably contain very valuable material, though as a collection they had suffered greatly before the Company undertook to preserve them. They are said to be the remains of one of the royal libraries existing at Beejapoor in the Deccan prior to its capture by Aurungzebe in 1686. That Emperor carried off cart-loads of manuscripts, and only respected a portion attached to a Mohammedan shrine. Among the fragments are books in Persian and Arabic, beautifully written and illuminated, and some in Mahratta and Sanskrit, in Canarese and other southern languages, along with black-letter English and Spanish books in not great abundance.

BICKMORE'S EAST INDIAN ARCHIPELAGO.*

In the none too extensive list of American works, half scientific, half popular, of which Agassiz's "Brazil" is a recent and first-rate example, Mr. Bickmore's travels will take a creditable place. We owe the present work to an expedition which had for its object to restore the scattered and impaired collection of shells from the East, made in the last half of the seventeenth century by the German naturalist, Rumpf or Rumphius, a description of which was published after his death, in 1705; and to procure a duplicate collection for American museums. Mr. Bickmore attributes his complete success in these particulars to the liberality of certain persons in Boston and Cambridge, and to the uniform and singular courtesy of the Dutch authorities throughout his journeyings in the Archipelago. The facilities thus afforded him by the latter enabled him to extend greatly his observations, and to visit islands which he could hardly have expected to approach before he had experienced so friendly a reception. In fact, the reader is anything but wearied or perplexed with conchological details, thinly distributed as they are through six chapters only out of seventeen. The other topics which go to make up the contents of the book are the natural features, formation, and probable origin of the several islands visited; their resemblance or unlikeness in respect of inhabitants, of fauna and flora; their political history; official statistics as to population, productiveness, commerce, etc.; and the Dutch rule and Dutch society as they appear to a stranger, who is treated with distinguished consideration wherever he goes, who does not stay long in Batavia, and who leaves the island domain within thirteen months after entering it, having, as he says, travelled six thousand miles in the meantime, and fulfilled his scientific mission.

Our author not only reports to us all that he saw, but shows his acquaintance with the works of previous explorers and travellers in the same field, so that, altogether, he offers a very considerable amount of information, which will be fresh to most readers. With the exception of his experiments in regard to hot-water vegetation, he makes, perhaps, no original contribution to our knowledge of cosmical development; but he represents in a very striking manner the extent of volcanic upheavals, and indicates very clearly the probable connection between the Archipelago and the Asiatic and Australian continents. He notes also the strict limitations of their fauna and flora where only narrow straits separate adjacent islands, and indicates what products are exotic and from whence derived—in settling which latter question comparative philology plays an important part. To hear the English speech in those countries ought to have caused scarcely greater delight than to meet with maize, and cocoa, and pine-apple, and reflect that these are America's gifts to the Old World. Even coffee was introduced into these islands, in which pepper and cloves and nutmegs are indigenous, though, strange to say, the natives have never discovered any use for them. How the endowed compare with the endowing countries, Mr. Bickmore's contrast of Java and Cuba illustrates; and though the colonial policies of Holland and Spain have too often run parallel, the latter may perhaps justly be charged with the inferiority of her favorite island:

"Java is to the East Indies what Cuba is to the West Indies. In each there is a great central chain of mountains. Both shores of Cuba are opposite small bodies of water, and are continuously low and swampy for miles, but in Java only the north coast borders on a small sea This shore is low, but the southern coast, on the margin of the wide Indian Ocean that stretches away to the Antarctic lands, is high and bold, an exception which is in accordance with the rule that the higher elevations are opposite the greater oceans, or, more properly, that they stand along the borders of the ocean beds or greatest depressions on the surface of our globe. In Java, where the coast is rocky, the rocks are hard volcanic basalts and trachytes, which resist the action of the sea, and the shore-line is therefore quite regular; but in Cuba there is a fringing of soft coral rock, which the waves quickly wear away into hundreds of little projecting headlands and bays, and on the map the island has a ragged border. In its geological structure, Cuba, with its central axis of mica slates, granitic rocks, serpentines, and marbles, has a more perfect analogue in Sumatra; for in Java the mountains, instead of being formed by elevations of pre-existing strata, are merely heaps of scoriæ, ashes, sand, and rock, once fluid, which have all been ejected out of separate and distinct vents. The area of Java is estimated at 38,250 square geographical miles; that of Cuba at about 45,000. The length of Java is 575 geographical, or 666 statute miles; that of Cuba 750 statute miles. But while the total population of Cuba is estimated only at a million and a half, the total population of Java and Madura is now (1865), according to official statements, 13,917,368. . . . . In Cuba, of a total area of thirty million acres, it was estimated in 1857 that 48,572 were under cultivation, or, including pasturage, 218,161 acres. In Java and Madura last year (1864) the cultivated fields and the groves of cocoa-nut palms covered an area of 2,437,037 acres. In Cuba, from 1853 to 1858, the yearly exports were from 27,000,000 to 32,000,000 dollars, and the imports of about the same value. In Java, last year, the imports amounted to 66,846,412 guilders (26,738,565 dollars); and the exports to the enormous sum of 123,094,798 guilders (49,237,919 dollars)."

Dutch kindness and hospitality, in the case of Mr. Bickmore, could only protect him to a certain extent from discomfort and danger. Earthquakes and volcanoes he had always with him; more than once in Malayan canoes he came near being swamped at sea or in the furious surf, or stranded on coral reefs; in descending from the cone of a crater his life hung for a moment on a single fern; even in a Boston carriage, his horses being untrained, he was like to have been hurled from winding cornice roads into bottomless abysses; he braved the pirate *Shenandoah* in the Indian Ocean (spring of 1865), and ventured into the cannibal district of Sumatra; he walked with fear and trembling—or, as he is apt to say in such cases, "with a shudder"—among tigers and snakes, and at the very last, at Singapore, had a deadly engagement on ship-board with a "specimen" python, which a malicious acquaintance had given him "on sight, unseen," as the phrase is. His adventures with the "American," as the Boston carriage was called, are worth quoting, both in themselves and as specimens of the author's best narration. Having had a sufficiently alarming experience with horses on the narrow and precipitous mountain descents, Mr. Bickmore contrived to have coolies assigned to draw him instead:

"I selected three of the tallest and fleetest and placed them between the thills, and ranged others outside to haul, by means of long rattans fastened to the forward axle, and a suitable proportion behind to hold back by a rattan secured to the hind part of the carriage as we went down hill. All being in their places, I jumped into the carriage. A wild yell was raised, and away we dashed down a gradual descent, as if we were drawn by a race-horse; the road became steeper and steeper, and we flew faster and faster; those behind had evidently forgotten what was expected of them. Those in front, who were outside of the thills, dropped the rattan and leaped aside for fear of the rattling wheels behind them, and those in the thills shouted all sorts of implorings and execrations against those behind, who seemed to enjoy the discomfiture of their fellows too much to hold back at all. When we reached the bottom of the long hill, the men in the thills were the only ones near the carriage. The others were scattered at intervals all the way down the hill, but were coming on as fast as they could. All seemed in the best of temper, except those in the thills, who gave a spirited lecture to the others; but at once all formed as before and took us up the succeeding hill.

"At noon we came to the famous suspension bridge of rattan, of which I had been hearing the most frightful accounts for the last hundred miles. At once I took off my shoes to avoid slipping, and hastened down the airy, oscillating way, without allowing myself to look down and become giddy at the fearful depth beneath me. . . . . At each bank the bridge is some eight feet wide, but it narrows toward the middle until it is only two feet, where it vibrates the most. I had been directed to go over, if possible, at a hurried walk, and thus break up the oscillating motion, and particularly cautioned against seizing the side of the bridge, lest it might swing to the opposite side and throw me off into the abyss beneath. When I had gone half way across the first span I found that one of the cross-boards, on which I was just in the act of placing my foot, had become loose and slipped over to one side, so that if I had stepped as I intended, I should have put my foot through, if indeed I had not fallen headlong on the rocks in the torrent more than a hundred feet beneath me. I therefore stopped instantly, and allowed myself to swing with the bridge until it came to a state of rest, and then again went on slowly, and safely reached the opposite bank. My companions, who stood on the bank behind me, became greatly alarmed when they saw me stop in the midst of the long span, and were sure that I had either become giddy, or was frightened, and that, in either case, I would grasp hold of the side of the bridge contrary to their express orders. The difficulty in crossing this bridge, which is as flexible as manila rope, is so great, not only because it oscillates to the right and left, but because there is a vertical motion, and its whole floor, instead of moving in one piece, is constantly rolling in a series of waves. . . . .

"Although I am not one of those who allow themselves to be constantly tortured by presentiments and omens, I could not rid myself of an impression that some accident was going to happen to those who were bringing over the carriage, and went back to see for myself what they were doing. The wheels and the top were over, and six natives were bringing the body, which, though large, was very light. They had already crossed the long span, and were coming on to the short one. Is it possible, said I to myself, that such a slight structure can hold such a weight at such a great leverage? We shall soon see, for they are rapidly coming to the middle of the second span. At the next instant there was a loud sharp crack, like the report of a pistol. One of the large rattans that went over the high branches of the camphor trees and supported the sides, had parted at one of its joints. The officer who had charge of the bridge, and was standing by my side, seized me by the shoulder in his fright. As soon as the rattan on one side broke, the bridge gave a fearful lurch in the opposite direction, but the natives all knew they must keep perfectly quiet and allow themselves to swing, and, finally, when it had become still, they came on carefully and reached the bank."

Mr. Bickmore's observations on the various tribes he met with are

* "Travels in the East Indian Archipelago. By Albert S. Bickmore, M.A., Professor of Natural History in Madison University, Hamilton, N.Y., etc., etc." New-York: D. Appleton & Co. 1869. Pp. 553.

interesting and suggestive. He is, apparently, reluctant to confess that his cannibals invented an alphabet of their own, since he thinks it very inconsistent with their mode of living. But this is, in our opinion, to lay too much stress on the value of letters. Men have been found to argue that it is as repugnant to roast an ox as to roast a missionary. The fact that maize was not found by Europeans in the Archipelago is considered by the author as partial evidence that the American aborigines never came in contact with those of Oceanica. But the hideous distensions of the ear which he describes are an ancient custom of the Indians on our North Pacific coast as well as in the interior of South America. The trick of cutting down elephants from behind, as practised occasionally in Sumatra, is, boldness apart, the same that makes the glory of Mr. Baker's Hamran agageers; but it is quite possible that this has been learned of the Arabs. The proficiency of the Javanese in the making of musical instruments is a sufficient distinction from our copper-colored friends on the Plains.

We may note one custom which the author relates with some gusto, or rather with a naïveté which is amusingly visible in other portions also of his diary. He is speaking of a sumptuous entertainment given, on the island of Nusalaut, to the Dutch officer known as the Resident, and himself:

"The process of demolishing had fully begun, when the dark beauties who had been dancing before the house, came in, and ranged themselves around the table. My first impression was, that they had come in to see how Europeans eat, and I only refrained from hinting to that effect to the Resident on my right, because he had already smiled to see my surprise at our novel reception; and besides, I was anxious not to appear to be wholly ignorant of their odd customs. Soon they began to sing, and this, I thought to myself, is probably what is meant by a sumptuous banquet in the East, and, if so, it well deserves the name. As the song continued, one after another took out a handkerchief of spotless white, and folding it into a triangular form, began to fan the gentleman in front of her. This is indeed Eastern luxury, I said to myself, and while I was wondering what would come next, the damsel behind the Resident reached forward and gave him a loud kiss on his cheek. 'That was intended as an appetizer, I presume?' *Natuurlijk*, 'Of course,' he replied, and I leaned back in my chair to give way to a hearty laugh, which I had been trying for a long time to restrain, when suddenly I was astonished by a similar salutation on the lips! It was done so quickly that I had no time to recover from my bewildering surprise, and coolly explain that such was not the custom in my land. Instead of my laughing at the Resident's expense, the whole party laughed at mine; but my confusion was dispelled by the assurance of all, that even the Governor-General himself had to submit to such treatment when he came to inspect these islands. Besides, I was made aware that the fault was largely my own, and that when I leaned backward to laugh, the fair one behind me had misinterpreted the movement as a challenge (which she certainly seemed not loth to accept). At every village we had to run a similar gauntlet, and I must confess that several times it occurred to me that the youngest member of the party certainly received his share of such tender attention, and that many of these beauties, *nona itum*, were determined to improve their present opportunity for fear that they might never again have the privilege of kissing a gentleman with a white face."

The real explorations undertaken by Mr. Bickmore were in the peninsula Minahassa, of the island Celebes, and in Sumatra. Thence, as we have intimated, he went to Singapore, *en route* to China, on which we may expect, we trust, another book in due time. His experience among the Celestials was of excellent service in preparing the work before us, as it enabled him to determine the origin of many customs in the Archipelago which might otherwise have passed unnoticed or unexplained. But he seems unprepared to account for the fact which struck him, that the Chinese of the Archipelago are content to be buried there, unlike their brethren in California. Two tolerably full maps and copious wood-engravings after photographs, complete the satisfaction with which Mr. Bickmore's travels may be followed; but the chapter on Sumatra would have been much clearer if accompanied by half a dozen interleaved sketch-maps of the several excursions described in it.

FOREIGN POLITICS.*

Mr. Grant Duff is member of Parliament for the Elgin Burghs, in Scotland, and holds an office in the Indian Administration under the Gladstone Government. As he enjoys—and, we believe, deservedly—the reputation of knowing more about foreign politics than any other man in England, indeed of being the only man in England who has made it the subject of close and systematic study, it was naturally hoped and expected by his friends that he would have been offered a high position—the Under-secretaryship, say—in the Foreign Office, but this he did not receive, because, according to the wags and the ill-natured, he knew so much more than Lord Clarendon, that he would have proved an uncomfortable subordinate.

The volume before us, which has now been lying on our table for some time, consists of a series of four addresses composed with the view of being delivered to audiences of his constituents in the Elgin Burghs during the year 1868, but which, owing to the pressure of other engagements, were not actually delivered. The "Glance over Europe" is a pamphlet containing a lecture which the author gave at Peterhead in December, 1867. The nature of the "Political Survey" may be best described, by saying that it is a kind of condensation or extract of all that was really trustworthy concerning the political condition and prospects at the close of that year, of France, Italy, Spain, Portugal, Holland, Belgium, Switzerland, Denmark, Sweden, Norway, Germany, Austria, Russia, Turkey, Greece, Asiatic Turkey, Persia, Central Asia, Interior Central Asia, China, Japan, Siam, Egypt, Abyssinia, Zanzibar, Madagascar, West Coast of Africa, Morocco, Tunis, Tripoli, the United States, and the States of Central and South America.

The first question that will naturally suggest itself to any one on reading this list is, how could the author find room to say anything worth saying, within the limits of a moderate octavo, and how could he acquire the knowledge necessary to say it, on such a vast range of subjects? As regards the space, he dismisses each country with a few pages, but those pages deal with the most prominent feature or tendency in its politics; in other words, the feature which an ordinarily intelligent foreigner would be likely to talk about, or be interested in, but about which the opinions of even the most intelligent foreigners are apt to be of the vaguest kind. As to the knowledge necessary to speak with authority on so varied a theme, Mr. Grant Duff has acquired it, first of all as regards European countries, by frequent and protracted visits, and inter course with the leading statesmen and politicians of all parties, and as regards others of which he has had no personal knowledge, he has boiled down, if we may so speak, the diplomatic and consular reports, the most recent travellers' books, and the newspaper articles and correspondence. The result is an exceedingly valuable sketch of the political condition of the civilized world, accompanied with very useful suggestions as to what may reasonably be expected during the next few years with regard to each country, and all done in a perfectly calm and judicial spirit, and with a complete exemption from English leanings. We have been informed that it was the author's intention to publish a similar volume every two or three years, bringing his information down to the latest dates, but we fear his official duties may interfere with the execution of this design.

It would be difficult to over-estimate the service which he or any equally competent man, with a social or political position high enough to secure him the ear of the public, would render to Englishmen by the regular and persistent prosecution of such studies as Mr. Grant Duff has furnished, because there are, perhaps, few nations which have greater difficulty in understanding foreign politics, owing partly to want of imagination and partly to want of sympathy. The politics of a foreign country can hardly be understood by anybody who has not, in an eminent degree, the faculty of putting himself in other people's places, or who has not resided in it so long as to acquire familiarity with his neighbors' points of view. It is to this defect in the English character that we owe the extraordinary blunders of the English press, and the English public men, upon nearly all the great questions of continental politics (to say nothing about the blunders about the American rebellion), since the French Revolution of 1830. Upon that, and upon the Greek revolution which immediately preceded it, they were in the right, and as a rule they have sympathized warmly with all the great liberal movements on the Continent during the last thirty years; but they have almost invariably, when the moment of action came, been seized with some crotchet which has dried up the fountain of their benevolence, and presented them to their protégés in the light of cold-hearted deceivers. They encouraged the Poles, and Hungarians, and Italians, and Danes, in succession; but somehow, when the crisis came, they were never ready to do anything but criticise and find fault; and what has most exasperated the Continental liberals is, that most of the criticism has rarely had any basis in knowledge. A few Englishmen study foreign politics as it is rarely studied, but the mass of Englishmen do not take pains to be well informed, which would make no great difference if they had not so much to say about it; and what with ignorance and want of the sympathetic quality, their judgments drive foreigners nearly mad.

It must be admitted, however, that the difficulty of getting at the truth about foreign politics is not trifling. The leading London papers take, in ordinary times, considerable pains to get good information, but then the

*"A Political Survey. By Mount Stuart E. Grant Duff." Edinburgh: Edmonston & Douglas. 1868. "A Glance over Europe." Second Edition. Same author.

mere labor of reading all, or half, what the newspapers or travellers say about foreign countries in our day, or reading the diplomatic reports or despatches, is something from which most people shrink. It would probably be found on examination, that ninety-nine men out of a hundred, both in England and America, rely on the telegraph now for all they learn of what is going on abroad. A book like Mr. Grant Duff's, therefore, which gives the key to some of the leading problems, or even a thread to carry one through the labyrinth of a revolution or "question," can hardly fail to be in the highest degree useful.

Americans, as regards knowledge, are by far worse off than Englishmen, but then their greater sympathy and imagination, and greater distance from foreign countries, prevent their ignorance from doing as much mischief. Within the range of our observation the New-York *Times* and *World*, the Chicago *Tribune*, and the Boston *Advertiser*, and the Springfield *Republican*, though this last has weak, gushing moments, are the only papers which make any attempt to see, or even any pretence of seeing, foreign affairs as they are. Most of the others either eschew the discussion of them altogether, or else feel it to be their duty to take, of every event or movement of importance occurring abroad, what they are pleased to call the "American view." To the "American view," three things are necessary—first, complete ignorance of the facts of the case; secondly, a firm conviction that all rebellions are justifiable, and will end well; thirdly, an equally firm conviction that monarchs and nobles are the only persons in Europe who do not look at government and society from the American standpoint, and who do not wish to see society remodelled in exact imitation of that of the United States. That human character can have been affected in Europe by the habits, traditions, and education of two thousand years, and that a German, or Frenchman, or Spaniard, can really and truly take a different view of the ends of existence and of the elements of happiness from an Illinois farmer or "railroad man," they treat as an invention of aristocrats and tyrants. As we have said about Englishmen, this would be all very well if the love of talking about foreign affairs, and meddling in them by speeches, and resolutions, and reports, and subscriptions, and filibustering, were not rapidly growing. But it is growing, and therefore it is in the highest degree important that a greater number of persons should make the condition of foreign countries a subject of conscientious examination, and a greater number of journals should take realistic views of foreign politics, and give us, not what they "feel" or "hope" about them, but what they *know*, and what the public ought to know, before it begins to halloo over them, and sign petitions and addresses about them. The "American view" we get in abundance from N. P. Banks and George Francis Train.

The matter is all the more important because, now that our domestic troubles seem in a fair way of settlement, the disposition to meddle in foreign troubles seems to be rapidly reviving, and with it comes an enormous amount of folly and absurdity and self-stultification. In the late controversy with England, the advocates of the United States clung firmly to two positions of vast importance, both to political morality and public law; one was that a rebellion was not justifiable because it *was* a rebellion, or because the rebels were "the weaker party," or "the minority;" that it was the duty of every man, before encouraging it, to enquire faithfully, whether it had any better grounds than caprice or passion, or whether its ends were justifiable, or *whether it had a reasonable chance of success*, or of setting up something better than what it sought to overturn. The other was, that in the matter of according belligerent rights, or recognizing the independence of rebels, a state should be governed strictly by the rules of international law, and not by its own desires or sympathies; and on England's departure from this position our charges in the Alabama case are based by those who make them with most bitterness. Yet it would be hard to discover in the speeches or resolutions of the Cretan or Cuban meetings, to say nothing of the votes of the House of Representatives, the least trace or sign of our ever having been the champions of any such doctrines.

A History of Lowell. Second revised edition. By Charles Cowley. (Boston: Lee & Shepard. 1868.)—The acknowledged value of local histories, when prepared with even a moderate degree of accuracy and painstaking, will serve as our excuse for reviewing a work published several months ago, from which our attention has hitherto been diverted. We take it up the more readily as it is unpretending both in scope and appearance, and is, considering its brevity (pp. 235), as well done as could be expected. Its literary workmanship is not high, and the proof-reader has neglected many errors in the types; but the book is orderly in its arrangement and may be read with interest even by those for whom many of the statistics will have no attraction whatever. The author we take to be a lawyer by profession. In the late war he was a paymaster and judge-advocate in the navy, and was wounded in the attack on Fort Johnson in Charleston harbor in July, 1864.

If it is difficult to gather from obscure and meagre records the early history of our first American settlements, it is hardly less difficult to write the annals of a town which began its corporate and independent existence less than fifty years ago. The very obscurity of the former is an incentive to diligent research and offers a fascinating field for speculation; the notoriety of the latter, in an age of newspapers which leave nothing concealed, forbids indulgence in the illusions of fancy, or much departure from a simple narrative and summary. In the first instance we have to deal with a few characters, of marked individuality, and have plenty of leisure to devote to them; in the second, we may also have a few more prominent than the rest, but then their career is well-known and amply recorded, and their very faces are remembered by those still living, while the generation succeeding the founders is yet active on the stage, and is not a proper subject for the historian. All this is to be said of Lowell as compared, for example, with Salem Village, and the more so because the city may at this day be described as inchoate and unfinished. Mr. Cowley says of the people, in a misapplied but intelligible phrase, that "the *genius loci* is not in them,"—in other words, the municipal spirit is wanting. This defect we are too familiar with in New York, and partly for a similar reason—the immense influx of foreigners. This has had the natural consequences in politics:

"It must be confessed," says the author, "that Lowell has become a political Bœotia—that her politics, her office-holders, and her office-seekers are the opprobrium of the Commonwealth. She is cursed with miserable 'bummers,' of both parties, who, were they suddenly placed in the Common Council of New York, would have nothing to learn of political chicanery, but might be able to impart some valuable suggestions to Fernando Wood himself."

On another page he states that "in the first years of Lowell, three-fourths of the men placed in public authority were among the best men living there [here]. But none will pretend that such has been the fact during the last twenty years." In this period a great revolution has taken place in the character of the factory hands, who, when M. Chevalier visited the mills in 1834, were almost all New England girls, but in 1860, at the time of Prince Napoleon's visit, were "a motley crowd of Americans, English, Scotch, Irish, Dutch, and French Canadians, who were hardly likely to arouse that exquisite poetic sentiment which Chevalier felt for the factory girls of 1834." Mr. Cowley fixes the date of political demoralization in Lowell at about the era of the first great European emigration to this country, of which Lowell must have early felt the effects; but "its grand impetus was derived from the Know-Nothing movement of 1854, which suddenly changed all the loafers of the city, of native birth, into scheming politicians." The California fever and emigration to the West still further reduced the native element, in spite of which, it is encouraging to observe the excellence of the public school system of Lowell. A noticeable part of its history is the arrangement effected in 1835 by the Rev. James Connolly, the Catholic priest, and the School Committee, for including the Irish schools with the other public schools—an experiment which at first was coupled with the condition that the teachers of the schools thus included should be Roman Catholics. "In a few years, however, the jealousies which rendered this arrangement advisable subsided, and differences of creed ceased to be recognized in any form in connection with the public schools." Lowell also for a time adopted the free evening schools, but failed to keep them up; and the author claims for it the honor of being the first town in which school-reports were regularly read at the town-meetings.

Something of the old stock still remains in Lowell, or at least the spirit of those Chelmsford men who at Bunker Hill steadied themselves from a panic, on their leader breaking forth with "Old Hundred;" or their brother militiamen who, during Shays' Rebellion in 1786, "served under General Lincoln in the western counties, and, 'on the memorable thirtieth of January, performed a march of thirty miles, without refreshment, through deep snows, in a stormy and severely cold night'"—a march to which, as Theodore Parker once remarked, if the Boston "Tigers" of his day had been subjected, nothing would have remained of them at the end but their bearskins. The Lowell men of the Sixth Massachusetts honored their ancestors in being first to answer the summons to Washington, and in facing the Pratt Street mob in Baltimore, by whom three of their number perished; Corporal Crowley, a native of Lowell, bearing the colors "with a steady courage that attracted the admiration of all," and surviving that peril only to offer up his life in another place. To Lowell we also owe Generals Butler and Banks, both as politicians and as commanders—the

balance of whose services to their country in either capacity can be struck by posterity more justly than by any living. Of Banks we read very little in this history; the only unfamiliar reminiscence of him being his editorship of a Democratic newspaper after he had ceased to be the "bobbin-boy." General Butler figures a good deal more and not always reputably, but is on the whole treated leniently by the author. Assistant-Secretary of the Navy Fox is the third conspicuous sharer in the conduct of the war whom Lowell produced, and there is perhaps some limit to her just pride in him. The merit of the younger Abbotts is duly emphasized by Mr. Cowley, and is known to all readers of the "Harvard Biographies."

Other distinguished men not a few, from the Apostle Eliot down, have had a more or less immediate connection with the spot now called Lowell, but the real interest attaches to the trio whose names will never be forgotten in the traditions of that city. American energy, inventiveness, boldness, and executive ability cannot be better illustrated than they were by Francis C. Lowell, Patrick T. Jackson, and Kirk Boott. The last was the Titan of them all, and his tremendous will, which had been indulged as a soldier under Wellington in the Peninsular War, naturally carried all before it in a new and growing town where his powers of direction and achievement had the freest scope. There are, accordingly, stories to be told of his imperious supervision of the religion and politics of his employees, and of his interference in town affairs when public sentiment was likely to cross him. But the reader wishes that both he and his associates could have been portrayed more minutely, not only as men worthy of study in themselves, but as throwing light on the development of the gigantic industries with which they are for ever identified. The national bearing of their lives is hardly touched upon, except where mention is made of Mr. Lowell's part in making the tariff of 1816 protective of cotton goods.

Society in a community so heterogeneous as that of Lowell may not be scrutinized very closely. It has always furnished, says the author, "an attractive field for quacks. Not to mention political quacks, who are common everywhere, we have had quacks of one class, who have flourished at the bar; we have had quacks of another class, not less numerous, who have flourished in the pulpit; but the faculty most prolific in quacks is the faculty of physic. Here the vender of every nostrum, the empiric, and the abortionist have reaped a luxurious harvest." In ministers the town has been particularly unfortunate, not less than five having been publicly disgraced for their licentiousness or connection with bad women. It is the exceptional case when the author says of the Kirk Street Congregational church that, "in the substantial elements of parochial strength, this church is one of the strongest in Lowell. Yet four lines suffice for its history—it having had no changes in its pastorate, no schism, no scamps, no scandal. 'Happy are the people whose annals are barren.'" The large female operative population may have had something to do with the immorality which infected even the pulpit, and still more with the prosperity of the quacks referred to. Lowell, we are reminded, is the city of Dr. Nathan Allen, who contends that, so far as his observation goes, the native population is far behind the foreign in ratio of increase—in fact, is dying out. To this cause he ascribes the total excess of deaths over births (695 to 654) in Lowell in 1863. To his more general conclusions, however, we have already taken exception, and we do not feel sure that even on his chosen ground he is altogether a safe guide in this branch of social science.

Tribune Essays. Leading articles contributed to the New York *Tribune*, from 1857 to 1863, by Charles T. Congdon. With an introduction by Horace Greeley. (New York: J. S. Redfield. 1869.)—An acute reasoner on the origin of wit and humor, and the distinction between them, has concluded that the mind sometimes criticises its own classifications of the objects presented to it, and is witty when it detects similarities between things which it accepts as different, and humorous in noticing differences in those things considered alike. "Pity and sympathy," he still further speculates, "are evidently compulsions laid on us, and a just and benevolent nature could not need them, so that we may suppose that in a higher state of existence they disappear; perhaps the passionate hate of guilt may be lessened, too, in those no longer subject to temptation, . . . and as, to an advancing moral insight, crime must seem more and more the height of absurdity and abnormality, the vision of the evil world will steadily change more and more into an intense and tremendous farce."

In this analysis we discern the just appreciation of the work which lies before us. "When I began to write for the *Tribune*," says Mr. Congdon in his forcible preface, "there was hardly a political virtue, hardly a fundamental social truth, hardly a time-honored maxim of humanity, hardly an elementary principle of justice, which we did not have to fight for as if they had been discoveries." In other words, wrong had become right, humanity inhumanity, conscience hypocrisy, robbery property—language was not only perverted but subverted, wherever slavery held sway; and that was everywhere. There was, therefore, an inexhaustible spectacle of incongruities—of contradictions, as we have just said; and, according to the definition, an infinite field for humor for whoever had perception of them. Many had the perception who were spell-bound and tongue-tied; many more, however, who were stirred by the monstrous cruelties of the slave system, and filled with overflowing sympathy for its victims, could only cry out wrathfully and tearfully, like prophets of retributive justice. Slavery, too, was so clothed with respectability, and so entrenched in the reverence felt for the Constitution, that to raise a laugh against it was almost to commit sacrilege. Satire directed against it returned with ten-fold effect upon the North; for, so far as slavery was concerned, the South was eminently consistent. Being also thoroughly fanatical, it never produced a humorist.

The North produced but few; their trade was unpopular, and the Abolitionists were for the most part too grimly in earnest. Mr. Lowell and Mr. Edmund Quincy alone, as we now remember, habitually so divorced themselves from their sympathies as to regard slavery, its doings and its pretensions, (first at all events) with the eyes of a humorist. Mr. Congdon is worthy to rank with them, not as a technical Abolitionist, but as a natura humorist with anti-slavery instincts, and a powerful co-laborer from the day of small things to the triumphant end. In this volume he has gathered but a part of his contributions to the *Tribune*, but they serve very well to show the character of his writing, and, what is of some consequence to the historian, the truth of the statement which we have quoted from his preface. Since the war other humorists have arisen, and have even taken possession of the comic prints, on the side of morality; but Mr. Congdon had been long in practice when "Doesticks" reported the Butler slave sale on the Sea Islands, and afterwards "Orpheus C. Kerr" and "Nasby" planted the stings of their satire in the dying institution. Some gratitude, therefore, is due him as a pioneer, and we hope this collection of articles will secure it for him.

They are, to be sure, not so funny reading now as when they originally appeared. Many of the public incidents they discuss have fallen out of memory, and scarcely excite the interest necessary to a full enjoyment of the humor with which they are treated. But, on the other hand, all is not jesting with Mr. Congdon. Though not used to solid argumentation, he is by no means incapable of it, and as a cultivated and well-read writer he is able to afford a good deal of pleasure. It would be impossible by extracts to convey a just idea of his style, but we cannot resist giving two or three that we have marked. He is telling how Deacon Netherland caused "Old Anthony" to be flogged, on suspicion, with a saw:

"Joseph was a carpenter. Hence the theological propriety of using a saw. . . . . Well, they were rather hard on the 'boy.' The neighbors closed their windows that they might not hear his cries. The women whimpered—as the women will—till the owner of the stable stopped the proceedings, probably being ashamed to have them noticed by his horses."

Mr. Benjamin Screws, of New Orleans, a professional negro dealer, is described as "the man who deals in the cerebrums and the cerebellums, the skulls, the wind-pipes, the chests, the abdominal regions, the legs, the heels, the great toes, and the little toes of his fellow-creatures." Judge Parker "does not appear to be one of your brilliant men, the sort of person to hang up in a dark alley." And this is good sense and sound learning

"It is a great mistake to suppose that the opposition to slavery-extension which the Northern States exhibit is purely a Puritan feeling; for a deal of it is of old Dutch origin; and more of it has grown up in spite of Puritan predilection for a liberal interpretation of, and a strong respect for, the Hebrew Scripture. The truth is, so far as the Scriptural argument is concerned, that the Puritanical spirits are at the South, and holding slaves there by virtue of perverted texts out of Genesis and Deuteronomy, and fine-spun theories about the curse of Canaan."

The occasion for such writing as is most of Mr. Congdon's has pretty nearly abated, and the genius which he had for it is not shared by everybody. He has not lacked for imitators, however, and their forced jokes and pedantic citations often fill too large a space of the paper for which he did so much. It is due to him that the public should have his genuine and probably his best productions set apart by themselves, and placed among the historical documents of the thirty years' warfare against slavery.

The Solace of a Solitaire: A Record of Facts and Feelings. By Mary Ann Kelty, author of "Visiting My Relations," etc. (London: Trübner & Co. New York: John Wiley & Son.)—This is a loosely-written book, with but little to commend it on the ground of artistic merit. Its author is an

aged lady, who has published a good deal in her time, but whose works have not hitherto been deemed of sufficient interest to justify a reprint of them on this side of the water. The volume before us is, in its way, a plea for the doctrine of an infallible inward guide; though the author is not a Quaker, nor does she treat her subject from the Quaker point of view. The book can hardly be called an argument, nor does it rise to the dignity of a formal discussion. It is what it professes to be, a "record of facts and feelings." It is an unmethodical, desultory statement of the author's experiences and opinions, chiefly touching the doctrine of an inward light; with quotations from authors of high authority on other subjects in corroboration of her positions.

The frankness of Miss Kelty's personal disclosures, the unreserve with which she tells us the heart-secrets of her history, give to her pages something of that sort of interest which is found in books of a lighter character, while the gravity of her purpose and the importance of her subject make her work, as a whole, not unworthy the attention of the most serious and thoughtful reader. She is a warm admirer of the old mystics, and from her quotations and allusions it is evident that her chief "solace" has been found in such writers as Cudworth and Henry More, Madame Guyon and Fénelon, Jacob Boehme and Fichte, and such modern religious philosophers as our own Ralph Waldo Emerson. Perhaps the chief value of this book is found in the apt quotations it contains from these and other writers.

Stories for Eva. By Anna E. Appleton. (Boston: American Unitarian Association. 1869).—*Father Gabrielle's Fairy.* By Mrs. Mary C. Peckham. (American Unitarian Association. 1869.)—The Association which publishes these stories offered in May, 1867, three money prizes for "the best three manuscripts of books calculated for Unitarian Sunday-school libraries, and adapted to children under ten years of age." Twenty-nine manuscripts were sent in to the committee, of which number eight were judged worthy of publication, and five out of the eight have already seen the light. The two which give occasion for this notice are, however, the only members of the series which we have seen. Miss Appleton's belongs to the ordinary Sunday-school type—it is not so full of technical theology and precocious piety as some of the stories published in the same field, but it has, notwithstanding, a "goody" flavor which is not quite pleasant. "Father Gabrielle's Fairy" is much better, and we find on trial that it answers the end of giving innocent amusement to little children in quite an admirable way. It is a story of peasant life—the peasant life of children in Brittany at the time of the French Revolution—and in writing it Mrs. Peckham has evidently worked more under the influence of the idea that any work of fiction, however slight, is an artistic opportunity, than under the special inspiration of a Sunday-school prize for a Sunday-school book.

Astor Place and Eighth Street, New York.

A LIBRARY OF EDUCATION,

Selected from the Best Writers of all Countries.

This attempt at bringing within the reach of all the thoughts of the best minds on a most important subject is meeting with high appreciation.

What recommends it apart from its subject-matter and its cheapness is its convenient form—permitting of being carried about the person and read at spare moments, and so light as not to fatigue the hand—and the fact that each work will be complete, and, as far as possible, standard.

The following enumeration will give some idea of the field to be occupied: *Locke*, Thoughts on Education; *Bacon*, Advancement of Learning; *Milton; Ascham*, The Schoolmaster; *J. S. Mill; Carlyle; Prof. De Morgan; Sir Edmund Head*, Shall and Will; *Rousseau*, Emile; *Mme. de Genlis*, Adelaide and Theodore; *Montaigne*, On the Institution and Education of Children; *Fenelon*, On the Education of Girls; *Pestalozzi*, Leonard and Gertrude; *Jean Paul Richter*, Levana; *Horace Mann; Dr. Channing; Franklin; Plato*, Republic; *Xenophon*, Cyropædia, etc., etc.

Vols. 1 and 2, containing Locke's "Thoughts on Education," and minor essays on Study, Reading, etc., together with Milton's Epistle on Education, and lives of both authors, are now ready. They will be mailed to any address for 20 cents each.

J. W. SCHERMERHORN & CO.,
14 Bond Street, New York.

The American Wheat Culturist.

A PRACTICAL TREATISE UPON THE CULTURE OF WHEAT. By S. Edwards Todd. 432 pages large 12mo, illustrated, price $2 50.

"No well-appointed Agricultural Library can be without it. If a poor farmer can buy but one book relating to his art, let him buy this."—*New York World.*

"We commend it to all intelligent farmers, and believe its careful reading will be one of the first steps towards the raising of a successful crop of that from which comes the staff of life."—*Maine Farmer.*

"The chapters on 'Preparation of the Soil,' 'Varieties' and 'Means of Preventing Ravages of Disease and Insects,' are worth very many times the price of the book."—*Rochester Express.*

"It is a thorough treatise on the subject of Wheat-growing."—*New York Observer.*

"Its common sense and practical statements, together with its excellent pictorial illustrations, will make it a favorite and useful work in the farmer's library."—*New York Tribune.*

The Week.

THE Senate has been constantly at work during the week, but has done nothing of importance except to confirm and reject nominations. It has not done very much rejecting, but rather more of what it has done is highly discreditable to it than creditable. It is a good thing that Mr. Stephens—the son of Mrs. Ann S. Stephens the novelist, who can do a little lobbying on occasion—was refused the consulship at Leith, where we already have in Mr. Fiske a worthy representative, in whose interest we hope it was that the rejection of Mr. Stephens took place. But there seems to be nothing to rejoice at in the rejection of a certain nominee for a postmastership in Kansas because he was "personally obnoxious" to Mr. Ross, and because Mr. Ross's fellow-senators recognize his right to half the patronage in his State. In fact, it is simply disgraceful; it illustrates the motives which governed many senators in refusing to repeal the Tenure-of-Office Act—a measure which allowed them to buy their own places with other places, that is to say, with the people's money. On Friday Mr. Brownlow obtained a victory like Mr. Ross's. Mr. Ashley's confirmation as Governor of Montana is another scandal. We suppose Mr. Sumner gave his support to the "original impeacher," and not to the ex-congressman and ex-committeeman of whom such stories are told as very thoroughly justify his district for dispensing with his services. The story goes that Grant did not feel free to decline to nominate Ashley, because he had the united support of the Ohio representatives and senators. The fault of the Ohio members does not, however, seem at all a valid excuse for the President's action.

The President has shown, however, every disposition to correct mistakes when pointed out to him. For some of the worst ones, such as that in the case of Wadsworth, for instance, he can hardly be called responsible, inasmuch as Wadsworth experienced no difficulty in getting any number of signatures of prominent men to his testimonials—politicians, editors, and others apparently considering the signing of their name to a recommendation for office to be something they owe to any of God's creatures who chooses to ask for it. The case of Original Impeacher Ashley is, perhaps, the worst of all, and in this the public would be justified in being very severe on the President, if it were not that the Senate has done in cold blood, and after full debate with all the facts before it, what the President may have done through ignorance and inadvertence. Ashley, while Chairman of the Committee on Territories, entered into agreement with a land speculator, named Case, agreeing to supply him with information as to the Committee's intentions, and so to enable him to speculate successfully, exacting half of any money Case might make. The affair was examined by a Committee of the House, Ashley's letters to Case produced in evidence, and the charge fully proved, but he was let off because it did not appear that he had received any money under the agreement. This was eight years ago, and he has since been endeavoring to cover up his misconduct by "soundness on the main question," roaring for impeachment, and denouncing the wickedness of Andrew Johnson; and the Senate appears to have accepted these and the recommendation of one hundred and fifty Congressmen as a sufficient atonement for one of the most disgraceful abuses of his trust of which a legislator could be guilty. The worthy is now provided for by the Governorship of Montana. There is, of course, some consolation in the fact that he was only confirmed by one vote, but then when such a man as Mr. Sumner might have changed the result, and did not, one cannot help expressing the earnest wish that somebody of Mr. Sumner's standing would explain the principles on which they understand this Government to be based. If they really believe that moral character is of no consequence in the servants of a republic, they ought to say so frankly, and give us their reasons, and not beat about the bush as they have done in Butler's and Ashley's case.

On Thursday, in the Senate, Mr. Anthony had read by the Clerk a letter from Messrs. Brown, Ives & Co., in which those gentlemen did what all Rhode Island seems to be doing with great vehemence—"repudiated" Mr. Sprague's recent aspersions. If their house is in need of advertising they may certainly be much obliged to the young senator. By Mr. Anthony's device the Browns' "card" goes into the *Globe*, and posterity, reading that paper in due course, gets the Browns' defence at almost the same time that it gets the calumnies of their enemy. On Saturday Mr. Sherman introduced a resolution passed by the Ohio Legislature which expostulates with Congress for its grants of land to railroad companies, and protests against the longer continuance of the practice of making them. When one or two more of the powerful States shall have given their representatives to understand that "robbing the public of its patrimony" must not be done by the help of their votes, there will be hope that the lobby may no longer be able to resist successfully the wish of the people. As things are now, the lobby buys up a majority in Congress, or enough of Congress to put their friends, honest or otherwise, in a majority, and these steal land for the Rings. The acres are counted by millions that have already been corruptly got in this way, and it is time we should wake up to the

fact that even the "boundless West" is considerably smaller than the "all creation" it is commonly called.

On Monday, Mr. Chandler, of Michigan, offered one of his habitual resolutions to the effect that the President be authorized to negotiate with England for the transfer of the British North American possessions to this country and the consequent abandonment by us of all claims against her. The speech in which he supported his views was tremendous. The Canadians and Nova Scotians and other Provincials would, however, have something to say in the matter of such a transfer; and we may tell Mr. Chandler that we have been in the Provinces, and that he himself personally, by name, and in his specific character of senator, constitutes an obstacle to our happy union with the Dominion; he points a moral, sometimes, in Nova Scotia, against the admirableness of American democratic government. His speech confirms us in the impression that the opposition to his re-election in Michigan last summer was due to "British gold." The agents of the British Government naturally enough spread abroad the report that he drank too much, but this calumny was promptly refuted, as our readers may remember, by General Butler. We wonder what that corrupt and unscrupulous power will now bring up against this distinguished man, when its minions read this last speech and feel his lash on their miserable hides.

Those of our friends in Pennsylvania who had their doubts if we were not too civil to our own legislature when we called theirs the corruptest in the Union, may have some of those doubts removed by looking into the Harrisburg *State Journal*. "Anything that had money in it," says that paper, "however unfair, disgraceful, and destructive it might be, was sure to pass." And again: "Divorce bills were openly sold in the lobbies; the Tax Bill was bought through the House, and when it reached the Senate $2,000 a vote was freely offered for its passage." The *Independent* takes up the tale also, and appears to suspect the members of many crimes besides bribery and corruption. "We simply mean to characterize it," it says, "as the most suspicious-looking public body we ever saw." "Never before," it continues, "have we seen so squalid an array of low brows grouped together in any one legislative body." Solid Pennsylvanians, it appears, do not hesitate to say, with profanity, that the present legislature is "the most corrupt that ever preyed upon that bleeding commonwealth." This beats Albany a little; but things there are getting so bad that the careful *Times* calls names, and tells of five or six Republican senators whom it openly charges with being purchasable and purchased. The Democratic members are not precisely to a man counted on as a matter of course to sell their votes, but nobody thinks of the majority of them as not being in the market. What is to be done about it all nobody seems to know. The abolition of all "special legislation" is advocated by some, and the covering of all the legislative ground by general enactments—a remedy which, to be thoroughly efficacious, should be coupled with another change in the constitution which should give us non-elective judges to interpret our general statutes. As for the greater but less glaring rascality of Washington, one newspaper correspondent of character and sense, not afraid to tell all he knows, might do a great deal in the way of putting a stop to it, to say nothing of what he might do for his paper.

The Rhode Islanders seem to have gone clean daft over the attacks of Senator Sprague on "Ives & Co." and on General Burnside. The Providence papers contain little else than replies and denunciations of the fiercest kind directed against the senator. Nothing more foolish or malignant than Mr. Sprague's speeches was probably ever uttered in a legislative body, and the assault on General Burnside would deserve punishment of some kind if uttered by anybody else. But the speeches have been, on the whole, so wild and incoherent, that it is quite plain either that he is not fairly responsible for them, or they are not worth answering. The tempest they have stirred up has really given them nearly all their weight. Besides, there is always something ludicrous in the sensitiveness of a whole community, and if we might be allowed to offer advice to the Rhode Island press, it would be to drop Mr. Sprague and let him get up his "Poor Man's Bank."

Mr. Boutwell is busily engaged in anticipating the May and July interest, and has, it is reported, paid off half a million in this way, and has thus far effected a saving to the Government through the rebate of $1,700. We have little doubt that, by close attention to business, he may before the first of July bring this amount up to $3,000, and then we shall all be happy and prosperous. What pleases us most in this financial operation is that it will in some degree furnish a set-off to the millions of waste which will probably take place during the next half year through the appointment of new and untried officers to nearly every post of importance connected with the revenue. Mr. Wells calculates that the regular waste and stealings of these functionaries in an ordinary year amount to about $75,000,000; the year when they are all changed, we are satisfied $25,000,000 is a small sum to add to this amount for the loss caused through the total derangement of the machine; but against this nefarious system Mr. Boutwell has not a word to say, or at least has never said a word. He has, however, done one good thing in cutting down the force at the Treasury Department, where supernumeraries are reported to have abounded.

What with Cuban rumors and the *Alabama* question, gold has crept up three or four per cent. and is now close on 135—and it will probably stay there for a while. Mr. Motley is getting his instructions for London, and they are said to be very precise and extensive, and leave little play for his discretion, Messrs. Sumner, Evarts, and Caleb Cushing lending a hand in framing them. The tone of the English press, however, leaves little ground for the expectation that the negotiation is likely to be soon renewed. There is no reason to believe that the present Ministry will offer anything more than Mr. Johnson got, and the prevailing sentiment here is in favor of letting the matter lie as it is. Anybody who supposes that England is likely soon to offer an apology for the issue of the Queen's proclamation of neutrality we believe to be greatly mistaken; and so is anybody who supposes that Americans will be satisfied unless they get one. Mr. Sumner's use of the case of the *Leopard* and *Chesapeake* as an illustration shows how far apart the two parties still are. No ministry would venture to put the issue of a royal proclamation on the same level with an unauthorized outrage committed by the captain of a frigate, and apologize for it to a foreign power. We therefore cannot help believing that the introduction into the case of the issue of the proclamation, not simply as an unfriendly act and as evidence of animus in the *Alabama* matter, but as a positive wrong in itself, needing atonement, makes a friendly settlement indefinitely remote and opens up a smiling prospect to the gold gamblers.

We spoke last week of the singular indifference to "the claims of the press" displayed by General Grant in his appointments. But one leading editor has been offered an office, and he has declined it. When one contrasts this with the lavish distribution of places amongst editors and publishers which marked the advent of Mr. Lincoln's administration, it looks, at first blush, as if the moulders of public opinion had not been fairly dealt with. But the circumstances are different. Mr. Lincoln's election was due to the triumph of certain ideas, and to this triumph the editors had contributed more than any other body of men. If the proposed use of offices, therefore, be to reward those who have done most for the party, the editors were entitled in 1861 to a very large share of them, and they got it. To Grant's election they have contributed comparatively little. Some of the principal newspapers have accepted him as a *pis aller*, and, at all events, his triumph was simply a continuation of the process which Mr. Lincoln began. The consequence is that they have now been confined to the humble and obscure task of recommending people for office. Some of them have made the usual number of journeys to Washington, and done the usual amount of lobbying on behalf of their protégés, but, we are glad to say, got nothing for themselves.

The practice of editors taking office is reprehensible in more ways than one, but principally in this, that it throws an air of gammon over all their denunciations of the faults of politicians proper, and makes their articles, at least for some time before election, pass for so much hackwork done in expectation of substantial pay. There is, we know, a pleasant theory amongst themselves that the compliments paid them by politicians are due to an appreciation of their services to the community; but the truth is that nearly all the praises of editors and of the editorial office one hears come from editors themselves. The reverence of the public for them has a strong infusion of devil worship in it; that is, people are deferential to them through pure fear of being abused and made odious by them. They will never get any higher claims to respect till they keep out of the scramble for office, and stop "recommending" their creatures and hangers-on.

We are glad to say, however, that the repetition of this scramble and the shocking abuses which it reveals, combined with the rapid growth and spread of corruption, and the exclusion of editors from office, has done a good deal towards directing public attention to the necessity of a change in the system. The press of both parties has within the last week or two spoken more strongly than ever in favor of the adoption of the Jenckes plan, or something like it. Mr. Jenckes brought the subject up once more in Committee of the Whole on the 9th inst., and will bring his bill in once more in December. In the meantime everybody who has any regard for the country, not to speak of decency or morality, ought to do what he can toward frightening Congressmen into supporting it. We say frightening, because appeals to the reason of a large number of them seem utterly useless. The war, it is popularly supposed, "saved the Union." It did nothing of the kind; it simply gave the people another chance of saving it from the attacks of enemies compared with whom Davis and Lee were but fleas.

Mr. Boutwell's offer of the Appraisership of this port to Mr. Dana of the *Sun*, an offer which Mr. Dana declined, is a curiosity in its way, inasmuch as it was in reality an offer to turn Mr. McElrath, a faithful and efficient officer of whom no complaint has ever been made, out of an office with the duties of which he is perfectly familiar, for the purpose of giving it to Mr. Dana, who had not asked for it, and who, according to Mr. Boutwell, "probably had neither taste nor inclination for it." It is "a point on which," adds the sagacious Secretary of the Treasury, "our success in collecting the customs revenue turns, and I know of no way in which you can render so efficient aid to the Government." Begging Mr. Boutwell's pardon, his "success in collecting the customs" turns on nothing of the kind. It turns on his ability to keep men in office, and encourage them, who are doing their duties honestly and faithfully; and the idea that the collection of the revenue can be helped by putting them out and putting in others who have "neither taste nor inclination" for the duties would probably have entered the head of nobody but an ingrained politician. Mr. Dana, would, we know, have discharged the duties of the office faithfully, but he has rendered the public a service in refusing it, and sticking to his editorial post, where, we are glad to hear, he is going to "denounce and expose political immorality."

The Cuban news—and we are careful to take it from sources friendly to the "insurgents"—consists of a report of the arrival in Washington of letters from prominent Cuban leaders "in which the utmost confidence in their ultimate success is expressed;" of a rumor of the close investment of certain Spaniards in two fortified convents by Quesada's forces, 6,000 strong; of an announcement that the "provisional government" is going to issue "an important manifesto;" of the seizure of several lots of sugar at Havana, and of the killing of two negroes by a mob in the same place; of the receipt of a letter in Savannah (Ga.) announcing the arrival of "three volunteer expeditions" from Florida, and of great desertions amongst the Spanish forces; and of a rumor of a "heavy engagement"—of which, we need hardly say, "no particulars have been received." There is also a report of the sudden disappearance of a patriot army of 12,000 men on the approach of three converging Spanish columns of very inferior force—an exploit which the Cuban sympathizers seem to think very remarkable and even hopeful; but it is hard to see what the insurgents gain by the assembling of themselves together if they dissolve when the enemy appears, because the use of armies is generally supposed to be the attack and destruction of other armies. As we have said before, however, the military "operations" on the island are mere by-play; the real contest is going on in Washington and New York, and in those places the Spaniards always get the worst of it. General Dulce's senseless proclamation, threatening to treat filibusters as pirates and immediately execute them, has of course furnished the Cubans with abundant materials for rumors. Of this the President had to take notice, and its execution would, of course, cause trouble; so the Cuban agents have during the week filled the columns of the organs of the Lie Power with stories of recognition, of the fitting out of fleets and armies, and the despatch of envoys requiring the Spaniards to quit the island. All sober observers, however, agree in representing the disturbances in the island as subsiding; and as reinforcements of troops are constantly arriving from Spain, it will probably be before long so thoroughly policed that even the burning of plantations will become difficult.

The Belgian difficulty with France was supposed to be settled by the appointment of a mixed commission to pass upon all matters in dispute, but it is now announced that the proceedings are arrested by the inability of the two governments to agree upon the questions to be submitted for its discussion and decision. What the precise nature of the difference is, the despatches do not say, but the probabilities are that the French are not disposed to be accommodating, owing to the increasing pressure of the opposition at home. The attacks in the Corps Législatif increase in weight and violence, and the resistance of the ministers appears, since their check on the Haussmann affair, to grow feebler. M. Thiers has been unusually active during the last few weeks, and is gradually throwing aside the air of respect for the Constitution which marked his speeches in the earlier days of the opposition. The power of concluding commercial treaties without consulting the Legislature, which the Emperor retains, and has exercised with England, as well as more recently with other powers, is proving one of the most exasperating incidents of the Imperial régime. The manufacturers, who are suffering from the treaty complain of it all the more bitterly because it is the result of an exercise of arbitrary power, and the telegraph tells us that a great scene has recently taken place in the Chamber in consequence of M. Thiers pronouncing "the political liberties of France, like her commercial liberties, a farce."

The feeling of soreness has doubtless been aggravated by the recent publication, in an appendix to Professor Bonamy Price's new book on the currency, of a letter from M. Michel Chevalier, giving an account of the way the treaty was framed, and it must be admitted that the story is, for Frenchmen, a little provoking. He says the idea of entering on a free-trade policy was first conceived by the Government in 1855, after the Exposition, and it proposed to the Legislature to remove all prohibitory duties; but the proposal was promptly rejected, and it was evident that no progress in that direction was possible with the sanction of the Chambers. Being in England in 1859, M. Chevalier mooted with Mr. Cobden the plan of a treaty of commerce in the interest of free trade, talked it over with him and with Bright, and obtained the warm support of both; then settled the basis of it in three-quarters of an hour with Gladstone, and then started for Paris, followed *secretly* by Cobden. They were received separately by the Emperor in order not to excite suspicion, and after a few consultations, regular negotiations were opened by Cobden and Lord Cowley on behalf of England, and MM. Baroche and Chevalier on behalf of France, and by January, 1860, the treaty was signed. Then it was for the first time revealed to the world, and there was a regular rush of protectionists to the Tuileries, but it was too late.

MR. SUMNER AND THE PROCLAMATION OF NEUTRALITY.

THERE is little doubt that Mr. Sumner's exposition before the Senate of the so-called "*Alabama* claims" receives the approval of a great majority of the people of the Northern States, including many who have no sympathy with his favorite ideas, and who generally skip his classical allusions with some contempt and more impatience. His argument was, in closeness, directness, and legal force, happily superior to many of his recent speeches. The character of the subject appears to have revived in the senator's mind the effect of that juristical training to which it was subjected in earlier days. In rejecting the Johnson and Clarendon convention it is clear that the Senate has acted in accordance with the general sentiment of the country. It was very desirable to have some generally received statement of the foundation of that sentiment, and it is likely that Mr. Sumner's argument will stand as such, at least for the present. Even those who differ from him as to the extent of the claims of the United States may agree as to the objectionable form or character of the convention, and its failure to correspond to the circumstances on which those claims must be founded, even supposing them limited to compensation for the vessels and cargoes actually destroyed by ships of the *Alabama* class. The English journals, in charging the Americans with unreasonable dissatisfaction with the proposals on the English side, have often represented these proposals as including a positive consent on the part of England to make such compensation. From the confessions which have been publicly made in England during the last four years, and the compliments which Mr. Johnson's appearance at British feasts as our representative has elicited, the American public had been led to believe that this consent, with at least an implied acknowledgment of something very like wrong-doing on the part of the British Government, was virtually given. They do not look upon the offer of an opportunity to refer the question of payment for such and such a ship or ships and cargo to some accidental arbiter, on the same footing as any private claims which may be brought forward on the other side, as being a fulfilment of expectations hitherto entertained. There is a general feeling that in this respect the national sentiment has been trifled with.

The difference between the recognition of the Confederates as belligerents according to their actual military and naval force, and the concession of belligerency to the Southern States in their confederacy, so as to give nationality to armed ships issuing out of a neutral port, has not hitherto been made sufficiently prominent in this discussion. Mr. Sumner's argument is good for its statement at least, if not for its application, of this distinction, which we are inclined to regard as giving the key to the controversy about the "*Alabama* claims," so far as it involves a question of strict international law. But we are by no means confident that in this controversy our Government should insist that this distinction was overlooked by Great Britain in taking international cognizance of the rebellion by the Queen's proclamation of neutrality May 31, 1861; as Mr. Sumner says,

> Close upon the outbreak of our troubles, just one month after the bombardment of Fort Sumter, when the rebellion was still undeveloped, when the National Government was beginning those gigantic efforts which ended so triumphantly, the country was startled by the news that the British Government had intervened by a proclamation, which accorded belligerent rights to the rebels. At the early date when this was done the rebels were, as they remained to the close, without ships on the ocean, without prize courts or other tribunals for the administration of justice on the ocean, *without any of those conditions which are the essential prerequisites to such a concession;* and yet the concession was general, being applicable to the ocean and the land, so that by British fiat they became ocean belligerents as well as land belligerents. In the swiftness of this bestowal there was very little consideration for a friendly power; nor does it appear that there was any enquiry into those *conditions precedent* on which it must depend. Ocean belligerency being a "fact," and not a "principle," can be recognized only on evidence showing its *actual existence*, according to the rule first stated by Mr. Canning and afterwards recognized by Earl Russell. But no such evidence was adduced; for it did not exist and never has existed. Too much stress cannot be laid upon the rule that belligerency is a "fact," and not a "principle." It is, perhaps, the most important contribution to this discussion; and its original statement, on the occasion of the Greek revolution, does honor to its author, unquestionably the brightest genius ever directed to this subject. According to this rule, belligerency must be proved to exist, it must be shown. It cannot be imagined or divined or invented; it must exist as a "fact" within the knowledge of the world, or at least as a "fact" susceptible of proof. Nor can it be inferred on the ocean merely from its existence on the land. Unfriendly in the precipitancy with which it was launched, this concession was more unfriendly in substance. It was the first stage in the depredations on our commerce. Had it not been made no rebel ship could have been built in England. Every step in her building would have been piracy. Nor could any munitions of war have been furnished. The direct consequence of this concession was to place the rebels on an equality with ourselves in all British markets, whether of ships or munitions of war. As these were open to the National Government, so were they open to the rebels. The asserted neutrality between the two began by this tremendous concession, when rebels, at one stroke, were transformed not only into belligerents but into customers. In attributing to that bad proclamation this peculiar influence, I follow the authority of the law lords of England, who, according to authentic report, announced that without it the fitting out of a ship in England to cruise against the United States would have been an act of piracy. This conclusion was clearly stated by Lord Chelmsford, ex-Chancellor, speaking for himself and others, when he said: "If the Southern Confederacy had not been recognized as a *belligerent power*, he agreed with his noble and learned friend (Lord Brougham) that, under these circumstances, if any Englishmen were to fit out a privateer for the purpose of assisting the Southern States against the Northern States, *he would be guilty of piracy.*" This conclusion is only according to analogies of law.

Exception may well be taken to many of these assertions. Up to the time of the proclamation any American might have been a customer for ships or munitions of war in British ports. The Southerners had been buying in preparation for the war, and if no notice whatever had been taken by the British Government of the existence of a rebellion, as Mr. Sumner appears to intimate was possible, any person, British or American, Northerner or Southerner, might have gone on exporting ships and munitions to Southern or Northern States; provided she took them as articles of commerce and not in a ship under a new flag, not known in commerce or hostile to the United States. Of course our consuls must soon have begun to refuse the necessary papers, and our minister would have begun to call for the arrest of the parties engaged in the commerce with the South, as persons engaged in piratical enterprises, or as subjects of Great Britain engaged in unlawful designs against our peace and safety, and, as such, coming within the provisions of the Foreign Enlistment Act. Mr. Sumner insinuates, rather than affirms, that it was the duty of England to have taken this course throughout the rebellion. But this would not have been to ignore the rebellion. That was impossible. Unless we assert that by the rules of international law every government, in case of a rebellion, is entitled to receive the commercial assistance of every friendly power, without reference to the actual strength of the rebellion, it must be admitted that the British Government would have been justified at some time or other in taking the position of neutrality. Mr. Sumner's argument is, that if this position of neutrality had not first been taken there would have been no such belligerency *in fact* as could justify this position on the part of any foreign power.

On this point, which we cannot now properly consider, we may be obliged to differ from the prevailing opinion. We have recently said that there were circumstances attending the proclamation of neutrality and the progress of the rebellion which have made the question between the two countries one of feeling, and we readily concede the force of Mr. Sumner's exposition of the reasons for the feeling on the American side. But it must, we think, be admitted on the part of the United States, if we propose to negotiate at all, that the proclamation of neutrality, at some time before the issuing of the *Alabama*, could not of itself be a ground of international complaint. Mr. Sumner says, "That England became an 'arsenal' for the rebels we know, but this could not have been unless the proclamation had prepared the way." But it was the violation of the proclamation and of English laws that made England an arsenal for the rebels. The effect of the proclamation was to close "the markets of ships and munitions," not to "open" them, as Mr. Sumner states it, to the two "contending parties," as the proclamation styles them.

The concession of belligerency, if it may be called by that name, which violated the principle laid down by Mr. Sumner, was not made by this proclamation. It is now urged by the English jurists that a violation of the municipal laws can be no grievance to another nation, unless the act itself is also contrary to international law. They claim further that as this law now exists, privateers, or armed cruisers in the service of a foreign state, may lawfully issue out from neutral ports. Now it is here, we think, that the principle which Mr. Sumner has

brought forward becomes applicable. The proclamation must be, because it can be, interpreted as recognizing belligerency according to the fact. The point we would make, and which Mr. Sumner states elsewhere in his speech, is, that the Confederacy had no such status that it could make a privateer of a ship equipped in a neutral port. The American Government did not accord this status to the Confederacy by proclaiming a blockade of Southern ports, because that was a recognition of belligerency only according to the "fact."

The United States had that status, and might, as the law of privateers now is, have sent out such a cruiser. This is a superiority which every recognized nation must have, if there are to be such things as recognized nations. Mr. Sumner argues as if a proclamation of neutrality between the two "contending parties" on the part of England could give the Southern Confederacy this status. Of course it may be that in the minds of Mr. Laird and the British public, the proclamation was taken to have this effect. But that is not our affair. Mr. Sumner, and Mr. Seward before him, have erred, we suggest, in making the recognition of the *Alabama*, as a lawful cruiser the legal consequence of that recognition of a civil war which was made by the British proclamation. According to this reasoning, France is equally responsible with England for the issuing of the *Alabama*.

With the view we here take, we can admit that cruisers sailing from a Southern port and putting into English harbors were properly treated as belligerent ships, and not pirates. We can even admit that, had the *Alabama* been run out to a Southern port as a mere article of commerce, though in violation of English municipal laws, and had thence sailed as a cruiser, she might have been entitled to like consideration. The ship once identified, *in fact*, with the Confederate force, would admit of belligerent recognition to the extent of the fact. But, on the other hand, there could be no recognition of the belligerency of the Confederacy by land and sea as a "principle," which should apply to an armed ship issued out of a neutral port, least of all by the neutral from whose ports and against whose law she had issued. It is from insufficiency of legal terms that we connect "belligerency" with the *Alabama*. The ship, on the facts, was in the same category as if the English proclamation had never been issued, and no "contending parties" had been recognized by the English Government. Mr. Sumner says, with justice:

> The dedication of the ship to the rebel service, from the very laying of the keel and the organization of her voyage, with England as *naval base*, from which she drew munitions of war and men, made her departure as much a *hostile expedition* as if she had sailed forth from her Majesty's dockyard. At a moment of profound peace between the United States and England there was a hostile expedition against the United States. It was in no just sense a commercial transaction, but an act of war.

Mr. Sumner's speech has the old ear-mark of the emancipationist. He seems to think that England was bound, by ancient anti-slavery ties, to render assistance against the Confederacy. Southern secession was in the interest of slavery, therefore, etc., etc., says Mr. Sumner. But if he really means to maintain that nations are bound by the professions of their public men, who is to answer for Messrs. Banks and Chandler?

While generally agreeing with Mr. Sumner in his argument for the rejection of the Johnson and Clarendon convention, we cannot wish that it should be a foundation for future negotiation. It was understood that Mr. Seward had abandoned the position that the "*Alabama* claims" are founded on the proclamation of neutrality, and we hope that the present Administration will not return to it.

We agree with Mr. Sumner, that we are entitled to a convention, giving reparation on the ground that a principle of international law has been violated on the part of England; and if it is clear that that has occurred, the acknowledgment is perfectly consistent with national honor and dignity. We would confine our claims to the limits of fact and international law; the existence of a certain national feeling or sympathy may have been an ulterior cause of greater losses, but it cannot be made a basis of demands and reparations.

"TIGHT MONEY," AND WHAT MAKES IT.

The high rates of interest paid by borrowers of money during the last few weeks, the difficulty of obtaining a sufficient supply even at these high rates, the steadiness with which the rates have been maintained for an unusual length of time, and the prevalence of this scarcity at all the leading financial centres of the country, have had so decided an influence on so many varied interests, and have brought "the money market" home to so many firesides, that many people outside the business world are interested in the phenomenon.

Everybody asks, What makes money scarce or tight at one time, and abundant or easy at another time, when we at all times have precisely the same amount of money in circulation? When we speak of money being easy to borrow, we do not mean easy to borrow in sums of five or ten or twenty dollars; we mean easy to borrow in sums of thousands, tens of thousands, hundreds of thousands. Large sums of money can, of course, only be borrowed from large institutions, like banks, or private banking-houses, or trust companies, or similar corporations. To say, therefore, that money is easy, is merely another way of saying that the banks and other financial institutions have large accumulations of money in their hands. To say that money is tight, is merely another way of saying that the accumulations of money in the hands of banks and other financial institutions are light. The question, therefore, resolves itself into this other question, What makes money at one time accumulate in the banks, and at another time leave the banks and go elsewhere, and where does it go to?

The amounts of money controlled by banks and other financial institutions are so overwhelmingly large compared with the amounts at any time under the ordinary control of private individuals, that we are apt to think that a very large share of the whole money of the country is in the possession or under the control of the banks. Nothing could well be more erroneous. The total amount of paper money (greenbacks, fractional currency, and national bank-notes) in circulation in the whole of the United States has, for the last two years past, been, in round numbers, seven hundred millions, and has not during that time ever materially varied. The largest amount held at any one time during that period by all the banks in the country was $133,000,000, in January, 1868, or not quite one-fifth of the whole. The smallest amount held at any one time during that period was $99,000,0000; in April of the same year, or somewhat less than one-seventh of the whole. Of all the currency in circulation in the whole of the United States, the banks throughout the country hold on an average one-sixth, or say, $125,000,000. The other five-sixths, or say $575,000,000, the people carry in their pockets, or hold in their money-drawers.

Every wholesale merchant has some money in his safe, from which he makes the ordinary minor payments incidental to his business. Every retail merchant, from the owner of a dry-goods palace to the smallest news-stand or corner-grocery, has some bank-notes in his drawer when he closes the store for the night. Every housekeeper that goes shopping or marketing carries a roll of bills more or less large. The mechanic or the laborer carries a week's wages in his pocket until they are spent, or deposited in the bank, or laid aside in some safe place towards paying the rent. The cattle-dealer has his belt, the farmer his stout wallet, every traveller his purse, the railroad-conductor his handful, the expressman his envelope, every man, woman, or child, from the prince to the beggar, carries a porte-monnaie, or receptacle of some kind, all more or less full of greenbacks, or national bank-notes, or fractional currency, all holding a certain part, however small, however large, of the grand total of the money in the country. The money thus held by the people amounts to about five sixths of the whole money in the country. When the banks hold $125,000,000, the people hold $575,000,000. The true bank of the country is the people's pockets. The so-called banks hold only the surplus which the people do not need. When, therefore, money accumulates in the latter, it is simply evidence that the people are using less money in their business, are carrying less money in their pockets. When money leaves the banks it is simply evidence that the people are using more money in their business, are carrying more money in their pockets. When the people are using little money, money accumulates in the banks. When money accumulates in the banks, money is easy to borrow. Therefore, when the people are using little money, money is easy to borrow. When the people are using much money, they withdraw the surplus from the banks, and the accumulations in the banks decline. When the accumulations in the banks decline, money is difficult to borrow. Therefore, when the people are usng much money, money is difficult to borrow.

The bulk of the money is in the hands and pockets of the people. What the people do not require, is temporarily left in the banks. This surplus, temporarily left with the banks on deposit, is the money that the banks have to lend. When the owner calls for it, the bank has to call upon the borrower to return it. The bank never lends it all, never lends, or never should lend, more than a portion of the surplus left with it. If, then, only one or two or a few owners call for their money, the bank is not necessarily obliged to call upon the borrowers to return it; the bank has probably enough on hand to pay these owners without calling in its loans. Or if the bank has not enough surplus on hand, and does have to call in some of its loans, other banks will probably have surplus enough on hand to lend a little more, and the borrower can thus be accommodated elsewhere. But if the bank, or a number of banks, should have been so foolish as to lend the whole of the surplus deposited with them, or if a great many of the owners of this surplus should call upon the banks at one and the same time to have their money returned, the banks would then be compelled to call in their loans, and the borrowers would find it extremely difficult to borrow elsewhere, and money would be in very active demand, and difficult to get, and the papers would chronicle daily for their readers, and "gloomy husbands would report nightly to disappointed wives, that money is very tight."

The amount of money kept in daily use by the people is so very large compared with the amount of money held by the banks, that it becomes easy to understand how a very slight increase in the amount required by the people causes a very large decrease in the amount at the disposal of the banks. When the people hold $575,000,000, or five-sixths of the whole, and the banks one-sixth, or $125,000,000, an increase of one per cent. in the amount used by the people is equal to a decrease of five per cent. in the amount at the disposal of the banks. When the people hold $575,000,000 or at a rough average sixteen dollars apiece, an increase of the average holding from sixteen dollars to seventeen would deprive the banks of over one-fourth of the whole amount of money at their disposal. In January, 1868, the banks held $133,000,000 in currency, and money was so abundant, and so easy to borrow, that people scarcely knew what to do with it. All the money that any body needed could be borrowed, on good security, at six and even five per cent. By the 1st of April of the same year the banks had lost $34,000,000, that is to say, the people had taken into use, in addition to what they had before, the sum of $34,000,000, or less than one dollar each. Yet by the 1st of April all the money markets were in a panic, money was worth one-quarter of one per cent. a day, or over ninety per cent. per annum, and could scarcely be obtained even at that price. Of course every one familiar with Wall Street operations knows that these extreme rates were to a great extent artificial, and in many cases even fictitious, but neither artifice nor fiction could well have put the rates to such extravagant figures, if the scarcity had not been real; and indeed there is no doubt that the scarcity was real and very severe. The quarterly reports of the national banks, which were not published until long afterwards, showed that not only the banks of New York, which alone could be affected by the artifices of speculative combinations, but all banks throughout the country, had lost large amounts of currency, or in other words, that the amount of currency in the hands of the people had really increased, and that the scarcity, however aggravated by artificial means, was in itself natural, and was really caused by the increased amount of money required by the people in some way or other for the transaction of their daily business.

Not only is it apparent that the stringency in last April was natural and real, but there is every indication that the same influences which affected the money markets then are still at work now, and brought about in the same natural way the stringency of the last few months. We cannot well avoid a few figures, which tell their own story. The following are the amounts of currency (greenbacks, national bank-notes, and fractional currency) held by all the banks of the United States at the dates given:

July 1, 1867.	Oct. 1, 1867.	Jan. 1. 1868.	April 1, 1868.
$119,000,000.	$113,000,000.	$133,000,000.	$99,000,000.
July 1, 1868.	Oct. 1, 1868.	Jan. 1, 1869.	April 1, 1869.
$116,000,000.	$107,000,000.	$106,000,000.	?

On the 1st of July, 1867, the amount in the banks was very near to the average, one-sixth. The grain crop was good, and the cotton crop was thought very good, and both crops were rapidly brought to market, requiring the use of a good deal of money, and the supply in the banks fell off to $113,000,000 in October. But business as a general thing was not prosperous, prices of most articles had materially declined, the cotton crop as far as sold had brought very low prices, the planters had refused to sell the balance, winter set in early and stopped the transportation of grain, and people throughout the country found themselves less well-off than they had anticipated, less able to spend money, and with less business and less opportunity to use money; money, therefore, rapidly returned to the banks, and by the 1st of January, 1868, had accumulated to the extent of $133,000,000, the largest amount the banks had held for some time. During January and February the condition did not materially change, but the poor crop of breadstuffs in Europe caused a renewal of the active movement in our own crops; the West were sellers of cereals and meats at high prices, without buying many goods in exchange, the farmers were getting more greenbacks than ever, and were holding them firmly. At the same time the movement first began to develop itself which more than any other has influenced the course of the money market during the last twelvemonth. The low prices realized for the cotton crop in the earlier part of the season had very much discouraged the Southern people; they felt poor and were poor, and were neither in the mood nor the position to spend money. They had held back a portion of their crop, and had managed to live on the proceeds of what they had sold. When the cotton market rapidly improved, they had still a fair supply to sell, and as they were not in debt, they could exact and receive payment in money, which accordingly went South in considerable quantities, and has remained there ever since.

When the banks held $125,000,000 of money, and the people held $575,000,000, and it was calculated that the whole people of the country held on an average sixteen dollars, it was not of course implied that the money was distributed with any degree of regularity. Individuals held amounts far exceeding the average, and whole classes of people held amounts far below the average. In the same way the people of certain parts of the country were holding and using in their business more than the people of other parts; while the people in other parts, from choice or accident, or from any other cause, held or were using far less than the average. It is notorious that the amount of money held or used by the people of the Southern and Southwestern States in the spring of 1868 was almost nominal. We have seen that the average amount held by the whole people was sixteen dollars. It is certainly not an exaggeration to estimate that the average held by the people of the Southern and Southwestern States did not exceed eight dollars. Now, if we suppose that the unsold balance of the cotton crop and the lands sold at that time to Northern purchasers had furnished the South with sufficient money to enable each individual to increase his average holding from eight to twelve dollars, which would still be far below the average of the whole country, and supposing the States in question to contain eight millions of people, we could at once account for the total loss incurred by the banks between January and April, 1868. Since the latter date, the amount in the banks has, with natural fluctuations, steadily decreased, until the amount held by them on the 1st instant—judging from the condition of the New York banks alone, the figures for all the banks not having been published—must have sunk even below that held at the same time last year, causing the extreme stringency that has for weeks past been the subject of so much discussion.

It must be evident that the increased amount of money held by the people at large in consequence of the increased holdings of the Southern people, is very different in its effects from any ordinary increase brought about by temporary causes. When the people withdraw from the banks a portion of their surplus in order to employ it in bringing their crops to market, they do not withdraw it permanently, but, on the contrary, as soon as the crops are sold they return it to the banks, where it helps to swell the banks' accumulations and to make money cheap and easy until it is needed for another crop. But the money which the South has received within the last fifteen months is scarcely yet sufficient for their ordinary wants on the lowest

possible basis. There is for them no surplus to be returned when no longer needed; the money which they have received they will retain. Yet the whole money business of the whole country is based upon the calculation that the currency withdrawn from the banks for use by the people during the spring and fall is gradually returned during the summer and winter. It is a question of no slight importance what the consequences may be of disappointment in this expectation. But we have not left ourselves room to discuss it here.

A FRENCH "LEAP AHEAD."

The competition amongst a certain class of radical reformers for positions in the extreme front seems to be as keen as ever; in fact, as the years roll on, it grows keener. Our readers may remember—some of them, no doubt, with amusement—the curious forms which this honorable rivalry assumed in this country during the contest between President Johnson and Congress. First, when it became apparent that judgments could not be obtained from the Supreme Court, in accordance with what was pronounced to be "the spirit of the age," a loud cry was raised for the abolition of that tribunal, and the persons who first raised it, enjoyed for some weeks an apparently assured position as the most "advanced thinkers" on this continent. But their pre-eminence was very short lived, for somebody else bethought him of abolishing the Senate, and the enemies of the Supreme Court at once sank into insignificance, as timid and half-hearted men, out of sympathy with the people and unworthy of their confidence. But there was no security even in this position, for before long the abolition of the presidency was demanded, and the man that wanted to get rid of the Senate saw his laurels fade on his thoughtful brow. After this there was nothing for it but to try Andrew Johnson, and the great object of ambition then became the invention of the strongest terms for the definition of his guilt, and for the description of the importance of the impeachment trial, and of the dreadful consequences to the human race that would result from his acquittal. Since the trial the competitors have turned their attention mainly to social questions, and they are occupied at present with the very bases of society—property and family.

The mode of dealing with these subjects resorted to by the more advanced of them is worthy of close attention on the part of all sensible men, who seriously propose to themselves to take part in the great work of setting the world to rights. One of the peculiarities of this mode we can best describe by saying that in it the one constant element in all sociological problems—human nature—is treated as if it did not exist. In other words, in dealing with large masses of men, they utterly discard the rules and tests which they invariably employ in dealing with and judging individuals. If an individual comes to them for assistance or advice, in trouble or misfortune, one of the first things they do is to form an opinion based on what they can learn of his history and antecedents, touching the extent to which his difficulties are due to inherent defects in his character. But they never conclude, or never act as if they concluded, that, if circumstances were made favorable for him, he would never do wrong or come to grief again. In counselling or helping him, they make large allowances for natural weaknesses; they recognize not only the existence of temptations around him, but of a liability on his part to fall a victim to temptation; in all they say to him and do for him, the prejudices, passions, meannesses, of human nature are present to their minds just as well as its strength, and greatness, and nobleness. In marrying their daughter to a man, they are not satisfied with learning that he is earning enough money to support a wife, and is likely to earn more. They do all they can to find out what qualities enter into his composition, whether his nature is such as to make him a pleasant and reliable person to live with; and if, from what they hear of him, they conclude he is likely to go off with another woman, or set a bad example to his children, they do all they can to prevent his becoming connected with them. If they have a friend, or protégé, employed at a small salary in a bank or counting-house, they acknowledge in the fullest manner his subjection to the laws of morality and the existing social arrangements; and if they hear some fine morning that he has forged a check, or robbed the till, they ascribe it unhesitatingly not to his employer's refusal to divide his fortune with him, or even give him a larger salary, but to his being himself a scamp.

In dealing with men in the mass they totally discard these rules, however, and generally refuse to allow that any of the great social evils are due to anything but the abuse of power on the part of somebody. If workingmen are not all comfortable, forehanded, and intelligent, the reason is, they say, that the legislature has not fixed the hours of labor, and capitalists are not willing to pay higher wages. That the workingmen's want of prudence, economy, or natural ability has much, if anything, to do with the evils of their condition they never will admit. In like manner, they find married life in a very unsatisfactory state. Husbands and wives, in a great number of cases, live together very unhappily, and have many more children very often than they can support or educate, or than the wives' health will allow; but if you tell the class of reformers of which we are speaking, that a large portion of the evils in marriage is due to the same causes as all the evils of life, as the deceptions, and frailties, and passions which embitter all human relations, and constitute the great mystery of the universe, they set you down as an epicurean or selfish conservative, and refuse to listen to you.

The workingmen, they see, have little and suffer much; the capitalists have a great deal and enjoy much; the remedy, therefore, is, either to print off capital, and give it to the workingmen, or else compel the capitalists to go shares with them. Embody these arrangements in a bill, bring in your bill, read it three times, let the Governor sign it, and the great labor problem, which has perplexed mankind for four thousand years, is solved. Marriages are unhappy: husbands and wives won't suit each other, and wives do not like having all the trouble and danger of bearing children. Now, you cannot deal with this problem, as with the labor problem, by legislation. There is no use in bringing a bill into Congress, providing that every second child shall be borne by the husband, and that women shall be naturally equally competent with men for all duties now performed by men, and that all women shall be tolerably happy. A two-thirds majority in both houses, powerful as it is, would be unable to give such a measure any real validity. The population would still be kept up in the same way as now, and a very large percentage of women "would still want what they hadn't got," and suffer a good deal from "general debility," bad teeth, and bad servants, and a deficiency of money. Being fully aware of all this, and seeing that there is in marriage a great deal of unhappiness, the reformers are now, by way of removing it, doing what they can to abolish marriage, and substitute for it what we really must call promiscuous intercourse. We know very well that they would protest against the application of this term to their grand plan; but then this is really what their grand plan would result in, and what the partial adoption of their plan by a portion of the population is resulting in. The theory of marriage as an institution of civilized society has always been, and is now, in most countries, that the contracting parties owe certain duties to society, and are bound, for its sake, to submit to certain sacrifices, or even hardships. These are to live together, and form one family, except in the case of grave breaches of the contract on the part of one or the other, and to provide a home, maintenance, and education for their children, until the children were able to take care of themselves. The new theory is, that society has nothing to do with the marriage contract, except to provide a form for its celebration and attestation, and that its duration should depend entirely on the will or caprice of the husband or wife; that as to the children, one of the parents—it is not clear which—owes them a maintenance of some kind, while all that the community owes them is "the ballot;" and that a child who asks for more than this, and complains of not having a home or parental care, is an unreasonable little creature with feudal tastes.

What our reformers plead for here, however, and what a good many of them practise, is simply easy divorce—in other words, the dissolution of the marriage contract by a judicial tribunal, whenever either of the parties alleges that he or she has had enough of it. To deny a person this, they say, is to cut him off from the "pursuit of happiness," which is well known to be one of the "inalienable rights." This is, it must be admitted, tolerably advanced ground, and they have greatly enjoyed standing on it, but they will be pained to hear that a French sister has got ahead of them and now leads the march on that line; and she is not one of the ignorant declaimers, or fanatics of the "Redoute," but an exceedingly acute thinker and powerful writer, of whom a very large proportion of our woman's rights champions here might profitably take lessons in logic and rhetoric. We mean Madame Clémence Royer, of whose able argument against the right of combination amongst the working classes, in the December number of the *Journal des Economistes*, we spoke some time ago. Her remedy for the evils of the workingman's condition we waited for with some curiosity, and she has produced it in a long article in the March number of the same periodical.

Her remedies are, first, the revival of the old trade corporations of the middle ages, but on a different basis, master and workman to be included in them; secondly, the "mobilization" of the workingman, that is, the supply of every possible facility for his moving from place to place in search

of work; and under this head she condemns in strong terms all movements which encourage him to become an owner of a house or real estate, as this mode of investing his savings naturally ties him down to one place. But then the workingman cannot be mobilized very much under the best of circumstances, unless you also mobilize his family, and the "mobilization" of a wife and children involves great expense and trouble. Upon reading her statement of its difficulties, we felt that she was face to face with an insurmountable obstacle, but we were mistaken. Here she takes her great "leap ahead," and leaves Ben Butler, Ben Wade, and the whole fraternity of our social explorers literally, in the language of the turf, nowhere. Her mode of mobilizing the family is to abolish the family. Woman, she says, needs and must always have a permanent abode. She cannot rove, as man can and must do; therefore let her be no longer tied to any man in particular, or any man to her.

"We must then," she says, "mobilize the family, destroy its indissolubility. This is the only way of saving it from shipwreck; it is only in reforming courageously that we can prevent its falling into complete desuetude." So she proposes that the marriage-contract should be dissolved on the simple request of either of the parties, and that there should be instituted a kind of marriage corresponding to the *confarreatio* of the Romans, sufficient to legitimize the woman's position and the birth of her children, but not binding on her or her husband longer than he or she pleases. The woman being the more permanent person, Madame Royer proposes that she, and not the father, should give her name to the children and be the legal head of the family, the father being relegated to a secondary position, and constituting in domestic life a kind of shadowy auxiliary, of no moral influence or weight, and not necessarily known to his children; and the mother taking as many husbands in succession as her fancy or circumstances suggested; the result being, we need hardly say, perfect happiness, purity, and freedom for all concerned, and an end, total and complete, to the quarrellings, falsehood, and oppression of the present system. The scheme is worked out with much ability, and its bearings on property and other social arrangements are fairly considered.

The editor of the *Journal* half apologizes for inserting this portion of the article, which he styles "passiblement excentrique;" but he justifies himself on the ground that his readers are "philosophers" to whom "the most delicate combinations" may be submitted with safety. We commend it to the careful consideration of our American reformers. Many of them will naturally peruse it with mortification, for there is no denying that Madame Royer is at present far in advance of them all. The most fearless of them has never proposed to make the mother the head of the family, giving her name to the children, and consigning the father to a nomad existence in which his domestic relations would bear the closest possible resemblance to those of the domestic animals, and through which indeed the condition of the whole human race would have made one step toward the freedom and exemption from degrading conventional bonds and restrictions now enjoyed by the brute creation.

ENGLAND.

LONDON, April 2, 1869.

YOU will have heard long before this that the second reading of the Irish Church Bill has been carried by a majority of 118. The number is probably sufficient to insure that the bill will pass the House of Lords, and that the efforts of its opponents will be limited in future to the attempt to save as much as possible out of the fire. Resistance to the principle is henceforth hopeless; but a good deal may be done in the way of altering details. I will only add that one consideration must not be forgotten in considering this subject. The Conservative party has many reasons to be anxious for a settlement; so long as the question remains open, the Liberal party have a definite bond of union; when it is closed there is strong probability that there may be a schism in the ranks of the majority. So acute a leader as Mr. Disraeli has his eyes perfectly open to this fact; and though hot-headed Tories of the old school, represented by Mr. Gathorne Hardy and his like, will be for fighting "to the bitter end," the cooler headed section of the party would be only too glad of any conclusion. Victory is hopeless, and they will be content with a safe retreat to some position in which their chances of fighting to some purpose may be very different. For this reason, I feel little doubt that the House of Peers will be induced to consent to mangling the measure as far as they dare, without directly opposing it.

I will now turn to a question which I noticed in my last letter, and the practical importance of which to the future of this country is probably far greater than that of the Irish Establishment. The Commission which has for two years been receiving evidence as to the working of trades-unions has at length published its report. Any one who desires to understand the present position and prospects of the English artisan will find materials of the highest interest in the ten folio volumes (they are very thin volumes) of evidence published by the Commission during the course of its labors. Nowhere, I may say in passing, is more interesting information to be found on a vast variety of subjects than in the mass of blue-books annually published by Parliament and generally thrown aside as waste paper. Any one who will dip into them will find a quantity of original evidence which it would be hard to discover elsewhere, and this series is specially suggestive on many matters. The main results of the investigation may be stated very shortly as follows. In the first place, trades-unions, though subject to various legislative disadvantages, have spread hitherto, and are still continuing to spread, in a most remarkable degree. To mention no other example, the Society of Engineers, which has branches all over England, in our colonies, and in the United States, has increased in ten years from 15,000 to 33,000 members. In the same time its expenditure has amounted to nearly half a million of pounds sterling; and it is so powerful as to be able to fight almost any combination that can be brought against it. The total number of unionists in the country, although there are many discordant calculations, has been put by one observer as high as 860,000. The organization of these great societies is remarkably complete and perfect, and the scale on which their operations are conducted is equal to that of a first-class commercial enterprise.

In the next place, a large number of the functions which they discharge are admitted to be really useful. They act, to a large extent, as friendly societies; they support members out of work; they have sick funds, besides what are called "accident" funds and burial funds. Some of them maintain also reading rooms, libraries, and give charitable subscriptions. The great society which I have just mentioned spent only about six per cent. of its whole revenues upon disputes, and the remainder in benefits. It is said that the tendency of these large societies is, on the whole, to make strikes less frequent than before, as they produce an increased sense of order and subordination. The richer unions, again, do a useful work in distributing labor; they keep elaborate reports of the state of trade in different districts throughout the country, and transfer workmen to the places where their labor is wanted. On the other hand, it was proved beyond dispute that they sanction many objectionable and tyrannical practices. The number of actual outrages—such as those which have made the name of Sheffield infamous—seems to be diminishing; yet it is true that in Sheffield and Manchester there has been an atrocious system of organized crime which is a disgrace to the country. Blowing men up with gunpowder, maiming them seriously, and stealing their tools have been frequent occurrences. Besides these practices, which are happily confined to a narrow district and which appear to be dying out, there are others of a more outrageous kind. The general imputation upon the trades-unions is that they endeavor not merely to raise the rate of wages, but to level them; to bring down the best workman to the level of the worst. Thus they object very frequently, though not invariably, to piece-work; in one notorious case they maintain a rule against what is called "chasing," that is, they will not allow a man, however able he may be, to do more than a given quantity of work in a day. They fall in with the spirit of that ancient device of the monkeys, who would not talk, for fear they should be made to work; and restrain the energy of their best men lest their performances should be made into a precedent for all. There are many other modifications of the same general principle, which have been sufficiently denounced in the papers of the day; as, for example, the extreme jealousy of each class of artisans to allow any part of its work to be done by a rival class, even when extreme inconvenience is produced in consequence; the limits put upon the number of apprentices allowed to be employed; the resistance to machinery, which is happily becoming rare, and various other practices of which it is at least the *prima-facie* tendency to restrict production by restricting the freedom of labor.

The farther question as to how far the trade of the country has actually suffered from these societies appears to be a very difficult one; and after all that has been said as to the driving away of trade from our own manufacturing districts, it is at least possible to attribute the result, so far as it has taken place, to other causes. The iron trade, which is generally quoted, has steadily increased, in spite of the fact that German and Belgian competition has certainly become far more dangerous than formerly. Upon this very important matter the Commissioners do not express any distinct opinion.

The real question, so far as legislation is concerned, is of a very narrow kind. Till the present time, the law has been rather vague. It has on the whole been directed against combinations of workmen, and combina-

tions leading to a strike are now illegal, unless for the purpose of raising wages or reducing the hours of labor. The workmen may not, for example, combine against a shop rule or against the employment of a particular foreman. Moreover, they may not employ "intimidation, molestation, or obstruction." Workmen have been punished for shouting "baa-baa" after a man or telling him that he is a black sheep; for giving an employer notice that his workmen will strike unless he dismisses particular workmen; or for telling a workman that if he goes to work "there will be a row." Moreover, the law will not protect the funds of any association which uses them "in restraint of trade." Thus, if an association forbade its members to work in a factory which was unhealthy its treasurer might carry off its funds with perfect impunity. As a fact, it has been held that the rules of some of the largest associations operate "in restraint of trade," and therefore they are unable to recover their property in case of embezzlement. The law is very hazy and difficult to interpret distinctly; but, as a rule, trades-unions are unlawful societies, incapable of public recognition or registration, and without any legal title to their funds.

Now it is plain that the result of thus placing them outside the law has by no means been to discourage them; on the contrary, they have increased and flourished in spite of all disqualifications. Indeed, the absence of legal protection has intensified the evils; it has led them to resort to those irregular modes of enforcing their authority which are the natural resource of secret societies. Being unable to bring an action at law, they have taken to gunpowder, or at least to bullying of various degrees of intensity. They are so powerful that it would be perfectly idle to attempt to suppress them, even if it were now possible; any such attempt would, in fact, be far more likely to produce a revolution than to secure its object. Legislation against trades-unions would be equivalent to giving six months' warning to the British constitution. There are, in fact, only two courses open to the practical legislator. One is that which is accepted by the majority of the Commission. They would give legal protection to societies which did not admit certain objectionable practices into their rules. Those which favored the restriction of the number of apprentices, the limitation of the use of machinery, the prevention of piecework, or the support of other unions in strikes, would still be illegal. The minority say that as these rules are, at worst, foolish, the unions which adopt them should be protected against fraud and crime like other societies. The state is not to interfere in order to make men moral or wise after its own fashion; and if the unions choose to act foolishly they must be punished like other foolish persons by taking the consequences of their actions. To this the stronger argument may be added that as unions formed to secure these purposes exist in spite of the law, and will not give them up for any good which the law can offer them, the legislation would be simply useless. The unions exist, and are going to exist, whether we like it or not, and if they attain objects which are not criminal without the use of criminal means, there is no reason for exposing them to exceptional legislation. One proposal is to repeal the power which the magistrates at present enjoy of inflicting summary punishment for molestation and obstruction. This, in the view of the minority, is an exceptional legislation, and therefore unfair to the trades-unions. The justice of this is, perhaps, doubtful; but it is certain that the law is at present in a vague and unsatisfactory state, and allows certain actions to be punished at the discretion of a magistrate, which do not seem to go beyond a fair action which is open to employers as well as artisans. If the workmen publish intimidatory lists of those who work in disobedience to their orders, the employers equally combine to keep out of employment all who have been concerned in a strike; and the employers, as being a smaller body, have greater facilities for combination than their men. In short, as trades-unionism for good or for evil is an established and a growing fact, which has made head against all previous attempts at legislation, it is better to allow it protection, unless in distinctly criminal actions, which can be reached by the ordinary laws of the country. This is the main conclusion, and it is one which shows what great power is already exerted by those bodies, for if the employers had any prospect of success in a direct attack no one can doubt that they have the will to undertake it. The strict political economists in the Commission were thoroughly hostile to trades-unionism, but even they were compelled to propose a relaxation in the laws by which it is at present hampered. Perhaps the most remarkable evidence given was that of Mr. Mundella, the gentleman who has turned out Mr. Roebuck, for Sheffield, who gave an account of the remarkable success of the boards of arbitration lately instituted at Nottingham. The masters have there met the leading members of the unions, and all questions interesting both parties have been fully discussed. By a quaint regulation the board of arbitrators decided that as carrying a question by majorities generally produced some jealousy, they would always agree unanimously. Since 1860 they have succeeded in doing so, and every difficulty that has arisen has been satisfactorily solved without strikes or locks-out. This suggests one mode in which the unions, if sensibly managed, may ultimately work for the conciliation of masters and men. The plan has been followed with success in many trades, and some efforts are now being made to settle the dispute between masters and men at Preston, where a great strike in the cotton factories has just commenced, by the adoption of some such scheme. Amongst many less pleasant symptoms this is, I hope, a proof that we are beginning to look at such disputes from a rather more reasonable point of view; that trades-unions are better managed, less violent, and less stupid than in their infancy, and that the upper classes do not look upon them with simple and unqualified aversion.

Correspondence.

"THE WAR AGAINST ALCOHOL."

To the Editor of the Nation:

Sir: A constant reader of your journal, I notice in your issue of the first instant an article headed "The War against Alcohol," which states that after forty years of temperance agitation "the end seems almost as far off as ever;" that "every year it turns out that the conclusions reached during the year before are not satisfactory to all concerned, and accordingly every year sees some new scheme foisted upon the statute-book;" which charges advocates of temperance with having "brought the subject out of the moral into the political arena," and with general inconsistency in their aims and doings, and represents them as fanatics more devoted to the scheme of prohibition than to the cause of temperance itself—as those who "appear to believe that the next best thing to a prohibitory law which is enforced, is a prohibitory law which is a dead letter."

Such statements as to the movements and aims of, and of the results attained by, the friends of a cause so auspicious and so highly accredited in popular esteem, are well calculated to excite surprise, and should not be expected to pass without remark.

The friends of temperance insist that much has been accomplished by the agitation referred to. The early "so-called friends of temperance" had a great and unwelcome truth to present to mankind, namely, that the use of ardent spirits as a beverage, then almost universal, was hurtful to both body and mind. Dr. Rush, of Philadelphia, in 1804, first awakened enquiry upon this fundamental point, by the publication of a tract entitled, "Enquiry into the Effects of Ardent Spirits upon the Human Body and Mind." He maintained that it had a positively injurious effect upon both to persons in health. The remedy which the demonstration suggested, and which the extent of the evil clearly demanded, was total abstinence from all intoxicating drinks as a beverage. This the pioneers in the temperance reform inculcated and sought to enforce as a clear moral and Christian duty. From the beginning, the American mind and conscience were in a state of unbelief and insensibility as to the real character of alcohol, and its effects upon the human system and on society. The "so-called friends of temperance" did, however, succeed in establishing in the public heart and conscience a right credence upon these points, against all disbelief, all odds, all opposition, prejudice, and interests. To this historic fact our worthy President, in accord with his predecessors, bears willing testimony: "Being satisfied from observation and experience, as well as from medical testimony, that ardent spirits, as a drink, are not only needless but hurtful, and that the entire disuse of it would tend to promote the health, the virtue, and the happiness of the community, we hereby express our conviction that should the citizens of the United States, and especially the young men, discontinue entirely the use of it, they would not only promote their own personal benefit, but the good of our country and the world."

The history of the movement, on its every page, attests the truth of this general statement. This may well be claimed as an achievement of no doubtful import, kindred in its effect to the anti-slaveryre form in England, which, having convinced the English mind of the inherent wickedness of slavery, prepared the way for emancipation which followed. The friends of temperance and prohibition may well take courage. A great advance has been made. The intellect of the nation yields its assent to the proposition that ardent spirits as a drink are hurtful: the popular conscience declares abstinence to be a high moral duty. These are the harbingers of better days; and the end, it may be hoped, is *not* "almost as far off as in the beginning."

It may be conceded that the pioneers in this movement approached the subject with caution. The preacher of temperance of the early time was

denounced as meddling with that which did not belong to him; and true it doubtless is, that, conscious of the magnitude and power of the evil to be encountered, the whole truth was not at once, and boldly, declared.

First was the "conclusion" that ardent spirits, as a drink, were hurtful; then disapprobation of the custom of drinking; then pledge of abstinence from ardent spirits; then total abstinence from all intoxicating drinks. If these show hesitation, as doubtless they do, it is submitted that it was a hesitation not unnatural, when the novelty of the movement, and the unfriendly, nay intolerant, character of the times are considered. It exhibits no conclusions reached and abandoned, but rather other stages of the same movement in advance reached in succeeding years.

Having attained the high vantage-ground of a popular judgment against ardent spirits as a beverage, and in favor of abstinence as a moral and Christian duty, the friends of temperance claimed the legislative interposition to inhibit the traffic for such use, as pernicious to the public health and morals, and as prolific in pauperism and crime. Surely it may not be contended that this "brought the subject *out* of the moral into the political arena." Was it ever supposed that the friends of moral and social reform were liable to the charge of having abandoned their cause by an appeal to the legislative authority to prohibit practices acknowledged to affect injuriously the public well-being? It is not easy to concede this implied isolation of politics from morality. They are deemed to be quite inseparable. Morality teaches the rules which *should* govern the relations of men. It is the office of politics to develop and prescribe the laws by which human action shall be determined, so far as men interfere with each other. It would seem, therefore, that whatever morality reprobates it may properly invoke legislation to inhibit, without abandoning its legitimate province.

In defining the position of the friends of temperance a misapprehension of fact is apparent. "Drinking must be prohibited by law," it is said. When, or where, or by whom was it declared that "drinking must be prohibited by law"? It may be questioned whether any such resolution was ever adopted, declaration made, or "conclusion" reached, by any body of temperance men, or that any such "legislation was ever determined upon," or invoked, under the direction, influence, or lead of the friends of temperance anywhere. Laws against *drunkenness* exist in most, probably all, of the States; but these laws are not chargeable to the temperance movement. The friends of temperance aim to prohibit the *traffic* in intoxicating drinks as a beverage. They hold that all experience shows that the fruits of such traffic are drunkenness, ignorance, brutality, waste, pauperism, crime, impaired health, shattered intellect, premature decay, and untimely death, constituting at once a gigantic moral, social, and political evil, and they do not doubt the authority of the civil power to declare that such traffic ought wholly to cease. Nor is prohibition, thus considered, a novelty in American legislation. The traffic has always been prohibited by and to certain persons. It was open only to the "respectable," according to the formula of "license," excluding minors, idiots, and Indians, as ineligible to the privileges of drinking. With increasing intelligence and the lights of experience and observation, it has come to be seen that not even the "respectable" may properly be privileged to enjoy a traffic to the public detriment, and that as to the vending of a deleterious article the law has no exception of age, or capacity, or condition—its protecting shield is over all alike.

L. M. M.

Augusta, Maine, April 14.

[Against the temperance agitation, in so far as it consisted or consists in moral suasion, we have said nothing and have nothing to say, as long as it is conducted with a proper respect for individual liberty of thought and action. We must remind "L. M. M." that though much has been "maintained" as to the injurious effects of moderate quantities of alcohol on the human system, nothing has been "demonstrated," and it is to the confusion which exists in the minds of most temperance advocates as to the meaning of these two terms that most of the hostility to the temperance agitation is due. Every man is bound, doubtless, to abstain from any article of food or drink which is injurious to his mind or body, but the test must be supplied by his own understanding and not by that of some other man; that is, he must be convinced either by experiment or argument. Moreover, the question how far I, who can take alcohol in moderate quantities, am morally bound to refrain from it altogether because other men take it in immoderate quantities, is a very knotty question, which a great many platform orators think they have answered; but then the greater portion of the civilized world, and of the most enlightened men in it, are not satisfied with their answer. From "L. M. M.'s" deduction "that whatever morality reprobates it may properly invoke legislation to prohibit, without abandoning its legitimate province," we dissent *in toto*. To agree with him, we should have to discard nearly every one of our notions as to the province of jurisprudence, and our reasons for declining to do this are too numerous to be given here. The experiment of making law and morality convertible terms has been frequently tried, and with the most disastrous results, both to the one and the other. We have not a word to say against prohibitory legislation, *if it can be enforced;* what we condemn is the almost childish delight which some reformers take in embodying their ideas in legislative acts, which nobody or only very few obey, and which the majority laugh at. The civil power, doubtless, has "the right to declare that the liquor traffic ought wholly to cease;" but it has also the right to declare that all knaves and evil-disposed persons ought to betake themselves to some honest calling, and live by it. Anybody who enjoys calling on the civil power to make such declarations, is welcome to do so, but he must not insist on our believing that he is making a good use of his time. The distinction between prohibition of the traffic in liquor and the prohibition of drinking, is of course a distinction without a difference. It is not to the traffic temperance men object. As an article of commerce alcohol is not half as dangerous as oil of vitriol. To prevent the drinking is, of course, what they really aim at, as indeed "L. M. M." admits.—Ed. Nation.]

A letter-writer to the editor of the *Nation*, signing himself "Citizen"—a Republican to whom the party has owed a good deal—made the following remarks, in our issue of March 18, speaking of Grant's appointments:

"Sir: Your article upon the Cabinet this week hints in very mild language that which, for General Grant's own good and for the interests of the country, needs to be plainly stated. The President has made a great mistake, and is following it up with a series of mistakes, which, if persisted in, will involve him in difficulties and disasters.

"Neither Grant nor any other man knows enough to manage this Government without advice. It was very well for Grant to keep out of the ordinary struggle for Cabinet places; but the total failure of his first arrangement has shown that he needed the counsel of a few well-chosen persons upon that subject.

"The mistake about Mr. Stewart's appointment is only one error among more serious ones. The nomination of Mr. Stewart the day after he had presented General Grant with a check for $65,000, for a house given to him by a number of gentlemen, of whom Mr. Stewart was one, was very *mal apropos*. The appointment of Mr. Borie, who subscribed to the purchase of a house for General Grant in Philadelphia, is open to similar comment. The appointment of Mr. Washburne to the State Department was a compliment that could only have made him ridiculous, if he had not been sensible enough to ask for a change which, while it put him in a place for which he is marvellously ill-fitted, will not make him so conspicuously absurd as he would be in the State Department. . . .

"What we have thus far seen of the disposition of minor offices is not encouraging. General Grant's avowed determination to bestow a number of valuable offices upon his personal friends is not wise or just, and will necessitate compromises with other men having personal friends, and power to support them, in which the public interest will suffer. And it is with some curiosity that I ask whether Mr. Montgomery Gibbs is one of Grant's personal friends; for I see him among the early favorites for a fat office. Binckley was a poor specimen of Presidential favorites, but Gibbs will make the memory of Binckley honorable. Indeed, I do that honest, though very incapable, gentleman sore injustice in putting his name and Gibbs's together."

On this, the *Pall Mall Gazette*, talking of political corruption in America, based the following singular bit of misrepresentation:

"But still more striking circumstances are stated affecting General Grant himself. They are told, not by an enemy, but by a Republican, in the columns of the New York *Nation*. He says that the President nominated Mr. Stewart to an appointment 'the day after he had presented General Grant with a check for $65,000, for a house given to him by a number of gentlemen, of whom Mr. Stewart was one.' Another of his nominees, Mr. Borie, subscribed for the purchase of a horse for General Grant in Philadelphia. 'General Grant's avowed determination,' says the writer, 'to bestow a number of valuable offices upon his personal friends is not wise or just.' He mentions one or two other instances. This is not corruption on the part of the President, but it is very remarkable indiscretion."

This is bad enough, inasmuch as it leaves the impression on the mind that the *Nation* had made a charge of corruption against General Grant; but now comes the London correspondent of the New York

Tribune, and, with characteristic unscrupulousness, makes the following comments on it, the dishonesty of his performances being about equally great whether he had or had not seen the letter in the *Nation*—though most probably he had not seen it:

"It may interest you to see what kind of ammunition is furnished to enemies of America by the New York *Nation*, and what use they make of it. The following is from to-day's *Pall Mall Gazette*, which, after charging bribery upon Governor Fenton, says [as above quoted from the *Gazette*]:

"The malicious ingenuity with which facts, in themselves innocent, are wrought into an accusation against President Grant, could not easily be surpassed. The indecency and untruthfulness of the libel may fairly, perhaps, be divided between the two guilty journals."

Notes.

LITERARY.

THE late Mr. Calvin Blanchard—who for years made his name notorious in many parts of the country by means of an advertisement, in which he offered to send through the mail postpaid, on receipt of price, such works as respectable booksellers do not ordinarily urge on their customers—left behind him at the time of his death the manuscript of a work which his widow, Mrs. Anne Eliza Edwards Blanchard, has revised and condensed, and which will soon be published. It has a title as formidable as that of the great work mentioned by us the other day, which Mr. Stephen Pearl Andrews and his friends have in preparation. It is as follows: "The True Principles of Positive Sociology; An Announcement of the Religion of Society; and an Exposition of the Statics and Dynamics of Humanity, being the Religio-Political Physics: Or, an Answer to the Great Question: If you take away my Religion and Politics, what will you give me in their stead?" This seems as successful a combination of two fashions of titles—an old one and a modern one—as our English bibliography has to show. Once a title-page was a *résumé* of the contents of the book, and to be "learned in title-pages" was, after all, to have some considerable learning. At any rate our great-great-great-grandfathers could, by turning over books, acquire that sort of learning—a knowledge, namely, of where to go for a completer knowledge—for the sake of which Dr. Johnson once recommended the perusal of the mere backs of books on shelves. Now, the way of many book-makers is to make the titles of their works undescriptive, and even enigmatic. Mr. Hale's "If, Yes, and Perhaps," serves as an example. The method of being full and unintelligible at the same time is not often so well exemplified as by Mr. Blanchard's name for his posthumous offspring. Mrs. Blanchard we presume it is who writes the life of the author, and the "review of his writings and career," which are to be prefixed to the "True Principles." It would be a mistake, we may remark, to look upon Mr. Blanchard as simply a purveyor to the general public of such literature as it would be better the general reader should let alone. He was not a wise man; in fact, he had the habits of mind of a reformer of the long-haired type, who has become almost crazily in love with his own mental vagaries; but the selling of corrupting books was not his end, but a means—a way he took of getting his peculiar philosophic and sociological ideas before the world; the obscenity was the bait, and the hook, as he fondly hoped, was the treatise on greenbacks, or marriage, or war, or what not, which it was his custom to append to the works which he chose for publication. It is probable that he, too, would have regarded it as unfortunate that, practically, his labors served the cause of immorality. But it is likely that he never perceived that.——Messrs. A. S. Barnes & Co. announce "Hymns of the Church, with Tunes," selected and arranged by a Committee of the Reformed Church.——The Catholic Publication Society have in press Mr. J. Spencer Northcote's translation of De Rossi's "Roma Sotteranea."——Mr. G. W. Carleton adds to his library of American humorous literature a volume which has recently appeared in England, containing "Artemus Ward's Lectures." Whether all the lectures are given, or only a part of them, we are not informed, but in any case there is a large public ready for the volume, for it will be wanted by those who heard the lectures delivered, and by those who have known the lecturer only in print.——Mr. M. W. Dodd announces a new edition, in one volume, of "The History and Depository of Pulpit Eloquence," by the Rev. Dr. Henry C. Fish.——Messrs. J. B. Ford & Co. have made into an octavo volume the series of phonographically reported sermons, by Mr. Beecher, which they have been publishing for the last few months, and which they will continue to publish.——Mr. George A. Leavitt announces "New Annuals for 1869 and 1870," by Mr. and Mrs. R. H. Stoddard; a "Life and Campaigns of General U. S. Grant," and "An Account of his Election and Inauguration, etc.," by Mr. P. C. Headley, a writer of the J. S. C. Abbott school, who once was better known than now, though he may still be in favor with that public, very profitable but more obscure nowadays than formerly, which gets its reading matter from "book agents."——A second and enlarged edition of an admirable book, Dr. George Derby's "Anthracite and Health," is announced by Messrs. A. Williams & Co.

—Of the books just published, or just announced as forthcoming, in England, a good many are of interest and value. Poetry offers us but little that is new or good; still, we have "Child World," by the authors of "Poems Written for a Child;" and, as the *Telegraph* says, "the grown-up person who does not fall into raptures" on reading the works of the two authors in question "must have led a strange life," or else he must be destitute of tenderness and, what is nearly as bad, "all sense of metrical sunshine must have been omitted from his composition." Seriously, however, "Child World" is highly to be praised, so far as we can judge by its predecessor and by extracts that we have seen, as being really poetical, and as being pleasant reading for adults, whatever it may be to children. Mr. George Augustus Simcox, a writer worthy of attention, has written a new volume called "Poems and Romances." Schiller's "Song of the Bell," which possesses so intelligible an attraction for the tribe of translators, finds still another translator in Mr. J. H. Merivale. Mr. Edgington's "Odyssey" meets with a cool welcome from the critics, and apparently deserves nothing better. In accordance with a theory which he holds, that in times of primitive antiquity men used unpictorial, unadorned language, Mr. Edgington employs a diction which may be called simple to baldness, and which makes one of his assailants say, that if it is by the lack of adornment that we are to judge of the antiquity of poetical works, then Mr. Edgington is "more ancient than Homer—or than Lord Derby, which would be saying something more." That Mr. Edgington's remarkable theory was made to fit the dimensions of his own rather than Homer's vocabulary, even a reader who had no views on the general question might be inclined to suspect when, to give a single example for many, εὐῆρες ἐρετμόν he finds to be rendered "well-built oar." Why he should not say "steam-refined oar" or "hemstitched oar," instead of "well-built," Mr. Edgington could probably give a reason altogether satisfactory to himself. An English Odyssey that is doubtless a good deal worse than Mr. Edgington's is "A Nearly Literal Translation of Homer's Odyssey into Accentuated Dramatic Verse," by the Rev. Mr. Lovelace Bigge-Wither. Mr. Bigge-Wither has done the whole of the "Iliad" and "Odyssey" into English since the appearance of Lord Derby's "Iliad," in 1865! But his "accentuated dramatic verse" is not a particularly hard vehicle to manage. A man might be able to do in a day a great many lines such as these:

> "He's gone out-of-sight—out-of-mind! and-to-*me* hath left
> Woes-only-and-tears: nor only *him* I weep for
> Now."

The words connected by hyphens are to be read, the translator says, as one foot, with the emphasis on the last syllable.—A new poem with what seems an oddly self-contradictory title, "Oswald the Hermit: a Domestic Drama," is by an anonymous author. We may mention under the head of poetry the fact that Mr. Charles G. Leland's Hans Breitmann's ballads having become popular enough in England to have gone through six or seven editions, are now the subject of an unseemly quarrel between Messrs. Trübner & Co. and Mr. John Camden Hotten, who has laid unauthorized hands upon them and gets out editions that will seriously diminish the author's profits. Mr. Hotten gives with the ballads "editorial and illustrative notes," but Messrs. Trübner & Co. are, it is said, soon to have the advantage of Mr. Leland's own supervision of their editions, and, moreover, they are able to offer to their customers certain pieces which Mr. Hotten cannot offer to his without an infraction of the English law of copyright. Whatever may be Mr. Leland's right to complain of the treatment to which Mr. Hotten has subjected him, the rest of us Americans should remember the continual robberies that may be charged against us, and that it is our own fault if we have not international copyright laws.

—Of new theological works recently published in England the one most likely to be interesting to our cisatlantic religious world is Mr. James Martineau's "New Affinities of Faith," a little pamphlet which is described as "a plea for general Christian union." Cobbett's "Legacy to Parsons" is now thirty or forty years old, but its republication under the editorship of the present William Cobbett is timely, the disestablishment of the Church of England in Ireland being recognized as the sure forerunner of the total separation of Church and State in all the British Empire. Certainly the case could hardly be more readably presented, if it might be presented more accurately, than in Cobbett's knock-down English. The Reverend J. Spencer Northcote, who is already somewhat known as a

writer on the Catacombs, is preparing a translation of De Rossi's very well known work on the same subject, "Roma Sotterranea." Mr. Northcote's task is not that of mere translation, for he exercises a compiler's discretion as regards the treatment of the text. The work is to be illustrated profusely, and the Chevalier De Rossi is himself superintending the printing of the chromos, which, however, will be less numerous than the woodcuts. The fifth volume of Merle D'Aubigné's "Reformation in the Time of Calvin" is now ready. "Misread Passages in Scripture" is the taking title of a book by Mr. J. Baldwin Browne. A third and enlarged edition is published of the "Exposition of the Sermon on the Mount, drawn from the Writings of Saint Augustine." Historical and literary, rather than theological, but well worth the attention of clergymen, whether polemical or not, is a new German work—"Geschichte der Stadt Rom," by Alfred von Reumont. In this last volume the author treats of the "humanism," which developed itself fully in the pontificate of the singularly infallible Leo the Tenth and those of the popes just preceding and following him—the inordinate classicism which reached such an anti-Christian pitch that God is spoken of in the works of some of the devotees of the revived paganism as *dii deœque*, and men like Doctor Neale, looking back on those times, and not duly weighing all the considerations, are moved to cry out, as Neale in one place does, "What a dread fulthing, after all, was the mediæval discovery of the classical literature!" or words to that effect. It is not at all in that spirit that von Reumont regards this very interesting period; he rather shows us its features and allows us to judge for ourselves, and shows them so clearly that we have in sufficiency the grounds of judgment. We do a service, we believe, to orthodox clergymen in calling their attention to six essays, by as many different men, on "Congregationalism"—"whether Baptist or Independent." The object of the writers is to describe the Congregational system and the forms of character it has produced, and "to prepare men's minds for a freer development of Christian polity." Apparently it will be worth while to read this book in connection with Mr. Martineau's, above mentioned.

—The English historical and biographical works of the month are not specially attractive, but there are two or three very good ones nevertheless. Mazzini, whatever we may think of him either as a speculative or as a practical politician, is often very happy in the exercise of his usual function of criticising men and things; for, while he holds all sorts of disturbing theories, yet he has the temperament which is apt to confer a greater or less degree of a power that might not improperly be called sympathetic divination. His essay on Carlyle, for example, is an extremely accurate description, spiritual and mental, of that author, and, written some quarter of a century since, it was on its first appearance really a prophecy as well as a portrait. Much of this critical power Mazzini displays in his autobiographic "Life and Writings," the fifth volume of which work is now in press, and the whole of which is worth possessing, if only for the checkered career which it depicts, and for the interest of many of the figures on the canvas. The same thing can hardly be said of the "Count Bismarck," which young Mr. Lewes has just translated. It is, however, a small paper-covered book of about the size of the Tauchnitzes, and, to say no better of it, will be useful to any one who is thinking of getting up padding for the magazines. New editions are in preparation of Mr. John Forster's "Sir John Eliot; a Biography, 1590–1632," and the same author's "History of the Grand Remonstrance in November and December, 1641," with the introductory essay on English freedom in Plantagenet and Tudor times. Rassam's "Narrative of the Mission to King Theodore" has raised the important question — important for the honor of England and Lord Napier of Magdala — whether or not Theodore was attacked by the English army after his lordship's acceptance of his presents had caused the king to think that there was peace, or at the very least that there was truce, between himself and the English. Mr. Rassam's statements are very direct, and are well supported by evidence, and so far as we have seen, the friends of Lord Napier and that officer himself have done little in the way of effectually meeting the charges. We must not forget to mention Mr. William Lee's "Life and Uncollected Writings of Daniel Defoe." Defoe has of late attracted a good deal of very well deserved attention, and it is much to be hoped that Mr. Lee is fit for his task. He has, at any rate, been a diligent and loving student of his remarkable hero. The amended catalogue of Defoe's writings exhibits no less a number than two hundred and fifty-four, for several of which we are secondarily indebted to Mr. Lee's labor and research. Of new English works of fiction and of miscellaneous works, there are not many this month that call for particular notice. Some of our readers would enjoy the cook-book of Mrs. Tom Hood—the younger—with the preface by Tom Hood. "Tib's Tit-bits" is the title of it and it contains two hundred and thirty-one recipes.

—In speaking two or three weeks ago of the Tauchnitz-Tischendorf New Testament, we might properly have called attention to the late Dr. Geo. R. Noyes's translation, which has been published since the death of that lamented scholar, by the American Unitarian Association. Dr. Noyes chose Tischendorf's texts as his standard, while reserving the right to differ from him in his preferred readings. His aim was to make a translation which, while it should be even closer to the original than the accepted version, should be freed from the obsolete forms of speech preserved in the latter. Where there has been no good reason for change, however, the familiar phraseology has not been disturbed. Dr. Noyes's ability and conscientiousness were both beyond question, and the part which he did not survive to revise in the proofs has received the care of Mr. Ezra Abbot, who also assisted in revising the rest. His accuracy and learning, too, need no guaranty.

—The chief feature of interest in the "Zeitschrift zur bildende Kunst" (Vol. IV., No. 6) is the etching of a stormy landscape, by Rembrandt, after the original painting in the Brunswick gallery, never before reproduced. William Bürger, in the text which accompanies this characteristic picture, states some interesting facts in regard to the class to which it belongs. The number of Rembrandt's landscapes is so far from being numerous, that only about thirty are known with certainty, and of these, neither Holland nor Belgium possesses one. England has at least a dozen; Germany ten; Russia—whose galleries are much richer in works of the great masters than is commonly suspected—six; France two, of which one belongs to Mr. Bürger himself, and the other to Prince Czartoryski. With two or three exceptions, these paintings represent no actual scene in nature, but contain a few simple objects to which the painter's genius superadds the contrasts and conflicts of the elements, with his wonderful handling of light and shade. Rembrandt's countryman and contemporary, Peter van Hooge, had the honor, at the late sale of the Delessert gallery, in Paris, to be rated with Raphael, a Dutch interior by the former fetching 150,000 francs, as did the latter's *Virgin and Child*. Teniers' *Fishmonger* brought even more, unless there is an error in the report. The Raphael was bid in by the Duc d'Aumale over the Prince Napoleon, who also coveted it. It now, therefore, returns into the hands of the Orleans family, having been owned in 1792 by Philippe Egalité, who lost it, with other valuable paintings, at billiards to M. de Laborde. In 1799 in fell into English hands at an auction sale, with a valuation of 13,125 francs. In 1843, Delessert purchased it for 27,250. It will now return to England till such time as it is safe for the owner to dwell in France instead of in exile.

—Few persons, probably, could explain the origin of the lily or *fleur-de-lys* which marks the North on the compass of Christian nations. Dr. Breusing, in a learned and exhaustive article (not yet concluded) on Flavio Gioja, in No. 19 of the *Journal of the Geographical Society of Berlin*, connects this Bourbon emblem with the invention of the mariner's compass, and thinks it the homage paid by Gioja to the house of Anjou, which then ruled Naples and Amalfi. It is certain that the lily was not in use before the bisection of the right angle in subdividing the compass, and this we owe to the Italians. The Chinese, from whom the magnetic needle was most likely derived, divided the magnetic horizon into twenty-four parts, while the Japanese, the Arabs, and the Greeks agreed in using twelve. To this day Chinese ships use a land compass. In the Middle Ages the East of the compass was distinguished with a cross, which the interest then felt in the East sufficiently explains. The seeming pre-eminence thus given to that quarter was really held by it prior to the discovery of the needle. The ancients determined their hemispheres by day and night, and in reckoning the points of the compass they began with the East; as, when Homer (Od. v. 295) enumerates the winds, he mentions Eurus first and Boreas last, and a south-east wind with him was viewed as an east-south one. Eginhard, in the time of Charlemagne, did the same, though not for the same reason. The winds were the cause of the division of the horizon into more than two parts, such as the course of the sun would have suggested. The Temple of the Winds, at Athens, was an eight-sided building, of which the sides and not the angles answered to the directions from the centre outwards. That is to say, the ancients divided their horizon by arcs of thirty degrees instead of points, as is the modern fashion. The German sailors of the present day use both divisions. The ship heads East or West (*Ost, West*—one syllable); the sun rises, Russia lies, in the East (*im Osten*—two syllables)—a distinction which they carefully preserve but land poets neglect. The Italians, as we have said, bisected the right angle to make

eight points, and again the angles thus obtained, and so on. The points were connected with the centre by rhombs, thus making a figure which was called a *rosa ventorum*, or wind-rose, for which the English have no name whatever. The Germans call it *Strichrose*, or point-rose. It is claimed for Gioja that he fastened the needle to the under side of the wind-rose card, and thus made the compass practicable at sea; and it is possible that he also contrived the "gimbals," or swinging attachment of the present ship's compass. Two fine maps accompany this number of the *Zeitschrift*, one showing the progress of the line of the Po Delta, the other the actual condition of the Danube Delta from below Galatz, of which, and of the attempts on the Sulina branch to assure the navigation of the great river, the editor treats in a separate article.

—Secondary education for woman has found a hearty, sympathetic patron in the Crown Princess of Prussia, who attended on the 14th of January the formal opening of the so-called Victoria Lyceum in Berlin. This institution is the result of the labors of a Scotch lady, Miss Archer, assisted by such liberal minded men as Prof. Dr. von Holtzendorff and Prof. Bonitz—the latter, as one of the Curatorium, delivering the address at the opening referred to. The plan of this college is to afford regular courses of lectures, widely different from those "popular" ones to which alone women have heretofore had access. They will embrace history, geography, literature, art, philosophy, physiology, the natural and physical sciences, but not at present the professional branches. The term now in progress is to have four courses: modern history, German literature, French literature, and the history of art; the October term, four additional: English literature, music, botany, physics. A novel feature will be the use of the language of each country in describing its literature. Instruction in art will be combined with visits to the admirably arranged museums of the city, by special permission obtained through the Crown Princess. Music will be taught in connection with its history, and the scientific exposition of the musical thoughts which distinguish the sonata, the symphony, etc., will be practically illustrated, we are told, on the piano. This peculiar instruction will be undertaken by Dr. Ehrlich, an exquisite performer and a highly intellectual man. The management will consist of a very select company of nine ladies and gentlemen, of rank, learning, and wealth, one or more of whom will be present at every lecture. The college year is from October to April, inclusive (divided into two unequal terms of three and four months each), with the view of accommodating the probably numerous attendance from the provinces. The students will be encouraged to submit to an examination, though this will not be compulsory. Female lecturers will be admitted. Already two hundred and forty students, full of zeal and cheerfulness, have more than provided for the expenses of the first term, and shown, besides, the need which the Lyceum will meet and, it is to be hoped, satisfy.

MAX MULLER'S "CHIPS."*

Mr. Scribner has done a good service in adding Professor Max Müller's "Chips" to his valuable series of philological publications; for mere "chips" though they be, fragmentary essays like these contain much of the most vital discussion of the day. In a science that is in process of development, like comparative philology and mythology, there must necessarily be some crudeness and much repetition in the occasional essays published from time to time; the essays before us, however, even with some repetitions, contain little that we should be willing to lose.

Nearly one half of the second volume is taken up with that earlier essay upon Comparative Mythology (1856), the substance of which is repeated in Professor Müller's second course of lectures, and which, if we are not mistaken, first called attention to the fact that comparative mythology is a science. The essay indeed, although so much earlier, contains nearly all that is material upon this subject in the lectures; less elaborate in the details, but even more suggestive and eloquent in the statement of principles. Several of the other essays treat of the same subject, and nearly all in this volume touch upon it more or less distinctly; so that here we have his latest and most matured views—the latest of all being a review of Cox's Mythology (1867), noticed some months ago in these columns. In this latest essay, the same principle is laid down (p. 159) with which the earliest essay closes: "that mythology is simply a phase, and an inevitable phase in the growth of language; language being taken in its proper sense, not as the mere outward symbol, but as the only possible embodiment of thought." "The origin of mythological phraseology, whatever outward aspects it may assume, is always the same; it is language forgetting itself." It is hard to exaggerate the importance of this principle, which, as the author points out, was recognized also by K. O. Müller; but we think it has been somewhat exaggerated in these essays, and that Professor Müller overlooks, or rather denies, an equally essential element of mythology. He says (p. 162): "The mistake most commonly committed is to suppose that mythology has necessarily a religious character. . . . Religion, no doubt, suffered most from mythological phraseology, but it did not suffer alone." Here we fail to see what is gained by discarding old definitions. Mythology, as commonly understood, certainly implies a religious basis. It is true, the primary meaning of the word has relation to expression of thought rather than to the thought or sentiment itself; we have to do, however, with the mass of beliefs and traditions which actually pass by the name *mythology*, and in these it is undeniable that religion is an essential part. Even if, in nine cases out of ten, the explanation of myths is found in the meaning of words, there yet remain cases, as Professor Müller admits (p. 169), in which the etymological test fails. But the other element, the religious, is never absent. If now we throw aside this accepted definition, and make mythology to be identical with the poetry inherent in words, as he seems to do, we shall after all only have transferred a term from one set of ideas to another, and shall be driven to search for another term to attach to the old idea. Of course that stage in language which he calls the mythological is of the first importance in the history of language, and was indispensable to the formation of mythology—of much, too, which is not mythology. The recognition and illustration of this stage, and of its bearing on the development of myths, is one of the author's great services to scholarship and thought; but it will not explain everything that we call mythology.

It appears to us, therefore, that Professor Müller nowhere shows sufficient appreciation of the part which the religious sense must have had in the creation of mythology—nowhere recognizes that earnest faith in the dæmonic powers of nature which lay at the bottom of the ancient polytheism. Even in the fine passage in the first essay, in which he treats of the personification of abstract nouns and the powers of nature, it seems to us that he inverts the true process, and looks to language for an explanation, rather than to the instructive beliefs of the human mind. "In ancient languages," he says, p. 55, "every one of these words had necessarily a termination expressive of gender, and this naturally produced in the mind the corresponding idea of sex." But where did they get their "termination expressive of gender?" Was it not from the incapacity of the human mind at that stage to conceive of action or mere existence, except in living beings? The life which inspired all the powers and objects of nature, the unseen beings which dwelt in them, were the spirits or "dæmons" which human reverence developed into gods. These were the powers that were loved or feared, propitiated and worshipped.

It is true that "the stories of the Argonauts, or of the Trojan war, or of the Calydonian boar-hunt had very little to do with religion, except that some of the heroes engaged in these were called either the sons or the favorites of some of the so-called gods of Greece" (p. 162). Even these were as much religion as the exploits of Samson or the slaying of Goliath by David. But the concession made in the sentence just quoted is enough. If they had ever so little of religion, they possessed an essential element of mythology. Agamemnon and Jason and Atalanta were not gods, but they were descended from gods; the legends which told of them were on one side purely human, but on the other they touched that unseen world which lay all about the Greek, and inspired him with earnest sentiments of religious faith.

In regard to comparative mythology, the volume before us contains, as we have said, little in substance which we did not already possess in the lectures on language and in Mr. Cox's little manual. A great part of the volume, however, is devoted to bringing forward a new phase of the investigations which have grown out of comparative philology. "As the science of language," he says, p. 195, "has supplied a new basis for the science of mythology, the science of mythology bids fair, in its turn, to open the way to a new and scientific study of the folk-lore of the Aryan nations. Not only have the radical and formal elements of language been proved to be the same in India, Greece, Italy, among the Celtic, Teutonic, and Slavonic nations; not only have the names of many of their gods, the forms of their worship, and the mainspring of their religious sentiment been traced back to one common Aryan source; but a further advance has been made. A myth, it was argued, dwindles down to a legend, a legend to the tale; and if the myths were originally identical in India Greece, Italy, Germany, why should not the tales also of these countries show some similarity, even in the songs of the Indian ayah and the English

* "Chips from a German Workshop. By Max Müller, M.A., Fellow of All Souls' College, Oxford. In two volumes. Vol. I., Essays on the Science of Religion. Vol. II., Essays on Mythology, Traditions, and Customs." New York: Charles Scribner & Co. 1869. 12mo.)

nurse? "There is some truth," he adds, "in this line of argument, but there is likewise great danger of error." In half a dozen essays, on Norse, Highland, and Zulu tales, and on Folk-Lore and Manners and Customs, he discusses the various attempts which have been made to collect and compare such tales, and criticises them with very sound judgment. If in his own field of linguistics Professor Müller is chargeable with far-fetched and strained etymologies, certainly nothing could be more calm and judicious than these judgments of his upon the errors of others. In the main, however, he admits fully the claims of this new branch of his science: "Here, too, the ground-plan of a new science has been sketched out and broken relics of the ancient folk-lore of the Aryan family have been picked up in the cottages of Scotland, the spinning-rooms of Germany, the bazaars of Herat, and the monasteries of Ceylon" (p. 258). Again: "These very stories, these 'Mährchen,' which nurses still tell, with almost the same words, in the Thuringian forests and the Norwegian villages, and to which crowds of children listen under the pippul-trees of India, these stories, too, belonged to the common heir-loom of the Indo-European race, and their origin carries us back to the same distant past, when no Greek had set foot in Europe, no Hindoo had bathed in the sacred waters of the Ganges" (p. 222).

The same key which has unlocked so many of the riddles of mythology is applied, not without success, to the folk-lore; and the Sun, the Dawn, Day and Night, Winter and Spring, are shown to be embodied in many of these tales. An example of these is the familiar story of the Frog-prince (p. 244), which we all remember in Gammer Grethel, and which Prof. Müller unhesitatingly classes as one of the sun-myths; "it can be shown," he says, "that frog was used as a name of the sun;" i. e., "at sunrise and sunset, when the sun seemed squatting on the water." Unfortunately, while these words would certainly lead one to suppose that there was direct evidence that the word meaning "frog" was used for the sun, no direct evidence of this is offered; the sentences which follow appear to be only a labored argument to show the probability of such a use, and the argument ends, "must have been at one time used, etc." The result is, that the reader is left in doubt whether the statement is a known fact, or only an inference from probability.

The history of these mythical tales, after the gods of heathendom had been supplanted by Christianity, the power, that is, by which mythical legends became mere fairy stories, is well told on p. 233. "Christianity had destroyed the old gods of the Teutonic tribes, and supplied new heroes in the saints and martyrs of the Church. The gods were dead, and the heroes, the sons of the gods, forgotten. But the stories told of them would not die, and in spite of the excommunications of the priests they were welcomed wherever they appeared in their strange disguises. Kind-hearted grannies would tell the pretty stories of old, if it was only to keep their little folk quiet. They did not tell them of the gods; for those gods were dead, or, worse than that, had been changed into devils. They told them of nobody; aye, sometimes they would tell them of the very saints and martyrs, and the apostles themselves have had to wear some of the old rags that belonged by right to Odin and other heathen gods. The oddest figure of all is that of the devil in his half-christian and half-heathen garb. The Aryan nations had no devil. Pluto, though of a sombre character, was a very respectable personage; and Loki, though a mischievous person, was not a fiend. The German goddess, Hell, too—like Proserpine—had once seen better days. Thus, when the Germans were indoctrinated with the idea of a real devil, the Semitic Satan or Diabolus, they treated him in the most good-humored manner. They ascribed to him all the mischievous tricks of their most mischievous gods."

We have spoken first of the second volume, because it contains the discussions which are most identified with the name of Max Müller, and possesses at the same time most novelty to the majority of readers. We do not know, however, but that the first volume would, on the whole, be pronounced the most interesting and the most valuable. At any rate, there are many readers who will care nothing for these strange identities of words and fables and objects of worship, but who will turn eagerly to the essays upon the divers forms of religion of the Asiatic peoples. The first volume contains admirable essays upon nearly all the great primitive religions of Asia, with their sacred books—the Vedas, the Zendavesta; Buddhism, the Parses, the books of Confucius, Semitic monotheism—all these titles, of the first interest to the students of religious thought, are treated in the author's eloquent style, and with his unsurpassed erudition. Here, no doubt, we may look for what is latest and best worth knowing upon these subjects.

Besides these there is a short essay upon the "Popol Vuh," or sacred book of the Quiché tribe of Central America, which is shown to be a genuine record of the times before the Spanish conquest. To be sure, the book in question is not the real "Popol Vuh," but is the composition of a Christian convert of the sixteenth century, who was unwilling to suffer the records of his nation to perish, and who therefore made out this compilation from whatever early material was accessible to him. Even this is of the greatest value, and the genuineness of the work is vouched by the modesty of its claims. But it does not follow because the document is genuine that its records are necessarily true. It repeats the old beliefs and traditions of the people, crude and confused as such recollections must necessarily be. Professor Müller makes some judicious remarks upon this head; after alluding to the old Greek traditions, and remarking that "we know nothing of Greek history before the Olympiads, and very little even then," he continues (p. 327):

"The same applies with a force increased a hundred fold to the ancient history of the aboriginal races of America, and the sooner this is acknowledged, the better for the credit of American scholars. Even the traditions of the migrations of the Chichimecs, Colhuas, and Nahuas, which form the staple of all American antiquarians, are no better than the Greek traditions about Pelesgians, Æolians, and Ionians: and it would be mere waste of time to construct out of such elements a systematic history, only to be destroyed again sooner or later by some Niebuhr, Grote, or Lewis."

CURRENT FRENCH LITERATURE.

HERE are "L'Interné," by M. Jules Janin, and "Les Dents du Dragon," by Alphonse Karr.—Manhood has its prime, and the enthusiasm and fire of youth can scarcely be expected to extend beyond half a century of years. Jules Janin is sixty-four, Alphonse Karr is ripening into his fifty-first summer. Janin's "Femme Guillotinée" and "L'Ane Mort" first appeared in 1829–30. We would not say, "superfluous lags the veteran," but when we read his "Chemin de Traverse," with 1837 on the title-page, and a gush of young enthusiasm and charming fancy over all its other pages, we cannot help contrasting it with the book before us. And then the Madame Prevost obituary, his description of the flower-seller's shop in the Palais Royal, where he picks up the fleuriste's order-book, and in its items reads the hidden history of the gay Parisian world. Terrible and touching; with such exquisite trains of associations; such feeling, poetry, truth! And yet the book contained only the names of those who gave and those who received a few poor flowers. The loves of Paris kept by double entry! Here, to-day, a simple bouquet of violets is sent and accepted. Then a rose. Each day adds a flower to love's message. Then, alas! soon, each day tears away a flower, until *his* name and *her* name are no longer written together; and, as the first sender disappears, you perceive a fresh bouquet of violets appearing with a new name attached to it. Ah! if you but knew the slight duration of these grand passions, "*éternelles comme la rose!*" Janin is not to be judged by his novels, and the one before us is far from being the best of them, although it has some admirable pages. Janin is not a novelist, but he is the greatest of feuilletonists. Wit, fancy, fertility, gayety, critical acumen, and the gentlest of persiflage are all his, but he wants the continuity to write a book. Alphonse Karr has long been remarkable for the eccentricity of the titles of his works, "Journey Around My Garden," "An Hour Too Late," "Black and Blue Roses," "Mid-day to Fourteen o'Clock," and his "King of the Canary Islands," lately announced. He is best known by his Guêpes (Wasps), a series of satirical papers, published at short intervals, from 1839 to 1850. His "Dragon's Teeth" is fragmentary and discursive; *laudator temporis acti*, he talks much in it of his Guêpes and himself.

In "Le Sentiment Religieux en Grèce," by Jules Girard, the religious sentiment of the ancient Greeks, from Homer to Æschylus, is presented in its moral development and in its dramatic expression. M. Girard takes direct issue with Renan, who, in his "Apostles," says of the Greeks, that they never had any high appreciation nor profound sentiment of the destiny of man; that they accepted life as children do; that their infantine serenity was always a self-satisfied one, and this peculiar serenity a national characteristic. To the reader of M. Girard's five hundred and fifty pages, it is a secondary question whether or not he gets the better of Renan in the argument. The attraction of the work lies in the elaborate demonstration of the existence of an elevated tone in Grecian philosophy and dramatic arts. The chapters upon natural religion in Homer, upon anthropomorphism as developed in Homer and Hesiod, on the progress of moral and religious sentiments, the influence of Orphic ideas on human destiny and a future life; the religious ideas of Æschylus, as expressed in his "Prometheus" and "Eumenides," added to the parallels with Sophocles

and Shakespeare, all present attractive reading and valuable suggestion.

"Éléments d'Histologie Humaine" is a translation from the well-known German work by Kolliker, which, for the past twelve years, has been the only classic treatise on the science of histology used in the French medical schools. Dr. Mark See, its translator, has enriched the work with statements of the many valuable discoveries made since 1856, elucidated several obscure points, and removed the remnants of several ancient errors. The first part of the work is devoted exclusively to the study of the tissues, which are divided by the author into four classes—the cellular, conjunctive, muscular, and nervous. Kolliker declares for the doctrine of Schwamm, so brilliantly developed and sustained by Virchow, and greatly enlarges the signification of the term *cella*. He extends its former acceptation of a vesicle closed by a membrane, and recognizes in it the *organite* of Milne-Edwards.

The "Histoire de l'Art Grec avant Périclès" is by M. Beulé, a member of the Institute of France, and Secretary of the Academy of Fine Arts, our author speaks as one having authority. M. Beulé is well known in Europe as a passionate admirer of classic art, and in several published works has given proof of great taste and erudition. The present work fully justifies his reputation. He declares that, starting in the East, the cradle of so many movements in the progress of humanity, art reached Greece by Asia Minor and the Ionian Islands. Barbarous, puerile, and profitless in Assyria, in Egypt, in Phœnicia, art gradually improved in traversing the Archipelago, and attained in the continental Hellenic lands its fullest development. M. Beulé maintains—and here is an interesting feature of his work—that the Greeks, with all their superiority, nevertheless invented nothing. From the East they received all the germs and earliest efforts of art, which they so transformed and perfected that the true originators are lost sight of, and they alone appear as the creators. The patrimony of ancient art was the general inheritance of the community of nations. The Grecians appropriated it, absorbed it, and, in a style and form peculiar to themselves, made it for ever their own. All that preceded them is despised or forgotten. They alone are remembered. Ionian in Attica, Dorian in the Peloponnesus; graceful in the first, virile in the second, Grecian art spreads and increases with this double characteristic throughout Greece and its colonies. The monuments of the cities of Sicily and of Campania tell plainly what race founded them. It progresses with constant developments until Phidias, Dorian by birth, Ionian by education, finally fuses the two currents, and produces from their union its complete and ideal perfection. An artist as well as a scholar, as enthusiastic in his admiration of beauty as profound and accurate in his researches, the author reviews with his reader all the works, essays, artists, cities, and ruins, from Samos to Corinth, Corinth to Syracuse, Syracuse to Pœstum, showing by turns the progress of architecture and of sculpture, until we find the supreme expression of Grecian art in Phidias and Polygnotus—Polygnotus, the Prometheus of painting, the first who threw animation and fire into representations of the human countenance, who first in his paintings represented the mouth open and the teeth displayed, who first clothed his figures in light garments, and threw transparent draperies about the forms of his women; the author, in short, of both delicacy and expression in painting.

"Gianotti, sa Vie, son Temps et ses Doctrines" is the work of Charles Tassin. Gianotti was a contemporary of Macchiavelli. Like Macchiavelli, he was Secretary of the Florentine Council of Ten; like him, he essayed to give form and expression to the principles of governmental policy. Unlike Macchiavelli, though, he was the advocate of reason and justice against the apologists of force and cunning, and combated his reasons and condemned his principles. M. Tassin shows that even at that epoch the Macchiavellian theories were far from being generally accepted in Italy, and points to Gianotti as the exponent of a school teaching the doctrines of right, as opposed to those of the school of mere interest.

The publication of the "Memoirs of Talleyrand," so long promised, now appears to be so indefinitely postponed that it is altogether possible they may, after all, never see the light. Here is the actual position of the matter: the memoirs in question were bequeathed by Prince Talleyrand to his niece, the Duchess of Sagan, who was forbidden to publish them before the expiration of thirty years after his death. But this restriction was unaccompanied by any obligation to print them. The Duchess of Sagan bequeathed them under the same conditions to the Count de Bacourt (the same who edited the correspondence of Mirabeau and of the Count de la Marck). The Count, in turn, left them to M. Paul Andral and M. Chatelain, and added twenty to the thirty years ordered by Talleyrand. The result of all these dispositions, and of a simple sum in arithmetic, is that the "Talleyrand Memoirs" cannot be published before 1888, and even then, it will rest with both MM. Andral and Chatelain, or their heirs and executors, to publish or not, at their option. No obligation rests upon them to do so.

The main features of the pontificate of Sixtus the Fifth ("Histoire de Sixte Quint," by M. Dumesnil) are familiar even to general readers of history. He was an extraordinary man, and, during his reign of more than five years, displayed an energetic will as applied to affairs of state and of religion, an unbending severity toward criminals, constant solicitude for the well-being of his subjects, an enlightened fondness for the arts, as is shown by numerous monuments, and a spirit of inflexible determination in raising the Holy See into a state of independence of foreign princes. M. Dumesnil's work is an additional proof, if any were needed, of the fact that the mission of history in the nineteenth century appears to be to *unteach* all preceding modern history. The author shows that the origin of Felix Peretti, Pope Sixtus, was not low, as is related (the story ran that he was originally a swineherd), and that he was allied to the "best families, short of nobility," of his province. His pretended infirmities, the statement that he was elected because supposed to be dying, and the well-known crutch-story, he pronounces to be all fabulous. He shows, moreover, that there is no warrant for these stories in contemporary history, and quotes Tempesti, one of the historians of the conclave which elected Sixtus, to the following effect: "In electing Montalto Pope, still vigorous of years, since he had only reached sixty-four, and enjoyed a robust and vigorous constitution, it was felt certain that he would live long enough to bury Farnese and his partisans, etc."

"L'Immortalité de l'Ame chez les Juifs" was first published in Paris some ten years since. It is a translation by Isidore Cohen fron the German of Dr. Brecher, Surgeon of the Israelite Hospital at Prossnitz. It is well known that a general impression prevails to the effect that the doctrine of the immortality of the soul was formerly unknown to the Jews; that it is not found in the Prophets, and most certainly not in the Pentateuch. Judaism appeared to remain proudly indifferent to the accusation and to public opinion until Dr. Brecher, who is well known to Hebraists as the commentator and editor of the Cosri, or Khusari, undertook seriously in this little work to prove from Hebrew tradition, from the Scriptures, and from the Talmud, that the Jewish people have always recognized the doctrine of the immortality of the soul. His task is executed with great force of reasoning and a most interesting display of erudition.

We may remark here that the general current of Protestant Christian opinion upon this subject is strongly tinged with the prevailing theory of Warburton, as developed in his "Divine Legation." He argues the subject at great length and with some learning, and concludes that although the more current doctrine has always been that a future state of rewards and punishments was taught by the law of Moses, he has, nevertheless, proved beyond all reasonable question that such a doctrine is not to be found in, nor did it make part of, the Mosaic dispensation.

For this and similar opinions, Dr. Warburton was made excessively uncomfortable by a profusion of compliments from Voltaire, which were so energetically declined by the Bishop of Gloucester as to draw from the Sage of Ferney language in which no trace of eulogy could by possibility be discovered.

"Campagnes et Stations," by Ed. du Hailly, has a title which announces an author by turns soldier and sailor. Precisely in what capacity he travelled he does not say, but from internal evidence we take him to be a naval officer of rank, charged with a diplomatic mission. The book is most interesting from the first to the last of its 462 pages. On his route to Singapore, M. du Hailly gives us glimpses of Madeira, Brazil, Bahia, and the Cape of Good Hope. Then comes Singapore, a city of nearly 100,000 inhabitants, which in 1819 had no existence beyond that of a miserable Indian village. The details concerning Siam and Bangkok are fresh and very full. The author speaks of American Protestant missions founded in Siam thirty-six years ago—Baptist, Presbyterian, Congregationalist, etc. "This land will soon be Immanuel's," wrote a missionary in 1839. In 1857, Sir John Bowring doubted seriously if ten native Siamese Protestants could be found. M. du Hailly professes himself unable to comprehend the *persistante confiance* displayed by the Bible societies in the distribution of their publications—"a distribution of which experience has demonstrated the almost total uselessness." Nevertheless, he says, these missions have not been wholly profitless, for they have aided in spreading much useful knowledge, and they publish the only journal in Bangkok. Then he gives us the result of three years' observation among the continents and islands of the great Southern Ocean, and a history full of remarkable details concerning the Coolie trade, or rather, the traffic in Coolies, and closes with two chapters on the French Antilles (Martinique and Guadaloupe), and Six

Months in Newfoundland. A professional book-maker would have made at least half a dozen volumes out of his material.

"Le Poème de Lucrèce" is a treatise by C. Martha.—The poem in question is of course the "De Rerum Natura." An extraordinary fact connected with the great work of Lucretius is the slight mention made of it by succeeding Latin authors. Not that it was unknown to them; far from it. With the single exception of Ovid, who speaks of it with enthusiasm, they nearly all refer to it disparagingly, although nearly all of them profited by it. One reason for this silence, doubtless, was the little taste that existed among the Romans for such elevated speculations as the poem indulges in. Another was a feeling that may be called religious; somewhat akin to that which, years ago, prevented people in England from acknowledging familiarity with such a work as Rousseau's "Nouvelle Héloïse." But this neglect of the ancients has been more than compensated by the admiration of the moderns. Lucretius has not only been translated into all the principal modern languages, but has received the tribute of numerous refutations and commentaries. In English alone we have translations of his poem by Creech, Busby, J. S. Watson, and Good, not to mention the brilliant paraphrase of some of its passages by Dryden. The translation of Creech is a double one, being in prose and in verse. So great was his admiration of Lucretius that the story—apocryphal, we think—runs that his suicide was in imitation of his original. In Germany, Eichstädt's version and notes are well and favorably known. In France, Montaigne and Gassendi gave Lucretius great attention. Molière studied and translated his great poem; Villemain wrote an essay upon it, and a Professor (Patin) of the Sorbonne delivered a course of lectures upon it. Then there is Cardinal Polignac's refutation of its philosophical system the "Anti-Lucretius, sive de Deo et Natura," in admirable Latin—an enormous work in nine books, of thirteen hundred lines each, which it was once the fashion to admire; Voltaire speaks of its author as

> "Le Cardinal, oracle de la France
> Réunissant Virgile avec Platon,
> Vengeur du ciel et vainqueur de Lucrèce."

Voltaire himself admired him highly, but unfortunately for the reputation of the poem, he resuscitated precisely those elements which best merited forgetfulness, and it is only during this century, thanks to Villemain, Patin, and the author of the work before us, that Lucretius is judged impartially and appreciated fairly. M. Martha's book, of 360 pages, is an able analysis and elegant commentary, not only upon the poem, but also the preceding and contemporary literature of Greece and Rome, their theology, philosophy, science, and social system, together with an admirable appreciation of the doctrines of Epicurus, and of the opposing schools of philosophy; the whole illustrated by an eloquent *résumé* of the Christian doctrines bearing upon these subjects. It is neither a translation nor a commentary, but both—as, from passage to passage, the poem may seem to require the one or the other. Besides the salient beauties of the poem, familiar to many, the admirable picture of the pursuits of man, the progress of art and science, the grand pictures of chaos and the creation, and the description of the plague with which the poem closes, M. Martha has, with tasteful discrimination, developed the beauty of many passages hitherto imperfectly noticed or misunderstood.

The Military and Civil History of Connecticut during the War of 1861–65, comprising a detailed account of the various Regiments and Batteries, through March, Encampment, Bivouac, and Battle, &c. By W. A. Croffut and John M. Morris. (New York: Ledyard Bill. 1869.)—The books that record the part which the several States of the North took in the war of the Rebellion are getting to be so large that a lifting tackle or boom-derrick will soon be needed to move them from the shelf to the desk; and as for their weight it may be conveniently stated by adopting the phrase of the old story of the stout man, and saying that so many go to the ton. The volume now presented to the public is a large octavo of eight hundred and ninety-one pages. It is a very creditable piece of work, showing an infinite amount of patient labor, and composed with modesty, candor, and good sense. It gives an excellent account of the commencement of the war, and calls up a vivid remembrance of the enthusiastic spirit of those days, with their flag-raising, money-giving, sword-presenting, and enlisting of soldiers. It contains an abundance of good little biographical sketches of true representatives of Connecticut, and follows closely and apparently with accuracy the fortunes of all the military organizations which she sent to the field. The plan of the author is "to group events that are synchronous, and carry forward the whole with something of the consecutive method of history." They have adhered to this plan with fidelity, but have confined themselves so closely to recording the services of the soldiers of their State, as hardly even to mention the haps of regiments from other States serving not only in the same division but even in the same brigade with Connecticut troops. Thus their accounts of battles read oddly, when they are defective only by reason of the omissions incident to the plan of the work, but it is to be added that they have other and more serious defects. They are sometimes confused, and sometimes all wrong, but as the authors modestly disclaim any intention of offering "elaborate descriptions of battles," and seem to have honestly tried to tell the truth, and have succeeded in telling the tale of the contingent of Connecticut with great minuteness, and without undue laudation of their heroes, or distasteful disparagement of the troops of other States in comparison with them, there is no occasion for submitting this feature of their work to searching criticism. They have used manuscript reports of battles with some freedom, but it is to be wished that they had quoted from them much more largely. Such material is of very high value, and, if the writer be of a certain calibre, is of the highest, and it will be every day more difficult to procure. The value of books of the class to which this belongs, is of course primarily local, but they contain stores of information from which the future historian must draw. To him the contemporaneous records of interesting events made by the actors in them, of whatever grade, will be as precious as "apples of gold in pictures of silver." Narratives digested from materials becoming day by day less accessible, not to say non-existent, will be worth much less, and therefore it is earnestly to be hoped that future compilers of similar books will enrich them profusely with extracts from official reports, diaries, scrap-books, "private letters," as Messrs. Croffut & Morris say they have gathered facts from, and with memoranda of the statements made to them at "personal interviews."

The Wonders of Optics. By F. Marion. Translated from the French and edited by Charles W. Quin. (New York: Charles Scribner & Co.)—A series of books called the "Bibliothèque des Merveilles" has recently appeared in Paris, and has proved sufficiently popular to encourage the publication of an American edition. The work before us is the first number of this series. It is principally devoted to explaining the extraordinary effects obtainable by the use of lenses and mirrors. Descriptions are given of the eye, and of the defects and errors to which it is liable, such as color-blindness and ocular spectra. An account is also given of some curious workings of the imagination, during which images are seen with such distinctness that the patient is unable to distinguish them from real objects. Among the descriptions of optical instruments, a chapter is devoted to the spectroscope, of which, strangely enough, there is scarcely any notice in the French edition. Although not quite accurate in all respects, yet this chapter contains a good summary of spectrum analysis, particularly in its application to astronomy. In describing the telescope an error occurs which requires correction. The Cambridge telescope is said to be larger than that at Pulkova. In reality, they are both of the same size; and their diameter is fifteen inches, instead of eighteen or nineteen. The largest achromatic lens which has yet been mounted is not Mr. Buckingham's, but the Craig telescope, twenty-four inches in diameter and over seventy feet in focal length.

Perhaps the most interesting portion of the book is Part III., which is mainly devoted to showing how much of the magic of the ancients may be reduced to an ingenious use of concave mirrors and other optical instruments. A good description is also given of the method of producing the "ghosts" which were exhibited a few years ago at many of our theatres. The interest of the work is much increased by the large number of illustrations, a portion of which are very well executed.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Barnes (Rev. A.), Notes on the Book of Psalms, 3 vols	(Harper & Bros)	
Chunder (B.), The Travels of a Hindoo in Bengal and Upper India, 2 vols	(John Wiley & Son)	
Colange (L.), Zell's Popular Encyclopedia and Universal Dictionary, Parts XIII., XIV., swd	(T. Ellwood Zell)	$0 20
Ellis (Rev. G. E.), Aims and Purposes of the Founders of Massachusetts: Their Treatment of Intruders and Dissentients, swd	(John Wilson & Son)

April 15, 1869.

THOMAS CARLYLE.

Messrs. SCRIBNER, WELFORD & CO. beg to announce an entirely New Edition of the whole of Mr. Carlyle's Works, to be completed in Thirty Volumes. It will be carefully revised by the author, handsomely printed in 8vo, with Portraits, Maps, etc., and entitled

THE LIBRARY EDITION OF THE

Collected Works of Thomas Carlyle.

The First and Second Volumes are now ready, and consist of

I.

SARTOR RESARTUS:

THE LIFE AND OPINIONS OF HERR TEUFELSDROCH.

One Volume 8vo, $3 75. With new Portrait of the Author.

II.

THE FRENCH REVOLUTION.

Volume I.—THE BASTILE.

One Volume 8vo, $4 50.

EACH WORK WILL BE COMPLETE IN ITSELF.

Volume III. will be ready for delivery on the 15th of May, containing "The French Revolution," Volume II. And a *new volume* on the 15th of each month, *regularly*.

Price to subscribers to the whole work, only $3 75 per volume, payable upon the delivery of each volume. Single volumes sent postpaid upon the receipt of the price.

SCRIBNER, WELFORD & CO.,
654 BROADWAY, NEW YORK.

JUST PUBLISHED:

Chips from a German Workshop.

By MAX MÜLLER, M.A.

Reprinted from the Second London Revised Edition, with copious Index. Vol. I. Essays on the Science of Religion. Vol. II. Essays on Mythology, Traditions, and Customs.

Two Vols., Crown 8vo, uniform with Lectures on the Science of Language, $5.

CRITICAL NOTICES:

The curious reader will find in these volumes a body of combined entertainment and instruction such as has hardly ever been brought together in so compact a form.—*Evening Post.*

Müller often writes a story which Macaulay himself, if his own too exuberant taste could have been a little pruned, might have envied.—*N. Y. World.*

We welcome every work of Professor Müller's as a real addition to English literature, in point of style no less than in point of matter.—*London Saturday Review.*

A German workshop—not mechanical, but intellectual—is a precious resource to the student and thinker.—*Boston Transcript.*

For sale by all booksellers, or sent, post-paid, upon receipt of the price, by the publishers.

T. ELLWOOD ZELL, Publisher,
Philadelphia.

HAPPY THOUGHTS FOR ONE DOLLAR.

[*From the Home Monthly.*]

"HAPPY THOUGHTS is a book full of the most delicious nonsense. We have not, for a long time, seen more fun or truer fun than sparkles from every page of this little book. We have laughed heartily over it. Buy it and read it some idle afternoon. Quotations would not fairly represent the book; the reader must be gradually beguiled into the spirit of the author."

HAPPY THOUGHTS FOR 75 CENTS,

At any bookstore, or will be sent by mail by the Publishers,

ROBERTS BROTHERS,
BOSTON.

Single numbers, $1 25.
Yearly subscription, $5, in advance.
Vols I and II. bound, $6 each.

GEO. ROUTLEDGE & SONS,

416 BROOME STREET, NEW YORK,

Have just issued:

I.

STUDIES ON THACKERAY.

By JAMES HANNAY. Printed on toned paper. 16mo, extra cloth, price $1 25.

II.

NEW BOOK BY SARAH TYTLER.

GIRLHOOD AND WOMANHOOD. By SARAH TYTLER, author of "Papers for Thoughtful Girls," etc. Crown 8vo, extra cloth, gilt edges, price $2.

III.

SADIE'S POEMS.

TWILIGHT HOURS: A Legacy of Verse. By SARAH WILLIAMS (Sadie). With a Memoir by E. H. PLUMPTRE, M.A. Crown 8vo, extra cloth, price $2 50.

IV.

BEAUTIFUL THOUGHTS

FROM GERMAN AND SPANISH AUTHORS. By CRAUFORD TAIT RAMAGE, LL.D., author of "Beautiful Thoughts from Latin Authors," etc., etc. Crown 8vo, half bound, $3.

V.

THE PRESENCE OF CHRIST.

By the Rev. ANTHONY W. THOROLD, M.A. Crown 8vo, extra cloth, price $2.

VI.

CHILD WORLD.

A Book of Poems for Children. By the authors of "Poems Written for a Child." With 16 Illustrations. Square 16mo, extra cloth, gilt edges, $1 75.

SPURGEON'S NEW DEVOTIONAL BOOK.

EVENING BY EVENING;

OR,

Readings at Eventide.

A Companion Volume to

MORNING BY MORNING;

OR,

DAILY BIBLE READINGS.

By the same author.

12mo, cloth bindings, $1 75.

No religious family can afford to be without these books as guides in daily family devotions.

These books are somewhat after the plan of the well-known "Morning and Evening Exercises" by Jay; but in originality and vigor of thought very much the superior.

There is an earnestness about all that Mr. Spurgeon says which goes to the very heart of his reader's religious experience.

Perhaps no man living is better fitted to prepare books of this nature, which are calculated to warm the hearts and make the family devotions of interest and profit.

Sent by mail, post-paid, on receipt of the price.

SHELDON & COMPANY,
498 and 500 Broadway, New York.

A LIBRARY OF EDUCATION,

Selected from the Best Writers of all Countries.

This attempt at bringing within the reach of all the thoughts of the best minds on a most important subject is meeting with high appreciation.

What recommends it apart from its subject-matter and its cheapness is its convenient form—permitting of being carried about the person and read at spare moments, and so light as not to fatigue the hand—and the fact that each work will be complete, and, as far as possible, standard.

The following enumeration will give some idea of the field to be occupied: *Locke*, Thoughts on Education; *Bacon*, Advancement of Learning; *Milton; Ascham*, The Schoolmaster; *J. S. Mill; Carlyle; Prof. De Morgan; Sir Edmund Head*, Shall and Will; *Rousseau*, Emile; *Mme. de Genlis*, Adelaide and Theodore; *Montaigne*, On the Institution and Education of Children; *Fenelon*, On the Education of Girls; *Pestalozzi*, Leonard and Gertrude; *Jean Paul Richter*, Levana; *Horace Mann; Dr. Channing; Franklin; Plato*, Republic; *Xenophon*, Cyropædia, etc.. etc.

Vols. 1 and 2, containing Locke's "Thoughts on Education," and minor essays on Study, Reading, etc., together with Milton's Epistle on Education, and lives of both authors, are now ready. They will be mailed to any address for 20 cents each.

J. W. SCHERMERHORN & CO.,
14 Bond Street, New York.

SLAVE SONGS OF THE UNITED STATES. A Unique Collection of Original Melodies—words and music—obtained among the negroes of the South; preceded by an account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal, by Prof. W. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50.

CRITICAL AND SOCIAL ESSAYS. Reprinted from the *Nation*, and supplying in some measure the first two volumes of that paper, which are now obtainable only with difficulty. Cloth, 12mo, price $1 50.

LIFE AND LETTERS OF CAPTAIN JOHN BROWN. Edited by Richard D. Webb, and published by Smith, Elder & Co., London, 1861. In all respects the best life of John Brown ever written. Illustrated by a photographic portrait without a beard, showing perfectly the character of the lower part of the face. Cloth, 12mo, price $1 50.

POLYDORI VERGILII DE RERUM INVENTORIBUS. The last publication of the Agathynian Club. Superbly printed, paper cover, 8vo, price $3.

Sent post-paid on receipt of price. Address PUBLISHER, Box 6732, New York City.

ON THE HEIGHTS.

M. L. P. in the *Boston Commonwealth:*

"It is not probable that Auerbach will ever write a novel equal to "On the Heights," for, indeed, that is so full, so comprehensive and exhaustive, that the mind from which it emanated must require years of slow growth to be able to yield another work so rich in contemplation—in a sort of aphorism that remains in the mind as a sweet perfume in the air of a room; we may not recall the words but the idea diffuses itself through the thoughts."

One volume, 16mo. Price $2.

Sold by all booksellers. Mailed, post paid, by the publishers.

FACTS FOR THE LADIES.

I have used my Wheeler & Wilson Sewing-Machine for the last twelve years, and it had already been in use two years when I bought it. I have had it doing all kinds of shop-work from seven in the morning until six, and sometimes ten o'clock at night, continually going. I have never sent it for repairs, and I think it is now in as good order as when it came out of your store, and I would not exchange it for any you have.

The Week.

THE last day of the Senate's extra session were not particularly creditable either to the Senate as a body, or to Messrs. Nye, Sprague, and Abbott individually. Mr. Nye made a speech of the well-known variety that he cultivates. Mr. Sprague made another preposterous exhibition of himself, and gave some of his correspondents the pleasure of seeing themselves embalmed in the amber of the *Globe*, for he has printed all their letters to him. Mr. Abbott (of North Carolina)—who might do well by taking a leaf out of the book of his clever and more silent colleague, Mr. Pool—made a display of what used to be called "plantation manners," and threatened to seek a "personal difficulty," as it used to be called, with Mr. Sprague. It is said that the latter gentleman weighs only five-eighths as much as Mr. Abbott; but, for all that, is reported as "walking the avenue" in perfect fearlessness. Still, you never can tell. Mr. Abbott, on his part, is not known as a fire-eater; but we believe he was seen in the avenue too. On the whole, it would be as sad to see Mr. Sprague kill Mr. Abbott as to see Mr. Abbott kill Mr. Sprague. Thursday was partly occupied, too, with eulogies on General Burnside, who was not permitted to remain long under the aspersions of Mr. Sprague. Senator Brownlow told the latter gentleman that there were babies enough in East Tennessee called after the General to drive out of the State any orator who should attack his good name. General Burnside is, we believe, a man that everybody likes who ever knew him, except Mr. Sprague and the late Count Gurowski, and there was a natural desire on the part of his friends to say good words of him; but it is to be doubted if he cares anything for what such an enemy can say. At the close of the evening session the Senate adjourned *sine die*, having acted on all its treaties, but not on all the nominations sent in to it. Mr. Sanford does not go to Spain, nor Mr. Jones to Belgium, nor General Sickles anywhere, as yet, though his "services" during the campaign were not small, as probably he is—all things considered—as effective a platform speaker as there is in the country. Mr. Pile also is defeated, and cannot go to Brazil unless the President disregard the senators' wish, which is very unlikely, although he is to be the Government from now till winter. We may modify a statement of ours, made last week, and say that only one editor at all influential got anything like a first-class position; it was Mr. Rublee, of Wisconsin, a man of more than ordinary character and cultivation, who is likely to do us credit in Switzerland.

The practice of senators soliciting appointments to office got a long discussion in the Senate on yesterday week. It is a practice which has always prevailed to a greater or less extent from the early days of the Government till now, but was never before an evil of such magnitude. It is probable that for the forty-five or forty-six thousand offices which constitute "patronage" there have been not less than four hundred thousand or half a million applicants, and inasmuch as many thousands of these have paid their personal attentions to "our representatives," the Senate is in no very good humor. Mr. Fessenden and Mr. Trumbull were most affected by the consideration that under the present system the members of the two Houses are made mere office-brokers, and that the senators are often guilty of pretending to deliberate on appointments that they have in fact eagerly pleaded for. Mr. Cameron was no little displeased with the fact that his advice has not been often enough asked for by President Grant. Mr. Abbott took a truly office-broking view; he thought that a mistake is made in not apportioning the offices among the States in accordance with the population. Mr. Carpenter wanted the departments instructed to send in the names of all the Government employés, together with the facts in regard to their appointments. This Mr. Carpenter wanted because he is of opinion that a great reduction could be and should be made in the present clerical force in Washington. It will be seen, however, that it would incidentally give exact information as to what States and what senators have had most luck of late, and a balance could be intelligently struck. The Senate did not vote on the resolution, however, but went into executive session. We do not observe that anybody had anything to say in favor of the Civil Service reform which alone can be of the least possible use in our present deplorable circumstances. The respectable press is giving Mr. Jenckes more support now than at any previous time; but a good part of the press is controlled by editors who are themselves "inside politics" to the extent of being able to put their own hands and those of their friends into the public treasury, and it must be by pressure from the people that Congressmen are to be drawn into this reform, it is a thing to be regretted that all the editors are not sounder on *this* main question which is also *the* main question.

The Sprague affair, after "convulsing" the State of Rhode Island, and filling all its newspapers, has at last dwindled down into the dimensions of a small and ridiculous quarrel between Mr. Sprague and Mr. Abbott of North Carolina, a foeman worthy of his steel. Abbott thought Sprague had likened him to "a puppy," and filled Washington with rumors of impending bloodshed; but on becoming sufficiently calm to write to Sprague to know whether he had really likened him to a puppy or not, he found to his great surprise that Sprague had not meant him at all. The parties are now friends, and what is still more gratifying is, that Abbott wishes the unhandsome language used by him with regard to Sprague to be "considered unsaid." We hope now the people of Rhode Island, the house of Brown, Ives & Co., and the Rhode Island newspapers will be able once more to turn their thoughts to their regular business.

Mr. Ashley has written a defence of himself to the New York *Times*, in which he says that "whatever interpretation, from the 'corruption' stand-point, may be put on his letters to Mr. Case, he has always felt confident that the correspondence, read in the light of the testimony of the only parties fully cognizant of all the facts, would acquit him of

any intentional wrong." In support of this theory, he mentions that "he has been four times unanimously re-nominated by the Republican party of the Tenth District," and that "a direct issue was made unsuccessfully against him on these letters at the election of 1862," and that they were used against him to some extent in 1864, but not at all in 1866 and 1868. We shall only say on this point that it is curious that a man of Mr. Ashley's age and experience should mention a caucus nomination in reply to a charge of corruption. We should like to know what offence against morality would damage a man in the eyes of an average nominating convention. The Congressional committee appointed to enquire into the case found that "no condition precedent was demanded from F. M. Case for his appointment as Surveyor General, or for the appointment of any of his subordinates, the evidence conclusively showing no illegal or corrupt acts on the part of the said Ashley with regard to said appointments."

It may serve to give our readers an idea of what Mr. Ashley's ideas of political morality are, and those of an average Congressional committee, to explain that the Case correspondence reveals the fact that Mr. Ashley got the appointment of Surveyor-Generalship of Colorado Territory for F. M. Case in 1861, and when working for it wrote to Case telling him that if he got it he would like his (Ashley's) brother to be Case's chief clerk—"salary $2,500"—and that "it was the best office in the gift of the President," one in which the Surveyor could make from $50,000 to $100,000 in four years, and "that if Case got it, he (Ashley) wanted to unite with him as full partner in land speculations and town sites," and "that he was working hard and earnestly for him;" that he "had promised Mr. Case to get help" in securing the appointment, and that "he wanted to have an interest with him, if he got the place, in the city and town speculation;" that "the Pacific Railroad would go through this Territory, and that it would be a fortune to both of them, if they got the place." Furthermore, in inviting Case to write a letter, to be shown, about the appointments, he asked for his views, on "a separate piece of paper," as to "the proposition for the city and town lots speculations." Then, says the legislator,

"I will probably be chairman of the Committee on Territories if we can carry out the programme to elect Grow speaker, and your brother, Charley Case, of Indiana, clerk, *and then I will know all the proposed expenditures in the Territories, and post you in advance. Write one letter for me, and the other to show.* Damn your business in the Williams County Court. Write and telegraph."

The two gentlemen actually did afterwards sign articles of copartnership, under which F. M. Case agreed to give Mr. Ashley a half of all lands he might purchase in Colorado, Mr. Ashley paying half whatever money they might cost. The verdict of the Congressional Committee on this strange affair, as well as the recommendation, signed by 150 members of Congress, of Mr. Ashley for the governorship of Montana, and the failure of the Senate to reject him with this correspondence before it, only show how deep the poison has sunk, and what hard work the country has before it in attempting to bring about any reform.

The eight-hour law, as regards the Government navy-yards, has again been brought up for exposition at the hands of Attorney-General Hoar, he holding with his predecessor that no matter what length of time men work in the Government employ, the pay must be, under the law, regulated by the rate paid by private establishments of a similar character in the neighborhood; so that if a man only works for eight hours, he ought only be paid for eight hours, and Secretary Borie has ruled accordingly. Hereupon, however, Senator Wilson intervenes, and says this cannot be the true interpretation of the law, inasmuch as it was passed in compliance with the petitions of divers workmen, who meant that they should get ten hours' pay for eight hours' work; that this is what Congress meant in passing it, and that this is plainly what the law does mean. In reply to this, all that need be said is, that to allow a law to be interpreted by everybody who took part in making it, by the aid of his remembrance of what passed in debate, would be productive of great inconvenience. As we had occasion to remark with regard to the reconstruction acts in the Georgia case, the meaning of laws is to be extracted from the language in which they appear on the statute-book by authorized official interpreters; it would be a very remarkable case of ambiguity or obscurity which would warrant the consultation of the members of the legislature passing it. We say this without disputing the correctness of Mr. Wilson's assertions as to what Congress intended to enact.

The free-traders have begun to be very active, and are holding meetings in various parts of the country, and are apparently drawing some of the veterans of the anti-slavery struggle into the agitation. Henry Ward Beecher has presided at a meeting in Brooklyn, and William Lloyd Garrison has spoken at one in Boston; upon which the *Tribune* suggests that the old abolitionists, having been in favor of "abolishing everything from Christianity down," cannot be expected to have any respect for the tariff—an argument on the "religion" and logic of which it is hardly necessary to dwell. A call for a counter demonstration of protectionists in Philadelphia mentions, in illustration of the atrocity of the course pursued by the free-traders, that they "openly" avow their intention of throwing open American markets to foreign producers, the signers evidently feeling that a man who cherished such an intention would, unless unusually hardened and unprincipled, keep it secret; thus furnishing another illustration of the kind of religious veneration the protectionists have for their theory and reminding one forcibly of the missionary views which actuated the earliest slave-traders. There is, however, a good deal of dexterity shown in this mode of treating the subject, because if you can once make a question sacred, and set down anybody who even touches it as a bad man, you have covered it with a very formidable outwork. We have spoken elsewhere of a similar line of argument adopted by the *Examiner and Chronicle* in defence of the baptism of adults through holes in the ice in winter, our contemporary insinuating that anybody who took exception to the practice of the rite under such circumstances was probably himself dirty in his habits, and disliked the application of cold water to the skin under any circumstances.

The free-trade meeting in Boston was in reality a meeting for the foundation of a Reform League, of which the diffusion of free-trade views is only one of the objects, the reform of the Civil Service and an early return to specie payments forming the others. The meeting was addressed by other desperate characters besides Mr. Garrison, Mr. Edward Atkinson and Mr. William Endicott, jr., being amongst the worst and most notorious. They filled Chickering's Hall with their blasphemings for several hours. Amongst the indecencies and absurdities in which they indulged were audacious expressions of faith in the intelligence of the individual man, doubts about the purity and unselfishness of manufacturers of pig-iron, besides some unsettling doctrines as to the depressed condition of the wool trade under a tariff ranging from 50 to 130 per cent. There was no interference on the part of the police, and some of the most respectable newspapers have reported their proceedings in full—giving one a saddening glimpse of the moral condition of Boston.

The New York *Times*, in criticising Grant's diplomatic appointments, says, "there has been a pretty clean sweep of the ministers, secretaries, and consuls appointed by Mr. Lincoln, and mainly kept in office by Mr. Johnson, and as a whole the change has not been an improvement." This, we think, is quite true. But, given the necessity of a "clean sweep" every time a new administration comes in, not only is an improvement not to be looked for by the change, but we may be thankful if there is no deterioration. Other things being equal, a new consul or ambassador is pretty sure to be a worse one, because a less experienced one, than the old one. If he is as good as the old one, it shows that he was a better man to begin with. Mr. Washburne is, and undoubtedly always will be, a worse minister than any of his predecessors since 1860; indeed, in some respects he is quite incompetent. Mr. Motley is, as the *Times* says, in some ways inferior to Mr. Adams; but Mr. Adams refused to stay in London, and had exhausted the legal discussion. What seems to be wanted now in Lon-

don is somebody to let the English public know what the American public feels, and this Mr. Motley undoubtedly will do. The idea that he or any other man will get the British Government to apologize for issuing the proclamation of neutrality, we look on as a great mistake by whomsoever entertained. Whoever devised that mode of "settling" the difficulty has certainly succeeded in "settling" it for some time to come. As to Mr. Adams's absence from the State Department, which the *Times* deplores, as do we, we do not see that anybody is to be blamed for it, or that it indicates any serious defect either in the temper of the Republican party. Members of the cabinet, in all constitutional countries, are expected to sympathize with the principles and policy of the party in power; if Mr. Adams does not do this it is doubtless a misfortune, but one of the misfortunes to which all human affairs are exposed.

The Springfield *Republican* is apparently under the impression that in reviewing the honorable and sensible course of the American people on the various great foreign questions of the last eighty years, it is defending somebody or something against the attacks of the *Nation*. But this is a mistake. The "American view" of foreign affairs at which we recently "sneered" was, as we pointed out at the time, the view of the leading American blatherskites. Had it been the real American view, not only would there be no honorable American diplomacy for the Springfield *Republican* to review, but there would be very little of the United States left. The remains of the Republic would by this time consist principally of bags of reports and resolutions of the House Committee on Foreign Affairs. There is no "view" in the world, let us assure the *Republican*, either on home or foreign affairs, like the view of honest men who know what they are talking about; neither the "American view" nor the "British view" nor the "French view" can for one moment compare to it; and it is the predominance of this view, on the whole, in the regulation of human affairs which makes the world worth living in and has made the United States a great nation. The mysterious prayer with which the *Republican* concludes its article—that something unpleasant may happen to it if it does not stand by the enslaved of all modern countries we have read, "frigid" though we be, with proper emotion. The *Republican*, however, does better things for the oppressed foreigners than invoke conditional curses on its own head, by working in the cause of good government and good sense at home; and for this reason the judicious "middle view" of the various political convulsions of the globe which it professes to take ought to be treated with respect.

In England the Irish Church Bill is under debate in the Committee of the Whole, and seems to undergo no diminution of favor with the House. Instead of having all the virtue extracted from it by Conservative amendments, as was feared by many, it has thus far rather gained in Radicalism, Mr. Gladstone's provision making the three cathedrals "national monuments" to be maintained at the public expense, having been struck out on the motion of Mr. Jonathan Pim, one of the members for Dublin. The most remarkable political incident, however, has been the removal of the vice-consul at Formosa, who, when a mission-house was destroyed by the Chinese villagers, called up a gunboat, had the village smartly bombarded, the Chinese forts stormed, a reasonable number of Chinamen killed, and the Chinese officials compelled to pay both for the property damaged and for the expense of castigating them. Not only has the vice-consul been removed, but the naval officer who did his bidding has been censured, and the money extracted from the local authorities returned. This is the first-fruits, we presume we may say, of the Burlingame mission. The English consuls and naval officers in China have also received stringent orders not to take the law into their own hands, but when they have cause of complaint against local authorities to refer them, as they would in Europe, for settlement to the capital. Some of the English papers take a gloomy view of the future under this regulation, arguing that the Chinese will inevitably construe it as a sign of fear on the part of the barbarians and govern themselves accordingly; but why not try it? If the Government at Pekin shows long-continued and obstinate disrespect for international law and for its own engagements, the gunboats can still be resorted to; if it does its duty and punishes outrages on foreigners, its subjects are far more likely to be made by it tender of foreigners' rights than by the fire of a foreign fleet. At all events the regular civilized plan is worth a trial, which it never yet has had. Sir Rutherford Alcock, the British minister, is reported by telegraph to have written home that the Chinese "do not desire progress," whatever that may mean.

The new Spanish constitution is, in most respects, a remarkable document. It embodies nearly all the leading constitutional principles in use in Anglo-Saxon communities—freedom of speech, freedom from arbitrary arrest, freedom of education, and of worship, and of expatriation, and the responsibility of public functionaries before the courts for their acts, whether official or non-official. This last rule is one which, if we are not mistaken, no other community of the "Latin race" has yet ventured to adopt, though it lies at the very base of constitutional liberty. The Spaniard's house is hereafter to be his castle, and letters and telegrams even—the Butlerites, we hope, will be ashamed to hear—are declared inviolable. The Catholic Church is to continue the state church, but the exercise of all other forms of faith, both by Spaniards and resident foreigners, is permitted. Even this is an immense stride for Spain, and is a far safer measure than complete separation between church and state. The suffrage is to be universal; the ministers responsible to the Cortes; the Cortes to be composed of a Senate and Congress. The former to be one-fourth renewed every three years, the latter to be totally renewed every three years. The provisions relating to the election of the Cortes, its relations to the king—for the government is to be a monarchy—its working, procedure, and dissolution, its powers and duties and privileges, closely resemble those of the English parliament. The powers and duties of the king are the ordinary ones of a limited monarch; the crown is to be hereditary under the law of primogeniture, but without exclusion of the female line. Armies are maintainable only by annual enactment. Altogether the instrument may be considered a remarkable display of good sense and political ability, and is at the same time a great triumph for liberal ideas. The draft of the constitution only reached us by the last mail, and what we know of the subsequent debates on it in the Cortes we get simply by telegraph. Thus far, the provisions relating to universal suffrage, the freedom of the press, and the freedom of worship have been adopted by a large majority. The republicans have made a stand against the monarchy, but apparently in vain, but all efforts to concentrate a respectable number of votes on a candidate for the crown have thus far failed. The discussion of the various articles of the constitution still continues at the present writing. The conscription has been carried out without much difficulty. The strongest arguments against the republicans are, perhaps, their own impatience and readiness to resort to armed resistance. Patience and faith in talk are of the essence of republicanism.

The news from Cuba during the week has not materially changed in character. The principal hope of the insurgents when we last wrote was undoubtedly that trouble with the United States would grow out of the seizure of the *Mary Powell*, or out of something; but this is gradually fading out. There have been no reports of engagements on the island during the week, while the Spanish troops are receiving continual reinforcements. One of the stories received by Cable from the other side of the Ocean is that England is going to recognize the belligerency of the Cuban revolutionists by way of being consistent; the person who invented the story evidently having a vague notion that there is some resemblance between the Cuban case and the Confederate case. Another story is, and this we believe a true one, that the Mexican Congress has authorized President Juarez to recognize Cuban belligerency as soon as he pleases,—we suppose by way of welcoming Cuba into the happy condition in which Mexico now finds herself. The brutality and ferocity of the Spanish volunteers seem to be something extraordinary, and their discipline evidently amounts to nothing. If there were any real warfare going on in the island the hostilities would doubtless be marked by frightful atrocities.

THE PRESIDENT'S WOULD-BE "ADVISERS."

THERE has been a good deal of fault found with Grant for not having taken "advice" more frequently, before making his appointments, if not from politicians properly so-called, at least from prominent Republican Senators or Representatives; but the extent to which this would have helped him may be inferred from the debate in the Senate, last week, on the relations between the senators and the office-seekers. It appears that nobody whatever, of the class to whom the President would naturally resort for advice in such cases, is to be depended on; office-seekers naturally do not go to obscure men or men unknown in politics to get them to sign their recommendations or lobby for them. They go to editors, members of Congress, and old political managers, orators, and wire-pullers; and amongst the persons whose signatures are or are supposed to be of any value, all conscience and all sense of responsibility with regard to these recommendations seem to have died out. In the first place, the great mass of them have not the courage to say no to anybody, so thoroughly has good-nature got the better in their minds of the sense of justice and the sense of truth. By refusing to sign recommendations for persons whom they did not know or did not approve of they would help to give a large and shiftless class a lesson in the real nature of the public service, and of the responsibilities attaching to it, and thus do something towards reforming it; but we believe that, nowadays, the refusal of a signature is a thing unheard of. In one case that has come to our knowledge, a gentleman, whose endorsement was supposed to be of much value, has given it indiscriminately to everybody who applied to him, and then eased his conscience by going to the official whom it was intended to influence, and requesting him to pay no attention to it. That is, sooner than in a frank and manly way refuse what he well knew he ought not to give, he deliberately lied to every office-seeking adventurer who came his way, and then atoned for it by sensibly confessing his lies to the man whom the adventurer asked his assistance in deceiving. Upon members of Congress, on whom the President and the departments have to depend in the main for any knowledge whatever of the hundred thousand applicants for places, the pressure has, of course, been far greater than on private individuals. And it appears they have very generally resorted to the same device for getting rid of bores. It is doubtful whether any Republican representative has refused to sign any recommendation presented to him within the last half year, and in addition to this they have all had to dance attendance in person at the White House and the departments, pushing the claims of their more important friends.

The lot of the Senate, though the Senate constitutes a part of the appointing power, has been just as hard. Every Republican Senator has had to sign right and left, and lobby at the departments besides. It seems from the debate last week that they feel the shame and scandal of being turned into touters, to help the most worthless portion of the American population to live on the American taxpayers, but there is no help for them. If they refuse, they offend the most active and unscrupulous of the local politicians, who would go home forthwith, to denounce them as ill-natured, aristocratic, out of sympathy with the people, and intrigue to prevent their re-election. Considering what happened at the impeachment trial, too, it is no wonder they should do so. On that occasion a great many people who have little in common with the common herd of office-seekers—maintained with great heat not only that a senator owed his vote to his constituents, but his moral judgment—that he should sacrifice his very conscience to their will. If this be sound doctrine, it is not very remarkable that party politicians who want offices should insist on the use of their miserable bodies to push their claims with the President and heads of departments. Mr. Trumbull, and men of that stamp, writhe under the present state of things. He threatens to bring in a bill making it a penal offence for senators to go office seeking in the departments. But he may spare himself the trouble. No law can put an end to the practice which does not drive away the office seekers. The root of the evil is not in the senators, but in the system which allows a worthless vagabond who has failed in all honest callings, the chance of protecting himself against wholesome and well-merited privation by getting into the national service.

If we have 45,000 officers, and party custom insists on their being changed every time there is a change of administration, and forbids the exaction of any intellectual or moral qualification—there will naturally be about 200,000 candidates for the various places. These have to be sifted by some process or other. The established theory as to what constitutes a "claim to office" requires a sifting process just as much as does Mr. Jenckes's Civil Service Bill. Each has to prove his "claims" by calling witnesses, and the business of the executive is to weigh the testimony of these witnesses; and the present system of indiscriminate signing of papers, of course, makes it almost impossible to weigh their testimony with any approach to accuracy. Drunkards, kleptomaniacs, and jeremy-diddlers are at present able to make their appearance at the White House with almost exactly the same kind and amount of support as the wise and good, and it comes from the very men to whom those who are abusing Grant for not "taking advice" would have him apply for assistance in choosing. What makes this abuse all the more absurd is that those administrations which have taken their advice have made the worst appointments, and that his will compare very favorably with those of the very best counselled of his predecessors. We believe it would be found on examination that the really bad appointments made by Grant are those which have been made under pressure from members of Congress. The Ashley nomination, for instance, was the result of "advice" from 150 Congressmen; while the appointment of the New Indian Commission—the best thing, perhaps, Grant has done—is not a thing which any regular politician would have suggested or approved of. That he should have occasionally blundered in trying to do without advice, is the inevitable result of the system which has converted the men of whom the President ought at such a crisis to seek counsel, into unblushing and unscrupulous promoters of the private ends of party hacks. But in order to get rid of the system, somebody must attempt to break loose from it, and in breaking loose from it must expect to commit errors; and instead of railing at Grant for his errors, we ought to thank him for his courage in risking the commission of them.

It ought to be borne in mind, too, in judging him, that he is the first president who has really had to breast the monstrous tide of corruption which flows from the present system of appointment to office. Before the war the number of offices was so small that the abuses connected with the distribution of them, gross as they were, made but little impression on the public mind, and interfered but little, comparatively, with the proper transaction of the public business. After the war broke out, the number of them steadily increased; but it increased gradually, and no great batch of appointments had to be made at once. The appointments, too, which were made by Mr. Lincoln from time to time lasted, with few exceptions, until the accession of Grant, so that it is now for the first time that we witness the full effect of the "rotation" and "spoils" system—that is, the sudden dismissal of every official charged with the administration of the Government, and the substitution of a great multitude of utterly unknown and inexperienced persons. No such political phenomenon has ever been witnessed in any other country. Even the armed revolutions of other civilized nations leave the lower offices at least in trained hands; and that our Government should stand the shock so well is perhaps the most striking proof ever given of the self-reliance of the people and the strength of the principles on which the Government is based. This is, of course, another way of saying that Grant has had to encounter an ordeal such as no ruler has ever had to undergo without being armed with something like dictatorial power. We pass over without notice the assumption on which a good deal of the abuse of him is based, that the common run of politicians proper have something to tell about the work of government which it will repay a president to listen to and ask for; the fact being that a class more utterly unfitted to advise a ruler on any question of organization, administration, economy, or jurisprudence, probably does not exist. The only bits of wisdom they have to communicate can be had in any bar-room in the country any Saturday night.

OBJECTIONS TO THE CIVIL SERVICE REFORM.

THE scheme proposed by Mr. Jenckes to meet the difficulties which at present beset the proper working of the administrative machinery of our Government is now generally admitted by candid persons of all parties to be likely to yield a fair measure of reform. Almost all the prominent journals of the country have declared themselves in its favor. Nevertheless, there are those, as might have been anticipated, who find ground for serious quarrel with Mr. Jenckes's bill; who assert, either that the competitive system, once introduced, would prove fraught with consequences of which its friends do not now dream, of a character likely to prove pernicious to republican government; or else that the remedy proposed does not touch the root of the disease, and that Government will be as badly infested with wire-pullers, log-rollers, managers, manipulators, intriguers, and "statesmen" after the passage of the bill as it is now.

Those who belong to the first class are such as think that the establishment of a regular force of officials, holding their places for an indefinite time, would, after a little, lead to that curse of free institutions, bureaucracy. We have heard this objection urged by thoughtful men, and although it has not yet been made in Congress or on the stump, it probably will be before long. Indeed, the outburst of patriotic fervor on the part of General Logan last winter, in which he declaimed against Jenckes's bill on the ground that it would lead to an aristocracy, may, perhaps, be considered as the first infantile attempt of the opponents of all reform to reach some point on which they might hang a real argument of the kind we are now considering. What they ought to have talked about was the danger of a bureaucracy, but being in want of a good sensational word, and knowing from long experience the virtues of the epithet "aristocratic," they applied it. The notion, however, of a *caste* of Post-office and Treasury clerks is so absurd that they are likely to change their ground, and next winter we shall find General Logan and General Butler, unless we are greatly mistaken, declaiming against a bureaucracy. Let us anticipate their reasoning; this is what they will say:

"In the degraded countries of Europe, Mr. Speaker, those countries whose history has been one long succession of murder, rapine, and oppression; where the necks of the people are still bowed beneath the heel of the tyrant; where feudalism still stalks rampant over the fair face of nature; where the throne of royalty is still erected amid the groans of the whole laboring population; where freedom is unknown; where the starry flag of liberty is never unfurled; where the glorious aspirations of man are, in the words of the poet, positively sneered at with all the 'insolence of office;' in those unhappy regions, Mr. Speaker, we are told a perfect civil-service system exists. It is, indeed, perfect; perfect in its organization, perfect in its irresponsibility, perfect in its despotism. It has received a name of its own; it is called a bureaucracy. There have been aristocracies in the world, and there have been plutocracies in the world; but more perilous than either for the liberties of a people is a bureaucracy—a poison which eats into the very heart of freedom; her vigilance is of no avail; she is doomed when that juggernaut of feudalism is brought upon the stage. Farewell to thee, bright spirit! Farewell! Time was when equal rights and happiness were the watchword of a united people, stretching from the wild billows of the Atlantic to the peaceful waters of the West. Alas! that day is no more. The fatal pall of bureaucratic institutions is being spread over thy fair form. Thy doom has been spoken; murderous hands make thy grave ready. Farewell!"

We are ready to make an even wager that some time next winter, when the subject comes up again in Congress, either one of two things will happen; either General Logan and his cohort will, each one in turn, utter the apostrophe to liberty given above, and mail it in suitable quantities to his unhappy constituents, or else they will completely change their tactics, and come out strongly in favor of Jenckes's bill.

Now the cry against bureaucratic despotism, which the friends of reform will have to meet sooner or later, has no foundation, for the simple reason that those countries in which it exists are tormented by it from the fact that it is supported by a large standing army. France and Prussia are afflicted by the evils of bureaucracy more than any other countries in the world; that is to say, the administration of their government is placed in the hands of an army of officials which tends all the time to usurp more and more power. And the people who would like to prevent this are quite unable to do so, because the military force of the state is in the hands of the executive, and thus stands behind the various bureaus. To take a very signal instance: in the course of Haussmann's operations as Prefect of the Seine, that official discovered that he could not make some improvements which seemed to him desirable, without more money than had been placed at his disposal by authority of law; he accordingly took the money without authority of law. When the fraud was discovered the Parisians were angry, but what could they do? They could not remove the government which employed the fraudulent bureaucrat without a revolution, because there was an army of a million or so of men who would have prevented them. So Haussmann goes on improving Paris. But such a thing could never have happened in any country which was not kept in awe by a standing army; and until some one more awful even than the late Andrew Johnson appears upon the scene, we need not fear that in America. If any prefect of the Tombigbee or Suwanee, were to plunder the Treasury of the United States after Haussmann's plan, he would find in a very short time what kind of a bureaucracy he belonged to. To have a government of any class, whether an aristocracy, a plutocracy, or a bureaucracy, you must have force to back it; otherwise, the moment the people find they don't like it, they will quietly overturn it.

But the latest objection to Mr. Jenckes's plan, and by far the strongest, is one which has within a few days been urged in the columns of the *World*. That journal says that admitting entirely the necessity of reform, it fails to perceive that the proposed civil-service system meets the difficulties of the case. It works by a board of examiners, who are to examine all applicants for inferior positions, and recommend those who seem best fitted for the post they seek. But the superior offices—those which are filled by the President and Senate—the bill does not touch at all. The thousand or more places which Gen. Grant has just given away are not to be affected by the reform, and indeed cannot be, partly because a grave doubt exists whether the Constitution would permit such a change, and partly because no one would think of a competitive examination for Ministers Plenipotentiary, consuls-general, collectors, surveyors, and officials of this kind. The matters which need enquiry in such cases are not those which five or six gentlemen can very well discover by means of an "examination paper." The idea of Motley or Longstreet passing a "fair examination" is of course ludicrous. But it is these offices, the *World* says, which most need reform; what is the use of preventing a scramble for office in the lower grades, if we still permit the scandal of office-seeking in the topmost ranks?

The argument is a plausible one; but is, we firmly believe, unsound. The passage of the Civil Service Bill, though not directly affecting the superior offices, would have an important indirect effect on them. The curse of the present system lies in the existence of an enormous class of wire-pullers and managing men whose only idea of politics is to get a living out of the Government. The forty thousand smaller posts of emolument and trust which they seek at every election, and scheme for between every election, will be closed to them for ever after the passage of Mr. Jenckes's bill; their occupation will be gone; they will betake themselves, it is to be hoped, to honest callings—such of them, that is, as do not succeed in entering the service themselves in an honorable way. Now this will leave only those offices which are in the gift of the President and Senate at the mercy of the office-seekers, and to change the method of appointment, or rather the motives which govern the appointments here, we must rely on time. When you have the entire staff of an official army appointed on correct principles, the time is not far distant when the generals will be well selected and retained in the service during good behavior. One of the most powerful preventives of corruption and inefficiency in any department of government is a system of promotion. This is at present impossible, because no one stays long enough in office to admit of such a thing. The only change a good minister or consul experiences is that of retirement. But if you once give all the inferior officials a respectable tenure, there arises a possi-

bility of promotion for good behavior. The man who distinguishes himself in the lower grades will be looked upon, other things being equal, as a fitting candidate for higher honors. This is so now in England. The English civil-service examination does not apply to the higher offices any more than would Mr. Jenckes's system, but the office-seeking disgrace does not exist there. We do not mean to imply that the cases are absolutely parallel, but merely that the reform proposed may have a great effect. After we have reformed the lower grades, time and public opinion may be relied upon to do the rest. The attention of the country once thoroughly aroused to the necessity of the thing, we feel convinced that we shall see a return to the old ante-Jacksonian practice of appointing and dismissing also for cause. Public opinion is at present powerless, because of the enormous size of the evil; reduce that size to proportions of less terrible magnitude, as Mr. Jenckes proposes, and the chance for public opinion to do the rest will be a good one.

THE LATEST PHASE OF THE CONTROVERSY WITH ENGLAND.

An authoritative and, it is generally admitted, correct statement of the national feeling with regard to the *Alabama* controversy with England, has now been made by Mr. Sumner. The newspapers, too, have all said their say about it, and have all said nearly the same thing; and doubtless in the instructions given to Mr. Motley, the exact position which the country has taken up in the matter and is prepared to stand by, has at last been defined. It may be worth while, therefore, to enquire what the prospect of a settlement on Mr. Sumner's basis is. We pointed out last week what we considered to be an omission in his speech, inasmuch as, while showing with great force that ocean belligerency is "a fact and not a principle," he failed to notice that the existence and activity of the Southern Confederacy in the summer of 1861 was also a fact, which it was impossible for the English Government to ignore, and which the blockade of the Southern ports, and the export of arms and ships from England to the Southern ports, would have compelled the English Government to deal with, even if the proclamation of neutrality had not been issued. The municipal right of blockade has never been conceded by maritime powers; and no attempt was made by the American Government to carry out the Act of Congress which asserted it. The Southern ports were blockaded as the ports of a belligerent, and English ships attempting to enter them would have been captured and condemned, on the theory that the South was a belligerent, even if the Queen's Government had remained perfectly silent. Moreover, the *Nashville* could have presented herself at Southampton in November, 1861, even if the proclamation had not appeared, and on representing herself as the armed ship of an organized Government, in possession of an army and territory and ports, would have been, under all the precedents, received and treated as a *belligerent fact!* The attempt so often made to make the proclamation appear *purely* gratuitous, by speaking of the Confederacy as a "power without ports"—like Switzerland or Bohemia—is simply puerile. The South had ports; and all through the war carried on an enormous trade through them. What people mean when they say it had "no ports" is that the ports were difficult of access, as indeed those of France or England might become, in case either of these powers was engaged in hostilities with an enemy superior at sea. The appearance of Confederate cruisers from Confederate ports, therefore, was not only possible, but probable, and if a Confederate cruiser had arrived in an English port before the proclamation was issued, the English Government would have been compelled to apply to it, as *a fact*, the knowledge it possessed of the existence of the Confederacy. To have treated it as a pirate would have been against all principle and all precedent.

Nevertheless, all that Mr. Adams said of the proclamation was perfectly true. It was "unprecedented and precipitate," inasmuch as it was clearly premature, and being premature it laid England open, as Mr. R. H. Dana says, to "the suspicion of an unfriendly purpose" towards the United States. Taken in connection with what followed—with the language of the English press and of prominent English statesmen, the tone of English society, and the misconduct of English officials—Americans have been amply justified in treating it as an important piece of evidence in support of the charge of wilful neglect in the *Alabama* case. Whether, as Mr. Adams contended, the recognition created all the naval power the rebellion afterwards possessed, is a purely speculative question. To discuss it is to enter a region in which the understanding is of little or no value. We can no more answer the question, Would the Confederates have had any navy if Great Britain had not issued the neutrality proclamation? than we can answer the question, What would have happened if the *Monitor* had not reached Hampton Roads the day the *Merrimac* left Norfolk, or if Sherman had been defeated by Hood before Atlanta? Anybody is on such topics entitled to hold any opinion he pleases. Almost any opinion can be supported by a great variety of ingenious arguments.

But, for practical purposes, we are saved the necessity of discussing the question at all by the fact which all admit, that, *whether the proclamation of neutrality existed or not*, the creation by the Confederates of a naval base in England, and the fitting-out of ships in England to prey on American commerce, was unlawful. The course of the *Alabama*, from the moment her keel was laid until she sank, was, as Mr. Sumner has shown, a succession of "acts of war" perpetrated by English subjects, and with the connivance of the Government, against a power with which England was at peace. Her cruise was a "hostile" (English) expedition. This position once taken or conceded, the proclamation becomes of little consequence in fixing English liability. We do not need the proclamation to enable us to define the character of the *Alabama*. The fitting of her out, and letting her sail, was, according to Mr. Sumner's showing, the strongest possible form of wrong one nation can commit against another. It was injury of enormous amount added to biting insult. There is no offence one nation can inflict on a neighbor calling for broader or deeper satisfaction. It makes absolutely no difference whether it was owing to the proclamation or to the instigation of the devil that she was launched. American rights and wrongs remain precisely the same.

This being the case, the way in which the mere issue of the proclamation, or "the concession of belligerency," as it is called, has been by dint of rhetoric raised from the position of *primâ-facie* evidence of "unfriendly purpose," which it at first occupied, into that of a positive wrong in itself, the principal wrong committed by England against the United States; and the way in which the cruise of the *Alabama*—"act of war" though it was—has been degraded to an entirely secondary and subordinate position, and the material damage done by it set down as comparatively a bagatelle not worth discussion, is, in our opinion, one of the most curious and interesting phenomena ever witnessed in a great controversy. This process has been now going on steadily for six years. It has at last been consummated, and it will be well if it does not land the *Alabama* controversy in a veritable *impasse*, from which there will be no egress except by humiliating retreat or by war. The position of the United States now is, that the premature declaration of neutrality was an outrage of the same character as the attack of the *Leopard* on the *Chesapeake*, or of the filibusters on the *Caroline*, and must be atoned for apart altogether from the question of resulting material damage, in the same way in which Canning atoned for the *Leopard* outrage, by an apology and an expression of repentance. Now for the fitting-out of and sailing of the *Alabama* in contravention of her own laws and of the law of nations, and by the supineness or guilty connivance of her own officials, England may with dignity, and ought in justice, to express her regret, and even hearty and formal regret, besides paying the damage consequent on her neglect and wrong-doing. No nation, however powerful, is bound in honor to justify an illegal act, especially when committed by subordinate officials. Had the American Government, therefore, firmly clung to the position that the cruise of the *Alabama* was an act of war committed by Englishmen against a friendly power, to be atoned for by apology and substantial damages, we should see before us the prospect of a speedy settlement, satisfactory to the United States, and not humiliating to England. But what England is now asked to do is to apologize (as for a gross wrong, like the attack of the captain of a frigate on a foreign man-of-war in time of peace in a distant sea) for a proclamation issued by the Queen in council, with

the advice of her responsible Ministers, addressed to her own subjects, and putting in force an act of Parliament, the execution of which is expressly left to her discretion. The expectation that any English Ministry will venture to propose such a thing to Parliament and the country, or even to debate it seriously amongst themselves, we look upon as extravagant and baseless. There is not the smallest warrant to be found either in English history or in human nature for entertaining it. No first-class government ever submitted to such humiliation as this would involve, without fighting, and being reduced to the last extremity. We therefore venture to predict that any negotiations in which such a concession is demanded will, if pressed, lead to war; and if conducted on the waiting plan, of which some people seem so much enamored, will simply keep alive the feeling of resentment and bitterness between the two countries, and leave the Alabama controversy to be settled, Heaven knows how, by some future generation. There is such a thing in diplomacy, as in law, as proving too good a case, and if an apology and compensation can be got for the sailing of the *Alabama*, the discussion of the causes of her sailing, whether moral or material, may safely be left to the debating clubs.

COURTS OF LAW IN RUSSIA.

THE Courts of Justice in Russia have long been a by-word in Europe and America, and still are to people who know only the old *régime*. Not even the Emperor Nicholas was blind to their defects, and as long ago as 1848, consulted Count Bludoff as to the way of remedying them, and by his advice gave the second division of his private Chancellory the authority to devise a new system. The second division reflected a long time over the matter, and in 1861 the Emperor Alexander, when he returned from the Crimea, found that the first principles of the new system were not yet agreed upon. He immediately appointed a commission of eminent jurists to examine all foreign systems of administering justice, and to agree on one which could be applicable to Russia. After much labor and consultation, the Commission published in October, 1862, the "fundamental principles for remodelling the Courts of Justice," copies of which were sent throughout Russia, and the public was invited by the official newspapers to discuss them, and to send in their remarks to the Commission. More than five hundred articles and criticisms were received, and they filled, when printed, seven large volumes. The Commission now went zealously to work, and in May, 1864, made their final report. The system which they recommended was approved by the Council of the Empire, and was finally sanctioned by the Emperor by a ukase of November 20, 1864.

The new courts were first introduced into the governments of St. Petersburg and Moscow, and eight others in their immediate neighborhood, and began work on the 1st of January, 1866. In 1867 they were introduced into six other governments, and on January 1, 1869, into five others, and partially into ten others. They have also been introduced into the Caucasus. Poland, the Baltic provinces, and Siberia are the only regions still unprovided, and measures are being taken to introduce them there, but as elective assemblies play a certain part in the matter, they must wait for the formation of those bodies. It will be seen that though there is no legislative representative assembly in Russia, the sense of the nation is sometimes practically consulted. The same method has been used in preparing other great reforms; and even in getting up a new tariff, the law was prepared by a commission who heard delegations from all over Russia. The results of the judicial reform may be briefly stated as these: Judges, trained to the law and independent; a complete separation of civil and criminal jurisdiction; trial by jury in criminal cases; publicity and fairness.

The lowest jurisdiction is that of justices of the peace, who sit separately and in *banc*. These justices are elected by the *zemstoa*, or provincial assemblies, the members of which are elected by the people; and they may be chosen from any class, but must have a legal education, and an amount of property equal to fifteen thousand rubles. They receive from one thousand five hundred to two thousand two hundred rubles salary. They have jurisdiction in small cases, both civil and criminal, and the procedure is somewhat informal. Next above are the District Courts, consisting of several judges, who go on a circuit throughout the district, which is usually a single government. There must be always three judges on the bench. These courts are divided into two branches, the civil and criminal, and have jurisdiction in all cases that do not go before the justice of the peace. The judges are appointed by the crown for life or good behavior, and receive salaries varying from two thousand two hundred to four thousand five hundred rubles. There are, however, some cases which are excepted from their jurisdiction, such as offences against military law, or by persons in the military service, which are tried by the military tribunals, offences against certain church laws, which are tried by the ecclesiastical tribunals, etc. Next above the District Courts are the Chambers of Justice, Courts of Appeal, composed of twelve or more members, who are appointed by the Crown, and receive salaries of from three thousand five hundred to six thousand rubles. The Chambers of Justice are divided into departments according to the character of the cases. There are at present four: at St. Petersburg, Moscow, Kharkof, and Odessa. The highest Courts of Appeal are the two Departments of Cassation of the Directing Senate, one for civil, the other for criminal affairs. The senators are appointed by the crown, and receive seven thousand rubles salary, the presidents of departments getting two thousand additional. The Senate, as originally constituted, had the powers of a Court of Appeal, together with that of registering and publishing the laws, and was composed chiefly of retired generals, about whose judicial abilities many amusing stories are told. Since the formation of these new Departments of Cassation, the members of which are all jurists, no appointments have been made to the other departments, and they will all, with the exception of that which has charge of registering the laws, be allowed to die out. The decision of the Senate is final, and has the force of a law. There cannot, however, be two appeals, as in New-York, for the Chambers of Justice and the Senate have different powers. An appeal is taken to the Chamber of Justice on the ground of some impropriety in the trial in the District Court, and the whole case, facts and all, is reviewed, and finally decided. An appeal to the Senate lies in case of a misinterpretation or misapplication of the law by either of the other Courts; and if the appeal is decided favorably to the applicant, the judgment of the inferior court is declared null, and the case remitted for re-trial. The Chambers of Justice have also some other powers, as will be seen below.

There is, of course, the usual staff of secretaries and clerks, and there are always official stenographers attached to the District Courts. The case of the Government is represented by officers, corresponding to our State and District Attorneys, called *procurors*, with their assistants, and with them are connected judges of inquest—the French *juge d'instruction*—who go through the preliminary investigations in criminal cases. There is only one grade of attorney; he must be a citizen, be twenty-five years of age, of good moral character, must have received a diploma in the law course from some university or law-school, and in addition must have served for *five years* either in the courts, or as *candidate* for legal employment, or with some advocate as assistant. He is admitted by the Chamber of Justice after passing the examination of the Society of Attorneys, and on their recommendation. The candidate for legal employment is one who has received the diploma from a law-school, and has entered his name at the Court. He is considered in government service, without pay, and may be ordered to perform any legal duty of a light character which the Court may think necessary, such as to defend criminals, supply the places of inquest judges, etc. He is obliged to frequent the courts, in order to acquaint himself with law and procedure. Parties are also allowed to plead their own causes.

A civil cause begins and proceeds in substantially the same manner in Russia as in most other countries; a summons is issued by the Clerk of the Court on the request of the plaintiff, and the presentation of a *primâ facie* case. More interest attaches to the trial of criminal cases, as in these the jury is used, an institution very new and strange in Russia. On information lodged by the police or by a private person with the procuror, he instructs the inquest judge to go to the spot, investigate the matter, and take proof, and, if it is sufficient, to arrest the accused. The procuror then draws up a bill of indictment, and sends it with the evidence taken to the Chamber of Justice on which his district depends. If the evidence is judged sufficient, the matter is dropped, otherwise the indictment is returned with instructions to proceed. It is never in the discretion of the procuror alone as to whether to go on or not.

A criminal trial by jury in Russia does not differ greatly in form from one with us; it is, however, the minor differences and the *tout ensemble* that make it seem a little curious. As soon as the court is opened by the presiding judge the accused is brought in, guarded by two soldiers in long gray overcoats, with bayonets fixed. A jury is then empanelled. A general jury list is annually prepared of all persons in the district liable to jury duty, who must be twenty-five years of age, neither blind nor deaf, must understand Russian, must be in government service, *or* have a certain small amount of property or receive a certain salary (the minimum is

two hundred rubles per annum), *or* be peasants chosen by their villages or holding some responsible office in their villages. But all persons in military and naval service, priests, monks, and teachers of national schools are excluded. From this general list special lists are prepared at special times, so that no person shall serve more than once a year. When the jury is empanelled, the judge reads a list of about fifty names, from which the procuror and the prisoner's counsel can each strike off six. They cannot object to a juror for prejudice. The remaining names are put into an urn and the judge draws out fourteen. The jury consists of only twelve, but the extra two are sworn in, and listen to the case, but act only in case of the sudden illness, etc., of any juror. The priest attached to the court then puts on his robes and brings out a reading desk with the Gospels and a cross. The jury hold up their right hands with the thumb and two fingers pressed together in sign of the Trinity when they take the oath, cross themselves, and kiss the Bible and the cross. During this ceremony the audience and assistants all rise, as also when the judges enter, and when judgment is pronounced. After this the indictment is read, and the prisoner answers, guilty or not guilty. The witnesses for the prosecution are then all introduced at once, are questioned as to their relationship or indebtedness to the prisoner, and are then sworn in the same way as the jury. They afterwards retire and appear only as they are wanted. There is no witness-box, but the witness stands in the centre of the room facing the jury. Each witness is questioned first by the judge, and then by the procuror, and then cross-examined by the counsel for the prisoner; and finally, the prisoner himself is allowed to interrogate him and to make counter-statements. When the testimony is finished the procuror speaks to the jury, then the counsel, and then both again if they choose, and the prisoner is allowed to speak also if he wishes. The judge then sums up the evidence and gives to the jury, in writing, the questions they are required to answer—which are agreed on between the procuror and the prisoner's counsel. The jury do not give a general answer of guilty or not guilty, but answer these questions separately. Even in cases where the prisoner pleads guilty the case goes to the jury, and they may find the circumstances so extenuating as to return a verdict of not guilty. While the jury is out, the judges and lawyers retire to their withdrawing room, where there is always some smoking, and usually tea-drinking also. The foreman of the jury delivers the verdict to the presiding judge, who reads it aloud and then pronounces sentence. Neither judges nor lawyers wear gowns. The judges and law officers of the crown are in the plain uniform of the service, the other lawyers in the case in full evening dress.

The benefit of trial by jury is doubted by some even in England and America, and it of course finds its opponents in Russia; the procurors, for example, think there are not enough convictions. But, on the whole, it seems to work well there, and the method in which trials are conducted is fair and satisfactory to the public. The judges say that juries are much better than they had any right to expect, that they understand what they are about, and are not troubled by class prejudices. In the country towns the juries are very often of peasants exclusively, and in the cities there is hardly ever a jury without one or two on.

But what is considered in Russia the great merit of the judicial reforms is, that the trials are public. This is, indeed, a great safeguard. Secret trials have always been associated with tyranny and injustice. Three years have not yet worn off the novelty of a public trial in St. Petersburg and Moscow, and the courts are nearly always crowded with spectators. The newspapers are permitted to publish their own reports, which they do very fully, devoting usually more space to the courts than is given to them by a New York paper. Criticisms, too, on the proceedings are not unusual. Publicity is very favorable to the integrity and independence of the judiciary, and the character of the judges in Russia stands now as high as it once was bad. They by no means always decide as the government officials would have them, and in one or two cases where the freedom of the press was concerned, they have decided against the Government, much to to the dissatisfaction of the Minister of the Interior. There is at present a healthy antipathy between the courts and the police whose functions have been greatly cut down, and a police official who has been guilty of any stretching of his prerogatives meets with but little mercy from either procuror or judge. The character of the bar has been very much raised by the new laws, even in three years. Law, as a profession, is now a career, and not only are more able young men studying law, but members of the higher nobility—Princes and Counts—are entering on law, not as an amusement, but with intention to devote themselves to the profession. One young man of twenty-seven, Prince Urussof, has already made himself a name as a criminal lawyer which is known throughout Russia.

Correspondence.

ANOTHER WORD ABOUT THE "ALABAMA" CASE.

To the Editor of the Nation:

Sir: If you will allow me one word in reply to your remarks on my letter of March 25, I will endeavor to say as little as possible.

Had not your Senate quashed the *Alabama* convention, the evidence of the case would have brought out by this time, that the very fact of the recognition of the treaty being "premature" is the proof of the friendliness of our Government at the time. Your minister was known to be on his way to London, and the agents of the rebels knowing this were expediting the departure of two vessels bound for the South. Without the proclamation of neutrality it was impossible to stop their departure. *Obviously, then, that recognition of the state of war, which you yourself confess was inevitable, was the more friendly to your Government in proportion as it was more immediate.* And I know it was pressed as such at the time by the warmest supporters of your cause. You think the kindness mistaken, but done in kindness it was. You grant the recognition was inevitable, but blame it as being premature. Surely this explanation of the motives of what seems to you indecent haste will make you pause in your criticism. You, sir, have done what you could to keep your readers in possession of the truth as regards England; and you know how much an increasingly large party in England felt for the United States, bled with the United States during your struggle. That party feels now at a loss how to act and what to advise. In other words, I would respectfully repeat my question, "What would the Senate have accepted? Could not the slight defects of the system of arbitration proposed have been modified by one hint to Mr. Johnson during the discussion of the treaty? And if so, were not the Senate bound morally to aid the construction, and undertake the ratification of a treaty negotiated by their own agent?"

With this letter of mine and your reply, I know our controversy will end. The time which elapses between our replies is too long to make such a discussion possible. But its issues are too great to import any acrimony by carping at details. Of course we, English, blushed at the tone of our newspapers, at the tone of our Beresford Hopes, and at the remissness of our government officials; now, in turn, we are vexed at the seeming want of high-mindedness in your papers and your Government.

In all good faith I again ask you, "Do you wish for a settlement of this quarrel? And if so, what do your Senate and people want?"

I remain, yours faithfully, H. Lee Warner.

Rugby, England, April 7, 1869.

Notes.

LITERARY.

Messrs. T. B. Peterson & Brothers announce a new novel, "The Changed Brides," which is quite equal to "Fair Play" and "How He Won Her," which are "two of the best novels ever published." It is the work of Mrs. Emma D. E. N. Southworth, who "is beyond all doubt the first female novelist of the day."

—The New York Chapter of the American Institute of Architects, are endeavoring to raise money for the purchase of a library of works on architecture, which shall be free to all members of the Chapter, and to all draughtsmen, students of architecture, and amateurs, who are provided with tickets—in other words, free to all respectable applicants. That this purpose may be the sooner effected, the architects have done what the painters and sculptors did long since; they have established two grades of honorary membership—membership for life, an honor which costs a hundred dollars, and membership in perpetuity (descending to heirs and assigns) which costs five hundred. That to subscribe for the furtherance of this enterprise is a good use of money will not be doubted by any one who takes into account the reasons which the architects urge. Architectural works are so expensive that without a public library many of the students of art will be without the means of completing their art education. This holds true in especial of many of the students of the art of industrial design, who are often poor, and who often, too, are of that class most to be sympathized with—girls on whom are thrown responsibilities that do not rest on the most of their sex. There is no doubt, either, that the influence of such a library would have its effect in giving us good buildings as well as beautiful ones—buildings that should neither be eye-sores nor

stand as monuments of wasted material, labor, and time. The Chapter has already secured as subscribers fifteen or twenty of the best-known citizens of New York.

—Criticism, as some of the poets once in a while are constrained to remind us, "is not 'creative' literature." Still, the student of it sometimes comes upon something that repays him for his labor. Last week a correspondent of the *Tribune*, writing from a town in the north-eastern part of this State, expressed his dislike for one of the usages of the Baptist Church—or withheld his approval—in these terms: "Here, on bitter cold days, with the thermometer at zero, the rough rivers hid in thick ice are bared with axe and spade, and the converts—often sweet young girls of tender age—are plunged in. As we see them struggling in evident fear and agony, shrinking from their water-soaked garments which freeze about them, we can but ask if *this* be imitating the blessed Master. Instinctively we ask, Had Christ preached and baptized in this climate, would *he* who healed the sick have risked the life of the body to purge out the innocent stains of girlhood? I have no ill-will toward any denomination or any member of any denomination, but I would have this cursed abuse corrected." To have no ill-will toward any denomination or any member of any denomination covers a wide field of human charity, and one might have supposed that it would have disarmed criticism. The correspondent, however, has by this time made a discovery to the contrary; a critic of his criticism, who writes in the *Examiner and Chronicle*, deals with him in an exemplary manner. First he refutes the correspondent's errors in judgment. "We have reason to suppose," he says, "that the blessed Master knew all about the temperature of the Adirondack region when he gave the commission commanding his followers to give baptism '*in all the world*' to them that believe." And furthermore, "the history of such baptisms proves that the blessed Master knew as much about the laws of health as he did about the temperatures of the world." Thus the matters of fact are disposed of. But the correspondent's moral turpitude, as shown in his using the word "cursed," is not left without notice: "We apprehend that our critic will have plenty of time to recover from his shock before the 'abuse'—about which he knows how to swear—is 'corrected;'" and, finally, he is finished off by a remark or two about his probable disregard of the decencies of life and of the laws of health in neglecting the duty of personal cleanliness. Very likely he doesn't wash himself: "Nobody in ordinary health is injured by a cold water bath; and if our critic were to try one himself we have no doubt that it would do him good both in his temper and his health. We advise him to ask these sweet young girls to whom he so commiseratingly refers, what they think of a cold water baptism. It might teach him some lessons as to the effects of very cold water that would be of service to him." One is never unprepared to learn that a critic is ignorant and intellectually feeble, nor that he is morally defective, nor that he lacks reverence, and is manifestly irreligious. Such shames are common; we have no knowledge of so bad a class of men, unless they are very much belied. But it is something new to hear a charge preferred that the fraternity are filthy in their personal habits. However, in this case it is not only a critic that is criticised, but a critic that is criticising, and of course nothing is astonishing.

—A leader in a recent issue of the *Independent* affirms that "President Haven of the University of Michigan has just thrown open his college doors to the daughters as well as to the sons of the West." As this statement may mislead the public mind on a subject in which many people have a personal interest, we think it very desirable that it should be corrected, although the absurdity of it will be at once apparent to any one who has the least acquaintance with the organization of the institution referred to. It does not lie in the power of any one man either to open or to close the doors of Michigan University to any class of persons. The entire control is constitutionally vested in a "Board of Regents," and we have sought in vain in the published proceedings of that body for any act indicating a change of policy in respect to the admission of women to the privileges of the University. About ten years ago a "memorial of several young ladies" brought this subject before the Regents, who, however, passed a resolution declaring it to be "inexpedient to introduce this change into the institution." This resolution, we have the best authority for saying, has never been rescinded and still expresses the official attitude of the governing power in the University on this vexed question. How soon the restriction may be removed, of course we cannot tell. The positive editorial statement of the *Independent* is possibly prophetic, but it is certainly premature. We are well aware that there is no salic clause in the organic law or in the code of rules and regulations of the college, except it be the invariable use of the pronoun "he" in defining the rights and duties of the student; *sed more fit;* custom is a law; precedent is a barrier not more passable than statute.

—We spoke last week of the Chevalier de Rossi's great work, the "Roma Sotteranea." The curious pages in the early history of the Christian church which are written in the inscriptions of the Catacombs have, probably, never had a more thorough student than De Rossi; and the American religious world is to be congratulated on the fact that there will soon be in our market a comparatively cheap edition of the translation of his book, which has been made by the Rev. Mr. Spencer Northcote. We refer to the matter again, after having looked over a little volume, the work of a Canadian clergyman, which was published in Toronto some ten years ago, and which is more creditable to the literature of the Dominion than any other publication coming from its western provinces that we have as yet seen. We gladly take this opportunity to speak of it with due respect, as it will so soon be superseded, quite as much, we dare say, to its author's satisfaction as to anybody's else, for he seems to have pursued his study modestly and sincerely. What we more particularly had in mind, however, was to say a word on a subject of which the mention of De Rossi's book reminded us, and in which we descendants of the Puritans—or at all events spiritual descendants, whether we will or no, of the early Christians—may be supposed to take some small interest. The Puritans have been laughed at for a good many things, and for not many have they been laughed at more than for their way of conferring on their children and taking on themselves scraps of Scripture, or, indeed, whole slices of it, as proper names. It was a custom, however—speaking by the way—to which we probably owe two or three of the prettiest of English female names—Grace and Hope, for example; and perhaps we may include Faith, which has defenders. But something not at all unlike this Puritan practice prevailed among the Christians of the Church's earliest days, as the catacombs bear witness by preserving such names as Quodvuldeus (*quod vult deus*). From the spirit in which this name was assumed sprang also the names of humiliation which the catacombs record, as Limus, or Filth—unless, as is possible, the heathen were the sponsors in such instances. It was, however, only in the days when there were the fanatical as well as the real reasons for what the Romanists call "Bible-worship," that the fashion of textual names, as we may call them, could have reached the extreme of which the famous "Praise God" etc. Barebones is the familiar illustrative example.

—Prosper Mérimée, the French academician, whom the Paris journals have just put to death and then brought to life again, in his younger days was guilty of a literary mystification which had an amusing success. In 1827, he with a friend was planning a journey to Italy and intended to extend the tour to Dalmatia, but as their funds were scanty they proposed to write their travels in advance and employ the money they got in seeing if they were much mistaken. Mérimée said that he would collect and translate the popular poetry, and as his skill in this matter was doubted, he brought to breakfast the next day five or six such translations. He afterwards wrote many more and finally published them in a volume called "La Guzla, ou choix de Poésies Illyriques, recueillies dans la Dalmatie, la Bosnie, la Croatie, et l'Herzegowine." The notes were filled with Illyrian words, and the writer got up his subject from one or two books of travels. The chief object of this mystification was, says Mérimée, to have a hit at the "local color" with which everything published at that time was filled. The notes of Chateaubriand, of Southey, and of Moore, to their poems, are patent indications of this demand for local color. Not only was the book supposed to be genuine in France, but a German made it the subject of a profound dissertation; and Mizkiewicz, the Polish poet, who was well versed in Slavonic poetry, never doubted its genuineness, and translated some ballads from it into Polish, while Pushkin translated nearly all of them into Russian. The translation of Pushkin was well received, and it was only eight years afterwards when he wanted some further information as to the original that Mérimée explained what he had done and apologized for the deception.

—M. Feydeau's new monthly art-periodical is of 88 large octavo pages, the printed page being of the size of that of the *Fortnightly Review*, but in larger type than that, and on larger paper, so as to present a very elegant aspect. It contains no illustrations, but from seven to nine body articles to each number, followed by "Nouvelles de l'Art et de la Curiosité," in smaller type. As is usual in French journals, each article is signed. The *Revue* has about it this much that is remarkable, that it undertakes to espouse vigorously a cause; it devotes itself to the promulgation of certain theories of art, and the full criticism, according to the best lights,

of works of art, collections, and of acts of individuals and of the state which bear upon the arts. If its course should continue to be in the spirit of the leading address to the reader, it might prove of the greatest value to the arts, to literature, and to history; but such a course would be almost unexampled. The announcement of intentions is, however, frank and complete enough: "It will not be a work of pure analysis and of cautious speeches (ménagements), but an instrument of warfare and of polemics. It has always appeared to us singular that, while in all political, social, philosophical, literary, and religious questions two hostile camps are set face to face, each trying to destroy the other, there should not be the same in questions of art. Between us and our adversary there is no truce possible. We represent principles diametrically opposed, and the affirmation of one set implies the negation of the other. . . . . We shall support and protect every attempt, however timid, however juvenile it may be, which may tend to bring the French school into the healthy and natural path laid out and laboriously followed by the masters. It is for this task, and because we were fatigued with the guilty good-nature and the caprice which too often preside over the criticism of art, that we have founded the Review." We leave for future notices the mention and criticism of particular articles. The Review seems to be an undertaking of first-rate importance, which we are glad to welcome.

WASHINGTON BEFORE AND SINCE THE REBELLION.*

WASHINGTON is a changed place from what it was fifty odd years ago when the witty Abbé Correa de Serra, then minister from Portugal, bestowed upon it the well-known epithet of the City of Magnificent Distances. The distances are still respectable, if not magnificent; but the vast intervals which used to yawn between the spots reclaimed to human habitation have been filled up, and the amorphous aggregation of buildings has gradually crystallized into a compact town.

> "The embryo capital where Fancy sees
> Squares in morasses, obelisks in trees,"

as Tom Moore said of it sixty-five years ago, has measurably fulfilled the vision of Fancy, if not in splendid squares and towering obelisks, at least in a few public buildings worthy of the capital of a great nation. The growth of Washington was very slow for a long time, as was natural enough, it being a purely factitious city, with no *raison d'être*, no excuse for existence, the creature of theory and not of necessity, or even of convenience. And it was the creature of the theory of a poor nation, without an inspired savage, like Peter the Great, at its head, to force its growth by compelling the energies and resources of a needy population into artificial channels by stress of absolute power. So its distances long remained magnificent, its broad avenue only deepening and widening the ocean of mud which formerly even more than now was the terror of horsemen and the despair of foot-passengers. Speculators, of course, at once flocked thither, in that childlike faith in the omnipotence of law which still distinguishes the universal Yankee nation, most of whom learned by hard experience that cities no more than spirits can be called from the vasty deep even by the spells of the most fairly engrossed of statutes. They did succeed, however, in driving the inhabitants to hide in the rear of the capitol, which, through their means, turns its back upon the city on which it was intended that it should lift up the light of its countenance.

The population was, of course, as artificial as the city it inhabited was factitious. There was no natural reason for its being there at all. Unlike Topsy, it did not grow, but was made, and made out of the most heterogeneous materials. No one came there from any love for the place, or from any associations with it. Besides the aggregation of office-holders which necessarily clustered around the capital, there were none, for long years, other than the patient waiters on the rise of real estate that chose to encounter the discomforts of frontier life combined with those of a society pretentious without pretensions. So intolerable were its annoyances that in less than ten years from its occupation as the seat of government, a serious proposition was made, and defeated in the House by only two votes, to remove back again to Philadelphia. Josiah Quincy says, writing to his wife at that time, "the society here has exceeded its ordinary measure of dulness, and, since the question of removal has been agitated, it has been distracted with every species of personality and violence." This latter statement we may well believe, since Mr. Sloan, of New Jersey, who made the motion for removal, declared in his place that he had been threatened with assassination if he did not abandon it. A little later Mr. Quincy writes again: "All the settled inhabitants of the place are slave-holders or office-holders. All are interested in building up Washington. Appropriations out of the Treasury are the chief objects of their thoughts." And zeal in the procuring of these was the chief virtue and duty of every Congressman, in their eyes, which alone could merit the privilege of their friendship and society. The slave-holding influence it was that defeated the project of returning to Philadelphia, the instinct of that subtle power teaching, even at that early day, the importance of having the seat of government under the shadow of the ever-encroaching institution. And up to the rebellion, the society of Washington was informed and permeated by the pro-slavery spirit to a degree which made it hardly possible, certainly most unpleasant, for persons tainted with Republicanism, to say nothing of Abolitionism, to have any part or lot in it. Indeed, no prudent Abolitionist resorted to the metropolis of his country, unless under strong necessity, previous to the election of Lincoln, and never without an animating consciousness of possible personal danger in by no means improbable contingencies.

These are some of the reflections which are suggested by Mr. Gobright's book, although it does not treat of the days of which we have just spoken. Mr. Gobright came to Washington early in the year 1834 and has lived there ever since, "connected with the press" in various capacities. Much history has thus passed under his eyes, and this volume narrates some of the more prominent facts of which he has been the spectator, from Jackson's battle with the Bank down to the impeachment of Johnson. His work is not without a certain interest to those whose memories run so far back, as it revives the recollection of occurrences all of which seemed to be of vital importance, and some of which really were so, which have been crowded out of view by the rush of later events. And to that fortunate number whose lives are comprised within the five and thirty years of Mr. Gobright's "Recollections" his record of them is an abridgment of that portion of history which may serve to induce a more curious examination of it. His claims are very modest and his handiwork does not call for criticism. He does not meddle with the philosophy of the facts he narrates nor go beneath the very surface of the history over which he skims. The hand of the paragraphist and the dealer in items is everywhere manifest, and there is little or nothing that he tells that a reasonably well-informed man of the right age with a tolerable memory will not find that he remembers. But such a *résumé* is not without interest nor without value, and exempts Mr. Gobright from the category of those who spend their strength for naught. He does not supply materials for the historian that is to come, and is far enough from doing that constantly expected personage's work. To this, however, he makes no pretension. But as something to stay the stomach of the hungry enquirer till he can be fed full, this slight refection may answer a wholesome and sufficient purpose.

Washington had begun to harden from the gristle into the bone when Mr. Gobright first settled there, and was grown into a sprawling hobbledehoy of a city, and its society had become comparatively consistent and homogeneous. But it was intensely Southern in its affinities and, as we have said, bitterly pro-slavery in its feelings. Of course, there were honorable exceptions to this general rule, the more honorable for their rarity. It watched with delight the seeming triumphs of slavery, not divining that they were only hastening on its destruction. The Annexation of Texas, the Mexican War, the Fugitive Slave Bill, the Kansas struggle, the repeal of the Missouri Compromise, Brooks's murderous assault on Senator Sumner, all these prologues to the theme of Secession were rapturously applauded by the finest society of Washington as sure to usher in the millennium of universal slavery. And when rebellion came there were none more sanguine of its success or that rejoiced more sincerely, and as loudly as they dared, over the early victories of the rebels, than the principal inhabitants of Washington. During all those years, too, the inherent semi-barbarism inseparable from slavery would crop out from time to time from under the thin veneering of external refinement of manners. Of this Mr. Gobright's "Recollections" contain abundant evidence in the disgraceful scenes in both Houses of Congress, and elsewhere, enacted by Henry A. Wise, Bailie Peyton, Henry A. Foote, and Thomas Benton, not to mention the attempted assassination of Mr. Sumner by Brooks, and the actual assassination of the Irish waiter by Herbert. Eight years have wrought a mighty change. Even the most vicious of the sympathizers with the rebellion are comforted by the improvement in their real estate and the increase of population consequent on its suppression; and though the tricks played before high Heaven by the War-horses are more absurd they are not so dangerous as those of the Fire-eaters. Mr. Butler proposes merely to cut our purses and not our throats, and Mr. Banks, instead of threatening bloody Disunion, mildly suggests the annexation of all suffer-

* "Recollections of Men and Things at Washington during the Third of a Century. By L. A. Gobright." Philadelphia: Claxton, Remsen & Haffelfinger. 1869.

ing nationalities by resolution and good advice. The composition of Congress is certainly capable of immense improvement, which we have faith enough in the common sense and the sense of the ridiculous of the people to believe will yet be made. And we feel assured that the reminiscent yet to be, that shall recount the events of the five and thirty years from the accession of General Grant, will have a better story to tell than has fallen to the lot of Mr. Gobright.

VAN PRAET'S HISTORICAL ESSAYS.*

In these days of historiographical amplitude—when every writer, of whatever capacity and on whatever subject, strives to be as full and as descriptive as Livy, and when even such eminent historians as those to whom we owe the "Consulate and Empire," the "History of England" under James and William, and the life of "Frederick the Great," tire us out by the length of their narratives, speculations, or incidental talk—it is quite refreshing to meet with a book like M. Van Praet's, in so high a degree combining richness of contents with conciseness and brevity. In a very small compass it sketches the principal outlines of the political history of France, Spain, England, Italy, Germany, and the Low Countries—but only in their relations to, and action and bearing upon, each other—from the death of Edward III. to the peace of Utrecht, in traits so well drawn and so distinct as to put the whole development of European politics, from their earliest origin at the dawn of modern history to their first culmination in William III., in the fullest relief.

The end of the feudal wars between England and France; the position of Burgundy, under its four dukes of the house of Valois, between those contending parties; the attempt of Charles the Bold to carve out with his sword a new empire between Germany and France; the family wars that succeeded the feudal; the unification of France under Louis XI., simultaneously with that of England under Henry VII., and of Spain under Ferdinand of Arragon; the dissolution of Burgundy; the wars for territorial aggrandisement waged by Charles VIII., and Louis XII. in Italy; the war-intrigues of Pope Julius II., and the league of Cambrai; the long duel for supremacy between Charles V. and Francis I.; Charles's conflict with the Protestant princes of the empire; the struggle of Philip II. with the revolted Netherlands and with England; the separation of the Netherlands and the formation of the Dutch Republic; Henry the Fourth's and Richelieu's endeavors to break up the Spanish power; the attempt of Ferdinand II. to unite Germany under imperial sway; the relations of England under the Stuarts, Cromwell, and the Restoration, with France, Spain, and Holland; the wars of Louis XIV., and the career of his great antagonist, William of Orange—these are the main topics of M. Van Praet's work, which, while it pretends to be only a historical sketch of European politics, contains so many personal delineations and so many summaries—though no description—of events as almost to deserve to be considered a philosophical history of Western Europe. Though presupposing a full knowledge of the events of the periods it treats of, it is, by the clearness of its statements and the perspicuity of its generalizations, made fully accessible to the understanding also of those who approach the general history of those periods with the curiosity of tyros. Some small faults of obscurity in style are to be charged to the translator rather than to the historian.

The author, who before elaborating this his first historical work had "passed more than thirty years in the absorbing pursuits of public life"—devoted to the service of Belgium—finds it possible that, in observing the progress of governments, an involuntary preference, or long and deeply-rooted habit, "has led him to look more especially to the personal side of historical events, and to dwell too much on the influence exercised by the acts of particular men at critical moments." This "too much" may be comparatively correct, but in themselves the sketches of leading men given in this book—such as the pictures of Philip the Good, Charles the Bold, Louis XI., Francis I., Charles V., Philip II., William the Silent, Richelieu, and William III.—form its most delightful, though perhaps not its most important parts. Some of these pictures are, so to say, full-size portraits, which readers familiar with the corresponding delineations by Schiller, Barante, Prescott, Macaulay, Motley, Kirk, and others, will still find highly attractive. M. Van Praet has profited by the latest publications on his subject—among others he mentions the two last-named American historians with praise—and draws his material chiefly from documentary sources such as the correspondence of Charles V., by Dr. Lanz; the Papers of Cardinal Granvelle, collected by M. Weiss; the correspondence of Philip II. and of the Prince of Orange, published by M. Gachard; the Archives of the House of Orange-Nassau, by M. Groen Van Prinsterer; the documents on the succession of Spain, by M. Mignet; the negotiations between France and Austria, by M. Le Glay; the different collections of Venetian despatches; the voluminous memoirs of Richelieu, and the "Letters and State Papers of Richelieu," by M. Avenel.

Pure objectiveness is one of the most striking characteristics of M. Van Praet's "Essays." Though again and again generalizing and reasoning, the writer is nowhere to be discovered in his writings, and were his name and one or two sentences of the "Preface" omitted, it would be a hard task to find out his national, political, or religious stand-point. But the subject—perhaps selected on that account—caused itself the author's native land, "the Low Countries—the birthplace of Philip the Good, of Mary of Hungary, of the family of Croy, of Adrian VI., of four or five generations of the House of Nassau, of Egmont, of Barneveld, of Tilly, of Tromp, of De Witt, and of Heinsius, and more especially the provinces of the South, the country where the Dukes of Burgundy lived, where Charles V. was born, where the Duke of Alva combated the Revolution and the Reformation; where Maurice of Nassau fought against Spinola, William III. against Louis XIV."—to occupy inevitably, a very prominent place in his sketches. During the two centuries' struggle between France and the House of Austria—it began shortly after the accession of Francis I., in 1515, and ended shortly before the death of Louis XIV., in 1715—the Belgian section of the Netherlands never ceased "to have an importance disproportioned to its population and military force, as one of the fields of battle, and as one of the great stakes which were played for. This importance resulted from its central position on the map of Europe, from its wealth, its contiguity to France, to Germany, and to the sea; its situation on two great rivers, the considerable increase of power it brought, or threatened to bring, to any one of the great states which might possess it or covet it; and from the difficulty of founding a balance of power in Europe, likely to last, when these provinces were in the hands of one of the great states, or one of those deeply engaged in a general war."

Want of space prevents us, to our regret, from more fully acquainting our readers, by means of copious extracts, with this excellent work. It is as well written as well conceived. Its translation from the French was begun under the auspices of Mrs. Austin, and almost entirely revised by Sir Edmund Head, neither of whom, however, lived to see it published.

THE MAGAZINES FOR MAY.

Putnam's for May has an article which fully accounts for the recent opening of Japan to the Western barbarians. It relates that in the year 1850, Gallatin Lingenfelter, the only son of an American merchant, made a voyage to China, for purposes of business, and that his vessel foundering, he and a boat's crew were cast ashore upon the island of Niphon. He made land in a little bay fronted by a lawn, where were a group of women, the attendants of a young girl who evidently was a personage of consequence, and who was not of very dark complexion. Lingenfelter, weakened by the great privations he had undergone after his shipwreck, fell down in a swoon before he could reach the feet of the chief lady, but not before he had seen that, like the beautiful Haidee, she looked upon him compassionately and with admiration. When he awoke, however, he found himself and his companions under the guard of a battalion of soldiers, and immediately he was carried off into the interior of the country. Several times he was on the brink of death by decapitation; once the executioner stood behind him sword in hand, but opportunely a conch shell and a horn were blown, a commutation of sentence came, and slavery was the worst calamity that overtook the unfortunate prisoner. He had two consolations, however; he had in his possession a stick of wood on which was drawn the picture—mysteriously conveyed to him—of the young lady whom he had seen on landing, and his daily work lay in a flower-garden. Horticulture had always been his delight, and soon his bouquets became renowned throughout the island, and still are a proverb in all Japan. We need hardly say that Lai-lai-lin, hears of the remarkable florist, that one day she goes with her retinue—she is no less a personage than the daughter of the Tycoon—to our hero's master's garden, that she recognizes her old acquaintance, that she has always loved him, that it was at her intercession that his life was spared, that she at once has him transferred to her own grounds, where he surpasses himself and his gardening, that he teaches her the rudiments of Western science, and that just in the nick of time—for in a day or two more she would have had to marry a certain daimio, the Prince of Sinaro—an American man-of-war arrives on the coast, and is the means of the lovers' escape from the domains

of the father of the bride. The Emperor speedily learned that it was with an American that his favorite daughter had eloped, so he sent out to this country the Japanese embassy, which we all remember, with a command that the ambassadors should, without fail, bring him back his favorite child. But they were surrounded with so much etiquette and pomp—what with Mr. Boole and the other municipal authorities of this and other cities—that they could make no efficient search for the estray, and were at last compelled to go home and commit hari-kari, to a man—except "Tommy," and he, we believe, has since perished in battle. The Tycoon's unassuaged grief led him to make one more effort to recover his undutiful but beloved Lai-lai-lin, and soon he sent over to us the troupe of jugglers and necromancers which, a year or two ago, attracted so much attention and admiration in several States of the Union. Many of our readers will recollect that a small juggler and necromancer fell headlong from a high tight-rope or trapeze to a floor of the exhibition-room, and was nearly killed. The mishap was consequent upon his nervous excitation at seeing Mrs. Lingenfelter in the audience, and perceiving that, in all probability, his fortune was made, and his future secure. It was an easy matter for half a dozen members of the acrobatic troupe to get admission to Mr. Lingenfelter's chamber, administer to him a stupefying drug, put him into a box, and fly with him and his Lai-lai-lin towards Japan. But by means of the telegraph the whole party were arrested at a way-station, Gallatin and his wife were released, and then one of their captors, driven to the last resource, made known to the couple that force having failed he was authorized to say, that if they would voluntarily return to Niphon all should be forgotten and forgiven. It was not without some hesitation that they decided to comply with the wish of the Tycoon, but they did so determine, and it is to Mr. Lingenfelter's court influence that we are to trace the success of the endeavors to open the Japanese ports to the commerce of the world, and the peculiar favor with which Americans are received in "the Source of the Sun."

We commend to the perusal of our readers the first article in *Putnam's*, the one called "Thomas Carlyle as a Practical Guide"—a title decidedly suggestive of the *lucus a non lucendo* method of nomenclature. Its author, Mr. Justin Macarthy apparently, writes with a heat which seems hardly necessary, considering that so few people nowadays look to Carlyle for very much more than some amusement and pleasure, but he writes with intelligence and force, and if, perhaps, he exaggerates Carlyle's present importance, still he presents a just conception of the real nature of the man, and clearly does not himself hold him at too high a rate. To Carlyle's literary merits, which are as great, if not as frequently shown, as his literary faults—and that is giving him much higher praise than belongs to most contemporary workmen in English literature—Mr. Macarthy pays proper respect. "Christus Sylvæ" is not particularly well worth looking at as a poem, but it is of some interest as exhibiting what may be called a drawn battle between the poets and a man of poetic susceptibility and of some poetic power who emulates the performances that he admires. Usually in such cases the poets obtain so decided a victory that the contestant is made to appear as indubitably a plagiarist, conscious or unconscious. But Mr. Plimpton, although he puts himself in danger, holds his own so reasonably well that there may be hopes of his doing something yet, even in poetry.

The best piece in this month's *Atlantic* is unsigned; but literary America is more fortunate than we think if Mr. Howells did not write "The New Taste in Theatricals;" we have nobody else, we fear, who can do anything so subtly and delightfully playful in humor, and we have not many who can write so good English. The absolute correctness of the theory which Mr. Howells offers us to account for our attendance at the theatres where they display English blonde burlesque and play French *opêra bouffe* may perhaps be doubted. It is always safe to make recognition of the natural depravity of the human heart; and although in our American communities there is a healthy ignorance of French, especially of the kind that has more than one meaning, and although Mademoiselle Tostée was very amusing, and, perhaps, was even a great actress, as Mr. Howells calls her, still it was not wholly for fun, nor yet altogether as a means of grace, nor entirely because we Puritans, without being at all French ourselves, take a little languid interest in French wickedness, that we went to see "La Belle Hélène." Partly, we fear, we went because we are a little wicked ourselves; it isn't only the good Americans who are fond of Paris. So also of the burlesque: it is for not very metaphysical reasons that a majority of its devotees cultivate that British blossom. It makes for Mr. Howells's side, however, that *opêra bouffe* declines in popularity, and so does the other fact that the innocent Humpty Dumpty beats Ixion and the Forty Thieves in the matter of drawing crowds. But, still, we shall do as well not to get spiritually proud over our patronage of the drama.

For the rest, the May *Atlantic* contains nothing very noticeable. Mr. Parton's "Clothes Mania" is up to his usual level, except, perhaps, that this time he gives more of the rather feeble jokes with which he interperses his far more readable gravity. The believers in "mystical interpretation" of scripture as a rule of conduct, when it is furnished by others than inspired men with regular credentials, may profitably take a look at Elder Evans's explications in "The Autobiography of a Shaker." There is nothing new, we believe, in the anonymous essay on "The Intellectual Character of President Grant," which seems to be, on the whole, considerably inferior to its predecessor, the essay on Grant's moral qualities. There is in this article too much of the advocate; besides, for the full elucidation of the subject it would be better to hear the opinions of a trained soldier than those of a civilian. It is in war, after all, that Grant's mind has been proved and tested, and Jomini's estimate of his intellect—could Jomini have come over here and become acquainted with the conditions of the military problem, complicated as it was by being a volunteers' semi-political war in a wilderness—would have been more valuable than ours, or Mr. Whipple's, or that of any probable writer of the article in question. "Can a Life Hide Itself?" is a rather bewildering question put by Mr. Bayard Taylor and answered by him in the negative. But taken in the sense in which Mr. Taylor uses the words, his answer should have been different. No day passes without the death of many men totally unknown, of whose previous lives, and crimes, and misfortunes no one who witnesses their deaths will ever know anything, and of whose deaths no one will ever hear who has known the story of their previous careers, and has suffered or been glad in the knowledge. These, however, are unnecessary remarks. As a story, Mr. Taylor's piece is an invention something in Poe's manner, but not nearly so well done. At best such things are apt to look as if the pick-lock were first made and then the lock to be picked were made to match it, and the work has to be done with more of a peculiar sort of skill than Mr. Taylor seems to have at command, or it makes pretty tiresome reading. Real life does, to be sure, sometimes provide us with such difficulties and such solutions as Mr. Taylor's; but real literature hardly ever does. Mr. John Burroughs, among the birds and trees and plants, is sure to be admirable; of its kind, his "Spring in Washington" is a great success, and will be found extremely pleasant, especially by dwellers in the city, who miss more of the spring than of any of the other seasons. The "Foe in the Household" is not at its most interesting stage just now, but it is still a satisfactory story. The author who calls herself "The author of 'Victor and Jacqueline'"—a story which we dimly recall, has no need of hiding her name behind a *nom de plume*.

The poetry of this number of the Magazine is by Miss Marian Douglas and Doctor Parsons. The latter always makes a failure, we believe, when he essays the humorous, and he falls rather flatter than usual in this case. Miss Douglas writes a very pretty piece, in which, by the way, poetical justice is done, and for the first time, so far as we know, to the little "life everlasting"—"a silvery bloom with fadeless leaves," and quite fit for the purposes of Puritan courtship.

"Hans Breitmann in Politics" is *Lippincott's* chief attraction this month; but we are glad to see that this third set of the series is the concluding one, for Mr. Leland was evidently making too many. This account of Hiram Twine's device for carrying "a rural village" for Breitmann instead of der Schmidt is not at all up to the mark of the best of its predecessors. It is very farcical in its main conception; but that might be forgiven if the details were not in many instances clumsy. Mr. Twine's whole speech is a highly improbable effort, and might have been so much better that, as we say, it is a comfort that Mr. Leland has determined to stop. If he wishes to do Breitmann work there is enough of it to do without the production of anything fresh; the old ones are very well worth elaborating—a task on the successful performance of which, it is probable, depends Mr. Leland's continuing place in select American literature.

Mr. Gaylord Clarke contributes some "Recollections of Washington Irving," and presents his kindly natured hero in as pleasant a light as he always appears in, unless when he is insanely lauded by his too kind friends.

"Rougegorge," by Mrs. Harriet Prescott Spofford, is one of the most remarkable of that author's tales, and the attention of all young writers should be called to it as a model to be shunned. The Baron of Rougegorge, as we all know is apt to be the case with members of Mrs. Spofford's peerage, comes of a race that never "goes back on" its purpose when once the purpose is formed. He is wealthy, perfectly impassive, handsome. He has a friend, young Saint Marc, a paragon of "personal advantages,"

whom he loves with the most ardent affection, and who one day commits suicide because he has been refused the hand of the high-born Ayacinthe de Valentinois. Rougegorge swears to revenge him, and posts home from Assyria, once the realm of Semiramis, to his quarters in Paris. Ayacinthe of course falls in love with him and he wins her. Then he is revenged, for on the evening of the wedding-day he makes a grim countenance and informs her that she madly loves her deadly enemy; that he loved Saint Marc, has had his portrait taken as a reminder of vengeance, and only gained her heart for the purpose of trampling on it. The Baroness Rougegorge, little as we thought it, has sufficient sense to tell her husband that she never knew till that moment that Saint Marc had ever asked her father for her. But the baron, as we have said before, comes of a race that does not yield its purpose for small trifles of that kind. At the end of three weeks the baroness, with some hard lines round her mouth, but beautiful as ever, walks into the baron's den, and the pair, after more or less high and mighty language on the part of both of them, agree to live amicably before the world. Then the baroness trims up her husband's apartments with hyacinths, and as she was named after that flower the fragrance intoxicates the baron, who by this time is, of course, utterly in love with his icy wife, and he will have nothing but hyacinths in any of his rooms. They absorb all his oxygen and he dies on the floor, with his triumphant wife standing over him and taunting him with having crushed her young heart, for the De Valentinoises, too, it seems, come of a race that is pitiless in pursuit of its purpose. All this folly, without one touch of nature, with a deal of hungrily selected sensuously fine language, is a sample of what passes with some of our young women and young men for clever and "impassioned" writing. What ideas of the passions such persons entertain—it would be worth while to know, we were going to say—it would be useless to inquire. They can do nothing with the real truths of human nature; and think they have done better than to do anything with them, if at the same time that they are false to them they are fantastically false to the facts of possible human life. A publisher undertakes a heavy responsibility that assists in making such literature accessible.

In *Hours at Home* for this month may be found a sketch of the Russian peasant, who seems to have impressed Mr. Eugene Schuyler very favorably, as indeed he impresses most Western travellers, whether European or American. "The Sources of the Jordan" will interest the large public who are never tired of hearing of Palestine; but a paper of travel that has considerably more freshness is the Rev. Mr. Bushnell's "Cannibals of Equatorial Africa."

The *Galaxy* for May is a good number. "Put Yourself in his Place" is becoming agreeably complicated. Apparently a hint is given of the meaning of the title, which would seem to show that its application to the circumstances of a workman and "the trades," fighting it out on the free labor question, is not the application which the author intends to make. The rest of the *Galaxy* is all readable, except the "Choir of Songsters," in which some dozen or so of the minor, or more minor, poets sing for us in not very sweet contention. Two pieces, however, have merit, and might very well have been exalted to a higher place than they now occupy; both "Foreshadowings" and "Across the Wall" are better than most magazine poetry, and are indeed poetry. There is something, too, in Mrs. Piatt's "Lily of the Nile;" but Mrs. Piatt is given over to being enigmatic to a degree that is not justified by anything that is found in her work when it is puzzled out. It hardly seems like a natural manner either; if it is, it would seem to be wisdom on the part of the writer to struggle hard to attain simplicity of treatment.

Mr. B. F. De Costa, who is an enemy to history as it appears in the school-books, makes a reasonable article on the question of "Why Captain Kidd was hung." Mr. Richard Grant White brings his "Words and their Uses" to a close, and promises to do a certain amount of revision and correction of them before they appear as a book. We should say that the article before us—"A Desultory Denunciation of English Dictionaries"—might secure for his little work, when it does appear, a tolerable share of criticism, which may or may not be useful to Mr. White when he comes to prepare new editions of it. However, the world, outside the philologists, will very likely be profited, and Mr. White will not be seriously hurt, we dare say, though he does show vivacity in resenting attacks, and the newspaper amenities will be so much advertisement for the book. "A Great Advocate" is by Mr. Edwards Clarke, and treats, not particularly well or ill, of the late Mr. Brady.

The minor departments of the *Galaxy* seem to be better this month than they have been for a long time. "Captain Kidd," in the "Miscellany," we have spoken of. It has for companions, "A Texas Ride," which is clever; a readable account of the little Italian musicians who harp and fiddle about the streets; and a poor piece by Mr. J. E. Cooke. Philip Quilibet has one or two very good short essays in the "Driftwood." "The Merciful Element in Fiction" is especially entertaining. In "Literature and Art" the "Notes" are full of a certain sort of information, and "A Glance at some of our Naturalized Literature" at least is all sound criticism, and of a kind not often enough found in our periodicals, though the same things are only very doubtfully true of the remarks on "Saul" and the "Blameless Prince."

Harper's is known of all men; of the May number we need only say that it is as good as usual, but contains nothing which demands the attention of any but its accustomed readers.

REVISION OF THE FEDERAL STATUTES.*

WHATEVER may be said against projects for a codification of the unwritten or common law, there can be no possible objection worthy of respectful consideration to a codification of mere statute law. What has been written once can be written again. Statutes which are scattered over a hundred volumes can be gathered together, their repetitions omitted, their inconsistencies reconciled, and their ambiguities cleared up, with vast advantage, and without a single necessary disadvantage. There is, in fact, no reason whatever for the present discreditable condition of the statute law in England and America, except the laziness, incompetency, and jealousy of legislatures. They are too lazy to codify the statutes, even if they were competent for the work; they are far too untaught to have the slightest idea how the work should be done; and they are too jealous of their prerogative right to tinker the law, to accept and adopt the labors of any commission that is able and willing to do the work.

The statutes of the United States are far on their way to that sublime state of confusion and incomprehensibility for which the statute law of England has long been famous. Congress heaps up new laws without pretending to understand the old ones, or to make the operation of the law uniform in cases of the same nature, or decently reasonable in its operation. Thus, there are half a dozen different ways of removing causes into the Federal courts, attended with differing results; and, curiously enough, no provision is made to enable certain suits to be brought in the Federal courts in the first instance, which may, nevertheless, be transferred there after their commencement. The laws upon this particular subject, moreover, are scattered all over the statute books from 1789 to 1868. So it is with regard to many other subjects of legislation; some statutes, indeed, referring to others for explanations on material points, these in their turn referring to others, and these still to others, which prove, upon examination, to contain nothing whatever in relation to the subject of the statutes which refer to them for elucidation.

Senator Sumner has taken a most creditable interest in the project of consolidating the statutes; and soon after the political complexion of the Senate had so far changed as to give him weight in its deliberations, he diligently pushed forward a measure having that object in view. At length he succeeded in carrying through Congress a bill providing for the appointment of three commissioners to revise and consolidate the statute law of the United States. This commission has suffered under the usual disadvantage of such bodies, in having three members willing to draw pay, and only one to do any work. A great mistake was made in selecting at least one gentleman too eminent at the bar to be able to afford the time necessary for the work. It gave us no surprise to hear that, after being on the commission for two years or more, he pronounced its object impracticable. To such men it is necessarily impracticable. But if Mr. Brightly or Mr. Austin Abbott had been placed upon the commission (as one or both of them would have been, if fitness had been the only quality sought), we have no doubt that the practicability of the work would, ere now, have been proved by its completion.

We are glad, however, to see some fruit of the labors of this commission in a complete revision and consolidation of the postal laws of the United States, which we understand to have been mainly the work of one of the commissioners, Charles James, Esq. The whole law upon this subject is given in twenty-one chapters, containing in all three hundred and fourteen sections. The law thus brought within the dimensions of a single statute of moderate length and logical order, is now scattered through one hundred and thirteen distinct acts and resolutions, fourteen volumes, and sixty years of legislation. What has thus been done for the postal laws can be done for all the other laws of the United States.

Upon such examination of the work as our limited time has allowed,

* "The Postal Laws of the United States, revised and consolidated. By the Commission appointed to revise the Statutes." Washington, 1869.

we are well satisfied with it, although the *complete* revision of the federal laws should, and, we doubt not, will, lead the commissioners to make material changes in this particular measure. Thus, the whole of the chapter on "Mail depredations and offences," and several sections in the chapter on "Carrying the mail," should be placed in their proper order in the general penal code which must be ultimately prepared. So section 296, in relation to the recovery of interest in postal suits, belongs to a general law on damages; and sections 306 to 313 belong to a general statute on practice in the civil courts. The commissioners have, nevertheless, done well in including these provisions among the other postal laws *for the present;* the first necessity being to get all these things together in the same relations in which they are now to be found upon the statute books, leaving their better classification to the second stage of the work. We hope, however, that the commissioners will not forget this important part of their duties.

In 1863, if we are not mistaken, Messrs. Grosvenor P. Lowrey, Augustus Schell, and Charles P. Kirkland were appointed on a commission to revise the revenue laws. We should like to know what has become of their work, or whether they ever did any. If they did, the results of their labors ought to be given to the new commission.

We shall urge the adoption of the commissioners' work, whenever it is complete, without any further revision by Congress. It is impossible for a large legislative body to tinker a code, or a carefully prepared revision of statutes, without doing more harm than good. If the commissioners do not turn out a satisfactory measure, it should be sent back to them, or submitted to new commissioners for further revision. But such a bill is too delicate to bear legislative tampering. Amendments that seem on their face perfectly right, will lead to tautology and inconsistencies. Congress takes a great deal on faith from interested speculators. Let it take something on faith from competent and disinterested commissioners.

The Ideal in Art. By H. Taine. Translated by J. Durand. (New York: Leypoldt & Holt. 1869.)—In writing upon the general theory of the fine arts, or of any fine art, or of any group of fine arts, special knowledge is requisite. It would be claiming nothing excessive for painting, for instance, as an abstruse and recondite subject, to assert that it ought not to be judged by unmodified laws of any other art, or by unmodified laws of art in general. Writers upon art are fond of finding analogies among the different fine arts; words are interchanged with a natural if sometimes fatal facility; "chromatic" music, "florid" writing, "harmonious composition" in a picture, have become phrases of general acceptation; and with this lax use of words comes the to-be-expected inaccuracy of thought and statement, leading the insufficiently informed to pronounce boldly upon the arts unfamiliar to them, according to the admitted principles of arts more familiar. Accepting the truth of a common principle and some common laws for all the beautiful arts, including even poetry, including even poetical prose, including even the judicious combination of appeals to the senses of smell and of taste—accepting all this, and insisting upon it that our critic shall not be deaf to music, nor cold to poetry, nor indifferent to the pleasures of any sense, nor unaware of the wonderful changes produced in any or all of his senses by cultivation—we have also to insist upon the inherent differences among the arts. Is art one? it is also many; ἑνότης ἐν πολυειδίᾳ, "unity in diversity." For how much of painting is of the spirit and how much of the eye and hand no man has yet been able to decide for others. Mr. Rio finds it all spirit, Mr. Scott nearly all skilled hand and practised eye; Mr. Taine finds it nearly all involuntary fixing of the floating dust of the "milieu." So far as it is of the spirit, that is, of observation, memory, and imagination, it is made up of the same influences as the other fine arts, though so differently felt and seen. But there comes in the physical side of it, the purely visible part of it, the decorative element in it, and destroys our prettily arranged comparisons and analogies, while not even admitting neat contrasts for our comfort. Mr. Taine's statement, on page 85 of the book before us, that "the beauty of a plastic work is above all plastic," is wonderfully sound doctrine. Let us add that the discussion of plastic art must not be too exclusively such as would apply to all the fine arts, but must be a little narrowed to the limits of the visible, the decorative, the distinctly careful of shapes and colors.

The technical, exact, and ready knowledge of a fine art which we require of those who write about it, is even more needed by him who discusses it in a general way than by the examiner of more limited fields of enquiry. An essay upon Chinese porcelain may be useful, if the work of a mere collector, without other knowledge than the empirical one gained in collecting, if only his natural taste be fairly good. We can trust an intelligent architect without extended knowledge of the history and relations of decorative art, to set down much very well worth recording in respect to out-of-the-way buildings he may visit. But when it is the central idea of art or of an art that is to be discussed, we demand the most extended, the most perfectly assimilated, the readiest knowledge of the subject. When a writer would discuss the ideal in art, even though limiting his subject to the plastic arts, besides his general supposed sound ideas upon art in general, he has need of such a practical familiarity with the actualities and possibilities of plastic art as only long familiarity can give—of spontaneous knowledge, so to speak, immediate certainty of the true answer to every question, of power of immediate and instinctive sense of truth and of fallacy, and knowledge of the whereabouts of the reasons for the judgment which he, for his part, needs no reasoning to help him to.

Mr. Taine's failure, or lack of greater success as an instructive or inspiring critic upon the fine arts, results from the lack of this thorough knowledge. His lectures are of a well-known and, except for their cleverness, not uncommon kind; the kind that is very agreeable and wonderfully true-seeming to everybody except those who are well informed. Such lectures delivered to the audience for which they are written—Parisian art-students, namely—would naturally fail to impress very much, and accordingly the rumor comes from Paris in many forms that among the *entreprises manquées* of the present government of France is the attempted renewing of the Ecole des Beaux Arts, culminating in such appointments as this of Mr. Taine to the chair of the History of Art. It is Herbert Spencer's reputation over again, all very well for the "general public," but the chemists and the physicians, the painters and the architects, are disposed to scoff at the new light. Does this prove anything? Of itself it proves nothing positively; but yet the views of experts are exceedingly well worthy of notice, and, as the experts look at it, Mr. Taine is a very inadequate judge of art.

Ecclesiastical Law in New York. By Murray Hoffman. (New York: Potts & Amery.)—A glance at Mr. Hoffman's digest will show that the Dutch Governors of New York down to 1664 did what they could to favor the Established Church of Holland by keeping matters ecclesiastical under the control of the clergy of Amsterdam. After that date the Royal English Governors were quite as vigilant for the interests of the Established Church of England and the Archbishop of Canterbury. But while Reformed Dutch and Episcopal societies, beginning with 1696, obtained what charters, confirmations, and resuscitations they asked for, the Presbyterians received no such favors, though they sued very humbly in the years 1719, '21, '59, and '75.

But all this was promptly changed at the Revolution. The Constitution of 1777 put all denominations upon a level. In less than ten years the eight acts which gave pre-eminence to the Episcopalians were repealed, and a general statute passed reducing the incorporation of all religious societies to great simplicity; the parties met together, fixed upon a name, acknowledged their doings, and recorded them in the County Clerk's office.

This statute of 1784 and the subsequent one of 1813 have answered for nearly all parties except the Dutch and Episcopalians, whose Consistories and Vestries were not sufficiently considered. To remedy this defect and define the various shares of minister, rector, vestryman, and layman, in the organizing and incorporating process, the statute of 1868 has been passed at Mr. Hoffman's suggestion, in behalf of his denomination, and he advises Episcopal religious societies to take advantage of it and reincorporate themselves. Trinity Church, it would seem, needs no such help. Having triumphed over all her legal adversaries, she can defy her legislative enemies by falling back upon some of the charters confirmed by the Constitution of 1777; and then, says Mr. Hoffman, "the whole City of New York would be again without a question, as it is perhaps even now, her parish, except where, by her consent or acquiescence, she has sanctioned the organization of independent churches and cures," p. 310. Views like these in regard to the latent powers of Trinity Church are quite startling to the casual reader; they hardly belong to modern times.

The Roman Catholic societies, more outspoken, and more determined to possess the land ecclesiastically, have obtained the Act of 1863, which carefully excludes the congregation from taking part in the proceedings to organize and incorporate themselves. A majority of the trustees are to be forever ecclesiastics; the two lay trustees are nominated by the ecclesiastics and hold office but one year.

In the Methodist societies the Act of 1857 speaks of ministers and stewards as the active parties in organizing and incorporating; the lay-

men make no figure. The charterless Presbyterians in New York, for thirty years prior to 1766, were grafted, in some way, upon the General Assembly of the Scotch Church; at the Revolution they were on excellent terms, apparently, with the Mayor and Aldermen of New York, and the Wall street and Brick meeting profited by the intimacy. While Baptists and other Congregationalists make a figure in New England ecclesiastical law, it can hardly be discovered from Mr. Hoffman's book that there are such denominations in New York; indeed the only Congregational society alluded to was authorized by this Court to become Presbyterian, many years ago, p. 288. It must be that the grace of incorporation is bestowed upon these uncanonical bodies under the Acts of 1784 and 1813. What ecclesiastical life they have is diffused through the mass of the members of each society—it does not centre in trustees, as a casual reader of the statutes might infer; but a majority of the members have control of the doings and property, as the courts have ruled several times; and with these constructions of the statutes there seems to be no need of special laws, pp. 284–290.

If these decisions are adopted, then the Southern, Middle, and Western States, that have followed the lead of New York in her several laws of organizing and incorporating religious societies, will be found in harmony with the more simple statutes of Massachusetts and the New England States generally. From the first those frosty commonwealths were in the habit of incorporating religious societies directly, without the intervention of trustees, however good. By so doing they have saved themselves from a world of complication and intermeddling.

Mr. Hoffman's learned work will interest lawyers abroad who are curious to know how state churches bear themselves and thrive after the state connection is severed. If we had space we might speculate on the question whether the superabundant general legislation of New York is not in a large measure due to the very canonical and very supervisory habits of her two leading denominations—the Episcopalians and Presbyterians.

Thunder and Lightning. By W. De Fonvielle. Translated from the French and edited by T. L. Phipson. New-York: Charles Scribner & Co.)—As its somewhat startling title leads one to expect, this book is of a decidedly sensational character. It is not a scientific work, but a popular treatise, not of the best sort. The subject seems at first sight rather a meagre one for a volume of over two hundred pages; but it must be remembered that the book was written in France, where lightning is much more frequent and dangerous than in this country. It is illustrated by numerous well-executed engravings of very singular subjects. It is a question whether any pleasure or instruction is derived from a picture of lightning killing a bell-ringer, or descending a staircase, or striking a fish under water. Again, it seems scarcely necessary to illustrate elaborately such dramatic events as lightning killing a murderer without injuring his intended victim, or melting a lady's bracelet off her wrist without hurting her. As regards the precautions which may be taken against lightning, we hardly agree with the author in considering silk umbrellas safer than those of other materials, particularly as silk ceases to be a non-conductor the moment it is wet. We doubt if many ladies will give up their jewelry for fear that it may attract lightning. On the other hand, the chapters on the physiological effects of lightning, and on its explosive globular form, contain many facts of interest which are not generally known. Although this volume has probably less real value than any other of the series, yet, from the striking nature of the subject, it is perhaps well calculated to suit the public.

Zwei Jahre österreichischer Politik. Aus einem Tagebuch. Herausgegeben von Friedrich Giehne. Erster Band. (Schaffhausen: Fr. Hurter. 1868. 8vo. pp. vii. 424.)—Giehne's "Two Years of Austrian Politics" is a record of political and military events in Germany since the spring of 1866, in the form of a diary, which bears conclusive internal evidence of the genuineness claimed for it by its author as "ein wirkliches und wahrhaftes, mit den Ereignissen gleichzeitig entstandenes Tagebuch." The value of such contemporary documents, in which great national movements are instantaneously daguerreotyped as they occur, is inestimable, especially as contributions to historiography. They preserve all the freshness of first impressions, and report many minute and interesting incidents and passing reflections, which would be out of place in a grave history, but are admirably suited to a book that is neither chronicle nor autobiography, but partakes of the nature of both. Herr Giehne is an enthusiastic Austrian, and judges everything from a partisan stand-point; his zeal for the Imperial cause frequently makes him unjust towards the enemies of "Kaiser Franz," and easily disposed to believe anything that is prejudicial to them. Thus he records with too great credulity the old newspaper story about the barbarity of the Italian troops towards wounded and defenceless Austrians after the battle of Custoza, and contrasts this alleged cruelty with the chivalry of "the whitecoats," who cared for the wounded Italians as tenderly as for their own comrades. The author doubtless thought this report to be true at the time he made a note of it in July, 1866; and if he wished to publish his diary without alterations in the text, he ought at least to have corrected the calumny in a foot note. Making due allowance for errors of this kind, which belong, according to Lord Bacon's phraseology, to those "idols of the tribe" which beset all minds and inhere in human nature itself, the reader will find Herr Giehne's book not only attractive in style, but also very suggestive in thought. That portion of the diary which covers the period of the war in Bohemia has an intensely dramatic interest, each daily record during the month of June lifting the curtain upon a new scene or a new prospect, until the final catastrophe of Königgrätz dispels all the illusions which the victory on the Po had fostered. The discussion of political topics is clear and comprehensive, especially as regards the mutual relations of the different provinces and peoples of the Austrian Empire, and the methods by which the Slavic, Magyar, and German elements, after so many centuries of deep-rooted hostility, are to be reconciled and united under equal laws and homogeneous institutions. The present volume closes with the neutralization of Luxemburg, the last entry bearing the date May 30, 1867. The second volume, which is to be issued soon, will probably follow the course of events into the year 1868, and record more fully the author's impressions of Bismarck's reorganization of Germany and of Beust's efforts to save Austria from moral, political, and financial bankruptcy.

Deep Down. A Tale of the Cornish Mines. By R. M. Ballantyne, author of "The Life Boat; A Tale of the Coast Heroes," "Gascoyne, the Sandal-wood Trader," etc. (Philadelphia: J. B. Lippincott & Co. 1869.)—Mr. Ballantyne's book contains a good deal of interesting information concerning the Cornish tin mines, which is thrown into the form of a story in which the part of hero is played by an athletic young surgeon who settles and begins the practice of his profession in the mining district. Beside the account of the mines and the mining operations there are one or two smuggling adventures recorded; the herring fishery gets a chapter or two, and there is even a little mild love-making thrown in before the story is ended. There is not enough of it, however, to interfere at all seriously with the proper business of the book, which is one that all intelligent boys of twelve years old and upwards ought to read with a good deal of pleasure. The whole interior of a tin mine is laid open, the means by which the ore is taken from the rock, the processes to which it is afterward subjected, and the peculiar risks to which the miners are exposed, are all described with a by no means tedious minuteness and not a little picturesque force. The book gives, too, what we should take to be a very fair account of the miners themselves, and the peculiarities of thought and feeling which the life they lead naturally induces; and on the whole is to be praised as combining instruction and amusement in a more than ordinarily successful manner.

George P. Rowell's American Newspaper Directory. (New York: George P. Rowell & Co. 1869.)—It cannot be fairly expected of a book like this that it should be correct in all its statements, nor that it should give all the information relating to the subject with which it deals. Omissions and inaccuracies were inevitable, especially in a first attempt at covering so wide a field. But one source of error might, we should think, have been more effectively guarded against. Except as illustrating the truth that editors are fallible, the assertions of most of them about their "circulation" are hardly worth setting down. Messrs. Rowell & Co. or S. M. Pettingill & Co. and other managers of "advertising agencies" have, for their own private use—or we suppose they have—a special knowledge of facts in regard to almost any given journal, that enables them to estimate at something like their just value the "claims" which it makes in public. But people not in their business have not this particular information, and are in danger of deception. Figures never live more nearly up to their proverbial bad character than when they are employed by the "knights of the quill" at the times of penning "A Few Words about Ourselves," and the remarks "To Our Readers," and so on. We do not see that any good is done by giving what seems like a business man's endorsement of these little inventions.

For many purposes, however, for most that it pretends to answer—this volume will be found useful. For example, the descriptive list of

North American towns and cities in which newspapers and other periodicals are published is valuable, and with its details as to population, chief industries, and other matters, will, we should suppose, be of real assistance to intending advertisers.

Anne Séverin. By Madame Augustus Craven, author of "A Sister's Story." (New York: G. P. Putnam & Son. 1869.)—We have felt some touch of regret that Mrs. Craven should have chosen to continue the career of authorship which she began so successfully in that charming book, "A Sister's Story." She had in that instance an abundance of very and peculiarly interesting material, which was very skilfully employed—and although one could but wonder at the want of delicacy, or, if that be too harsh an expression, at the unreserve which dictated the publication by so near a relative of memoirs of so peculiar a nature, it was nevertheless true that the book had a real value, and that, despite its ultra-Roman Catholic spirit, it could be read with pleasure even by people who dissented for the most widely various reasons from its conclusions. But neither in its matter nor style was there anything which made the publication of a novel by its author a thing to be looked forward to with any great pleasure—and now that "Anne Séverin" has made its appearance it suggests only, as we said at first, a certain mild regret that Mrs. Craven should have written it. It is a weak, rambling, confused little story, the scene of which is laid partly in England and partly in France, and at a period of some thirty-odd years back. We do not know that we discover any special reason which its author had in mind in writing it, and, although it is quite true that it is perfectly pure in conception and plot and incident, it is equally true that it is as futile and ineffectual as it is pure. As her story is constructed, we shall say that Mrs. Craven had but one chance of saving it from utter pointlessness, and, if for no higher reason, it was plainly her duty from an artistic point of view to convert the naughty English girl, who, well brought up, religious as far as a Protestant can be so, and full of good impulses, yet engages herself to two men at the same time, solely because she has not been trained to the "practice of self-examination." But she deprives her instead, in what seems a reprehensibly careless manner, of her Catholic lover, and leaves her in all her blindness to the tender mercies of an inflexible husband, who gets on his road to Rome only so far as Puseyism. On the whole, it does not seem advisable to recommend the book either as a means of amusement or edification.

The Wife's Messengers. By Mrs. M. B. Horton. (Philadelphia: J. B. Lippincott & Co. 1869.)—So far as we know, this is Mrs. Horton's first book, and we feel that we should be doing her a service if we could persuade her to believe that there are other fields in which she could probably labor to greater advantage than she will ever be able to do in that of literature. She seems herself to have felt a little doubtful of her success in making herself intelligible—so, at all events, we interpret her "grateful dedication" of her book to those "who are willing to see her purpose" in writing it. We are not ourselves unwilling to earn gratitude when there seems a fair chance of getting it, and may say, therefore, that, so far as we can see it, her purpose seems to have been to rhapsodize a little about Christian spiritualism, or Swedenborgianism, to get at the doctrine of "correspondences" by no matter what blundering and ineffectual methods, and incidentally to discourse a little on politics and practical philanthropy.

FINE ARTS.

FORTY-FIFTH EXHIBITION OF THE NATIONAL ACADEMY OF DESIGN.

PICTURES of domestic life, and especially those representing children and childish things, form the most important part of this exhibition. They are rather numerous, and there is more in them, taken together, than in any other group of pictures we could form this year. The exhibition, poor as it is, small as it is, insufficient as it is as an embodiment of contemporary art, represents that one side of our art well enough, and seems to indicate its relative importance. For the interest taken by the people in the pictures being entirely anecdotical, so to speak, dependent upon the subjects represented, and the cleverness with which stories are told, the relative importance of tales of domestic life is nearly as great in painting as in literature. Such a picture as No. 124, by Mr. Verplanck, in which are shown three children having a tea-party in the garret, just about represents a good but not the best sort of the art of the period. Very true and gentle feeling, and real interest in the subject, go far to make up a little poem of a pleasant kind, and such poems we all enjoy and really care about, indifferent to the artistic qualities of the pictures which contain them, and indifferent whether the story is told in prose or in verse, or in lines and colors upon canvas. The same figures in a wood-engraving would please us as well, and even better, except that our attention is called to the painting in a gold frame and known to be costly, more quickly than to a wood-cut. But, for all, No. 124 is sure of a buyer, and the buyer will get something for his money, though not a thoroughly well-painted picture. Mr. Guy's nice little boy paddling in the clear water which stands, "after the shower," upon the sunken flag-stones, is perhaps his greatest success in his chosen line. It is not a merely technical fault, however—the peculiarity often noticed in Mr. Guy's pictures of childhood—namely, the waxy cleanliness of the dabbling and splashing little hands and feet. It is not that dirt ought to be elaborated or dwelt on, but that it shocks one's sense of the possible to see boys "mussing" among cabbage-leaves and egg-shells, and keeping the while a surface as of Dresden china figures.

Mr. Lambdin's "Experienced Fisherman" and "Amateur Circus" are real and childlike though without much vigor. A great deal of swing and fury goes to make up the dramas of childhood, much more than these pictures give us; the action is never languid, the pauses are times of total rest, generally slumber. Mr. Peele's "One Tune More" gives us one of those moments of rest, and the picture is one of the best pieces of story-telling this year, however slight its merit as a work of plastic art. But it is here that nearly all the pictures fail. The best painted of the children are probably Mr. Johnson's, in his portrait group and only picture, No. 196, and Mr. Boughton's in 243, "Christmas Eve in England." The former of these is spoiled, as a picture, by the necessity of representing the monstrosities of modern fashionable upholstery and decoration, but the child is very lovely. Mr. Boughton's picture, slight as it is, is one of the best in the exhibition.

Of pictures, not of children, but still of home, No. 164, "The Weaver," by Mr. E. W. Perry, demands notice, and more room than we can give it to point out its merits and shortcomings. It is a work of the right sort within its limitations, and, if we admit that painters now-a-days are to cease trying to produce beautiful pictures, this will seem to be altogether of the right sort.

A picture of a different class is the "Gulliver," No. 109, by Mr. Waterman. It is interesting, and ought to be multiplied by wood engraving on a large scale or by lithography, for it is crowded with ideas, not the most artistic ideas, perhaps, but fanciful and ingenious, and truly picturesque ideas about the costume and general get-up of an imaginary people. Mr. La Farge has contributed to the interesting study of costume his picture No. 410, "Sleeping Beauty," a slight sketch in color of Japanese embroidered robes clothing a young woman.

For portraiture we have little to mention. Two heads by Page, numbers 322 and 326, are not unworthy of our best portrait painter. After these the only life-size portrait of any great value is No. 318, by Mr. Hunt. Mr. Weir's full length portrait, in the studio, and Mr. Johnson's group mentioned above, are of an interesting class, and Mr. Weir's at least is not badly imagined in respect to the surroundings and accessories.

Landscape art disappears year by year from our exhibitions. It was fondly imagined once that we had, or were likely to have, a school of landscape; but, although our best landscape painters scarcely ever exhibit, and although the exhibitions are fast losing all claim to represent the art of the time, still they are to be believed when they indicate a failing interest in landscape subject among the painters. For the fact is easily ascertainable that the public take no interest whatever in landscape. It is a languid enough pleasure that they take in pictures of any kind, but painted stories carry it over other kinds, and leave landscape pictures to be bought for the sake of the artists mainly. In fact, sometimes out of desire to have a specimen of so-and-so's work, sometimes out of kindness and to help so-and-so; in some way or another it is personal and not artistic interest that sells three-quarters of all pictures sold, and nine-tenths of all landscapes.

Under which influences the landscape painters have no particular temptation to exhibit, but live among, and paint for, each his circle of friends; and those painters who have more strings than this one to their bow, come to use this one less and less. On the other hand, Mr. Homer, not generally known as a landscape painter, sends a landscape this year; to be sure it is the most important one in the galleries. "Manchester coast," No. 187, is not a sunny picture although shadows are cast; that is its fault, the colors are not sunlight colors; but in other respects it is full of interest and of excellent qualities, and repays careful examination. Mr. J. D. Gay's landscape, No. 356, rivals Mr. Homer's in general interest and value. Mr. Brevoort's November is a picture of a kind we have learned to associate with Mr. Griswold, although the cedar-trees and hillsides are certainly not so well painted as in Mr. Griswold's winter pictures which we have enjoyed so much of former years. Mr. Griswold himself is struggling this year with a thing hard to master and which he has not mastered, spring green; the picture, No. 300, seems to us far from a success. A pleasant landscape, regardless of detail and of sunshine, but full of merit for all that, is the background of No. 168, by Mr. G. D. Leslie, presumably a well-known English painter.

Miss C. M. Clowes sends several small pictures of great promise. No. 365 offers in the "Two Calves" so remarkable a piece of accurate and sufficient painting, for an artist not yet well known, as to warrant almost any expectations for the future. Miss Eliot, another new exhibitor, sends two studies of landscape, one hung nearly out of sight, the other showing care for the boats and for the form of the ground—encouraging signs, for to paint boats and the surface of the earth aright is to do what few landscape painters do. The boats in Mr. Tiffany's "Yonkers," No. 367, are very good; this picture is also the work of a beginner, or at least of a new exhibitor, but that is not to be seen in the very skilful management of the pier and shed upon it, and the steamboat and schooner. Hills and water are not good. Mr. Tiffany's other picture is clearly and strongly painted.

Philadelphia.

BERTHOLD AUERBACH.

Now Ready:

BLACK FOREST VILLAGE TALES.

AUTHOR'S EDITION.

By BERTHOLD AUERBACH,

Author of "The Villa on the Rhine," "On the Heights," etc., Illustrated with 82 Facsimiles of the original German Woodcuts, 16mo. cloth, uniform with the author's edition of "The Villa on the Rhine." Price, $1 50.

This is the work which made Auerbach famous. BAYARD TAYLOR says of it in his biographical sketch of Auerbach, prefixed to the author's edition of "The Villa on the Rhine:" "These 'village stories' are models of simple, picturesque, pathetic narration. . . . A soft, idyllic atmosphere lies upon his pictures, and the rude and not wholly admirable peasant life of the Black Forest is lifted into a region of poetry."

AUERBACH'S VILLA ON THE RHINE, author's edition, 2 vols. cloth (one vol. now ready), $1 75 per vol., or 4 parts, paper (3 now ready), 50c. per part, conclusion soon.

HARRIET MARTINEAU'S BIOGRAPHICAL SKETCHES, $2 50.

POLKO'S REMINISCENCES OF MENDELSSOHN, $1 75.

TAINE'S ITALY (FLORENCE AND VENICE). Early in May.

SPIELHAGEN'S PROBLEMATIC CHARACTERS Early in May.

LEYPOLDT & HOLT, Publishers, New York.

A Charming Book for "Sportsmen Naturalists."

Now Published from Advance Sheets.

GUN, ROD, AND SADDLE,

PERSONAL EXPERIENCES, BY "UBIQUE."

In one small 12mo. extra cloth, bevelled boards, uniform with "The Dead Shot." Price $2.

These sketches of sporting experiences were received with great favor on their appearance by the best English and Continental authorities, and, in compliance with an expressed desire, were gathered in a volume.

The most popular and the most useful of living English naturalists learning that it was proposed to issue a transatlantic edition, he expressed his approval in the following note:

"I much approve of Mr. Gilmore's book, and should be glad to hear that it is published in America."—Frank Buckland.

NOW READY:

TWO NEW BOOKS

By the Author of, and uniform with,

"Robinson Crusoe in Words of One Syllable."

I.

SWISS FAMILY ROBINSON,

WRITTEN

In Words of One Syllable.

BY

MARY GODOLPHIN.

Small square 8vo, extra cloth, gilt side, with eight beautiful colored illustrations, price $1 50.

II.

EVENINGS AT HOME,

WRITTEN

In Words of One Syllable.

BY

MARY GODOLPHIN.

Small square 8vo, extra cloth, gilt side, with eight beautiful colored illustrations, price $1 50.

It will be observed that the above works are from the pen of Mrs. Mary Godolphin, who originated the One-syllable Literature by rendering "Robinson Crusoe" in words of one syllable.

They have been prepared with the greatest care, the only exceptions to the rule of rendering them into words of one syllable being in the case of the titles and proper names, which the author has been necessarily obliged to retain.

Other Editions will be found by comparison to be not only incomplete but incorrect, words to the number of two hundred having already been found of more than one syllable.

The Week.

THE only news of any importance that we have had from the South since the election of Grant is what comes from all parts of it in relation to the crops, and the political news from Virginia. It is all encouraging. Nothing is said this spring of the unwillingness of the negroes to work, and less by a great deal is said than ever before since 1865 of an unwillingness to let them vote. The convention of Virginia Conservatives has met and dissolved after a business-like session, in which, after a healthy resistance—much better than the "mush of concession," which was the fashion two or three years ago in the South, and which was mere hypocrisy, indicative of trouble to come—the old high-and-dry, conservative, white-man's-government party was defeated, by a vote of about two to one. It was decided to nominate Conservative Republicans for office, and to fight fairly for the defeat, not of the whole constitution, but of such portions of it—certain provisions of it are to be submitted for a separate vote—as are distasteful to almost all but the extreme Radicals. It is worth while to say that, making allowances for the difficulties of their position, the Anti-Radical party in Virginia have behaved in a way that secures them the respect—not, perhaps, strictly speaking, the intellectual respect—of the best of those who have disagreed with them. Certainly, Virginia—with the possible exception of North Carolina—has behaved in a manlier fashion than her neighbors, who have been too apt to "fight Radicalism" by killing and maiming negroes—a way of being opposed that Radicalism has not found much fault with, so far as concerns the winning of the fight. As an outward sign of the inward grace at work in Virginia, it is noteworthy that Pollard's *Southern Opinion* became so exclusively Pollard's and so little Virginian in opinion that it has given up its unlamented ghost. So extreme and erratic a man as Governor Henry A. Wise is hardly worth attention, except as the perversest straw may at least furnish corroborative evidence as to the direction of the wind; but he also has come out in favor of burying the issues that died in '65.

Further and calmer consideration seems to beget in various directions a good deal of dissent from and dissatisfaction with Mr. Sumner's speech, as a statement of the American cause against England. Various journals are joining in denouncing his plan of making England apologize for the neutrality proclamation, both as unnecessary and as certain to fail. Others again assail his legal position. Probably the most marked fault of the speech as a statement of the American cause is that it presents no distinct theory of the nature of the offence England has committed. In one place he charges her with having given Confederate ships the rank of lawful belligerents, which, without her proclamation, they would not have had. A few sentences further on he seems to forget this, and talks of the Confederate cruisers as "pirates"—thus implying that the proclamation, after all, gave them no lawful status, and therefore conceding, to all intents and purposes, that England incurred no responsibility in issuing it. By-and-by he shifts his ground again, and talks of the cruisers as *English* ships engaged in "war" against the United States—that is, as neither pirates nor Confederate cruisers. Now these theories cannot all stand together. If the proclamation gave the Confederates a lawful status, their cruisers were not "pirates." If it gave them no status, and they were "pirates," England is not responsible for the proclamation; while, if they were English war vessels assailing the commerce of a friendly nation, all talk about the proclamation is a mere waste of breath. Any intelligent reader may satisfy himself, by looking carefully at the speech, that it is really marked by the confusion we have here described, and we are therefore sorry that somebody did not undertake the work who had firmly grasped some one of these doctrines, and could present it clearly and vigorously. Mr. Sumner has supported all three vigorously by turns, but none of them long.

His sentimental charge about England's failure to sympathize with our war as an anti-slavery struggle was of course totally out of place in a legal argument, and especially as part of an attempt to prove and measure legal damages. If we are really going to introduce a new rule into international law, and hold foreign nations responsible for misdirection of the moral sympathies, we must not confine ourselves to cases in which they fail in showing proper feeling about slavery. All reforms will be entitled to an equal share of our support and consideration. We ought, for instance, to bring England to book for the indifference or hostility of her aristocracy to the temperance movement, and her neglect of popular education, and the low condition of her almshouses. Grotius and Puffendorf would probably be astonished to hear of Admiral Farragut burning the shipping at Liverpool, or shelling the fortifications at Portsmouth, because the House of Commons was not "sound" with regard to the proper treatment of the insane, or was obdurate on the eight-hour question, or deaf to woman's claim to the ballot; but Grotius and Puffendorf, poor old fellows, wrote according to their light, which was small, and are now dead, which is well for them.

What some of the more ardent friends of the negro are fond of saying—that the prejudice of color is pretty much confined to this country; that it is not felt by Frenchmen, Germans, and Englishmen; or that, at all events, they feel a much less degree of it than we Americans—is true in a sense, and partly, but it is not wholly true. The French seem to have little of it, and the Germans have not much, and the English in England do not display very much; but the "Anglo-Saxon," whether of American or British birth, as soon as he is confronted with a sufficient number of colored people to arouse anything more than a momentary curiosity, immediately begins to say "nigger," and develops a "prejudice against color" that makes him an intolerant persecutor and murderer until the man of color becomes a perfectly submissive creature, acknowledging his inferiority. The latest illustration of this truth we, to our disgrace, are furnishing in Alaska. The nations of that region are not all mild-mannered; some of the tribes are of a character quite different from that of the Esquimaux; but it is ridiculous to assert that there is the least reason why we should be attacking by land and water miserable savages with whom the Russians have lived in peace for generations. Even in our own despatches our performances wear a very ugly look. A United States

soldier kills a native, for reasons not stated, and probably not known—very likely not known to the soldier himself when sober; then the native's friends kill two traders; then Major-General Davis, Captain McIntyre, and seventeen soldiers go aboard the *Saginaw* and set sail for the native settlements. On the 14th of February they destroy a village at Kori Island; on the 16th, they destroy the villages on Kupilanoff Island; on the 17th, they destroy the salmon fisheries and two stockaded forts (protected dwelling-places?) at Security Bay. Not many people will believe that there was any decent reason for all this, and it is a pity Congress is not in session, that some member, of common humanity, might demand an investigation, or, at any rate, a sight of the despatches. Meantime, Grant might do worse than send General Howard, or some other officer of approved character, with a couple of interpreters—an American who can speak Russian, and a Russian who knows the Indian speech—to make an intelligent report on the condition of affairs in Alaska, before naval and military officers, who may be good fighters, but who probably are bad statesmen, disgrace us any more.

People who have latterly been frightened about the Hibernicizing and Catholicizing and Fenianizing of the United States, are not yet called upon to go into complete despair; the last report of the New York Commissioners of Emigration contains some reassuring statistics. At this port we received, during the twelvemonth ending with the end of last December, 213,686 alien immigrants. Of this number 47,571 were natives of Ireland, and, presumably, the vast majority of them were Catholics; and, if we put with the Irishmen the immigrants from other nominally or really Catholic countries—France, Italy, Belgium, Spain, Poland, Portugal, Mexico, and the South American States—we find that, speaking roughly, we may say that altogether our Roman Catholics coming in last year numbered 52,000. Taking the nominally or really Protestant countries of England, Scotland, the Scandinavian states, Holland, and Wales, we find that we got from them immigrants to the number of 54,000. Thus, balancing Roman Catholics and Protestants from other quarters against each other, we dispose of just about half of last year's total immigration. There remains the immigration from Germany, which amounts to very nearly the other half—namely, 101,989. What to say of the religious tenets of these last-mentioned new-comers, we do not know; the Commissioners have given us no religious statistics whatever—an omission that we hope not to see next year. But it has hitherto been matter of notoriety that the great majority of the German immigrants were not Roman Catholics. At all events, the non-Celtic blood flowed in the veins of more than two out of every three of last year's new-comers. For the twenty years that have just ended, the exhibit would be different in this respect, but still the preponderance is very decidedly in favor of the German, English, Scandinavian, Scotch, and Dutch elements; and what is more, the Irish immigration has since the war been steadily decreasing, while the immigration from the other sources referred to has been increasing. As to the destination of the immigrants, New York, Pennsylvania, New Jersey, and New England took more than half of those who arrived last year, the West, Northwest, and Far West took nearly all of the other half; while the South got 5,000 out of the 213,686.

There has been a revival of "interviewing" this week, Mr. B. F. Butler having been operated on by the *Herald* reporter, and had a variety of opinions, especially on the *Alabama* question, extracted from him. He dissents from Mr. Sumner's view as to the importance of the neutrality proclamation, and is entirely opposed to finding fault with England for sympathizing with the rebellion, but simply because he fears our objection might be used against us to prevent our sympathizing, as has been our custom from the beginning, with all the rebellions of the globe—a practice which he thinks we should not lightly abandon. His explanation of the conduct of England is that her great aim was the destruction of the United States; that she brought on the rebellion, first by establishing slavery in the United States, and then by emancipating her own slaves, and "teaching us that slavery was wrong, and emancipation and freedom only right," and having thus frightened the Southerners about their property, they rebelled to save it. His remedy for all this is "the waiting game." We are to wait till Great Britain is engaged in hostilities with some other power, and then we are to assail her in some insidious way, and make mince-meat of her.

Mr. Sumner has been "interviewed" also, and explained to the *Herald* correspondent all about the circumstances under which he made his speech, the effect it had produced in England, and Senator McCreery's reason for voting against the rejection of the treaty. He made one singular point—that the British Government ought to have been sharp enough not to negotiate with the ambassador of a retiring administration, which is quite true; but then we do not well understand how, "if he thought once or twice," as he says he did, of calling Mr. Thornton's "attention to this," he came to the conclusion "that he had no right to do it." Why not? If foreign governments are to be permitted to go behind the credentials of an American ambassador, and question his power to negotiate, on a general view of American home politics, what would there be so dreadful in an American politician dropping a hint, so as to put them on their guard? What interest of either country has been served by allowing the Johnson negotiations to go on for months without a word of warning from any quarter, except the newspapers, when a very few words from a man in Mr. Sumner's position would have excited caution?

We cannot very well imagine a worse use for a United States senator to put himself to in his vacation than going about as Senator Wilson has been doing, haranguing working-men with the view of persuading them that the United States Attorney-General does not know how to interpret United States statutes, and that the meaning of them is to be got at by consulting stump orators. If ever there was a bunkum bill introduced into Congress, it was the eight-hour bill; and Mr. Wilson's explanation that it was not only intended to relieve the Government employees, but set a good example to private firms, only aggravates it. Who, we should like to know, has furnished the Government with money for experiments in sociology; and if these experiments are once begun, where are they to stop? Why should not the Government try whether phalansteries are possible, or set up a "free bank?" Moreover, we should like to be informed what right it has to make any of its servants a present of two hours' labor a day, when millions of taxpayers are working from dawn to dark for a bare living, and when its debts are lying unpaid and its paper is at a discount?

News from Cuba there may be said to be none. Most of the news *about* Cuba consists of the history of fairs, concerts, and other entertainments got up in this city by Cuban sympathizers. One of them has written to us, enclosing a sanguinary-looking card of admission to a Cuban meeting, and asking us triumphantly how we account for the continued despatch of Spanish troops to the island, if there be, as we say, no "insurgents" on it. To which we reply, by an insurgent we mean not any man who chooses to take a gun or knife and go about cursing the government and disturbing the peace, but one of an organized, armed body, with a chief and a defined plan of operations. We have as yet seen no reason to believe that there is any such body in Cuba; but we are open to conviction. That there are plenty of malcontents and marauders, keeping up disturbances with a view of robbing, burning, fatiguing the troops, and furnishing a basis for the intrigues of their countrymen here, we do not doubt. But where is the man who has seen a Spanish soldier wounded in fight? Where are the wounded on either side, and the prisoners? What are the names of the battle-fields? That the country is in a dreadful condition, and that the Spanish volunteers are an armed and bloodthirsty mob, we do not deny. Mexico has accorded the Cubans "belligerent rights," and it would be well for her if she could send over some of her own "belligerents" along with the "rights." Every one of her provimces seems to have a rebellion of its own, and, between them all, there must be belligerency enough in the country to supply a dozen struggling nationalities. There is now a grand chance for the Fenians. Let them send to Mexico for as many belligerent rights as they think they will need to drive

British commerce off the sea. Unless Juarez is a less shrewd man than we take him to be, he will fill all orders for the article which may reach him, if accompanied with cash, and our advice to him would be to sell low, or, in other words, to cater for the many rather than the few. "Quick sales and small profits" should be his motto.

It turns out that the report sent by Cable that Sir Rutherford Alcock had telegraphed from China that "the Chinese were opposed to progress," was, as we suspected, a hoax. The proposition was so broad, and needed such a mass of facts and arguments to support it, that it would have taken a more than usually foolish minister to transmit it by telegraph across the globe, no matter what his sentiments about Chinese progress might be. Mr. Otway, the British Under Secretary for Foreign Affairs, has explained in the House of Commons that what Sir Rutherford Alcock really telegraphed, was that at the places in which the recent disturbances had taken place, there was "entire security and an improved position," and that accounts were received from all the ports of "the restoration of order and peace;" that Lord Clarendon's instructions—to which we referred in the *Nation* of last week—had been communicated to the Chinese Government, to the consuls and the admiral, and that there was "no more cause for anxiety at any point," and that English relations with the Chinese "had never been more satisfactory." In short, the new régime, the credit of which is due to American diplomacy, is likely to receive a fair trial. It is more and more plain that it is based not simply on humanity, but on sound policy. It is the interest of every civilized country to strengthen the dependence of the Chinese provinces on the Government at Pekin, because the break-up of the empire would be succeeded by a period of anarchy with which no Christian power could cope, and which would probably extinguish every spark of civilization amongst a third of the population of the globe.

The Marquis de la Valette, the French Minister of Foreign Affairs, who was supposed to be a bad, and was certainly an unpractised speaker, has covered himself with glory by a discourse in the Corps Législatif on the foreign policy of the Government, in which he says that the French and Prussian governments were never on better terms; that he had hopes of such an arrangement between the Pope and the Italian Government as would enable the French to evacuate Rome—the occupation being, he said, both onerous and distasteful to France. In answer to the charge of abandoning Greece, he said France had saved Greece from a war in which she would have been crushed, which he considered doing a good deal for her. The Belgian affair makes little progress, however, but the delay is telling in favor of the Belgians, both by exposing the absurdity of the French pretensions to the rest of Europe, and giving the French themselves time to reflect on them. Emile Ollivier has been disbarred by the Council of Advocates for becoming the standing political advocate, at a salary, for the Suez Canal Company, such a position being considered incompatible with the dignity and independence of a member of the French bar. The culprit has been defending himself in an amusing letter, in which he says he took the position in order to have more time and leisure for his political duties. Mr. Isaac Butt, of the Irish bar, accepted a somewhat similar appointment from an Indian rajah some years ago, and came near being expelled from the House of Commons for it, but, we believe, got off on the plea that it was a purely legal retainer, and did not bind him as a member of Parliament.

The Emperor has written a characteristic but yet singular letter of the kind which, if Mr. Ashley or Mr. Banks or Mr. Butler wrote it, we should call bunkum, to the Minister of State, calling, with much blowing of the Napoleonic trumpet, for an addition of two hundred and fifty francs a year to the pension of every soldier of the Republic and First Empire. He says that this will not only be a good way of doing honor to the memory of the great man, his uncle, on the hundredth return of his birthday, but "recall examples of patriotic devotedness to the minds of the young," and "awaken grand historical recollections." The letter has, however, been very coldly received by the press—first, because the First Empire is not in favor just now, Erckmann-Chatrian having destroyed the illusion of its great wars; and, secondly, because Frenchmen do not like to be told, as they are told in the present letter, that it was Napoleon I. "who, out of nothing, made Napoleon III. what he is." The popular impression in France has always been that it was the French people who made him what he is, and it is nearly as unpleasant to feel that they owe their ruler to an illustrious memory as to feel that they owe him to divine right. The canvass for the coming elections is going on actively, the Conservatives, Radicals, and Clericals forming three distinct parties, working through the prefects, the priests, and the stump and press respectively. The division between the Conservatives and Clericals is more marked than it has been for years, and it is through it that the Radicals expect to achieve most of their triumphs. In the meantime, everything looks peaceful. Marshal Niel says the army is on a peace footing, the number of men drafted for active service this year amounting only to 330,000, whereas it was formerly as high as 400,000, and that the present budget and the budget of 1870 are both peace budgets. Rentes are, accordingly, high and rising.

The Russian budget for 1869 has made its appearance, and calculates the ordinary gross receipts of the year at $287,655,845 (gold), but, deducting anticipated deficits and cost of collection, it will probably not be much, if any, over $250,000,000. Some of the items in the expenditure are worth notice, and help to depict the condition of Russian society. For instance, the civil list, including the allowances of the various members of the Imperial family, and the expenses of the Court, amounts to $6,661,414, while the whole of the clergy and their families, 600,000 strong, only get $3,983,302. The civil list, of course, does not include the private property of the Romanoff family, which is enormous. The army costs $102,580,581; the navy, only $12,855,816. There is a slight increase, about $1,500,000, in the military expenditure this year. The sum of $56,075,853 is absorbed by the interest and redemption of the public debt. There will be a deficit of about $10,000,000, but this will be met by a surplus from last year. There are in the budget, however, several gratifying signs of progress. There is an increase of $1,500,000 in the sum devoted to education since 1866, and there has been an increase of about the same amount in the judicial expenses, and this not owing to increase of crime, but to reforms in the administration of justice, and notably to the publicity of the trials, and greater care and time expended on the procedure, of which we spoke last week. The mere publication of the budget is, to those who remember the government of the Czar Nicholas, a great step in advance. There seems, too, to be growing application amongst the functionaries to the study of scientific finance, and several important experiments and changes in the mode of taxation are talked of, such as the substitution of a house-tax for the present poll-tax, and the committal to the communes themselves of the task of assessing and collecting it.

The news from Hungary is not in all respects hopeful. The reported triumph of the Deákists at the late election was not much of a triumph, it appears, after all. Deák, as most of our readers know, represented the policy which resulted in the present "dual" or federal union with Austria, as opposed to the policy of merely personal union, advocated by the more advanced liberals, and the policy of total separation, advocated by the extreme radicals, headed by Kossuth. The Andrassy, or Deákist Ministry, however, came into office after the surrender of Austria, and has held its own bravely ever since; but the last election, though leaving it a majority still, has cut it down by one-third, and the extreme or Kossuth radicals have made heavy gains, on a broad democratic platform, threatening a general uprooting of existing men and institutions, and the fashioning of all things anew. The Andrassy Ministry represents the union with Austria, and its overthrow would probably involve a split with the Germans, while the too rapid development of the extreme radical policy, in a region in which races, creeds, languages, and traditions are still mingled in great variety, would probably produce awful confusion. The ministry, it is thought, will seek to save itself by a series of practical measures of reform, which will appease the radicals without alarming the moderates.

"STATESMEN" IN THE CABINET.

In a late number of the Chicago *Tribune*, a paper which we always read with respect, and differ from with hesitation, we find an article which has already attracted and certainly deserves more than passing notice. It opens with these words:

"When General Grant was inducted into the Presidential office on the 4th of March last, he was stronger in the respect and confidence of the people than any other man who has filled that high office during the present generation. The only predecessor comparable to him in this regard was Mr. Lincoln, but Mr. Lincoln never saw the day when he was free from the active, determined hostility of a powerful political party. This party, when General Grant was inaugurated, had not only been crushed by defeat, but conquered by a latent admiration of the cool, silent, sure-footed antagonist who had overthrown them on so many and such diverse fields of action. The Republican party, so lately torn asunder by the Impeachment trial, was again united and irresistible in its loyalty to its elected chief. On that day it may be safely said that President Grant was the strongest man in Christendom; for his power was rooted in the affections of a free people."

It seems, however, that this is no longer so:

"There has been a change. Two months have passed away, and it cannot be affirmed that we have a strong administration. Its moral power has been frittered away by small absurdities, which, fortunately, have no bearing upon the sincerity, the truthfulness, or the high purpose of the President or his advisers. We doubt if there ever was an administration with more good intentions at heart, or less aptitude for carrying them into effect."

For ourselves, we are inclined to think the Administration, on the whole, rather a strong one, certainly not an absurd one; but, before giving our reasons for thus differing from the *Tribune*, let us examine in detail the specifications of the above charge. Grant's first mistake consisted, we understand, in supposing that "a government is the same thing as an army, and can be carried on, like a battle, with horse, foot, and artillery." What this means we are unable to say, unless it refers to the selection of Comstock and Porter as private secretaries, in which case it seems rather too like the sportive arguments of the *World* to call for serious discussion. It may mean, to be sure, the selection of General Rawlins for the War Department, inasmuch as that appointment is subsequently objected to; but as every one knows that the War Department is every year growing to be of less and less importance, and as very little interest was felt in the nomination, it is hardly fair to call the new Secretary a "government by horse, foot, and artillery." The second objection is the old one, that there are no "statesmen" in the Cabinet. "To carry on a government, statesmen are needed who understand the ideas, the wants, and the temperament of the people, and whose conjoint experience and wisdom may form a body of opinion in harmony with the nation, or at least with the party in power." But there are no statesmen in the Administration, it seems. To begin with—"the Secretary of State has come down to us from a former generation, and is not in harmony with the ideas of our day. He is a gentleman of a pure and noble type, but is not the man to conduct the diplomacy of a progressive nation like ours."

As no facts are mentioned in support of this point, we shall take the liberty of giving our reasons for arriving at a totally opposite conclusion with regard to Mr. Fish. He has, within the last two months, been placed in a position of great difficulty; one in which tact and courage and knowledge were eminently necessary; one in which he found himself the butt of one party and the stumbling-block of another; where the signing of his name might have made him the idol of a large part of the public, while withholding it made him nothing more than he was before—"a gentleman of pure and noble type, who came down to us from a former generation." We refer, of course, to the Cuban agitation, in which, thus far, Mr. Fish has shown just those qualities which the *Tribune* says he lacks. The hot-headed zealots who are raising men and money to drag us into a violation of the duty we owe to a friendly nation, would no doubt have dubbed Mr. Fish "statesman" if he had assisted their schemes by either material or moral aid. If he had consented to the plan by which New York was to be made the base of piratical operations against Spain, we should have heard in many quarters that he was just the man to take a leading position in a great and progressive government. It requires at times considerable nerve to be inactive; in diplomatic affairs, the kind of nerve the country most urgently needs just now is that kind which enables a public man to resist clamor. Let us judge the "statesmen," and the gentleman who has been so unfortunate as to come down to us from a former generation, by their fruits. One has maintained the country in an honorable position during a most anxious moment. The others have been doing their best to embroil us with two friendly powers. The result is that one high-spirited nation writhes under a gratuitous insult; while the powerful dependency of another brings in an old bill for damages against us. The House speaks through Mr. Banks, and Spain is outraged. The Senate allows Mr. Chandler to rave for a moment, and the darling aim of its policy—the annexation of Canada—is delayed for years. And these are "statesmen!"

The Secretary of the Treasury ought to have the *Tribune's* approval, because Mr. Boutwell happens to belong to the very class which is popularly believed to "understand the ideas, the wants, and the temperaments of the people," and which does actually "take a leading position in a great and progressive government." He is distinctly and eminently a "statesman," having risen from an obscure position to one of the highest by means of an exhaustive study of the whole field of state-craft, comprising the four great branches of the wires, the caucus, the convention, and the stump; having thereafter become distinguished for an invincible adhesion to the cardinal maxim of his school—that of always yielding to momentary pressure; and, finally, having been forced into the Cabinet by that very class which the *Tribune* insists is not fairly represented—those "statesmen" who only a few weeks ago talked of Mr. Boutwell as the only respectable appointment Grant had made. Those who believe, with us, that "statesmen" of this kind are the curse of the country, may well object to Mr. Boutwell; but how any one who really considers the creatures the caucus produces a national blessing can express dissatisfaction, we cannot understand.

The Attorney-General, the *Tribune* informs its readers, "is probably competent to discharge the clerical duties of his office," but "prior to his elevation was not in any way distinguished as a statesman, or held by his acquaintances as better qualified to assume the reins of government than the average of his neighbors in the same plane of society." The same statement is made of the Postmaster-General and the Secretary of the Interior. How far this is true of General Cox and Mr. Creswell, any one may judge for himself; but as for Mr. Hoar, the assertion is one of the most extraordinary yet made about him. Before his nomination as Attorney-General, he was the ablest judge on the Supreme Bench of Massachusetts, and his acquaintances held him so far qualified to assume the reins of government that he had been offered, a few months before, the governorship of the State. Since his accession to office, he has shown himself admirably fitted for his work by construing statutes according to legal principles, and not altering their meaning, as he has been urged to do by the "statesmen," to suit party necessities. We should like, in all seriousness, to know whether Mr. Hoar interpreting the eight-hour law in accordance with received canons, or the Hon. Henry Wilson interpreting it according to the dictates of his individual emotions, is the greater "statesman."

Only two months since the whole country was wild with joy over the idea of Grant's dislike of the "politicians." He was going to reform the government, purify the administration, introduce ability and efficiency where sloth and incompetency had been running riot; and he was to do it all in the turn of a hand. The loftiest expectations were entertained, and were naturally disappointed. When the Cabinet was announced, instead of finding seven Olympian gods seated about the President, we found seven quiet gentlemen, most of whom were—as we had asked that they should be—not politicians. The managing men and wire-pullers who were not called in were of course disgusted, and have been laboring ever since to persuade the public that an incompetent Cabinet has been selected. Their motives are simple enough; they want those offices themselves, and, as yet, have only got one of them, the Treasury. Accordingly, we have charges, insinuations, rumors, and "little digs" of every kind. To-day, Mr. Fish is tired of Washington, and is to resign; to-morrow, Judge Hoar is to retire; the next day, it is Mr. Cox. Of course we do not for a moment imply that the Chicago *Tribune* is influenced by any other motives than a desire for improvement in the public service; but how the public service is to be improved by an influx of "statesmen" we

do not see. Will several more Boutwells help us? Would Gen. Banks do better than Mr. Fish as Secretary of State? Would Gen. Logan be preferable to Gen. Rawlins as Secretary of War? How would Gen. Butler do for the Department of the Interior? These are our "statesmen;" and it seems to us that before the Chicago *Tribune* lends its weight to the attack they are now covertly making on the Administration, it would be well to see what improvement we should obtain by change.

The great and crying faults of Grant's administration thus far have been the appointment of several worthless men to important offices, and his adherence to the old principle of rotation. These cannot be too severely denounced; but, as regards the Cabinet and the general policy of the Government, for heaven's sake let us for once give the President at least six months' trial. He has now been two months in office, and already the bombardment of him has begun, although he has, during the whole period, been overwhelmed by a crowd of persistent, unscrupulous, and corrupt office-seekers, mostly the "statesmen" from amongst whom he is abused for not selecting his advisers. No human brain or human character could stand such a test; and the immediate and pressing work for patriotic men is not abuse of Grant, but the rousing of popular indignation against a system which makes both the talents and virtues of its best citizens worthless to the nation.

THE ŒCUMENICAL COUNCIL AND MODERN BELIEVERS.

The growing laxity of the bonds between church and state in England, Austria, Italy, and Spain, and the fierce discussions which are raging all over the European continent touching the relations in which the church should stand to the state in an ideal community, together with the near approach of the meeting of the Œcumenical Council at Rome, are all signs that we have almost reached the close of the first stage in the revolt of freedom against authority which began with the Reformation. What that great revolution really secured for the individual in most civilized countries, was simply the privilege of worshipping God in his own way, subject to certain inconveniences and restrictions. Nobody has, in any European country, until very recently, dissented from the established form of faith without a certain amount of suffering in mind, body, or estate. Either he was excluded from certain offices, or was compelled to contribute to funds from which he reaped no benefit, or was shut out from certain educational advantages, or was subjected to a certain amount of social discredit. This was true even of the most advanced countries. In the less advanced ones, like Spain, it was only by great prudence and self-denial that he avoided getting into jail or losing his goods. All this was the natural and legitimate consequence of the doctrine, which survived the Reformation, that the state, being a moral person, is bound to have a religion of its own. Now the state having no means of expressing its opinions on any subject, except by means of commands sanctioned by penalties, it could only be religious by adopting some one creed, and slightly persecuting such persons as did not embrace it. What is meant by a state church is, in short, a church to which the state testifies its devotion by inflicting some penalty on all who do not belong to it.

Such is the influence of habit and of the sentiment of antiquity on the mass of mankind, that there is no knowing how long the church might have maintained its temporal supremacy if it had not allied itself with political tyranny. If it had only used the "arm of flesh" with moderation, and had contented itself with a moderate amount of deference and profits, it might perhaps have avoided being put on an equality with dissenters for one or two centuries more; but its horror of movement and of change has really precipitated its overthrow as far as this world is concerned. Before the French Revolution the mass of the higher clergy belonged to the aristocratic caste, and naturally sided with the privileged orders against the populace. Since the Revolution, its ranks have everywhere been largely recruited from the people; but the new class of priests and bishops have been just as zealous defenders of the absolute authority of pope and king as the old ones were of the feudal constitution of society. So the revolt has gone on, and, the absolute authority of the crown having been everywhere overthrown, the principle of a state religion is sharing its fate.

What is alarming churchmen most, however, is not so much the threatened loss of the temporal supremacy as the spirit in which the revolt against its supremacy is conducted. The fierceness and bitterness of the early reformers are no longer visible amongst its enemies. Priests run no risk of being mobbed or hanged; convents run no risk of being sacked. There is no enthusiasm whatever in the work of demolition. In the new movement there are no Luthers, or Knoxes, or Gustavuses. Nobody wants either to make martyrs or be a martyr himself. The prevailing temper of the anti-state churchmen, indeed, both in England, Austria, and Italy, is one of contemptuous indifference. They treat the connection between church and state as an old and rather tiresome joke, of which the world has had more than it can bear. A temper of this kind your genuine ecclesiastic finds it much harder to contend against than real persecuting hatred. Dr. Newman, in one of his farewell sermons before he went over to Rome, spoke of this easy, tolerant spirit of the times as to him the saddest of all modern social phenomena, and declared, with a good deal of insight, that he would prefer superstition, no matter how dark.

A correspondent of the London *Times*, who has been writing some valuable letters to that journal on French politics and society, strikingly illustrates this point in describing the complete indifference with which the French public, Catholic though it be, views the approaching meeting of the Œcumenical Council. Nobody seems to care in the least what conclusions that body may reach. If it promulgates any diatribes against modern society, after the manner of the Pope's Syllabus, people will simply pay no attention to them. If it produces any new dogmas for the acceptance of the faithful, the faithful will either try to believe them or not, each individual as he pleases. Let them be easy or hard to swallow, there will be no controversy about them—they will make no recusants or schismatics. All French Catholics are willing to believe, the correspondent says, anything that the Church may prescribe as worthy of belief, if they can do so without inconvenience; if it be too hard work to believe it, they will simply let it alone. Fuss about it they will not make.

In France, too, as in other countries, the meeting of the Council is looked for rather with what may be called antiquarian than with religious interest. People's imagination is impressed most by the fact that it is an ancient assemblage, which has not met for three hundred years, and which, when it last met, was supposed to be capable of revealing literally and exactly the Divine thought on all matters of human concern. It comes before the world now, therefore, rather as a mediæval curiosity than a living force.

An Italian paper, which professes to have seen a list of the subjects to be debated and passed upon by the Council, mentions amongst the number the dogma of the infallibility of the Pope, and of his supremacy over the Council itself, which the Council is to affirm and promulgate; and the doctrine of "the moral necessity of the temporal power," the affirmation of which by the Council will, the Papal authorities flatter themselves, "produce a salutary effect on the ideas of princes and peoples, consolidate the power of the Church," and lead, sooner or later, to the restitution of the provinces usurped by the Revolution. Now, the discussion and promulgation of such doctrines by the Council as the will of the Almighty, so far from affecting "the ideas of princes and peoples," will simply help to heighten the pictorial effect of the show. The Œcumenical Council, talking as moderns talk, and thinking as moderns think, would, as a spectacle, be very imperfect; but, uttering the Divine will with regard to the proper division of the soil of Italy, and authoritatively informing us that any old Italian priest whom the cardinals may select for the office of Pope can never by any possibility be mistaken on any subject on which he deliberately makes up his mind and utters it, the entertainment will be faultless. It will give us a real glimpse, and probably a last one, of the sixteenth century, and will increase the number of the intellectual puzzles which the Church now offers to the enquirer from the outside. He is already a little staggered by the complete repudiation demanded of him by the Church, of the authority of the very reason through which she works his conversion

into the true faith; but he will be fairly nonplussed by being called on to accept the dogma of the infallibility of the Pope at the hands of an authority outside the Pope. If the Pope be infallible, there is no need of the Council; and all he has to do to impose on Christians the obligation of accepting him as such, is to promulgate the doctrine himself.

Amongst the minor incidents which mark the growing wideness of the gulf which separates the Church from the modern world, is the late speech of Señor Castelar in the Spanish Cortes in defence of religious liberty, and in reply to an outspoken assertion of the right of persecution by a priest named Manterola. Few finer bursts of eloquence are to be found in parliamentary annals, and its merit was heightened by the fact that it was uttered in real debate—that is, was spoken *impromptu* in reply to an opponent who had just sat down. It was in many ways a model parliamentary speech, that of a consummate master of language, dealing with a subject he thoroughly understands, and on which he deeply feels; and its effect was heightened by its being spoken in Madrid, by a Spaniard, before an audience unused for centuries to free speech on any subject, and, above all, on the rights of conscience; and it closed with a peroration by which any audience anywhere might well have been moved. And yet, out of Spain, it will be read mainly as a rhetorical feat. The positions it assails have in other civilized countries been carried; the doctrines it preaches are already, in the rest of Christendom, set down amongst the commonplace assumptions to which men hardly think it necessary to refer specifically, either in conversation or debate. To know how far the world has travelled since the days of the Calas, one can hardly do better than watch the fight which the Spanish Liberals are carrying on.

THE NEWSPAPER SCANDAL.

Nearly every newspaper in the country—some of the New York papers, by what must have been an almost superhuman effort, preserving strict silence—has had something to say about a long article published in the *Sun* last week, and interspersed with extracts from private letters, its object being to prove the managing editor of the New York *Tribune* a corrupt and intriguing person. The theory—to use a legal phrase—of the writer of the article is that the managing editor, having secured the control of the *Tribune*, established, in company with two young friends of his—old schoolfellows, and fellow-employees in the office of Colonel Forney's *Press*—two daily papers in Philadelphia, the *Post* and the *Star*, which were to be the exponents of extreme Radical opinions; that, not having capital sufficient to support the enterprise in its early struggling days, he deliberately went to work to sell its support to Chase, Cameron, Grow, and Brewster, or, in fact, any politician who needed support, and was supposed to be able and willing to pay for it; that, to make the support of such young and weakly periodicals worth purchasing, a promise of the *Tribune's* aid, or at least silence, was thrown into the bargain; that, besides this, substantial aid was furnished to the two newspapers in the shape of correspondence from writers paid and employed by the *Tribune*, and that the Associated Press despatches were stolen for them in the *Tribune* office with the knowledge and connivance of the managing editor; and that, becoming emboldened by his success as an intriguer, he at last set on foot a scheme for ousting the present publisher of the *Tribune*, and installing the publisher of the *Post* in his place.

When we come to examine the evidence adduced in support of this theory, we are obliged, in the first place, to discard completely the running commentary by which the letters are accompanied. It is very amusing, no doubt, but it is evidently the composition of a bitter enemy of the managing editor, and makes no pretence anywhere of being a sober narrative. Its assertions, too, are those of an anonymous writer, whose good faith or accuracy we have no means of testing. There then remain the private letters. Mr. Young, the managing editor of the *Tribune*, in a letter to the *Evening Post*, and Mr. Stockton, the editor of the Philadelphia *Post*, in an article in his own paper, take great pains to draw attention to the baseness of the person who handed these letters over to the *Sun* for publication; but this is really a matter of comparatively small importance to the public. The matter of interest to the public is whether these letters are genuine, and, if so, whether they afford fair ground for believing that the managing editor of the *Tribune* really did get up Radical papers in Philadelphia, offer their support and that of the *Tribune* for sale, and help them along by the aid of *Tribune* correspondence and purloined *Tribune* despatches. We are bound to say we do not find in the correspondence—the genuineness of which nobody has as yet questioned—any *proof* that the support of the *Tribune* was offered to anybody as an inducement to advance money to the *Post*, although we do learn from it that Mr. Young did write to Philadelphia, "as a *Tribune* man," "to pave the way for getting money out of the League for the *Post*;" and it does appear that there was in the minds of the proprietors of these journals a fixed determination, which in the case of Cameron and Grow, at least, was executed, of applying to politicians for loans of money, either directly or in the form of purchase of shares. There would, of course, be nothing to remark upon in this if it were a purely commercial transaction, or if the lenders were not men in public life, eagerly seeking political honors. But Cameron and Grow were; and their being in public life, and engaged in the quest of certain offices, is expressly mentioned in the letters as one of the reasons why they would be likely to lend the money. We are warranted, therefore, in the inference that they did lend it, in consideration of a promise of such support, and this inference will of course be strengthened by the political reputation of the gentlemen who were approached in this way. Great and patriotic men they may be, but pure men they are not commonly supposed to be. It is right to add, however, that the editor of the *Post* declares that the money was lent out of personal regard for the borrowers, and that the *Post* has not supported Mr. Cameron or anybody else as a consequence of the loan. Mr. Brewster also writes that he lent his share from the same motives, and Mr. Cameron, ingenuous man that he is, expresses "great astonishment and surprise" at the whole affair.

It appears also from the correspondence that despatches for the *Post* were purloined from the *Tribune* office; that Mr. Simonton, the agent of the Associated Press, complained of it; and that Mr. Young instituted a "careful investigation," but discovered nothing; that he gave Mr. Simonton to understand that the report that the *Post* was "run by parties connected with the *Tribune*" was untrue, that none of the conductors of the *Post* had anything to do with the *Tribune*, and suggested that the leak in the despatches probably occurred in the office of the Philadelphia *Press*. There appears, however, from Mr. Young's private correspondence with the conductors of the *Post*, to be no doubt that he was at least cognizant of the leak; and the editor of the *Post* says that he (the editor) did "employ" the night editor of the *Tribune* to steal the despatches, and that "he continued to do so for some months, till the source of their information was discovered." "With this arrangement," (!) he adds, "Mr. Young had nothing to do. He may have suspected it; he was never informed of it by me. It was by Mr. Young's direct influence the matter was stopped." The point to be cleared up here is, whether it was stopped before the agent of the Associated Press set traps to detect the perpetrators of the fraud, and whether it is correct to say that Mr. Young had "nothing to do with the arrangement." A month before Mr. Simonton's complaint, Mr. Young really wrote to Philadelphia as follows:

"New York, Oct. 9, 1867.

"Dear Boys: Have just sent condensation of column Cable, and all else. I did not send election details, supposing you would have them from *Press*. I hope I did not err in this, as I might have given you a column. The Cable was good, and I sent to make sure, signing Warner's name."

Now, why should an affair of this kind—full as it is of meanness and baseness from beginning to end—be a matter of any interest to the public at all? What makes it worth while to comment on it? This, and this only—that it affects deeply the character and influence of the press, and on the character and influence of the press largely depends, in our opinion, the possibility of getting the country out of the slough of corruption in which it now wallows, without resort to very violent and dangerous remedies. The *Sun's* theory that the exposure, even if well founded, affects nobody but Mr. Young, would, if correct, leave the *Sun* itself without the shadow of an excuse for making it. If Mr. Young were simply Mr. Young, the *Sun* could hardly justify the devotion of four columns to the publication of his private letters, and the exposure of his private affairs. What makes his doings and those of his friends in Philadelphia of the least importance to the world at large is that he has, during the last three eventful years, had almost entire control of one of the most important instruments for the moulding of public opinion in this country; and that the gentleman in Philadelphia who now acknowledges that he paid a man for whole months to steal despatches from another newspaper office, to be used for his own pecuniary benefit, was at the time he did it engaged in "educating the party" up to higher moral ground about the negro. Considering the kind of people some of the "educators" of the party during the last five years have been, the wonder is that it should be even as decent and well-behaved as it is.

It is almost impossible to overestimate the influence which a great

daily paper may exert on the fortunes of a public man; and if it make a profession of zeal and earnestness, of course its influence is all the greater. The mere ability which the editor of such a paper possesses of saying anything he pleases to fifty or sixty thousand persons six times a week, gives him enormous power, even if the things he says be never so foolish or absurd. Iteration is in our day one of the greatest of the social forces, and talent, learning, and logic have hard work to contend with it. But apart from his editorial comments altogether, he has, in the fact that he supplies and arranges news for the community, the means of making or marring almost any politician's career. He may consign a man to obscurity, or keep him in it, by merely keeping silence about him, or by merely treating his doings or sayings as matters of slight importance, or by making inuendoes about his doings and sayings, or spreading false reports about him, or attributing base motives to him. Or he may pick out a worthless adventurer, without a single feature in his character or career to recommend him to the consideration of an honest man, and gradually puff him into fame and honor by respectful allusions, eulogistic "notices," and elaborate reports of his speeches. How all this is done, and what effect it may produce on the reputation of the very best men and very worst men, anybody may see who will take the trouble to read the *Tribune's* Washington correspondence or its editorial articles during the Impeachment trial.

Now, nobody will deny that the character of the men who control machinery of this kind is of the last importance to the community. It ought not to be in the hands of persons who have not earned the public confidence, and if it remains in the hands of persons who have forfeited public confidence, the country loses what is now almost the sole remaining instrument of reform. The influence of all other agencies on public affairs is comparatively slight. The periodical, and above all the daily, press is engrossing more and more of public attention; and unless its morality grows with its strength, and the men who manage it, having so much to sell, are not respectable men, we might as well ask the knaves, without more ado, to divide our substance between them. Politicians nobody trusts; the judiciary fewer trust every day; the pulpit has greatly declined in influence; and if the newspapers go over to the enemy, and sit at his orgies, what is to become of us? It is therefore greatly to be regretted that Mr. Young has not been able to deny the genuineness of the letters, or else offer a satisfactory explanation of them. The bringing of a libel suit against the *Sun* does not meet the difficulty, because the libel suit cannot be tried for two years to come, and because we observe by Mr. Young's affidavit, on which the order of arrest was obtained, that he does not meet any of the serious points raised by the letters themselves.

ART STUDY IN THE IMPERIAL SCHOOL AT PARIS.

II.

GÉRÔME.

Among a set of French Bohemians the acclimation of a stranger is quick and kind—particularly, I may modestly say, an American stranger. Native saplings are apt to meet with rougher weather, as I shall perhaps have occasion to set forth on a future opportunity. But the American, at this moment, is the world's Fortunatus. To be sure, among what I have called the rustic Parisians, his elevation may involve something. Confounded with the Brazilian, he has the responsible advantage of being putatively made out of money, and of being expected to talk Portuguese. In the first week of my school-life another *nouveau*, a little, yellow, kinky-headed Venezuelan, was pushed up with a great deal of pageantry, and a circle formed to see us embrace as compatriots. Then, too, confounded a little with the Englishman, he partakes with him the repute of knowing how to box, and is expected occasionally, when out of temper, to distribute, with the mere wind of his fist, the persons of his drama. You individually, of course, may be neither Midas nor Milo; but, as we all know, the advantage next to holding three bowers and an ace, is the advantage of being suspected to hold them.

There stood at first, however, between me and the perfect sympathy of my new comrades a barrier formed of the following articles: two rush-seat stools—one high and the other low, an easel made of deal, and a few napoléons for *bien-venu*. The most engaging freshman, until proved good for so much, is only experimental. A chronic looseness in the compliance has made the studio sceptical. Prompt loyalty to the *bien-venu*, to *tabourets* major and minor, and to the easel, is a test. The committee who made this demand was composed of sachems of the school, young men of affairs, perfectly accustomed to that versatile grace with which a boon companion, if he is a Frenchman, can wriggle out of a proposed expense. Settling these taxes was made the object of a meeting in the chamber occupied by the treasurer of this delegation, a fat youth with a Bourbon jaw. After some ciphering, the furniture was ordered, the *bien-venu* estimated and paid. And then our treasurer, expanding, made coffee at a little cooking-range which occupied the bottom of the closet where his Sunday coat was, and handed it with effusion as we sat honorably on his bed, and rested two pudgy hands, finished with nails the shape of shoeing-horns, upon my shoulders, as he said, with splendid hilarity, "You 'll find us gay, my friend; you 'll not find us Calvinists."

Then, when the care of the kirschwasser bottle and the black soap had been farmed out to the marmoset in spectacles, my habilitation was complete, and we were very comfortable.

We were particularly well attuned, I fancied, on the third morning of my attendance. It was foggy as ever. On several days during the winter just past the fog has acted as special constable, and incontinently closed the school, where work was impossible. I had arrived early, and my comrades, less like human forms than blank misgivings, as of creatures moving about in worlds not realized, were arranging themselves in the tobacco-smoke, setting palettes, filling pipes, trimming crayons, moistening bits of bread, and wringing them into erasing-balls in the corners of handkerchiefs. The creaking of easels, the banging of color-boxes and of stools put into place without much tenderness, formed an orchestra to which snatches of various student-songs were joined *obligato* by independent performers. All these doings, taken up with so much bustle in the morning twilight by such an incongruous and arbitrarily joined party, reminded me for a long time of hotel scenes, when one staggers up by starlight in one's sleep for a particular start, and knocks against dreaming waiters and impromptu breakfasters at an unconvincing *table d'hôte*. Clinging to this fancy, I long managed to relieve the chill by imagining an adventurous and holiday situation, until presently the chill vanished, and the thing became easy as any routine becomes easy.

The model, in his Antinous attitude, hung his curled head, poring over the promontories formed by his breast and knee, and regarding the toes of his right foot, among which he seemed to find something fascinating. Blanc, leaning over my shoulder familiarly, convinced himself of several errors in what I had done; his own sketch was beyond criticism, having rested inchoate within the notched perpendicular line with which many artists begin their design. Presently the Italian, who had several times thrown up his arms for relief, yielded to his ennui, and fairly nodded in slumber as he stood. Blanc, the idlest of capable creatures, was outraged.

"Mais la tête donc, sacrrrré—la tête, voyons, imbecile!" he sputtered, and, rolling up a morsel of half-dried paint from a palette, he hit the man, with his exquisite aim, on the lips, where the color stuck.

The fellow took it patiently, and apologetically showed his teeth in what was a tricolored smile.

Two students were dexterously fencing with mahl-sticks. He whom I have called the secretary was describing, with asthmatic laughter, an adventure of the previous evening:

"You see it was at the Châtelet, and Alphonse and the Grand Lou-lou and I, we determined to extirpate the *claque*. They were in full force, chiming in regularly, at every attitude of the *première dame*, with their cursed rataplan, like the clatter of an alarm-clock. We were safe in the Paradise, Alphonse, Grand Lou-lou, and I, and an ally in the shape of a *spirituel* butcher. We leaned over the edge and mocked them, and then drew back invisible, like the wardrobe scene in *Hernani*. As for me, I am eloquent, and I gave them reasons. 'You insult the appreciation of competent persons,' I said to them; 'there are gods in the gallery who can select the points better than you, idiots, cretins, poor five-centime creatures, inappreciable change for a franc and a glass of wine, unhappy echoes, lemures, larvæ——'"

"Why, look you!" spoke up a student who had followed the recital with involuntary warmth, "you assault the oldest tradition of the French stage! I say you deliver yourself to combat the machinery of Talma, of Mars, of Victor Hugo himself——"

"*Tiens, tiens*," said the secretary, surprised, "it is the *bambino!* What is the matter, *bambino?* Who gave you an opinion, *bambino?* What do you know about the question, my excellent *bambino?*"

"I," said the poor marmoset, drawing back,—"I was in the *claque*."

The door opened upon this; a singular subdued hiss ran round the room.

Hssp!—a scarcely audible sound that seemed to spread as the ripple of a petrifying spring. The great fellows and little fellows alike turned *sage* on the instant as the "Patron" entered, and began to labor with as much assiduity as was compatible with the violent tension which possessed them.

The model also was affected, and changed from an automaton to a marble. The universal uproar had suddenly and confusingly fallen—the effect ordinarily perceived on the shutting of the door of a noisy room having on this occasion been exactly reproduced by the opening of one. M. Gérôme, with the punctilio so sternly cherished by the Latin Quarter, uncovered at the moment of entering. With a brisk step, he carried his hat to the dressing-room, where a peg is always left unoccupied for him, by a miracle I have not yet learned to understand. Then, reappearing among us, he decisively displaced the boy at the nearest easel, and took a good hard stare at the model from that point of view.

A year ago, I may remark by the way, M. Jean Léon Gérôme was still to be called young. In the effect made by his sooty hair the white threads were not evident, his eyes were quick and bright like living jets, and his cheeks were still firm with flesh and blood. But a year ago he made a tour in the East, from which he came back in three months suddenly grey—it would seem as if he had slept awhile in Chillon. At the same time his broad olive forehead had turned to terra-cotta, his cheeks had chapped into fissures, and his eyes had changed from sparkling to glossy. The alertness and directness of his movements still continue, and give him the stamp of what is called a capable man.

His finish and love of line are carried into his professorship, and, so to speak, make one of his class-mornings like one of his pictures. Beginning at a corner of the studio floor, as if it were the corner of a panel, he progressively and minutely covers it with oversight, as he covers his pictures with drawing—slighting no person, omitting no duty, never failing, and never warning. His pupils come *seriatim* under his criticism, which is able, searching, adaptive—yet unsympathetic—conscientious, implacable, and admirable. He does not get sick and stay away; he does not come back and deliver an afterthought: as his pictures are without atmosphere, so his entertainment of the young intelligences committed to him is without perspective. To say this is, it seems to me, to describe a most excellent professor. His pupils accept him absolutely.

And here I may allow myself for this once a little excursion into technics, without which I could never finish my outline of Gérôme as professor. I will try to save a few of the searching strictures that dropped every minute from his lips. As he began his round, a few of his earlier criticisms I could not hear, on account of distance. But I noticed the pantomime—commenced in each case with a stare, in which the model was covered from just the same region in the air which had been occupied by the head of the pupil; then a study of the work; then, perhaps, a little skirmishing with a mahl-stick or plumb-bob, introduced without interrupting the most unhesitating monologue. In support of the latter, M. Gérôme pretty constantly applied the gesture of the Gallic Minerva—the laying of the forefinger on the nose, which is rhythmically tapped, while the head is thrust down and forward between the shoulders. In France, an argument, delivered with the hands down, may be seductive and even imposing; it is only when fortified with this gesture that it becomes irrefutable. In front of me squatted a little fellow in a faded coat, Blavet, curled near my feet on a color-box. Directly Gérôme himself had dropped easily into this unpretending posture, whence he delivered his oracle in nearly the attitude of an Oriental teacher:

"Observe," he said, looking earnestly up—Blavet had begun a very neat drawing—"your muscles are inlaid against one another. They are carpentered. There is a something—*that* is not the vivacity of flesh. Go next Sunday to the Louvre and observe some of the drawings of Raphael. He does not use so much work as you, yet one feels the elasticity of his flesh, packed together of contractile fibres, based upon bone, and sheathed in satin. You tell me you will express that texture afterward. I tell you Raphael expressed it from the first stroke!"

Behind me stood Grand Gus, painting, with his scrub of hair picked out fibre by fibre, like a Fan negro's, until it made a smouldering halo against the window.

"Your color rages," said the master; "that of the model is lambent. Besides, your figure is tumbling, it is not on its legs. I will save you labor by telling you the simplest way of correcting this. Turn the canvas upside down and draw it over. The error is radical."

To another he said: "You do not yet understand the continuity of forms in nature. You accent too highly. That is vulgarity. For instance: it appears to you that the internal and external *vastus*, when gathered in at the knee, cause a break in the outline, like the cap of a pillar. Similarly, under the calf. You are deceived, and should use your eyes; the accent is not in the line, it is in the shading beside the line, and even there far more slightly than you think. Here again, the vein crosses the fore-arm. You make a hideous saliency. Nature never, absolutely never, breaks a line."

I was listening intently to these dicta, which were at all events the compressed results of a life of study, drinking in all I could hear, and oblivious of the course of things. It was as if I had had my head under the minute-hand of the Tuileries clock: a dig in the side from some kind soul admonished me that the master was waiting. I yielded my place, and allowed myself to be minutely devastated like the rest. It was a criticism from which I emerged an older man.

By half-past ten the model was a painful spectacle from fatigue. Afraid to stir, he had been for some time rolling the muscles of his trunk, which ran in sullen waves down his figure, for the purpose of easing himself. No one showed him the least consideration, although his flesh had become pale, and his feet red and swollen. When the last pupil had been stricken helpless, and Gérôme had set us all vibrating like mandarins in response to his comprehensive bow—after the smallest boy had gracefully and prettily helped him on with his overcoat—the Italian, sighing, descended from his eminence in what was hardly a Greek manner, and most of us remembered that we were hungry and thirsty. So we all flocked out; all but the constitutionally penniless Blanc.

ENGLAND.

London, April 16, 1869.

The great surprise of the last fortnight has been Mr. Lowe's budget. We had looked forward to it with uneasy anticipations of increased taxation. There still remains to be paid the balance of that endless Abyssinian bill, only about half of some nine million pounds sterling having as yet been settled. Then the revenue has ceased to show that elasticity which distinguished it in the halcyon Palmerstonian period; the commercial depression of the last two years has been only too distinctly felt, and there was no room for a Chancellor of the Exchequer to come down to the House, as Mr. Gladstone used to do, with a grand flourish of trumpets, and proclaim in exuberant eloquence the marvellous buoyancy of our resources. Mr. Lowe's manner in bringing forward the budget was appropriate to a humbler frame of mind; his speech was as dry as that of the tradesman who presents you with a long-due bill; and he suffered from the additional disadvantage that, owing to an infirmity of sight, he was obliged to pick his way slowly, as it were, through the labyrinth of figures, occasionally stumbling, and having to recover himself painfully. And yet Mr. Lowe's speech, though it showed none of Mr. Gladstone's singular power of making financial statements amusing, had in itself the materials for a great oratorical effect. He had carefully prepared a great surprise for his audience, although his mode of announcing it rather deadened than heightened the intended shock to their nerves. The beginning of his speech enumerated all the difficulties in our way, the unsatisfactory state of some of the taxes, the monstrous bill hanging over us for the catching of poor Theodore, and the various difficulties which rendered our prospect less brilliant than it has been for years. And then suddenly, when we were prepared for a blow, and only asked ourselves upon what unwounded place he could find room to lay the scourge of taxation, behold! he turned round and presented us with a gift. The end of his speech was an enumeration of a long list of taxes to be abolished, as pleasant as ever fell from the lips of Mr. Gladstone, and a good deal more surprising. The tax upon post-horses, which has been a great cause of the inconvenience of British cabs; the tax upon fire insurance, which was one of the most indispensable facts of our financial system; the duty upon corn, which, though insignificant in amount, was the last remnant of the old protective system, and raised £900,000 in the year, are all to be removed; a penny is to be taken off the income tax (now at 6d. in the pound), and several minor alterations will tell in the same direction. If it is asked by what magic this agreeable peroration was tacked on to so gloomy an exordium, the answer is tolerably simple. The revenue of the year just elapsed* was sufficient to pay about half the Abyssinian bill; the reductions which have been made in the army and navy administration by the energy of the new ministers would enable us to pay the other half by the end of the year just beginning; and we should thus establish an equilibrium. A large surplus is then produced by certain alterations in the mode of collecting taxes, of which the substantial result is the anticipation of half a year's revenue in certain departments of direct taxation. Thus the assessed taxes, which under our present system would be paid in three instalments, will be collected in one sum in January next. We shall pay nothing in October, as we should have done according to

* The financial year is reckoned to the 5th of April.

the old rule; but in January we shall anticipate the payment of the October following. It is admitted that the proposed method of raising the taxes will be a great improvement upon certain old-fashioned arrangements at present existing. We are therefore promised a considerable reduction of inconvenient taxes, and an improved financial system, at the price of anticipating certain payments by some months. The budget will be in a state of equilibrium, and the bill for the Abyssinian expedition finally settled. If we indulge in no more little wars, we shall profit by our reduced expenditure in the year after next.

The budget, of which this is a general account, is certainly one of the cleverest that has been produced for many years; and although some doubts are expressed as to its soundness in certain respects, and especially as to the policy of raising so large a sum at one particular epoch of the year, I think it has met with as general approval as could be expected. It will probably be passed without material modification, and will be a new feather in the cap of the present ministry. Meanwhile, in spite of this ingenious device, our economical fit still continues, and any reforms which involve an increased expenditure have a very poor chance of obtaining attention.

Of the battle which still rages over the Irish Church I shall say nothing; for although the talking continues, and is likely to continue, nothing new has been developed of any great importance in regard to party strategy. Mr. Disraeli has, indeed, given notice of certain amendments, of which it is apparently the purpose to save as much as possible out of the fire. They will of course be rejected; but they probably indicate the line of policy which will be taken by the Conservatives in the House of Lords. The phrase which I have just used, of "saving out of the fire," is borrowed from a speech of Lord Stanley's, which perhaps deserves a passing notice. Lord Stanley's silence during the debates on the bill has been significant; it confirms an opinion which I have already expressed, that he, as well as Mr. Disraeli, would be only too glad of any decent compromise which would put the question finally on one side. In this most sensible men would differ little: so long as the Establishment is abolished decisively, it matters little what waifs and strays of the property of the clergy may be carried with them; but the evident lukewarmness which he displays is not very favorable to Lord Stanley's political position. He has been regarded as one of our most promising statesmen, but it seems to be very doubtful whether he has the necessary qualifications for high political success. A cool-headed, practical, unimaginative man, he has been placed by his family connections on the Conservative side; but, in reality, he sympathizes as little as a man can well do with conservatism of the ordinary type. He is rather of a cynical disposition; is apt to say, "These are my opinions; take them or leave them. I don't much care which; only let us proceed to business." There is much that is useful about the tone of mind thus indicated; but it is scarcely one to lead him into any prominent position. Having little enthusiasm in his nature, he awakes none in his followers. Conservatives think little of a man who evidently adopts their creed quite indifferently, as a matter of hereditary propriety; and Liberals can't quite forgive one who has not the courage boldly to avow the conclusions to which his logic should obviously lead him. On this matter of the Irish Church especially, he has rather tried to shirk the whole question, and has lost an opportunity of showing independence of party ties. With his great name and undoubted abilities, he has a certain position secured to him; but I do not think he will ever be a genuine leader in politics.

The best type of the rigorous Conservative at present existing is the Marquis of Salisbury, and I mention his name on account of a remarkable part which he took in a late debate. Lord Russell seems to have made up his mind to stick to the last to his work of reforming the British Constitution. He began life by supporting the Reform Bill of 1832, and he has just produced a bill of which the ultimate consequences may be highly important. It is a measure for permitting the creation of life peerages. There are various precautionary restrictions, such as that only twenty-six are to be created in all, and only four in any year; that they are to be selected from men who have held high offices in the state, or served ten years in the House of Commons, or been highly distinguished for literature and science. The advantage of such a measure is obvious, as it would enable many distinguished persons to be placed in the House of Lords who would not wish to support the burden of a hereditary peerage; whilst ministers naturally feel at present that they must be careful in increasing the ranks of the House, when their action necessarily extends to future generations. Undoubtedly, too, the place which the House occupies in public esteem would be greatly improved by the addition of a few eminent names; probably, if good appointments were made, the life peers would be able in no long time to sway the decisions of the hereditary dignitaries, many of whom take more interest in horse-racing than in legislation. It is equally clear that the two systems would very likely illustrate the danger of putting a new piece in an old garment; and that the absurdities of hereditary legislation would come into new prominence when the ancient and the modern systems were exhibited side by side. It was evident that these or similar considerations rather perplexed the Lords; that they could not quite settle whether it was desirable to welcome, or to be jealous, of the proposed infusion of new blood. Lord Cairns seemed to be taken by surprise, and delivered a rather incoherent criticism. The Marquis of Salisbury, on the other hand, accepted the proposal warmly, though coming from his political antagonists. It seemed that he was so annoyed by the calmness of the noble assembly to which he has been elevated from the excitement of the Commons, that he rejoiced over any prospect of introducing new elements of controversy. As he very truly said, the peers now represent almost exclusively the landed interests, and anything which gave a voice to the other classes would infallibly improve the value of their debates. The matter has been referred to a select committee; but the fact that so gallant a Conservative should have received the proposed change in such a spirit is significant enough; and it is highly probable that a measure will be carried which, we may hope, will form a starting-point for more effectual remedies in future.

To leave political speculations, I may notice the appearance of Mr. Lecky's new book, on the history of morality from Augustus to Charlemagne. Mr. Lecky has to some extent succeeded, though with unequal power, to the mantle of Mr. Buckle. He has an amount of reading which is perfectly astonishing in so young a man, and displays its results in a style always graceful if sometimes a little monotonous. His present book, so far as I have had an opportunity of looking into it, is an improvement in many respects upon his past: the subject is singularly interesting, treating both of the speculative theories of morality and of the practical illustration in the lives of men. To my mind, the argumentative part, which consists principally of a defence of the intuitive doctrine of morality, grounded on what I hold to be a misunderstanding of the utilitarian philosophy, is decidedly weak; but the rest of the book will be found full of interest, and it may probably be reckoned as the best product of the present season.

Correspondence.

A CORRECTION FROM MR. McCARTHY.

To the Editor of the Nation:

Sir: Kindly permit me to disclaim the authorship of the article in *Putnam's Magazine* on Thomas Carlyle, which your critic to-day ascribes to me. The article is not mine, and I have not yet read it; but if what I have heard elsewhere of its authorship be correct, the mistake made by your critic is a high though undeserved compliment to me.

Faithfully yours, Justin McCarthy.

April 29, 1869.

Notes.

LITERARY.

Doctor Horace Bushnell is engaged in the preparation of a work which will assuredly attract attention just now, and procure for its author a great deal of sympathy—for he is certain to be well abused. "Woman Suffrage, or the Reform against Nature," is the title he gives it; and no one who knows the character of his writings will expect the body of the book to be any less forcible in manner than this defiant title-page. It will be published by Messrs. Charles Scribner & Co.——Mr. D. Van Nostrand has in press a dozen or more new books of a character so technical as to make it not worth our while to mention them to the general public. One, however, of his forthcoming publications some of our readers may like to see; nobody can ever know too much "horse," and sooner or later we all "trade" or buy. It is "Notes on Horses for Cavalry Service, embodying the Quality, Purchase, Care, and the Diseases most frequently encountered, with Lessons for Bitting the Horse and Bending the Neck," by Brevet-Major Arnold, of the Fifth Cavalry.——Mr. Edward A. Pollard, believing that Mr. Jefferson Davis will never be tried—for he is safe in England, where he has descended to "the commonplaces of trade"—and believing

that therefore the times are now ripe for publishing a history of Davis's Confederate administration, will soon issue such a work, which will be sold by book agents. Mr. Pollard esteems this historical biography to be his best work, and there is no doubt that it will be interesting reading. To say that its author is nothing if not rhetorical would not be telling the truth, though he is often amusingly stilted, for he can write vigorously and tell a plain tale when he likes; his character for accuracy is fair, and he had exceptionally good means of information. We should judge, too, that he sets out with a true conception of the dimensions of his principal figure—a Brummagem "statesman" (and of the Southern type at that), if ever there was one.——Another work relating to our civil war is soon to be published by subscription in England. Its title is "Letters on the American Rebellion," and it is composed of selections from the letters which were written in the course of our troubles to various English journals, by Mr. S. A. Goddard, an American long resident in the neighborhood of Birmingham. Mr. Bright speaks well of Mr. Goddard's labors, which no doubt had value. Rev. Samuel May, jr., of Leicester, Mass., will receive the subscriptions of Americans who may wish a copy of Mr. Goddard's book, and the price of it, as delivered in New York, will be a guinea.——All teachers and pupils who have to do with the study of German will be glad to hear that Messrs. Leypoldt & Holt have in press "A Compendious German Grammar" and "A German Reader in Prose and Verse," prepared by Professor Whitney, of Yale. Professor Whitney aims to furnish in these works the best practical aids to the student, and at the same time to put him in the way of getting what general grammatical and philosophical training the study can be made to yield without interfering with the pursuit of the main object. Both the ends aimed at will, we have no doubt, be attained. Professor Whitney is a lover of philology in its wide sense; but, on the other hand, he has successfully assisted beginners in German for the past fifteen years in his place as a member of the Yale body of instructors. A model text-book we may certainly expect from him.

—The inevitable moving of the 1st of May affects the publishers also. Messrs. T. Nelson & Sons have gone from Grand Street to 52 Bleecker, and reinforce the group of firms already established in that region—Messrs. Charles Scribner & Co., Messrs. G. P. Putnam & Son, James Miller, Messrs. C. B. Richardson & Co., and Messrs. J. W. Schermerhorn & Co. Messrs. Fields, Osgood & Co., on the other hand, have removed to the corner of Waverley Place and Broadway, to join the group which the firm of Messrs. A. D. F. Randolph & Co. leads off. Mr. D. Van Nostrand has gone up from the corner of Broadway and John Street to more commodious quarters, in a store that extends from 23 Murray Street to 27 Warren; but still is a "down-town" publisher. Mr. Allen Ebbs has left Chambers Street, and is to be at 436 Broome Street, near the cluster of firms that have made that neighborhood well known as a bookselling district—the Appletons, Mr. Carleton, Messrs. Hurd & Houghton, Messrs. Routledge & Sons, Messrs. Leypoldt & Holt, Messrs. Sheldon & Co., Mr. G. S. Wilcox, and Mr. Widdleton. Mr. Christern has come down a little from the region of Union Square, and is now in University Place, at No. 14. Messrs. B. Westermann & Co. go to meet him as far as 471 Broadway. Mr. E. Steiger some time ago removed from William Street to Frankfort.

—The last three or four years will be memorable in the literary history of this country for the great number of new periodicals that have been issued. Van Nostrand's *Eclectic Engineering Magazine* is, however, the only American periodical which is devoted exclusively to engineering, although in England and on the Continent several are devoted to this subject. As the high price of these foreign journals has prevented their circulation on this side of the Atlantic, the want of a good magazine dealing exhaustively with this specialty has been greatly felt by engineers. This want will be in a great measure supplied by the work before us if it can be kept up to its present high standard. But it has one defect too important to pass by in silence, namely, the want of illustrations, for the few woodcuts it contains are scarcely worthy of the name. Such woodcuts are suitable enough for geometrical diagrams, but elaborate engineering works can be properly illustrated only by the aid of full-page lithographs or engravings. As several methods of applying photography to printing on stone and steel are now in operation in this city, where *Van Nostrand's* is published, it seems as if some use might be made of them. It is the principal advantage of these methods that they reproduce the most elaborate drawings with cheapness as well as precision. The value of such essays as "The Moldau Suspension Bridge at Prague," for instance, or "An English Locomotive," would be greatly increased even by a woodcut. As the articles are generally brief, forty or fifty are contained in each number. Most of them are taken from foreign engineering journals; and, as we should expect from the high reputation of the editor, the selection is generally very good. Such articles as "The Electric Light for Lighthouses and Ships," "Photography," "Gas as a Calorific Agent," will interest not only engineers but all physicists and the general reader. A great amount of information is contained in each number, and the price is reasonable compared with that of other similar works.

—A correspondent sends us an epigram by the late Washington Allston, the painter, which was probably never before published. Even the trifles of a distinguished man have a value for the new generation such as he never would have put upon them:

ON THE DOMES OF THE STATE HOUSE AND EXCHANGE COFFEE-HOUSE.

O wondrous town! what wondrous ways thou hast
To show the wond'ring world thy wondrous taste!
Go, starveling connoisseurs! repair to Rome,
And feast your eyes with Peter's empty dome!
Such flimsy piles great Boston scorns to raise;
She solid pudding loves, not empty praise.
Hence from afar, to Epicurean eyes,
Two mighty emblems of her taste arise,
To Phœbus' table, offered by his lover—
An Indian Pudding this, and that the *Cover*.

—We have received from the authors, in pamphlet form, the lectures delivered last January in Boston, before the Lowell Institute, by George E. Ellis, D.D., and Emory Washburn, LL.D. The former, on "The Aims and Purposes of the Founders of Massachusetts" and "Their Treatment of Intruders and Dissentients," were discussed, on occasion of their repetition here in New York, in the *Nation* of April 1. A careful perusal of these two lectures as now printed, and greatly enlarged by citations which would have consumed too much time in the delivery, only increases our sense of their importance, and our desire that they should be as widely read as possible. They have, of course, gained in interest by the citations referred to, and the theory they maintain is so much the more firmly established—is indeed put past question. We are led also to modify the remark that Dr. Ellis neglected to indicate a principal cause of the failure of the Puritan experiment—the operation, namely, of the English common law in spite of the charter assumption of complete jurisdiction over the territory of the colony. It was no part of the lecturer's purpose to account for this failure, his object being simply to present the historical facts which alone furnish the key to the so-called Puritan intolerance and cruelty, and for want of a knowledge or clear appreciation of which the acts of the founders of Massachusetts have been so curiously misjudged both by their friends and their enemies. If we are not mistaken, this service has been performed for the first time by Dr. Ellis, and, as a natural consequence, the greater part of his first lecture is devoted to insisting upon the right view to take of the purposes of Winthrop and his brethren—"to construct a commonwealth out of a church, and to administer all civil affairs by church members." In the second lecture we get some idea of the amount of material which undoubtedly exists in illustration of its subject, and which we may trust Dr. Ellis will elaborate as he finds leisure. The treatment of the Quakers is described with reasonable fulness and fairly weighed, and the distinction between the original Friends and those of the present day deservedly enforced.

—Dr. Ellis's lectures are an excellent introduction (as they were in point of time antecedent) to Prof. Washburn's on "Slavery as it once prevailed in Massachusetts." This lecture, though by no means polemical in form or spirit, is in effect a rejoinder to Mr. Geo. H. Moore's "carpet-bag" "History of Massachusetts" (may he pardon us the expression!) The insufficiency of this gentleman's special pleading was pointed out in the *Nation* of May 21, 1866, and his suppressions and perversions very ably shown up in the Boston *Advertiser* of Sept. 18, following. Prof. Washburn begins by recalling the notions that prevailed throughout Christendom, at the time of the founding of Massachusetts, in regard to slavery and the slave-trade; and the existing state, or rather the non-existence, of international law as now understood and respected. Next, the limitations of the Massachusetts charter as to the making of laws inconsistent with those of the mother country, and the special safeguards thrown about the slave-trade with the colonies, are dwelt upon; and finally the first organic act declarative of Massachusetts' intention in regard to slavery—Mr. Moore's *cheval de bataille*—is analyzed, and shown to be as unfriendly to the spread of slavery as was consistent with the limitations alluded to. There can be no doubt that, whatever the practice of the people was, the legal construction of the ninety-first article of the "Body of Liberties" of 1641 could only have given freedom to the issue of slaves on Massachusetts soil; so that it is correct to say that after that date no slave was legally born in Massachusetts. As for "establishing" slavery, the article did nothing of the kind. Prof. Washburn gives many interesting particulars as to the number of slaves held at different times in Massachusetts, and the mitigation of their treatment caused, among other things, by their very paucity; and also makes very clear the emancipating power

and intent of the "Bill of Rights" in that clause of it by which slavery perished in the courts after 1780. As a reply to some of the minor arguments with which Mr. Moore seeks to make out his case, the explanation on p. 19 of seemingly inconsistent and unsettled action on the part of the General Court, seems to us particularly good.

—We have just been having so great a journalistic scandal in this city—a scandal without a parallel, so far as we know, in the history of the American press—that, in comparison with it, almost any event in the world of journalism seems like a ripple beside a wave. It is, however, a noteworthy fact that the *London Review* is just dead. We may say that it is dead; it has been merged in the *Examiner*—the journal which Leigh Hunt founded, and which, though less known over here than the *London Review*, was always a better paper both in politics and in literature. It was not so much better, however, that its consent to the merging need have been difficult to obtain. But what was worse in the unregretted *London Review* than its insufficiency was its self-sufficiency—though that word is not wide enough either; it was apt to seem to be a cheaper sort of *Saturday Review*, and the tone which is nearly intolerable in the latter paper was often quite so in the former. The *Saturday's* vulgar superciliousness, its prejudices and wilful misunderstandings, its smartness, which often suggests the brilliant satirical young man fresh from the university, and which get it the applause of its worst readers, can be borne with in consideration of the ability, courage, and real learning which it displays about as constantly as it displays its disagreeable traits—that is to say, the cases are few in which it does not approve itself learned, able, and nobody's servant. But, in comparison with its exemplar, the *London Review* was like that sort of second-rate Englishmen which a good authority declares to be wholly unendurable by gods or men, and the latter, with considerable unanimity, will acquiesce contentedly in its decease. It was as disagreeable as pretentiousness must be. It sounds as if it might be true enough that the paper had the assistance of some of the *Saturday Reviewers;* but they were not the best, we may be sure; and of these the contributions may very likely have been such as the *Saturday* had declined to receive, or such as even the writers would not have asked it to accept. One symptom of the decline of the *London Review* found its way into the papers some two or three months ago. The firm of T. T. Clark & Co., who publish a good many valuable works, as most of our clerical readers know, discovered that books which they had sent out to editors for notice might pretty regularly be found shortly after on the stalls of the second-hand dealers. Thereupon they marked their "editors' copies," and were not long in finding which paper was the offender. A note addressed to the editor called forth no more civil reply than that their books were worthless, and were sold without being reviewed because they were not worth reviewing—a reply which, doubtless, was not the truth of the matter. So far as now appears, the English weekly press is all the stronger, as regards both honesty and ability, for the demise of the *London*, as also for that of the *Reader*, which perished some two years ago. And, as the weekly press is furnishing perhaps the most influential portion of English literature, we may be glad to see it weeded of its weaker and less worthy members. There is still the *Athenæum*, with its fund of literary information; and the *Saturday Review*, to correct the *Athenæum's* continual blundering in criticism; and the absolutely honest and candid, if somewhat too ethereal and somewhat whimsical, *Spectator*, to supplement the *Saturday Review* by doing justice and showing mercy, inculcating the higher morality, and setting an example of true refinement as distinguished from superfineness.

—Whatever may be the rate of speed at which the Hebrew people are, of their own motion, coming over from Judaism to the beliefs of some of the Christian sects, it is not, apparently, a rate of speed which is much accelerated by the missionary society which is styled the "Society for the Conversion of the Jews." It is doubtful if conscientious labor was ever in the world more persistently and entirely wasted than by this body of men. It may be said that the gain of even one convert in a century would amply justify a century of labor and incalculable expense. But to this plea one of the possible replies is to urge the consideration that all souls must be esteemed of equal value, and that there are a great many races which resist conversion with so much less success than the Hebrew, that to attack that race any more seems like a misappropriation, so to speak, of the revenues of the church. The less savage tribes of negroes, for example, and some of the South Sea Islanders, could be brought over by scores for the same amount of money and degree of effort which are now expended in the Christianizing of the one Jew and a half which is said to be the reward of a year's exertion on the part of each British missionary; and we suppose the same result is obtained pretty exactly by the services of his American brethren. The *Pall Mall Gazette* quotes from the "Jewish Records" of the British society some passages, which no doubt are characteristic ones, for the *Gazette* is fair, and which are not encouraging to the supporters of the mission. One old man, we are told, a Polish Prussian Jew of eighty years of age, when approached upon the subject of religion, received the minister in the spirit indicated in these words, which are those of the minister himself: "Sad to say, as soon as he heard the name of Jesus, he uttered the most fearful oaths, and ran away as fast as his old legs could carry him." Another, a shopkeeper, was "so baffled and perplexed" by the arguments used by the missionary, "that he beat his head and beard in great agitation, and declared he would never give up the Talmud." Another who was preached to "immediately pretended to be deaf;" but the efforts have not been wholly lost in his case, for "years ago" he "would not listen at all." Another remarked that he was "tired of the tracts, and advised us to sell and circulate old Hebrew books, as being more useful and interesting." Another complained of the sinfulness of mankind, and indeed of his own sins; but then he showed also "an inveterate antipathy to Jesus." Another, an old clothesman, denied with great firmness that the Messiah had appeared, because if He had *he* should not be obliged to stand there in the fair selling hats. All things considered, we submit that money given to the missions which work among a people whose ability and obstinacy are so well known, and whose attitude towards Christianity is what the instances above given pretty fairly indicate, is money ill employed. To be sure, the attitude of the Jews towards Christianity is not always one of decided and active hostility; but generally it is so at the moment when the missionaries are arguing with them, and that is the important moment.

—The literature of Ritualism grows rapidly in England, and on the whole it is creditable to the ability of the Anglo-Catholics, and is not more discreditable to their candor and good temper than is commonly the case in the polemics of the English Church, which, if it has given rise to many exquisite specimens of controversial writing, has also afforded opportunity for a deal of small spitefulness, and even for a certain amount of what, not to put too fine a point on it, might be described as pigheadedness and brutality and fatuousness. What, for instance, can be said of the Irish bishop —soon to be disestablished—who, a month or so ago, publicly expressed his wish that "Bill Gladstone" might speedily go to what Mr. Mantilini called the "demnition bow-wows?" Or what to this line of remark, which was taken up by a Mr. Puxley at the same conference, where his Grace of Cork freed his mind: "Let them hope that their dear Queen, God bless her! would not perjure herself. Let her own good sense tell her not to perjure herself. It was a cowardly thing of Gladstone to take this opportunity, when a poor woman was on the throne, to confuse her, and endeavor to make her commit perjury. If Prince Albert were alive, he would not dare to do it . . . the traitor . . . the renegade," and so forth? To do the Ritualists justice, they do not so often as their High Church enemies descend to such a point as that. And we do not know that we should not say that they have the advantage of their opponents in all their arguing on the given premises, though on what we consider the true question—which, however, an ordinary churchman is debarred from urging—they seem altogether in the wrong, and doomed to ultimate defeat in spite of the headway they are now making. They fight against the stars in their courses—to say nothing of their being on bad terms with Rome.

—These remarks are suggested by a contribution now before us, which Mr. A. R. Mowbray, an Oxford publisher, has recently been making to the store of lighter weapons in the Anglo-Catholic armory. It consists of nine or ten pairs of contrasted pictures—after the manner of Pugin's "Contrasts"—setting forth what in the Ritualistic nomenclature is styled "The Deformation" and the Reformation. The "Reformation" is of course the Ritualistic movement, while the "Deformation" is the "glorious Reformation" in which Protestantism has hitherto rejoiced. The first pair of pictures illustrate a rubric in the Book of Common Prayer, which reads as follows: "Chancels shall remain as they have done in times past. And here it is to be noted that such Ornaments of the Church and the Ministers thereof, at all times of their ministration, shall be retained and be in use as were in the Church of England, by the Authority of Parliament, in the Second Year of the Reign of King Edward the Sixth." One of the two engravings gives us an elaborate altar, with candles according to rule, all prepared for the celebration of the Mass. Behind the altar is a painted window. The other one shows us a table that looks like a piece of kitchen furniture. It stands under a patched window, through one of the panes of which passes the stovepipe of a box-stove. Beside it are a dust-pan and brush, and a hat, overcoat, and cane are lying upon it. Beneath it are family-vaults. Everything is made to look squalid and irreverent. Thus we are taken through a number of church scenes: the "Reformation" singers

are boys sitting orderly in the choir, and evidently chanting sweetly. The "Deformation" singing-loft, on the other hand, presents a sad spectacle; virtuosi, inattentive young women, bass-viols, and fiddles unite to make discord. The bad "Ringers" are if anything worse than the bad "Singers." The merely nominal Christians who pull the bell-ropes in the Deformed Church are busily engaged in smoking pipes and swigging beer in the tower. But the Reformed singers are devotionally, and with rhythmic movements, making a joyful noise of chimes. The little volume will, we fear, gratify a good many of our readers. Seriously, we suppose it to be at least a not wholly unjust attack on the unseemly ways which still obtain in many of the parishes that fell into the slough of carelessness in the evil days of the Stuarts and the Georges.

—The Dauphin literature has not, we find, grown more entertaining and exciting in proportion as it has grown more voluminous; but there are people whom it will interest to hear that another claimant to the French throne that was has been unearthed, and an English book has been written about him. The new story begins like the old ones. Louis XVII. did not die in the Temple, but was removed to a place of safety on the other side of the Channel, where he lived and died as Augustus Meves, a music composer. Somehow the Augustus Meves who was substituted for him in the prison was not suffered to remain, but was removed and replaced by a little deaf and dumb boy. A commission sent by the Committee of Public Safety to examine the unknown Dauphin are declared to have made a report, in which they said that to all their questions to the child they could get no answers at all. We do not know that we have any other bit of evidence to offer as an inducement to any one to buy the book in question: that much may be got from it, at any rate.

—We have already alluded, with high expectation, to the discovery by Joseph Albert, court photographer at Munich, of a mechanical mode of reproducing photographs; and from a later account, given in a supplement for April 2 of the *Zeitschrift für bildende Kunst*, it would appear to be the farthest advance yet made in the art. One who has seen specimens of this "Albertotype" writes that they are in no respect inferior to the prints produced chemically—are as clear, as soft, as strong in tone, while in cheapness, durability, and independence of the fading effect of exposure to light they are superior. The picture is impressed directly upon the desired material, be it stiff card, glazed surface, copper-plate paper, or any ordinary kind; and the color, dissolving neither in water nor spirits, but in the oil of turpentine, we suppose to be printers' ink. This is all we can guess of a process which preserves, in photographs after nature, the finest shades and the minutest detail, that will bear inspection under a magnifier without betraying the fact that they are prints. Already regret is expressed for the expense to which the inventors of the carbon process have gone in developing it, since it now seems likely to be superseded at once, not even retaining the advantage of producing fac-similes in color. The Albertotype does the same. Everybody can guess what this will lead to, and there is yet a chance of an original publication—a daily illustrated newspaper that can dispense with engravers.

A NEW SOUTHERN AUTHOR.*

How much credence ought to be given to the statements of "John Capelsay, of Natchez," who styles himself "Mr. Page's executor," and who, after announcing the first of these books upon its title-page as a novel, proceeds in its preface, and also in that of the subsequent story of "Ben Eccles," to claim that they should be received as veritable autobiographies, we are unable to determine. There is an improbability in the supposition that a man should spend the latter part of his life in writing a succession of stories about himself and his neighbors, and locking them up, one after another, in his desk for his executor to find and publish; but, after granting due weight to that improbability, and taking also into account the fact that the style of the prefaces and of the executor's occasional notes is very like that of the stories which they accompany, there is little or nothing in the manner or the matter of the books themselves which it would do to adduce as internal evidence that any intentional mystification has been practised on the reader. In any case, it is a matter of no great importance. "Abraham Page, Esq.," may very likely be mythical; but whether or not the account given of the genesis of the books which bear his name be incorrect, there can be no doubt that the books themselves have a genuine biographic flavor about them. To read them is to get much the same kind of pleasure that one finds in listening to the talk of a shrewd, sensible old man, such as one occasionally meets in out-of-the-way country places, who, having spent all his days in one spot, has been colored by his surroundings to the very marrow, and whose judgments on men and things, if they have the defect of being provincial and narrow, have also the virtue of resulting fairly from his own observations. His opinions may or may not be valuable; they are, perhaps, more than likely not to be so; but it is quite possible to listen to them with interest and pleasure, and not to care in the least about the soundness of the conclusions he draws from his premises. "Te-rewth," as the Vermont collegian announced in his valedictory essay, is doubtless "the element and the aliment of the rational mind;" but, for all that, there is a good deal of satisfaction to be got at times from well-put fallacies.

This we say, not because we invariably quarrel with Mr. Page's opinions—which are such as were held twenty-five years ago by any ordinary Southern gentleman, who, without being as profoundly interested in politics as the majority of his compatriots, yet maintained in their integrity the usual principles of his class—but because the pleasure he has given us is due entirely to the strength and raciness of his individuality. His mind evidently found its natural expression in story-writing, and in betaking himself to it he has been in no wise hampered by his reading, or by any uneasy sense of the conventional ways of describing character and manners. It would be a serious advantage to any of our young writers to study his books carefully, for the sake of learning how interesting ordinary American life can be made when described by an honest and unaffected observer. There is a directness and simplicity about both his thought and his expression which are rare enough in any literature, and which such acquaintance as we have with that produced in our Southern States would, least of all, have inclined us to look for in that quarter. But Mr. Page, although unmistakably a Southerner, and proclaiming himself such by the nature of the topics in which he is interested, and the views he takes of them, as well as by the occasional local peculiarities of his language, is not at all offensively or obtrusively so. One reason for this is that his books relate to a time before the agitation of the slavery question had produced its full result of angry irritation—a time when "Mississippi and Alabama had not yet been admitted as States, and Texas was a savage land." Mr. Page died, says his executor, just about the beginning of the war; and it seems true enough that books which concern themselves so little with the vexed questions between North and South could hardly have been written by so true a Southerner on the hither side of that contest.

It is to be said, too, that the thought of having a Northern audience has not, apparently, entered as a disturbing element into our author's mind. He has neither modified in any way, nor, on the other hand, brought into any undue prominence, his thoughts on any subject with the idea of influencing or addressing those whom he might naturally expect to differ from him. Not only the justice, but the absolute righteousness, of slavery is so completely a foregone conclusion with him, that he has not a word to waste on the subject; and, excepting now and then a slighting remark—as that here is another instance in which negro nature differs from human nature—he scarcely mentions the negroes at all. Occasionally, too, he has a word or two to say about "the Yankees"—what one might call "a fling," if it were not so absolutely devoid of malice—so evidently the result of sober and quite satisfactory reflection, as when he says that "wherever the peculiar civilization of the North is introduced, there is bound to be a shock to retiring female modesty;" but usually he confines himself closely to the matter he has in hand. That matter is the description of life and manners in the little Southern village where he was born, and where he lived all his days in the comfortable assurance that life had nothing better or pleasanter to offer than what could be found within its limits. Contentment is certainly a virtue, and it is hard to say who could practise it with greater hopes of success than a man situated as Mr. Page describes himself to have been, who felt the pleasant conviction that to be a gentleman was the chief end of man, and that only a Southerner, the owner of slaves, could ever hope to attain it. Under such circumstances, a cheerful serenity and a calm confidence in surveying and analyzing the meaner works of God's hand could hardly fail to be engendered in any bosom. Such was the result, at all events, in Mr. Page's case; and, considering the two unaffectedly pleasant books which, but for this satisfaction with himself and this thorough persuasion of the soundness of all his positions, would certainly have been less peculiarly pleasant, we find in ourselves not the least disposition to quarrel with it. Mr. Page has looked at life with his own eyes, which were those of a shrewd, humorous, and quasi-philosophical observer, and has told in an easy and natural way what he has seen and

* "Abraham Page, Esq. A Novel." Philadelphia: J. B. Lippincott & Co. 1868.
"What I know about Ben Eccles. By Abraham Page." Philadelphia: J. B. Lippincott & Co. 1869.

what he has thought about it. His opinions on duelling, and State rights, and universal suffrage, and the worthlessness of education, and on matters of religious faith and practice, carry no weight, because they are so evidently the result of his birth and breeding rather than of independent thought; but he makes, perhaps as much on account of his attitude on these questions as for the sake of the unembellished record which he gives of a kind of life which must soon die out even at the South, a thoroughly unique and valuable contribution to literature. Southern life and manners have been described before, by their own writers as well as by Northerners. To name a few out of many: Mrs. Stowe has done it in a way; and Miss Evans has tried it, and so has Miss Harland; and Major De Forrest has made some very clever studies; and there are glimpses of it in Mr. Olmsted's letters; and the author of "Inside, a Chronicle of Secession," did a good deal of it remarkably well; but, generally, those who made the effort have done so with some special object other than faithfulness in mind—with some "main question" in view, on which it behoved them beyond all things else to be sound, and which prevented our getting any really valuable observations from them. The outlines of the sketch might be tolerably correct, but there was pretty sure to be plenty of false color; and the thing most evident in the work was always the special relation of the author to the subject. It could only be done properly from the inside, and in Mr. Page we seem to have, or to have had, precisely the man to do it—a man not only so thoroughly convinced of the absolute truth of the peculiar Southern views of life, and filled with so easy an incredulity as to any necessity of taking contrary opinions into account, that he unconsciously avoids the artistic mistake of bearing too heavily on them in his work, but also a man to whom politics and creeds, no matter how firmly he held them, were, after all, subordinate matters. He cared more about human nature than about its accidental modifications, and as he has given us by far the most valuable idea that we have of what Southern life and habits and opinions really were, so, had he lived in New England, he would have made quite as trustworthy a study of the varieties of the social life of that part of the country.

By all of this we do not mean that, considered as stories, his books have any special literary value; that their characters are either particularly interesting or very well drawn; that their plots are novel or their situations even more than commonplace—we mean only that, by virtue of the peculiar individuality of their author, who seems to have absorbed the very essence of his time and place, so as to have been nothing but by virtue of what they were, we have such a picture of what were the life, the manners, and the opinions of the better class of Southerners as we have never had before, and, for obvious reasons, are not likely to have again.

CHINA AND THE CHINESE.*

WITHIN the past few years we have had many books upon China from writers of various shades of character and capacity—all of them giving some information, and all of them with more or less of those defects which seem inevitable. Our knowledge of the Chinese is still very inadequate to a thorough understanding of them, and we receive with pleasure every new book which promises to give additional information or present the subject in a new and attractive light.

The book before us was written by the Rev. John L. Nevius, who was ten years a missionary in China, and who consequently had opportunities of obtaining much information; it is written with clearness, and the author evidently aims to be just and generous, and to give truthful delineations of Chinese character and institutions. Many of his sketches are well drawn, and interesting enough to make us regret that he did not enlarge more fully upon them; they tend to enhance our interest and respect for the Chinese, and to stimulate our desire to know more of them. The author, of course, views the Chinese from his own standpoint, and he exhibits no lack of confidence in the extent of his knowledge or the correctness of his judgment respecting them. Some of his statements are at variance with those of other writers who have heretofore been regarded as good authorities. For instance, he says that "benevolent societies exist in China in numbers and variety hardly exceeded in Christian lands." His detailed description does not sustain the assertion, although he mentions some that were not generally known to us. He says that "*free* day schools are *everywhere* to be met with," usually instituted and supported by the benefactions of some rich family. Dr. Williams, in his "Middle Kingdom," says expressly "that there are no public or charity schools established by government or by private benevolence for the education of the poor." Dr. Williams also shows, with regard to the benevolent institutions of China, that they are very few; and he adds that "charity is a virtue which thrives badly in the selfish soil of heathenism."

Those who have heretofore considered China to be a "land of schools and scholars"—where literature was more highly honored and education more generally diffused than among any other people—will be surprised at Mr. Nevius's statement that the proportion of the Chinese who are sufficiently educated to be able to read general literature as the masses of our country do, "is not more than *three per cent.* of the whole population." Sir John F. Davis says that "among the countless millions that constitute the empire, almost every man can read and write sufficiently for the ordinary purposes of life." Of course, the education of the masses is comparatively rudimentary, and the advanced scholars can only be those who have time to devote to their studies; but, after making allowance for this and for the peculiar nature of their written language, the proportion of educated men must, we think, be much greater than Mr. Nevius estimates.

But the author dwells mainly upon "the religious condition and wants of the people," and the character and results of the labors of missionaries. It is these subjects which he has most at heart, and which he warmly presses upon the public attention.

However indifferent the public generally may be in regard to Christian missionary work in China, all thoughtful men will admit that it is a work of great importance—one that will gradually force itself more and more upon the attention of the Chinese and foreign governments as well as people, and will very probably become a source of serious trouble between them. The existing treaties provide that in China "all persons, foreign and native, who peacefully teach and profess the Christian religion, shall be alike entitled to the protection of the Chinese authorities;" but these treaties were in fact obtained by force, and we must accept with some slight qualification the public announcement of Mr. Burlingame that China "now invites your missionaries, and tells them to plant the shining cross on every hill and in every valley," * for there is abundant evidence that neither the government nor the people of China heartily endorse such an invitation. Still the Christian world hails the notice with joy, and numerous missionaries of every religious denomination are sent to reap the harvest—from the powerful and well-organized Church of Rome to the smallest of the many Protestant sects; while the warmest appeals are made to all of them to send more laborers. Mr. Nevius concludes his book with the announcement to his fellow-Christians that "the Master calls upon them for their best offerings to his cause—for their sons and their daughters, for their gold and their silver." Thus a crowd of missionaries, of various and conflicting creeds and ceremonies, struggle with each other to make converts, and gather the lost sheep into their own folds. But the Romanists warn their flocks against the Protestants as wolves in the garb of shepherds, while the Protestants, however much they may differ from each other in some respects, will all unite in saying that Romanism is but another form of paganism. These evils seem to be inevitable, from the fact that all the missionaries are commissioned and paid to preach the special theology of the church which sends them.

The author of the book before us has a rigid special theology of his own; and as he freely displays it to the public, he invites notice and comment. We shall, therefore, make a few remarks in illustration, while we accord to him every respect for his own sincerity and good intentions. He evidently considers that the worship of idols is the sin of all others most offensive to God. After showing the immense amount of money which is annually expended by the Chinese for the support of idolatry, and the vast number of idols, he says, "We know that God punishes this sin with spiritual and *eternal* as well as temporal judgments; and fearful indeed will be the doom of this nation if God should visit it according to the *number of its idols.*" Yet still he says—and with truth—that Chinese idolatry contrasts favorably with that of almost any other nation, as well as with that of ancient Greece and Rome. In Chapter XXIV. he gives a "beautiful instance" of faith in prayer on the part of some converts who, at a time of great suffering from a long-continued drouth, felt "not only pained but rebuked" at seeing the people everywhere thronging the temples and praying to various deities for relief, and therefore they resolved to go up into a high mountain and spend the whole night in prayer to God: they did so, and the next day, before some of them reached their homes, they were overtaken by a copious shower. The author does not say, but we would ask him, if he would teach those converts to believe that God had answered *their* prayers for rain, while

* "China and the Chinese. By the Rev. J. L. Nevius." New York: Harper & Brothers. 1869.

* See his public address in New York.

he refused to listen to the unfortunate pagans who knew of no other way of appealing to him except through their idols? or, would he teach both parties that rain falls by the operation of the natural laws which God has made, and that they are perfect to attain the end for which he made them without his special intervention? In the same chapter he mentions the instance of a Ningpo convert who could only be made to see the duty of closing his place of business on Sunday by the discipline of a painful carbuncle on the back of his neck, which even threatened his life, and of which he could not get cured until he declared his determination that if God would spare his life and restore him to health he would never open his shop again on Sunday.

Mr. Nevius makes a broad distinction between civilization and religion. In his judgment, religion seems to stand apart by itself instead of being closely interwoven with all man's thoughts and pursuits in this life. Speaking as a guide and missionary to the Chinese, he says that "human science has no regenerating or sanctifying power in it. An acquaintance with Western languages not only introduces the student to the stores of religious and scientific knowledge, but to works which teach rationalism, infidelity, and science falsely so called." To be consistent with this opinion, he must oppose the introduction of Western literature and the sciences; and he forces us to conclude that, if he and his co-religionists could have their own way, they would merely transfer the Chinese from their state of pupilage under Confucianism to a state of pupilage under a rigid dogmatic theology which condemns freedom of thought, the acquisition of universal knowledge, and that full intellectual development which are the only means whereby the eyes of the understanding can be opened, and man be really enabled to see what is true and what is false.

The various views of the missionaries will doubtless cause much discussion among their converts, and the indiscretion of many will produce trouble. But even if they were all "wise and prudent," and acted in harmony, Christianity is necessarily a disturbing element when introduced amid a people whose social and political condition is identified with heathen faith. It will probably be very slow in its progress among the Chinese, for it will have to contend with the most enormous mass of self-satisfied and conservative inertia the world has ever seen.

It is a remarkable fact that, although Christianity had its origin among an Asiatic people and on the soil of Asia, and was preached by the early apostles among many of the Eastern nations, yet it never took root and flourished permanently in any part of that great continent. It has flourished and developed only as an exotic, among the European races. During the eighteen hundred years in which the Gospel has been preached, all the efforts, early and late, to Christianize Asia have been of no avail, and with the exception of the few tribes of Russian Siberia, the great bulk of the Asiatic people are still pagan or Mohammedan. Among the few Oriental Christians Christianity is so travestied as to be hardly recognizable. Christian missionaries visited China many centuries ago, but the seeds which they planted took no permanent root, while Buddhism was readily accepted, and has flourished for eighteen hundred years. Will Mr. Nevius say that all the efforts to Christianize Asia have failed heretofore because the true Gospel has never been preached there? for he says, "We have the Scriptural view that the success of the Gospel, wherever it is preached, *is certain*."

Thus far in the world's history all the efforts of the European races to introduce their civilization and religion among the Asiatic peoples have failed. Even before the Christian era, as far back as the time of the Macedonian conquest, when the Greeks settled permanently and in large numbers in Asia, they, instead of Hellenizing the Asiatics, themselves became Asiaticized—their blood and their civilization being finally swallowed up amidst the swarming millions of that continent, leaving no trace among its people. All efforts since then have been alike unsuccessful; but it may be possible that, in these modern days, the higher civilization which has ever heretofore failed to make an entrance from the West, will, after making the circuit of the globe, finally succeed in penetrating by way of the eastern coast.

THE NORTH AMERICAN REVIEW FOR APRIL.

Two or three of the papers in this number of the *North American* are of a character to suggest the thought that, much as the usefulness and influence of quarterly magazines have declined of late years, they still fill a place that needs to be filled. They are no longer powerful as party organs. Nobody nowadays goes to the *Edinburgh* for his politics; or if possibly anybody does, he gets what he might have got better in his daily or weekly journal. Quarterlies are merely volumes of essays which hardly have a less arbitrary or more necessary bond of union than that supplied by the binder and stitcher. But it is not easy to see how Mr. Grünbaum, for example, could have got his essay on the "Talmud" before the public unless in the pages of a quarterly; and the same thing is true of Mr. Poole's essay on Cotton Mather. Both articles are too long and too learned for a weekly paper—which knows it is always at the peril of its life that it forgets that it is rather hastily read by a very various public, and which is negligently preserved—and they are almost equally ill adapted for monthly magazines, which now are mainly for novel-readers. The publication of pamphlets hardly seems a thing much to be encouraged; and if it were, the pecuniary success attending it is not, in the large majority of instances, such as to encourage writers to prepare them. Perhaps the death of the *North American*, for example, might induce pamphleteering, or might make it possible to establish in this country a masculine monthly magazine—one of a graver character than suits most magazine readers; but it may be doubted, and we are rather inclined to think that it would cause us the loss of a certain number of useful and valuable essays which we should all be sorry to lose. Nevertheless, it is undeniable that in this country and England the quarterlies are apparently almost superseded, the public interested in them being in process of steady diminution. The religious ones may very likely be the last in the field.

Mr. Poole is the well-known author of the "Index to Periodical Literature," and was till very lately the librarian of the Athenæum Library in Boston. It is natural, then, to expect from him exactness of information, and this essay of his on "Cotton Mather and the Salem Witchcraft" it is safe to recommend as quite a model of that kind of writing in which the conscientious and thorough examination of the facts in a case is alone sufficient to topple down a time-honored and most imposing fabric of rhetorical assertion. Of all the whitewashing that has been done within the last few decades, we know of none that is any better, or so good, as this of Cotton Mather. Or, instead of calling the process whitewashing in this instance, we ought to speak of it as the washing off of mud most recklessly and causelessly thrown. If it is the mission, in historiography, of our nineteenth century to write history by unwriting all that has previously been written, Mr. Poole may serve as a type of the historian of the period—a not very large, but a very perfect specimen. The temper of his essay is admirable, and that is not a common characteristic of such performances, which are usually far enough from being the examples one might have expected of cool, dispassionate criticism; as a general thing, the operator dabbles in the blood of two or three of the previous writers on his subject, and a deterrent smell of carnage, as Doctor Johnson said about the shambles, accompanies his activities. Mr. Upham's well-known and deservedly praised book, entitled "Salem Witchcraft," is shown to be very much in error in the view which it takes of Mather's part in the tragedies; and of course Mr. Bancroft suffers, as is almost certain to be the case when anybody applies close research to the story which he undertook to tell. Mr. Poole seems to us, we may remark, to hold sounder opinions than Mr. Upham as to the character of some, at least, of the Salem phenomena. As regards some of them, we should say that there is about as much begging of the question in styling them "the delusion" as in styling them "witchcraft." Some truly unaccountable things happen nowadays that closely resemble some of the things that happened in Salem two centuries ago. The fact that, while they have no spiritual value, and are in that light contemptible, they have been assumed by some clever and a multitude of silly persons to be of vast importance, has made people stoutly deny their occurrence—a sufficiently profitless way of treating the matter.

Mr. Lewis H. Morgan—a clever writer, whom we believe we are not mistaken in calling a Canadian man of letters—makes an essay on "The 'Seven Cities of Cibola,'" which three centuries and a quarter ago were an Indian confederacy in what is now New Mexico. He performs for history and Mr. Prescott the same service which Mr. Poole renders to Mr. Upham and Mr. Bancroft and their works, and makes one wish that he himself would do what he is waiting for some one else to do—namely, write a history of the North American aborigines, or rather a historical treatise on their polity, manners, and customs. Perhaps there is no people concerning whom so much is accurately known, concerning whom there is in the popular mind more of misapprehension. The school-book Indian—from the Narragansett and Powhatan to the Tlascalan and the Uté—and the novelist's and poet's and pictorial-historian's savage are probably all equally far from the real Indian. Mr. Hepworth Dixon also, with his philosophic theory of the red man as the founder of the American Union of States, might profit by a perusal of Mr. Morgan's too brief general remarks as much as the believers in Mr. Prescott might. Every year it becomes plainer how much of the

work of our American school of history was done on a wrong method, and apparently in a spirit which not knowingly, but yet really, subordinated the work to the glory of the man doing it. More of it will have its place with the labors of Robertson than with those of Grote, and probably ten years will not pass before it is generally admitted that we have done best in purely imaginative literature. This might have been maintained *à priori*. But our oratory first, and afterward our histories, we selected as the achievements by which we would stand or fall, and it may be gravely doubted if we stand.

Mr. Grünbaum's "Talmud," without being so eloquent as the eminently attractive celebrated essay by Mr. Deutsch, is full of interest in spite of its being weighted with too much minute erudition. We had better say, perhaps, that the author has not been able to avoid the appearance of being oppressed by his facts, and has written rather to fellow-students than to many subscribers for the *North American*. Not the less his essay is a credit to the *Review*, and very good reading.

We do not know that there is much that is at all new in Dr. Hammond's vindication of tobacco; but he is an authority, and what he says on the subject is worth the attention even of the very much embittered. A plea for tobacco which we have always liked as well as most of the writing on the most abused of plants, is that contained in a familiar letter of Mr. James Howell, who bears strong testimony to its many virtues in the relieving of imposthumes and many other sad complaints. But anything seems good in comparison with the vigor of statement and the command, not to say the subjugation, of statistics which is shown by the anti-tobacconists, whose manner is certainly not "too sweet to be wholesome."

Mr. Henry Brooks Adams contributes an essay, which deserves to be styled statesmanlike, reviewing the work of the last session of Congress. It is a thoughtful, forcible, and highly suggestive article, which, let us hope, will get a great deal of attention. What it says of the Alabama treaty, the treaty for the purchase of St. Thomas, Mr. Seward's diplomacy, the economic measures of the present Administration, the "rings" that control the Senate and the House, the Tenure-of-Office Bill—is all talk upon subjects upon which everybody has talked; but these subjects have seldom been treated of with anything like the independence of thought and plainness of sensible speech that Mr. Adams brings to the discussion of them. By the way, we think we have not before mentioned a certain incident in Mr. Butler's career which Mr. Adams recalls to mind. Nothing could be more characteristic: When Mr. Seward had begged Denmark to sell St. Thomas, and after much importunity had succeeded in getting her to do so; and after the people of the island had expressed their willingness to become our fellow-citizens; and after the King of Denmark had released them from their allegiance; our Senate, as everybody knows, saw fit—for reasons that Mr. Sumner may perhaps some day explain—to lie quiet and do nothing whatever about ratifying the agreement. So now Mr. Butler comes with this little suggestion, that inasmuch as Denmark has abandoned the island in pursuance of a popular vote, we are now at liberty to take it without paying anything at all—a mode of "conveying" territory that is not usually applied to anything but personal property.

The article on "Earthquakes," by Professor J. D. Whitney, is instructive and noticeably well written. So is Mr. J. B. Hodgskin's exhibition of "The Financial Condition of the United States," which is highly praiseworthy for the lucidity of its treatment of a subject on which nine-tenths of all the writing is densely obscure. Karl Blind's "Spanish Revolution" is, of course, on the side of the Spanish republicans; but it seems not unfair, and it shows an intimate acquaintance with the circumstances, which makes it worth close attention. These articles on European politics, which some readers condemn, are really to be praised, for they give no despicable help in the work of killing out "spread-eagleism"—a curse not so wholly antiquated as may be imagined by urban readers.

The critical notices are not very numerous, but they are new notices of fresh books, and are good without exception, especially those of Mr. Hunter's, Mr. Besant's, Mr. Gage's, and Mr. Longfellow's books. The reviewer of Blake's three books, also, has made an interesting notice, which, however, is of necessity far from being exhaustive. It is not, we should say, a very good reason for refraining from discussing the qualities of Blake's genius that recently they have been very much and very inadequately discussed. It is to be hoped that the writer before us, who seems at home in Blake's art work as well as in his literary work, may take occasion to make the poet the subject of a long essay. A point to be brought out—and the bringing out of which would be to account for the "marvellousness" of the fact that Blake so utterly escaped the influence of his prosaic century—is his absolute sufficiency to himself, the unhesitating certainty which he, as mystic and idealist, could not help but feel that he was the centre of the universe—in fact, was the universe. Another point is the fact that in his case this cast of mind was united with so much artistic capacity—a very rare conjunction. Indeed, at first blush the artistic faculty and the "orphic" kind of intellect seem all but incompatible, and as a matter of fact the conjunction is, as we say, extremely rare—"form" seldom occupying its due place in the regard of the orphic thinker. But the two are by no means necessarily disjoined, and in Blake's case they existed together in all but unexampled fulness.

Pulpit Germs. By Rev. W. W. Wythe. (Philadelphia: J. B. Lippincott & Co. 1869.)—Unless "Pulpit Germs" is intended as a book for youthful students in theological seminaries, we do not see how it can be, as the preface claims that it is, "not intended for drones." It gives four or five hundred skeletons for sermons, and this is one of them:

314. The Returning Prodigal.

Luke xv. 17–25: And when he came to himself, he said, How many hired servants of my father have bread enough and to spare, etc.

1. Convictions.
2. Apprehension of mercy [*sic*].
3. Decision.
4. Returning.
5. Welcome.
6. Confession.
7. Recovery.

Surely a man competent to make two respectable essays a week, to say nothing of a man who ought to be of mental power sufficient to be a capable guide and leader of a large number of his fellow-citizens in many important fields of thought, should stand in no need of such elementary instruction in his calling as this three hundred and fourteenth "germ" conveys. It will be the drones and the incapables who will use it.

A New Tale of a Tub: An Adventure in Verse. By F. W. N. Bayley. With illustrations after designs by Lieutenant J. S. Cotton. (New York: John Wiley & Son.)—Who Mr. F. W. N. Bayley is we do not know; but we should imagine that, whether he is or not, he might be the companion-in-arms of the Lieutenant J. S. Cotton who furnishes the designs for these verses. The story and, still more, the way in which it is told call to mind the typical literature of the mess-room, which, if it is generally very slight, is apt to be gay and merry, or else sentimental in no overpoweringly sad sense. In this case, the story is to provoke mirth. It tells of two Bengalese—white ones—who go out into a desert plain, on a broiling day, to enjoy a picnic luncheon, and are attacked by a tiger. They are, however, eating beside a big barrel, which is accountably on the spot, and into this they contrive to get the royal animal, who in turn contrives to run his tail out at the bunghole. Then the very short and fat Bengalese and the very tall and thin Bengalese contrive to tie a knot in the tail, and thus effect their deliverance. We do not quote any of the verses, which are well adapted to the incidents of the story, and, as we have said, this latter—verses and all—is a good specimen of the mess-room literature. We dare say it will be popular at West Point. Perhaps the rigidity and monotony of the daily routine of life among military men under pretty severe instruction, and afterward in garrisons, necessarily results—so far as it has literary results—in rather aimless trifling. However, we should not have spoken at all of the "New Tale of a Tub"—which is an old tale reprinted—but for Lieutenant Cotton's designs, which are very spirited and good, so far as the tiger is concerned. Of the men, in the pictures or the letterpress, nothing good is to be said.

Treatises on Light, Color, Electricity, and Magnetism. By J. F. Jencken, M.D. Translated by H. D. Jencken. (London: Trübner & Co.)—The late Dr. Jencken was a remarkable example of the possibility of pursuing a literary career without eyesight. During the last thirty years of his life, although totally blind, he prepared essays on very many branches of human knowledge, including theology, natural and physical science, and poetry. Since his death, his son has undertaken German and English editions of his works, to be published in four volumes, of which the first is before us.

The first essay is a full statement of a new theory of light; and to render it more intelligible to the general reader, it is preceded by a historical review of the whole subject, which occupies more space than the theory itself, and will be to many the most valuable part of the book. It is certainly an admirable exposition of the various theories which have been proposed from the earliest times to the present day. But as to the theory, before Dr. Jencken's views can be accepted, they must withstand successfully the same tests that were applied when the corpuscular was

superseded by the undulatory theory. Thus it was shown that the latter explained mathematically all known optical phenomena; and many new corollaries of the theory, which experiment had not then detected, were found on searching to be true to nature. Moreover, several facts were accounted for which were absolutely unintelligible on the theory of emission. Dr. Jencken has not applied the mathematics to his theory, and his arguments are mostly æsthetic rather than physical. He denies the existence of a luminiferous ether, and maintains that light is of a dual or polaric character; also, that the eye is not a simple optical instrument, but that colors are in part due to it. In the latter discussion he appears to confound subjective colors, or those due to imperfections or peculiarities of the eye, with the real tint of the object.

The treatise on electricity and magnetism is shorter than that on optics, and the historical notice less satisfactory. Gravitation, electricity, and magnetism are regarded as different manifestations of the same force; and the author appears to consider them as matter rather than as motion, since he speaks of their efflux and influx. The arrangement of the book is excellent, and shows good judgment on the part of the translator. The selection of words is sometimes unfortunate. Thus, light, air, and electricity are called elements, and terms are sometimes used in peculiar senses which may be very expressive to the writer, but are not so to the reader. Considering the nature of the subject, the book is an attractive one, but we doubt if it receive much attention from men of science. Since the days of Bacon, it is recognized that the physical sciences cannot be much advanced by abstract reasoning alone.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Bumstead (J.), On the Wing: A Book for Sportsmen	(Fields, Osgood & Co.) $2 50
Cleaveland (Mrs. E. H. J.), No Sects in Heaven; and other Poems	(Clark & Maynard) 1 25

GEORGE ROUTLEDGE & SONS,

416 Broome Street, N. Y.,

Have just received from Messrs. Alexander Strahan & Company, the London Publishers, a further supply of

THE DUKE OF ARGYLL'S NEW BOOK,

PRIMEVAL MAN.

AN EXAMINATION OF SOME RECENT SPECULATIONS.

16mo, cloth, $1 50.

"This volume is perhaps the most clear, graceful, pointed, and precise piece of ethical reasoning published for a quarter of a century. . . . The book is worthy of a place in every library as skilfully popularizing science, and yet sacrificing nothing either of its dignity or of its usefulness."—*Nonconformist.*

"This book shows great knowledge, unusual command of language, and a true sense of the value of arguments. . . . It may be questioned and even confuted in some points, without losing any of its claims as a candid, clear, and high-minded discussion."—*Pall Mall Gazette.*

BY THE SAME AUTHOR,

THE REIGN OF LAW.

ESSAYS ON DIVINE GOVERNMENT.

A New Edition, with additions. Crown 8vo, cloth, $2 50.

"We think it would be a profitable enterprise for some American publisher to reprint this book. It is one of the best of its class published in recent times. Of the scientific merits of the work we have but a word to say. The author contributes to the illustrations of design in nature an interesting discussion of the 'machinery of flight" in the wings of birds, and by this and other scientific matters makes his book a very readable one."—*The Nation.*

"This volume is a remarkable work, in which the logical sufficiency of the arguments is equal to the perspicuity with which they are stated. The style is simple and clear, and not without eloquence, and the aptness and variety of the illustrations are striking."—*Evening Post.*

"This is a very great book; great because, while treating of the most profound subject of human thought, it can be read with comfort by those whom Mr. Lincoln called plain people."—*The Round Table.*

AUERBACH'S BLACK FOREST VILLAGE TALES. Author's Edition. Illustrated with Eighty-two Facsimiles of the original German Woodcuts. 16mo, cloth, uniform with the author's edition of "The Villa on the Rhine." Price $1 50.

AUERBACH'S VILLA ON THE RHINE. Author's Edition. 2 vols. cloth (one vol. now ready), $1 75 per vol., or four parts, paper (three now ready), 50 cents per part. Conclusion soon.

HARRIET MARTINEAU'S BIOGRAPHICAL SKETCHES, $2 50.

POLKO'S REMINISCENCES OF MENDELSSOHN, $1 75.

TAINE'S ITALY (FLORENCE AND VENICE). Early in May.

SPIELHAGEN'S PROBLEMATIC CHARACTERS. Early in May.

LEYPOLDT & HOLT, Publishers, New York.

LITTLE, BROWN & CO.'S

LIST OF

RECENT LAW BOOKS.

I.

GRAY'S REPORTS. Vol. XV. Reports of Cases Argued and Determined in the Supreme Court of Massachusetts. Vol. XV. 8vo.

II.

TENNESSEE DIGEST. A Digest of the Judicial Decisions of the State of Tennessee from the year 1796 to July, 1868. With Notes by Henry Clay King, Esq. 4 vols. 8vo.

"The Living Church."

A Monthly Journal, under the above title, will be published on the 6th of MAY, and on the first THURSDAY of each following month.

"THE LIVING CHURCH"

Will advocate the claims of a positive Christianity in its relations to all the living questions of the day, in Criticism, Natural Science, Philosophy, Social Reform, etc., etc. The following gentlemen are among the contributors:

Rev. Wm. A. Muhlenberg, D.D. (whose "Brotherly Words" will be incorporated in these columns), Rt. Rev. Thos. M. Clark, D.D., Rev. E. Harwood, D.D., Rev. Phillips Brooks, Rev. Henry C. Potter, D.D., Rev. Jos. H. Rylance, D.D., Rev. Walter Mitchell, Rev. C. C. Tiffany, Rev. Wm. R. Huntington, Rev. E. C. Porter, Rev. C. A. Richards, Rev. J. T. Walden, Rev. D. O. Kellogg, Jr., Rev. W. T. Wilson, Prof. J. L. Diman, Rev. E. A. Washburn, D.D.

Terms:

TWO DOLLARS PER ANNUM, payable in advance.

Subscriptions should be addressed to "THE LIVING CHURCH," 633 Broadway, New York.

Literary communications and contributions should be addressed to the Editor of "THE LIVING CHURCH," 103 East Twenty-first Street, New York.

$20 A DAY to Male and Female Agents to introduce the BUCKEYE $20 SHUTTLE SEWING MACHINES. Stitch alike on both sides, and is the only LICENSED SHUTTLE MACHINE in the market sold for less than $40. All others are infringements, and the seller and user are liable to prosecution and imprisonment. Full particulars free. Address W. A. HENDERSON & CO., Cleveland, Ohio.

The Nation Press.

The Proprietors of THE NATION PRESS give notice that they have established a Book, Pamphlet, Job, and Newspaper Printing-Office in this City, and are prepared to execute at moderate prices, for cash, the best of work in any and all of these branches.

For BOOKS they will furnish Electrotype or Stereotype Plates, as desired, and will guaranty unusual accuracy in their preparation.

PAMPHLETS of every description, embracing Prospectuses, Statements, and Reports of Corporations, Statistical, Scientific, and Literary Papers, Law Pleadings, etc., etc., will receive the same attention as books, and be printed with especial care.

JOB WORK, in all its details: Cards, Circulars, Programmes, Bills, Receipts, Forms, etc., will be promptly dispatched, with taste, and in the newest varieties of type.

NEWSPAPERS, MAGAZINES, and other Periodicals will be printed on reasonable terms, and strictly upon time.

In short, the Proprietors undertake to satisfy first-class custom in all that pertains to a general Printing Business.

Orders may be sent to THE NATION PRESS, 27 Rose Street (a few doors North of Frankfort), or to this Office; and estimates will be furnished at either place.

THE EARTH CLOSET COMPANY

ASKS ATTENTION TO THE FOLLOWING STATEMENTS CONCERNING THE ADVANTAGES OF

THE DRY EARTH SYSTEM,

AND TO THE APPENDED TESTIMONY OF THOSE WHO HAVE HAD EXPERIENCE WITH IT:

The EARTH CLOSET is a substitute for the water-closet or the common privy. In its simplest form it implies only a tight receptacle beneath the seat, a box of sifted dry earth, and a scoop or cup with which to throw down a sufficient quantity of earth to cover and absorb the evacuations. This is unpatented and unpatentable. From its simplicity and cheapness it is fully within the reach of the poorest family; and for the sake of its perfect efficiency its adoption into every cottage in the land should be urged. A very simple adaptation of the same process will completely overcome the greatest horror of the sick-room. The bottom of the vessel should first be covered with enough earth to prevent adhesion.

Where no more elaborate provision is made, the earth may be kept ready for use in paper bags, each holding about a pint of earth.

For those who desire something more convenient and requiring less personal attention, the Company offers:

COMMODES of various forms, and made of different woods, for the following prices:

In neat chestnut or pine cases, panelled (pull-up sort)	$25 00
Do. do. do. do. (self-acting)	35 00

Black walnut cases, from $5 to $15 extra, according to finish. Extra finish in other woods, $5.

APPARATUS FOR FIXED CLOSETS, including seat with finished holes, earth platform under the hopper, galvanized iron hopper and shield, all packed in a box about two feet square by seven inches deep, without extra charge for packing or drayage (pull-up)	$11 50
Self-acting, including weights	13 00

or with earthen shield at seventy-five cents in addition.

NOTE.—A lithographed plan, with full directions, is sent with each set of fixtures, which will enable an ordinary carpenter to set them up without difficulty.

The chief ADVANTAGES of the Earth Closet are

1. *Complete* deodorization from the moment of first covering the deposit until it is finally applied to the soil as manure.

2. Absolute prevention of the communication of CHOLERA and TYPHOID, either by the leaking of fæces into wells from which drinking water is taken, or by the exhalation of vapor poison from the evacuations of diseased peasons.

3. The placing within reach of all, rich and poor, in town and in the country, a simple means for providing *in the house* a comfortable private closet. Probably nothing has so much undermined the health of American women as the irregularity to which they accustom themselves rather than encounter the cold and storms (themselves a great source of injury to delicate indoor folk) in bad weather. It is a question between taking cold, getting wet feet, or facing some other discomfort, and forcing nature to postpone her call. So great is our adaptability that the natural function soon subjects itself entirely to the will, and for days together there will be no especial inclination. It is not possible adequately to discuss this question here, but no thoughtful person need be more than reminded of the existence of the difficulty to appreciate the value of the perfect relief offered by the house-closet.

4. In houses of the better class the removal of that all-pervading, depressing effluvium which (more or less offensive in its odor, according to circumstances), creeping out from every overflow outlet of bath-tub, wash-bowl, urinal, or kitchen-sink, carries the poisonous gases of the "soil-pipe" and the sewer to every room, marking its presence with headache, low fevers, and general debility.

5. Such a saving of manure, and, consequently, of the very basis of our prosperity, as needs no discussion.

In addition to the foregoing, there are many reasons, both of decency and of economy, why we should secure the most immediate deodorization and covering up of our exuviæ.

TESTIMONIALS.

From an article contributed to the New Haven *Palladium* by Prof. Samuel W. Johnson, of the Sheffield Scientific School of Yale College.

"The means of satisfying at once all demands of sanitary science and of agriculture is, however, fortunately everywhere at hand, and of extreme simplicity and cheapness in its application. *Dry and fine earth* is the material.

* * * * * * *

"Reader, you should lose no time in providing yourself, and inciting your neighbor to provide, some form of earth closet in lieu of the vault which has hitherto sufficed. Health and economy both demand it! City authorities, you would do well to enact that all privies within a hundred feet of dwellings, or of wells in use, should be converted into earth closets, and to provide for their systematic and thorough inspection."

Professor Johnson, who is the first agricultural authority of the country, has also given the following testimony:

"SHEFFIELD SCIENTIFIC SCHOOL OF YALE COLLEGE,
"NEW HAVEN, Conn., March 29, 1869.

"MY DEAR SIR: I have read your little publication on 'Earth Closets' with great interest, and am glad to learn that you are taking active measures to bring the subject practically to the notice of our people. I am myself familiar with the use of dry earth as a disinfectant and dryer of fæces. *Nothing can be more instant and effectual than its operation, and its use has every sanitary advantage.*

"The agricultural aspect of the subject is of the highest interest and importance. The Earth Closet enables us to effect a more than Chinese economy of our night-soil and urine, in combination with the utmost cleanliness, convenience, and cheapness.

"The Commode of Mr. Moule, as improved by you and manufactured at Hartford, is *very effective and convenient* for hospital and sick-room use, and I trust the public will not be slow to avail themselves of the 'reform' which your enterprise now puts within their reach.

"Yours, most truly, S. W. JOHNSON.
"To GEO. E. WARING, Jr., Esq."

"PHILADELPHIA, April 10, 1869.

"Having tested one of Moule's Patent Earth Closets (manufactured by the Earth Closet Company of Hartford) with my patients in the *Pennsylvania Hospital*, in a manner which may fairly be said to have been a very severe one, I am confident that it not only warrants all that is claimed for it, but fulfils all the requirements of such a convenience for a hospital as well as for a sick chamber, or for family use. (Signed) ADDINELL HEWSON, M.D."

"EARTH CLOSET COMPANY, HARTFORD:

"The Commode which I received from you three weeks since has been in use in my family from that time, to my perfect satisfaction. Having no dry earth, we have used it with our anthracite coal ashes, and, although it is in a closet opening directly into one of my family rooms, no one would suspect its being in the house.

"Yours truly, S. W. ROBBINS.
"WETHERSFIELD, 8th April, 1869."

From the *Lancet*, August 1, 1868.

"The strongest possible testimony has been borne to the efficacy of the 'dry-earth system,' which was in use throughout the volunteer encampment at Wimbledon. Last year the system was experimentally tried, and resulted so satisfactorily that it was determined to adopt it this year exclusively. There can be no question that the test to which the system has thus been subjected was a crucial one, considering especially the excessive heat, which, although favorable to the rapid drying of the soil, was yet creative of other conditions increasing the difficulties attendant on fæcal deodorization. Altogether, some 148 dry-earth closets and urinals were in operation at Wimbledon; and when it is remembered that about 40 or 50 of these closets were used daily by not less than 2,000 men without the slightest annoyance to sight or smell, the measure of success is complete. It is not too much to say that no other system is possible at Wimbledon, where circumstances have all to be made to square with a temporary requirement. But if the dry-earth closets can stand the test of such repeated use as they have lately had, it seems to us to follow as a matter of course that they must be in every way suitable for the exigencies of rural districts, where the detestable open privy reigns now supreme."

Extract from the Reports by Dr. Monat, Inspector-General of Gaols in India.

"It is, in my humble judgment, impossible to overestimate the benefits that will result from the labors of the Rev. Mr. Moule in this important branch of hygiene—the dry-earth system. It is without exception the greatest public benefit conferred by a private individual in a matter so essential to public health that I am acquainted with."

From the Rev. J. H. Bernau, Incumbent of Belvedere, Kent.

SEPTEMBER 14, 1868.

"When, twelve years ago, I took possession of my parsonage, I found my family and myself were frequently suffering from nausea and sick headaches. On investigation I found that the cause of all this was the close and unpleasant proximity of a water-closet, with its accompanying cesspool, and the deleterious gases emanating therefrom. Having had the cesspool emptied, and made free use of disinfectants, I hoped the evil would be cured. The remedy, however, was but of short duration. The old complaints again appeared, and I began to apprehend that typhoid fever would be the sure result, unless some more efficient remedy were found. Hearing of Mr. Moule's invention, I adopted the same, I confess with some misgivings and prejudice as to its probable efficacy, but found it a complete success, for ever since we have been free from all unpleasant smell and annoyance. For the information of those who wish to utilize the soil as manure, I would state that when judiciously applied it will be found equal to the best of stable manure, and even to guano itself. My gardener removes the soil from the earth closet weekly, and after having well mixed the same, deposits it in a place sheltered from sun and rain. Having remained there for some months, it is then used either for the closet again as the deodorizing agent, or applied to the ground as manure—no vestige of paper being found."

From the *Observer*, July 19, 1868.

"Amongst the many important features connected with the camp this year of a novel character, possibly there is none more important than its sanitary improvements. It is gratifying to think that, amid all the troubles and anxieties of a camp life, due attention has been paid to this point. The introduction, under official sanction, of what are termed 'Moule's Patent Earth Closets,' has had the effect of preventing the least approach to any objectionable effluvium. When the heat of the weather is considered, this is the more important, as we find that on Thursday last, which is believed to have been the hottest day ever known in this country, in Steward's tent (optician to the National Rifle Association) the thermometer registered 100 degrees (Fahrenheit) in the shade."

"Matlock Bank Hydropathic Establishment, Riber Castle, Matlock, and Lea Mills, near Derby,
May 31, 1866.

"GENTLEMEN: I find your Patent Earth Closet a perfect success. It may be used in any room without the slightest effluvium being perceived. J. SMEDLEY."

From Sir J. H. Lethbridge, Hillsborough Terrace, Ilfracome.

"I consider the Earth Closet among the greatest boons offered to poor suffering humanity."

THE COMPANY ALSO OFFERS **PREPARED DRY EARTH** FOR **DRESSING WOUNDS** AND ILL-CONDITIONED **SORES,** BEING OF THE SAME QUALITY AS THAT USED BY DR. HEWSON IN HIS REMARKABLE EXPERIMENTS AT THE PENNSYLVANIA HOSPITAL (PHILADELPHIA). **Price 50 Cents per package.** For further information send for circular to the

Safes to let by the National Park Bank
IN A BURGLAR AND FIRE-PROOF VAULT.—For the safe keeping and protection from fire and burglars of Securities of all kinds, including Stocks, Bonds, Mortgages, Wills and Diamonds, and Valuable Jewelry of every description. An inspection of the vault, constructed by this Bank in their new building, will at once convince all parties interested that the most perfect attainable security has been reached, and at an extremely moderate annual cost to each tenant.

The officers will take pleasure in showing the vault on application.

The Week.

To say that the Pacific Railroad is finished is quite as much as to say, in the words of the only poet whom we have as yet observed grappling with the subject:

"Hail to the pathway of nations here,
It runs to-day through a hemisphere."

So far as we have seen them, the speeches, prayers, and congratulatory telegrams, including that of the irrepressible A. Oakey Hall, all broke down under the weight of the occasion, and it is a relief to turn from them to the telegrams which passed between the various operators, and tog et their flavor of business and the West. "Keep quiet," the Omaha man says, when the operators all over the Union begin to pester him with questions. "When the last spike is driven at Promontory Point, we will say 'Done.'" By-and-by he sends the word, "Hats off! Prayer is being offered." Then at the end of thirteen minutes he says, apparently with a sense of having at last come to business: "We have got done praying. The spike is about to be presented." Half-past twelve (local time) of the 10th instant was the moment of driving the last nail, and before sunset the event was celebrated, not very noisily but very heartily, throughout the country. Chicago made a procession seven miles long; New York hung out bunting, fired a hundred guns, and held thanksgiving services in Trinity; Philadelphia rang the old Liberty Bell; Buffalo sang "The Star-Spangled Banner;" and many towns burnt powder in honor of the consummation of a work which, as all good Americans believe, gives us a road to the Indies, a means of making the United States a half-way house between the East and West, and last, but not least, a new guarantee of the perpetuity of the Union as it is.

The "Bohemian" seems to be the American citizen who is most excited over the affairs of the Cuban insurgents. The general public, no doubt, feels a more or less languid interest in the fortunes of the rebellion; but the feeble meeting that was held the other night expresses this interest pretty fully, and we are persuaded that we are in little more danger of being carried away to Cuba by our feelings, or seeing much of our money carried there, than we are of being run over and mangled by the velocipedes which, according to some correspondents, block up all our thoroughfares. This is not saying that there has not been some activity in this city, and perhaps elsewhere, in the purchase and shipping of munitions of war and the enlistment of men; or perhaps, we ought to say, in the transportation of some Cubans and a few other people who are willing to join Quesada. But it is very hard indeed to learn anything at all reliable as to what has been done, for those who know most say least, and those who say most are the gentlemen who get up "head lines" for some of our enterprising contemporaries—whose enterprise, we are glad to see, does not bring them in much. The most that rumor says is that two thousand men and much shot and shell were put on board the *Perit*—a steamship fitted out at Red Hook Point, and sent to Cuba some ten days ago; that the two iron-clads which ostensibly went to Peru awhile ago, really will go to Cespedes; that the *Arago*, or a vessel much like her, went off with a thousand men about a week ago; that the *Quaker City* is fitting out for service in Cuban waters; that a heavy schooner, loaded down with cannon, rifles, and ammunition, set out from Hunter's Point for Cuba about three weeks since; that the Cuban Junta drill men in an upstairs room up-town; that General Jordan, formerly of Beauregard's staff, and General J. B. Steedman, favor the revolutionists, and that this city is full of spies. Furthermore, it is said, and probably without any truth—for General Barlow is a man who, presumably, knows his duty, and will do it—that the United States Marshal's office was not wholly in the dark about the movements of the *Arago* and the men who control her.

We disbelieve most of all this. Where General Jordan and "the War-horse of the Ohio Democracy" may be we do not know, and we may frankly say we do not care. It might be a sad thing to hear that Dulce had captured both of them. The Spanish minister is undoubtedly watching closely the action of the Cuban Junta; and he, it is reported, is satisfied that the talk about the iron-clads and the *Arago* is false. Setting rumor against rumor, we are decidedly inclined to believe the one which consists with what is known of Secretary Fish's, Mr. Garcia's, and Marshal Barlow's characters. We would not counsel any one to believe either, that two thousand, or one thousand, or five hundred volunteers, of any nationality, have left this port to enter Quesada's service, any more than to believe that the Government is winking at conduct on the part of United States officials which Spain would be as entirely justified in making ground of complaint against us as we are justified in complaining of England for letting the *Alabama* escape. It is noticeable—very noticeable, if one remembers the Lopez excitement of twenty years ago—how many of our journals are on the side of honest observance of our duty under the rules of international law. No fear need be entertained, we should say, that any reasonable ground of complaint against us can be found by the Spaniards—who, meantime, are disgracing themselves by a blood-thirsty cruelty that would justify Secretary Fish in making the strongest representations to the Spanish Government. There remains no doubt that Valamesda really issued his infamous proclamation.

We have at last got something wearing an air of definiteness about the Cuban insurrection. The Spanish authorities on the island have sent word to the Spanish Minister in Washington that the insurrection "is virtually terminated," and that there are now only 1,200 insurgents in arms. On the other hand, the Associated Press agent says that the Government in Washington has received advices direct from the insurrectionary districts; but what the advices are, he fails to state. The *Tribune* correspondent, however, supplies the deficiency. He says that the report from the insurrectionary districts has been received by our Government from an agent of its own, and "shows that the Cuban insurgents are not making any headway, and that the Spanish army will soon put an end to the insurrection," and that nothing remains of the insurrectionary forces but detached parties acting as guerillas." He adds that this

comes "from sources which leave little room for doubt." It appears, nevertheless, that certain veracious chroniclers in Washington, known as "parties here in the interest of the Cubans," allege that the Cuban army in the island numbers 28,000 men, including 3,000 Americans. The figures of an established government, furnished to its authorized agent, regarding the number of its enemies, we should not feel justified in considering more than half diminished; so we shall set down the Spanish returns of the Cuban force at 2,500 men. "Parties here in the interest of the Cubans" we cannot help treating as liars to the extent of three-fourths; so we shall set down the Cuban account of the insurgent force at 7,000 men, and we shall split the difference between this and the Government report, making the Cuban army now in the field 4,750 men. We do not present this mode of getting at the truth as anything very admirable, or by any means successful; but it is the best within our reach.

The friends of the insurgents in this country have never yet favored us with the numbers of their army, the names of any of their generals, or an account of any of their marches or engagements. We do not even know the name of any officer of the insurgent government that the President is called on to accord "belligerent rights" to. Nobody has published an account of a fight in the island with any details calculated to give any more air of reality to it than belongs to the famous battle of Roncesvalles. Nobody, so far as we know, is willing to say that he has seen a man, Spaniard or rebel, killed or wounded in line of battle. About the hospitals, train, and commissariat of the contending forces, we are equally in the dark. We made the acquaintance last week of a Cuban gentleman fresh from the island, and asked him eagerly what was the state of affairs, hoping to get military details. He said it was "perfectly dreadful," which we knew before; but had nothing to tell of except the cruelties of the Spaniards to the unarmed inhabitants. When we ask the Cuban sympathizers for these details—in such form, of course, as will not injure the cause—they send us cards of admission to Cuban meetings in New York and Philadelphia, and accounts of Cuban sewing circles and bazaars up-town—which are no doubt very praiseworthy phenomena; but we have never heard of a war of independence successfully carried on in this way. If the Cubans mean to be free, they must find men who, at some point or other, are willing to wait till the Spaniards come up, and face wounds and death. It is not pleasant, we admit; but it has to be done by somebody. Perambulating the hills, waiting for the yellow fever to kill the Spaniards, will not do the work.

The English Government has intervened in the case of the *Mary Lowell*—result not known. The latest plan for achieving the independence of the island is to get St. Domingo to declare itself desirous of annexation to the United States, and, the favor and protection of the United States having been thus secured, the Republic is to accord "belligerent rights" to the Cubans, who are then to do something dreadful. We feared the Mexicans would not long have a monopoly of the belligerent rights market. If the Dominicans begin to produce them, it will reduce the price of the Mexican article greatly, owing to their greater nearness to the scene of action. We recommended the "Irish Republic" last week to get belligerent rights from Mexico; but we now think it might supply them itself to such struggling nationalities as want a good, cheap, and substantial article. Belligerent rights are clearly going to be the great instrument by which the young and rising democracies are to overcome the effete despotisms of the Old World; and the one great advantage of them is that the republics can, it appears, exchange their "belligerency" just as hard-pushed traders exchange checks.

Judge Benedict delivered a charge to the grand jury in the United States District Court in this city last week which contained some pleasing revelations as to the state of affairs in the Custom House under its late Collector, Mr. Henry B. Smythe, of which we hope Mr. Grinnell will take note. The judge showed up the drawback frauds of which we spoke some time ago, by which the Government was swindled of $700,000, and which affords an admirable illustration of the way "the men inside politics" conduct the affairs of that blessed institution. Drawbacks, perhaps all our readers may not know, are taxes returned on goods exported to foreign countries, and are one of the modes of encouraging native industry. To get the drawback a man has to produce four certificates, an affidavit, and a bond. The principal thieves of the Custom House therefore banded themselves together, and forged all these certificates in a great number of cases—there being no goods such as they described in existence, their affidavits being perjuries, and their bondsmen men of straw; and the documents were accepted with perfect simplicity, and the money paid in Washington. Judge Benedict says that the jury will see in the course of their enquiry "that the genuine seal of an internal revenue officer can constantly appear on certificates now claimed to be forged, and that part of the files of the Collector's office, *being bonds required by law*, can be removed and taken to a neighboring city *by persons having no connection whatever with the Government*, and there dealt with as unknown parties might require, and then returned without objection or remark." He adds "that in the warehouse department it has been possible for certain parties to withdraw dutiable goods without payment of any duty, until the loss of a single warehouse has equalled $400,000." We quote the judge's exact words. We heard a few days ago, *apropos* of this, of a respectable lawyer in this city, possessing some political influence, who, during the late office-seeking crisis, was obliged to leave town with his family in order to secure sleep—the office-seekers thundering at his door all night long; and we can hardly wonder at their importunity when we see what their chances are. Nevertheless, we have the authority of Mr. Logan and other War-horses for the assertion that any change in this system would prove the destruction of American liberties; and even the common run of "practical men" look on you as an amiable enthusiast if you advocate it. The real wild visionaries, however—the true "simple little dears"—are the people who believe the Government can stand this sort of usage very long.

Another large free-trade meeting was held here on Monday, at which Mr. Howard Potter presided, and the principal speakers were Mr. Bryant and Mr. Edward Atkinson. The most important incident of the meeting was the revelation of Mr. Charles Marshall, the Treasurer of the Free-Trade League, of the fact that he had written a letter to the *Tribune* four or five weeks ago, placing a list of subscribers to the funds of the League at the *Tribune's* disposal for publication, in reply to the challenge of that journal, which has steadily insisted that the agitation was kept up with "British gold;" in other words, that the money employed in it was derived almost entirely from foreigners. The League were unable to answer this accusation for some time, owing, as Mr. Marshall now explains, to the fact that they had very little money, and were naturally unwilling to reveal their weakness to the enemy. The necessity for concealment having passed away, the treasury being full and the agitation flourishing, Mr. Marshall wrote his letter, revealing the names of the subscribers and the amount of the subscriptions, but the *Tribune* took no notice of the letter, and kept on, down to two days ago, repeating the challenge. The *Evening Post*, which has a mild, benevolent way of dealing with the *Tribune's* "eccentricities," asks, "Is this fair? Is this honest?" The *Post* must give people time to answer such posers. We do not mind saying ourselves, on first blush, that truly good men would, we feel sure, pursue under like circumstances a different line of conduct. The sum derived from Englishmen by the League amounts, it appears, to thirty-seven dollars and some cents, the product of five pounds in gold, probably contributed by some wicked old lord, from the recesses of his harem, out of sheer hatred to the workingmen of the United States.

The Washington correspondent of the Boston *Advertiser* represents the British Embassy in Washington as being very much puzzled about two things—one is, who among Americans has the treaty-making power; and the other is, the precise nature of the offence England has committed, and for which satisfaction is demanded. For the answer to the first, they should go to the Constitution. The answer to the second it would be difficult to tell them where to look for. In Mr. Sumner's speech they will find "the feeling of the country;" but as to

what the country wants satisfaction for, not only is Mr. Sumner divided against himself, but all the newspapers are divided against each other. Some say it is pure piracy, others say it is criminal laches, others say it is premature concession of belligerent rights, others say it is the failure to supply a proper amount of sympathy at the right time; but the greater number of rural publicists concentrate on the belligerent rights, which we observe the Fenians evidently look on as a commodity done up in brown-paper packages, and kept in the Treasury vaults by established governments. Our own opinion is that England was guilty of gross negligence in letting an English ship leave her harbors to prey on American commerce, and that she aggravated it by allowing it to take refuge and refit afterwards in British ports, and that for all computable damage thus done she ought to be made to pay, and that it would be her duty to add a formal expression of regret for the same. But should she refuse to express her regret, most sane Christians would certainly object to having one hundred thousand lives and four or five hundred millions of dollars spent in an attempt to make her. We are also opposed to having the United States launch pirates on her commerce by way of retaliation, and for the very same reasons that would have led us to oppose, had we flourished at the time, the reduction of an indefinite number of Moors to slavery in this country, by way of punishing the Deys of Tunis and Algiers for the operations of their corsairs. Anybody who insists upon and still expects an apology from England for the issue of the neutrality proclamation is, of course, if an honest man, entitled to a respectful hearing; but we should be compelled, though tied to the stake and the fagots ready to be lighted, to declare our belief that he was the victim of a monstrous delusion.

We have received from a flippant and light-minded Conservative a speculation as to the precise position Mr. Motley will occupy in London on his arrival, in which he says that when the Foreign Secretary asks Mr. Motley whom he represents, Mr. Motley will have to reply, "The feeling of my country." "Very well," Lord Clarendon will say, "but Mr. Reverdy Johnson claimed to represent the same thing, and we accepted his terms, proposed nothing, altered nothing, and changed nothing, but your Senate rejected his work." To this Mr. Motley will rejoin, that his predecessor represented only "the greatest criminal of this or any other age," and in no way the country at large. "Here Lord Clarendon," says this shallow sneerer, "will meet him by pointing to the unanimous confirmation of Mr. Reverdy Johnson by the Senate, and will ask whom Mr. Adams represented, for the terms offered by Mr. Adams did not differ materially from those offered by Mr. Johnson." Mr. Motley will then say, that, however that may be, he is himself the genuine article this time and no mistake, and represents our whole and undivided country, whereupon Clarendon will pull out a copy of the *Globe*, and proceed to read passages from War-horse Chandler's speech, but Mr. Motley will say "Bunkum!" and pull out another copy of the *Globe*, and begin reading from Mr. Sumner's speech as the only authorized version, and the two diplomatists will be engaged in a dispute over the likelihood of the President's being able to get the Motley treaty ratified by the Senate, when the servant will bring in the name of the Danish ambassador. Clarendon will then smile ferociously, and Mr. Motley, remembering the St. Thomas business, and not liking it, will thrust his *Globe* into his pocket, and ask to be let out by the side door.

The latest English papers are almost unanimous in treating Mr. Sumner's speech as sentimental and extravagant, and a settlement on any basis he has laid down as impossible, and that, therefore, if this is what inspires Mr. Motley, there is little use in opening the negotiations. Half the cost of the rebellion, they say, would amount to $2,000,000,000, and no provision seems to be contemplated by Mr. Sumner for throwing part of the loss on France, which not only accorded belligerent rights at the same time as England, but proposed to England to recognize the independence of the Confederacy in the middle of the struggle. The whole argument, our correspondent (whose letter arrives too late for publication) says, is considered to be of "the feminine nature." The *Pall Mall Gazette* argues that "these insults," for so it calls Mr. Sumner's speech, and the Mayor of Cork's ruffianly speech eulogizing Farrell, who attempted to murder Prince Alfred at Sydney, are due to the conviction which has sprung up in America and Ireland that England is afraid of the United States, and it admits, "as a melancholy truth," that England "has been considerably frightened at the state of Ireland and the unexpected development of the military power and tastes of the United States." It advises, in conclusion, a policy of resolution, readiness to pay for individual damages caused by English negligence, but "fighting at all hazards and disadvantages" sooner than entertain the question of paying general damages for recognizing the Confederates.

The Italian Ministry has resigned, and been apparently remodelled under the same head, General Menabrea. The cause of the crisis does not appear, particularly as the Cable reports that the Minister of Finance, Count Cambray-Digny, will probably remain in the Cabinet, and he seems to have been the member on whom the opposition concentrated most of their hostility. His management of the finances is acknowledged by most impartial observers to have been exceedingly good. There has been a steady increase in the revenue since he took office two years ago; but there is a deficit of about $3,000,000, of which he does not anticipate the disappearance for six years to come, though he hopes to cope with it by diminution in the expenditure and improvement in the revenue service.

The Spanish budget has been presented to the Cortes by Señor Figuerola. He estimates the receipts for the coming year at $267,750,000, the floating debt at $75,000,000. He proposes to abolish all prohibitory duties, and to fix three classes of duties—the maximum being 30 to 35 per cent. on certain articles now taxed very highly, being about half the amount levied under the American tariff. These are, however, to be lowered gradually during the next six years. The Government has put a loan on the London market for the nominal amount of $50,000,000, selling its bonds at 29¼, and paying 3 per cent. on the nominal amounts, which will make the net return to investors 10¾ per cent. The London *Daily News* represents the feeling in London as highly favorable to it, possibly owing to the fact that, in spite of the rascally treatment of one class of bondholders by the late Government, the regular dividends of the ordinary debt have been paid with great punctuality, and the character of Spanish merchants and traders stands extremely high—a circumstance which is, now that the Government is popularized, certain to affect its credit favorably.

The news from Germany, except an account of a small conflict in the North German Parliament between the Liberals and Bismarck, is without interest. The Liberals appear to be getting over the enthusiasm excited by the war, and have, by a vote of 111 to 100, passed a resolution to attach a responsible cabinet to the Chancellor of the Confederacy, and thus make the government of the Confederation regularly constitutional. At present the sole minister of the Confederation properly so called is the Chancellor, Count Bismarck; and he, the Liberals say, great man though he be, cannot possibly discharge all the duties which devolve on him. Moreover, he is the representative of Prussia in the Council or Upper House of the Confederation, where he is surrounded by the representatives of the minor sovereigns, and may be outvoted by them, and their tendency is to extend the influence of Federal authority, and draw within their influence a greater and greater range of affairs without incurring any corresponding responsibility to the nation at large. The Liberals want to extend the range of Federal authority also, but through the instrumentality of the Lower House, and reduce the representatives of the sovereigns to insignificance. Bismarck made a vigorous defence of the Council, accused the Liberals of fancying, in their eagerness for greater unity, that in advancing the hands of the clock they were hastening the flight of time, pleading strongly for decentralization, local independence, and what not, but it was all in vain. The majority insisted on his having a responsible cabinet to aid him in his work, and on his doing more work, and passed the resolution. It is thought it will eventually bring the Lower House into collision with the Council and the Executive.

WHAT IS THE USE OF INTERNATIONAL LAW?

Mr. C. T. Congdon, in the preface to the recently-published volume of his articles contributed to the New York *Tribune* during the anti-slavery struggle, says truly that when he began to write there was "hardly a political virtue, hardly a fundamental social truth, hardly a time-honored maxim of humanity, hardly an elementary principle of justice," for which he and his fellow-laborers "had not to fight as if they had been discoveries." It sometimes seems now as if enlightened friends of the human race would have to wheel about, and during the next half-century continue to do vigorous battle in behalf of these very things against some of those who, in the last half-century, fought by their side. Democracy, in so far as it means equality, may be said to have at last conquered the world. Privileges and privileged classes are gone: society is hereafter to exist for the benefit of the many, and not of the few. But it sometimes looks as if in warring against them a spirit of disbelief in the value of all things old, and of belief in the capacity of each generation to work out for itself all problems that may be presented to it, of whatever nature, had been developed, which, if not resisted now at the outset, would assuredly carry us into some very strange regions. So far from the accumulated experience of the race being of less, it is of more use now than ever. Having got rid of all outward restraints on our will—tradition, caste and custom, and authority—there is more need than ever there was for the absolute subjection of our will to our reason; and in the political and social field, at least, for reason to work profitably, or even work at all, experience has to be constantly drawn upon for doctrine, for reproof, and for instruction—in other words, for the materials of its decisions.

Our excuse for uttering what to most of our readers will seem commonplaces, is the extraordinary phase of feeling or opinion through which a large and very respectable portion of the public seems to be passing with regard to the nature and objects of international law. There is no country in the world in which there ought to be so little misconception or darkness now on these subjects; for there is none which has displayed, during the whole period of its history, a clearer comprehension of them, or has more faithfully and intelligently followed out its understanding of them. Strictly speaking, as nearly everybody knows, there is no such thing as international *law*. What passes by that name is simply a body of usages to which civilized nations have agreed to adhere, and in practice do adhere, in the great majority of cases. These usages are in part the product of the application to nations, as moral persons, of the rules of Christian morality which regulate the relations of individuals, and in part of the liberal use by publicists of the great maxims of Roman jurisprudence. But inasmuch as no rule thus obtained has any real sanction outside the forum of conscience; as there is no court of last resort to say what the law of nations is or is not; and as the punishment of any violator of it depends entirely on the ability of the injured party to overcome him in an armed conflict—it is only by a sort of perversion of the term "law" that it is applied to any such rule. What we really mean when we say that this or that is a rule of international law is, that a particular line of conduct, under particular circumstances, is the one which civilized nations, partly in the interest of civilization, and partly in obedience to their own sense of abstract right, have agreed to follow, and have followed in practice for a long course of time.

This agreement, considering that the parties to it have really known no *law* but their own will, has, on the whole, been adhered to with remarkable fidelity, and every age has witnessed improvements in it, and civilization probably owes more to the increasing reverence for it than to any other purely human agency. It has doubled the guaranties for peace, robbed war of half its horrors, promoted scientific research, strengthened and spread the idea of the brotherhood of man, and exalted the idea of justice, as something apart from and independent of material strength. But in adopting any new rule, nations have pretty steadily kept two things in view: one has been not to furnish the strong with fresh weapons against the weak, and the other has been to strengthen the civilizing, humanizing influences of society. All additions to the code have carried it in this direction. Each nation has felt under an obligation of greater or less strength either to propose something likely to increase human happiness, or else not to agree to anything likely to diminish it; and in adopting a new rule all have felt bound to consider, as legislators are bound to consider, not simply what will be its immediate effect, or its effect in a particular case, but what will be its remote effect, or its effect in the majority of cases. The difference between a foolish and ignorant legislator and a wise and skilled one is, as everybody knows, that the former concocts a law for each evil that troubles him, and does not think or care what will happen once this is cured; while the latter thinks his measure out, and conjures up before his mind's eye a picture of its general and ultimate consequences. Moreover, it must be remembered, in studying the *growth* of international law, that it has been due entirely to the readiness of the more civilized nations either to propose some new addition to the code, or agree to it when proposed by others. If nobody had been willing to advance, and if some one had not always been watching for an opportunity to make an advance, we should still be killing prisoners in cold blood, and making war for plunder or for the amusement of courtiers. It may indeed be said to be well settled, that it is the duty of a first-class power to do all it can to bring international usage *more and more* into accordance with the principles of municipal jurisprudence, both by precept and by example. It owes this to civilization and to humanity.

Now, what is the fundamental principle of municipal jurisprudence? Is it not that commands must be general in their application; that, a rule once established, *all*, no matter what their character or motives, must submit to it? Is it not well settled that, to prevent anarchy and to prevent the weak being a constant prey to the strong and rapacious, we must not admit a mere allegation of good motive from the wrong-doer as a sufficient answer to a charge of breaking the law? Supposing all thieves deserve to be killed, what would be the state of things in a country in which anybody might go out and kill anybody he thought was a thief whenever he pleased? Knowing, as we do, that society is full of wrongs of all sorts, which of us would be willing to live in a community in which even the very best man was allowed to go about and give everybody what he thought was his deserts? "No," says the legislator—even to ardent reformers—"Smith is doubtless a bad fellow, and richly deserves a cowhiding, and would be the better, and so would his wife and children, if you soundly thrashed him; but if I were to let you do it, some of his friends would shortly declare that you too were a bad fellow, and give you a thrashing; and, the practice of thrashing 'for probable cause' becoming general, the lazy, idle, profligate, and brutal would give themselves up to it completely, and the sober and industrious citizens would have to quit the country to avoid being constantly under the cudgel and the knife." In short, in order to maintain law, order, and even civilization itself, we are forced every day to suffer small evils to go unredressed, and to submit to occasional failures of justice and to the occasional triumph of wickedness, for the sake of the general interest; in other words, in order that justice be the rule and injustice the exception, and in order that the weak may in the greater number of cases enjoy reasonable security.

THE WAITING POLICY.

Our excuse for making the very obvious reflections contained in the foregoing article is the disposition displayed by a portion of the press, both in the matter of Cuba and in the matter of the *Alabama*, to advocate our taking one step back toward barbarism. There are now two sets of preachers in the field, discoursing on the subjects of our international duties and relations. One is repeating, almost in their very words, the arguments used by the English newspapers and orators to justify the premature recognition of the Confederacy as a belligerent. Nay, this set have gone one step further; for they, in the case of Cuba, lay down rules with regard to the concession of belligerent rights such as not only no Englishman but no Confederate ever ventured to propound. If half what they say touching our duty or policy toward Cuba be true, not only was Lord Russell not hasty in the issue of the Queen's proclamation, but he delayed ridiculously long. The belligerency of the Confederacy ought to have been acknowledged when the first Confederate Commissioners came to Washington, and its inde-

pendence ought to have been recognized after the battle of Bull Run.

We are told, however, that the cases are different; that the Cubans are an oppressed and long-suffering people, seeking simply freedom from a foreign yoke, while the Confederates had nothing to complain of—were rebelling against the government of their choice for the purpose of maintaining and perpetuating slavery. But then the rule of international law, which we are seeking to enforce against England, and which has been settled by the experience of a thousand years, takes no count whatever of the moral quality of rebellions. It is with their material strength that it concerns itself. Their morality a foreign nation is at liberty to examine for the purpose of extending or withholding its sympathy; but the "belligerency being a fact, and not a principle," the question to be asked them before conceding it is, not, Are your motives pure and lofty, and your conduct justifiable? but, "Where is your government? Where are your army and your navy and treasury?"

"But," says the Earnest Radical, "it is about the motives and causes of the Cuban rebellion we *ought* to ask, and not about its material strength. It is our duty to help the right, and not to wait till it has vindicated itself before giving it a word of encouragement." In making this observation, however, we think this gentleman, for whose moral qualities we have the highest respect, reveals what we shall take the liberty of calling the improvident, childish side of his mind. He is apt to live in the present. When he has a Lincoln, he acts as if a Johnson were impossible. When he is engaged in a war for a good object, like the war for the Union, he acts as if a war for a bad object would never be seen again on earth. The great objection to setting aside international usage on behalf of the Cubans is, that it would be sacrificing the interests of mankind to those of one small and not particularly admirable people. If a first-class power deliberately refuses to be bound in any particular case by anything but its own view of the moral character of a rebellion, of course all first-class powers will do the same, and there will no longer be any rule at all. Each power will make its own judgment the guide of its conduct, and interfere when it pleases in all wars and rebellions.

Now, which side—the right or the wrong—would be likely to gain by a complete repudiation of precedents? Let us see what has happened within the last fifty years in spite of the restraints of international law. The great powers have intervened on moral grounds on behalf of Greece and of Belgium; England has intervened on behalf of the Christinists in Spain, and France on behalf of independence in Italy, and Russia on behalf of the Christians in Turkey. On the other hand, Russia has encouraged the Turks against the Servians, has put down a liberal movement in the Principalities, has subjugated the Circassians, annexed the remnants of Poland, and helped Austria to put down the Hungarian insurrection. France has interfered to set up absolutism in Spain, and to hand Rome back to the Pope, and has for twenty years acted as the prop of a degrading tyranny in that city; Austria has helped to uphold a batch of small despots in Italy and Germany. In short, the triumph of liberal principles in Europe has been delayed fifty years, and is still imperilled, by the determination formed by the European powers after 1815, to govern their foreign policy by their sympathies and their views of moral right, and not to abide by the facts. A great many Radicals, too, are now disposed to wink at filibustering expeditions to Cuba in the interest of freedom, who were, ten short years ago, mourning over filibustering expeditions in the same region undertaken in behalf of slavery. The friends of slavery being just now a good deal depressed, and the cause of freedom in the ascendant, the friends of freedom act as if all the bad men had disappeared from the earth, and filibusters hereafter would be simply armed missionaries of the Gospel, and as if there were no need for caution in furnishing precedents for them.

Yet there never was a time when there was need for more caution. In the game of arbitrary interference, the unscrupulous adventurers and the owners of great standing armies will always be twice as alert and vigorous and enterprising as the friends of peace, progress, and humanity. Once break down the barriers of law, and you make the world again a hunting-ground, as it once was, in which the swift foot and strong hand, and not the pure heart and the tender conscience, will get most of the game; and it is doubly necessary to remember this at the moment when the march of science is bringing the aggressive, brutal races of the West for the first time into unrestrained contact with two or three hundred millions of "niggers" in the East. The salvation of that vast and almost helpless multitude, on which our adventurers are now looking down with hungry jaws, depends on our respect for law. We have lent them "Wheaton's Elements," and they are studying it; but what will it avail them to study it if the country which produced Wheaton sets the example of mocking at his wisdom?

Side by side with the indulgence shown for the disregard of international law with regard to Cuba, we must place what is called the "waiting policy" with regard to England. England, it is said, has broken the law of nations with regard to us, and let loose cruisers to prey on our commerce in time of peace. We complain of this bitterly, as well we may; and propose to punish her for it—how? By a fair demand for damages, supported by a threat of lawful, honorable war, under the national flag, and under the direction of a civilized and responsible government? Not at all. Most of our orators repudiate this as something too horrible to be thought of. What is proposed is to wait for an indeterminate period—it may be for five years and it may be for twenty—keeping alive all the while, through the press and the platform, the flames of international hatred, exaggerating every difference, reviving every dying spite and prejudice, and nursing amongst us the lawless, buccaneering spirit of European adventurers and malcontents, until England gets involved in a quarrel with some foreign power; and then—we are to let loose a great fleet of privateers on her commerce, under a foreign flag. In other words, to punish a breach of the great code which we have done so much to illustrate and strengthen, and which must hereafter depend largely on our reverence for its sanctity and its usefulness, we propose to commit another breach of it ourselves; and not in hot haste, or under misapprehension, but as part of an old and calmly settled policy. There are men—we read their letters and articles every day—who gravely propound this plan as if it were one of the finest products of the human mind—one of the choicest offerings a civilized people could lay on the altar of humanity.

We know it will never be carried out, but it is disheartening even to hear it talked of. War is a great evil, but it is not the worst of evils. It is not necessarily altogether enervating or demoralizing. There are virtues, and those not the least essential to national prosperity, which it cherishes: there are vices, and those amongst the most detestable, which it makes odious. Some of the finest characters the world has ever seen have been moulded amidst its flames. But from buccaneering under a foreign flag, as a means of avenging the wrongs of a first-class power, nothing can come but an increase in the numbers and influence of sneaks, gamblers, adventurers, and jobbers. To send an ambassador, or a minister of peace, to arrange differences with England, while contemplating such a mode of redress as this in case the negotiations failed, as some people would have us do, would be something far worse than a degradation of the diplomatic art; it would be an offence against civilization. The civilized remedy for national wrongs is war, carried on by organized forces wearing uniform and carrying their country's flag, jealous of its reputation, fighting, not to fill their pockets, but to leave their children a heritage of great memories. Whenever the United States proposes a substitute for it, it will be, we trust and believe, not buccaneering, but argument; not wholesale robbery, but the shock of trained intellects before a tribunal, which we are sure civilization will some day produce, whose integrity and learning will be such as to enable rival nations to commit to its keeping the most precious of their possessions—their honor.

CHINESE PROGRESS.

The troubles between foreigners and natives in China reported during the past year are, without doubt, to a certain extent due to the fact that the two races are coming into closer contact at a larger number of points; but this is in itself a reason for some anxiety, when we consider that our present intercourse is slight when compared with what the future must produce in order to justify the enormous commercial

anticipations which America and Europe are basing on China as a producing and consuming market. Since the departure from Peking of Sir Frederick Bruce, Mr. Berthemy, and Mr. Burlingame—the three ministers who were personally committed to the co-operating policy they had founded—the strong party representing the traditional policy of the West in China has raised the cry that years of experimenting have been thrown away, and that the Chinese still adhere to their exclusiveness and fail to show any desire for progress. By this they of course mean that the Chinese do not desire the establishment of lines of steamboats on their rivers, of railroads and telegraphs throughout the country, or the working by foreigners of their immense deposits of coal and other minerals, nor the introduction of labor-saving machinery.

To expect that the Chinese should show a longing for these things, or even a general willingness to accept them, would be equivalent to supposing them to be as well acquainted with the principles and practices of political economy as the natives of the West, where the doctrines of that science have spread but slowly even in the light of experience. It is in human nature for every people to wish for material improvement; but the Chinese show in their industry and energy at home, and in their widely spread commercial enterprise throughout Asia, a difference from most other races of that region; while these latter lack the energy and perseverance to work for what will not fall ripened into their laps. There is no people more prompt than the Chinese in taking advantage of and persistently following any road, no matter how difficult, when they feel assured that there are reasonable chances of material success.

The important question is not whether they wish for "progress," but it is whether there has been a radical improvement in the theory and practice of their intercourse with foreign nations, and whether, having the will, the government has also the power to enforce the observance of the treaty stipulations. The history of the past thirty years furnishes the material for an answer to this question.

Before 1860, foreigners were ignored by the central government, and were confined to only a few ports. Here the citizens of several nations were permitted to trade until the commercial interests they represented had grown to enormous proportions. The questions and disputes which naturally arise in connection with contracts, duties, etc., assumed yearly greater importance. The central government, treating the foreigners as barbarian traders, and refusing to hold any intercourse with their representatives, left the conduct of affairs entirely to the provincial authorities—often unscrupulous men, who found their own profit in the existing condition of things. Legal redress for injuries was out of the question, and satisfaction was sought by foreigners in the use of force. The policy of retaliation and reprisals became the rule of action, and consuls lost little time in making a fearful use of gunboats and marines on the slightest provocation. Each province was treated as an independent nation, and trade continued at one port while war waged at another.

The pernicious results of this course became yearly more evident in the arbitrary action of foreign consuls and private individuals, and in the insolent weakness of the native officials. One of its worst features was that it formed a school in which all classes of foreigners learned to use the law of might, and to disregard the Chinaman's right to property and even to life. Wholesale murder was committed daily at the ports, steamboats and sailing vessels purposely running into and sinking boats and junks, often crowded with passengers, if they happened to be slow in moving out of the channel. Young clerks educated in this school drove rapidly through the crowded streets without ever stopping to care for the women and children run over by them. These cowardly acts were encouraged by the peaceful character of the natives, and impunity for every crime against the Chinese was ensured by the removal of foreigners from Chinese jurisdiction to the dead law of the consular courts. A time arrived when war was unavoidable. In 1860, England and France finally wrested from China a treaty, which not only conferred great additional privileges on foreigners, but also compelled the central government to assume the control of its foreign affairs, and to treat directly with ministers of the treaty powers.

A turning-point in Chinese history was reached in this war which overthrew the anti-foreign party at Peking, and it was fortunate for the world that in the crisis the reins of government passed into the hands of Chinese statesmen who, according to the united testimony of the foreign ministers, were men of great ability, even when measured by our standard. It was even more fortunate that these men were met by representatives of the West who were able to rise above the prejudice of race, and see in the inevitable approach of the East and West to a contact at all points the necessity of an entire abandonment of the traditional policy inaugurated by England. A co-operating policy was framed by the foreign ambassadors and approved by the home governments, which bound the ministers to consult together on all important questions and to act in concert, thus bringing to bear the moral pressure of all the treaty powers in support of the just demands of any one of them.

As experience has shown that the chief source of danger in our future relations lies in the weakness of the central government as against its provincial officials, the co-operating policy binds the foreign powers to strengthen the former, so far as this can be done by encouragement and moral pressure. As a first step in this direction, it guaranteed the integrity of the empire, by agreeing neither to demand nor accept concessions of Chinese territory. To strengthen China within, and to render her independent of alliances which might result in the loss of territory, the ministers agreed to encourage a reorganization of the army, and to assist her in adopting European discipline and arms, and to furnish the officers necessary to introduce these reforms. The result of this was shown in the bravery of the troops thus armed and disciplined during the rebellion, and the reorganization is, we believe, steadily advancing.

The next and most important step was the introduction of an honest and efficient administration of the marine customs service, as a means of ensuring the revenue necessary to centralized strength. To this end, the old system of farming out the collection of the duties was abandoned, and a service was established by the government in which both foreigners and natives are employed, after having passed a competitive examination to ensure efficiency. At the head of the service is an inspector-general, appointed by the Chinese Board of Foreign Affairs, to which he reports. The present incumbent is a foreigner of very marked ability. The customs service of China is, to-day, the most efficient and honestly conducted in the world—a fact which is attributable to the care shown in obtaining, by competitive examination, the ablest young men, who receive liberal salaries and promotion according to merit. It is believed both by the Chinese Government and the foreign ministers that the successful working of this department of the administration will lead to needed reforms in other branches, by introducing departmental division of labor, and doing away with the custom of uniting in one official the most varied duties—a practice which renders any check on fraud impossible. The government began to see from these results, also, the wisdom of paying liberal salaries. Reform in these two branches would remove the chief obstacles in the way of judicial reform and other improvements. That the Chinese have abandoned, willingly or unwillingly, their exclusive policy, is shown by their causing a translation of "Wheaton's International Law" to be made by Dr. W. P. Martin, and by their adopting it, and assuming not only the rights conferred but also the responsibilities imposed by it. Not less important is the establishment, by the Imperial Government, of the University of Peking, in which the languages and sciences of the West are taught.

Beyond the working of its own machinery, the Chinese Government can effect no reform by decree; the literati and the people have the balance of power. The people constitute one-third of the human race, and are confined to an area about one-third the size of the United States. With this dense population daily life is a daily struggle for existence. Every known occupation is crowded. The question of railroads, steamboats, and labor-saving machinery means, to their minds, the throwing out of employment of untold millions. When we remember how bitterly these improvements were fought by the much sparser laboring populations of Europe, can we wonder any at the unwillingness of the Chinese to rush blindly into them?

Western innovations have made considerable headway already. Steamers have absorbed the carrying trade of the Yangtse River to the heart of the empire, and others navigate the Pei Ho in the North and Canton River in the South, while the coasting trade is fast passing from the clumsy junks to sailing vessels and steamers. In all these, Chinese capitalists are largely interested financially. There is no lack of Chinamen who appreciate the advantages to be derived from railroads, and telegraphs, and machinery, or who would embark their fortunes in introducing them. But the people must gradually learn to see their advantage in them, and we must remember that the speed with which changes are introduced is apt to be in the precise ratio of the size of the people amongst whom they have to be brought about. The course of events during the past nine years shows that, when it is necessary, China can produce rulers who are equal to great emergencies; that in this instance the government is fully aware of the necessity of placing the country on an equal footing with the West; that they show every desire to maintain the treaties. But they also recognize the difficulties to be encountered in spreading Western improvements among populations which are so vast that it takes long to establish a balance after any disturbance. And they acknowledge that the spirit of progress is of popular growth, and not to be created by decrees.

If the embassy now in Europe should succeed in obtaining a just interpretation of the treaties, and guarantees that China shall be permitted to choose her own time for adopting Western improvements, then we may look for a healthy growth of these, although it may not be as rapid as Western speculators could wish. It would be well if those who have a voice in these questions could be always impressed with the fact that in dealing with China we are dealing with the largest member of the body of mankind. In it is concentrated the greater part of the labor and of the skilled labor of the earth; there the tradesman and the workman are wholly emancipated; and they inhabit a country hardly second to our own in its wealth of coal and iron and other raw material. These have their great work to do when the time shall come, be it sooner or later; but tampering with them is tampering with the incalculable forces of the future.

MOONLIGHT IN MAY.

THANKS! for I understand you, happy night,
And smile with you at all that made me sad,
Drawn unawares beyond all griefs I had
Into the truthfulness of clear moonlight,
Before whose frankness I can banish quite
The old forlorn endeavor to be glad,
And carelessly stand listening as I please
To the faint rustle on the sparkling shore
Of conscious waves that rippingly at ease
Outrun the light and lead it on before;
Or to the murmur of the moonlit trees
Whose time of waiting and reserve is o'er,
Whom Spring has taught to captivate the breeze
And charm the nights made musical once more.

ROBERT WEEKS.

"WOMAN IN THE LYCEUM."

MISS KATE FIELD repeated, in New York, on Monday night, before a large and, as respects quality, excellent audience, a lecture already delivered in Boston and Brooklyn in vindication of the claims of women to pursue lecturing as a profession if it shall so please them. The occasion was a novel one, inasmuch as we believe Miss Field is the first woman who has avowed her intention of becoming a professional speaker in public, for reasons in large part, if not mainly, material. Her predecessors on the platform, at least those of them who have attracted public attention, have, we believe, without exception, taken to it for the purpose of advocating certain views on social and political subjects, by the diffusion of which they hoped to better the world, and have treated the necessity or practice of receiving pay for their work as a very subordinate part of the cause, if not with the sort of scorn that saints sometimes feel for their bodies. Moreover, they have been apt to feel a curious supramundane contempt for their audiences, which prevented their making any attempt in the matter of dress or attitude or delivery to humor, or, as they perhaps would rather have us say, to pander to, their prejudices.

Miss Field, who evidently has that best of gifts—whether for lecturers or other people—common sense, has, however, taken to her new calling in what we may call a scientific spirit. She recognizes, in the first place, what we wish some male orators would recognize—that the days of prophets are over, and that the office of a public speaker in our time, whether in pulpit or on platform, is simply the *persuasion* or entertainment of his fellow-men. Amongst the good things she said on Monday night was, that "most people hear through their eyes;" and she has, therefore, endeavored in her mode of delivery to turn to account the personal advantages which women—*quâ* women—almost always possess. Nearly every woman, if well-dressed and in good spirits, is a pleasing object, both to her own sex and the other; and we have always believed that women who took to the platform as a profession would make a great mistake if they attempted "to sink the woman" in the orator or in anything else—if, in other words, they did not endeavor to look as *womanly* on the platform as in the parlor.

Moreover, men, who compose for the present one-half, and by far the most influential half, of the human species, and will for ages form the tribunal before which reputations must stand or fall, like a certain kind of women, and like to see them dressed and acting in public and private in a certain way. That their taste is inherently bad may be true, but it cannot be changed by persons who outrage it; and women who do outrage it as platform orators, simply show that they have mistaken their vocation, and that there is nothing of the orator, or persuader, in their composition. A female lecturer ought, therefore, we take it, to carry with her to the platform the arts by which she retains her influence in the drawing-rooms of cultivated people. To wear pantaloons, or purely "sensible clothes," on the rostrum is simply to misuse or mislay the tools of her trade. We think, too, as we remarked some months ago, in speaking of Madame Audouard's performance—although we admit that our light on this subject may not as yet be perfect—she should sit down, as Miss Field does. A woman standing and talking for an hour and a half will, until we have reason to entertain a higher opinion of her physical powers than we do now, be to most people a somewhat painful spectacle. We know she does it at parties; but then the rest of the company is not seated, and the nervous strain of conversation at parties is not serious. The declamatory and passionate style of oratory is not suited to her voice or her upper limbs. If this proposition should be found offensive by any reformer, we will modify it by saying that the world is not yet ready to see her, with any pleasure or profit, attempt anything approaching to energy of manner in public. Her voice will not bear it, and, even if it would, vocal energy would have to be supported by energy of gesticulation, and for this her arms are not suited. She, therefore, will always, it seems to us, lecture best in a chair, dressed as well-bred women usually dress, and talking in the tones and with the gestures which the debased and darkened males of the period find most effective. Seeing Miss Field address her audience in this manner, therefore, and in a clear and very musical voice, and in tones which were loud enough to be heard distinctly in every part of the little theatre, and yet not too loud to be perfectly suitable in conversation in a parlor, was to us a sign that she had mastered one of the great conditions of success.

Coming to the matter of her lecture—it was a somewhat elaborate statement of the reasons which make it difficult or impossible for an average woman to make a livelihood as an actor, or as a reader (like Mrs. Kemble), or as a *littérateur*, or even as a teacher. In the three first of these occupations she showed without much difficulty that nothing but genius will enable a woman to avoid very hard work, great discomfort, and very small pay; and in teaching, for which she is admirably adapted, she has to contend against the overstocking of the market, and the mean disposition of the school committees to take advantage of it to pay less wages than they give to men for similar work. All this was very well stated; but Miss Field's conclusion that, therefore, women ought to go into the lecturing business, did not seem to us very clear. Lecturing is, no doubt, as she pointed out, free from many of the disadvantages mentioned, and it requires very much less brains than literature; but then to succeed permanently as a lecturer, as hundreds of ambitious males know to their cost and sorrow, one has either to have achieved sufficient celebrity in other walks of life to be an object of curiosity to the young men and women of the rural districts, or else to be possessed of remarkable powers as an orator—that is, have something very good to say, and be able to say it very well. The number of women who fulfil these conditions will, it is reasonable to expect, always be smaller than that of men, and the number of

men who fulfil them, as we all know, is exceedingly small. The really successful and paying male lecturers do not number over a dozen, and they have to be men in vigorous health. How will women face the hardships of winter travel, and the discomforts of village taverns, and the weariness of diaconal tea-tables, is a question easier asked than answered. That there are a certain number of women who might now earn a good livelihood by lecturing, we do not doubt; but when we speak of the "lyceum" as a profession for woman, we speak of it, of course, as something to which a fair number of women might turn as a calling with a reasonable chance of success. That it can be so considered we do not believe, though we have no doubt that Miss Field, and perhaps a few others who try it now, with special qualifications, may find it answer their expectations.

Miss Field dwelt at considerable length on the old theme of the poverty and woes of literary people—woes which in our opinion have no more claim to sympathy than the woes of any other class. There is no more reason why a "literary man" should be pitied for not succeeding in selling wares which nobody wants than men of any other calling; and the whining author who goes about making a public display of his needs, and howling over the sorrows of his "garret," when cranberries and fresh lettuce are as high as they are now, is in our opinion as close an approach to "the sturdy beggar" of the old statutes as modern society affords, and deserves somewhat similar treatment.

The case of women is different. Their market is really artificially restricted; and there is a real pathos in the efforts of those who have no "bread-winners" to stand between them and the world, to find the way to self-support. Any woman who is engaged in exploring society for places in which women may stand securely alone, and fill her pockets through the labor of her own hands and brain, deserves everybody's thanks and encouragement. Miss Field would therefore deserve them even if there were less real merit in her address. It has a great deal of force, though unequally distributed, a deal of humor, some wit, and plenty of sparkle, and a vigorous, pointed style. Its faults are the expenditure of too much time and attention in the assault of positions that nobody seriously defends, and an over-discussion of difficulties which really do not exist. There is no hostility amongst the greater portion of the public to woman's appearance in public. People go to hear female orators, readers, and lecturers just as readily as males, if they are worth hearing; and our advice to women would be to stop talking about their right to follow this and that calling, and follow it. If their goods are better than other people's, the world will buy them.

"SOUND ON THE MAIN QUESTION."

We had no intention, when touching last week upon the scandal lately brought to light in the offices of the New York *Tribune* and the Philadelphia *Morning Post*, to return to the subject. But the affair has since we wrote derived some fresh importance from the mode of dealing with it adopted by a portion of the press. In the first place, the *Tribune* has signified in the most emphatic way its indifference to the offence of which its managing editor has been accused, by retaining him in his position. This is a matter of considerable interest to the public, and, above all, to political reformers, because in that position, as we have already pointed out, he has the virtual control of a newspaper of great influence, and can still through it, if so disposed, help to exalt very worthless men and degrade very good ones, and confuse the public judgment on very important questions, by the unfair presentation of facts. In the second place, several papers, claiming the character of moral and reformatory organs *par excellence*, have been trying to turn the public attention away from the main question—the guilt or innocence of stealing despatches of great pecuniary value, for the purposes of gain—and fix it upon a question of secondary interest—the propriety of publishing private letters as proofs against the perpetrators of the fraud. Private letters are, we believe, the property of the receiver; but an honorable man will not publish them if he has reason to believe the writer will object to it, or if it is likely to subject him to serious injury or inconvenience. To push this rule, however, to the extent of making it a grave offence ever to publish private letters at all, even for the purpose of exposing outrageous and systematic fraud on the part of the writer of them, would be simply, to say the least, to subordinate the greater to the lesser morals. Even when, as in this case, however, it is a *particeps criminis* who produces the letters, however repulsive we may feel his conduct to be, we are none the less bound to deal with his revelations as in themselves distinct and independent facts. We may not honor or admire informers; but we are nevertheless obliged, in the interest of society, to use their testimony to bring criminals to justice. If a teller in a bank brought to the president a batch of letters from the cashier, showing that he and the cashier had been for a series of years engaged in heavy embezzlements, the president would probably not invite the teller home to dinner, or give him his daughter in marriage; but what should we say if he were to dismiss him with a long lecture on the sacredness of private correspondence, and act as if he had no knowledge of the cashier's dishonesty? Yet a good many journals are abusing the *Sun* for publishing Mr. Young's letters on ground which, if tenable, would oblige the president to treat the cashier as an honest man. What the *Sun* has done has been to bring the informer and the criminal to the only bar at which, unfortunately, the case can be tried—the bar of public opinion. The informer may be base; but there is the criminal, and there are the witnesses and the proofs; and everybody who attaches much importance to public or private morality is bound to form an opinion about them, even if he gives no open expression to it.

We can imagine several reasons—and none of them discreditable—why certain journals should wish to keep silent about the matter altogether. But we can imagine no good excuse for such treatment of it as the following from the *Independent* of last week:

"The New York *Sun* of Tuesday, April 27, had twenty spots on its face. These were extracts from the private letters of John Russell Young, *ingeniously garbled and arranged to blacken his character*. After reading the defamatory publication, we exclaimed to ourselves: 'Even if the impression which this indictment seeks to create is in every respect true, *the victim is nevertheless not half so culpable as his persecutors*, who, to gratify a personal pique, have thus publicly violated one of the fundamental decencies of private life.' . . . *The courts, and the courts alone, can fairly weigh the case.* How far Mr. Young has acted foolishly, how far heedlessly, and how far criminally, we have no right to decide from the dexterously shuffled private scraps by which his enemies have sought to condemn him out of his own mouth."

Or as the following from the *Anti-Slavery Standard*:

"The *Sun* of this city has achieved a most dishonorable distinction the past week by an apparently malicious personal attack upon John Russell Young, Esq., *the able* and *very efficient* managing editor of the *Tribune*. We are surprised that Mr. Dana, however strong his dislike of the *Tribune*, or however certain he may be of Mr. Young's alleged unfair dealing with the Associated Press, should have permitted the *Sun* to *commit a greater and more offensive indiscretion than the worst that is charged against Mr. Young* in the needless publication of such a private correspondence. As a matter of journalism, it would be a wretched precedent for other papers of less pretence to respectability than the *Sun* to follow. The case has been promptly transferred to the courts, wherein Mr. Dana is held to answer. Meanwhile, the proprietors of the *Tribune*—the parties chiefly concerned and responsible—avow their respect for and continued confidence in Mr. Young by retaining his services as the chief manager of that journal."

It thus appears that in the opinion of these two moralists it is a worse thing to publish the letters of a man guilty of a gross fraud, in order to prove his guilt, than to commit the fraud itself.

Now, the facts in this case are, we believe, no longer questionable. Mr. Dana offers the original letters to the inspection of all interested, to show that they are genuine and that the copies published by him were not garbled; while Mr. Ottarson, sometime the night editor of the *Tribune*, and Mr. Simonton, the agent of the Associated Press, both allege that they laid traps for the managing editor, and offer positive proof of his guilty complicity in the stealing of the despatches. Moreover, Mr. Young has not denied it, nor has the *Tribune* done so on his behalf. The pretence, therefore, of the *Independent* and the *Standard* that the matter is still open to doubt, has no basis whatever; while their expressions of horror at Mr. Dana's conduct in publishing the letters, and of continued sympathy and respect for Mr. Young, show what we cannot help calling a perversion of the moral sense—or, if this be a strong or offensive expression, a want of the sense of moral proportion—which, appearing in two journals specially devoted to the application of morals and religion to the work of social and political reform, calls for some reprobation.

It is, however, in our opinion, simply a fresh illustration of the extent to which the reforming world has been corrupted by the "main question." Long-protracted service in the field, even in the best of causes, is not very sharpening to the moral perceptions; and the struggle in which the army of reformers has been for so many years engaged against slavery has elevated hostility to slavery, or, of late years, fidelity to what has been supposed to be "the cause of the negro," to a degree of importance which has, in the eyes of large numbers of them, dwarfed most other virtues, nay, even deprived some of the most important of virtues—such as truthfulness—of almost all value. Some of the results of this camp loyalty, or, to turn it slightly round, this military unscrupulousness, during the last few years, have been painful as well as

disheartening. It has apparently done much to weaken, if not destroy, amongst a certain class, all respect for what is the very foundation of national greatness—personal character. Their newspapers and orators have actually got into the habit of making a joke or derision of a long and pure life, marked by the faithful discharge of the everyday duties. They have accordingly made some of the most honorable, truthful, clean-handed, upright men in the community the objects of their fiercest abuse. They have, too, lavished some of their warmest enthusiasm on some of the most worthless characters that have ever appeared in public life, and the multiplication of which, or general exaltation of which, would go far to break up society. It has led them to treat with marked deference and offer a place in the national councils to a professional "humbug;" and in one case, in consideration of devotion for a few years to temperance and political equality, to condone a life of small cheating, which, as revealed by the man who lived it, a Bengalee money-lender would blush to own.

More than this, it has actually led them to compound a new standard of morality, and give new meanings to some of the most important moral terms ("truth," for instance, in their vocabulary, now means simply fidelity to party), and has led them to lavish on mere differences of opinion epithets of reprobation which should be carefully reserved for gross moral offences —such as lying, cheating, and stealing. Mr. Trumbull, for example, was described last summer by the *Tribune*, and Mr. Evarts by the *Independent* —the one for not agreeing with "the managing editor" as to the guilt of Andrew Johnson, and the other for not agreeing with the *Independent* as to the ethics of the bar—a subject Mr. Evarts certainly may fairly be supposed to have studied—in terms which conscientious and scrupulous men usually reserve for thieves and forgers. Mr. Evarts was "base" and "dishonored," we were told; but we now learn from the same source that Mr. John Russell Young has done nothing to forfeit our respect and confidence.

Is it at all wonderful that, under these circumstances, the three young men who started the Philadelphia *Post* should not be very nice in their views as to the manner of making their columns attractive? They were told every week by that righteous and luminous paper, the *Anti-Slavery Standard*, as well as by great numbers of other members of the Butlerite denomination, that in trumpeting for negro suffrage they were doing the highest work of which human beings are capable. They found that, owing to the refusal of the Associated Press to share the news with them, their "organ," instead of being a rifle-cannon, was nothing but a humble battering-ram. If they could get the news, not only would their own temporal welfare be greatly promoted thereby, but their way of salvation made known to a far greater number of heathen. They remembered, too, that some of the most notorious cheats and peculators of their political sect were held, in spite of their cheating and peculating, in high reverence amongst the faithful—so they determined to get the despatches somehow; it could not injure the Associated Press *very* much, they doubtless reasoned, while every copy it added to their circulation was so much gain for the black man. And then to think of the fifteen murders a day in Georgia, of "the traitor in the White House," of the "drunkard" at the head of the army, of the base and mercenary pettifogger in the Attorney-General's office, of the money-changing, thieving senators, the corrupt Supreme Court, and the weak-kneed public!

The community is just now a good deal wrought up on the subject of corruption. But if one were to enquire what the soil is on which corrupt judges and thieving legislators grow, we think one would find it in the unscrupulousness of professed moralists, the subordination, by reformers and other good people, of personal integrity and personal honor and fastidiousness to political fidelity or soundness. The "main question" is, in short, carrying rottenness further into public life than it has ever gone before. The real foes of society are not after all the highwaymen or Erie operators, but the preachers who have more regard for men's creeds than their lives, and the philanthropists who make good nature the first of virtues, and fancy that if they can banish cruelty from the world they will have assured the future of the race. The result of their labors thus far is, that the tide of corruption rises higher and higher every week, and with it rises the cry of the suffering poor and the debauched and demoralized youth; and foremost in nearly every "ring" are uproarious friends of mankind.

Reform we must have, and it must come from ourselves. There are no barbarians waiting to sweep away our civilization when it cumbers the ground, and plant something new and better in its stead. But no real reform is possible without beginning with the individual knaves. No reform which aims at producing a society in which the truthful, honorable, scrupulous man shall not, no matter what his opinions on politics or religion, sit in the seat of honor, deserves or will secure success.

Correspondence.

ENGLAND'S INTENT.

To the Editor of the Nation:

Sir: Some statements of popular sentiment, made tentatively to excite discussion, rather than as affording a key to the controversy between the United States and Great Britain, have appeared over the signature "America." No replication was made to Mr. H. Lee-Warner's first letter in your issue of March 25, because the editorial comments seemed in general all-sufficient. I did not wish to burden your columns. Mr. Warner's second letter in the *Nation* of April 29 contains an averment of *fact*, with the *inference* suggestively put, that the desire to stop "two vessels bound for the South" precipitated "the recognition of the *treaty*" (the *proclamation of neutrality*, or the recognition of *belligerency*, is perhaps intended). If the statement of fact and the inference of friendly intent were coupled a little more positively, and uttered—not by one of a powerless minority—but officially by Lord John Russell, the soothing effect upon the American mind could hardly be overestimated. Cannot Mr. H. Lee-Warner persuade him to make it? If true, it can be made with dignity, and ought to be made officially, as the most delightful mode of escape from national misunderstanding. But until it is made, "the late United States of America" may be pardoned for apprehending that Mr. H. Lee-Warner's enthusiasm outruns his knowledge of official intent.

It is precisely on this point of friendly or unfriendly *intent* that the difficulty of settlement hinges. We are willing to forgive the most disastrous errors of misjudging friendship. If England intended to aid the United States by a premature act, which breathed the soul into a potential rebel navy, we can now afford to smile at the amiable indiscretion. But, inasmuch as the action of the Admiralty in the case of the ship from Rochelle, in Buckingham's time, *does* give a parallel British precedent for treating the rebels of a friendly power as pirates, and the British recognition of belligerency as a principle—before the fact existed at sea—gave our *pirates* a maritime status, we must say in the words of the Spaniard, "God defend us from our friends, and we will take care of our enemies."

It is the ligature of unfriendly intent that binds the fagot of our complaint into a bundle that no sophistry can break over the knee. Let this ligature be cut, and the whole controversy is reduced to the breach of neutrality. An apology, a few millions, and the disgrace of an official may spare us an age of embitterment. But, with the *animus* unexplained, nothing will satisfy the American mind but a compensation vast as the injury, and one that will involve dominant England, with its Lairds, Hopes, and Roebucks, in distress and humiliation like our own.

Until this question of *animus* shall be settled by some official declaration, all the acts are to be taken together. If a man opens lights or loopholes in his shutters, with the intent to watch and defeat the burglars who are attempting to break and enter my premises, and if I find afterward the same burglars firing upon my friends from those loopholes, I certainly require stronger evidence of friendship in the first act than any which Mr. H. Lee Warner proposes. If my friends requested to have the loopholes made, they may have been induced to play into the hands of my enemy. The bill of complaints against Great Britain is divisible, like its claims of damages, into several counts, heads, or articles. Whoever throws the national *animus* out of the account may make some unsatisfactory settlement an easier task for an envoy, but degrades the wrong which destroyed our commerce, filled our homes with dead, and added one thousand millions to our debt, *while it enriched Great Britain in vast proportions*, into the petty act of an irresponsible official, who will lose place and wages till dominant English sentiment shall provide him with a better!

Some of the articles of complaint are not susceptible of special claim for damages sounding in money or penitence. But until the question of *animus* is settled, each article swells the burden of all the rest; and if the result of direct damages, to the citizen and to the country, should sound in a thousand million of dollars, it must be borne in mind that *while Great Britain impoverished us, she vastly enriched herself.* If we demand that she shall pay smartly for her wrong-doing, it is because her wrong-doing has given her the means and power to pay smartly. Let her disgorge the plunder.

The articles of complaint are, as they rest in the national memory—and if we regard the war of the Revolution, the war of 1812, and the Caroline affair as bygone evidence of friendship—as follows:

1. That, while slavery was a *magazine* which we were trying to keep wet, England was doing her best to fire it. Her periodicals were full of

slave-whippings and roastings; and the traditional Yankee of her caricatures was the Southwesterner, with stars and stripes for his trousers, and the cat-o'-nine-tails in his hand or sticking out of his pocket. For this we cannot even demand an admission that this irritation and lampooning was not the part of a bosom friend.

2. When the Union was convulsed with a war to prevent the extension of slavery in the Union, or the establishment of a government outside of it founded on slavery as "a corner-stone," no official or national sympathy was manifested with the party in power, which was the anti-slavery party. The leading and well-patronized journals of Great Britain were bitterly hostile to the Union cause, and the Union troops were caricatured as they retreated from their first great disaster. For this we cannot even demand an admission that it was not the part of a *consistent* friend.

3. For the proclamation, which gave hope of a maritime status to an unbuilt navy, and assured our rebels that if they could get ships of war they should not be treated as pirates, we cannot even claim the admission that this was not the part of an *intelligent* friend. But we can return this favor.

4. For the delays, evasions, negligence, and omission of British public servants, which then on British soil supplied the navy for whose maritime safety the premature proclamation had provided, we can demand damages, greater or less, according as a friendly or unfriendly animus is proven. If a malicious intent swept our commerce from the seas, prolonged the agonies of an enormous war, and burdened the future with its hundreds of billions of debt, this crime against human nature will be avenged by heaven.

These are the four articles of grievance which, if bound together by the *nexus* of hostile *animus*, justify peremptory demands for grand damages. But if hostile intent can be explained away, as Mr. H. Lee-Warner suggests, the whole matter may rest upon the criminal negligence of some unworthy official. No American minister can do justice to American sentiment and determination on this subject without endangering the harmony of his general diplomatic relations to Great Britain. A courteous commission of the best legal minds in this country—a commission not too easily convulsed by the *bonhomie* of genial good society, should present our demand, argue it, urge it, and when it is rejected should lay it squarely on the table for authoritative settlement hereafter. Till the day of that settlement this irritating element should be banished from discussion.

War is always popular, and the party out is ever ready to use the charge of pusillanimity against a Fabian administration. But the counsel, "Spar for wind!" is as applicable to a war-worn nation as it is to an exhausted pugilist. Delay does not mean surrender. AMERICA.

BOSTON, May 25, 1869.

A GERMAN VIEW OF THE ALABAMA CONTROVERSY.

[THE following letter was addressed by a Prussian, formerly in the diplomatic service, and long resident in Italy, to an American friend in this country. As the view of a cultivated looker-on, whose sympathies are with the United States, and who has had practical experience of politics, it is well worthy of attention. It is worthy of mention that the English is entirely his own.]

FLORENCE, April 10, 1869.

DEAR ——: Your letter of March 8 reached me in due time, together with a *Nation*. Another *Nation* came this morning. I like the article in the *Nation* which you have marked. Strange to say, the *Pall Mall Gazette* had (the day after the *Senatus consultus* became known in England) a leader which was written in a similar spirit, and containing, *inter alia*, a passage in which the writer said there was "something truly noble in this intensity of American feeling," however serious the consequences of so unforgiving a disposition might be for England, etc., etc. I think on that day the majority of the English papers assumed a similar tone; but twenty-four or forty-eight hours brought on a certain revulsion of feeling, and John Bull, who had really and sincerely been penitent, and who had begun to understand the magnitude of his sins against his transatlantic brother, seemed roused again to a new kind of self-assertion, and the tone of the press, though respectful and by no means unfriendly towards America, has ceased to be humble and penitent. This is very much to be regretted, I think. One's moral sense felt satisfaction at seeing that the wrong had begun to be understood by the wrong-doer. But now the whole question has once more become a mere question of national pride; and I confess, to my own regret, that America appears for the first time less to advantage in this matter. Not that she can ever be in the wrong in this question. Far from it. But the odds in her favor *appear* less overwhelmingly great. This would not be so if the treaty, in spite of its possible defects, had been ratified. I know there are wrongs and insults for which no court of justice can afford any satisfaction. To accept damages, for instance, in an action of *crim. con.* were a dirty affair; yet it seems preferable to duelling or private cowhiding. But, granting that between nations duelling cannot yet be dispensed with, it would still be inconsistent to *claim damages* where fighting is thought to afford the only possible adequate satisfaction. According to my own views and feelings, America should never have opened negotiations on the vexed *Alabama* question and its corollaries, but have calmly accepted the British *modus operandi* as an established international precedent, or resolutely challenged Great Britain to fight it out. By sending in her bill of claims, and a special ambassador to discuss them (and America stands technically and, I think, also morally responsible for her President as well as for his representatives), America showed that she did *not* consider the question as beyond the pale of ordinary and bloodless settlement. Her claims were officially recognized, and I understand that none of Mr. Reverdy Johnson's demands were refused. That his behavior was silly and irritating to the Americans, I grant; but nothing prevented the Americans from making a monster petition for his immediate recall.

Even if the President, with his usual obstinacy, had refused to grant this, such a petition would, as a demonstration, have had a wholesome effect in England. Instead of that the Americans wait quietly until the deed is done; and, while the document is still in mid-ocean, they sign a petition to Congress in favor of non-ratification; and the extreme haste with which the Senate acceded to this wish shows, I think, that the treaty was annulled, not so much on account of its contents and demerits, but because the occasion seemed a good one for snubbing England. Let me repeat that England deserves any amount of snubbing. It is not this that I regret. But the proceeding had the appearance of pettiness, and has had a bad effect on England, who is now rather inclined to recant many of her *peccavis*. Considering, moreover, that, with the single exception of Roebuck (who, after all, is only a kind of political wag and *capo ameno*), every politician in England had openly and frankly acknowledged America's right and England's wrong; that Earl Russell had done this a year before in a public speech; that the old sinners who have been at the helm so long are just now passing away, and making way for the middle-class men, who have less difficulty in feeling with and for others,—considering all this, I think it would have been handsomer, and perhaps even wiser, on the part of America if she had abided by the issues of the negotiation, amending the treaty, if needs were, and thus closing the long chapter of quarrels with the England of the Past, and opening a new account with Young England, the England of the Future. The unfortunate *combinazione* that the United States are just now going to recognize the independence of Cuba obfuscates still more the popular English mind, and must act like balm on many a conscience that had just been roused to remorse. I can imagine some people arguing thus: By this recognition of Cuban independence, America shows that she reproaches England with a simple *political* transgression; not with the transgression of a *moral* law, for such a moral law would be binding at all times and on all—the wrong-doers as well as the wronged.

But enough of politics. I do not fear to be misunderstood by you; but I willingly wind up this disquisition with a repetition of my opening remark, viz., that the debt of wrong which England owes to America is as large as it ever was; that, a full payment being impossible, a *pro forma* payment (half moral, half material) was the only one that could have been either claimed or conceded; and that it is a regrettable thing that the national spite against the President and his nominees was allowed to induce the Senate to refuse that only possible payment of the international debt, which unfortunately must now stand over until some future day of bloody reckoning, or else remain unsettled for ever, to the obvious detriment of the unfortunate holders of the *Alabama* claims.

Notes.

LITERARY.

MESSRS. LEYPOLDT & HOLT have in preparation a sort of "character album," which may be expected to be popular for some time. It will consist of an indefinite number of leaves, each of which will contain forty questions (twenty on each page), and forty blank spaces for answers to the same. The questions begin with rather harmless ones, as, What is your favorite color? What is your favorite female name? What is your favorite

flower? and the like; but as they go on they lead insidiously to revelations of the foundations of character—by-and-by the writer must tell his favorite manly trait and womanly trait. It is an ingenious device, and, as we have said, it may be expected to have some vogue, especially among the young ladies and young gentlemen. But, as Pantagruel said to Friar John or some other of his companions who had related a certain well-invented story: "It would be very good indeed, were it not always necessary to remember that we must live in the fear of God," or words to that effect; the character-album will inevitably lead to the sin of falsehood. But, on the other hand, it will afford a fine field for young humorists not yet strong on the wing. The same house will publish, in the course of the next few days, their translation of Herman Schmid's "Habermeister;" the second volume ("Florence and Venice") of Taine's "Italy," translated by Mr. Durand; and the first volume ("Problematic Characters") of their issue of the works of Spielhagen—a novelist who is contesting with Auerbach the right to the first place in contemporary German fiction. Messrs. Leypoldt & Holt will also republish "Within an Ace," by Mrs. Jenkin, any one of whose books is almost perfection as a means of pleasantly spending a lazy evening, they all being bright and clever, not too long and not too deep, and fresh enough in flavor, although they have a good-society air about them—a good-society air which, by-the-by, always prevents them from getting uncomfortably far from the region of genteel comedy, even when they try to be tragical, which is not often.——Messrs. Lippincott & Co. will shortly publish "Beatrice" (and other poems), by the Hon. Roden Noel, a more than clever writer of poetical pieces; "Walter Ogilby" and "Aspasia"—a pair of novels; "Three Thousand Miles through the Rocky Mountains," by A. K. McClure and others; "The Life and Teachings of Mensius," by Dr. Legge, a respected sinologue; "Nora Brady's Vow and Mona the Vestal," by Mrs. A. H. Dorsey; and "The Christian Singers of Germany," a little compilation by Miss Winkworth, which forms the sixth volume of the excellent Sunday Library which Messrs. Lippincott & Co. are republishing. The same house have nearly ready a book which it is very likely we shall see going quietly into three or four editions. It belongs, we suppose, to the class of books of which the same author's "Our Children in Heaven" is one, and of which the most successful one just at present is "The Gates Ajar." They aim to give us glimpses "behind the vail;" or, as their harsher critics of the religious press would say, "to be wise above what is written." Still, they go into all the churches, and are perhaps not only harmless, but to some people edifying. At all events, they go through a number of editions that ought to strike shame into such critics as the clever one who reviewed "The Gates Ajar" for the *Harvard Advocate* the other day. The forthcoming volume referred to above is by Dr. William Holcombe, and is entitled "The Sexes, Here and Hereafter." Some of the religious booksellers of Boston, by the way, will not sell "The Gates Ajar," we hear, or sell it very reluctantly.——Messrs. Claxton, Remsen & Haffelfinger announce a new edition of Eliza Cook's poems, which can still be sold in farm-houses; a "Life of Samuel Miller, D.D., LL.D.," of Princeton: and "Notes on the Settlement and Indian Wars of the Western Part of Virginia and Pennsylvania from 1763 to 1783."——Collectors of early Americana will want the book just mentioned, and collectors of later will very likely want "In Hospital and Camp," by Miss Sophronia E. Bucklin, which will be published by Mr. J. E. Potter, of Philadelphia.——Turner Brothers & Co., of Philadelphia, have in preparation a book of poems by Mr. J. J. Watson, who is the author of a poem with the title "Beautiful Snow," which most of our readers have seen in some newspaper or other. It is one of that class of pathetic poems founded on a real occurrence so pathetic that, when once it is known, the poem seems its shadow. Mr. Watson and his friends, sitting one stormy evening in a Broadway saloon, were accosted by a woman who asked charity, saying, "Gentlemen, there is nothing pure about me except the snow." This incident Mr. Watson afterwards put into six stanzas. So we learn from the Philadelphia *Publisher's Circular*, which tells the story because it is sure of its truth and because several persons have claimed the authorship of the piece.

—*Appleton's Journal*—which is "a journal of literature, science, and art"—is understood to be already a remarkable success in a pecuniary point of view, and it is so tolerable a success in literature, science, and art that nobody need regret its large sales. It is not wholly, but it is something, like a weekly *Harper's Monthly*, except that it wants—and will have to want, we suppose—the "Editor's Easy Chair," which redeems the most popular of American magazines from the fate of being read only by people who read nothing else. It is likely that "The Man Who Laughs," by the very great Hugo, just now attracts half, or even more than half, of the large number of people who have at once taken to buying the new periodical; but still, as we have hinted by the partial comparison above suggested, it would be a journal of wide circulation even should great novelists fail from the earth. Its art and its literature are not on a level too high to be accessible to large numbers of people, and its science is the popularized science which our American people like so much, and insist upon having. There is, of course, a little uncertainty as yet about the step and gait of the new journal; it has hardly acquired a distinctive character; but before very long—by the time "The Man Who Laughs" has come to an end, or before then—it will, no doubt, have made up its mind whether it will be a manual of popular science with a literary attachment, or a journal of literature for the intelligent masses, with a more or less strong dash of science. We see that *Appleton's* is honestly eclectic, or rather confessedly eclectic; that it is not so dishonest in its borrowings as one might think who, knowing some of its contemporaries, should look over its pages without much care. At the end of the reading matter, just before the advertisements, there is a table of contents, which tells from what periodicals the unoriginal articles have been taken. Why the same thing should not be done by other publishers who borrow articles and pictures we do not know. The American readers would think no worse of their magazine, but go on buying it all the same; and the foreign author or artist might get some consolation from the knowledge that, although he had been pillaged, yet his name, as the name of a person worth pillaging, had been made known to a certain number of his distant fellow-beings. Du Maurier, for instance, would probably be pleased occasionally—or pretty constantly—to see his sign-manual in the pictures of one of our weekly illustrated journals; and, even if he did, the readers of it would come as near as ever to "tasting" the strictly English flavor of the comic page. We are glad to see that *Appleton's* is setting a good example in this respect. It will be, to some persons, an inducement to subscribe for the paper if we tell them that each number is either illustrated or accompanied by a pictorial supplement. The latter sometimes consists of a wood engraving—as of the Battery or of the Central Park drive—and sometimes of a steel engraving—fit for the portfolio, if one is not a collector of choice engravings—of some American landscape painting. In size the new paper is a quarto of thirty-two pages.

—A veritable Stuart Washington is now for sale in Boston. It was painted for the gallant and accomplished Charles Cotesworth Pinckney, for a short time one of Washington's aides, and for half a century was an ornament of the Pinckneys' town-house in Charleston. When the great fire of 1861 destroyed so large a part of that city, the picture was by good fortune saved from destruction; and as owners of valuable and perishable property were by no means so sure as the Charleston *Mercury* was that the place could never and would never be captured, the family removed this and other treasures up the country to the little village of Pendleton, in Anderson District, where the war did not reach it. It has since been sent North, and an opportunity is now offered of obtaining a work which is not only valuable in itself, but is rich in historic associations which alone will make it always interesting and a valuable possession.

—Mr. Lewis H. Morgan, the writer of "The Seven Cities of Cibola"—a very good paper in the last number of the *North American*—is not, as we thought him to be, the Canadian man of letters of the same name, but a resident of Rochester, in this State. He is the author of the "League of the Iroquois," a work relating to our aborigines, and also of a valuable and interesting little book on "The American Beaver and his Works," which has already been noticed in the *Nation*—a fact that makes our mistake less excusable. We are glad to make this correction, if for no other reason, for the reason that it gives us an opportunity to say again what we said in noticing "The Seven Cities of Cibola"—that we hope Mr. Morgan may not wait for some one else to do it, but may bring his own knowledge, good sense, and literary skill to the task of making a good treatise on Indian polity, manners, and customs. From what we know of him now, we are almost ready to agree beforehand to praise it when it is done.

—We should not be fair to our readers who like magazine reading if we neglected mention of that one of the magazines which we find to be, on the whole, the pleasantest of them all. It is not necessary, we confess, to like many of them very much. Still, if one would see what Emerson or Lowell or Longfellow has last done; if one wishes to lose nothing of Mr. Whittier's or Mr. Howells's, one is compelled to keep an eye on the *Atlantic Monthly*. It may not be very taking as a whole, but there are almost always one or two things in it which are able to temper our regret for the departure of its old days—the days when the women were not in so Massachusetts a majority in the *Atlantic's* world, and it did more writing for men.

Or may it be said that it is as good now as it ever was; that it was not better then, but only seemed so to younger eyes, and by contrast with the previous barrenness of our periodical literature? Anybody who owns the first few volumes can take them down and satisfy himself. Then there is *Harper's*, which is useful to the man who wants a *résumé* of the newspapers, who cannot be bothered with keeping up with the daily telegraphic fablings about Crete and Guatemala and Cuba and Venezuela and Samana and St. Thomas, and yet is willing to hear something of all those—necessary countries, if he can learn it without too much trouble. Moreover, Mr. Curtis's "Easy Chair" is *sui generis*, or nearly so, and of not a bad *genus* either, if any one likes unfailing good taste and good feeling, and almost unfailing good sense, expressed in English that is always graceful—though sometimes there may be a little consciousness of gracefulness—and would be always agreeable if sometimes one did not feel like getting away from it and going somewhere where he can see the delivery of a knock-down blow or two. Then *Putnam's* and *Lippincott's* are usually worth turning over in the hope that something good may be hit upon; and it is an unusually dull month with the *Galaxy* when there are not two or three bright and sensible things in it; and always in some of its departments it gives a little of what the town has been talking about. But, on the whole, the reader who naturally dislikes magazines as they are usually made, and that more difficult reader whose appetite has been jaded and all but worn out, may get a great deal of pleasure from the *Overland Monthly*. Much of it is as unbookish and American as an old-fashioned journey across the plains may have been; as new and refreshing as Colorado air. The Plains, the Pacific coast, the Isthmus, the Pacific islands, the gold country, the Chinamen, the distinctively Californian and frontier phases of life, are the themes with which the *Overland* habitually deals; and it has dealt with some of them so well that we believe it may boast not only of having produced the most American of our magazines, but of having produced a very excellent magazine. We do not know why one of its articles—"The Luck of Roaring Camp"—may not be called the best prose magazine article that has appeared in this country for many years. Be that as it may, it is a vivid picture of a miner's camp, and tells most skilfully a story of real pathos and humor. The humor of the *Overland* has always been one of its strong points. What it is in California that breeds humor we have never been told, and do not know. Perhaps it is the atmosphere. They say Californian children are born with bigger heads than any other American children, and brains are a necessary ingredient in humor. Or, possibly, it may be that the "sweet note of the pistol" used to make so large a part of the old Californian conversation that men cultivated various indirect ways of "stating their views." Or it may be that the Eastern and Northern men going to that strange climate and strange soil, and among the strange men collected from all parts of the world and engaged in new labors, perforce got cultivation for that perception of incongruities which is at the bottom of so much that is humorous. The question is one that some one on the spot might study more profitably than we can here; some writer in the *Overland* might at all events gather together materials for study that would be good as data, and very good by themselves. The critical notices of the *Overland* do not profess to cover anything like the whole field of literature; it might even be said that they have the fault of seeming to be done on the principle of selecting books as pegs on which to hang reviews that the editor wishes to write for the sake of exercising his peculiar satirical power; but they are extremely good of their kind; and, while they are witty, we observe no lack of wisdom in them and no sacrifice of justice, and almost always agree with them entirely. In fact, there is nothing in the *Overland Monthly*, so far, that we do not cordially commend. It comes nearer than almost anything else—book or magazine—that we know to being at once good literature and that "American literature" which used to be longed for by the people who knew little about America, and less about literature, and thought that all they did not know about both was not worth knowing.

—Without being able to call Dr. Hammond's quarterly—the *Journal of Psychological Medicine*, etc.—ideally good, we can recommend it to our medical and legal readers, and to all that large class of readers who are interested in physiology, psychology, and psychologico-physiologic matters, as being always interesting and more or less instructive. Probably this will be sufficiently evident if we quote the table of contents of the April number, which is now before us. It is as follows: "The Physiology and Pathology of the Cerebellum," by Dr. Hammond himself; "The Intermarriage of Relations," by the well-known Dr. Nathan Allen; "Judicial Executions for Capital Crimes," a rambling essay by Dr. Alonzo Calkins on the modes that have obtained in various ages and countries of inflicting the penalty of death; "The Influence of Methomania upon Business and Criminal Responsibility," by Dr. Stephen Rogers; and a biographic and critical essay—neither biographical enough nor critical enough, or else too much biographical and too much critical—upon Pascal, by Doctor T. Edwards Clarke. Had Doctor Clarke confined himself to consideration of the hallucinations under which Pascal labored in the latter years of his life, it is conceivable that he might have made an interesting paper, from which young doctors, at any rate, might probably have got profit, and from which the general reader would certainly have got instruction and pleasure. But for a good part of his time he oscillates between the medical essay and the literary essay, and at the last he goes over altogether to the literary essay, and gives us a piece of unrelieved padding in the account of M. Michel Chasles' attempt—if it is not unjust to M. Chasles to use that word—to make out that Pascal anticipated Newton's great discovery. A good thing for the editor to have done would have been to cut out the concluding pages of Doctor Clarke's essay, for the reason that what they contain has already been printed over and over again in the literary periodicals—the proper place for it. The article immediately preceding the "Pascal"—that which treats of methomania—is apparently careful and able, and is of great interest. Methomania—a disease of the brain induced by excessive use of alcohol, or inherited from an ancestral victim of alcohol—may be described, says Dr. Rogers, by these habits of the patient, which are symptomatic: "(1) Periodic secret drinking to intoxication, attended by studied secrecy regarding it, and persistent denial of the act; (2) Periodic solitary drinking to drunkenness, though not in secret, attended by the same determined denial of the act; (3) Gulping down alcoholic liquors on all possible occasions, to drunkenness, without regard to taste or quality." Whatever may be thought of the adequacy of this brief *quasi*-definition—especially the third clause of it—we think almost any reader will find that Dr. Rogers's general treatment of the subject is worth attention.

—The approach of the hot weather causes a diminution of the publishing business in England as here, but we find in the English lists the titles of some works that are important or interesting to the American reader. In Theological and Religious literature there is nothing of much consequence. With the increased prominence of the Ritualistic movement in the Church of England, the works of Dr. John Mason Neale, recently deceased, begin to meet with wider acceptance than at any time during his life. His "Via Fidelium, being Litanies, Stations, etc., and Devotional Aids for the Sick," is just published. "Tischendorf's New Testament" reaches a second edition, and has undergone some slight revision. Dr. Pusey has prepared a Second Part of his "Eirenicon," and there is a new volume of "Miscellaneous Poems," uniform with the "Christian Year," by Mr. Keble, whose Biography, as was to have been expected, is popular; the first edition having been at once exhausted, it has gone into a second. The Second Part of the "Eirenicon" has been long in preparation. It is addressed to Newman, as was the First to Keble. Of History and Biography, we first mention a work the nature of which allies it to the branch of literature just spoken of. It is "Stray Leaves from the Journal of One in Heaven," by an author and an editor whose names are unknown to us. Mr. John Hosack, a barrister, is the author of a new historical work on a subject that somehow still preserves its attraction for historical students, especially Scotch students, who may be supposed to have the national fondness for disputation, and who enjoy the weighing of evidence whether or not the point it bears upon is much worth considering. "Mary, Queen of Scots, and Her Accusers, embracing a Narrative of Events from the Death of James V. (1552) to the Close of the Conference at Westminster (1569)," is the title of Mr. Hosack's book, which will contain the "Book of Articles" produced against Mary at Westminster, and never hitherto published. Mr. John Foster, the able author of the best "Life of Goldsmith," has written a "Life of Walter Savage Landor"—a man too little known, and well worthy of being even studied. That always interesting period, the age of Louis XIV., gets some additional illustration in "The Life and Charitable Works of Madame Miramion," by Alfred Bonneau, a translation of which will soon be issued by Mr. Bentley. The same publisher has in press the "Memoirs of the Marquise de Montagu," by the Baroness Noailles. There is also a new edition of the "Life of Scott," by his son-in-law, and a "Life of Mary Russell Mitford," by Mr. A. L'Estrange. As appertaining to history, we may here mention a new edition of Count Cavour's "Thoughts on Ireland, its Present and Future." In Fiction, we have a novel worth reading in Charles Lever's latest production—except his "Cornelius O'Dowd" papers—which is entitled "That Boy of Norcott's." A promising title is "Count Theleki, a Story of Modern Jewish Life." A new novel—"The Unhappy One"—by Turgeneff, has been translated, and will soon appear. It is a story written with its author's usual power, and from the ac-

counts of it that are given, it seems to be the expression of the sadness, if indeed we may not say the despondency, which underlies much of Turgeneff's writing. The story is of an illegitimate daughter of a nobleman, whose affections, frozen by her aristocratic father's selfish coldness, warmed by a confiding love only to be frozen again by the desertion of her lover, baffled at all points by treachery and cruelty, finally lead to the death of "the unhappy one." Mr. Albany Fonblanque—whose "Tangled Skein" some of our readers may remember as a more than ordinarily successful novel of the sort in which the interest largely depends upon the apparently insoluble intricacy of the plot—is the author of a new work called "Cut Adrift," which we are not afraid to recommend without having read it. To say nothing of the author of "A Tangled Skein," the son of Albany Fonblanque's father could hardly be less than clever. *Macmillan's* speedily begins a new novel, "A Brave Lady," by Mrs. Craik, and "Doubles and Quits," the novel by Captain Lockhart that has been running through *Blackwood*, will now be published in book-form. There are many other announcements of new novels, but still it is true that of late in England the fiction of home production hardly equals in interest the translations of foreign novels. What with the author of "Max Havelaar" and Björnson and Hugo, and Turgeneff, and Reuter, and Auerbach, American readers, at any rate, incline to think that Reade, George Eliot, and Dickens hardly hold their own, either with their own or our audience. Doubtless this conclusion would hardly be reached if we applied as the only test the size of the audiences. But then, again, if that test were to be accepted, we should have Miss Mühlbach to account for, and some others. Mr. Trollope, we must not forget to say, will begin in the end of June a new story for "Once a Week," which periodical is now in the hands of Mr. Dallas, the author of "The Gay Science," who is said to make an efficient editor. In Poetry, there is nothing, we believe, more attractive than a little book made up of a number of pieces which were sent in to a Dundee newspaper, the proprietors of which had offered a prize for the best poem. Mr. George Gillfillan was an unfortunate choice of editor, perhaps, for although not a critic devoid of discrimination, he is not a critic of nice discrimination, and it is quite possible that if he omitted any of the pieces he omitted some of the best. However, what he gives us bear testimony to the fact that the people's poetry of Scotland is still, as of old, a strong growth, hardly to be matched elsewhere in the world. We have already referred to Keble's new book. Besides that and some translations from the classics—notably Lord Lytton's forthcoming "Odes and Epodes of Horace"—we have nothing to mention now except a translation, said to be not particularly successful, of "Uhland," by Mr. W. F. Sandars. The critics seem to be in ignorance of Longfellow's translations; and the one done by a young lady, which he quotes in his "Hyperion," "'Twas Pentecost, the Feast of Gladness!" seems very good beside Mr. Sandars's; and for "Many a year is in its grave," Uhland might properly have been thankful to his fair translator.

—As we remarked the other day, the *Guardian* (London)—which is called Mrs. Gamp by some partially irreverent English ecclesiastics—has set about discouraging the trade in lithographed sermons, and will no longer publish advertisements of them. Yet the practice of using other people's discourses has the sanction of Saint Augustine, if we remember right; and everybody remembers Sir Roger de Coverley's approval and enforcement of it. A more doubtful authority—especially in the eyes of our Catholic and High Church friends—is Bishop Burnet. He advises the young preacher that, when he chooses another man's sermon for his own delivery, he should not choose too good a one—one above his own capacity—as he may thereby be found out by his parishioners, which would not tend to edification. However, this is one of the questions that will hardly be settled by authority, but will be decided on its merits. As the thing is now managed, none but a man unfit for pastoral functions would have anything to do with it. It certainly savors very strongly of rascality when a clergyman buys and preaches as his own a sermon printed in script, with mock interlineations and erasures artistically put in, so that if by mischance one of his flock should pick it up, it might seem to be of home production. And it is but a mere trifle better when the clergyman sends to one of the many London shops which make disposal of such wares their business, and procures a hundred, or more or less, discourses which have been written and used by some dead man whose heirs have put them on the market. In this latter case, the curious parishioners may very likely, as other people have, come upon an endorsement which states where and when and by whom the sermon was originally preached, and the pastor would at least have a right to plead that one means of deceiving his people he had not used. But if a minister does as Doctor Parr is said to have done—let it be generally known that unless he put forth a printed slip stating that his sermon for the following day would be unborrowed it would be a borrowed one—or, if he does as a certain New York clergyman of our acquaintance once did—notify his congregation that they need not suppose that all the sermons he should preach would be his own—we do not know that as much is not to be urged in favor of the practice which the *Guardian* has recently taken to disliking as can be said in condemnation of it. It may be doubted, at any rate, if congregations would grumble much if the custom were quite general. The strictly denominational sermon, and the sermon explicatory of texts, are almost sure to be borrowed in great part, and it seems as if they might about as well be borrowed bodily. With the sermon enforcing moral duties, and the sermon to arouse religious fervor, the case is different. Moral sermons are probably best when they are sent pretty directly into particular pews—the next pew at the least, as the joke goes; and the sermon addressed to the devotional element of our natures is not likely to be good unless it springs directly from the heart and soul of the preacher.

—Lord Romilly, Earl Stanhope (Lord Mahon), the Marquis of Salisbury, the Earl of Airlie, Lord Edward Fitzmaurice, Sir W. S. Maxwell, Doctor C. Russell, Doctor Dasent, and Mr. T. Duffus Hardy, constitute a commission, recently appointed, which will report on the historical documents known to be in existence in private collections in England. There need be no doubt that, as a result of the labors of this commission—and the names promise workmanlike research—more than one valuable addition will be made not only to our historical treasures, but to our stores belonging to other departments of literature. Things do not move so fast in England but that we may expect to see old chests in the lumber-rooms of ancient houses giving up works never heard of and works once known but long lost sight of. The present century has seen English history in great part rewritten, because discoveries in public and private collections have necessitated disbelief in the accounts of historians no further distant from us than a century ago; but literature pure and simple also owes much to the last sixty or seventy years, as witness the discoveries made by Shakespearian investigators, who so late as last year rejoiced in an important "find;" the deciphering, if not the discovery, of Pepys's Diary, which is at least as great a gain to the literature of entertainment as it is to history; the discovery of Evelyn's Diary and of Milton's "Christian Doctrine." It is to be wished that the English commission, with its weighty names, might be able to bring it about that some of the Continental governments should permit British or foreign agents to make explorations abroad. Tischendorf's Asiatic researches have but recently given us almost the most valuable of our Biblical codices; and who can tell what might not be found in hidden places in those countries where learning once flourished and is now in utter decay, and which are ruled by obedient allies of England? The monasteries of Greece and Turkey might yield as rich fruits as are expected from British India when the commission there at work shall have searched thoroughly the depositories of that region.

—Blackstone, in discussing the nature and origin of feudal tenures, takes occasion to speak of the conditions of peace which the Cimbri, confident of victory, offered the Romans just before the battle at Vercellæ, in which they were so ruinously defeated. Florus narrates the circumstances, but apparently, as indeed might be supposed, without understanding very clearly by what tenures the barbarians were accustomed to hold lands or expected to hold the grants which they demanded from the Romans. Before and since Blackstone's day this subject was, and has been, more or less ventilated, and is now pretty well understood, though work still remains to be done before the field is exhausted. We find in Sybel's *Historische Zeitschrift* a review of a history of the Burgundians in the fifth and sixth centuries of our era, by Professor Binding, of Basle, which is to form the first volume of an extensive work upon the laws of that nation. The author is pronounced to have succeeded in reconciling the vague and contradictory statements in regard to the landed institutions of the tribe, and to have arrived at a result "in a manner equally acute and convincing, and certain of general acceptance." It is well known that the method of the barbarian conquerors was to exact from the inhabitants a certain portion of the lands, varying in different countries. The system followed by the Burgundians seems to have been as follows: Each large landed proprietor was required to receive a Burgundian family to an equal share of his estates. No actual division was made, but a kind of joint ownership was established. In course of time, however, it was found convenient to make an actual partition. The special assignment was made by lot, to determine, that is, which Burgundian

should be assigned to each piece of land (not to each proprietor, for one proprietor might own several estates); in this there was no regard to rank. *Sors* was the name of the portion of land which fell to the barbarian; the two co-proprietors were called *consortes*, also *hospites*, and the relation between them *hospitalitas*. The proportion of one-half was after a while found insufficient, and the Romans were forced to content themselves with one-third of their arable land, and to give up besides one-third of the slaves, *Unfreie* (who had not been subject to the original division). Those Burgundians, however, who had received from the king a portion of the royal domain, *fisc*, had no share in this second partition. The ancestral kinsmen of the Burgundians were less fortunate in effecting arrangements with Marius and Catulus.

—The fourth volume of Varnhagen von Ense's journals, which has just issued from the German press, is very entertaining reading, albeit much of it, although its author calls it "Leaves from German History," must be called mere gossip concerning the sayings and doings of the people of the court at Berlin. One of its stories concerns Wilhelm von Humboldt, and as it throws a little side-light on a distinguished figure, and moreover serves tolerably well as a sample of the contents of Von Ense's book, we reproduce it here: "A story is told of him which shows that, fine as was his culture, he was capable of the greatest coarseness. He was at an assembly at the Geheimerath Rust's, when another guest, seeing a lady leave the room whom he took for Frau von Humboldt, respectfully drew his attention to the circumstance. Von Humboldt looked, and perceived that the stranger had made a mistake—the lady in question was the humpbacked wife of the Hanoverian ambassador; but, instead of thanking him, he replied sharply: 'Do you think I have married all the humpbacked women there are?'" The stranger's impertinence deprives him of sympathy, and constitutes some excuse for the "sharpness;" but it is almost to be hoped that Frau von Humboldt may, at one time or another, have repaid her husband for the brutality of his speech.

"ARNE" AND "THE FISHER MAIDEN."*

At first, after having read these novels of Björnson's, the reader is so charmed that he can only enjoy; and if, by-and-by, he begins to think of the sources of his pleasure, he stops himself, very likely, and feels like making an end by saying that the truth is that some books are simply to be enjoyed and not critically examined. "Arne," in particular, so nearly perfect and so purely delightful, affects one as any beautiful appearance in nature does—a brook, the first green, a lovely sunset—and for awhile analysis of the charm seems impertinent. But the books that disarm criticism, even if it be that they do not best repay it, are those that best endure it. So, while we can in no way so well fulfil one of the critic's most important duties as by indulging ourselves in one of his chiefest pleasures—as by heartily advising all lovers of stories, and all lovers of poetry, and all lovers of nature in her sunny aspects, and all who get pleasure from the quickening of their best and kindliest sympathies, to make the acquaintance of this captivating poet of nature and the affections—still, it may be as well to say a word or two of less undiscriminating comment on works upon which it is so easy to lavish praise—which it is so impossible not to praise.

At the bottom of both stories we have the idea of a "vocation" which perturbs the spirit of a young man or young woman whose life has been shut within narrow limits—the stir of life in the bud whose nature it is to become leaf or blossom, and which cannot and, being human, will not be thwarted. Arne—a love-child, whose father is Nils, the village fiddler, the handsomest and most active of all the young men, and whose mother is a simple, kind-hearted girl—grows up to youth without companions, except his own thoughts, which nourish in him the poetical temperament of which his father had the germ. He makes songs in which he expresses his longing to go out into the world beyond the mountains, where, as it seems to him, he will find what he vaguely wants. One of the prettiest of these is that beginning

> "What shall I see if ever I go
> Over the mountains high?
> Now, I can see but the peaks of snow,
> Crowning the cliffs where the pine-trees grow,
> Waiting and longing to rise
> Nearer the beckoning skies."

So he is always melancholy and secretly dissatisfied with himself and all about him. As his mother says, he would fain go forth to fetch the sunshine, and cannot yet see that he would have it if he would but open windows in his house wall—a wise saying of hers, the old clergyman thinks, "but, indeed, she had thought of hardly anything else for eight years."

Arne is a good son, however, and stays with his mother despite his uneasiness, solacing himself with his books and his songs. And then, too, there is Baard Böen's little daughter, Eli, of whom the young poet begins to think just at the time when, perhaps, the wanderer in his blood would have got the better of his filial affection but for this ally; and, on her part, Eli is not so shy as to frighten wholly away her backward and sensitive lover. With the help of his mother's simple managing—the story of which is told with a most felicitous mixture of pathos, and humor, and delicate sentiment; and by favor of Eli's mother—who in the bottom of her heart cherishes some tender recollections of the good-for-nothing Nils, and looks kindly on the son for the father's sake; and with the furtherance of Eli's father—who feels some remorse at having struck Nils the blow that crippled him, the two young people marry, and we leave Arne with sunshine let into his house; with his vocation discovered; possessing the knowledge that in the gratification of his craving affections, in the love of a wife to inspire his songs and afterwards to sing them with him, he is to be content and happy.

How pure and sweet the love idyl is, how vivid the picture of the hamlet life, how we are made to feel the beauty of nature, what an impression of innocence and happiness the whole work makes upon the mind, how simple and frank yet artistic the handling of the materials is, we should despair of making the reader understand by our best efforts, and must content ourselves with sending him to Björnson. If he find any other blemish than the insertion of the chapter in which Arne attends the feast and hears the guests tell tales, we do not know where it will be. This chapter, by the way, contains what we take to be the original of that frightful story which Doctor Holmes, in the preface of his "Guardian Angel," attributes to a New England source—the story of the youth who drags his father by the hair along a path near the homestead, and at a certain point is told by the old man to stop, as he had not dragged *his* father any further than to there.

In "Arne" the author touched but lightly on the conception which we have said underlies both these works. Or, rather, Arne Kampen's "felt call" was of a kind—although he at first did not believe so, or did not think so—which could be obeyed without any resulting interference with the ordinary round of his life as a dweller on his native farm, among the neighbors, and trees, and streams, and hills that he had known from boyhood. There was a struggle, but it was brief and not severe, and it ended in the harmonious conjunction of the poet's ideal and actual life; all of the world that he, doing his best, could have found beyond the mountains, he found within them when he brought his Eli there.

In the "Fisher Maiden" the power of the vocation is more insisted upon, and there is no doubt that it is in great part in consequence of this that in the "Fisher Maiden" we have not so good a work as "Arne." In the lattter story Björnson undertakes to defend the theatre—for which in his early youth he wrote a little—and also to deal with a more important and more difficult subject. He tries to show us a young girl who possesses dramatic genius, and who has a passionate desire to go upon the stage, and to show us how this genius and passion influence her character, actions, and life. But, as we think, he fails in these respects. It is a matter hardly worth speaking about—we did not begin it, however—but the stage will no more stand because of our author's defence than it will fall because of the attacks which his more religious Norwegians make upon it; he should have said nothing or been more conclusive. Again, Petra's longing to be an actress is not so much made to appear like the instinctive selection of a foreordained career, as like the whim—to be sure it was a whim that she cherished long—of a restless and impressible girl, very much struck by a spectacle utterly new and strange to her (it is on the occasion of her first visit to the theatre, when she sits rapt or rises unconsciously to her feet, taking the action of the play to be reality, that she forms her irrevocable determination to become an actress). And, finally, her dramatic genius we are tacitly asked to take for granted, as we hardly see her offering any more convincing proof that she possesses it than climbing up and down from the ground to her chamber window, in imitation of Romeo. So far as concerns the outward incidents of Petra's life after she has witnessed her first play, the effects of her resolve are made sufficiently obvious. Going, chance-directed and careless whither, into the interior of Norway, she lights upon a parsonage into which she is rather unaccountably received as one of the family, and there she devotes herself to reading dramatic literature with great assiduity—with what sorts of results as regards the study of Shakespeare we have just seen; also, in pursuance of her purpose she reso-

* "Arne. By Björnstjerne Björnson." Boston: Sever & Francis. 1869. "The Fisher Maiden. By Björnstjerne Björnson." New York: Leypoldt & Holt. 1869.

lutely refuses to entertain thoughts of marriage. This does not seem much like truth to nature; Björnson does not, however, trouble himself with any more artistic representations of the influence of Petra's purpose upon her fortunes, nor, keen as his eyes are for the aspects of life as it is in the affections, does he deal in any subtle manner—hardly does he deal at all, indeed—with the changes which her character and ways of thinking must have undergone when she came to live her new life—an intellectual existence so different from that which had been hers before she knew that theatres existed. In short, all the "vocation" part of the story is decidedly weak rather than strong, and seems like something extraneous and only rather clumsily connected with the admirable part of it.

Much of it is admirable. The first half of it—which relates, with great skill and with a characteristically light touch, the unfortunate love of Gunlaug, Petra's mother, and Pedro Ohlsen, her weak-souled father; which sketches the childhood and girlhood of the Fisher Maiden herself, and describes her abortive love affairs, or rather the shadowy imitations of love affairs with which she amuses her fancy and puts off the demands of her heart; which gives us a glimpse of the fishing village and its people—all this is interesting and pleasing, and some of it is work of a kind that is out of the reach of any but a man of genius. Good, also, though it is more sketchily done—and, much against our will, is subordinated to Petra's dramatic studies—is the description in the latter half of the book of the life at the parsonage; and particularly good is the scene in which the pastor is "dealt with" by a deputation of his people on the subject of keeping a piano.

One of Björnson's strong points is his skill in putting a landscape before us, not by "word-painting," though for that matter "word-painting" never puts a landscape before us, but by a few happy sentences which serve us as eyes because they are the words of one with a strong love of nature; with an ability to see the picturesqueness of a scene as well as to feel the sentiment of it; with the ability, too, and the will, to choose descriptive words, and with an incapacity of performing the word-painter's trick of selecting ill-fitting fine phrases because they are fine. Touches of this power now and again occur in the "Fisher Maiden," but not so frequently as in "Arne." From the latter book we quote a passage which justifies this praise, although it is not the best thing of the kind which might be found:

"Arne went to the other window, and looked out also. Indoors it was warm and quiet; outdoors it was cold, and a sharp wind swept through the vale, bending the branches of the trees, and making their shadows creep trembling on the snow. A light shone over from the parsonage, then vanished, then appeared again, taking various shapes and colors, as a distant light always seems to do when one looks at it long and intently. Opposite, the mountain stood dark, with deep shadow at its foot, where a thousand fairy tales hovered; but with its snowy upper plains bright in the moonlight. The stars were shining, and northern lights were flickering in one quarter of the sky, but they did not spread. A little way from the window, down towards the water, stood some trees, whose shadows kept stealing over to each other; but the tall ash stood alone, writing on the snow."

It is not then for his power as a thinker that Björnson is to be admired. He is a lyrical poet. Capable of failing in the drama, liable to seem weak when he attempts to take philosophical views of life, he is yet gifted with such a capacity of feeling, and he has so much of the poet's power to tell us with precision what moves his soul and appears to his vision, and so much of the artist's power of selection and self-restraint, that he takes his place among the most genuine and delightful of the minor poets of nature and of the affections.

He is a man whom Burns might have delighted in—he is so tender, so simple, of so manly a disposition, and of such womanly delicacy and intensity of sympathy. If he, perhaps, wants something of Burns's strong understanding, he has a fineness which Burns lacked, and a purity in which Burns's works, at any rate, are sometimes wanting. To be sure he lives in a better age, and has had advantages of education from which the other was debarred. It is to this last fact, probably, that Björnson owes it that he is Burns's superior in artistic culture. For instance, he could never, we may be sure, have written some of Burns's letters; he might fail in intellectual grasp, but hardly ever in taste, we should say.

THE "SHEPHERDS" IN EGYPT.*

That difficult historical problem embodied in Manetho's narrative of the subjection of Egypt to the sway of "Shepherd Kings"—a narrative preserved only in scanty and evidently mutilated fragments—seems to be gradually, though slowly, approaching a solution, thanks to the indefatigable zeal of such able Egyptologists as Lepsius, Rougé, Mariette, Brugsch, Dümichen, and Chabas. The elaborate treatise on the "Shepherds" by the last-named scholar gives us a clear and satisfactory idea of the progress archæological research has made on this topic. It enables us to sum up what has been more or less definitely settled on the basis of indubitable discoveries; what is regarded as probable hypothesis by the most competent critics; and what is still to be deciphered.

Whether the name Hyksos—which, of all who quote Manetho, is mentioned by Josephus alone—was the national name of the invaders, or was applied to them by the Egyptians; whether they were Arabs, Phœnicians, or of still another race; whether the first dynasty founded by them in Egypt was the fifteenth Manethonian dynasty, according to the extract given by Africanus, or the seventeenth, as Eusebius has it; whether their sway over that country lasted nine hundred and fifty-three years (Africanus), or five hundred and eleven years, besides the indefinite time of the long struggle which resulted in their expulsion (Josephus), or, possibly, only a little upward of a century (Eusebius); whether any one of the various lists of Shepherd Kings that have been preserved is a correct copy from the original text of Manetho—all this is still shrouded in obscurity. It is only on the close of the Hyksos period that the papyri and the inscriptions on Egyptian monuments shed some light.

According to the latter sources, the Shepherds belonged to a group of Asiatic people known in monumental records under the names of Menti and Sati. These peoples, in very early times, occupied the territories adjoining Egypt on the north-east. Against the incursions of the Sati a king of the twelfth dynasty erected a wall on that border. The names of the Hyksos kings, linguistically examined, seem to indicate, contrary to the statements quoted from Manetho, a non-Semitic origin of the invaders of Egypt. If the name Hyksos was Egyptian, it may have signified "vile kings" in its application to the foreign rulers, and, in a modified form, "vile captives" when applied to the remnants of their race after their defeat by the Egyptians; for *hik*, in ancient Egyptian, signifies "king," *hak* "captive," and *shos* "vile." The word Shepherds would thus be merely an interpolation made by Josephus, who was desirous to establish the identity of the Hyksos with the pastoral ancestors of his people; and we may easily suppose that Africanus, Eusebius, and others adopted it from him. The Egyptian papyri generally designate the Hyksos by the word *Aat*, which signifies "plague" or "scourge."

These barbarians first appeared in Egypt, we read in Josephus after Manetho, during the reign of a king called Timæus, or Amuntimæus, as some manuscripts have it. This name, which has a good Egyptian sound, can as little be discovered on the monuments as the word Hyksos. The inroad of the invaders, we learn from the same source, was sudden, their conquest easy, their depredations terrible; they pillaged, burned, and massacred, and all whose lives they spared they reduced to slavery. Their first six kings were all bent on extirpating the native Egyptians; but after them came a period of comparative tranquillity and peace—the Hyksos kings reigning at Memphis in Northern Egypt, and the native princes reigning in Thebes, until the latter assumed the offensive, and began their long and successful strife for deliverance. It is at this point that the sources of original Egyptian information begin to flow—scantily, it is true, but clearly, and with a fair promise of gradually increasing abundance.

A papyrus, known to Egyptologists under the title of "Papyrus Sallier I.," introduces us both to Apapi, the Hyksos ruler of the North, and to Sekenen-Ra ("Warlike Sun"), the Egyptian ruler of the South. It was the time when "the land of Egypt was under the Scourges, there being no Lord-Life-Health-Strength" (that is, king) over the whole of it. When King Sekenen-Ra was Hik of the land of the South, the Scourges were in the city of the Amu, and the chief Apapi was in "Ha-uar" (Avaris), the Hyksos stronghold mentioned by Josephus. King Apapi made Sutekh "his divine lord, and worshipped none of the gods of the whole land. He erected for him a temple of excellent workmanship, to last for ages." He established festivals in his honor, and ordered daily sacrifices. This Sutekh is identified with Set, the rival of Horus, who was worshipped in Memphis in the earliest times of Egyptian history, and was probably chosen by the Hyksos king as an object of worship for his then already half-civilized and half-Egyptianized people, on account of his fitly representing the supremacy of the North over the South. Having established this worship, Apapi assembled the council of scribes to deliberate on a message to be sent to the Chief of the South, Sekenen-Ra. A message couched in pacific terms was despatched in all haste, the contents of which—alluded to only in a few words of the much-mutilated papyrus—seem to have been the demand of

* "Les Pasteurs en Egypte. Par F. Chabas, Chevalier de l'Ordre Impérial de la Légion d'Honneur, du Lion Néerlandais et de la Couronne Royale de Prusse (IIIe Classe), Membre de l'Académie de Sciences à Amsterdam, etc. Mémoire publié par l'Académie Royale de Sciences à Amsterdam." Amsterdam: 1868.

certain privileges, in exchange for which the Northern prince offered to allow in his dominions the worship of Ammon-Ra, the principal divinity of Thebes. This message, received with indignation by Sekenen-Ra, "his grand commanders, his officers, and the skilful guides who were around him," seems to have led, after a long period of comparative peace, to hostile complications, which, at a time not exactly to be defined, culminated in the war for independence.

This Sekenĕn-Ra, as is shown by a "Papyrus Abbott," is one of three kings of the South who bore that name, or rather surname, probably bestowed on them on account of their leading in the great national struggle. Of these, Sekenen-Ra Ta-aa-Ken appears to have achieved signal successes over the oppressors of his country, and to have paved the way to their final expulsion in the early years of his successor, Ahmes I., the first king of the eighteenth dynasty, whose reign is placed, though without certainty, in the seventeenth century B.C.

In the liberating campaigns of these two monarchs, as subsequently under their successors, fought Ahmes, the son of Abna, a naval officer, who, in his old age, immortalized his exploits in various wars by a long biographical inscription on his own future tomb, which we cannot reproduce here in full, interesting as it is to the student of Egyptology. Suffice it to say that Avaris was taken after some unimportant engagements, and that the siege and capture, in the fifth year of the reign of Ahmes I., of the town of Sharuhana—presumed to be the Biblical Sharuhen, situated on the southern border of Palestine—closed the Hyksos war. Lower Egypt was delivered, and Ahmes I. turned his victorious arms, with equal effect, against the Nubians, who seem to have taken advantage of his northern campaigns to invade the southern districts of his realm. Neither during this Nubian war, nor afterwards, did the Hyksos make any attempt to reconquer Egypt.

The plain narrative of Ahmes, son of Abna, entirely disposes of the fanciful account given by Josephus, after Manetho, of the expulsion of the Shepherds. His "King Thutmosis," who with four hundred and eighty thousand men vainly tried to capture Avaris, and was compelled to grant a capitulation to the Hyksos garrison of no less than half that number, is little more than a myth. The authenticity of the Egyptian inscription-narrative, on the other hand, is confirmed by the contents of a similar production of another Ahmes, "controller of war-prizes," who, like the son of Abna, served under the first kings of the eighteenth dynasty.

In conclusion, we cannot refrain from remarking that we find the Aat of the Egyptians—the "Plague" or "Scourge," as they designated the Hyksos—faithfully reproduced in the early Hebrew documents under the name of *Tzir'ah*, a word generally translated "wasp" or "hornet," but obviously identical in meaning with the Hebrew *tzaraath*, "plague," and the Arabic *tzeria*, "scourge" or "plague." When Moses says (Exod. xxiii. 28) that the Lord will "send the *Tzir'ah* to drive out the Hivite, the Canaanite, and the Hittite from before" the Israelites, or when we hear from Joshua (xxiv. 11, 12) that those and several other peoples of Palestine were actually driven out by "the Tzir'ah" from before them—that word designates neither a swarm of wasps or hornets, nor terror or disease figuratively so expressed. It means the people long known to the Hebrews as "the Scourge" of Egypt, and who, when expelled from that country, desolated and disorganized the petty states of Canaan, thus rendering them an easy prey to the subsequent conquerors. What space of time separated the occupation of Palestine by the Hebrews from the previous inroads of the Hyksos, is a point still to be established; but the identification of the Biblical *Tzir'ah* with the Egyptian *Aat* can hardly fail to cast some light on the chronology both of the "Exodus" and of the history of Manetho's "Shepherds"—if he ever used this term. His Ποιμενες (Shepherds), we venture to suggest, may be a corruption—voluntary or accidental—of Λοιμοι (Plagues).

Child-World. By the Authors of "Poems Written for a Child." (New York: George Routledge & Sons. 1869.)—We are decidedly of opinion that if we had a class of youthful critics—critics, say, from eight years old to thirteen or fourteen—a good many "juvenile books" would be forthwith put on the high shelves with the literature for adults, as being in no sense "truly royal books for the young;" and not at all "the very thing to win children's hearts;" and very far from "commanding the suffrages of all denizens of the nursery." Grown-up critics are remarkably apt to forget that the writing which makes them for the moment children again, is not only not necessarily what boys and girls will like, but almost of necessity is what they will not like—at the least, is what they will not much care for. The subject is a wide one; but there is one rule that we may pretty safely lay down, and that is, that whatever else children are interested in they are not interested in introspection; the "child-world," so delightful to men and women, is nothing to them. Take a book like "Little Rosy's Travels," for instance: the adult reader is charmed by its picture—so "true to nature," *we* say—of a little girl's daily life. But children like it for its adventures; a little girl enjoys it just as she would enjoy having Miss Rosy sit with her and tell how she went a-fishing without leave, and the big fish pulled her into the brook; and how once she was allowed to ride home on the load of hay; and how one morning before breakfast she went with her mother to the farm-house and saw the pigs—and so on. The more or less pensive and more or less humorous pleasure which the child's mother gets from reading the book the child almost entirely misses. Yet a much-praised class of so-called juveniles have for their chief, if not for their only, value—which is often great, as witness "Dealings with the Fairies," and "Liliput Levee," and, so far as our observation has gone, "Alice's Adventures in Wonderland"—have, we say, for the greater part of their value their power to please us who have left childhood behind us and like to look back.

To our apprehension, the very agreeable little book before us is not truly a book for young people; at any rate, most of it is not. We will quote a poem by "B.," who seems to us the cleverer of the two authors, and, what is more to the purpose, a better writer for the young than "A.," her partner:

"The Sea-gull *is* so sorry!
She flings herself about,
And utters little wailing cries,
And flutters in and out.
The fishes do not sympathize:
Fish are so very cool—
They make so many rules, you know,
And who can *feel* by rule?

"They have a rule for swimming,
A rule for taking food;
They have a rule for pleasure trips,
A rule for doing good.
And people who make rules like that
May dine, and work, and swim;
But never know how sweet a thing
It is to take a whim!

"I'd like to be a Sea-gull,
With lovely beak and claws;
I would not like to be a fish,
Subject to fishy laws.
And if they make more changes soon
By Acts of Parliament,
I won't consent to be a fish—
I *never will* consent!

"Rules are so very tiresome,
And so is good advice,
I'd like to be a reckless bird—
I think it would be nice.
Sea-gulls are sentimental, though,
Fishes are dull and sly;
I don't object to sentiment,
But dulness makes me cry.

"I do distrust a herring,
I quite despise a pike;
Of all the fish that ever lived,
A cod I most dislike!
They're stupid and self-satisfied,
And indolent and gruff.
I'm speaking of their characters—
To eat they're good enough.

"*Why* is the Sea-gull sorry?
I'm not allowed to tell!
The fish, who will not sympathize,
Know what's the matter well!
And you who'd feel with all your hearts,
And give her love and tears,
Are not allowed to hear a word—
And such is life, my dears!"

Now, there is no doubt that a boy or a girl who has never wished for the freedom of clouds, or waves, or happy beasts and birds, may be set down as exceptionally materialistic and literalistic. So far as concerns the child's wish to be a sea-gull, exempt from rules and good advice, our poem is a success as juvenile literature; for children reading it will sympathize with the supposed speaker, and be pleased to find themselves in company and in print. Probably, too, any child would speedily think of the gull as "sorry." But as for the rest, Heine might have done it. The poor, unappreciated sea-gull, pining for sympathy which the unpoetic, methodical fish do not accord; who pities himself, and whose soul utters lyrical cries amid a dreary waste of uncongenial companionship; but who constantly eats up the herring, whom he must say he distrusts; and fattens on the pike, whose interested character his own fine nature cannot help despising; and levies his heaviest contributions on the Philistine cod, whom he really cannot help hating—this is a victim to delicacy of spiritual and mental constitution whom Heine would have been pleased to meet—in mature years; but what even Heine would have done with him had he met him in his childhood, we do not see. So, good as "The Sea-Gull" is, in part, as poetry for children, and nice as it is for adults in its mixture of childlike-

ness and the thoughts of maturer years, it cannot be regarded as being a very excellent "juvenile" poem.

We have chosen for comment a not unfavorable specimen of the contents of "Child-World;" some half-dozen of the pieces are better, but some twenty-five or thirty are not so good. The young people's favorites will be, we should say, "A Ballad," which tells of a brave deed done in the Crimea; "The Little Schooner," which tells of a wreck and a rescue; "My Pony," which contains a horse, and so is sure of friends among all boys; and "The Fairy's Wedding," which the girls will like for its subject and its prettiness. The young people's elders will like almost everything in the volume. Some of the poems will please many of them as embodying the fleeting fancies of a more than usually imaginative child; more will please them as producing the impressions that their children's sayings and doings produce, or re-creating for them the world in which they themselves were children; and some as being—whether or not we think of children in connection with them—good, better than many works far more pretentious, because marked by delicate humor and true poetical ability.

Latin Lessons, adapted to the "Manual Latin Grammar," prepared by William F. Allen, A.M., and Joseph H. Allen. (Boston: Edwin Ginn.)—In the Latin series which the Messrs. Allen—experienced teachers—have undertaken to prepare for the use of schools, this text-book holds the second place, following the Latin Grammar, which we noticed on its appearance, and closely connected with it by references. We do not hesitate to pronounce it the best of its kind in the country, whether we consider its method or the scholarship of the editors. We like their principle of selecting a single excellent author from whom to draw examples for illustrating the chief features of the grammar, and then, after a thorough study of these details, introducing the pupil to the original work in its completeness and connection of thought. In this way mastery of a tolerably copious vocabulary and a thorough acquaintance with one good style is ensured at the same time; and, though the editors seem in their preface to think that they have not guaranteed pupils against "painfully toiling through the rudiments," we believe it will depend upon the teacher whether with these aids this shall prove at all too severely true. We agree too with the Messrs. Allen that Cæsar, as they found by laborious experiment, combines in his Commentaries the most desirable qualities for the purposes of these Lessons. So much of his work as relates the story of the Helvetian War, in the first book, is made the basis of the preliminary instruction, and is then given entire for exercise in reading, with carefully collated text, and a map of operations borrowed from Napoleon's "Life of Cæsar." The notes, also, have the benefit of the Imperial investigations, and of all the later learning concerning the conquest of Gaul. Both here and in the "Lessons" proper there is a good deal of freshness in the translations and remarks; as when (p. 78) they say, with a side-glance at Fenians and Know-Nothings: "The Druids were a religious or priestly order, jealous of the aristocracy of the tribe or clan, which represented what might be called the patriotic or native-Celtic party." Again (p. 47) we have for *ventum est:* "There has been coming done;" and (p. 84), "*frigora* is a cold season, or spells of cold weather." These are idiomatic and forcible renderings; and such are numerous.

The Horse in the Stable and the Field: his Management in Health and Disease. By "Stonehenge" (J. H. Walsh, F.R.C.S.), with copious notes and additions by R. McClure, M.D., V.S., and Ellwood Harvey, M.D. (Philadelphia: Porter & Coates.)—"Stonehenge" has a good reputation for his writings on the horse. As a rule, however, his works are intended more for the student and professional practitioner than for the layman, but in this edition the work is stripped of its professional technicalities and brought to the level of the general reader. Mr. McClure's notes and additions give increased value to the book, and will make it more acceptable to our farmers, among whom, indeed, a work of this kind is much needed. We are sorry to see, however, that the system of Mr. Rarey is introduced in connection with the chapters on the horse. A recent professor in the art of breaking horses offers us a more effective instrument in the preliminary lessons than any of Rarey's means and appliances—we allude to the "war bridle." It gives greater command over the animal, and he is thrown with more ease and with the expenditure of much less physical force on the part of the operator. Mr. Ellwood Harvey's article on "The Trotting Horse of America" will add to the value of the American edition.

Gun, Rod, and Saddle. By Ubique (Gilmore). (New York: W. A. Townsend & Adams.)—Mr. Gilmore's book is made up of articles culled from English sporting papers, to which, from time to time, he has been a contributor. As newspaper articles, we might imagine them moderately agreeable reading; but, collected in book form, one is cloyed with uninterrupted slaughter. The last chapter in the book is one entitled "Hints on Shooting." This is full of practical good sense, and for this alone we commend the work to young sportsmen.

The Trapper's Guide. By S. Newhouse. Edited by the Oneida Community. (New York: Oakley, Mason & Co. 1869.)—The "Trapper's Guide" is little else than an attractive advertisement of Mr. Newhouse's traps, which are manufactured by the Oneida Community, and are warranted to destroy anything from an infant to a grizzly bear. It is, however, quite attractive—advertisement or not—and apart from its commercial intentions, it contains facts of value to the trapper, the sportsman, and the naturalist. That it talks of good traps is a thing certain, for the Community has made itself a deservedly good name in this branch of manufacture.

THE DUKE OF ARGYLL'S NEW BOOK,

PRIMEVAL MAN.

AN EXAMINATION OF SOME RECENT SPECULATIONS.

16mo, cloth, $1 50.

"This volume is perhaps the most clear, graceful, pointed, and precise piece of ethical reasoning published for a quarter of a century. . . . The book is worthy of a place in every library as skilfully popularizing science, and yet sacrificing nothing either of its dignity or of its usefulness."—*Nonconformist.*

"This book shows great knowledge, unusual command of language, and a true sense of the value of arguments. . . . It may be questioned and even confuted in some points, without losing any of its claims as a candid, clear, and high-minded discussion."—*Pall Mall Gazette.*

BY THE SAME AUTHOR,

THE REIGN OF LAW.

ESSAYS ON DIVINE GOVERNMENT.

A New Edition, with additions. Crown 8vo, cloth, $2 50.

"We think it would be a profitable enterprise for some American publisher to reprint this book. It is one of the best of its class published in recent times. Of the scientific merits of the work we have but a word to say. The author contributes to the illustrations of design in nature an interesting discussion of the 'machinery of flight' in the wings of birds, and by this and other scientific matters makes his book a very readable one."—*The Nation.*

"This volume is a remarkable work, in which the logical sufficiency of the arguments is equal to the perspicuity with which they are stated. The style is simple and clear, and not without eloquence, and the aptness and variety of the illustrations are striking."—*Evening Post.*

"This is a very great book; great because, while treating of the most profound subject of human thought, it can be read with comfort by those whom Mr. Lincoln called plain people."—*The Round Table.*

BROTHERHEAD LIBRARY,
129 East Seventeenth Street, near Irving Place.

Catalogues now ready of 23,000 volumes — English, French, and German. New books and periodicals, foreign and home, constantly received.

The Publishers of Lippincott's Magazine take pleasure in announcing that the opening chapters of

"THE VICAR OF BULLHAMPTON,"

A NEW NOVEL OF GREAT INTEREST,

By Anthony Trollope,

Author of "Phineas Finn," "Orley Farm," "The Claverings," "The Belton Estate," etc.,

WILL APPEAR IN

THE JULY NUMBER,

COMMENCING VOLUME IV.

For Sale at all the Book and News Stores. Single Numbers, 35 cents. Yearly Subscriptions, $4. Liberal terms to Clubs and Agents.

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

J. B. FORD & CO.,

39 PARK ROW, NEW YORK,

HAVE NOW READY:

I.

BEECHER'S SERMONS:

New Series, 1868-9, embellished with a new Steel Portrait of Mr. Beecher—the best likeness of him ever published and a superb piece of engraving. 1 large 8vo vol., extra cloth, price $2 50.

Mr. Beecher's discourses need no new commendation. Their freshness and originality of method in presenting the old familiar truths, their felicity of illustration, their aptness, skill, and impressiveness, make them interesting to readers of every class and denomination. These Sermons are selected from those preached by Mr. Beecher during the past fall, winter, and spring, and are, therefore, especially well adapted to the present requirements of the community. This volume, which is the first of a series to be issued once every six months, contains also the Prayers (among the most profitable of Mr. Beecher's ministrations) and indication of the Scripture Lessons and Hymns sung, appropriate to each Sermon, in Plymouth Church.

II.

THE MINES OF THE WEST.

A full Statistical Account of the Mineral Development of the Pacific States and Territories, for the year 1868, with 16 illustrations; and a Treatise on the Relation of Governments to Mining, with Delineation of the Legal and Practical Mining Systems of all Countries, from early ages to the present time. By Rossiter W. Raymond, Ph.D., United States Commissioner of Mining Statistics. 8vo, extra cloth, $1 75.

"Well worthy the attention of the general public."—*Philadelphia Post.*

"Mr. Raymond's report has attracted marked attention by its clearness of statement, and the broad, scientific view which it presents of the whole subject of mining, in its relation to legislation."—*N. Y. Commercial Advertiser.*

III.

THE TROTTING HORSE OF AMERICA.

How to Train and Drive him; with Reminiscences of the Trotting Turf. By Hiram Woodruff. A handsome 12mo, with splendid steel-plate portrait of the author, extra cloth, $2 25.

The New York *Tribune* says: "This is a masterly treatise by the master of his profession—the ripened product of forty years' experience in handling, training, riding, and driving the trotting horse. There is no book like it in any language on the subject of which it treats."

Sent post-paid on receipt of price.

COMPLETION OF THE PACIFIC RAILWAY.

One Week to San Francisco.

REVIVAL

OF THE

BOOK TRADE.

TWELVE NEW BOOKS OF SPECIAL INTEREST.

Ready This Week:

I.

AUDUBON, THE NATURALIST.
His Life and Adventures. Edited by his Widow. One of the most entertaining and valuable of modern biographies. In a handsome vol. $2 50.

II.

BAYARD TAYLOR. THE BY-WAYS OF EUROPE.
The final book of travels of this popular author. Said by the critics to be the best. "Nothing can be more exquisite than his pictures," etc. 12mo. $2 25.

III.

BLINDPITS.
The Fourth Edition of this popular Scottish novel. $1 75.

IV.

BRACE. THE NEW WEST; OR, CALIFORNIA AS IT IS.
Full of new and important facts and statistics about the Natural Wealth of California—the Vine Crops, Silk Growing, Farming, etc.; the Yo-Semite and the Railway, *apropos* to the great event of the day. 12mo. $1 75.

V.

CRAVEN. ANNE SEVERIN.
A Novel. By the author of "A Sister's Story." "Remarkable for its purity and simplicity." "A book that the most fastidious of mothers might give to the most unsophisticated daughter." 12mo. $1 50.

READY ON SATURDAY, MAY 15,

Dickens's Works for the First Time Complete.

The publication of "Master Humphrey's Clock," by Hurd & Houghton, makes their editions the only complete ones in the market.

MASTER HUMPHREY'S CLOCK

consists of the chapters originally connected with the "Old Curiosity Shop" and "Barnaby Rudge," and is now reprinted for the first time in America, in a handsome form, nor can it be obtained in any of the current English editions. In these chapters, Mr. Pickwick reappears, as do also Mr. Weller, his son the immortal Sam, and a third Weller, son of Sam, an epitome of his grandfather. In this volume also appear

Additional Christmas Stories,

not included in the previous collections of this Series; comprising "Seven Poor Travellers," "The Holly Tree Inn," "Somebody's Luggage," "Mrs. Lirriper's Lodgings," "Mrs. Lirriper's Legacy," "Dr. Marigold's Prescriptions," "Mugby Junction." Also, a

General Index of Characters and their Appearances,

made expressly for Hurd & Houghton's editions, more than eighty pages long, and enabling one at once to find, as in a directory, the name and place of every one of Mr. Dickens's inventions. To this is added an

Index of Fictitious Places, Familiar Sayings, etc.,

rendering Hurd & Houghton's editions thoroughly furnished, and the only complete ones in the market. The Indexes were compiled with great care by Mr. W. A. Wheeler, the well-known editor of Webster's Dictionary.

MASTER HUMPHREY'S CLOCK. Household Edition. One vol. 16mo. Cloth, $1 50.

Riverside Edition. One vol. crown 8vo. Cloth, $2 50.

THE UNCOMMERCIAL TRAVELLER (only complete collection in America). Household Edition. One vol. 16mo. Cloth, $1 25.

Riverside Edition. One vol. crown 8vo. Cloth, $2.

THE UNCOMMERCIAL TRAVELLER AND MASTER HUMPHREY'S CLOCK. 2 vols. in one. Globe Edition. 12mo. $1 50.

THE HOUSEHOLD EDITION, illustrated by Darley and Gilbert. 54 vols. 16mo. 54 steel engravings. $1 25 per vol.

THE RIVERSIDE EDITION, with over five hundred illustrations, by English and American artists. 28 vols. crown 8vo. 544 steel engravings. $2 50 per vol.

THE GLOBE EDITION, with Darley and Gilbert's illustrations. 14 vols. 12mo. 54 steel engravings. $1 50 per vol.

Any set or single volume sent prepaid on receipt of advertised price by the Publishers.

SLAVE SONGS OF THE UNITED STATES. A Unique Collection of Original Melodies—words and music—obtained among the negroes of the South; preceded by an account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal, by Prof. W. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50.

CRITICAL AND SOCIAL ESSAYS. Reprinted from the *Nation*, and supplying in some measure the first two volumes of that paper, which are now obtainable only with difficulty. Cloth, 12mo, price $1 50.

LIFE AND LETTERS OF CAPTAIN JOHN BROWN. Edited by Richard D. Webb, and published by Smith, Elder & Co., London, 1861. In all respects the best life of John Brown ever written. Illustrated by a photographic portrait without a beard, showing perfectly the character of the lower part of the face. Cloth, 12mo, price $1 50.

Sent post-paid on receipt of price. Address PUBLISHER OF THE "NATION," Box 6732, New York City.

A NEW BOOK

By the Author of "THE GATES AJAR."

Men, Women, and Ghosts.

BY

ELIZABETH STUART PHELPS.

1 vol. 16mo. $1 50.

CONTENTS:

NO NEWS.
THE TENTH OF JANUARY.
NIGHT-WATCHES.
THE DAY OF MY DEATH.
"LITTLE TOMMY TUCKER."
ONE OF THE ELECT.
WHAT WAS THE MATTER?
IN THE GRAY GOTH.
CALICO.
KENTUCKY'S GHOST.

No book, for a long time, has taken such hold on the public as "The Gates Ajar," and these stories from the pen of the same author are sure to attract marked attention. The ground occupied by Miss Phelps in these interesting tales is peculiarly her own, and she has here woven together incidents of thrilling import, never losing sight of probability, and always keeping in view the purest moral effect. A distinguished writer, in speaking of one of the stories included in this volume, says: "It is, if I know anything of literature, a work of extraordinary merit. In breadth of human sympathy, in power of characterization, in descriptive power, in precision and delicacy of touch, I hardly know where to find its equal in American fiction." These same qualities mark all the stories in this book, and cannot fail to enlist the interest and admiration of their numerous readers.

THE GATES AJAR.

Twentieth Edition. $1 50.

"The Living Church."

A Monthly Journal, under the above title, will be published on the 6th of MAY, and on the first THURSDAY of each following month.

"THE LIVING CHURCH"

Will advocate the claims of a positive Christianity in its relations to all the living questions of the day, in Criticism, Natural Science, Philosophy, Social Reform, etc., etc. The following gentlemen are among the contributors:

Rev. Wm. A. Muhlenberg, D.D. (whose "Brotherly Words" will be incorporated in these columns), Rt. Rev. Thos. M. Clark, D.D., Rev. E. Harwood, D.D., Rev. Phillips Brooks, Rev. Henry C. Potter, D.D., Rev. Jos. H. Rylance, D.D., Rev. Walter Mitchell, Rev. C. C. Tiffany, Rev. Wm. R. Huntington, Rev. E. C. Porter, Rev. C. A. Richards, Rev. J. T. Walden, Rev. D. O. Kellogg, Jr., Rev. W. T. Wilson, Prof. J. L. Diman, Rev. E. A. Washburn, D.D.

Terms:

TWO DOLLARS PER ANNUM, payable in advance.

Subscriptions should be addressed to "THE LIVING CHURCH," 633 Broadway, New York.

Literary communications and contributions should be addressed to the Editor of "THE LIVING CHURCH," 103 East Twenty-first Street, New York.

The Nation Press.

The Proprietors of THE NATION PRESS give notice that they have established a Book, Pamphlet, Job, and Newspaper Printing-Office in this City, and are prepared to execute at moderate prices, for cash, the best of work in any and all of these branches.

For BOOKS they will furnish Electrotype or Stereotype Plates, as desired, and will guaranty unusual accuracy in their preparation.

PAMPHLETS of every description, embracing Prospectuses, Statements, and Reports of Corporations, Statistical, Scientific, and Literary Papers, Law Pleadings, etc., etc., will receive the same attention as books, and be printed with especial care.

JOB WORK, in all its details: Cards, Circulars, Programmes, Bills, Receipts, Forms, etc., will be promptly dispatched, with taste, and in the newest varieties of type.

NEWSPAPERS, MAGAZINES, and other Periodicals will be printed on reasonable terms, and strictly upon time.

In short, the Proprietors undertake to satisfy first-class custom in all that pertains to a general Printing Business.

Orders may be sent to THE NATION PRESS, 27 Rose Street (a few doors North of Frankfort), or to this Office; and estimates will be furnished at either place.

The Week.

THE Anti-Slavery Association, the Equal Rights Association, and the Universal Peace Society, have been furnishing the profane with a good deal of food for unholy mirth, during the past week, by the proceedings at their anniversary meetings. The Anti-Slavery Association has always been more or less incommoded by the necessity under which it labored of furnishing a "free platform" to all who were dissatisfied with existing social and political arrangements, and this inconvenience has, of course, been increased by the difficulty which it now finds in giving a good reason for its existence. But the end, it appears, is at hand, for Mr. Phillips announces that the ratification of the Fifteenth Amendment will indicate that its work is done. The "Equal Rights Association," or, to speak plainly, the Woman's Suffrage Association, has probably during the week done more to bring discredit on the female suffrage movement than all its enemies put together could do in ten years. In the first place, its managers displayed a remarkable incapacity for the transaction of business, and allowed their meetings to be marked with as much confusion and riot as the proceedings of a Jacobin club. Many of the most notorious political and social quacks of the day brought their pills and powders, washes and gargles, to the meeting, and were allowed to display and puff them on the platform, with the most amusing results, the audience highly enjoying the rows between them and the impotent officers. We could, however, for our part, forgive them all these things, for they may be the consequence of inexperience and want of executive ability. What we cannot forgive them for is putting some notorious politicians of the baser sort among their vice-presidents. We found there, for instance, our old friend Mr. J. M. Ashley, whose recent appointment to a Federal office has been one of the scandals of Grant's administration, and who has been convicted, on his own admission, of very gross abuse of his position as a legislator. We might mention others, but we refrain. If the leaders of the Woman's Rights movement imagine they are going to get the support of the best portion of the community as long as they exhibit this disgraceful indifference to personal and political character, they are greatly mistaken.

The only good reason women can offer for giving them the suffrage, is that the community will be the better of their having it, and the community will not be the better of their having it unless they do something more than increase the number of voters. What we want of them is, not more ballots, but a new element in politics. The curse of politics at the present day is the ignorance and low personal character of politicians. Do the women who are claiming the suffrage show signs of respect for skill and training and purity in public men? Not a bit of it. The wildest War-horse that ever whisked a troublesome tail has never displayed more contempt for reason and experience than is displayed on the Woman's Rights platform, and nowhere does your blattering and slightly tainted demagogue meet with a warmer greeting. The leaders of the movement keep telling us that they will "purify and elevate politics" if we give them the franchise, but, like many other reformers, they do not want to begin till they have got it. We believe, however, the public is getting tired of this little game. Anybody who proposes to "purify and elevate politics" must not ask us to wait till he gets this and that bill or amendment carried. We insist on the women beginning "the purification and the elevation" *now*. They must discountenance corruption at once by refusing corrupt men such honors as they may have to bestow, and promote good government by encouraging and supporting men who understand the art of government or show some disposition to acquire it.

Senator Wilson has just written a letter to the *Independent*, in which he expresses his opinion of the first sixty days of the new administration. On the whole, he is very well content. Grant's Indian policy is to be commended, he thinks, for its humanity, its discouragement of knavery, and its Christianity; the negro has nothing to complain of, for he has been duly considered in the distribution of honors and offices; economy is aimed at by all the heads of departments; the conduct and language of the President are worthy of the place which he fills. But in the matter of appointments to office, Mr. Wilson is not so entirely satisfied. He is constrained to confess that "several appointments have been made that were not fit to be made," and that the truest friends of the President see that this is so; it is true that "in the multiplicity of his appointments the President has sometimes failed to put the right man in the right place." But Mr. Wilson ought to tell the reason of some of these regrettable errors. The President has done some things in the way of filling offices which must of course make all of us who are truly good mourn very much, but he was not altogether without some shadow of excuse. For example, he nominated Mr. Pile for a foreign mission for which that gentleman was in all ways utterly unfit—except, indeed, morally; we have never heard anything against his moral character—and Mr. Pile came pretty near getting his confirmation. We do not know whether or not Mr. Wilson voted for or against Mr. Pile; but why did he enable Mr. Pile to urge his "claims," by pointing to Mr. Wilson's name among the signatures of his "endorsers?" We believe that Grant has decided to keep Mr. Ashley in Montana—if he behaves himself, we suppose, of course—as "a dreadful warning" to himself. Now, one of the things against which the figure of the "original impeacher" is probably to warn the President is the placing of any confidence hereafter in "strong papers," signed by a hundred and odd Senators and Representatives. Yet we suppose that Mr. Wilson's name was freely given to Mr. Ashley; and we shall wait for proofs to the contrary before we believe that when Mr. Wilson's colleague was fighting for the confirmation of the dishonest "friend of human freedom" and Mr. Case, Mr. Wilson withheld his favorable vote. Or did he decline to vote? Nobody is heard saying that Mr. Wilson voted against him, good thing as that would be to hear said. We are glad to see the pretty general disposition to "give Grant time" and to "let him have a fair chance;" but as long as we are in so kind a mood, why not be kind to all our good Senators too, and throw one end of the mantle of charity over our representatives in the House?

So far as the new Administration is contained in the Cabinet, it seems to be working very well. The *Herald* reporter "interviews" Mr. Fish a little too often, perhaps, but we do not observe that that ingratiating gentleman gets too many secrets of state out of the Secretary, who, however, might as well, we shall say, remand him to his imagination; the remarkable *World* correspondent gets on well enough by means of that quality. For the rest, we hear no more about Mr. Fish's having no mind of his own, and no definite views as to this country's foreign relations. It would not be surprising if Mr. Fish did more than any other one man to shape our course in foreign affairs during the next four years. Mr. Borie is understood to leave much power in the hands of Admiral Porter, and the two of them, with Captain Ammen, who is at the head of the Docks and Yards Bureau, are at work reducing expenses, and selling worthless material. The two naval men, knowing the ins and outs of the service, can, if so minded, do more of this kind of work, and do it much better, than any civilian could; and that they are so minded there is no doubt. Secretary Borie, then, who has been somewhat cried out against as doing nothing, is not ill employed just now in doing that. As for his being much under the Admiral's influence, we do not hear of any ill effects arising from this source, and till some such are heard of, it is too early to speak of too much influence. However, it is probable that there will be Congressmen enough to watch the Admiral, even if the Secretary does not do it for himself, and there is no reason to believe that he cannot. Secretary Rawlins everybody praises, and everybody regrets the ill health that makes his service a sacrifice. Mr. Creswell found his department in bad enough order, and it will not be an easy task for him to make it properly efficient again; but he is known to be a hard worker, and we believe there is, as yet, absolutely no complaint about him, nor about Secretary Cox; and Attorney-General Hoar maintains the repute with which he entered on office. It is satisfactory to think that if Massachusetts supplies some of the sentimentalism that may make our foreign affairs a source of trouble to us, she is represented in the Cabinet by a hard-headed man of law, who will drive no nail that he cannot clinch, and who is one of the last men in the world to put his country in the wrong, or to make her more or less ridiculous by putting her in a position which she cannot hold. On the whole, it is too early to speak as yet, but everything, so far, indicates that we have got a sensible, able Cabinet, who, with the President, may be trusted to bring sound sense to the consideration of whatever business they may have in hand. Possibly Mr. Boutwell should be excepted from this praise.

Gold has, somehow, been rising steadily ever since Mr. Boutwell took office, and stands now about 141. Part of this is, no doubt, due to temporary causes, and all of it may be due to circumstances which he cannot control. The exact composition of the discount on irredeemable paper, or the premium on gold, whichever one likes to call it, is one of the unsolved problems of political economy. We do not know for certain what causes it; but we do know for certain what will put an end to it, and the only thing that will put an end to it, and that is the redemption of, or the ability to redeem, the paper in specie. All attempts to get round this hard fact, or modify it, or neutralize it, must fail, and the sooner the Secretary and everybody else give up the job in despair, the better. No buying of bonds, or cancelling of bonds, it is quite evident, will bring greenbacks any nearer to par, or keep them from going, under the operation of influences of constant occurrence, farther from par. If the present rise opens either Mr. Boutwell's eyes or those of the public on this point, it will be a blessing in disguise. By the way, we perceive a good clerk has been dismissed from the Treasury because "he was opposed to impeachment." When one reads stories of this kind, and knows that the chief of the Treasury helped to get Mr. Butler into Congress, one is always disposed to doubt whether, after all, there is a generally recognized moral standard among politicians, or whether most of them do not carry one of their own manufacture in their pockets along with their keys, their pen-knives, and their wallets.

The Washington correspondent of the *New York Times*, speaking of Mr. Motley's instructions, says: "The precise character of these instructions is a matter of much speculation here, but hardly one of doubt. Mr. Motley's sentiments on the *Alabama* question are known to be in accordance with those of Mr. Sumner." Mr. Sumner has numerous "sentiments" on the *Alabama* question. If the correspondent means that Mr. Motley agrees with all of them, we can affirm pretty confidently that he is mistaken. With Mr. Sumner's indignation against England, and Mr. Sumner's feeling that reparation of some kind is due from her, Mr. Motley doubtless sympathizes; but we venture to assert positively that with Mr. Sumner's legal positions he does not agree, and that he will not attempt to maintain them, and indeed no lawyer of good standing in the country would advise him to do so. We believe Mr. Motley goes out in a sensible frame of mind, and with a determination to stand by the law, and that in his legal outfit neither Mr. Sumner's "rule of damages," nor his deductions as to the consequences of the neutrality proclamation, find any place. The *Times* points out with great force that Mr. Sumner does not actually say in his speech that England is *legally* liable for the expenses of two years of war; but he suggests that she is liable in equity, and evidently intends to produce in the popular mind the impression that no settlement will be a fair one which does not compel her to pay the cost of two years' fighting. As regards the English sneers and derision, we confess we think it would be an excellent thing to introduce the practice between the two countries of having all abusive or insulting articles and speeches, and all expressions of delight or triumph over the misfortunes of either country, emanating from the orators or writers of the other, assessed and paid for out of the national treasury. The rule ought to work both ways of course, and a kind of clearing-house be kept, presided over by an international commission, in which all blatherskite or abuse on both sides should be filed regularly, and a balance struck at the end of each year, and paid for by the party which had been indulging most freely. The record would be a sorry one, but it would certainly prove wholesome, especially if the governments were to have recourse against the writers for reimbursement. The number of "tuneful oracles" now employed in showing up the Yankees, and laying bare the wickedness and deceit of John Bull, which would become suddenly dumb, would be amazing; and if some of the priests betook themselves to the employment for which they are best fitted, there would be a prodigious fall in vegetables.

During the week, there has arrived news "by private letters from rebel sources" of a battle between the Spaniards and the insurgents, the latter commanded by Quesada in person. Quesada put all the Cubans in front, but prudently protected them by an entrenchment, and, to make assurance doubly sure, he "placed a force of four hundred American and Dominican volunteers in their rear, with orders to fire on them if they ran." Thus placed between two fires, "the Cubans fought with desperation," and repulsed two assaults. "The third being very determined and severe, they began to waver," and here their leader ordered "the rear-guard," as the despatch pleasantly calls the Americans and Dominicans, to advance, and the Cubans hearing them coming, and naturally having less dread of the foe in front than of the foe behind, went madly at the Spaniards. "A hand-to-hand combat ensued, in which the butchery was horrible, but the Spaniards finally gave way and retreated, but in good order." We have quoted here the exact words of the despatch, as supplied by the Cuban organs; and the New York *Tribune*, which is the principal one, remarks that "hereafter the Cubans will fight instead of retreating to the mountains on the approach of a large body of Spanish troops." But the same paper has been assuring us for the last three months that the insurrection was steadily growing, and that the Spanish cause was hopeless. So that it appears by merely "retreating to the mountains on the approach of Spanish troops" the rebels would eventually have driven the Spaniards out of the island. Why then abandon this eminently cheap and humane style of operations for sanguinary engagements such as we have been describing? Why waste the blood of brave men in fighting when the same results can be attained by running away? It is hardly necessary to offer any comment on the report of the "battle." The question will

suggest itself to every honest and intelligent man, how much longer this attempt at imposture is to be kept up? Here we are not only asked to sympathize with insurgents who, according to the accounts of their friends, cannot be depended on to stand an attack behind earthworks, and whose courage their general thinks it necessary to stimulate by putting a line of foreign volunteers behind them to slaughter them if they waver, but we are asked to believe in their success. The report, however, itself bears all the marks of being the composition of "the reliable gentleman." The line of picked troops placed in the rear to keep the riff-raff up to their work, the growing terror of the riff-raff, culminating in despair, and followed by a mêlée and "horrible butchery," are phenomena which "the reliable gentleman" has witnessed on many a field before now, and which he takes a morbid delight in describing.

From England there is little news which may not be found in our correspondent's letter or which we have not discussed elsewhere, *apropos* of the state of Ireland. It appears to be tolerably plain that the disestablishment of the Church will not prove a pacification, and that the land question must be dealt with in a way which, to satisfy the tenantry, will have to be revolutionary. A comical illustration of the spirit in which some of the clergy of the doomed Establishment are taking their misfortune was afforded at Killarney, during Prince Alfred's recent visit. One clergyman refused to officiate before him, at a small church, because the son of the gentleman who built it had voted for the Gladstone bill. Another was then applied to, and he gladly accepted; and the Lord-Lieutenant being of the party, he gave him a piece of his mind on the Church question. The other English trouble is the growth of pauperism, which has reached, in London and its vicinity especially, what may be called appalling proportions. The primary cause of this sudden increase was undoubtedly the failure of the cotton supply during our war. This threw great numbers of persons out of employment in the manufacturing districts, and dissipated their savings; and they drifted to London in the vague hope with which large cities seem to inspire men—that there "something would turn up." After the war came the commercial collapse of 1866, and the breakdown of the swarm of joint-stock companies, producing fresh depression which has lasted till now, and leaving a vast crowd of operatives not only paupers, but hopeless and helpless paupers. One of the beauties of the forced manufacturing system which we are trying at such heavy expense to transfer to this country is, that where there are no waste lands to act as a break, the mistake of one man reduces a thousand to beggary; and in the old world they remain beggared. When we get the West tolerably well filled up, they will remain beggared here. We are only beginning to find out, all over the world, what a serious thing it is to have the material growth of society outstrip mental and moral growth. Emigration on an enormous scale is much talked of in England; but this would, of course—even if it were possible to carry it out—only prove a palliative. No change being effected in the character of the laborers left behind, they would breed fast enough to fill up the void with very much the same kind of people as had been drawn off.

France is laboring in the throes of preparations for the elections, which take place early next week. The great increase in the number of opposition candidates, coupled with the recalcitrant spirit displayed by the late legislature, which, however, passed the law giving pensions to the veterans of the empire before dissolving, and the growing doubts amongst even Imperialists as to the practicability of personal government, have naturally alarmed the Government, which has now been for several months taking precautionary measures. One of the first was the permission, if not even encouragement, given to the meetings of the "Reds," and the careful publication and distribution of reports of the worst speeches, so as to frighten the small farmers, about property and the family. The next was the address of circulars to the mayors of communes, announcing grants from the treasury for small local improvements, and intimating that they had been made on the urgent solicitation of this or that Government candidate. In addition to these there is, of course, the usual vigorous canvassing of the mayors, letter-carriers, gendarmes, and forest guards, who are in France a very numerous body, and are expected to "work for the party" as vigorously as Americans in the same position; but they have the advantage over their American brethren of working simply in obedience to orders, and not for life—that is to say, if the Government were defeated at the polls, or even overthrown by force, they would not be "decapitated." The Imperialists are, of course, certain of a large majority; but then what they are fighting against is the increase of the minority, and this seems certain, do what they may. The Belgian trouble is said to be settled by a compromise, under which the Belgian legislation stands; but the French company gets something in the nature of a lease of the Belgian roads, for which they had bargained. The Belgian minister, M. Frrèe Orban, made a journey to Paris to enter on negotiations, but this being taken as a sign of fear, he got nothing for his pains.

Affairs in Spain may fairly be said to be in an indescribable condition. All attempts to find a monarch have failed completely. The refusal of Dom Ferando of Portugal left nobody in the field but the Duc de Montpensier, and he is said to have no warm friend but Admiral Topete. Prim and Serrano only support him coldly, and even they may now be said to have abandoned him. This long delay has had the effect of disgusting the lukewarm Monarchists, and driving them over to the Republicans, while it has besides disheartened the ardent ones. Everybody of all parties is forced to admit, that to give a monarchy a chance of success, the monarch would have to be chosen warmly and unanimously, and all chance of a choice of this kind has passed away. Everybody put up now would have to be placed on the throne with more or less assistance from the army, and this would of course mean that he would be in the hands of a military clique. Indeed, for any monarch to succeed in our day whose claims and fitness had undergone long discussion at the hands of a popular assembly, he would have to be well-nigh superhuman. In the meantime, the majority shrinks from the idea of a republic—which to many of them is an abyss, of which none can see the bottom, and to others would simply be a military dictatorship under popular forms. The last plan talked of is a Council of Regency, as a sort of interim government, until something turns up. The debates on the constitution continue, and all its radical features have been adopted.

Shere Ali, the successful competitor for the Afghan throne, after some nineteen years of warfare, is a very lucky man. The Russians have now pushed down in Central Asia nearly to his northern frontier, and the English have been for some time on his southern frontier, and his alliance has therefore become of considerable importance to both of them. The Governor-General has, however, got the whip-hand of the Russians, and has had the monarch at a "durbar" or grand reception, where the chiefs sit side by side on a dais, in the presence of their vassals and dependents, to say civil things to each other, and exchange presents. Lord Mayo gave Shere Ali a splendid sword and other articles, besides a battery or two of field artillery, and assured him of British favor and protection, and a large yearly stipend, and the Afghan "responded in appropriate terms," as the reporters say. The Russians, on the other hand, are looking on somewhat suspiciously. Negotiations, of which Mr. Gladstone has spoken with some reserve, are in progress for the purpose of coming to a friendly understanding with regard to the limits of the territory and pretensions of the two powers in Asia, but this does not prevent the British dealings with the Afghans being looked on with an unfriendly eye. The *Moscow Gazette* and the *Golos* give it plainly to be understood that the Russian party are not satisfied with it, and are disposed to play at the same game. The latter paper says that the Ameer is likely enough, when he has spent the pounds sterling, to "try roubles for a change." A fight between the two great powers in that region would be, in some ways, a ridiculous spectacle. India gains enormously in all ways to which Christian men attach any importance by having the Russians for a neighbor north of the Himalayas instead of the barbarians of Turkestan and Bokhara, while the presence of the English in India will greatly simplify the Russian work of pacification and civilization. Shere Ali, who is an old hand at intrigue, will probably in the meantime fill his pockets.

"SPARRING FOR WIND."

We spoke last week of the injurious moral effect of keeping quarrels with foreign nations open—or, to use the language of our correspondent "America," "sparring for wind." "Sparring for wind" is a process usually resorted to by persons actually engaged in a fight, or, in other words, is simply a tactical device to make subsequent blows more effective. Consequently, the phrase is hardly applicable to the course which some persons now wish us to pursue toward England. We are not engaged in hostilities with anybody, and there is consequently no occasion for us to "spar" in order to get our wind. We can get it as people usually get it who have got themselves out of breath by violent exertions—that is, by keeping quiet and attending to our ordinary business. "Sparring" really means in the present case, however, the interchange of abuse by the newspapers of the two countries; the periodical delivery in Congress and Parliament, by their ranters and blatherskites, of denunciatory harangues; the periodical production by Banks of "reports" and resolutions showing England to be the great enemy of mankind; and the deliberate encouragement of, or connivance at, by our Government of all schemes and enterprises, however wild or violent, or however worthless the persons engaged in them, which have for their object the annoyance or confusion of Great Britain; and our deliberate abstinence from all co-operation with her in the promotion of the interests of the human race. This is what "sparring" means between two nations not actually engaged in hostilities; and this is all it can mean. It is, in short, the work of a pair of barbarians; and it cannot possibly be kept up very long by any country without lowering the moral tone of the whole community.

Can it be kept up very long without doing great material injury, particularly to a country situated as the United States is at this moment? We think not. A government like that of Frederick the Great, or any other great military monarchy ruling a simple and agricultural community, could very well afford to cherish grudges against one or more of its neighbors, and announce its intention to pay off old scores whenever it found fighting convenient. Such states are always in a state of preparation for war; and the farmer's calculations, and his work, are in no way affected by the signs of the political horizon. The experience of the rich commercial and manufacturing nations of the European Continent in our day shows, however, that next to actual war in its injurious effects on trade and industry, is a state of suspense, or of expectation or fear of war. Nay, it is, we believe, the deliberate opinion of the most intelligent Frenchmen and Prussians that it is on the whole much less expensive to fight at once, and have it over, than keep threatening and intending to fight; and this not owing to the fact simply that large armies are kept on foot, and large sums expended in armaments, but owing to the semi-paralysis which uncertainty always brings with it, and the effects of which, though less easy to estimate than the cost of armies and navies, are undoubtedly more injurious to national interests.

This is true too, be it remembered, of countries in which trade and industry are in their normal condition, and in which the currency is beyond the reach of political vicissitudes, and which have not recently passed through any exhausting struggles, and whose military and civil service is organized with the highest degree of efficiency. It is doubly true of a country like this, which is just recovering from a tremendous civil war, and whose currency, by being left without other basis than the wisdom and honesty of politicians, is dependent for its value on the entire absence of political disturbance. A single foolish speech at Washington may lower the price of all commodities and the value of outstanding debts from one to twenty per cent. The price of gold is now the one anxiety of the financial world, and, in fact, the whole time and attention of the Secretary of the Treasury are absorbed in keeping it down, and "regulating the market," or "foiling the speculators," as it is called. Nothing he can do in this way can, however, provide a thorough remedy. The only remedy is a return to specie payments, and a return to specie payments is not possible as long as a foreign war is among the probable contingencies of the future. To restore order to our finances, bring gold back into circulation, put an end to the troubles in the labor market, and check the great spirit of speculation which is not only disorganizing productive industry, but is corrupting politics, we need several years of quiet, of *confidence*, and of hard work. This we cannot have if the policy of keeping alive differences with England, for the purpose of wreaking vengeance on her at a more convenient season, be persisted in.

To make this policy effective, it must be accompanied by a state of chronic exasperation against England, so that when the time for fighting comes people may be ready for it. Hatred of England must be cherished, and the memory of her wrong-doing must be strengthened in the press, on the platform, and through social intercourse. We cannot do this, however, and still reserve to the Government the power of choosing its own time to draw the sword. If we keep the public of the two countries in this irritable temper, we must be ready for war at any moment. The slightest incident may bring it on—a squabble between fishermen, an excess of zeal on the part of a naval officer, a small boundary dispute—in short, anything on which the two powers can take opposite views. Consequently, every man among us would have to trade, build, speculate, lend, borrow, and contract with the possibility of a bloody and protracted struggle with England constantly present to his mind. If everybody fell into a pacific temper, and became indifferent to vengeance on her, of course the war would never take place, and the policy of waiting would become ridiculous.

That such a war would be bloody and protracted, no reasonable man can doubt. If we once satisfy Englishmen that we are bent on fighting or humiliating them, and that nothing else will satisfy us, England will act, as *first-class powers have always acted*, when threatened or bullied persistently; that is, she will fiercely resist. There is not a case on record of submission, on the part of a power of England's standing, to such demands as some hot-headed people would now have the United States make on her. She would undoubtedly fight, and fight desperately, and fight with what would be a revolutionary energy. The one weight upon her would be Ireland; but we think no calm observer can doubt that any attempts of the Irish to aid the United States in the struggle would simply result in a war of races, in which the Irish would be well-nigh exterminated, and the island made a desert, for their intervention in the struggle would unite the working and middle and upper classes in England as one man, and convert the war into one of races and creeds. We should get Canada but as a conquest, with its inhabitants bitterly hostile, and thus release the English garrison. We should drive English commerce from the seas—that is, send English ships under other flags; but we should indefinitely postpone the restoration of our own, and we should make repudiation certain. Our debt would be wiped out: Pendleton would at last see his dream fulfilled, and into the gulf of bankruptcy and misery thus caused some millions of eyes at the South would look down joyously. Last, but not least, we should have closed, in the estimation of the world, the era of constitutional government. The spectacle presented by the two great Anglo-Saxon nations on coming out of the conflict would certainly not encourage others to try or persist in the experiment. And does any sane man believe that we should get at the close of the war the apology for the Queen's proclamation, and the repayment of half the expenses of putting down the rebellion, which Mr. Sumner has been pleased to ask for?

We may say all this with the better grace, because we believe America has a perfectly good case against England; that all that portion of her claims for damages which is computable, and which the opinion of the civilized world will pronounce reasonable, will be paid, if firmly, calmly, and decently urged; and that along with payment can be obtained an expression of regret for the wrong-doing which brought this damage about. But the negotiations will have to be conducted by statesmen and not by rhetoricians, and they ought to be pressed *now*. Both honor and interest forbid delay. There ought to be no pause till the thing is settled. To send an ambassador to London with instructions to do nothing, and talk as the representative of a friendly power when his Government is really meditating war for unredressed wrongs, would be a very foolish and wicked performance. America is the offended party; her business is to seek redress, and policy as well as dignity forbid her resting till she gets it. Mr. Motley, thanks to Mr. Sumner's speech, will have a much more difficult task than either Mr. Adams or Mr. Johnson:

it was "a great speech," but a sorry help to a diplomatist. Nevertheless, we believe Mr. Motley can close the quarrel; for we believe it was merely Mr. Reverdy Johnson's personal folly which led to the present abrupt and unfortunate break in the negotiations.

MR. BOUTWELL'S POLICY.

Simple as Mr. Boutwell has made the *accounts* of the Treasury, the *affairs* of the Treasury are more complicated than ever. The difficulty of the Secretary in deciding what to do with his surplus gold is one of his smallest difficulties. There are many who believe that a more difficult question will soon arise—how to meet his currency deficiency. It is the Secretary from whom every one will expect the suggestion how to avoid the immense loss from idle Treasury balances, how to abolish the mischievous three per cent. certificates, how to return to specie payments, how, in short, to restore the national finances to a moderate degree of health and stability. In how far Mr. Boutwell may be able to solve these questions, time only can show. For the present, we propose to point out only what we think the errors of the Secretary in relation to his sales of surplus gold.

The gold interest on the national debt amounts every year to $124,000,000, or about $10,500,000 a month. This interest is payable at somewhat irregular intervals, so that at certain periods of the year the amount which the country owes for interest is larger than at others. The periods when the amount thus owing is largest are the 1st of May and the 1st of November. According to the debt statement just published, the amount of gold interest owing on the 1st of this month was a trifle over $45,000,000, while the Treasury held gold of its own to the amount of $92,000,000, or $47,000,000 more than the interest accrued at that time on the whole debt. If the Treasury had paid off on the 1st of May all the interest that it owed, whether due at the time or not, it would still have held $47,000,000 of gold that belonged to it; and if its coin income from customs duties continued at the present average rate of $15,000,000 a month, or even if it fell off to only $11,000,000 a month—a very great and unexpected falling-off—it would still receive every month as much coin revenue as it needed for interest payments, and would continue to hold $47,000,000 of gold over and above its present or accruing gold indebtedness. It is this $47,000,000 of gold which is commonly called the surplus coin in the Treasury. It is evident that unless the receipts from customs fall far below the present average, the surplus will always continue at about the figure of $47,000,000. Should the present average rate of receipts continue, the surplus would rapidly increase.

Simple-minded people ask, Why meddle with this surplus at all? why not leave it alone entirely? There are a number of reasons why it must be meddled with. In the first place, there are not, as far as can be ascertained, much more than $100,000,000 in specie in all the States east of the Rocky Mountains; there is certainly not more than that amount at the disposal of the mercantile and financial community in the principal money-centres on the Atlantic. Now, with $92,000,000 of this amount in the Treasury, there will be only $8,000,000 left in the hands of the community; and as the customs amount to about $15,000,000 a month, and must be paid in coin, it is easy to see what a dead-lock must result. Indeed, about the middle of April last affairs had come to just that crisis. The gold in the country had pretty much all gone into the Treasury, merchants who had duties to pay found it impossible to borrow gold for the purpose, and when they attempted to buy it the price advanced so rapidly that the Secretary himself became convinced of the necessity of relieving the community, and offered to prepay the coin interest on the bonds before it was due, and even sold some of his surplus gold, in order to enable the merchants to get the coin for duties. The question naturally arises, Why should the Secretary interfere? If the merchants had duties to pay, and they could not get the coin here, they could have procured it in Europe or elsewhere, and thus the supply of coin in the country would have been increased, and the recurrence of a similar complication avoided. Has not the Secretary's interference really prevented the remedy from being obtained? It has indeed done so, but only in order to avoid another worse evil.

The income of the Treasury consists of coin from duties, and currency from internal revenue and other sources. Its expenditures consist of coin for interest payments, and currency for the army, navy, and other requirements. For several years past the receipts in coin from customs have exceeded the requirements in coin for interest, and the receipts in currency from internal revenue have fallen below the requirements in currency for the army, navy, etc. The Treasury has always received more gold than it needed and less currency—it has consequently always had to sell a part of its coin revenue in order to make up the deficiency in its currency revenue. If, therefore, these sales are an imperative necessity, it is the part of wisdom to sell the gold when the supply upon the market is small and the demand active, rather than when the supply is large and the demand limited. If the Secretary had refused to relieve the market by sale or by prepaying the interest, the price of gold would have advanced largely, and coin might possibly have been obtained from elsewhere; but the Treasury would still have been obliged to sell, and would then probably have sold at a time when the supply was large and the demand limited, thus again depressing the price after a large advance, and introducing a fresh element of fluctuation into a market that already fluctuates too much. The position, then, is this: So long as the currency receipts do not at least equal the currency expenditures, the Treasury will be necessarily a seller of gold; and as long as the Treasury has necessarily to sell gold, it ought to sell it at the times when gold is needed, even if it thereby temporarily prevent the accession of fresh gold from abroad.

The selling of gold to supply the deficiency in the currency revenue is evidently an imperative necessity—a matter in which the Secretary has no choice. Here we stand on firm ground. As long as there is a surplus in the gold revenue and a deficit in the currency revenue, the Secretary must sell gold, and he must sell gold enough to meet that deficiency. The amount that he will be obliged to sell depends upon the amount of that deficiency. The amount of that deficiency depends upon results that no man can foretell; it cannot be known in advance, and can only be developed month by month, week by week, as the revenues are collected. It is, therefore, impossible to provide for it any length of time in advance. The necessity to sell gold to provide currency may come upon the Treasury at any moment. That moment may be one when the supply of gold upon the market is large, the demand limited, and the price low. It may be a moment when money in the financial centres is scarce, when a sudden sale of gold by the Treasury would make money still more scarce, create a panic, and disturb all the financial and commercial operations of the whole country. It is therefore evidently a wise policy to distribute the sales of gold over as wide a period of time as possible, and not to make the operations o the Treasury depend upon the necessity for sudden and large sales. The only way to avoid the necessity for large and sudden sales of gold is to keep on hand a moderately large currency balance. The present currency balance in the Treasury is far too low to be safe. The recent stringency in the money market, extending virtually over the last six months, and the desire to alleviate, or at least not to aggravate, that stringency, was Mr. McCulloch's, and probably has been Mr. Boutwell's, motive and excuse for letting his currency balance run down to the extremely low figure of $6,000,000 or $7,000,000. If it is the present Secretary's intention to realize gradually from his present weekly sales of gold the currency which he almost certainly will need some time during the summer, his policy is to be highly commended. But he must not part again with the currency so obtained. As long as he sells gold to meet his almost unavoidable currency deficit, he is on safe and solid ground. But he must keep his currency for the purpose for which he is obtaining it. The moment he sells gold for any other purpose than that of providing for his currency deficit, or the moment he employs the currency so obtained for another purpose, he is in imminent danger of serious complications. Up to this point any ordinary business man of good capacity can clearly understand and judge the wisdom of his course. Beyond this point, the question becomes more complicated.

It must be distinctly understood that the surplus gold which the Secretary is justified in selling is only the surplus that accrues, month by month, after deducting the coin interest that accrues during the same

period. At the present rate of customs receipts, this surplus amounts to between $3,000,000 and $4,000,000 a month. Of this surplus the Secretary may, and indeed must, sell enough to meet his currency deficit; and as the currency deficit cannot be calculated in advance, it must be left to his discretion and judgment how much of it, and when, he will sell. But it is far different with that much larger amount of surplus, the $47,000,000 referred to above, which is the accumulated coin surplus of years. The accruing monthly surplus is the Secretary's, to dispose of as he may think best for the exclusive purpose of meeting his probable currency deficit. The accumulated surplus, the $47,000,000, is the people's. The Secretary must not touch it except for reasons of the utmost gravity, in cases of the greatest emergency, with the clearest popular understanding of his purposes, and the most decided popular approval. Right or wrong, the people regard this accumulated surplus as the principal guarantee for the ultimate redemption of their depreciated currency.

Mr. Boutwell announces through the public prints that he will buy hereafter, until further notice, United States bonds to the extent of one million a week. Where does he propose to obtain the currency to pay for them? On the first of this month his currency balance was less than eight millions, a sum far too small for safety in ordinary times, but dangerously inadequate in times of wild speculation and inflation at home and abroad. It is true that during the present month he will be in receipt of large amounts from income tax, but his receipts during the months next following will again be light, and even any surplus he may have this month will not be more than enough to raise his currency balance to a safe figure. It is true that during the month of April the Secretary shows a surplus of receipts over expenditures of over six millions, but he surely does not for one moment believe that he can maintain that rate of surplus for any length of time. We cannot believe that Mr. Boutwell seriously anticipates such a surplus, and even if he does, and has better reasons for doing so than we know of, is it wise, is it prudent to dispose permanently of such a surplus, not only before he has it in hand, but even before he is moderately certain of getting it at all? The more the circumstances are examined, the more it becomes clear that Mr. Boutwell does not propose to pay for the bonds he intends buying out of any surplus he may have at the end of the year, but that he is *selling the people's accumulated surplus of years in order to buy the bonds he advertises for.* The gold he is now selling is not the accruing monthly surplus of gold that he is obliged to sell to meet his accruing currency deficit—that he will be obliged to sell anyhow, later on—but gold that there is no necessity for him to sell. We are at just that period of the year when gold in the ordinary course of events becomes abundant and unprofitable to hold here, when, besides, the tendency of the markets is to cause gold to be shipped abroad even though it be profitable to hold it here—at the period of the year when ordinary prudence should make the Secretary hesitate about making even the most necessary sales of surplus gold; and yet Mr. Boutwell proposes to sell large amounts of gold, not to provide in advance for his currency deficit, not from any necessity, but simply because the coin accumulation in the Treasury frightens him, or because he thinks an absurd law of Congress, relating to an impossible sinking-fund, never put into practice, never understood by those who made it, must be more imperative on him than on his predecessors, who disregarded it with the unanimous consent of the people.

THE CRISIS IN IRELAND.

The latest news from Ireland gives reason to believe that the disestablishment of the Church will not, as many people in England hoped and believed, pacify the island and put the land question out of sight. The Gladstone Ministry have entered in good earnest on the work of conciliation; and along with their attack on the Church, have set the greater portion, if not all, of the imprisoned Fenians at liberty, evidently believing that this display of clemency would make sufficient impression on these gentlemen to secure, if not their love or gratitude for the English Government, at least their silence and forbearance; that, in short, it would be taken as an evidence of a forgiving spirit. This expectation has been completely disappointed. The Fenians and their friends show that they have, as the Opposition in England predicted, taken it as a sign of fear. The language of the liberated prisoners has been as bold and defiant as ever, and in fact they evidently feel under obligations to the Government, not for having released, but for having imprisoned them, inasmuch as it has given them what is worth a good deal to a Fenian leader—the honors of martyrdom. To have passed a short term in a "British dungeon" is, in fact, now an essential qualification for any man looking forward to a political career in the "Irish Republic." At a banquet given to some of the martyrs in Cork, the Mayor—a Mr. O'Sullivan—indulged in a panegyric on those who had suffered in the Fenian cause, rated O'Farrell—who attempted the assassination of Prince Alfred at Sydney by shooting him in the back—as highly as any of them, and in fact passed a glowing eulogium on him, reducing his crime to the rank of a mistake or indiscretion, and his remarks were loudly applauded by the moralists who sat round the board. About the same time, the Orangemen and Catholics came into collision in the classic streets of Londonderry, and had a fine riot, lasting nearly two hours, and only suppressed by the arrival of the troops. Every week, too, brings the news of the murder of some landlord, or man of the landlord class, with that dreadful secrecy and dreadful indifference on the part of the surrounding population which make these murders so appalling and so impressive.

Now, these are certainly not the results or the accompaniments which people looked for when Mr. Gladstone commenced to abolish the Establishment; and they are slowly convincing the English public that the disestablishment of the Church will not prove sufficient; that some new arrangement of the land tenure, and perhaps a revolutionary one, will have to accompany it. As usual, however, the Tories refuse—as they have always refused—to believe that Irish grievances are real, and that Irish discontent and disturbance are not the result of somebody's machinations. In the old days, before the emancipation, it was the fashion to accuse "Popish" priests of being the authors of all the trouble, by putting bad ideas into the minds of the common people. When the lay agitators made their appearance with O'Connell, of course they had to bear the blame; but they having died out, John Bright has been fixed on as the cause of all the trouble; and Lord Claude Hamilton, the brother of the late Lord-Lieutenant the Duke of Abercorn, recently made a determined attack on him in the House of Commons, accusing him of having spread abroad, by his speeches on Ireland a year or two ago, the notion that the tenantry were entitled to the absolute ownership of the land, and that its transfer to them would be not only a feasible, but a proper settlement of the Irish difficulty; and he maintained that the appearance of the author of this theory amongst the Ministers of the Crown has naturally confirmed the delusions and stimulated the passions to which the present disturbances are due. A rumor, too, has been spread that Mr. Bright did really intend to introduce a land bill in accordance with his own views; and Lord Russell, in the House of Lords, called on the Government for a repudiation of the report or an explanation of it.

There is, however, another opinion spreading in England as to the cause of the Irish troubles and the possibility of removing them, which is perhaps more important than any, inasmuch as it is taking hold of the minds of many Liberals, who are really anxious to have Ireland governed not in accordance with English but with Irish notions. According to this opinion, the belief that the Irish are sure of help from the United States some day before long, and that England knows this, and is afraid both of America and the Fenians accordingly, and can, therefore, now be coerced into any desired concession either with regard to the land tenures or anything else, has taken fast hold of the Irish mind, and, therefore, no reasonable reform which the British Parliament can now initiate or carry out will satisfy the malcontents. This belief, too, they say, is strengthened by the *Alabama* controversy, and by the impression which American politicians are so busy in spreading—that as long as the *Alabama* claims are unsatisfied, England's hands are tied, and she dare not fight. Consequently, it is, as long as this belief prevails, useless to look for the pacification of Ireland by anything short of the complete surrender of the island to the priests and the most ignorant of the peasantry. A very large portion of the English public—and amongst them are, we regret to say, some of the

best friends and warmest sympathizers with America and American ideas—begin to feel that the moment is near at hand when this incubus must be thrown off by force, and English control over its domestic polity won or lost by a trial of strength with this country. This feeling has, it is useless to disguise, received a powerful stimulus from Mr. Sumner's recent speech; and there is now no knowing how far it may go, or what influence it may have on Irish reform. One thing it is certain to do; and that is, rekindle that mixture of race-hatred and religious hatred of which the Irish have for so many centuries been the unfortunate objects, and which is just as strong as ever it was, and in fact stronger, amongst the English masses, and to which the spectacle of the Irish playing the part once more of the allies of a foreign enemy, and their presence in large numbers in the English manufacturing towns, would lend fresh fury.

That the Irish would reap any benefit, either temporary or permanent, from the convulsion, it seems to us impossible to believe. The Irish Catholics have always proved a worthless ally to the enemies of England. They have for three centuries been ready to join any invader, and yet they have never been able to put the English Government in half the peril to which it was exposed from the Pretender's handful of Highlanders. They did little or nothing for Charles I., and brought Cromwell on themselves. Their support of James was feeble, inefficient, and easily disposed of, and their alliance with the French Directory was one of the jokes of the Revolutionary wars. The armed pressure on England in 1782, which extorted the concession of legislative independence, was a purely Protestant movement, and the men who conducted it were the grandsons of those who fought under William at the Boyne, and defended Derry and Enniskillen—in other words, were the ruling race. The power of organization for military purposes, based on a sober appreciation of facts, and a sober sense of the difficulties and necessities of an armed resistance to England, has never shown itself amongst the Catholics in the smallest degree. It is impossible to ascribe this want of executive ability to the unfortunate circumstances under which they find themselves in Ireland, in view of what we have seen of the Fenian organization here. No enterprise more thoroughly childish, or more nearly resembling play, has probably ever been engaged in by grown men. An outbreak in Ireland, therefore, in aid of a foreign enemy of England, would be a partial rising of the peasantry, under the lead of a batch of such generals, colonels, and captains from this country as figure in the "War Department" of the Fenian Brotherhood and headed the invasion of Canada, and they would find arrayed against them, as one man, all the intelligence, wealth, and capacity of the island, with the whole population and resources of England and Scotland at their backs. The result of such a conflict, unless accompanied by the landing of a large foreign army and the destruction of the British fleet, could hardly be doubtful. But the prospect, either for England or Ireland, is not a pleasant one.

NEW PARTIES.

That the Republican and Democratic parties have so long continued to be the sole occupants of the political field—that no new faction should arise to claim its right to exist and to struggle for the mastery—has probably surprised many people. It has certainly not been for want of vigorous attempts to break the solidity of both parties that they still remain intact; in one we have had Johnson and Seward with their schemes of reconstruction, and Butler with his policy of repudiation; in the other, the factious venom of Blair and the insidious poison of Chase have been at work; yet Republicans are still to-day the party of Equal Rights, and Democrats are still to-day the party of opposition to the negro. Within a week have the Democratic legislators of Indiana resigned their seats in order to defeat negro suffrage; within a week have we not read in the columns of the *World* thrilling articles on "miscegenation?" The old enemies still stand facing each other, although the spectators have been assuring each combatant for years past that the quarrel is over.

Now, for our own part, we have always maintained that the quarrel could not be over until one side or the other gained the victory, and lately it has been apparent enough that the victory could only be assured by the election of Grant and the passage of the Fifteenth Amendment. One of these objects is accomplished, the other not quite yet. Until it is, we do not expect much change in the aspect of politics, but when it is—and the work is being done at a rapid rate—what is going be the result? Are we going to have new parties? Are Democrats and Republicans to take other names? Or are we going to drift along in the old fashion, surprising all the world by our love of tradition? To give decisive answers to these questions would need the gift of prophecy; but for a partial answer, we think the materials are within reach. Already, it seems to us, new parties are endeavoring on all sides to gain a foothold in popular approval, which they may use, when the fitting moment comes, to usurp the succession left empty by their predecessors.

First, of course, comes Senator Sprague, with all the appliances ready for the formation of a workingman's party. The Senator's view of the situation is that, the issue of the war being dead, slavery abolished, the negro enfranchised, and the Copperheads put to rout, it is time for wise men to be looking around them to see what new questions may be made the ground for a new move in the grand march of civilization. Casting about him for a solution of this question, he sees that the relations of capital and labor are by no means of the most pacific character. There is the eight-hour movement; there are the strikes all over the country; there are the trades unions; there is Mr. Wells's report, showing that the rich are growing richer and the poor poorer every year. Besides all this, he is a capitalist himself, and his neighbors are capitalists, and he knows from personal experience how "live" a question the great workingman question is. Accordingly, with a boldness which cannot be too much admired, and which shows how confident he is of his position, he turns upon the Republican party and exposes to it the absurdity of its own existence—shows it how like a carnival of misrule are its proceedings, and how necessary it is for the welfare of the country that some pure-minded patriot should step in to shield the Republic from its wanton attacks. He rushes into the breach himself, and explains how the rallying of a new party about him would save everything from destruction. We don't recollect the details of Mr. Sprague's policy; we doubt if any one does; the main thing is that his object was to found a new party upon the ruins of the two old ones.

New Party No. 2 comes from a different quarter. Various gentlemen—we hesitate to give their names, because some of them enjoy a prominence which nothing we might say could reduce, and others an obscurity from which we would not for the world drag them,—various gentlemen, seeing, with Mr. Sprague, that the issues of the war are dead, slavery abolished, the negro enfranchised, and the Copperheads put to rout, say within themselves: "What new question can be found which shall unite the people of our common country in one grand political blow? Evidently, the acquisition of territory. It has done so in times past; it will do so in times to come." Straightway the Annexation party rises into view, with its newspapers, its mass-meetings, its leaders, aiming on the north at Canada, on the south at Cuba and Mexico. When a prominent Western legislator introduced into Congress, a few months since, his resolution looking to a protectorate of San Domingo; when a noted Eastern statesman the other day obtained the passage of resolutions of sympathy with Cuba; when one of our "great dailies" advocates the cession of British America in satisfaction of the *Alabama* claims, and advertises the scheme by means of a special Canadian correspondent—we only see in all these various acts various evidence of the prevalent feeling that the time is coming when "new parties" will be needed. Just as Mr. Sprague sees visions and dreams dreams of a workingman's party, so do these others of a great "real estate" movement, which shall, by its harmony with the natural yearning of a great people, prove the fit successor to the glories of the expiring organizations it is to displace.

No less sure are the Free-traders that the moment is at length arriving in which an effective blow can be struck on behalf of commercial liberty. The questions which they discern as requiring immediate solution are those which connect themselves with commerce; and the new party which in their estimation is to carry all before it is that which writes "Down with Protection" upon its banners, and calls the

poor and the down-trodden to arms. The coffers of the League begin to fill with money, and in order that every influence may be brought to bear, other planks are added to their platform. It was the misfortune of the gallant Sprague that he had only one weapon; the same difficulty exists in the case of the Annexationists, and till very recently was a fatal defect in the equipment of the Free-traders; but lately, grown wiser through experience, they seem to be attempting the formation of a party which shall not only embrace those who sympathize with them on the subject of free-trade, but those, also, who are anxious for a return to a specie currency, and those who desire civil service reform. The late meeting at Boston, in which Edward Atkinson, Ralph Waldo Emerson, Mr. Garrison, and others took part—to be followed, as we hear, by the establishment of an independent journal, with a large capital—looks, it must be confessed, more like political "business" than anything we have yet seen. To what it may lead we cannot say, but it is one more new party aiming to supplant the old.

Mr. Sprague has come to grief; the Annexationists are in a bad way; whether the Reform League will or will not change the face of politics we do not undertake to say; but one fact in connection with these movements deserves notice, and that is, that the Administration is in a position to get all the benefit possible from them without any of the risk which necessarily attends the career of the leaders who begin them. Coming to power at a time when a general belief prevails that both the Republican and Democratic parties have seen their best days, absolutely unfettered as to the future, it may examine and probe in every direction, profiting by the experience of the agitators and schemers who would guide it, and adopting its own policy after the amplest experiments *in corpore vili*. Whether the eight-hour agitation will furnish a good basis for a policy, whether annexation will, whether free-trade will, the Administration has good means of discovering, without exposing itself to the dangers always attending political rashness. Whether a new party is needed at all, or whether the old ones will serve for four years more, will very largely depend upon the conduct of Grant. He has already settled the reconstruction question in Virginia and Texas; the *Alabama* question, it is becoming more and more evident, he has in his hands, and not in Mr. Sumner's; the annexation question has thus far been determined by him, and not by mass-meetings in this city. The Indian policy of the Government is his own. Suppose now that, after mature consideration of the different plans suggested by Mr. Sprague and others for the reform of the multifarious evils that beset our body politic, he should come to the conclusion that a certain bill of Mr. Jenckes for the reform of the civil service was necessary to the welfare of the country. Suppose, further, that he says so to Congress, urges it upon Congress, insists upon it to Congress. We think it would pass. It seems to be taken for granted that any mad scheme of territorial aggrandizement or foreign war which he might propose would be at once acceded to; is it not possible that good measures would be also received with favor, as they have been already? If so, then the new parties which now loom up in every quarter might disappear, for their aims would have been to a certain extent anticipated, though there can be no rest till some policy with regard to the tariff has achieved a decided triumph. At present Congress votes one way on this subject, and thinks another.

SOME HYGEISTS, OLD AND NEW.

THERE is a certain debatable ground lying between the domain of medical science and the ordinary range of popular reading, in which a good deal of light literary skirmishing is kept up in a desultory way. To so great an extent is it done nowadays, that any man, the least adventurous in this wise, can scarce fail to be induced, or rather driven, in spite of himself, by the broadside of the liniment-man or the almanac of the pill-maker or the more persistent volume of the more respectable medicine-man or doctor, to do something or other for his lungs or liver, to spare an oppressed mucous membrane, or to rescue a languishing cutaneous surface. That the public lends a willing, indeed an avid, ear to such appeals is indicated by the great number and variety of these publications. The taste for them is not unreasonable, neither is it a modern, though it seems a growing one.

Among the earliest of books upon which—as if the world would not willingly let them die—the printing-press was set to work, was that of the school of Salerno, "De conservandâ bonâ valetudine." Few secular books multiplied their editions through centuries more than this; its commentaries were many and ponderous; its translations were not a few, though its original Latin is of that happy depravity that it might easily be read, one would say, by an average druggist's apprentice. It was meant for a popular treatise on hygiene (being the advice of the faculty of Salerno to King Richard I. of England, when he passed that way in a probably crapulous and atrabilious condition), and it has many of the best characteristics of such treatises. Its speech is direct and simple. Its queer rhyming verses stick in the memory. It is eminently safe: to this day few would be so hardy as to contradict

> "Ex magnâ cœnâ, stomacho sit magna pœna,
> Ut sis nocte levis, sit tibi cœna brevis,"

or to gainsay the advice to wash one's face with cold water in the morning, enforced as it is with citations from Aristotle, Paulus Ægineta, Rhazes, and Avicenna. Moreover, it has the oracular air, the tone of authority, that the people so impartially loves, whether it deliver truth or its opposite. This air of authority, some cynics would have us believe, carries its owner faster and farther in popular esteem than any other quality. However this may be, we may admit that, helped by a deal of vociferation—and an undeniable spice of genius—it did so much for one quack more than three hundred years ago, that to this day, perhaps, people pray over his grave in Salzburg for help against cholera and such like disasters.

The above-mentioned *opusculum* of the school of Salerno is obsolete. Its antique vocabulary condemns it before a time-serving generation. It makes no mention of phosphates. And Alexis St. Martin appears upon none of its pages. He cannot be kept out of any modern treatise, by the greatest vigilance, later than the middle of the second chapter. However, he displaces one "Dr. Goss, who had the power of ruminating," or (to avoid the ambiguity of this verb as applied to the human species) of regurgitating his food at will, which must have rendered him not so agreeable as a companion as interesting in a book. Popular works on digestion used to swear, in a small and painful way, by Goss, until destiny overtook him in the person of our friend St. Martin, who, on the whole, is a rather more pleasing subject of contemplation.

The contemporary literature of hygiene is extensive and various enough to need some kind of classification. Its *raison d'être* is strikingly diverse in one case and another. First, There are the deliverances of the apostles of what Mr. Carlyle calls "the potato gospel." It is noticeable enough that the fiercest shouts for bran and uncontaminated green-groceries proceed from a neighborhood notorious for east winds of a quality which should set well-regulated minds to thinking seriously of train-oil and tallow candles; also, that these demands are delivered with an animus that calls to mind the intense ten minutes before feeding-time in the department of large carnivora in zoölogical gardens. Dyspepsia is gastric fanaticism; it will not long exist dissociated from its moral analogue. One may properly listen delighted to hear these sages make it manifest that the regeneration of the human species is a mere matter of nitrogen and phosphorus, and bewail too late the parental ignorance that sifted the bran from out the bread of our childhood, and not only that, but bespread our slices with the insidious enemy, butter—driving, as we may say, unregeneracy into us and clinching it.

Then there are the forceful utterances, of intermittent loudness and persistence, of those who brandish the dumb-bell—who, standing somewhat aloof from the charmed circle of the P. R., take a moral but dispassionate view of the muscularity displayed therein, gaining wisdom thence that impels them to lay hold of their fellow-men with affectionate violence, till they are a terror to all of their friends who are, as Mr. Nasby says, "normal," who pummel their members and crack their joints to exorcise the foul fiends of pain and weakness. Then we have the confused cries of those who at one operation renovate the epidermis and purify the interior consciousness by the penetrating vapor of the Russian or the unearthly heats of the Turkish bath, and with these we hear the murmurs of those who are about to reform society by dry-earth sewerage.

We need do no more than mention that class of books which the "agents" hawk about the country, for no one is so lucky as not to have seen many of them. "Alexis," of course, figures in them, and diseases are always "the ills that flesh is heir to," and old age is never less than "the sere and yellow leaf," and sleep is "tired nature's sweet restorer." Let us hope that these fine expressions, and the free, if sometimes irrelevant, use of Scriptural sentences may counterbalance the ill effects of the wildly loose statements of physiological, chemical, and statistical facts that abound

in these books, and of the pruriency which a large class of them do as much to excite as if they were avowedly impure. Another point we may properly mention is the uniformity with which, in this whole genus of works, the admission escapes each author that he may be found at No. so-and-so, in such-and-such a street, or that the great principles which he inculcates are carried into effect at such-and-such an establishment.

The newest book which we feel to be of what we might almost call absolutely vital importance to the continuance of the human family on any terms worth having, is one which has given us great satisfaction as combining so many of the features of hygienic literature that we have been touching on. Its naïvely ambiguous title is "How not to be Sick," which, as a large part of the book is devoted to an exposition of a little pet "pathy" of the author's, may well be taken in an objurgatory or dissuasive sense by the more cautious of his readers.

It shows the already mentioned gift for quoting irrelevant scraps of Scripture with such unhesitating freedom that a melodious snuffle runs as a diapason from preface to finis. "If children live on carbonaceous food, and the necessary elements are not furnished till the second teeth are formed, 'there remaineth no more sacrifice for sin, but a fearful looking for of judgment.'" "If mothers could be made to realize" their responsibilities, "they would, notwithstanding the embarrassments, overcome all difficulties, however great, and, breaking away from the starch and grease-eating customs of society, would say, with Joshua of old, 'As for me and my house, we will serve the Lord,'" etc. If it were at all worth the while, we should be glad to show how fully our author justifies what we have said about the rhetorical charms which spring so unexpectedly in this department of literature, and how, in his case, they mingle with an erudition peculiarly his own, as where, for instance, he tells us "*Hordeum* is the Greek name for barley." Those same east winds we spoke of have blown also upon this good man, and now he cannot have bran enough to his dinner, nor be too well guarded from butter. And if anybody wants to know anything more about "How not to be Sick," we beg him to ask some one whose leisure hours number twenty-four in the day.

Now some people, whose literary range is quite restricted, read a great deal in books relating or professing to relate to the preservation and restoration of health, and the majority do so with absolute indiscrimination. There is a necessity for every man to have some theory of medicine and hygiene, even if it be, as it very generally is, a curiously erroneous one. We have known several such, each tolerably satisfactory to its constructor and proprietor, based upon the advertising columns of those religious newspapers which, while maintaining the highest standard of virtue, go so far to relieve what might otherwise be the oppressive vacancy of a well-regulated Sunday afternoon in the country. Much needs to be done by way of educating the popular mind to juster ideas in this regard. An essay in the "Atlantic Almanac" for the current year, by Dr. Holmes, "Concerning the Human Body and its Management" (its authorship makes it superfluous to qualify it as sensible and witty and pungent), is a capital miniature model of what may be done by the right man in this way. Then there are the exquisite "Five Lay Sermons on Health," by Dr. John Brown, of Edinburgh—somewhat too much *de haut en bas*, perhaps, for the sternest of our republicans, but charming to the more grovelling mind, and full of thoroughly good advice. Dr. Bowditch's recent papers on consumption, in the *Atlantic Monthly*, are another specimen of how instruction may be given to the people on special medical topics of vital importance; and a serviceable and clever little book, not republished, we believe, in America, is the "Lectures on Public Health" of Dr. Marpother, of Dublin. We mention it with pleasure not merely for its intrinsic merits, but because it is among the first-fruits of the new professorship of hygiene in the Royal College of Surgeons in Ireland. Has any seat of "the new education" in this country an instructor, not merely in the art of preserving individual health, but in the great subjects of the alimentation and hygienic government of communities? He is more needed in those institutions than in any school for medical students, who can, from their other studies, supplement the lack of special instruction in this branch.

But when all has been said, by way of instruction, exhortation, and entreaty, by wise men and by fanatics, there are two practical heroes upon whom much of our hope for the future is built—the one who is to regenerate our popular cookery, and turn it from its still too exclusive devotion to salæratus and the frying-pan, and that other who is to plant our sunniest hillsides with the vine, whose teeming wealth shall make it even more inexcusable than now for people to corrode their vitals with vitriolic spirits.

ENGLAND.

LONDON, April 30, 1869.

WE have just received a report of Mr. Sumner's speech upon the *Alabama* claims, and a good many comments have been made upon it. I do not wish to express any opinion on the controversy, as in fact I could add nothing to your knowledge of a matter which is as well understood upon your side of the water as upon ours. I will merely state what I believe to be the general feeling here, which is, for the rest, pretty well represented in the articles which appear in the *Times*, the *Pall Mall Gazette*, and other leading newspapers. It is simply that the ground taken in Mr. Sumner's speech is one upon which it is impossible for us to enter into any negotiations with a prospect of success. The damages inflicted by the *Alabama*, and our responsibility for them, are, it is said, a fair question for arbitration; but it is impossible that we should begin by acknowledging ourselves to be in the wrong, and humbly apologizing upon our knees; or that we should admit in any case that we are liable for "half the cost of suppressing the rebellion," or two thousand millions of dollars. Why, it is said, is nothing said about France, which was just as hostile to the United States as England, and would, but for our opposition, have been willing to recognize the independence of the South? The whole argument, it is said, is of the feminine nature, and imports into a merely legal question the general sentimental grievance, which, however important, is not relevant to the purpose. In short, we fear that if Mr. Motley comes to press these views upon our Government, there is no present chance of a satisfactory solution of the existing difficulties. We must wait, and trust to the effects of time in cooling the passions which at present render discussion to any purpose impracticable. I will say no more upon this not very agreeable topic, and I can only hope that it may not become more prominent.

The matter which still occupies the place of honor in newspaper columns—though in private it has almost ceased to be discussed—is the long battle over the Irish Church. Nothing has happened within Parliament of any importance. The House of Commons is devoting three evenings a week to help it to drag its slow length through committee. Every clause gives a fresh position to be held doggedly by the Conservative forces, and to be successively stormed by the Ministerial majority. Sometimes Mr. Gladstone is victorious by as much as 120; sometimes the majority falls to a little above 80. But, after a longer or shorter battle, the result is always the same; every clause in the bill is passed without material alteration; and nothing new is to be looked for till the peers are allowed to try their hands upon legislation. Outside the House, however, there are some manifestations of public sentiment which are worth notice. The purpose of the supporters of the bill is to restore tranquillity to Ireland by doing uniform justice to men of all religious creeds. The approach of a better system of things was officially marked by the release of a number of Fenian prisoners. We must all hope that the policy thus indicated will be ultimately successful; but the omens are not at present very favorable. The Irish people—or at least a part of them—are giving us some very broad hints as to their view of the matter. There has been a fresh outbreak of agrarian outrages of the old type, to which we are so painfully accustomed. A landlord goes out for a walk; he is found dead by the roadside, with his skull broken and a dozen bullets in his body; the deed has been done in broad daylight, and within a short distance of people working in the fields; but not the slightest clue can be found to the perpetrators of the crime, and magistrates and police are hopelessly at fault. Two landlords have been thus murdered within a few days. Again, Prince Arthur has been making an Irish tour, by way, I presume, of appealing to the popular love of a prince and answering the complaint that the royal family never show themselves in Ireland. One result of his presence was a desperate fight in the streets of Derry between the Protestants and Catholics, who had collected to welcome him, in which revolvers were freely used and three men are reported to have been killed. But a still more remarkable demonstration took place at Cork. Two of the released Fenians—Warren and Costello—were treated to a farewell banquet previous to their departure for America, at which the mayor presided. This gentleman, besides indulging in the usual style of Irish eloquence about the oppressions of England, and eulogizing various Fenian heroes, selected for especial honor "that noble Irishman, O'Farrell," who, as you may possibly remember, shot the Duke of Edinburgh in Australia, and was hanged for his patriotic action. O'Farrell, said the mayor, would be as highly thought of as any of the men who had sacrificed their lives for Ireland. This eulogium was introduced *apropos* of the presence in Ireland of the brother of O'Farrell's intended victim, and may be considered as a specially felicitous expression of opinion. The mayor will, I presume, be called to account for his eloquence; and I should imagine that

Prince Arthur will hardly attend the banquet to which the Cork town council had invited him. But it is sufficiently plain that the abolition of the Irish Church will not go far to conciliate patriots of this stamp. Indeed, it is plain that the Fenians consider themselves to have already extorted one concession from their tyrants, and to regard it as merely a stepping-stone to more important changes. When the Church is abolished, we shall have the land question. Government has stated that a bill upon that subject is ready for next session, but they decline to state what is its nature. The vague expectation that some great changes may be expected has doubtless contributed to excite the minds of the people; and the first result of an act of justice may be rather an increase than a diminution of the existing discontent. The Irish question is not destined to be settled in this or next year's session, nor, I fear, in a good many sessions after that. The Liberal majority is sufficiently compact to force the present measure through Parliament; but there is a danger that the Irish agitations may produce a degree of bad feeling which will make a policy of justice more difficult in the immediate future. It is hard to feel sanguine as to the possibility of establishing a cordial conciliation between races so widely contrasted.

The mention of Ireland suggests a topic which has lately been coming into prominence in England. The growth of pauperism, which has been terribly rapid during the last two years of commercial depression, has suggested amongst other remedies the possibility of a large emigration. A public meeting was held not long ago at Exeter Hall, in which the most sweeping proposals were put forward. The only way, it was said, of raising the position of the English laborer to a proper standard, was by an emigration rather of millions than of thousands. To carry out such a plan effectually would require Government assistance; and it was suggested that Government should, in fact, take a very large proportion—say half—of our lowest classes and set them down bodily on the shores of America and Australia. This heroic remedy has of course no chance of being adopted; we are much too economical just now, and our governing classes would have little disposition to spend their money in removing a large part of the labor of the country. Better arguments may be found in the interests of the people themselves. I do not imagine that our colonies, to say nothing of the United States, would be particularly gratified at a proposal to swamp their labor markets with masses of paupers; for the great burden upon the poor-rates consists of the class which has been demoralized by long poverty, and of families where pauperism is hereditary. This class would probably be as shiftless in New York or Melbourne as they are in London, and the temporary relief afforded to our rates would probably soon be filled up by the rapid expansion of the reckless part of the population. We cannot get rid of the responsibility of this terrible growth of our civilization by simply shipping it across the sea, tempting as the proposal appears at first sight. The proposal to send out our skilled artisans is equally disagreeable; for that would be to get rid of our most valuable classes and leave us with the refuse. For these, as for other obvious reasons, I see little chance that any such scheme as I have mentioned will be put into execution; but the proposal is significant of some tendencies which may become important. The Irish precedent has shown what amazing proportions may be taken by a spontaneous emigration, and though that precedent may be now inapplicable, it is plain that the idea of a more partial exodus is beginning to be discussed amongst the English working classes. There has, for example, been a strike amongst the artisans employed in the cotton factories at Preston; and instead of simply supporting men out of work, the unions have adopted the plan of helping a good many of them to emigrate. The trades unions in other departments have felt the effect of the commercial depression, and some of them which were formerly very prosperous have experienced such a falling off in their funds as to make their situation rather precarious. They are beginning to discuss the propriety of the course put in practice at Preston, and would obviously find a considerable relief in exporting the surplus labor, instead of leaving it to weigh permanently upon their funds. In the course of the Government plans of economy, some of the dockyards have been reduced, and a good many of the artisans thus thrown out of work come upon the parish. A certain number have already been sent out at Government expense, and more, I believe, are likely to follow. These and other symptoms go to prove that an increased emigration is very likely to take place amongst our unemployed laborers in various departments of industry; and although any spasmodic attempts at wholesale emigration are scarcely probable or desirable, the stream which sets outwards from our shores is likely to increase considerably in volume.

Mr. Dickens, I am sorry to say, has been at last compelled to give up his readings, which have been almost as popular here as they seem to have been in America. The strain upon his strength has been too great, and notice has been given that he will not again appear in public for some months. I am glad, however, to be able to add that his illness does not appear to be so serious but that a short period of rest will in all probability restore him to his usual strength.

Correspondence.

HERBERT SPENCER'S REPUTATION.

To the Editor of the Nation:

Sir: A writer in your last week's issue, in criticising "Taine's Ideal in Art," expresses himself as follows:

"It is Herbert Spencer's reputation over again; all very well for the 'general public,' but the chemists and physicians, the painters and the architects, are disposed to scoff at the new light. Does this prove anything? Of itself it proves nothing positively; but yet the views of 'experts' are exceedingly well worthy of notice."

There are few papers in which such an utterance in regard to Spencer would deserve notice, but since you have lifted it into importance by fathering it, it is desirable as well as just that it should be controverted.

Neither Spencer himself nor any of his most enthusiastic followers has ever claimed that he occupies a leading position as a specialist. In the prefaces of more than one of his volumes, he distinctly expresses his obligations to various "experts" (all, by the way, leaders in their respective departments) for their assistance and correction in matters of detail. Therefore, if your critic meant to imply that "experts" have no opinion of Spencer as an "expert," he took the pains to state a platitude which of itself shows his unfitness to express any opinion on the subject. It is, therefore, only considerate to suppose that he meant to imply that Spencer's reputation as a philosopher—as a correlator of special truths rather than as a discoverer of them (this being the only reputation ever claimed for him) is "all very well for the general public," but that the "experts" are "disposed to scoff at him."

The precise nature of a man's reputation does not, of course, admit of demonstration, but a few authoritative illustrations can fix it pretty definitely. Agreeing with your critic that "the views of 'experts' are exceedingly well worthy of notice," I append a few of them.

I. Dr. G. D. Hooker, Government Superintendent of the Botanical Gardens at Kew, a botanist certainly second to none in England, and last year President of the British Association, not only in his inaugural address pronounced Spencer "one of our deepest thinkers," but, referring from his own point of view as an "expert" in botany, spoke of certain discoveries made by Mr. Spencer through "a series of admirably contrived and conducted experiments," and spoke of Mr. Spencer's paper as an example of what may be done by an acute observer and experimentalist, versed in physics and chemistry, but, above all, thoroughly instructed in scientific methods.

II. Prof. Huxley, in a lecture last winter before the Royal Institution, on "Biology," the subject in which he is specially an "expert," said, after expressing his own adherence to the doctrine of evolution: "The only complete and systematic statement of the doctrine with which I am acquainted is that contained in Mr. Herbert Spencer's 'System of Philosophy;' a work which should be carefully studied by all who desire to know whither scientific thought is tending."

III. G. H. Lewes, whose opinion on the comparative claims of systems of philosophy must be considered that of an "expert," says of Spencer, in the last edition of his "History of Philosophy": "He alone, of all British thinkers, has organized a philosophy. . . . Even antagonists are compelled to admit the force and clearness of his genius, and *the extent and profundity of his scientific knowledge*. It is questionable whether any thinker of finer calibre has appeared in our country."

IV. John Stuart Mill, the greatest living "expert" in those laws of thought on which the soundness of any system of philosophy must ultimately rest, says of Spencer that his "'Principles of Psychology' are, on the whole, one of the finest examples we possess of the psychological method in its full power" (Mill's "Hamilton," chapter xiii.) "One of the acutest metaphysicians of modern times" (*Ibid.*, chapter ii.)

"Mr. Spencer is one of the small number of persons who, by the solidity and encyclopædical character of their knowledge, and their power of coördination and concatenation, may claim to be peers of M. Comte, and entitled to a vote in the estimate of him" (Mill's "Review of Comte"). "One of

the most vigorous as well as boldest thinkers that English speculation has yet produced" (*Ibid.*)

It is of such men as these that your critic's "General Public" is largely composed. If further evidence is needed, it can be had without stint. It is clearly not the "experts" who do the "scoffing." H. H.

New York, May 3, 1869.

[Our critic may have taken the pains to state a platitude, but he stated it by way of illustration; and, as we may remind "H. H.," to illustrate the unknown by the known—even by that which is known to the point of commonplaceness—is something worth taking pains to do.

As regards Mr. Spencer's claim to be considered an expert whom experts should respect for a specialist's excellence in their particular lines of labor—a claim which, apparently, "H. H." does not wholly give up, after all—we do not see that it is well supported by the citations. Dr. Hooker praises Mr. Spencer, not as a botanical authority, but as a man who devised and conducted extremely well a certain series of experiments. Professor Huxley says that Mr. Spencer's works are worth the careful attention of persons who would know the drift of the scientific thought of the day, and, further, that he has made the only complete statement of the doctrine of evolution, which no doubt is true—as true, and as relevant to the matter in hand, as that Goldsmith wrote the only complete "Vicar of Wakefield." The doctrine of evolution is Mr. Spencer's, and it is in his books that we are to look for a full statement of it; but the fact that we find it there does not make Mr. Spencer a specialist in biology, in the sense in which Professor Huxley is such, any more than his "Nebular Hypothesis" essay makes him such a specialist in astronomy as Leverrier. We need not go through Mr. Mill's or Mr. Lewes's remarks; they are not addressed to the question whether or not we are to regard Mr. Spencer as great in any field except that in which a successful laborer hardly goes by the name of expert or specialist.

It is hardly necessary, we should say, to add that our critic did not at all intend to do what "H. H." thinks it would be only considerate to suppose he did intend to do—namely, speak disrespectfully of "the only reputation claimed" for Mr. Spencer—the reputation of a "correlator of special truths, rather than a discoverer of them." To deny a man a reputation he does not claim is not to deny him a reputation he does claim; "H. H." has knocked down an antagonist of his own setting up. We may say, in conclusion, that Mr. Spencer's reputation being used by our critic incidentally and illustratively, the whole article in which the reference occurs is better than a detached sentence or two, if any one would like to know the critic's precise attitude of mind as regards the question.—Ed. Nation.]

Notes.

LITERARY.

The "Life of Daniel Webster," by Mr. George Ticknor Curtis, which has been so long talked of, is announced as in press by Messrs. D. Appleton & Co. The same house will republish "Gheel, the City of the Simple," which has made so favorable and marked an impression in England. It is by the author of "Feudal Castles of France" and "Flemish Interiors."——Mr. G. W. Carleton will publish "Hilt to Hilt," a new story by Mr. J. E. Cooke, and a translation of Renan's "Life of Saint Paul."——We have received a prospectus announcing the future publication, by subscription, of a work with the title of "The Histories of the Jewish Congregations of America," prepared by the Rev. Raphael D'C. Lewin, a writer unknown to us, who says that his aim is to put before the public a complete history of the Jews and Judaism in America. "The first portion of the work will contain the accurate histories of the various congregations of the country, from the dates of their organization to the present time, embracing a period of over two centuries," and will be perhaps as useful as any of the parts, though, doubtless, not the most interesting of them. It will be in one volume, and will be sold at the price of three dollars.——Messrs. Roberts Brothers announce "A Day by the Fire," and other papers hitherto uncollected, by Leigh Hunt; a new volume of poems by Dora Greenwell; "Out of Town," by the facetious F. C. Burnand, whose "Happy Thoughts" recently opened so new and true a view of fun, and "The Commentaries of Major Blake," by the same author.——Messrs. Sheldon & Co. announce Mrs. Jane G. Austin's "Cipher," the novel which has been running through the *Galaxy* to the satisfaction of the readers of that periodical. Mr. Richard Grant White's "Words and Their Uses" will be issued by the same firm.——Messrs. Scribner & Co. will soon publish in book form the articles on "Divorce" which President Woolsey has been contributing to the *New Englander;* "Great Hunts," by Victor Meunier—an addition to the Library of Wonders—and "Foreign Missions: their Relations and Claims," by the Rev. Dr. Rufus Anderson.——Messrs. Turner Brothers & Co. announce a work, entitled "Married," by Mrs. C. J. Newby, an Englishwoman who has met with some favor from the critics, and more from the readers of novels. She is the author of "Kate Kennedy," "Common Sense," "Margaret Hamilton," "Only Temper," and other stories of which the same house are about to publish new editions.——We may say here, in reply to a remark in Monday's *Times*, that the "character album" we spoke of last week as announced by Leypoldt & Holt, *is* announced by that firm, is original in some respects, and is as new as most books, though it is not the first of its species; that some irreverent clergymen do to our knowledge call the *Guardian* Mrs. Gamp; and, finally, that the *Nation* of last week—the same number commented on by the *Times*—contained a formal correction of an error in regard to the place of residence of Mr. Lewis H. Morgan, and a humble apology for the mistake which confounded him with a Canadian. What more would any one have than deep contrition and prompt reparation?

—We gave some account of *Le Nouveau Monde* when it was first started in this city as a political and literary weekly. It appears to have achieved success, and on the 15th of last month to have entered on a new series and second volume. By way of additional attractiveness, it has made an arrangement with the Paris *Monde Illustré*, by which the two papers can be had together for nine dollars a year, which is certainly not dear. The illustrated weekly is forwarded regularly to this country, and of its kind is to be praised, though valuable for little else besides its engravings. In *Le Nouveau Monde* we have found a good variety of reading matter, skilfully and decently composed or compiled; and we should suppose that those high schools and academies which subscribe for it in large quantities—using it, apparently, in place of a text-book in French—have reason to be satisfied with what they get. It is now publishing each week Erckmann-Chatrian's "L'Invasion."

—Editing a country newspaper is getting to be an easier thing than ever, we should say, and perhaps more profitable, as the editor and proprietor has more opportunity now than formerly to devote his personal attention to the job printing that usually gives the country editor his main support. We believe it was the publishers of the *Atlantic* who began the practice of sending out—"for the convenience of editors"—broadsides containing extracts from the forthcoming number of the magazine, which should be reproduced in the journals to which they were sent, "with credit to the magazine," of course. In a little while *Lippincott's*, the *Galaxy*, *Putnam's*, *Appleton's Journal*, and the rest followed suit; and now in thousands of sanctums the scissors are plied without the old wear and tear of mind. There is no criminality in the arrangement, we suppose. It is no great credit to our journalism, perhaps; and perhaps it does its part toward deferring the time when the Americans who exercise most influence upon their fellow-citizens will constitute a class of men worthy of their power—will be journalists, honest, pretending to be nothing that they are not, able to do their own work, and above dictation of any sort. But we may admit that, though it is a practice not much to our taste, the practice which it displaces was in no respect a good one. The publishers had some reason to be dissatisfied with the way in which their magazines have customarily been reviewed by most of the papers. The country press was seen in almost its worst aspect at the time when it was paying for its magazines by "noticing" them. It never made any pretence of criticising; it merely, for value received, made monthly paragraphs on "Periodicals Received"—a title embracing everything from the *Atlantic* to *Demorest's*—which began with a word or two of praise, expressed in terms either perfectly conventional and meaningless or else ridiculous, and which ended with a more or less incorrect list of "the remaining contents." So it is not very wonderful that Messrs. Fields, Osgood & Co. invented the circular broadside—or, rather, adapted to literature the well-known circular broadside, by means of which the New England Loyal Publication Society did such yeoman's service during the war, by weekly administering sound political doctrine to some seventeen or eighteen hundred Northern editors, of whom many had no "views" of their own. And, of course, what one

house has thought it necessary to do, nearly all the other houses must do also.

—There has been a good deal of dispute of late as to whether or not there was ever any Barbara Freitchie; and whether, if there ever were, it was or was not she who defiantly displayed the Federal flag when General T. J. Jackson entered the town at the head of his rebel troops; and, finally, whether or not any Federal flag was displayed by anybody on any such occasion. The controversy was settled, we believe, in favor of Mr. Whittier's heroine's having been truly the real heroine of a true story, and a later copy of the Frederick *Examiner* seems to confirm this conclusion. We learn from the *Examiner* that by order of the town government the house of "the Freitchie woman" has been removed, and that laborers have recently been at work digging down some ten feet below the surface, as if to remove the very spot on which it stood—"to wipe the damned thing out," as the *Examiner* says, apparently quoting the language of some councilman. It appears—if the Republican journal's statements are true, and we do not vouch that they are not somewhat colored by partisanship—that the authorities passed a resolution which provided for the widening and straightening of Carroll Creek. They then decided that the Freitchie house was in the way of the necessary improvement, and voted that it should be taken to pieces. The house was, however, not so much in the way but that in making the creek straighter—it must have been excessively crooked before, one would say—and to reach the point at which they aimed, it was found necessary to make three very sharp angular turns, which accordingly were made. The house, then, like the old woman who lived in it, now exists on earth only in picture and song and story; but both old Barbara and the house thus have a lease of life long enough and indestructible enough to make the alleged action of the Frederick authorities another illustration of the truth that, except a parish vestry, no body of men is so stupid as a town council.

—Neither in diplomatic archives, nor in the despatches of commanders, nor in the chronicles of party struggles, nor in the records of legislative debates, can the whole story of the war of the rebellion be found. It differs from most wars in the fact that it was, to an extent almost unparalleled, a war in which every inhabitant of the contending countries not only took an intense interest, but one in which everybody, man or woman, as citizen of a town, as member of a church, as preacher, or teacher, or politician, or speaker, or knitter of socks, or taxpayer, actually took an active and more or less efficient part of some kind. It was emphatically a people's war; and what with our Sanitary Commissions and Christian Commissions and Freedman's Commissions; what with our system of allowing our volunteers to elect their officers, and of letting them vote for candidates for civil offices; what with our unexampled tolerance and even encouragement of newspaper reporters at the front, and our organized bands of women who nursed in the hospitals, it never ceased, even on the very field of battle itself, to wear the aspect of a people's war. So it happened that to write the real story of the struggle it would have been necessary even for a historian of the old school, and it is doubly necessary for a historian of the better school, to survey and traverse a very wide field in order to gather together the materials with which to construct an adequate work on the great rebellion. The North has not been careless of its duty in this respect; each month during the war and each month since has added something to the immense store from which our coming Thucydides is to draw. The South, as was natural in the defeated party, and as was to be expected of a people but very little accustomed to work in literature, has hitherto done almost nothing to make the record complete. Yet unless the Southern side of the case is presented in proper fulness, as only Southern labor can present it, we shall never have the great debate fitly treated. We are glad to see that a Southern Historical Society has been formed, which will devote itself to collecting reliable data of the civil and military events in the career of the Confederacy. Doctor Palmer of New Orleans is its President. General Lee is the Vice-President for Virginia, General Breckinridge for Kentucky, General Braxton Bragg for Louisiana, Mr. A. H. Stephens for Georgia. It is to be hoped that they will go to work systematically and laboriously, and set on foot branch societies with energetic secretaries in as many Southern cities as possible. Northern Historical Societies might do much worse than to put themselves in communication with the new member of the sisterhood and render it such aid as they can. We do not know if any of the Historical Societies in the Border States or their neighbors are doing what we suppose they easily might do in the way of securing authentic records of the part which the Southern Unionists took in the war. Ohio, Maryland, North Carolina, West Virginia, and Missouri ought to be able to offer us some extremely interesting contributions to history. The two States last-named would render a valuable service to American literature—to say nothing of politics and patriotism—if they would promote research of the kind by legislative enactment and a small grant of money for the use of a domestic commission.

—The Springfield *Republican* allows the English correspondent of the *Tribune* to lead it into asserting that the *Pall Mall Gazette* wants to go to war with this country over Mr. Sumner's speech, and that the said belligerent journal is "the organ of the British landed aristocracy." The *Pall Mall Gazette* might just about as well be called the organ of the British Radicals as of the British landed aristocracy. There is hardly a political or social doctrine of importance which "the landed aristocracy as such" hold dear, of which the *Gazette* is not the enemy, and its principal and ablest writer is a pure Benthamite. In fact, what the correspondent probably meant when he talked of it as an "organ" was, that the landed aristocracy read it, but they do this because it is a good evening paper, and not because it reproduces their peculiar opinions on either church or state.

—A work which makes what we are inclined to think may be a dubious claim to be considered unique, is now on sale at the store of Scribner, Welford & Company. It is a volume entitled "Pietas et Gratulatio Collegii Cantabrigiensis, apud Nov-Anglos," and was printed in 1761 at the press of J. Green and J. Russel, of Boston. It contains the metrical laments and congratulations in which Harvard College loyally indulged upon the death of George the Second and the accession of his grandson, and was presented to the latter monarch by his humble subjects, the President and Fellows of the "infant seminary." It did them credit, the *Monthly Review* thought, and in July, 1763, that periodical devoted four pages to a very civil notice of the poems, styling the Latin and Greek verses elegant, and informing its readers that while, as was to be expected, some of the English verses, as well as some of the Greek and Latin, were not especially good, some others, although the work of a son of Harvard who was but youthful, were "allowed to be nervous." Any one who wishes to know what young alumnus it was who earned this praise, may probably discover his name by looking into Mr. Duyckinck's Cyclopædia, where the "Pietas et Gratulatio" receives considerable attention. Of the English verses not especially worthy of praise, we suppose these that follow may be taken as a specimen; they celebrate the ante-nuptial voyage of the future Queen Charlotte:

> "George gave the word—the naval chiefs obey;
> And thro' the ocean cleave their rapid way.
> They gain the port, on Elbe's fair stream now ride;
> And there receive young Brunswick's future Bride.
>
> Each british crew now anxious for THE FAIR
> Tho' seldom used to pray, thus framed a prayer—
> 'Ye latent rocks! bow down your craggy heads;
> 'Ye sands destructive! sink your covered beds:
> 'Ye winds! forget to rage—in gentle gales
> 'Propitious blow and fan the british sails:
> 'O NEPTUNE, Britain's friend! the tempests reign
> 'And guard fair Charlotte thro' your rough domain.'",

"Though seldom used to pray," as applied to the ship's companies of that day, may be praised as a good, natural stroke, unless, indeed, we may suppose it reluctantly put in to explain the obviously bad fist of it that "each british crew" makes of praying in the succeeding verses. But what is a colonial poet to do who has it laid upon him to make a naval squadron pray, when unfortunately in all the works of the ingenious Mr. Pope not a single precedent for marine devotions is to be found? He must do what he can. It is not in this same "gratulatio," but in a "laudatio" upon George the Second that the reader may find a more pleasing instance of poetic aggrandizement than is often happened upon. After the European exploits by sea and land of the hero of Dettingen have been recalled to memory, the muse, crossing the water, makes mention of the cisatlantic glory of his arms, and depicts the triumph of the British musket over the savage weapon which is known to us as the tomahawk:

> "*Here* he restrained the Indian's thirst of gore,
> And bade the murderous Tomax drink no more."

Yet, doubtless, we of this present day of realism in poetry may easily laugh a little too much at our ancestor's grandiloquent tomax—or grand delinquent, as Mr. Lowell's unconsciously wise friend once said. It might be hard to prove, after all, that there is not as much of the truth in the school whose poorer scholars fell into the pit of "poetical conventionalism" in ideas and words, as in the school that flourishes just now, and whose poorest scholars make nature—everything in nature—to be art, and, furthermore, to be all that there is of art. After all, it may be that there is not such an immense deal to choose between Mr. Edward Moore's and Mr. Cawthorne's method, on the one hand, and Mr. Whitman's, with his gravel-pit architecture, and Mr. W. M. Rossetti's, with his criminal-court-

report poetry, on the other. It is a little curious—to return to our "Pietas et Gratulatio"—to find the President and Fellows of a college so soon to be in rebellion against the King addressing him as in the following sentences of their preface. There is an independent tone, however, in their expression of loyalty which is consistent enough with the actions of "the Massachusetts" not so very many months later. It says, in prose that may be "allowed to be nervous": "It was the fate of our Ancestors to be driven from their native country by an Administration very different from that of your Majesty. They then complained of their hard treatment, but they saw not the Design of Providence. Had Great Britain been always governed by Princes like those of your Majesty's illustrious House its Dominion would have been confined to its own Islands; no one would have been persuaded to exchange the happy country for any other whatsoever. Thus it is that the Divine Wisdom produces good out of evil; and makes arbitrary Princes the instruments of extending the Dominions of a Patriot King." One might look far among congratulatory addresses to monarchs before finding one with a more manly ring, or with so little promise of scrupulous obedience to any king not a Patriot King. The volume is a quarto, in red morocco covers, on which are stamped the royal arms. The printing is very good, the Greek type being particularly clear; and the whole appearance of the book is much to the credit of the Boston workmanship of a hundred and eight years ago. If it be truly unique, the University Library ought to be put in possession of it.

—The race—whose cradle was the British Isles, we were going to say—which, sprung from various stocks, and gathered from various lands into Great Britain and Ireland, has overflowed its island limits, and spread over every quarter of the world, is very badly off for a name for itself. Look at almost any one of the larger bodies politic into which it is divided, and we shall find that the people composing it are entirely unable to find a name acceptable to all of them, or which any outsider would regard as truly descriptive. What, for instance, is a citizen of the United States to call himself if he wishes to use but one word as expressive of his nationality? The European will call him an American. But so is a Patagonian an American. Or if the Patagonian and the other dwellers south of Darien are styled South Americans, and the other denizens of the New World North Americans, still we people of the thirty-seven States have no more right to the exclusive use of the latter term than the Canadian has. The best name we have got as yet is Yankees, and to call a Southern State man a Yankee is to drive him half frantic. The Canadian's difficulties are as great as ours; the Dominion of Canada has no name applicable to all its subjects. The Nova-Scotian indignantly declines to call himself a Canadian, and prefers even the designation of "Provincial" with which Yankee "runners" or "drummers" are apt to irritate him. The Prince Edward's Islanders and New-Brunswickers are in an equally bad case. Then there are the members of the ruling race in India; they cannot style themselves Indians without suggesting the idea of our aborigines; and Anglo-Indians will hardly do, for the Scotchmen who abound in India, as everywhere else where hard work and a little consequent money-making is to be done, would no doubt decline to be called anything less than Scoto-Indians. The Australian is, perhaps, rather better off than his neighbors; but still, when the various colonies of his demi-continent grow to importance, what will the New South Welshman, or the Victorian, or the Western Australian do for a tolerable patrial? In the mother country, the affair is in still greater confusion. Shall we call the islanders Anglo-Saxons? The Welsh, Scotch, and Irish forbid it; and so, we suppose, would Norman, Dane, and Huguenot; and so, for the matter of that, would pretty much everybody who delights himself with ethnology; Mr. Edward Freeman has for years been almost unhappy on the subject. "English" will not do at all. They have a St. Andrew's Society in Glasgow which devotes itself to hauling over the coals every writer and every speaker who dares to say or to write "English" when, as the Society holds, he ought to say or to write "British." Sir Archibald Alison—the *Saturday Review* informs us—Mr. Gladstone, Mr. Bright, Lord Palmerston—and not to mention many more, the Queen herself—have been brought to book by the Glasgow patriots for slights and scorns put upon Albin—if there be a Lowland Scotch Albin—by the careless use of such terms as "England," "English," and "Englishmen," when the proper words were "Britain" and the like. But what Irishman will submit to be called a Briton? It would be as reasonable to expect our own "last surviving soldier of the Revolution" to call himself a Britisher as to suppose that any friend of Owen Roe's or Lord Edward's would accept a name which the perfidious and bloody Sassenach are willing to bear. But if neither "Anglo-Saxon," nor "English," nor "British" will serve the turn, there is nothing that will; and the most vigorous and dominating of modern races must be content to get on as it may unchristened. Probably it is the race of all races that will feel least discontent and discomfort on account of its semi-anonymous condition. So that it governs India, and absorbs America, and founds empire in Australia, and makes all the world pay tribute to the islands that are the commercial centre of the globe, it will bother its artistic soul not very much about the fine name or set of names that it ought to have in place of its present clumsy system of self-nomenclature. We think of no better advice to give to persons who may have mental difficulty as to the proper course to be pursued in this matter, than that they should bear in mind Mr. Bright's remark to Mr. Burns, a member of the above-mentioned Glasgow society. It appears that as soon as Mr. Burns sees in print any infraction of the rule of accuracy which it is the Society's business to maintain, or hears of any oral infraction of it, he at once addresses the offender by letter, enclosing a copy of a certain pamphlet which he has written. Mr. Bright having received admonition, replied that "custom and convenience are in many things omnipotent." Anglo-Saxon, we think, we shall continue to use as a good enough name for the race that rules Great Britain and Ireland, the American Union, India, Australia, and the Dominion of Canada; and English, Anglo-Indian, Australian, and American seem to us to be good enough descriptive words and well enough understood to justify us in disregarding the objections of Mr. Freeman and Mr. Burns, and whatever gentleman it is who stands up for the Cambro-Briton and the Celt.

—Russia possesses in the *Codex Sinaiticus* one of the three great lights on the original text of the Bible, and has besides in her Slavonic version a side-light of considerable interest, if not value. It has been assumed that because Saint Cyril, "the apostle to the Slavi," and Saint Methodius, his brother, who made this version in the latter half of the ninth century, were Greek missionaries, "they forced the barbarous language to adapt itself to the forms of the Greek," or, in other words, translated from the Greek rather than from the Latin or Hebrew originals. This, however, is considered an open question, and so also—for the reason that the original manuscripts are lost—is the question whether the translators adopted the principal Slavonic tongue or one of its dialects—the ancient Serb being most probably that which was used. There is again a doubt as to the characters they employed—whether the Glagolitic, or (substantially) the present Russian alphabet, which Cyril either invented or adapted from the Glagolitic. M. Solski has undertaken for Russia to recover, as far as possible, the original text of the missionaries, and has already satisfied himself that a great many alterations have been made by the copyists—who were not, it must be confessed, without excuse in their efforts to improve the obscure and strained expressions which the Slavic tongue was made to bear; and that the text has undergone several revisions, and even new translations. Still more: the commentaries on the Scriptures, which abound in Russia, are based on a different version from the one commonly accepted; so that a labor not less great than Tischendorf's will be needed to collate and publish side by side the numerous variations just indicated. And after all has been done in this direction, in the service of history chiefly, Russia's well-wishers would like to banish the work to the Imperial archives, and substitute for it a Russian translation and a Russian service, to be used by priests and people and nobility, in place of the jargon and medley heretofore in vogue.

BALDWIN'S "PRE-HISTORIC NATIONS."*

THE importance, in the history of remote antiquity, of the Africo-Asian race which, after the clear indications of the Mosaic ethnological table, is designated as Hamitic, Cushite, or Ethiopic, has long been a favorite theme of archæological speculation. The civilization and power of Meroë, Egypt, and Arabia Felix were incontestably the achievements of that race in pre-historic times; Phœnicia, the mother of so many inventions and colonies, was, according to that Hebrew record, with which the narrative of Herodotus so well agrees, a nation of the same ethnic family, notwithstanding her use of a Semitic tongue; and late discoveries have also confirmed the correctness of the connection in the Biblical narrative of the Hamitic element represented by Nimrod with the great centres of power on the Euphrates and Tigris. Many competent archæologists, however, extend the sphere of the ancient Hamites far beyond the limits above mentioned.

According to George Rawlinson, "linguistic discovery tends to show

* "Pre-Historic Nations; or, Enquiries concerning some of the Great Peoples and Civilizations of Antiquity, and their probable relation to a still older Civilization of the Ethiopians or Cushites of Arabia. By John D. Baldwin, A.M." New York: Harper & Brothers. 1869.

that a Cushite or Ethiopian race did, in the earliest times, extend itself along the shores of the Southern Ocean from Abyssinia to India. The whole peninsula of India was peopled by a race of this character before the influx of the Aryans; it extended along the sea-coast through the modern Beluchistan and Kerman; the cities on the northern shores of the Persian Gulf are shown by the brick inscriptions found in their ruins to have belonged to this race." This was the race of the Ethiopians of whom "the uniform voice of primitive antiquity" spoke as dwelling on the shores of the Southern Ocean "from India to the Pillars of Hercules." And long before Rawlinson, Maurice, in his "Ancient History of Hindustan," spoke thus of the "daring Cushite genius" when "in its full career of glory": "It was they who built the tower of Belus and raised the pyramids of Egypt; it was they who formed the grottoes near the Nile, and scooped the caverns of Salsette and Elephanta." Heeren, too, fully appreciated the almost universal significance of the Ethiopians in the traditions of primitive times. He found them in the annals of the Egyptian priests; he found their legends interwoven with the traditions of Asiatic wars and conquests, their glory sung by Hellenic bards when the Greeks scarcely knew Italy and Sicily by name, and their lustre undiminished "when fable gave way to the clear light of history."

Fully convinced of the correctness, and somewhat dazzled, we fancy, by the vague light of the Cushite theory, Mr. Baldwin presents it to us in its widest possible developments. He exhausts "traditions, mythologies, fragmentary records, mouldering monuments, and other remains of the pre-historic ages," and ransacks all the stores of recent research, to prove that the Cushites were the original civilizers of South-western Asia, and that, radiating thence, their influence was not only established all along the coast regions, on the Indian Ocean, the Mediterranean, and the Atlantic, but also extended through the continent of Africa, and probably across the great oceans, to the shores of what we call the New World.

The original seat of that grand race he finds in Arabia, the principal part of what, as he believes, the Hebrew Scriptures called the Land of Cush, and the Sanscrit Puranas designated as the interior Cusha-dwipa—a geographical division comprising the regions extending from the borders of Hindostan to the Red Sea, beyond which lay, according to the same legendary documents, the exterior region of the same name. The Arabia of Mr. Baldwin, however, is not the Arabia with which old accounts and traditions have made our fancy familiar—a land of dreary wastes and deserts, roamed over by homeless and restless Bedouins, and only dotted with oases, and fringed with fertile tracts. Accepting Mr. Palgrave's most favorable testimony, he sees even in Central Arabia—so long hidden from the eye of civilized observers—"a rich and beautiful country, a settled and civilized population . . . cities, towns, tillage, and regular government." The desert is the outer fringe of a vast and fertile table-land; the Bedouin is a degenerate outgrowth of the fixed nation, and in no respect its representative; where we were taught to see but arid and treeless wastes, there populous cities, with bastions, towers, and gates, have been discovered. And what now is waste in Arabia was in olden times, to a great extent, cultivated, populous, and flourishing. Witness the remnants of ancient tanks of vast dimensions, and the splendid ruins, of which only a part has as yet been explored, of grand centres of civilization, "from Balbec and Petra to Mareb and Zhafar." The magnificence of Yemen in antiquity has always been a theme of admiration, and there remain abundant traces to show that the wonderful ancient tales of Sheba and the Sabæans were in the main based on ample facts. Strabo, Pliny, Ptolemy, and others testify that the coasts of Southern Arabia were lined with great cities. The inscriptions on the ruins, in what we call the Himyaric tongue, show that the people that once flourished in tropical Arabia were not of the Semitic race. They were the Adites of the remotest age of Moslem tradition, which speaks of their splendor and riches in the same exaggerated strain with which it execrates their fatal infidelity. Semitic invasion and Moslem fanaticism have destroyed that noble branch of the Cushite race; but some living remnants of it and its language can still be discovered.

These Cushites of Arabia, Mr. Baldwin endeavors to prove, were in full possession of the grand inventions which afterward created the greatness and glory of the Chaldeans, the Egyptians, and the Phœnicians—descendants of the same race, and, in their earliest history, colonies of the same country, with which they, for a long period, formed one vast empire. Long before the Phœnicians—the disseminators of the alphabet in the West—left the shores of the Erythræan Sea; long before the Egyptians reared their pyramids and obelisks, and the Chaldeans erected their observatory on the temple of Belus—astronomy, mathematics, and the art of writing flourished in Arabia, a country from which, in much later times, Europe received the arithmetical figures and the science of algebra. Long before Sidon or Tyre was founded, the people that founded them, when still dwellers in Arabia, navigated, together with other Arabian Cushites, all the adjacent and many remote seas, carrying on a vast commerce, and planting colonies on the most distant shores. The circumnavigation of Africa, in the time of King Necho, instead of being the only, may have been the last undertaken by the Phœnicians. The colonies of the Cushites were organized on the plan of the mother country, the government being based on local self-government, with a loose bond of federation, such as united the cities of Phœnicia or of Philistia. Oman, in modern Arabia, offers another example of this form of government.

Were the Cushites of Arabia autochthons? Was their culture entirely originated by themselves? Or did it spring from a still older civilization? When did it begin? Mr. Baldwin attempts no distinct answer to these questions. The first period of Arabian history is naturally wrapt in mystery. The beginning of the second—"the period of colonizing enterprise, commercial greatness, and extensive empire"—he places as early as "7,000 or 8,000 years before Christ, and it may have begun much earlier." "Early in this period Cushite colonies were established in the valleys of the Nile and the Euphrates, which in subsequent ages became Barbara, Egypt, and Chaldea. . . . The Cushites occupied India, Western Asia to the Mediterranean, and extensive regions in Africa. . . . The vast commercial system by which they brought together 'the ends of the earth' was created, and that unrivalled eminence in maritime and manufacturing skill was developed, which the Phœnicians retained down to the time of the Hellenes and the Romans. In this period were the grandest ages of the great empire of Ethiopia, or Cusha-dwipa." This was followed, Mr. Baldwin believes, by a period of disintegration. First, Chaldea and Egypt; and then, "under the control of the people called Phœnicians, Northern Arabia, Syria, and the connected communities on the Mediterranean," became separate dominions. The Sanscrit branch of the Aryans invaded India, gradually subduing the Cushites, who had amalgamated with the earlier and darker inhabitants of the country, and in their rock temples worshipped Baal under the name of Siva, whom the Brahmans eventually received in their Pantheon. Arabia was divided and decayed. Its south-western parts alone continued to flourish for a long period, the Sabæans and Himyarites representing the Cushite civilization down to a time comparatively modern. The north was overrun by nomadic Semites, who occupied the Hedjaz, originated Mohammedanism, and eventually transformed the whole country. Egypt, Chaldea, and Phœnicia, the three grandest offshoots of Cushite Arabia, flourished for thousands of years after the dissolution of the original empire, and before the power of the Semites culminated in the Assyrian realm. We regret that we cannot follow Mr. Baldwin through the pages in which he traces the vicissitudes of the Cushite kingdoms and colonies in Africa, Asia, and Europe, from periods all but lost in the night of time, down to an age so late as the days of the Caliphs, when in the far East a "Malayan" empire of Cushite origin still survived. Down to this day the Berbers and Touaricks of Northern and Central Africa preserve some distinct and noble features of ancient Ethiopian descent and culture.

The materials which our author uses for his vast work of pre-historic reconstruction are by no means scanty, though decidedly of unequal value, and we must confess he handles them with skill and confidence. There is much in the whole scheme that hardly requires an argument; for much of it he has substantial arguments drawn from the oldest as well as the latest authorities; other parts he builds upon or corroborates by hypotheses and conjectures of a rather hazardous character. With erudition and zeal he collects all the evidence in favor of the theory that can be discovered in the pages of ancient and mediæval historians and poets, or of modern travellers and archæologists. Vedas, Puranas, the Dabistan, Homer, the Koran, fragments and legends of every kind, are made to contribute their support. The apparently most extravagant statements of Manetho, Berosus, Diodorus Siculus, Ptolemy, Strabo, Masudi, or Edrisi are eagerly used as evidence of a high order. Dionysus or Osiris, Cepheus, Zohak, Saturn, Kaiamors, Orpheus, and other mythical heroes of Hellenic or Eastern antiquity are restored to historical importance, and some of them even placed in chronological order. Gaps are filled out with hypothetical developments, such as should or might have taken place. Where an assertion cannot be proved, its opposite is ridiculed as far as possible. The restraints of "Usher's chronology" are justly spurned, and its defenders overwhelmed with contemptuous invectives; historical skepticism is treated with still greater and bitterer scorn; and even such critics as Grote, Wil-

kinson, and Renan are often unceremoniously handled. Whatever is in the way of the universal Cushite theory—belief in the Greeks as the earliest or foremost civilizers, Turanianizing linguistic speculations, or single assertions, in ancients or moderns, of a contestable character—Mr. Baldwin treats with the unsparing rigor of enthusiastic faith. On the whole, in spite of asserting and proving too much, he makes his theory sufficiently plausible.

We must, however, add that he fails to convince. Of course we do not mean to dispute the hoary antiquity or the greatness of Egypt or Chaldea, or the vast extent of Phœnician commercial and colonizing enterprise. Nor will we dispute with him about the meaning of the Hebrew word Cush (concerning which we are far from agreeing with his confidently quoted authorities), for the name has little to do with the theory. But he fails to prove by philological evidence, the only possible test—if it be possible at the present stage of Cushite linguistic research, which we greatly doubt—the identity in race of all the nations whom he glorifies as Cushites. He fails to show why his mighty and so highly civilized Cushites were everywhere so easily and so completely denationalized—the Babylonians, for instance, by conquering Assyrians, the settled Arabians by invading Semitic nomads, the Phœnicians by mere contact with their neighbors. We say by mere contact, for such names as Sidon, Tyre, Laish, Melcarth, Cadmus, Cabiri, "Sydyk the Just," and many others, make it evident, all Mr. Baldwin's assertions to the contrary notwithstanding, that the Phœnicians on the shores of the Mediterranean spoke a Semitic tongue in the times of their greatest power, no less than when Tyrian colonists carried such Semitic names as Carthage, Byrsa, Cirta, Zama, Hamilcar, Hannibal, Asdrubal, or Gades to the coasts of Africa and Spain. All the important Philistine names, too, as we find them both in the Greek writers and in the Hebrew Scriptures—Ecron, Gath, Ashdod, Ascalon, Gaza, Dagon, Abimelech, and so on—are purely Semitic. Mr. Baldwin fails satisfactorily to explain why "that old Cushite race, so great and influential in its time," has not only everywhere succumbed to aggressors of lower culture, but "almost wholly disappeared from the earth," with its literatures and languages; while Semites, Aryans, and Turanians continue to flourish in tribes and nations, with languages beautifully developed and preserved in fresh distinctiveness. These and many other easy objections to his theory Mr. Baldwin has hardly attempted to meet; but, we must acknowledge it, none would prove fatal to the whole structure, though parts of it could easily be made to crumble under the hand of severe criticism. We have presented its outlines to our readers; let the curious examine it more closely in the text of the author. The "Pre-Historic Nations," though not a perfectly sound book, is in a high degree both instructive and suggestive.

THE SOUTHERN VIEW OF THE LATE WAR.*

The average Northern man will probably take little interest in the elaborate discussions concerning the nature of the Federal Government, the sovereignty of the States, and the right of secession, with which Mr. Stephens has filled the large volume before us. These questions were thoroughly settled in the minds of the mass of Northern men long before the war; and the abyss which the events of the winter of 1860–61 opened to their eyes speedily convinced such of the Northern people as previously were in doubt that, whatever arguments might be adduced for the right to secede, the argument for self-preservation answered them all. Mr. Stephens quotes largely from the language of Mr. Lincoln and Mr. Greeley, in support of the right of secession or revolution; but he has learned, in the history of the last few years, that a great nation does not put its life at the mercy of every speech of a Western Congressman or every article of an erratic editor; and it seems as if he might have learned it before—as if a man of sense need not have waited for a bloody war to teach him the futility of this sort of argument, once so common in the South, and not yet quite obsolete there.

But, while the great majority of Northern readers will reject an argument in favor of secession as impatiently as they would an argument in favor of the Ptolemaic system, there are many who will be glad to see what is to be said upon that side, with a view to putting their minds into sufficient harmony with those of the Southern people to understand the feelings and temper of the South. To persons of this philosophic temperament, willing to "listen patiently to any sober and godly man who will sincerely argue that two and two make five," Mr. Stephens's book will be interesting. His propositions are far from being so repugnant to reason as the two-and-two argument. He quietly assumes a good deal that would be very offensive if argued at length, and confines himself to demonstrating the right of each State to withdraw from the Union at its own pleasure. This is done by means of an imaginary discussion, carried on at great length between Mr. Stephens, Judge Bynum, a Radical Republican, Professor Norton, a Conservative Republican, and Major Heister, a War Democrat—the three latter persons being, of course, fictitious. The greater part of the arguments consist of quotations from Hamilton, Jefferson, Madison, Webster, etc., etc., with comments upon them—all tending to show that the United States never constituted a nation, and that each State of the Union retained not only all sovereign rights not delegated to the Federal Government, but had also the right at any moment to revoke the powers it had delegated.

Of course Mr. Stephens's supposed visitors get the worst of the argument, and gradually recant their heresies. For he has very little to say about slavery. While thinking it perfectly right, he holds that it had no appreciable influence in giving rise to the doctrine of State rights, and that the war was carried on by the South in support of that doctrine, and not in behalf of slavery, except as an incidental and inferior consideration. In this Mr. Stephens is partly correct, as we suppose, and wholly sincere. Slavery did not, in any just sense, give birth to the State-rights doctrine. The ablest advocates of that doctrine were, it is true, slaveholders, but they were also abolitionists; and Samuel Adams, who was among its most strenuous supporters, was a Massachusetts man who never owned a slave. But the growth of slavery had, long before the war, made that institution the chief concern of the South; and we are not afraid to say that it could be easily shown that after 1840 its representatives never hesitated to encroach upon State rights when anything was to be gained for slavery, although they promptly fell back upon those rights when the interests of their darling institution required that course. Yet, in the main, the existence of slavery obviously depended upon the maintenance of State sovereignty; and therefore the South adhered in theory to that doctrine; and we have no doubt that by far the most of those who fought upon the Southern side believed that they were fighting for State rights rather than for slavery.

We should be glad to give extracts from Mr. Stephens's book, to show its spirit and style; but it is itself chiefly made up of extracts, and long ones, so that we could not possibly do justice to it. Its calm and dignified tone, the ability with which the views of "the Fathers" are brought out, and the evident sincerity of the author, deserve, and will secure, the respect of every fair-minded reader. Mr. Stephens presents a very strong argument in favor of the doctrine that the Constitution was a compact between the States, and shows conclusively, of course, that this is a federal, and not a consolidated republic. This reasoning being satisfactorily completed, he seems to think that it follows, quite as a matter of course, that any one of the States can withdraw from the federation and rescind the compact. For this proposition he requires no further authority than a line from Montesquieu, and a brief reference to the law regulating contracts between private citizens. But, in fact, this is the weak point in the whole Southern argument. There is a perfect *non sequitur*. All free governments are founded upon an implied contract; but nothing short of a total failure of performance upon one side has ever been supposed to release the other. Even in private life, marriage is a contract in which mutual affection is the prime consideration and the foremost obligation, without which the bond is a monstrous yoke, yet no decent community allows the compact to be broken for the mere failure of this consideration. Mr. Stephens does not pretend that the constitutional "compact" had been violated by all the Northern States: his single insincerity is in pretending to think that it was violated by thirteen of them; and he does not venture to assert that any one State had violated all or even most of its obligations, or that the breach of duty had been productive of any serious injury. He claims for each State the absolute right to withdraw at its sovereign will and pleasure, with or without cause. We say that, even conceding all his premises, this is not in the least a necessary inference from them.

Mr. Stephens's book cannot occupy the place which he hopes for it; but it will be a useful contribution to the literature of the war, out of which a future historian will be able to construct an impartial account of its origin. In the books now written, the historian will see conclusive evidence that the North and South had each grown up into such complete antagonism upon the doctrine of State rights, that neither section could even understand the other. He will comprehend the tendency of the North toward nationality of spirit arising from its more frequent intercourse with foreign nations, and the increased facilities of communication among its own people; while he will see in the rapid growth of slavery at the South, with

* "A Constitutional View of the Late War between the States. By Alexander H. Stephens." Vol. I. Philadelphia: The National Publishing Co. Pp. 654.

its inevitable consequences in retarding the progress of real civilization, a potent cause of adherence to the doctrine of exclusive State sovereignty, and also a cause of alienation from a free community, bound to the South by political ties, but separated from it in spirit by as marked a difference as exists between the mediæval days and the nineteenth century.

A House of Cards. A Novel. By Mrs. Cashel Hoey. (Boston: Littell & Gay.)—The plot of this story seems to us to have been well invented, and to have been handled with more skill than ordinarily goes to the construction of a novel. Mrs. Hoey has kept her main purpose steadily before her, and worked up to it with a good, artistic appreciation of the points to be made, and, so far as the main business of her story is concerned, with little or no unnecessary by-play. She does a good deal of rather prolix dissection of motives and of mental processes, with which we do not find so much fault in itself as for the reason that it interferes with the action of the book, which is never too brisk; and neither her character-painting nor her descriptions of social life—although they are in a way undeniably clever—seem to us the result of careful observation. In writing her story, the moral purpose of it was evidently the thing she had most at heart; and her characters have been carefully thought out and fitted to the parts they had to play with reference to the total effect rather than to their intrinsic truthfulness and vitality. As a general rule, we suppose that a novel whose main business is the development and study of character is pleasanter reading than one which depends for its interest mainly upon the skilful elucidation of its plot—that is, when both of them at all approximate excellence in their several lines; but when character-painting is undertaken, as it is every day, by persons quite innocently incompetent to the task, the result is even drearier than any other sort of entertainment. As Mrs. Hoey is not a genius, and is a clever woman, much given to the analysis of morbid states of mind and to pondering upon the necessary results of given actions, but with no dramatic ability, and a not at all keen perception of shades of character—she has, we think, shown good sense in devoting herself to that field in which she could work with the greatest hopes of success. Her problem in the present story was to illustrate the reflex action of deliberately committed evil actions not necessarily crimes, and to show how they must react on the character and may react on the outward lives of those who commit them. As we have said, her plot seems well contrived to meet this end, and her conception of her characters, especially of her heroine, deserves a good deal of praise. Her idea of what they should be is invariably much better than she succeeds in making her delineation. They are not weak, nor at all stupidly put together, but they want vitality. Apparently, Mrs. Hoey lacks skill to dissect the living subject. Her plot, although it is not a complicated one, is one not easy to compress into a few lines; and as her book, which has, on the whole, more good points than bad ones, is still far from being excellent, it seems not advisable to devote more space to it than will serve to note our appreciation of the painstaking and conscientious work in it, and to recommend it to novel-readers as better worth reading than most of the current books of its class.

The Gain of a Loss. A Novel. By the author of "The Last of the Cavaliers." (New York: Leypoldt & Holt. 1869.)—It is some time since we have encountered "the Jesuit" in an English novel—not, we think, since the days when Lady Fullerton was writing anti-Catholic stories; at any rate, they seemed anti-Catholic enough to our Protestant ears. He comes to light again in "The Gain of a Loss," and we are glad to find not one of his typical and well-known peculiarities wanting—he is as stealthy, as wily, and as unscrupulous as ever. As of old, his principal business is to "alienate into the coffers of the Church" all the property belonging to other people that by hook or by crook he can lay his hands on; he is, in short, as immoral in private and as hypocritical in public as only the Jesuit of an Englishwoman's novel can ever hope to be. Poetical justice is meted out to him at last in a satisfactory manner; not simply in that his machinations come to naught—that was to be expected—but his secret sins are discovered, and he is dogged throughout Europe by a vindictive old woman whose meditated vengeance is grimly foreshadowed thus: "There are convent prisons where priests do penance for the crime of having been found out."

The novel contains, also, a number of other romantic and rather high-strung personages—some of them remarkable for their beauty, some for their goodness; none, we think, for their superior intelligence—viewing them, that is, from an outsider's standpoint. As for the hero, it is hard to say whether his personal beauty, the mystery surrounding his birth, or his stanch Protestantism, which is of the muscular-Christian type, endears him most to the heroine and to the reader. He is by no means a bad fellow, although to the reader of many novels his character will not seem too startingly original. The story is pleasantly told, and will not, we suppose, be found the less readable because it contains plot and incident enough for one of twice its length—not that it is itself short. It is not a satisfactory novel in any but a very limited sense of the words; but besides being quite healthy morally—in the narrow sense of that word—it is at all events free from dulness—that worst fault which can be laid to the charge of any book which is written simply to amuse.

Fishing in American Waters. By Genio C. Scott. (New York: Harper & Brothers.)—Mr. Genio C. Scott, though he does some slight Izaak Waltonism that does not make him more agreeable, is, on the whole, an honest, straightforward angler, who believes what he writes—barring his verses—and tells all he knows *con amore;* and he knows a good deal. Mr. Scott's book is one of the most complete and sensible works on angling ever published—the most complete and sensible, so far as we know. The arrangement of it is admirable, the composition is good; the drawing and engraving of the fish are well done.

The book is divided into five parts: "Coast and Estuary Fishing, with Rod and Line," "Fresh-water Fishing, with Fly and Bait," "Commercial Fisheries," "Ancient and Modern Fish Culture," "A Glimpse of Ichthyology," and an appendix on cookery adapted to the resources of sportsmen in the wilderness. The article on "Modern Fish Culture" is one that the amateur breeder of fish will find of practical value and assistance. There is no department of fishing that Mr. Scott does not treat of, from tying a fly to gaffing the salmon. His descriptive powers are unusually strong; and it is curious to turn from a good vivid bit of his prose and see that his verse is the most dreary bosh imaginable. Mr. Scott has also—what looks like a fault—a habit of praising the tackle sold by one or two houses, wherever and whenever an opportunity presents itself.

Little Women; or, Meg, Jo, Beth, and Amy. Part Second. By Louisa M. Alcott. With illustrations. (Boston: Roberts Brothers. 1869.)—Miss Alcott's literary success seems to be very like that achieved by her favorite, "Jo," in this pleasant little story. She has not endangered her popularity by any excessive refinement, nor by too hard a struggle after ideal excellence in her work. Her book is just such a hearty, unaffected, and "genial" description of family life as will appeal to the majority of average readers, and is as certain to attain a kind of success which is apt enough fatally to endanger its author's pretensions to do better work in future. Meantime, "Little Women" is entertaining reading, and, as far as its moral lesson goes, may safely be put into the hands of young people, and will be likely, too, to give their elders a certain pleasure.

OLDTOWN FOLKS.

BY

HARRIET BEECHER STOWE,

Author of "Uncle Tom's Cabin," "Agnes of Sorrento," etc.

1 vol. 12mo, 608 pages. $2.

This is the first novel written by Mrs. Stowe since 1862, and is the only one of her stories except "Dred" that has appeared first in book form. It is entirely new, no part having been previously published. It is a story of New England life, and embraces a great variety of original and striking characters. Mrs. Stowe is perfectly familiar with all phases of New England character, and depicts most graphically the mode of life, the style of thought, and the manner of expression of the time to which her story belongs. She brings before us the stately Parson Lothrop and Lady Lothrop, who by virtue of their position were considered the temporal and spiritual superiors of everybody in the parish; Sam Lawson, the village do-nothing, and his wife Hepsy, a gnarly, compact, efficient little pepper-box of a woman; Aunt Keziah, the homeliest and kindest woman in Oldtown, a princess enchanted behind a hedge of ragged and unsightly thorns; Aunt Lois, whose happiness was imperfect if other people were not happy, only they must be happy on her pattern and in her way; good Deacon Badger, whose calm, serene, benignant figure was a sort of benediction as he sat in his pew of a Sunday; Uncle 'Liakim, a nervous, generous-hearted man, who took especial pains to bring to church all the "dry, forlorn, tremulous specimens of female mortality" in Oldtown and vicinity; Asphyxia Smith, a working-machine, always wound up and going; Ellery Davenport, a grandson of Jonathan Edwards, a gentleman of varied accomplishments and fascinating manners, yet able to "lie as innocently and sweetly and prettily as a Frenchwoman;" Debby Kittery, loyal to King George and "the true Church;" Rev. Dr. Moses Stern, to whom "an austere, inflexible, grand indifference to all things earthly seemed to give the prestige and dignity of a supernatural being;" and many other striking figures drawn from life. The author says: "My studies have been taken from real characters, real scenes, and real incidents. And some of those things in the story which may appear most romantic and like fiction, are simple renderings and applications of facts."

It is believed that New England life of sixty years ago has never before been so faithfully or graphically delineated as in this book. The descriptions of Oldtown, its old meeting-house, Easter Sunday, the way Thanksgiving Day was kept at Oldtown, the kidnapper's raid, the revival, and numberless other scenes and incidents; the humor and pathos, the sound sense and deep human tenderness of the story, give it a fascination which the readers of "Uncle Tom's Cabin" and "The Minister's Wooing" will recognize with delight.

*** For sale by all Booksellers. Sent post-paid on receipt of price by the Publishers,

New and Important School Books

PUBLISHED BY

WOOLWORTH, AINSWORTH & CO.,

117 Washington Street, Boston.

111 State Street, Chicago.

Just Issued:

HAND-BOOK OF NATURAL PHILOSOPHY,

For School and Home Use. By W. J. Rolfe and J. A. Gillet, teachers in the High School, Cambridge, Mass. With 212 wood engravings and 3 colored maps (illustrating Meteorology). Price $1 25.

The body of the book contains only 229 pages in clear, open type (*with no fine print*), and treats of all the topics of Natural Philosophy. The more theoretical portions of the subject are treated briefly in an Appendix, and descriptions of apparatus and directions for performing experiments are added. *Omitting* the Appendix, the book is not too difficult for Grammar and District Schools. *With* the Appendix, it is exactly adapted to the wants of those High Schools and Academies which have not time for a larger book.

It is not an abridgment of the larger "Natural Philosophy" by the same authors, but it is wholly a new book. It is simple in style and eminently a *practical* book, yet thoroughly scientific, and giving the results of the latest discovery and research. It is sure of a hearty welcome from all teachers who desire a book which shall be brief without being dry, and easy without being puerile.

BY THE SAME AUTHORS:

Hand-book of Chemistry. Price $1 25.

Hand-book of the Stars. Price $1 50.

These are brief elementary manuals of Chemistry and Astronomy, on the same plan as the "Hand-book of Natural Philosophy."

These books are especially adapted to a brief course extending through a single term of school.

Also,

The Cambridge Course of Physics. In 3 vols. 1. Chemistry, $2; 2. Natural Philosophy, $2; 3. Astronomy, $2.

These are larger books, by the same authors, and are intended for more advanced classes, or for those devoting a longer time to these branches.

This course has already been officially adopted by the State Boards of Maryland and Minnesota, and is already used in more than fifty cities and large towns, and in nineteen different States of the Union.

FRENCH.—Magill's French Grammar. Key to Magill's French Grammar. Magill's Introductory French Reader. Magill's French Prose and Poetry.

LATIN COURSE.—Preparatory Latin Prose Book. By J. H. Hanson, A.M. Comprising in 1 vol. all the Latin prose required for admission to Harvard and other colleges, with notes and references to Harkness's, Bullions's, and Allen's Latin Grammars.

HAND-BOOK OF LATIN POETRY. By J. H. Hanson, A.M., and W. J. Rolfe, A.M. Selections from Ovid, Virgil, and Horace, with notes and grammatical references.

SELECTIONS FROM OVID AND VIRGIL. A shorter Hand-book of Latin Poetry, by the same authors. An edition of this book, with a complete vocabulary, and references to Allen's and to Bullions's Latin Grammars, as well as to Andrews' and Stoddard's, and to Harkness's, is in press, and will be ready in May.

GERMAN.—A New Elementary German Grammar. By Gabriel Campbell, Professor in State University of Minnesota.

A Practical and Complete German Grammar. By Adolphi Douai, Ph.D. 12mo.

DRAWING.—Bartholomew's Drawing-book. New Series.

This series of books—the most practical and thorough course of instruction in drawing ever published—will be completed in 12 numbers, each containing 12 plates, executed in the highest style of lithographic art, and 24 pages of drawing-paper of a superior quality. Instruction accompanies each book. In connection with the first three books, a guide has been prepared, for the use of teachers and more advanced pupils.

DRAWING-SLATES.—Bartholomew's Primary School Slate, with a series of progressive lessons in writing and drawing. This is a new thing, and will prove the most admirable device for interesting and instructing young beginners in drawing.

PAYSON, DUNTON & SCRIBNER'S

NATIONAL SYSTEM OF PENMANSHIP.

The most practical style and successful system ever published. Revised, newly engraved, and improved. The growing demand for this popular copy-book has necessitated the increase of our manufacturing facilities to the capacity of over two millions per annum.

*** Circulars containing full descriptions, with notices and testimonials from eminent teachers, will be furnished on application.

Liberal terms for introduction. Address the publishers,

Zell's Popular Encyclopædia:

A UNIVERSAL DICTIONARY OF HISTORY, BIOGRAPHY, GEOGRAPHY, SCIENCE, ART, AND LANGUAGE, to be issued in from 200 to 250 weekly numbers, at 10 cents, and also in Monthly Parts, composed of five weekly numbers in one cover, at 50 cents. Specimens sent post-paid upon receipt of price.

T. ELLWOOD ZELL, Publisher,
Philadelphia.

The Nation Press.

The Proprietors of THE NATION PRESS give notice that they have established a Book, Pamphlet, Job, and Newspaper Printing-Office in this City, and are prepared to execute at moderate prices, for cash, the best of work in any and all of these branches.

For BOOKS they will furnish Electrotype or Stereotype Plates, as desired, and will guaranty unusual accuracy in their preparation.

PAMPHLETS of every description, embracing Prospectuses, Statements, and Reports of Corporations, Statistical, Scientific, and Literary Papers, Law Pleadings, etc., etc., will receive the same attention as books, and be printed with especial care.

JOB WORK, in all its details: Cards, Circulars, Programmes, Bills, Receipts, Forms, etc., will be promptly dispatched, with taste, and in the newest varieties of type.

NEWSPAPERS, MAGAZINES, and other Periodicals will be printed on reasonable terms, and strictly upon time.

In short, the Proprietors undertake to satisfy first-class custom in all that pertains to a general Printing Business.

Orders may be sent to THE NATION PRESS, 27 Rose Street (a few doors North of Frankfort), or to this Office; and estimates will be furnished at either place.

FACTS FOR THE LADIES.

I have had my Wheeler & Wilson Machine almost eight years, and have never ceased blessing the lucky chance that brought it to me. Not one cent has it cost for repairs, and I have broken but one needle in five and a half years. The same needle has gone through "thick and thin;" for since I learned that it would answer to use fine thread or silk for everything, I never change my needle, but use the same one to sew thick cloth of many folds that I use for hemming pocket-handkerchiefs.
NEW HAVEN, Ct. MRS. R. S. BROWN.

INTERESTING TO LADIES.

I have had a Grover & Baker Sewing Machine in constant use for six years, and it is just as good to-day as the day I purchased it. I have used it for all kinds of sewing and embroidery, and I prefer it to any other sewing machine that I have tried. It will do a greater variety of work, and is so simple that a child can use it.—*Mrs. E. E. Turner*, 608 *Pine Street, San Francisco.*

The Week.

THE Washington news of the week is not of great importance. Apparently in accordance with the maxim which he has contributed to the science of government, that the best way to get a bad law abrogated is to enforce it rigidly, President Grant has taken steps to enforce so far as he can the Eight Hour Law, as it is called, which the last Congress passed. Both House and Senate left the phraseology—verbiage, as they more happily say down South—of the law so ambiguous, that Attorney-General Evarts and Attorney-General Hoar both thought its less forced construction, if the words alone were looked at, to be that which required a reduction of the laborer's wages correspondent to the reduction in the hours of labor. To the question why they did not interpret it by the expressed intention of Congress, both those "hard legal minds" might perhaps have hinted that the true intent of Congress at or about election times is to be gathered from various things. Grant, however, has taken Congress at its word, and we shall see if the United States gets as much work in eight hours a day as in ten. We hope the Secretaries will give orders that figures bearing on this matter may be collected. The only other piece of news of any consequence is one that we are very glad to chronicle. Mr. Fisher, the Commissioner of Patents, has four vacancies in his department, and of course he has any number of applicants for them. He makes to each the same reply, to the effect that if each will come again, on such a day, and be examined, he need not fear that he will not be first assistant if he can pass high enough. We wish the Secretary might give orders in this instance, too, that information might be collected as to the relative efficiency of these and other clerks appointed on the old system. But then, just as the men get to doing their business well, they and the Secretary will go out together. An anonymous letter in the *Times* denies the statement published in the *Evening Post*, and reproduced by us, that a Treasury clerk had been dismissed for opposing impeachment.

Virginia, according to the President's proclamation, is to vote on the 6th of July, and the contest will be exciting, and the result, we suppose, is to be called very doubtful, so far as concerns the governorship. Both parties are said to be confident of carrying the State, and if that is so now, it is altogether probable that in the course of the next six weeks the Conservative Republicans will become yet more confident; it being reasonable to suppose that they will continue to make some, if not a great many, converts to the policy of voting from among the men who have hitherto upheld the doctrine that a white man, who is truly white, will not lower himself by having part or lot in the matter of carrying on in the Old Dominion a government in which blacks have a voice. But no such degree of approval is now given these men as was given them two years ago. Everybody anticipates the defeat of the provisions of the constitution which are to be submitted separately, and some predict the rejection of the whole instrument; but for the reasons already hinted at we think this unlikely, whether Wells beats Walker, or Walker Wells. It is odd reasoning which leads men who know that when once their State is in the Union they obtain almost absolute control of its constitution, to refuse to take any steps to get their destinies in their own hands, because they cannot take all the steps at once. As in Arkansas, so in Virginia, under the gubernatorial contest, which sets all the politicians at work, is the partially concealed struggle for the Senatorship—the great prize now of American political life, with its immense power for the ambitious, its social consideration, and with its opportunities for speedy fortune-making for the dishonest and greedy.

The aspect of Southern political affairs, while it is not so promising as the aspect of Southern industrial affairs, is yet hardly of a kind to justify the spasm of despondency which seized upon some of our contemporaries at the time of the "May meetings." In Arkansas there is some political excitement growing out of the rather quiet fight which is going on between Governor Powell, the so-called carpet-bagger, and the majority of the negro voters on the one hand, and the dissatisfied Republicans, composed of old native Arkansan Whigs, who afterwards were home-made Yankees or "scalawags" or native Unionists, and who now are almost willing, it is said, to join the Democrats in order to beat the Powell men. This would hardly be worth mentioning, perhaps, if it were not that it is in such contests as this that we may expect the negro to learn something of his value as a voter, and the white man—even the white Democrat of Arkansas, who has but now been under martial law in a good part of the State—to learn something of the value of the negro as a political ally. In some of the States further from the frontier of barbarism than the wild South-western States, the politician would be more bold than practical as a leader who even now should argue for the removal of the negro element of the body politic. Few North Carolina politicians, for example, would attempt to take such a course. Louisiana seems to be politically quiet, and so does Mississippi; but from Alabama and Georgia accounts come of some murders, and more threatenings, caused by political hatreds. There seems no reason, however, why the killing of Mr. Adkins, in Georgia, should be attributed to anything but the murderer's desire for the old man's money. The killing of Holmes in Virginia, too, was just such an affray as is common enough in the South; one man is "wanted" by the sheriff, another man is what the first man considers officious in aiding and encouraging the officer, and is therefore shot—being not unarmed himself, by the way. This is bad enough, and the murdered man's color and politics may have had their effect in helping on his death; but still it is not strictly a political outrage.

A difficulty of some importance has arisen in Virginia, owing to the inability of the judges to take the test-oath, and their consequent unfitness for office under the Fourteenth Constitutional Amendment. There are many counties in which, since the passage of the Amendment, there is not a single lawyer to be found legally qualified to sit on the bench and administer justice. This is, of course, delightful for the criminals, and some of them who have been sentenced by disfranchised judges have taken to suing out writs of *habeas corpus*, for the purpose of getting themselves released from prison. One of these cases came, recently, before Chief-Justice Chase, who took the

ground that the Fourteenth Amendment was not to be construed in a sense which would make it destructive of social order, and that, therefore, such officials as were necessary to the punishment of crime, and the protection of life and property, must be held qualified to act under it, even if unable to take the oath, as long as no others are to be had. In short, he held that there could be *de facto* judges in the interest of society as well as a *de facto* government, and that their acts were valid to the extent which social exigencies might make necessary. He accordingly sent the petitioner back to prison. The case also came before the celebrated Judge Underwood, who made mince-meat of the Chief-Justice. He took his stand on the *habeas corpus* as the palladium of our liberties, cited Boswell and Macaulay as to its value, said that if the Chief-Justice's ruling were good law, the "Constitution would become a mat to wipe our feet on, not a shield to protect our breasts." He enquired, scornfully, what is "a court *de facto?*" and said he would not be frightened at this time of day by a little law Latin; quoted Marshall to show the nature of a United States court, and Mansfield in the great Somerset slave case, to show that a judge should not be deterred from pronouncing a decision by the consideration of the inconvenience that would result from it. In fact, a more excruciating castigation was probably never inflicted by one great judicial officer on another. Underwood clearly ought to be Chief-Justice himself, and we have little doubt that were Ben. Wade President, he would be. With Wade in the White House, Train in the War Department, Sprague in the Treasury, Butler in the State Department, and Underwood as sole Judge of the Supreme Court, the howls and execrations of humiliated and terrified foreign tyrants would rend the skies.

We have from Cuba a variety of news. It appears that the battle of which we spoke last week was only a skirmish after all; but "Colonel Stockton, of Oil City," Pennsylvania, who has come back from the insurrectionary districts, says the rebel army amounts to 73,599, of whom 42,252 (we like the close accuracy of this) are drilling in "instruction camps," and are as yet only armed with sugar-knives. To make them fight, we suppose it will take a "rear-guard" of Americans and Dominicans of at least 25,000 men. It appears that the mouths of those who asked for a sight of the revolutionary government are now closed; for Cespedes has become a "President," and has issued a proclamation announcing that a "federal democratic republic has been established throughout the island," and a "provisional constitution has been ratified" (by whom, and on what day?) "The country is divided into four departments," we also learn, and "the more important offices have been distributed as follows"—he then gives the names of "the president of the chamber of representatives," of "the secretaries" we presume of the same body, of the minister of war, and of the general-in-chief. "The other offices," he says, "which are necessary for the administration of the government, will be filled without delay by gentlemen who inspire confidence." An impudent and inquisitive person might enquire, where is the Chamber of Representatives, and how is it composed? and who appointed the President? but we trust for the present no such persons will present themselves. Cespedes has issued a second proclamation to the people, and Quesada one to the army, filled with the noblest sentiments; but there is an unpleasant report from Havana that the bloody proclamation of Valamesda, issued April 4, to which we have more than once referred, was preceded by as bloody a one of Cespedes, issued Feb. 18, and the Spanish authorities produce the document. To this the New York "Cuban Republican Junta" reply, that it is true that Cespedes issued the bloody proclamation referred to; but that it was called forth, as the preamble to it, which the Spaniards suppressed, expressly states, by the Spanish atrocities. There are reports at this writing of the landing of 700 filibusters and of a fight between them and the Spanish troops, in which the latter were worsted. But we may as well say, frankly, that except the Cespedes proclamations, there has not been a particle of news from the island during the week in which any sensible or intelligent person can place any confidence, and yet there has been a good deal of news.

The agricultural news from the South—the important news just now—continues to be good, except such as relates to some local disaster like the breaking of the levee at one or two points in Louisiana. Cotton and corn are reported as doing well, and the recent assembling at Memphis of seven hundred delegates from every Southern State, all bent on industrial reorganization, is a promising sign. It is a pity that it was marked by one incident which shows that it had too much likeness to the curious gatherings which used to meet in old times and prove that slavery had nothing to do with the decay of the South, and that a line of screw steamers out of Norfolk was all that was needed to rehabilitate Virginia and make Portsmouth eclipse New York. Still it is expecting a little too much to expect a Southern gentleman, if he had the luck to have it, to refrain from reading to a mass-meeting of other Southern gentlemen a letter from General Lee; and we certainly should not expect the mass-meeting of Southern gentlemen to refrain from most enthusiastic and very long-continued applause. Only it was not strictly commercial, considering the source whence the South will have to draw much of the capital it hopes for; it helps a little to postpone the day of Northern disbelief in stories of Southern hostility to Northern men; and not altogether unreasonably. In Virginia there is some taking up of small farms by the European immigrants, of whom a slender stream sets towards the South, most going to Virginia or to Texas. That the latter State needs a little Northern immigration may be suspected when it is said—without contradiction and seemingly on good authority—that in Galveston, the largest city in Texas, there is but one man who deals in ice, who therefore has a monopoly of the business, and that, too, in a place with an almost tropical climate; that there is not a dry-dock in which a vessel may be repaired; that there is not a brickmaker, though material for bricks exists in abundance; that there is not a hat-maker, nor a broom-maker, nor a turning-lathe; that the whole State cannot show a manufactory of "fertilizers," though bones are plenty; nor a shoe factory; nor a paper-mill; nor a chandlery; nor a carriage factory. Most of the immigration into Texas goes to the German district, and is agricultural in character.

The key to the change of ministry in Italy, which was announced without explanation by the Cable a fortnight since, is found in the latest advices by mail, according to which the event is one of the most fortunate which has happened to the kingdom for many a year. Instead, as it appeared, of the Menabrea ministry being forced to resign after having survived one grave crisis after another with undiminished vigor, the Government has in fact received a most important accession from the Piedmontese faction, called the *Permanente*, which, ever since 1865, has voted with the Opposition to embarrass and defeat the measures of what may be called the National party, as well as the party of order and reform. This transfer of allegiance not only increases the Government majority in the Chamber, but really marks the end of that particularism—to borrow a word from German politics—which has hitherto been the greatest enemy of solid progress in Italy. The Neapolitan faction remains, but perhaps not for all time; and the state, which has never lost ground since Mentana, now feels that the epoch of assured prosperity has been reached. This happy result has been brought about through the initiative of Count Cambray-Digny, which accounts for his remaining in the reconstructed Cabinet, while several of his colleagues retired in favor of the Piedmontese. Prior to this change, it was argued that the new partisans of the Government ought not to be rewarded by immediate admission to the Cabinet, lest the contrast between their late hostility and their present loyalty should afford the Opposition too great a handle, and weaken the ministry itself for the measures it might have to sustain; and lest there should prove to have been not a union, but merely a coalition of parties. This fear, however, is hardly justified in view of the special, well-known grievance which animated the *Permanente*, and which bound them to find fault with everything that emanated from a government sitting in Florence instead of in Turin. Once reconciled on this score, and induced to forget the pangs of diminished self-importance, this party could without difficulty advocate any measure on its merits, and be at the same time a shining example of patriotism and political abnegation.

The elections in France have resulted in raising the minority in the Corps Législatif from 45 to 90, the Government candidates elected numbering 193. When it is remembered that the Opposition began in 1852 with five members only, and that it was owing solely to the exertions of the workingmen of Paris that these were elected, this seems a great gain; but when it is remembered, on the other hand, that it has taken seventeen years to make it in, it does not seem so very great after all. However, forty-five Opposition members proved a serious annoyance to the Government in the last legislature; and ninety combining with the lukewarm—of whom a certain number are sure to make their way in even under the Government wings—the coming session will probably be very stormy. Emile Ollivier, as has been foreseen ever since he took to coquetting with the Emperor, and especially since he wrote his book giving an account of it, has been dropped out; but he appears to be the only one of the original Liberals who has come to grief.

From England, the news relates wholly to the *Alabama* matter and Mr. Sumner's speech. The press is occupied about little else. A sort of panic appears to have been produced by a letter of Goldwin Smith's, published in the *Beehive*, advising the abandonment of an emigration enterprise, for which he had been collecting information, and expressing his belief that resident English might shortly have to quit the United States. This was, of course, taken as an expression of his opinion that war was imminent, and the various papers began to talk in view of the emergency. The *Pall Mall Gazette* is disposed to fight, and so are all the Tory papers; the *Times* argues in a paternal spirit; the *Daily News* and *Spectator* assail the Sumner speech with great sharpness; and the *Broad Arrow*, a paper devoted to the interests of the Civil Service, is not only ready to go to war, as a painful necessity, but as a pleasant duty which could not but have a satisfactory and triumphant conclusion. Mr. F. W. Newman, the brother of John, writes to the *Star* defending Mr. Sumner, on the ground that the very violence of his language, by giving free vent to the popular feeling, had a tendency to soothe popular resentment, and that it served the purpose of convincing England of her sins and shortcomings; and he ridicules the idea that the rejection of a treaty is an implied menace of war, or that Mr. Sumner's speech contains any such menace. But he defends the conduct of the English Government in issuing the proclamation of neutrality on the strength of a quotation from "a memoir of the Hon. John Jay on emancipation," which states that in August, 1861, Mr. Seward advised American Ministers in Europe that "the President, so far from rejecting, willingly accepted the doctrine that the Federal Government could not reduce the seceding States to obedience by conquest;" so Mr. Newman proposes that Englishmen should suffer for the "misdeeds" of their Government, and Americans for the "misdeeds" of theirs; but until it has been settled what are and what are not "misdeeds," it does not seem to us that this suggestion contributes much towards a satisfactory arrangement. There is no sign of war that we know of anywhere but in London; and there it will probably be confined to the "Household Troops" on one side and the correspondent of the New York *Tribune* on the other. The latter is evidently bent on battle, and is determined not to be taken alive, and his whoops and shrieks come over the ocean on every blast that blows.

Mr. Sumner is, it seems, receiving anonymous and insulting letters from "English bullies" on account of his late speech, and has begun to hand them over to the reporters for publication. The object of publishing them must either be to show that there are ruffians in England who write anonymous letters—which every one knew before—or that Mr. Sumner is undergoing martyrdom. We presume there is nobody in this country, or any other, occupying a conspicuous position, who is not exposed to this kind of annoyance; but then sensible men usually put anonymous letters, whether filled with abuse of the receiver or of anybody else, in the waste-basket. The cases in which statesmen call reporters in to copy them and print them are happily rare, and long may they continue so. Even the luxury of being the victim of persecution can hardly be enjoyed through them, as nobody knows who writes them, and a public man might horrify the world by the publication of a letter threatening to cut off his head and boil him down for glue, which was written after all by a schoolboy or a sot or a lunatic. "Bullies" rarely write anonymous letters; the authors are usually timorous sneaks, who would not hurt a fly unless they could take him unawares. We warrant that the Washington or Boston police will hold Mr. Sumner harmless against all the "bullies" on the globe for a mere trifle. His greatest danger at present, we take it, is from poison. We have our own reasons for believing that, should his foreign enemies decide on making a victim of him for his late address, they will try and get access to his soup.

President Woolsey, of Yale College, who, as those who have read his book know, is no mean authority on questions of international law, though he cannot be called a professional student of it, and who is, as few politicians are, able to speak on such questions as an intelligent human being and not as a partisan, has delivered two lectures to the Senior Class on the *Alabama* case, taking Mr. Sumner's speech as his text. He holds, we are glad to say, precisely the same position as the *Nation* with regard to the total absence of necessary connection between the neutrality proclamation and the sailing of the *Alabama*, and, consequently, the folly and needlessness of treating them as part and parcel of the same transaction, and insisting on what we are sure not to get—an apology for the issue of the proclamation—the *Alabama* depredations constituting of themselves a real and sufficient grief, satisfaction for which ought to be insisted on. Dr. Woolsey also assails Mr. Sumner's theory of "ocean belligerency" as something distinct, in the case of a power like the Confederacy, having several ports actually accessible to trade, from land belligerency—maintaining that the distinction has really its seat only in Mr. Sumner's imagination. Taking up the question whether there was animus in the proclamation, he argues that there was in what was known of the state of things at the South, in the letters of Mr. Seward, the articles of Mr. Greeley, in the general foreboding of the Northern public, quite sufficient reason for believing that the English Government may have issued the proclamation in good faith, without unfriendly intent, and with an honest desire to be neutral; in short, he holds that a "neutral looking at the state of things occurring here might have inferred that a state of war did exist." Coming to the case of the *Alabama*, President Woolsey declares that her departure was (municipally) illegal, and contrary to international law; that Lord Russell was guilty of culpable negligence in not stopping her—in fact, Dr. Woolsey says that "on reading the evidence he felt like shaking him;" that Earl Russell had ample warning; that there was treachery amongst other officials; and that for all this there is good ground for a claim for damages, but that war in support of it would not be justifiable until the British Government had refused to submit the question to a proper tribunal, which we infer he holds it has not yet done.

President Woolsey said in the course of his lecture that he wished it to be understood "that he had not been bribed by British gold" to take the ground he was taking before his young men. This is all very fine for him to say, but does he really expect the intelligent readers of the *Daily Tom-tom* or of the *Weekly Hammer and Tongs* to believe him? Does he not know that one of the favorite devices of these great organs is, whenever any important question comes before the American people for decision, to endeavor to prevent all discussion of it by saddling everybody who ventures to differ from them with some odious imputation before he opens his lips? During the war, and on all questions arising out of the war, the mouths of many honest and capable men were stopped by the cry of "Copperhead." On the tariff question and on all questions of international law, they are sought to be stopped by the cry of "British gold" and "Englishmen;" and by keeping up a good yelling reiteration of these phrases, it is generally possible to frighten timid men into their bedrooms, and some even into the beds and under the blankets. But unless we are greatly mistaken, the day for this particular form of blatherskite has gone by. There never has been a time when it was more necessary for men of intelligence to hold their own against this barbaric clamor and insist on being heard, and we doubt whether there ever was a time when there was a better chance of their succeeding.

THE GOVERNOR'S "FALL."

THE "fall" of Governor Hoffman—or, to speak more plainly, his signing a bill enabling the Erie operators to retain possession of the road in defiance of the stockholders for an indefinite period, after having given the highest promise of purity and integrity during the earlier months of his career—is causing the greatest surprise and lamentation amongst the good people of all parties who admired and lauded him. Even such old and experienced observers as the New York *Times* and *Evening Post* are plunged in tribulation by the revelation of the Governor's weakness, and of course the bankers, brokers, and "prominent financiers" who made haste to praise him when he began to send in his vetoes to the Legislature two months ago, are proportionately depressed.

Now, it was well to praise him when he gave signs of a willingness to disregard party ties and base party traditions and usages, and do his duty. Any man in public life who does good things has a right to the support and applause of good people, no matter what fears we may entertain as to his last end; and there has never been a time when such men needed it more than they do now; but then there is no excuse for the grief and astonishment which the Governor's "fall" is producing. How anybody possessing even a moderate or distant acquaintance with the character and aims of "the men inside politics" could have believed in the reality of his sudden conversion, or have supposed that he was going to break permanently with all the associations and traditions of his public life, passes our comprehension. It is all the more incomprehensible from the fact that Mr. Hoffman is by no means the first backslider of whom this city has had experience. When that eminent man, Fernando Wood, was elected Mayor in 1854, he was fresh from a little "unpleasantness" in the courts, which had resulted in proving him guilty of forgery and embezzlement perpetrated on his own partner. The facts of the case were perfectly well known to all our leading citizens, and the rest of his career, so far as known, had been that of a politician of the lowest class. When he took office, however, he made his appearance as a friend of virtue and good order, and made a decided hit. The police, of which he had entire control, made the lives of the gamblers, mock auctioneers, and prostitutes miserable, and in fact he acted with such vigor against all forms of vice and immorality that the wicked began to wind up their business preparatory to removing. The Mayor's office was crowded every day with bankers, brokers, financiers, and ministers calling to compliment his Honor, and thank him for the noble work he was doing. His swindling operations were spoken of as trifling "indiscretions"—we believe this is now the phrase applied to the crimes of "faithful" men—and in fact he played his cards so successfully that he obtained a gorgeous testimonial signed by the leading merchants asking him to stand for a second term. Once firmly seated, he "fell," as Hoffman has fallen and as O'Gorman has fallen, and as the whole tribe to which they belong are sure to fall sooner or later, no matter what their early promises or reforms may be.

We do not mean to put Hoffman in the same category with Wood as a private individual. But as politicians they have to be tried by the same tests. To expect "a man inside politics" to reform—that is, to become public-spirited, straightforward, high-minded, scrupulous—is to expect him to abandon deliberately a career which he has deliberately chosen, to break with the friends and associates of many years, to give up all hope of political advancement, and to sink into obscurity as soon as his term of office, if he holds one, expires. Had Governor Hoffman held out against the Erie Ring after it had got Tammany at its back, he would, two years hence, have found not only that he had no chance of renomination for the governorship, but that he had lost all chance of ever holding any public office whatever in the gift of the people. All hope of the senatorship, of the vice-presidency or presidency—for, of course, he hopes one day to be President—would be gone; and not only this, but he would find himself, on his return to the city, ostracized by his Democratic associates. He would find himself formally excluded from all Democratic councils and caucuses, and his opinions on political matters treated as worthless, and his character generally stigmatized as treacherous. To set off against this blasting of his political prospects and attendant social discomfort, he would have the good opinion of two or three Republican newspapers, which probably would hardly ever again mention his name, and of a number of respectable merchants, whom he would hardly ever see.

Would the Republicans take him up and reward him for his "noble stand" against corruption by giving him as prominent a place in their ranks as the one he had lost in the Democratic ranks? Not at all. He would find amongst them just as little appreciation of personal independence and integrity on the part of politicians as amongst the Democrats. He would find his honesty absolutely no recommendation to them, while his openly avowed indifference to party usages and obligations would make him an object of suspicion to all "the managers." His professions of conscientiousness and his scruples would be a standing subject of merriment in the more secret party conclaves, and the regular party organs would occasionally refer to him as a designing donkey, whom the Democrats showed their shrewdness in getting rid of. He would find that some of the worst men who have ever appeared in public life in any country or age—men compared with whose careers that of Fisk and Lane, base and shameless though it be, is innocent and pure—stand high in the Republican councils, and exert a powerful influence on the party, and obtain for themselves or their friends some of its best offices, and are supported and voted for by some of its best members. He would find a long course of honesty and integrity of just as little use to a political aspirant in Massachusetts as in the Sixth Ward of this city—a foul record just as little hindrance. He would find in one party, as in the other, a man's title to political honors tried by tests which the worst men can stand just as successfully as, and even more successfully than, the best—that is, the test of temporary adhesion to some piece of political doctrine.

The moral of Hoffman's fall, as of that of so many other men as good as he, is that the respectable citizens, not of this city and State only, but of all cities and States, must give up the notion that they can accomplish anything for good by patting on the back or writing flattering testimonials to anybody who, having got by accident or intrigue into high official position, treats them to a few spasms of virtue and independence. The work of reform cannot be done by chance or by spasms. It is, and has always been, a long steady pull, carried on with persistence and vigilance. We must begin, in the first place, by creating a reasonable belief in the minds of young men who are coming on the stage that unmitigated rascality will prove a disqualification for office in any party. No such belief can ever spring up as long as Republican constituencies send such men as Banks and Butler to Congress, and a Republican administration appoints such men as Sickles and Ashley to high official positions, not only without any concerted and emphatic remonstrance from the virtuous public, but with the hearty approval or the studied silence of the more influential portion of the Republican press. As long as these *facts* meet the eye of the rising generation, our *preachings* of reform must remain vain, and our code of political ethics a mockery, a delusion, and a snare. If the Government went right in the presence of such scandals, we should despair not of its future only, but of that of the race; for it would destroy our faith in the moral government of the world. One of the modes by which Providence works the deliverance of mankind from the reign of knavery is by making public misery one of its consequences. If the community did not suffer when the Fisks were in the ascendant, the world would be ruled by Fisks; if any party could achieve permanent success under the leadership of its knaves, no party would ever effect any reform. Nobody needs to be a sage to know that no permanent change can be made in the moral condition of public life without a vigorous and successful effort on the part of the community either to get rid of "the men inside politics," or, if this be not possible, to terrify them into at least a show of virtue.

MR. SUMNER'S SPEECH IN ENGLAND.

THE effect Mr. Sumner's speech has produced in England has probably surprised very few thinking men either here or anywhere else. The astonishment of some of the newspapers at it has the charm of almost infantile simplicity, but it is nevertheless very amusing. To read some of their comments on it, one would suppose that John Bull was well known to be a saintly character, who went

about the world begging people to point out faults in him, that he might at once own them and weep over them, and that he was constantly advertising for persons whom he might have injured in order to pay them handsome damages. In fact, it is only on the theory that they thought themselves dealing with an ideal, etherealized John Bull instead of the real one, that we can account for Mr. Sumner's delivery of his speech as a means of peaceably enforcing a claim, or for the *Tribune's* sapient proposal that Great Britain should surrender Canada, both as a sign of friendship and an admission of deep and deadly sin. In so far as the speech was addressed to the English public as a means of convincing them that they were in the wrong, and persuading them to do right, it has of course proved a complete failure. It has united the English people in sentiment on the *Alabama* question, and has strengthened the hands of those who are opposed to all reparation whatever. One merit may be allowed it—that of bringing home to the English mind what never has been thoroughly brought home to it before—the fact that Americans, of all classes and conditions, were deeply offended by the course of the English public and Government during the war, and have not got over it. Of this it has all along been difficult to persuade Englishmen, mainly, we believe, owing to the fact that no man of prominence and weight had given utterance to the sentiment. One of the unfortunate consequences of the constancy with which a large portion of the press abuses England year in and year out is, that when there comes a crisis like the present, when real and unusual resentment seeks expression, the newspapers are inadequate to the task, because nobody minds them. They have, owing to the limitations of human speech, to leave it doubtful in the minds of their foreign readers whether the American sense of British perfidy and unscrupulousness is any one year a whit stronger than it was any other year of the last ninety. Congress has thus far done nothing to supply the deficiency. There is not, and has not been for years, a serious debate in either branch on foreign questions. In the House, the illustrious Banks has it all his own way, and his speeches and resolutions of course have long ago ceased to influence any rational person in either hemisphere. In the Senate, the work of commenting on English policy has been left to Mr. Chandler; but no American has ever had the face to ask any foreigner to heeds him. The consequence is that for seven long years the public here has been feeling very bitterly towards England, and has been left by it representatives without the means of letting its feelings be known. The proper mode of giving formal utterance to popular sentiment towards foreign powers is a discussion in the legislature participated in by the leading men of the country. In the United States it is only the Senate which is fitted for any such duty. The Senate, however, mainly, no doubt, owing to its share in the treaty-making power, and its consequent practice of doing foreign *business* in secret session, has the habit of avoiding all public treatment of international questions. In the present instance it has departed from its practice, and published Mr. Sumner's speech as an expression of feeling; and that the speech has served one good purpose in satisfying the English public that people here are exasperated, there is no denying.

But there is no denying, also, that in so far as it was intended to answer the highest end of all oratory—the persuasion of those who differ with you, it has not only not succeeded, but has rendered agreement more difficult than ever. It has strengthened the English enemies of America, and weakened the English friends of America, and, what is worse, has shaken the confidence of the latter in the moral strength of the American cause, and gone far towards preparing them to throw their weight in against it. Many Americans may say they do not care for this; but it is not open to those to say it who have attached so much importance to English "sympathy" that they are half-inclined to fight England for not giving it. The father who whipped his boy for not loving him may not have cared for his boy's love, but the mere fact of the whipping barred the use of this plea in defending the whipping. So that there is really something melancholy in the justification which some of those who have been most clamorous on this matter of sympathy take in contemplating the rage and alarm excited in England by the speech, and the pleasure which, according to his friends the reporters, it gives Mr. Sumner to find himself the object of English abuse.

We have already discussed the speech, considered as a legal statement of the American case. It had some strong points, but the want of logical connection and agreement between them, and the tone of exaggeration and inflation which pervaded it, made it a very unfortunate presentation of our complaint in the forum of international law, and is well calculated to prejudice the American cause in the eyes of foreign lawyers. The statesmen of other countries are not used to the fervid mode of treating legal points at the hands of men high in office. Mr. Sumner, to be sure, is not a member of the Cabinet, but he occupies in European eyes a more important position than that of a member of the Cabinet, in being, as regards foreign affairs, the most important member of a body which even rejects treaties when it pleases, and the one man of the legislature to whose authority on foreign affairs the public generally defers. Men occupying similar positions in Europe always speak under a sense of responsibility, with an abiding consciousness of the gravity of the consequences that may result from their indiscretions. Even if they are not restrained by intellectual pride from making themselves the mouthpiece of mere popular passion, they are restrained by the reflection that they may, if they talk wildly, help to bring on a bloody war.

Our correspondent "America," whose letters we think are as good an expression of the wounded feelings of the best class of Americans as we have seen, has had the merit of not mixing up sentiment with law. He feels offended as a gentleman feels who has been badly treated by another gentleman, and he wants much the same kind of satisfaction. He holds that the code of Christian ethics, properly so called, which prescribes forgiveness of injuries and patience in our relations with wrong-doers, is not applicable to nations; that the first duty of a statesman is to bear the flag with honor, though it might be his duty as an individual to turn his right cheek to the man who had smitten him on the left. This distinction exists, it is true; but as civilization advances, every nation's estimate of what is due to its honor is influenced by the consideration of the grave consequences attendant on all attempts to vindicate it. Hot words and unhandsome behavior between individuals may be avenged simply by coolness, or fisticuffs, or mutual slaughter. In any case, all that happens is that two high-minded and touchy gentlemen have their clothes torn and their lives or limbs imperilled. No great interest is seriously affected by their manner of terminating their differences. But when nations come to blows, the moral and material welfare of millions, both of the present and coming generations, is involved in the contest. The very march of civilization is retarded by every shot that is fired, and fountains of misery are unsealed which often flow for centuries. The man who can approach a controversy which may have to be closed by such an arbitrament as this in the same spirit, and with the same loose watch on his tongue, with which he would approach a difference between individuals, not only need not disclaim the character of a Christian, but would find some difficulty in enrolling himself in any recognized school of philosophy or jurisprudence. The bravest soldiers and the finest gentlemen that have ever lived have been the heartiest in their horror of war, the readiest to exhaust all other means of obtaining redress before resorting to it; and men who really dread war, as all good men ought, are just as careful about creating the state of feeling out of which war may flash unexpectedly as about striking the first blow. Taunts, defiance, and passionate charges are things, therefore, which men in positions of responsibility are bound to avoid until the moment of physical action is near at hand. They have no place in civilized diplomacy, and it is not till the resources of diplomacy are exhausted that the war-drum should be beaten.

THE PROPER PROTECTORS OF WOMEN.

A CASE occurred in Maryland the other day, in which a girl, in a respectable position in life, who had been seduced under promise of marriage, deliberately killed her betrayer as he sat on the piazza of the hotel—firing a second shot into his body, in order to make sure work of it, as he lay helpless. She was of course arrested; but, being considered too good for the jail, she was confined at the hotel of the town where she lived, and was the recipient of marked attentions from the society of the place while awaiting her trial. She was acquitted

at once, and the jury were followed home and serenaded in honor of their verdict. The young man is said to have held a very good character. He was the only support, or the main support, of a mother and sisters; and it was their dependence on him, it was reported, that prevented his keeping faith with the woman whom he had betrayed, and his own weakness was the source of great pain and trouble of mind to him. Nevertheless, his neighbors evidently looked on him as no better than a wild animal, and treated his assassin with as much consideration as if she had defended a babe against a tiger, and honored the jury not only as dispensers of justice, but as vindicators of the oppressed.

About the same time, in Quebec, a jury acquitted a young man who had assassinated the seducer of his sister—though in this case, it must be admitted, the seducer was one of a peculiarly heartless and depraved type. The Cole case in Albany was treated by the jury in a somewhat similar way. In fact, it may be said that, in the eyes of juries, the killing of a seducer, either by his victim or by any of her male relatives, is perfectly legal; while in the eyes of the community it is, on the whole, praiseworthy. Moreover, the friends of the murdered person have no means of putting in any plea in extenuation, even if they have one to urge. The public prosecutor confines himself to proving the killing, and the deliberation with which it was done. The defence then proves the seduction, pure and simple, as the French say, and the case is closed. In fact, both the verdict of the jury and the verdict of the public are based on the assumption which every man knows to be incorrect—that seducers are always depraved villains, who do their dreadful work, in pure wantonness, on a perfectly innocent and unsuspecting passive object, and that the woman in no way contributes to her fall. The theory that she may have had a share in bringing it about receives no consideration whatever; and, of course, it can hardly be supported by evidence, because from the very nature of the occurrence, the circumstances which led to it are never known to more than two persons; and one of these has always been put out of the way by death before it becomes the subject of judicial enquiry. The strongest argument in favor of jury trials has always been that it brings the average common sense and everyday experience of average men to the consideration of questions of guilt or innocence, liability or non-liability, arising in controversies between individuals. This argument is generally sound; but it may be safely said that in the trial of all suits arising out of the relations of the sexes, it totally fails. The jurymen discard their individual experience of the facts of life completely, and look at the subject wholly from the point of view of an outraged father or husband—that is, of a man maddened by a terrible misfortune. This amounts to saying that the trial of such cases before juries is a disgusting farce; and that is exactly what we mean to say.

It is after the trial is over, however, that its absurdity becomes fully apparent. The jury who have acquitted the prisoner, and the judge who has charged in his or her favor, and the lawyer who has thundered against the dead seducer, will, on coming out of the court-house, meet and receive into their houses with perfect cordiality men whom they know to have been guilty of the very offence for which they have just pronounced assassination in cold blood a suitable penalty. They will vote for them for Congress and the governorship, sign recommendations for them for high and responsible public offices, and subscribe to public dinners in their honor. In one celebrated case, which was tried in Washington some years ago, the prisoner, who had murdered his wife's seducer, and over the woes of whose "desolated home" the court, jury, and bar almost blubbered, and who was acquitted at once, was himself a notorious profligate of the very lowest type—a kind of man, in fact, with which the contemporaries of Tacitus were, we are glad to say, more familiar than the communities of the modern world.

This disposition to treat lightly murders committed in defence of female honor cannot be ascribed, therefore, to a morbidly high estimate of the value of female purity to society, because if it were we should have rigid, nay ferocious, legislation for its protection, and we should see male offenders against it visited with severe social penalties. What is really at the bottom of it is a remnant of the feeling which—though of different degrees of strength in different communities, and though in this and others in our own day kept down or disguised by religious or moral culture—treats the immoral pursuit of women as a kind of a game of great danger, but which ought to be left open to anybody courageous enough to engage in it, and success in which is, on the whole, a sign of the possession of certain enviable qualities. Should the player fail, however, and lose his life, men hold themselves at liberty to say—served him right; he knew the risk before he engaged in the enterprise. Society puts itself towards the parties in the relation of an umpire, and simply watches the contest, notes the result, decides whether the play was fair, and dismisses the victor with a pat on the back. At the same time, as something must be done for the protection of the family, while putting the whole burden of the guilt on the seducer, and justifying his violent death, it treats its victim afterwards as just as guilty as he was, and makes an outcast of her. In fact, to sum up, they enquire into his death on the theory that he was the sole culprit, and after the trial treat her as if she was the sole culprit.

The Women's Rights advocates have been recently looking into this extraordinary state of things, with the view of finding a remedy; and what seemed to meet with favor with them, if rightly reported, was the time-honored device of making such a change in public opinion as would visit the seducer with the same social penalties as his victim. The infliction of the same social penalties on both parties is, however, something which we shall probably never see. Moralists have been trying to bring it about for over two thousand years, and have not succeeded. The Stoics preached the equality of their guilt before the Church began to preach it, and the Church has preached it incessantly ever since, but in vain. The reasons of their failure, it seems to us, are not far to seek. In the forum of abstract justice, temptations are put into the scale against guilt; and it cannot be denied, and never has been denied, that men's passions weigh heavily amongst temptations in this particular field of vice. In the second place, there is no code of morals, however lofty its sanctions, the enforcement of which is not modified by purely utilitarian considerations. Society refuses to treat men's licentiousness with the same severity as women's, because the consequences to the family, to children, and to property are less serious, and must, in the nature of things, always remain less serious; so that, though in the forum of conscience or the purely religious forum, such as that of the church, a male seducer may be treated as equally guilty with his victim, no such theory will probably ever govern the conduct of society at large.

The best remedy within our reach, and it is a remedy to which the champions of women's rights are bound to pay particular attention, is the training of the female understanding to weigh probabilities and estimate consequences and control feelings. It is impossible to believe that after society has been reorganized on the footing of "equal rights," women or their husbands or fathers will be allowed to avenge the wrongs of the sex by acts of violence; and the exact rights and wrongs of a case of seduction is something no court of justice can ever weigh. Not only must it always be impossible to ascertain the exact facts of each case, but the peculiarities, both moral and physical, of both parties must enter so largely into the result, that no human tribunal could ever divide the guilt between them with even an approach to fairness or accuracy. Women must, therefore, be taught to take care of their own honor, and to bear unsupported the loss of it. The present division of the responsibility of its protection is a disgrace to our civilization.

THE DECAY OF NEW ENGLAND.

It may not be known to most of our readers that whenever the *World* desires to adorn the tale of the profligacy of the age with a particularly pointed moral, the great storehouse from which it draws its illustrations is New England. Whenever any peculiarly cruel case of desertion, bigamy, or child-murder occurs in any of the Middle, Western, or Southern States, the *World*, in chronicling the fact, couples with it the reflection: "These are as bad as the things which happen in Massachusetts." Now such reflections as these strike sadly on the ears of those who have been accustomed to see Massachusetts and her sister States held up to the admiration of mankind as the home of all the virtuous. It is indeed amazing that the time should have come when Sybaritic New York should denounce Puritan New England.

Nor is it only the foreigner who mocks at her. Within her very gates is the enemy. In the first place, there is the arch-fiend, Dr. Allen, who claims the credit of the discovery that the native New England population is dying out—a discovery the truth of which we have disputed in these columns, yet none the less must we admit the appearance of the doctor's lucubrations to be indicative of the dying-out of something or other—perhaps public spirit, perhaps local pride, perhaps self-confidence—in that section of the country in which he writes. Thirty years ago, if a prominent *savant* or even a prominent minister had boldly avowed the belief that the native population was disappearing, he would have been flayed alive. Not even Dr. Channing would have dared to face the scorn which would have followed the declaration of such heresy. But to-day Dr. Allen makes a reputation out of it. And not only is it openly asserted that the Puritan stock is diminishing, but even that such of it as remains is no longer what it should be. Strange stories are afloat (Massachusetts men circulating them, be it remembered) that, not content with the natural decrease in population, the descendants of the Pilgrim band are taking measures calculated to still further reduce the birth-rate. We are unable to say whether this is so or not, as it is not a matter about which statistics are readily furnished by those best able to give them; but the curious part of the matter is, that the scandalous stories which have got about should have fastened themselves upon New England. Why New England, when it is supposed that every villany flourishes best in New York? Where corrupt judges abound, and the watering of railroad stock is done by Fisk and Lane, and "The Butcher-cart Thief" dwells, and Reddy the Blacksmith, and the criminal population control politics, and O'Brien is elected sheriff, there certainly, one would say, misoprogenitiveness might be expected to flourish. But no; it is against Massachusetts that Dr. Storer complains.

Then the Irish are said to be rapidly filling up the places which are left vacant for them by the missing natives. Thirty years ago the American operative system was the pride of Massachusetts. The mills at Lawrence and Lowell were worked by pure-minded and industrious Americans; now, how changed the scene! The American operative is no more—nothing is seen but the embruted face of "six hundred years of wrong." The whole manufacturing population is Irish, with a few native superintendents and treasurers scattered about here and there to keep the machines in running order. It is New Ireland, not New England any longer. As it is in the country, so it is in the city; in Boston, is is said, the Irish vote controls, or will soon control, politics, and a State Police has been established to enforce laws with which the municipal constabulary do not sympathize. It is said that a quorum of the Board of Aldermen can more easily be found at the Parker House than in the City Hall; and recently the question has arisen whether there is not some partnership between the city police and the housebreaking "ring." We do not pretend for a moment to decide the question, but the opening of such discussions does not tend to improve the reputation of the State; and what the tendency of putting it in the hands of a legislative committee is, we all know only too well.

Nor is this all. We have lately conversed with an intelligent gentleman from Massachusetts, who, being a "gold gambler," naturally took a gloomy and unpatriotic view of things, and from whose criticism, therefore, a great abatement must of course be made. Indeed, if we were to take as gospel-truth what the speculating and commercial classes say about the country and its various sections, we hardly know where we should be at all. But, thank heaven! we may yet find unalloyed truth in the editorials of the daily press and in the speeches of Congressmen off duty. Still, in the absence, for the last month or two, of any authoritative declarations from those quarters on the subject we are now discussing, it may not be inopportune to cite what this gentleman whom we "interviewed" said; and it was this: That in national politics, New England had sunk below the level even of New York—that was his way of putting it; that the majority of her Congressional delegation were nobodies, and the one or two brilliant exceptions were disgraceful demagogues, who had made a political reputation out of the want of a military one. One of them, he said, openly advocated national dishonesty, and was elected to Congress because his constituents thought that of no consequence. The other spent his whole time in fomenting dissenions between this country and nations with whom we were at peace. As for such fellows as Morrissey, they might be corrupt and ignorant—no one expected a prize-fighter to be anything else, and they had consequently very little influence; but the spectacle of Banks and Butler legislating was a sight which, if long open to the public gaze, would pervert its moral sense altogether. He did not confine himself either to Massachusetts, but went on to say that Sprague in Rhode Island, and the shadow of Barnum hovering over Connecticut, were enough to make any one blush for his country.

We confess that at the time we hardly knew what to say. The gold gambler always has such a truculent way with him in discoursing on these themes, that it is awkward to meet his arguments. Still, after mature reflection, we are inclined to think that there is a good deal to be said on the other side. The fact is that the New Englanders, after having been content to inhabit the rock-bound coast and sterile uplands east of the Hudson for two hundred years, have lately made up their minds that there are other parts of the world more highly favored than their old home, and places where man can obtain more substantial happiness with less difficulty than by ploughing either the granite of the Berkshire hills or even the richer lands where the old "river gods" of the Connecticut used to live and govern. The result is that at present the New Englander is engaged in his old work of emigration. He is leaving his home, and making a new one for himself in Ohio, in New York, in Texas, in Florida. We do not offer this as a new theory, for the fact is of course generally admitted, but its necessary effect upon New England has hitherto not been regarded as much as its probable effect on the lands which he is selecting for his descendants to inhabit. We are for ever felicitating ourselves that the West is being peopled in great measure by the hardy citizens of Maine, but we are continually forgetting what sort of an effect this is likely to have upon Maine. As the poor but ambitious farmers of the East leave their domicile, a new stream must flow in to take their place, and that stream is Irish. The moment this movement begins, it accelerates the other; the two races are in the field of labor to one another as specie and paper are in the field of finance; the poorer driving the better out. The Lawrence mill-hand of twenty years ago is an Iowa capitalist of to-day; the mill-hand of to-day is an Irish peasant. The population is rapidly becoming divided into two sharply defined classes: the Irish laborer, and the native employer. The result of this state of society is not particularly delightful in any aspect. Still, there is something to be said for New England. Notwithstanding the recent assertion of the *Times* that it would undertake to gather together in this city a larger number of highly cultivated men and women, at a shorter notice than such a collection could be got together in Boston or Springfield, few people, we are afraid, would agree in this bold assertion, for most people yet think that New England contains the most cultivated Americans there are to be found, and that Harvard and Yale are more likely at present to produce eminent culture than Columbia and Cornell. If she produces such men as Barnum and Sprague, does she not also give the country such men as Andrew and Hoar? If such soldiers as Butler and Banks are to be credited to her, so are many others. And we think there are signs that the days of these men are passing away, and that the time may not be far distant when a new kind of statesmen will control her destinies. Meanwhile, whether the decay goes on or not depends rather on her own practical exertions than upon the ability with which she conducts the controversy with the newspapers and public men of this city as to which is the wickedest place in the world, New York or New England.

THE POWER OF TALK IN THE UNITED STATES.

Mr. Albert Mario recently wrote to a Florence paper, that (in substance) anybody in the United States might write and publish against its form of government, and in favor of a monarchy or empire, without disturbing the slumbers of the Attorney-General; but that of course the case would be very different should a few or many rise in insurrection against the Union.

Thereupon the *Perseveranza* of Milan asks the *Nation* the following questions:

1. Are the laws in all the States of the Union the same in regard to freedom of the press?

2. Would the authorities take no notice of a paper which should habitually and outrageously vilify the republican form of government, and constantly urge its overthrow?

3. If there is no legal restraint or menace, is the temper of the people such that they would tolerate such a journal in its course?

4. And if a mob should destroy the paper, could redress be obtained in the courts?

There are, we believe, no laws in force in any State in the Union now which forbid any man discussing any subject he pleases, either orally or in print, provided he does not defame individuals. Should he do so, they have their remedy, either by a civil or criminal prosecution. If they choose the criminal prosecution, the public prosecutor will, of course, conduct the case in the same way, and under the influence of the same motives, as if he were conducting a prosecution for theft or manslaughter. There was an attempt made in 1798 to restrain abuse of the Federal Government and its officials, by declaring it a criminal offence to libel them, permitting the defendant, however, to plead the truth of his allegations; but the act was extremely unpopular, and it was very soon repealed. In we believe all the Slave States, during the existence of slavery, the circulation of "incendiary publications"—that is, printed or written books, papers, pamphlets, or circulars containing any sentiments, doctrine, advice, or, to use the words of the Mississippi Statute, "inuendoes calculated to produce a decidedly dangerous or rebellious disaffection among the colored population of the State"—was a criminal offence punishable with greater or less severity. We doubt, however, if many cases under these statutes were ever tried before a judicial tribune. We have never heard of one. What usually happened when anybody was suspected of circulating or publishing or selling seditious publications was, that he was "waited upon" by a "committee of the citizens"—that is, a mob—and invited in lighter cases to leave the State instanter, which he invariably did; and, in graver cases, was murdered, or tarred and feathered, or ridden on a rail. For several years before the war, the Southern postmasters, with the connivance of the Federal Government, refused to deliver to subscribers, at the South, Northern papers which advocated anti-slavery opinions, and no bookseller dared to offer anti-slavery books for sale.

During the war there were a few places in the South in which newspapers maintained throughout the struggle their hostility to the rebellion. Unionist papers were generally suppressed either by mobs or the hand of military authority. At the North cases occurred here and there, especially in the Border and Western States, in which papers of decidedly "Copperhead" tendency were either mobbed, or compelled through fear of mob violence to moderate their tone; but there was no large city at the North in which throughout the whole war there did not exist one or more publications which treated the rebellion as justifiable, rejoiced over Confederate victories, and denounced the Union soldiers as brigands, and the leading officers of the Government as criminals of the blackest dye. One or two such offenders in regions bordering on the theatre of war were tried and punished by military courts, and a few more were assailed by mobs; but no attempt was ever made to prosecute them before a civil court, for the simple reason that there is no law in the United States to prohibit anybody's denouncing the Government or advising its overthrow. There is published in this city at this moment a paper called the *Imperialist*, which openly advocates the substitution of monarchical for republican institutions; but the only penalty it has to fear is not being bought by many people. There were at one time legal restrictions in Massachusetts, and, if we are not mistaken, in one or two other New England States, on religious discussion, but they have everywhere been done away. There is now only one political offence known to the jurisprudence of the United States, and that is treason; and treason consists in levying war against the Government; and to bring the offence home to anybody he must be proved to have committed "overt acts."

So that Signor Mario is strictly correct when he says the Attorney-General does not trouble himself about seditious publications. A paper might devote itself daily—and thousands of papers do—to exciting "hatred and contempt of the Government," as they say in France. If they get subscribers enough to live, so much the better for the proprietors; if they do not, so much the worse for them; the world goes on all the same, and the Government stands. The authorities would not and do not notice them, for the simple reason that there is no law to enable them to punish them. In fact, it may be said that the principle is firmly established in the United States that, to verbal attacks on the Government, verbal replies are the only proper defence. If anybody says a particular official is a thief, he can be sued for libel on the individual; but the Government in its political capacity in no way concerns itself with the proceeding. We do not believe that a publication advocating a change in the form of government would now have anything worse to fear in any part of the Union than bankruptcy.

The basis of this indifference, which seems so strange to foreigners, is the general confidence in the might and wisdom of the majority. Everybody feels that an attempt at revolution would, in the absence of a great standing army, be ridiculous, unless the majority were in favor of it. If the majority were in favor of it, however, there would be no need to resort to violence, and the desired changes could be effected, as they are every day, by the ordinary machinery. The establishment of any other form of government than a republican one is forbidden by the Federal Constitution. There may be men who think this restriction a hard one, and who would like to do away with it, and who think the establishment of a monarchy possible, but they are classed with the slightly crazy enthusiasts, and nobody takes the trouble to argue against them.

In saying all this, we beg to assure the *Perseveranza* we are filling our columns with what Americans will consider commonplaces. We doubt if the information will be especially valuable to people like the Italians or Frenchmen, who have not tried the experiment of free government long enough to be satisfied of the power of mere talk in bringing about political changes. In both the United States and England, the public has again and again seen the most momentous modifications made in the government as the result of protracted discussion or "agitation," as it is called. This experience has made such a profound impression on all minds, that even the wildest enthusiast persuades himself that if he can only get the means of publishing a paper, he will eventually bring the majority over to his way of thinking. There is not an institution or social relation existing in the United States at this moment for whose abolition somebody is not laboring in the press or on the platform. There are papers and associations working for the abolition of capital, of wages, of property, of marriage, of the family, of animal food, of penal laws, of bolted flour, of taxation, of the army and navy, of colleges, of churches. But the last thing anybody thinks of is asking or giving to any institution, or doctrine, or custom the shield of legal protection. The law offers nothing even to the Government but a fair field and no favor. Everybody and everything has to submit to be questioned by all comers; and everything and everybody is questioned with greater or less freedom. *All* the results of this system are certainly not admirable. The license of the press is often revolting, but then the press improves most, and is best restrained, under the influence of public opinion simply. We have no doubt the best thing you can do with a blackguard who wants to assail somebody is to give him the means of doing it. He is less mischievous in print than he will be out of it.

ENGLAND.

LONDON, May 14, 1869.

THE great topic of the past fortnight has, I am sorry to say, been the dispute upon which I said a few words in my last letter. Mr. Sumner's speech has been the text of a great many newspaper articles, and has occupied much private conversation. There has been something like a panic in regard to 5-20 bonds in the City; and, in short, the prospect of increasing difficulty in our relations with America has caused more apprehension and annoyance than on any recent occasion. One circumstance which has contributed very greatly to this state of feeling has been a letter from Mr. Goldwin Smith. The respect which all Liberal politicians feel for that gentleman is so great that I would not lightly accuse him of imprudence. At the same time, I feel bound to say that his letter was singularly well calculated to produce an uneasy feeling, and one which I cannot but hope is more than the facts would justify. Mr. Smith, it seems, had been consulted in regard to the prospects of an English emigration, and the pith of his letter consists in the statement that there is so much danger of an interruption to friendly relations between the two countries that he cannot at present give any information on the subject. This has caused a marked sensation, and has excited many comments in the press of both parties. If, it is said, matters are so serious that a gentleman who speaks so decidedly from the American point of view as Mr. Smith, considers that the probability of a rupture is to be seriously taken into account by intending emigrants, we must be prepared for very unpleasant contingencies. If the *Standard* or any Tory paper had said such a thing, we might have set it down to their general hostility to America, which is naturally prepared to exaggerate American hostility to us. But when a high authority, who is

in some sort the ambassador of English Radicals to their transatlantic friends, finds it necessary to anticipate serious trouble, the significance of his remarks is very different. I have been informed by several persons of high position, who are generally little given to such suspicions, that the United States Government has made up its mind, with the general agreement of the people, to declare war against us, to seize Canada, and to demand payment of some hundreds of millions of pounds sterling.

You know far better than I can do how far this impression is justified by the state of American feeling. English opinion, so far as I have been able to observe, has been remarkably unanimous. We have, it is generally said, made all the concessions which the United States have any right to demand; we do not wish to retreat, and we cannot go further. If additional claims are put forward of the nature indicated in Mr. Sumner's speech, we must civilly and firmly decline to take them into consideration, and leave it to the United States to take the next step as may seem good to them. This has been the substance of all the expressions of opinion, whether in public or private, that I have been able to hear; and it has of course been mixed with a good many demonstrations of the unreasonableness of the American people in fancying that they have any serious grounds of complaint against us.

I will not, however, dwell any further upon this view of the question, because I sincerely hope, and even venture firmly to believe, that the controversy has not so threatening an aspect as some people have been trying to prove. But I may perhaps add a few remarks on the general state of English feeling upon the subject. Nothing is more desirable, to my mind, than an increase of friendliness between the two countries—not merely for the obvious reasons which have been put forward in dozens of after-dinner orations, including those of poor Mr. Reverdy Johnson, but because I think they are singularly well fitted to correct each other's failings. Their differences, as much as their points of likeness, make a better feeling desirable. Each nation is admirably qualified to criticise the other; but criticism is never so effective as when it comes from a friend. We—if you will allow me to speak frankly—could teach you some very useful lessons; I say nothing of free trade, which seems to be sometimes denounced as a diabolical device of perfidious England; but I may suggest that a higher standard of morality and efficiency in public officials would not be a bad thing in America, and that on that point they might learn something from the poor old mother country. Unluckily, when we denounce the spoils-of-office principle, we generally improve the occasion by arguing that all democracies are necessarily corrupt and degrading, and in that form you can hardly be expected to receive our advice. Far from sugaring the pill, which could only be asked by children, we smear it with a few drops of vitriol, which even grown people may fairly dislike. In England, on the other hand, we have much to learn from you. We are advancing by no imperceptible strides in the direction of democracy; but if we go with eyes constantly averted, groaning and shuddering at every step, we shall probably stumble and blunder. If we accept the inevitable cheerfully, and make the best of what is coming, we may gain the benefits without the frightful evils of a revolution. Now, the American example is constantly and more closely than ever before our attention. Everything which encourages an anti-American feeling in England is so much thrown into the scale of obstructive Conservatism; everything which tends towards a better sympathy between the two nation smooths away difficulties in the path of genuine reformers. A war with America—I can scarcely write the words with patience—would be an evil not merely in a material point of view, though it would be bad enough as a mere question of pounds and dollars, but because it would imply a reaction of which the ultimate consequences would probably be disastrous in the extreme. Therefore, a merely selfish desire for the interests of my own country makes me look with aversion on every new outbreak of international antipathy.

The same principle, however, explains that a really cordial feeling between our governing classes and the United States is scarcely to be expected in the present generation. An ordinary Englishman in the upper ranks, with a great respect for landed proprietors, a liking for a lord, a weakness for the Established Church, and a fair share of the prejudices which gather round those institutions, will never really admire a people which exists in defiance of them, and boasts of its emancipation. The English upper and middle classes disliked slavery; but they had no lively appreciation of evils which existed at a great distance in a state of society of which they had no experience, and which was rather a matter of abstract speculation than of any pressing or immediate importance to them. On the other hand, they disliked democracy with an intense personal hatred not unmingled with much fear. They were very comfortable and well off, and had things pretty much their own way; and though willing to be liberal toward dinnerless and houseless poor, had no notion of allowing the ragged part of the population to assert much power in the management of affairs. So long as a poor man touches his hat respectfully, and goes to church pretty steadily, he ought to be patronized, lectured, and improved; but, at any price, he must accept his station. Therefore the lively antipathy to democracy altogether overpowered, during the late rebellion, the theoretical dislike to slavery. I speak, of course, only of the majority of the upper classes—the result of the war has made some change. It has made contempt impossible; we must all acknowledge that the United States form a very big, if not a very great nation; more than this, it has strengthened, to some extent, the democratic party in England, and has made people willing to acknowledge that Americans had more in them than was generally believed. But it would be absurd to suppose that the dislike to which I have referred was suppressed, though it might be smothered; it was so far diminished that, in the absence of any provocation, a better state of feeling would have every chance of gradually growing up in its place; but it is equally true that a serious difficulty with America would give it fresh life, and cause another outburst of the old passionate vituperation of democracy in all its shapes. There is indeed this difference, that affairs in America are far more familiar to most Englishmen than they used to be, but familiarity does not of necessity breed affection.

The moral I wish to draw is not a very novel one; but I hope it may justify this rather long disquisition. It is, in the first place, that people who can raise themselves above national animosities—always foolish and sometimes dangerous—must wish, in the interests of the human race generally, to see the growth of a better appreciation of the two countries by each other; and, in the second place, by way of corollary, that on this side (as I presume on the other) mutual good feeling is a plant of tender growth, and might easily be stunted by an untimely storm. At present, we are in that neutral stage when, without any particular cordiality, we are, I believe, fully impressed with the policy of dealing in a fair and friendly spirit; and, if we are met with corresponding readiness, I can see no reason why a satisfactory settlement of our difficulties should not be attained At the same time, I repeat that the pretensions sanctioned by Mr. Sumner appear to us to be overbearing in a high degree, and that to insist upon them would be to call out a strong outburst of the old hostile feeling. Sir H. Bulwer, an elder brother of the novelist, and a very clever diplomatist, is to bring the subject before the House of Commons, when there will probably be an interesting debate.

I turn from the subject, which is at the best not very agreeable, to say that at last the House of Commons is freed from the incubus of the Irish Church. Mr. Gladstone's bill has passed with less mutilation than the most sanguine could have expected, and the great majorities which have attended its passage have probably given it sufficient impetus to go without much injury through the House of Lords. Meanwhile, the Commons having no more important subjects on hand than the education of the people, the improvement of bankruptcy laws, the proper care of the criminal classes, and other trifles of that description, have felt that they might take a Whitsuntide holiday, and adjourned accordingly for a fortnight. When they return, we hope that some business will be done.

Correspondence.

"SPAR FOR WIND!"

To the Editor of the Nation:

Sir: John Locke said, "Define your terms." A failure to discriminate between two meanings of the same word may be as fatal to argument as is the "non-distribution of the middle" in logic. An editorial comment objects to the use of the phrase at the head of this article, because "sparring" is provocative to England, and because the phrase only applies to a case where hostilities have begun. It seems to me they *have* begun, and point to delay, surrender, or instant war.

"To spar" has the original and secondary meanings of the dictionary—1, to fight or box; 2, to wrangle. But it has a third meaning, derived from common parlance, as your expressive word "blatherskite" is derived from "blatterer."

Among pugilists, "to spar," in the phrase objected to, means nothing like provocation or an incitement to attack. It refers to the dilatory process of fending off—keeping an antagonist from close quarters—putting off the supreme moment till recuperation, and still keeping in the ring. Stinging insult would be fatal to this "tactical device." In this sense,

and believing that "hostilities" *did* begin when England sent out the *Alabama*, and will continue until she atones for it, and that we sparred for wind through Mr. Lincoln's administration, the phrase was used in illustration to express the posture of confronting our powerful antagonist, making our full ultimate demand, and, if she shall reject it, laying it on the table, and refusing to settle it *now*, for a song, or by war. I propose a determined silence on the irritating subject till we, our demand being kept alive by official notice, shall be prepared to compel payment or condone the offence. If forgetfulness of injury or any other reason for letting the matter die shall supervene, so be it. The defensive persistence of the phrase, "spar for wind," does not imply a *provoking* continuance of the wrangle, nor is such stimulus necessary to the long-winded temper of

AMERICA.

Notes.

LITERARY.

MESSRS. J. B. LIPPINCOTT & Co. announce "The Reason Why," which is a book of household or domestic science; or, as it is commonly called, familiar science. The "Farmer's and Gardener's Reason Why" is another work—or two other works—presumably of the same general character, announced by the same firm. "The Vicar of Bullhampton" is the new story by Mr. Anthony Trollope, which is to appear in *Lippincott's Magazine*, and afterwards in book-form. The same house have in contemplation an edition, in Latin and English, of the "Regimen Sanitatis Salerni;" or, "The Code of Health of the School of Salernum"—a work sufficiently described in an article on "Some Hygeists, Old and New," in the *Nation* of last week. The editor of the forthcoming edition will be Doctor John Ordronaux, Professor of Medical Jurisprudence in the Law School of Columbia College.——Messrs. Claxton, Remsen & Haffelfinger will publish a volume of translations, by Henry Wireman, of select poems from the works of Rückert, Chamisso, and other German lyrists. "Gems of German Lyrics" is the title of Mr. Wireman's book.——We are informed that the proprietors of the *College Courant* will publish in the two immediately forthcoming numbers of their paper two lectures upon the *Alabama* claims, recently delivered by President Woolsey, of Yale. President Woolsey is well known as a student of the law of nations, his little treatise on the subject having been widely welcomed as a text-book of value. His character, also, is well known, and highly respected wherever it is known, and his countrymen will listen carefully to whatever he may have to offer for their consideration. We have elsewhere referred to the lectures as reported in the *Times*. The *Courant's* report will differ from that of the *Times* in being *verbatim*, and in having the author's revision.

—The suit brought in Cincinnati against Mr. Henry G. Shaw for fraudulently importing books from Canada into this country, paying upon them only a small part of the duty that should have been paid, has just been decided before Judge Leavitt, and decided in favor of the United States Government. The books brought to Cincinnati are therefore forfeited, and there is no real doubt that the same result will attend the suits pending at Detroit, Milwaukee, Chicago, and St. Louis. We do not think that anything was brought out at this trial which throws light on the question whether or not the English publishers, or some of them, who sold Shaw the books were really his partners in an attempt to defraud the United States Revenue; and, so far as we have seen, nothing came out which helps at all to explain the very remarkable action which Solicitor Jordan took when he released the books sold to Mr. Shaw by Messrs. Bell & Daldy—a firm which has not made so full an explanation of its dealings with Mr. Shaw as some of the other English publishers felt it incumbent on them to make. Mr. Jordan is no longer a legal adviser of the Treasury, we see.

—A correspondent writes to us that "the Minnesota Historical Society not long since received a copy of the Domesday Book of England—an edition photozincographed from the original by Col. Sir H. James, R.E., F.R.S., of the Ordnance Bureau (the discoverer of the photozincographic process), on vellum paper, resembling the parchment of the original Domesday. The text is a fac-simile of the original—blots, erasures, and all. It is in two volumes, a folio of 764 pages, and a quarto of 900 pages, elegantly bound in morocco. This biblical rarity, which cost a sum equivalent to $152 in currency, was the gift of Hon. Henry S. Sanford, U. S. Minister to Brussels. Copies of this edition of the Domesday must be very rare in this country." The Boston Public Library, the Harvard College Library, and the Boston Athenæum Library, have the Domesday Book (folio), of the edition of 1783, we presume, and the supplementary volume of 1816 (also in folio). These libraries all have also the Indexes (octavo). The Astor Library, also, is in possession of a copy, complete, of this edition and of the additamenta. We do not know that any of our libraries have a complete copy of the photozincographed work, but the Athenæum Library has that part relating to Cornwall, and the Boston Public Library has those parts which relate to Essex, Worcestershire, and Wiltshire; and both these libraries will, no doubt, get the whole of the work.

—The fourth lecture in the Lowell Institute course, on the early history of Massachusetts, has been printed in the same elegant form as those of Dr. Ellis's and Prof. Washburn's, already noticed. It is by Prof. Joel Parker, and discusses the "First Charter and the Early Religious Legislation of Massachusetts." The larger half of it is devoted to a historico-legal interpretation of the charter, in order to establish (1) the truly colonial, as against the theory of the purely commercial, nature of the enterprise which resulted in the Puritan Commonwealth; (2) the right to set up the government where it was finally transferred—within the limits of the colony itself; (3) the right of general legislation for the plantation, and of specific religious legislation; (4) the right of exclusion and banishment of persons obnoxious to the colony; (5) the right to create courts with full powers of judicature, independent of the courts of the mother country. These points are argued with great closeness and ability, and with not a little humor of the dry sort, with which those are familiar who are familiar with Prof. Parker; with criticism, also, of Bancroft and Story, and other authorities not too well informed in their subject. Then follows an examination of the acts of the Puritans with regard to the several sectaries that gave them trouble, and a general defence of them, by their own standard, against the charges of persecution. The Quakers, who put the Puritan purpose to a strain under which it broke down, are treated by Prof. Parker with less lenity than by Dr. Ellis, though not otherwise with a different judgment; and Longfellow is mildly censured for his misrepresentation of the spirit of the times which he depicts in his "New England Tragedies." Comparisons of Massachusetts with Plymouth and the Connecticut colonies, and with Rhode Island, and frequent references to our present politics, add strength to the lecturer's argument, which, as the product of a very eminent lawyer, forms an admirable complement to Dr. Ellis's conclusions, and closes the question, "What did the Puritans intend by coming to America?" According as this is answered, all subordinate questions must be.

—We are glad to say that the *Journal of Speculative Philosophy* has entered upon its third year and third volume, and may be supposed to be doing tolerably well—which will be good news to all judicious American friends of literature, whether Christians or pagans. It is still in the editorial charge of Mr. William F. Harris, and among its contributors, besides Mr. Harris, the most important it hitherto has had, are Mr. Charles S. Peirce, of Cambridge, a son of Professor Benjamin Peirce; Mr. Bronson Alcott, Doctor Hedge, Mr. Thomas Davidson, a writer of ability in other fields than the philosophic, Mr. D. A. Wasson, and Mr. A. E. Kroeger. Of these writers some have worked as translators, and a smaller number as contributors of original matter. The main value of the magazine has been its expositions of the philosophic systems born in Germany and France—expositions which, as it would seem designedly, have been of a character to attract the reader before somewhat indifferent and more ignorant. Within the two years of its existence the *Journal* has done more to make American readers of intelligent curiosity better acquainted with Hegel, Fichte, Schopenhauer, Cousin, and Schelling than most other agencies combined. There will be a slight change, we are informed, in the form of the *Journal*. It will be printed in larger type and on heavier paper, and will thus become the fitter for binding and preservation. August, October, and December will be the months of publication for the three remaining numbers of this third volume; the first number was published in April. The magazine is for sale in New York by Messrs. John Wiley & Son, in Boston by Messrs. A. Williams & Co., in Cincinnati by Messrs. Blanchard & Co., in St. Louis by Mr. E. P. Gray and Mr. F. Roeselin, in London by Messrs. Trübner & Co.

—After a long delay, which was spent in pretty vigorous discussion and canvassing, Professor Charles W. Eliot, the nominee of the Harvard College Corporation, has been confirmed as President by the Board of Overseers. The majority in his favor was two to one, or sixteen to eight—a majority which, we imagine, would have been larger had all the Overseers been present and compelled to vote, and which would, we think, certainly have been larger had the voting been done by the Board after it had been to a certain extent remodelled, as it will be by the election now at hand. We have little to add to what we have already said as regards this matter.

We offer our best wishes to the new President, who has before him a task in some respects as difficult and delicate as it is in all respects important. The uniting of the *fortiter in re* and the *suaviter in modo* is seldom more to be desired than when the quiet world of learned cloisters, so to speak, is necessarily to be disturbed; when with the help, or at least the acquiescence, of the much-respected men of the old order, we are to try to introduce the new order, which cannot but seem to them anything rather than an improvement. We hope for President Eliot a smooth and pleasant, as well as a vigorous and fruitful, administration; and we feel sure that a just understanding of the precise conditions of the educational problem that is now to be worked out at Cambridge would strongly confirm in their approval of the Overseers' choice all those who, though not upon the spot—and not very well-informed as to just what it is that must be done—yet regarded with favor Professor Eliot's nomination. It is well enough that there has been some delay in the selection of a man to fill so important a post; and there is no reason to regret that there was a stout fight and a decisive result. Thus the winning policy will, or should, be the more temperately and judiciously put in operation, and the losing policy will not, or should not, be factiously insisted upon, nor allowed to interfere with the consummation of the wish and will of the majority. As between a majority and minority alike in all respects, except that the one *is* a majority and the other a minority, the latter ought, we suppose—even in matters which "the brute force of numbers cannot decide"—to submit with dignified good temper.

—It is what the Yankees call "poor pay" for having fulmined over the United States and England to hear the Charlottesville *Chronicle* speak of the fulmining in this manner: "The great Massachusetts bully, Wilson, is a little taken aback at the reception of his great *Alabama* speech in England. He thinks he snuffs danger in the breeze, and is getting ready to craw-fish. It is announced that on the first opportunity he will modify his language and soften his expression." The *Chronicle* is a paper with more ability than good information, and we suppose it never has really drawn a long, full breath since the Whig party died; but, as a rule, it is in a better than semi-animate condition, and it seldom makes errors like this one. The Southern journals, however, are never safe from the handiwork of "our talented young townsman," who, capable of glowing oratory as he is, and proud of his brilliant pen too, is not very apt to earn his weekly salary when the statement of facts is the business. The scorn cast upon "Wilson" in the paragraph above quoted is quite a good specimen of his manner, only it is less dignified and more racy than is usual with him. Mr. Wilson will probably forgive him as soon as Mr. Sumner.

—The late and forthcoming English books which range themselves under the head of Miscellaneous seem to be more interesting than those which are to be classified as works in History and Biography, Religious and Theological works, Scientific works, works of Fiction, or books of Poetry. Messrs. Trübner & Co. publish a translation, by Professor John Dowson, of a Hindustani version of certain Arabic fables. The Hindoo translator called the work "Ikhuwánu-s Safá," and Professor Dowson calls it "The Brothers of Purity." In Hindustani it is as old as the year 1810, or as the days of "the noblest of dignified nobles, the cream of powerful princes, the Hatim of the age and the Plato of the time, the chief of chiefs and hero of heroes, Nawáb Governor-General Lord Minto Bahádur." "So," says the *Pall Mall Gazette*, "did the image of a Scotch Whig peer reflect itself in the mind of a Calcutta moulvie of that period." The fabulist relates that once upon a time ambassadors on the part of the beasts met in conference the ambassadors of men, and exhibited their grievances. The mule, the hawk, and other able representatives of what Erskine called "the mute creation," argued that it was intended that man should not exercise an absolute supremacy over the rest of the animal creation, but a superiority which should be used for the general good. The work has, however, for its main object to advocate the principle of religious tolerance, and this business is done, we believe, by the human interlocutors, and not by the beasts, who but seldom in all natural history have emulated the polemical proficiency of Dryden's unimaginative imaginary hind and panther and boar and leopard. The ambassadors of the men are from various countries, and occupy themselves in setting forth the goodness of their various beliefs. For example, a Syrian, "in woollen garments, with a belt round his waist, and with a censer in his hand, in which he kept burning incense and making smoke," while he spoke something with a bad voice in modulated tones, stands as a representative of (Roman Catholic) Christianity—"the religion of the Lord Jesus"—a system which he praises. Yes, the representative of Mohammedanism replies, "it is true; but he has forgotten to say this: we have not discharged the duty of serving Him; we have become infidels; we pay worship to the crucifix; we eat the flesh of swine after offering them in sacrifice; we have used deceit and calumny against God," etc. This method of advocating toleration, the reminding each other that we are all bad together, is a method that was more serviceable once than now, when the sincerest attacks on beliefs go deeper than a *tu quoque* addressed by holders of one creed to holders of another creed. It is agreeable news that the Viscountess Strangford has given us a volume of "Selections from the Writings, Social and Political, of the late Lord Strangford." A second edition is published of one of a set of works which might, perhaps, have a tolerably good sale here, even in the present depressed condition of the trade in miscellaneous books, and for which a permanent popularity might, we should think, not unreasonably be anticipated. They compose a series of compilations published by Mr. Edward Howell, of Liverpool, and prepared by Dr. C. T. Ramage. That one of the series which has reached its second edition is an eight hundred page octavo, entitled "Beautiful Thoughts from Latin Authors, with English Translations." It is provided with Latin and English indexes. Uniform with this volume are volumes of "Beautiful Thoughts from Greek Authors," from "French and Italian Authors," and from "German and Spanish Authors." Such works need many editors, and Dr. Ramage has probably had assistance, for his books are praised as not bad. Our American public—for reasons which will occur to any one who thinks for a moment of the value that we do after all (certain appearances to the contrary notwithstanding) set upon scholarship and polish, and of our repugnance to making ourselves ridiculous, and of the not perfect character of our educational training—our American public, we say, is eager rather than unwilling to read books of verbal criticism. Perhaps such works are too much in the nature of "specific" doses not to produce a sort of distrust of them; but this is a state of mind in regard to them which may easily be too much indulged. They are, sure enough, very often books of a sort to which a hasty and ill-natured person might apply Swift's remark, that some books he read with interest and profit, though they made him think little of their authors. But something may be got from almost any one of them. A good argument in their favor is an argument that is often urged as against them—oftener indirectly than directly urged—the fact, namely, that out of all the writers in all the world there never yet was a perfect writer, so far as we can tell. Always something a little better may be done in the way of perfectly expressing one's self, and hard as perfect action is, perfect speech is so much harder that perfect actions have been, but perfect speech, it is probable, never. "Rules and Cautions in English Grammar" is by Professor William Rushton, of Cork. His work is "based on the analysis of sentences," it is said; and "border-land words" get some of his attention. The interest felt in the boat race between Harvard on the one side and Oxford and Cambridge on the other, may lead to the perusal of a book, written by an Oxford man apparently, entitled "Hints on Oxford and Cambridge Aquatics," by Mr. E. G. Banks. Mr. Samuel Beal has translated, and Messrs. Trübner & Co. have published, in one volume, two works originally written in Chinese, and written, one of them, in the year of our era 415, the other in the year 518. "The Travels of Fah-Hean and of Sung-Yun" is the English title of the book, and it contains the account of their journeys which two Chinese Buddhists made from their native country into India. An attempt to interpret some of the principles characteristic of Mill's "Logic" and Professor Boole's "Laws of Thought" is made by Mr. J. P. Hughling in his "Logic of Names." Bibliographers will like to see "A History of Early Dutch, German, and English Printers' Marks," by P. J. Berjeau.

—Among new English books in Poetry we have this month more books than good ones—as, indeed, everywhere and always. A volume with a queer and unpromising title is the late Mr. C. G. B. Daubeny's "Fugitive Poems connected with Natural History and Physical Science." Apparently either the title, or the book, or both, is the work of a not very poetical-minded man. Pertaining to poetry are reprints of Wadham's "English Versification" and Puttenham's "Art of English Poesie." Lovers of the Elizabethans and the Elizabethan drama will be glad to hear of a new three-volume edition of John Ford's poetical and dramatic works. The Rev. Mr. A. Dyce—of whose death, which is a loss to English scholarship and literature, we hear as we go to press—was the editor of the new edition, which corrects innumerable errors in the work of Dyce's predecessor, Gifford. In History and Biography we have an edition, prepared by G. H. Maberly, of the "Historia Ecclesiastica" of the Venerable Bede; "An Historic Review of the Military Institutions of France," by M. le Duc d'Aumale, who is not pleased with the Emperor's system; still another "History of Ireland"—this time by a Mr. John Mitchell; a new and cheap

edition of Barry Cornwall's "Memoir of Lamb;" a "History of the Norman Kings of England," by Mr. Thomas Cobbe, a barrister, who claims that he has newly collated contemporary chronicles; and a work, in two volumes, "On Parliamentary Government in England," by Mr. Alpheus Todd. The work by Mr. William Lee, entitled "Daniel Defoe: his Life and Recently Discovered Writings," of which we spoke some weeks since, is now published, and seems to be of great literary interest. Five years ago the *London Review* published six letters written by Defoe (circa 1717) to Mr. De la Fay, of the Secretary-of-State's office, in which it is made manifest that the veteran pamphleteer and journalist was so far from having given up political writing in 1715, as his biographers have said, that he was for years very busy for the Whig Government at the dirty work of "disabling and enervating" Tory journals so as they should "do no Mischief." His plan must have been delightful to the scheming nature of "a Scots gentleman in the Swedish service," and "a British officer in the service of the Czar," and "Young Sheppard" (Jack) "just hanged at Tyburn," and "William Bond, of Bury St. Edmunds," and "Andrew Moreton, Esquire," and "Robinson Crusoe," and "Legion," and a legion of other people, under whose outward appearance was concealed Master Daniel Foe, or Daniel Defoe. The plan was to procure himself employment as a political writer on a Tory paper—the proprietors of which, knowing his great abilities and his sufferings in the cause, would of course never suspect but that he was a good Tory—and then proceed to "take the sting out of it," so that while it should be "kept to pass as Tory," it should do no harm to the Whigs. His services as "Translator of the Foreign News" he would at the same time sell to another paper, and would manage "to be so far concerned in it as to be able to prevent the Mischievous Part of it, and yet neither Mist (*Mist's Weekly Journal*) nor any of those concerned with him have the least Guess or Suspicion by whose Direction I do it." For this sort of work the Government paid him a yearly salary. Mr. Lee, with the clue which these letters furnish, has gone over the periodical literature of the years between 1712 and 1731—the latter being the year of De Foe's death—and has found nearly three volumes of new matter which he takes to be the work of this fecund and masterly writer. Of the genuineness of the letters which put De Foe's character in so dubious a light, we suppose there is no doubt; as to the genuineness of the articles republished by Mr. Lee there may of course be doubt, even if the authenticity of the letters to Mr. De la Fay be considered beyond question. Mr. John Camden Hotten is Mr. Lee's publisher; and Mr. Lee is unknown to us; and the book has not yet been subjected to the test of criticism by the better English authorities; nor has a copy of it yet come over here, so that we can speak of it only from hearsay, and not with any certainty; but it cannot fail to be interesting in a high degree, and most certainly is important if true. Some such writer as Mr. John Forster or Mr. Henry Morley might make a very great success in a biography of De Foe; and some criticisms of a *Pall Mall Gazette* critic, in the beginning of 1868, on Mr. Henry Kingsley's edition of "Robinson Crusoe," would be well worth any such biographer's attention. The Theological literature of the month adds one more volume to the "Ecce" literature: "Ecce Christus" is the title. The Rev. Mr. Orby Shipley edits the "Invocation of Saints"—a book designed as a manual of devotions for the use of members of the English Church. Father Newman issues a new edition of the "Apologia," which now goes by the title of "The History of My Religious Opinions." We believe that in its newer form the book lacks the famous exposure of Mr. Charles Kingsley. It is a lack that will not be regretted very much—though the prefatory discussion was excellent argumentation, and though, in the time of the controversy, it was pleasant enough to see justice done upon the original "muscular Christian," who used to preach up manly traits of character in a voice that had given rise to fearful suspicions about the sex of his virtue and valor before the "Apologia" came to his destruction. "Five Years in a Protestant Sisterhood and Ten Years in a Catholic Convent" we may perhaps as well put under the head of Theological and Religious Literature as under that of Biography; or, more strictly speaking, Autobiography. In Fiction, Mrs. Stowe's "Oldtown Folks" appears to be as successful in attraction as anything, though we have a new book by the author of "Cometh up as a Flower ("Red as a Rose was She" he calls it), and Mr. William Black's story, "In Silk Attire," goes into a second edition. Not all fiction, we suppose, is "Tim Doolan, the Irish Emigrant; being a full and particular account of his Reasons for Emigrating, his Passage across the Atlantic, his Arrival in New York, his Brief Sojourn in the United States, and his further Emigration to Canada." It is a title that reads as if we might have the "novel of incident and manners" among us once again. But we are informed that the book has "a serious religious tendency"—which the novel of incident and manners was perhaps more apt to have in some of its chapters than in all of its volumes. We fear, too, that the author of "Tim Doolan" may find so many reasons why his deluded countrymen should fly from this country to Canada West as to make his book not so taking as it might be as a work of fiction.

—The Parisian gentlemen who exercise their minds in the embellishing or the inventing of little tales about this and that eminent Frenchman, might turn their faculties to more profitable use if they would go into a close investigation of the character and habits of the well-known M. Michel Chasles, of the Scientific Department of the French Institute. With every disposition to think well of him, and to speak of him with the respect due to his reputation, we are compelled to say that collections of letters, never before heard of, written by distinguished men of a past age to other distinguished men, M. Chasles discovers with a frequency that makes it necessary to believe that he has semi-miraculous luck; or that he is very gullible; or that he is not so honest as a famous mathematician and a French Academician ought to be. Everybody will recollect how he was mixed up in an attempt to make the world believe that Newton had been anticipated in all his important discoveries by Pascal, and that Pascal was deprived of his just fame by the base ingratitude and knavery of the cheating Englishman. It will be remembered, too, that upon the exposure of the true character of the forged documents on which rested this heavy charge against Newton, M. Chasles declined to tell from whom he had received the newly-discovered letters which made good his great countryman's claim to Newton's honors. His silence was respected; it was said that perhaps he had bound himself to secrecy. But it will be no more than fair if M. Chasles is severely questioned as to the source whence he got a new batch of literary forgeries—we think there need be not the least hesitancy in calling them so—which he is now offering to the world. He has the partial endorsement of the Academy of Sciences, of which he is a member, the documents in question having been printed by order of that body, and its Perpetual Secretary, M. Elie de Beaumont, having asserted his belief in their genuineness. Professor Owen presents them to the English public in the last number of *Fraser's*, and while he does not explicitly declare that he thinks them authentic, he nevertheless seems to think their authenticity a thing to be taken for granted. The unauthenticity of such things is, however, always to be presumed; and, as a matter of fact, we may say that as it always should be so it always is, except by those with whom belief is rather an effort of credulity than a belief. The documents consist of letters written by John Milton to Molière, to Louis XIV., and to Voiture—all concerning Galileo and his difficulties; by Galileo himself to Louis XIII., and by Louis XIV. to Cassini and to Milton. In one of these letters from the Grand Monarque to Cassini, the king speaks of the duty of acknowledging quotations, and remarks that M. Newton had failed in his duty to "MM. Descartes *et Pascal*"—a little reference to the former "discovery" which would make one say that the author of M. Chasles' batch of letters concerning Newton and Pascal, and the author of this batch concerning Galileo, are, in all probability, one and the same person, and not too shrewd a person either. There are so many magazines nowadays that anything on which talk is possible gets talked about; and, moreover, the "silly season" comes on apace, when people are permitted to go up all sorts of trees for all sorts of mare's nests, that so the newspapers may be filled; wherefore we may very probably see some considerable number of articles about the new letters; but the conclusion which it is safe to predict will be reached is, that M. Chasles has concocted, or else has either wilfully or unknowingly lent himself to a literary fraud too transparent to be even interesting as a piece of rascality. Indeed, the golden days of literary forgeries are now some two or three centuries old.

—"Raphael and the Beginnings of the German Reformation," and a review of recent literature relating to Holbein—the latter with an illustration—are concluded in No. 7 (Vol. IV.) of Dr. Lützow's *Zeitschrift für bildende Kunst*, or *Journal of Plastic Art*. An interesting account of two Austrian architects, Eduard van der Nüll and August von Siccardsburg, who were partners in elevating the profession in their native country, and both died early, is given in the opening article, accompanied with a portrait of the former, and a favorable specimen of their joint work on a Government building in Vienna. There is, besides, the usual variety of correspondence and art intelligence. Since this periodical was the first to publish cuts of the silver-ware found at Hildesheim, we may here note that No. 4 of *The Workshop*—an art journal of a practical kind, which is always filled with well-chosen designs—contains engravings, mostly of real size, of five of the pieces discovered. Among them is the patera with the

Minerva in high relief, which was also figured in the *Zeitschrift*. *The Workshop* shows a segment of it only.

—It is proposed to celebrate the centenary of Hegel's birth next year. The school of that philosopher has now dwindled down in Germany to a very small number—though, remarkably enough, his method and ideas are gaining some ground both in Italy, France, England, and America—so that we fear the celebration will excite little enthusiasm. Still, whether one agrees with Hegel or not, as one cannot deny that he wielded an immense and, in part, very fructifying influence on almost every department of enquiry, especially on such as history, theology, æsthetics, etc., the centenary is deserving of commemoration, if any such birthdays deserve it. Professor Rosenkranz, of Königsberg—perhaps the best representative living of the right wing of Hegel's school—intends to publish a work exhibiting the master as a German classic. Not unlikely some of our American Hegelians may assist in honoring their master's memory. It is worth notice how much greater hold Hegel seems to take upon the American mind than upon the mind of any other people outside of his native Germany. His followers here are of course not all Americans, for the German blood is strong in the West, where the "Journal of Speculative Philosophy" most flourishes; but we fancy that more Americans than Englishmen or Frenchmen or Italians call the great idealist Rabbi.

—On the 19th of January last a man died in Leipzig whose name used to be on everybody's lips some fifteen years ago—the Baron von Reichenbach, the discoverer—if we are to say so—of the Od force. His career was in many respects so peculiar that we should not do amiss to give our readers a good many details; but we confine ourselves to the following facts: Von Reichenbach was born at Stuttgart on the 12th of February, 1778, where his father was librarian to the court. He studied law at Tübingen, but took his doctor's degree in philosophy, and showed a strong preference for the natural sciences. After leaving the university, he gratified his love of what is out-of-the-way and adventurous by spending three years in trying to secure the means and followers to found a German state on one of the South Sea Islands. This brought on him the wrath of Napoleon, who made him pay for his political fancies by a residence on Hohenasperg. After recovering his liberty, he joined with another nobleman in erecting iron-works and introducing beet-sugar manufactories into Moravia; but, quarrelling with his partner, retired into private life with a considerable fortune. Besides discovering creosote and paraffine, he published various geological essays. But his name was made famous, or at all events well-known, by the letters on odic magnetism, published in 1852. From this time forward he devoted himself to investigations into the od force, animal magnetism, and related subjects, publishing at intervals the results at which he supposed himself to have arrived. His ideas found little sympathy among men of science; but at the same time it is probable that he opened glimpses into a domain which still needs and deserves exploring. A few years ago he lost all his property, and came in consequence to Leipzig, with a view to interesting scientific men in his theory; but death terminated his disappointments and his hopes.

THE MAGAZINES FOR JUNE.

Lippincott's for June opens with some chapters of "Beyond the Breakers; an American novel," a story which may be more satisfactory to those of its readers who have taken it regularly in course than to us who have not read it faithfully from month to month; we should say that there is still room for the coming writer of the American novel. The second article is made up of two translations of the 'Dies Iræ," which possess merit, the editor thinks. They will, however, strike most persons who know the original or any one of the numerous English versions which have preceded these, as being decidedly uncalled for. The first is particularly bad for its unfaithfulness to the Latin, and for a disregard of anything like a decent standard of good English:

"Day of terrible requital"

is perhaps tolerable for

"Dies iræ, dies illa;"

but,

"Testing every trust and title,"

would have seemed to be an even impossible rendering of the second verse:

——"Solvet sæclum in favilla"—

if we had not evidence here to the contrary. Nothing that is good is to be said of this stanza:

"Prostrate in the dust before thee,
Heart-contrited, I implore thee,
Have a care for me unworthy."

"Heart-contrited" is no doubt the most unsuccessful of late compound adjectives, and the "have a care," with its suggestion of threat or warning, is bad enough. So, too, there is something grating in the line which stands for

"Inter oves locum præsta."

It reads in the English like the prayer of an office-seeker rather than that of a Christian in view of judgment—

"With thy sheep grant me position."

And little enough like the language of a Christian is the translation of "Jesu pie," by "Jesu pious!" The Latin adjective is probably expletive; or possibly it may refer to the stanza preceding, and may be considered an adjuration of the Son to recollect that it was by the will of his Father, in obedience to parental command, that he came into the world to save sinners:

"Recordare, Jesu pie!
Quod sum causa tuæ viæ"—

as a reminder to him that the wish which the Saviour knows so well was near the heart of his Father, the "rex tremendæ majestatis," ought to be obeyed with filial piety. At any rate, whether or not we take the preceding stanza to refer to the first person of the Trinity or the second, our word "pious," so different in meaning from "pius," will not have the effect of pleasing most readers. But the whole version is filled full of failings and faults; and this not wholly because of the translator's failure as mere translator, but because he does not know the piece as a poem. It is clear enough in the original that the supposed speaker, shutting his book, meditates on the description that is given in the New Testament and in the writings of the church of the last dread day. The first six stanzas contain the soliloquy in which he recapitulates the circumstances which are to attend the final judgment, and mingles with the recapitulation some obvious, or as we may say inevitable, reflections. It is not until we come to the seventh stanza that the poem becomes really lyrical. But thence to the end it is not more lyrical and apostrophic than up to that point it is meditative and descriptive. That this had never got into the translator's mind is made evident by his unfortunate rendering of the second stanza—

"Quantus tremor est futurus,
Quando judex est venturus,
Cuncta stricter discussurus"—

which is given thus:

"How great trembling shall be ours
When the judge puts on his powers,
And thy lasting issue lowers."

As so much English these lines are poor, and as so much English for so much Latin they are extremely poor; but the word "thy" in the last line, showing a radical misconception of the poet's intention, makes nearly as strong a case against the new translator as do all the the rest of his lines together. The second version that is given us is a paraphrase rather than a translation, and combines the usual faults of both those methods of rendering a poem, and we do not observe that it has any of the excellences of either.

As well worth reading as anything else in this month's *Lippincott's* is Mr. Dodge's defence of Byron against the attacks of some of his wife's friends. Mr. Dodge more particularly concerns himself with the conduct of Moore in not publishing Byron's journal, and charges that "Tommy," who "dearly loved a lord" who was a living lord, acted with bad faith and servility in withholding it from the press. There should not be much doubt, we think, that this is a true view to take; but it may very well be doubted if it would have been much worth while to let the world see the journal. It would have rather gratified curiosity than have thrown any new light on the poet and his works: and it may be suspected that should it ever, by means of any of the copies that were taken, be made public, Moore's disobedience of his friend's wishes will seem not to his friend's disadvantage. The journal may probably have shown Lady Byron somewhat sinning as well as more or less sinned against; but after all, probably there is nowhere now, outside of Miss Martineau's house and the cottages of the poor whom Lady Byron befriended, any such fervid belief in her utter blamelessness as to make it much worth while to attack her; and it is some time since the private affairs of the poet ceased to seem of equal importance with his poetry.

Mr. G. M. Towle's "Englishman on the Continent" is a satirical piece on a well-worn subject, upon which most of the writers apt to make choice of it could hardly be expected to be entertaining. And when satire is not entertaining, it is frequently disagreeable, as exhibiting what seems like ill-nature, and as being at the same time feeble—an attempt unsuccessful. Surely it must be in great part the fault of a man's temper, or of his deficiencies of one kind or another, if he can truthfully talk in this

spirit about the better classes of any European nation: "In the multitude of offensive travelling English you will find here and there more than one agreeable, well-bred, kind-hearted, quiet, and genial men and women." And then, too, must there not be another multitude of the inoffensive? It is not, to be sure, given to everybody to be well-bred or quiet or "genial;" but if not a majority, at any rate a large minority of the better educated people of all Christian nations are reasonably kind-hearted, and not too disagreeable in their ways of thinking and feeling, and not very offensive as regards manners. Probably if we were to take Bradshaw and fly to the uttermost parts of the civilized world, we should hardly find anywhere one absolutely perfect man or woman engaged in foreign travel. But it is only necessary not to be imperfect ourselves beyond a certain point to find, as we travel, that on the whole we are travelling with people not much worse than those we left behind—or than those that left home when we set out. Most of the sweeping abuse of mankind can fortunately be made of very narrow application. "Harneyhow's Hummock," by Mrs. Jane G. Austin, is a story, written apparently in one of those moods of luxurious indulgence of feeling to which women are prone, and which Mrs. Austin, as author, too constantly allows play. There is some indication of strength and some slight truth to nature in the ill-managed figure of Beulah, and some evidence of goodness and soundness of nature, on the author's part, in the unlikely way in which the story is wound up. But half as much pains to find some story worth the telling for its real significance and value as Mrs. Austin spends in pouring mere feeling into those that she is in the habit of telling, would be pains very profitably spent. And harder work in the selecting and rejecting of tales to tell would, beyond doubt, make itself agreeably manifest in the details of those that should be chosen and told. But however that might be, the story here told is "unhealthy," and, well meant as it no doubt is, must be condemned as being really immoral.

The Spiritualists are the theme of the writer of the first paper in the *Catholic World* for June. It is written to prove that the phenomena of "spiritism"—as "spiritualism" is perhaps better called—are not super natural—for the supernatural is God, and what God does immediately without intermediaries; and that they are not produced by the souls of deceased men and women, but that they are superhuman—subterhuman would seem a better word—as being the work of the demons of the great enemy of mankind, and of the arch-fiend himself. "Satan and his hosts having rebelled against God, and in refusing to worship the incarnate Son as God, were cast out of heaven and became the bitter enemies of Him and the human race. Satan, as the chief of the fallen angels, evil demons, or devils, carries on incessant war against God, and seeks to draw men away from their allegiance to him, and to get himself worshipped by them in his place,' and spiritism is one of the means he uses to effect his ends. This theory accounts also for planchette—a piece of wood of which devils now take possession, or did until lately, as formerly they entered into wooden images and images of gold, silver, lead, and other metals.

A writer on "Spanish Life and Character" is unusually civil to the revolutionists, admitting that the reverential tendency of Spanish character has in politics no doubt overpassed the legitimate barriers, and loyalty has done some mischief—a tone which we commend for adoption to some of our Roman Catholic friends who are so fond of the most Catholic Isabella that they forget the fact that it was a good majority of the most Catholic Spaniards who turned her out. We may add, too, that we are informed—and are willing to believe it not improbable—that the Holy Father feels a good deal of regret at having bestowed upon her Majesty the Golden Rose. The author of "Two Months in Spain during the late Revolution" atones, however, for the liberality of spirit with which the author of "Spanish Life and Character" treats his opponents. "These juntas," says the "Two Months'" lady, "who now rule in each city under the provisional government, are composed of people of low birth and low morals." In Cadiz they were taken from "the low townspeople, who are noted drunkards and unbelievers. . . . . Their first work has been to try and kill the Jesuits," and so on. Mr. Aubrey de Vere's May Carol we have not room to quote, but it is well worth looking at. It is, as is usual with his hymns, both original, ingenious, and subtle, and at the same time clear in thought and full of the sweetness of religious feeling. "The Geography of Roses" could not help being pleasant, though it is a slight piece, and "Good Old Saxon" is also agreeable, though not very weighty. Father Hecker's article—we suppose it is his—upon "The Approaching Council of the Vatican," contains some late information as to the composition of the committees and so forth, and some remarks about those wretched New Englanders who, it appears, have been reviling Father Hecker—who knows them thoroughly; he "went through all that," as they say, before he was twenty-one, at Brook Farm—for telling them that their decadence is due to want of faith. The article, like most of Father Hecker's, does not leave on one the impression that it is conclusive of the various matters it touches upon. We may suggest, by the way, that "the mocking ridicule of Voltairian infidelity" in which a portion of the press indulged when it heard that the Council was to be called, could not have been very much worse than Father Hecker's own lamentable assertion that "the Council of the Vatican will possess the same infallible authority with that which met at Jerusalem under Saint Peter"—where and when, we believe, Saint Paul withstood the "head of the church" to his face, "for he was to be blamed."

"Malbone" is concluded in this month's *Atlantic*—the hot-blooded young child of the sun being drowned out of the way in a fearful storm—which, from the beginning, was sure to come on that Newport coast and dispose of inconvenient personages—and the other characters going away as becomes them—that is to say, Miss Hope to lead a life of lofty soul-seclusion, and attend to her culture; Mr. Malbone, probably in old clothes and sunburn, to lead a life of self-denying usefulness, of which we may be sure he will be consciously unconscious to a degree that will get him Miss Hope yet; Aunt Jane to elaborate impromptu remarks of the most excessive brightness, sharpness, and naïve oddity. "The Hamlets of the Stage" is the first of a set, or a pair, of articles, and will be read with some pleasure. Its most distinguishing characteristic is a glow of that peculiar enthusiasm for the departed glorious which is, perhaps, never seen less alloyed by emotions worse than itself than when it is shed over the dead and gone heroes and heroines of the green-room. It is enthusiasm in which partisanship has no share; which is mingled with something of the pensiveness that always attends the memory of old pleasure and gaiety; which is called forth not so much by qualities that demand admiration as by those that conciliate affection, and even permit of a sort of patronage from him who applauds; whose usual votaries are the unsevere; and which, altogether, is perhaps enthusiasm in its most amiable form. "The Foe in the Household"—which is by Caroline Chesebro, it appears—continues to be interesting, or, rather, may be said to grow more so. The personages are not like any whom we have ever met, yet they are so contrived as to give the reader an effortless and very lively belief in their real existence, and in the true vitality of their intellectual and spiritual natures. It is dangerous, if accuracy is desired, to speak of a story before it is done, and it is disagreeable to try to express a judgment on a story, as such, which comes to the reader by bits; but still, recanting is always possible; so we will say that we do not now think of any American women who write novels whose books we should prefer to this "Foe in the Household" for our own reading. Though the situation is a painful one, and there is an easy possibility of morbidness; and though the sort of life to which we are introduced is too high-strained to be truly enjoyable and bracing as we share it, and the presentation of it will, perhaps, when done, not produce the effect a work of art should; and though the management of some of the details is not perfect—still the novel is fresh; it is honest and thoughtful; it is done with care, and not unskilfully; and it was worth doing. Nor, after all, is it likely that such a person as Delia, though evil things may happen to her, can ever really come to grief; so the painfulness of the situation as it stands need not deter any one from reading the story.

Mr. N. S. Shaler writes on "Earthquakes," and incidentally gives us a strain or two of that tremendous poetry which can be got from the blankest and most business-like prose that states some of the late discoveries of science—notably those relating to heat and light. It is as impressive and exalting, as genuinely poetic, as any of the pictures or visions of the imagination, to hear such things as this: "At a recent period in the history of our solar system, the heat of the earth was so great that the zone now occupied by life was the scene of contending elements; and at a future time almost measurably distant, when the other great source of energy, the sun, shall become in like manner stilled, when the great struggle between matter and heat now going on there shall be over, this little oasis of life, in the midst of the expanse of matter which obeys only physical laws, will cease to be. . . . That [heat] which we receive from celestial sources comes to us softened and equalized by the distance it traverses. The inconceivable convulsions of the sun, the flames a million miles high which burst from the fiery mass, the furious sounds which accompany this great struggle of matter with creative force, are quite lost in space, and there come to us only the equable and beneficent light and heat. We should have remained ignorant of the convulsions which attend the evolution of these properties, if we had been compelled to perceive them in their effects on the surface of the earth." Mr.

Shaler's philosophizing is perhaps hardly so good as his poetry To generalize to good purpose upon the effects of earthquakes on the character of the men and natives living in regions liable to seismic shocks, a very great deal of very various knowledge is requisite, and a comprehensive and minute knowledge of the geology of a country and of its history in the matter of earthquakes is but a scanty preparation for solving a most difficult problem—one of the most difficult with which the philosophic student of history has to deal, and one in which as yet more blunders have been made than striking successes gained.

We believe there is nothing else in this *Atlantic* that calls for particular notice. "Birds' Nests" is by Mr. John Burroughs, a writer whom we believe we always have to praise, and praise most when he is most himself, and has the birds and beasts for his subject and not men. The poetry is by Mr. Whittier ("Norembega") and Miss Celia Thaxter ("By the Roadside")—the latter seeming to us rather the better of the two. "China in our Kitchens" gives partial expression to the wail which comes up, louder from Boston than anywhere else that we hear of, about servant girls. Perhaps it is a part of the decay of New England that it no longer is capable of "keeping house?" Mr. C. C. Coffin advises that the Chinaman should be employed in the place of the tyrannical Irish girl—a suggestion perhaps worth attention.

Hours at Home has for its two most interesting articles a little sketch of Gottfried August Burger, by Mr. S. S. Conant, and a paper on "Model Lodging-Houses" by Mr. C. L. Brace. "Model Lodging-Houses" is too narrow a title for the essay, which deals rather with houses in which families regularly live—eating and, if necessary, working as well as sleeping in them. Mr. Brace points out very clearly how much more useful it is for a capitalist with some philanthropy to erect "model" dwelling-houses which can be let at a reasonable profit, than for a philanthropist who has capital to erect unpaying buildings—like Mr. Peabody's in London—which are successful as charities, so called, but on the whole are injurious to the class sought to be benefited, as well as unprofitable to the owners of them. Paying model houses would surely kill out tenement-houses, by showing landlords sooner or later that it is for their interest to build dwellings instead of poisonous sties of tenement-houses. The account which Mr. Brace is able to give of some of the London enterprises is very encouraging, and we suppose there is little doubt that the English success could be equalled here in this most crowded of civilized cities.

The article on Burger is readable and instructive. Perhaps so much need hardly have been said about "The Brave Man," a poem which might be called "people's poetry" in another than the best sense of that term; but, on the whole, substantial justice is done to Burger as poet and as man. The essay might with advantage have been fuller of details both critical and biographical, for its subject is a figure not much known. For the rest, the June *Hours at Home* has something about Prussia by Professor E. P. Evans, who also might well have doubled his number of pages; an article on "The Relations of Books and Reading to a Religious Life," by Professor Noah Porter; a neat little piece of serious poetry by A. D. F. Randolph; and the first half of Mr. Froude's rather feeble address on "University Education."

Probably the ordinary magazine reader will find *Putnam's* as interesting as any of the month's magazines except the *Galaxy*. "My Brass Valise," by F. R. Stockton, is a clever short story, which will dispose every American citizen who reads it to renewed contempt for the Emperor of the French and his mode of life. "Ferdinand de Lesseps and the Suez Canal" is by Mr. Edward De Leon, who it seems at one time represented the United States at the Court of the Pacha of Egypt, and who apparently had opportunities—which he has partly used, but has not made the most of—to learn and tell a good deal about life, social and official, at the Egyptian Court. We cannot say that he writes with a coolness and weightiness which compel us to think him a man who can be depended upon to convey to other men a perfectly correct and clear idea of what may have passed before him, and we do not know how much we are to believe without modification of his account of the enterprise which M. de Lesseps has carried to completion. We see that his article in the June *Harper's* conveys an impression as to the commercial value of the African canal which is at variance with that conveyed by his article in *Putnam's*. The latter is calculated to dash the hopes of those who had been thinking of the Pacific Railroad as sure to be the most travelled road, if not the only one, between the West and East. An impression directly to the contrary would be a natural effect of the article in *Harper's*, entitled "Said Pacha of Egypt." The maps and plans which accompany the article in *Putnam's* are of a kind to confuse, rather than be of assistance. "A Stranded Ship," by Miss or Mrs. L. Clarke Davis, is brought to a conclusion in this number. At the end it contains what seems as if it might be a correct, and certainly is a pretty vivid, description of the wreck of a vessel, and the taking out to her of a life-line, but apart from this scene, the story is neither probable nor forcible. "The Euroclydon," which we find agreeable, if only for its new puns, reads a little like the work of a hand not very practised at story-telling, but of a hand that might attain successes. The ship's company are not unlike other ship's companies with which the most of us have at one time or another been thrown, and the circumstances of the adventure are new. "Summer Snow" we suppose to be by the narrator of the Alpine experiences which were published in *Putnam's* some year or so ago, and which we found a more readable Swiss piece than it is natural for an habitual reader of magazines to suppose could at this day be produced. "Summer Snow" is as straightforward and unhackneyed as its predecessors —as "Yankee" and "individualized," and—in a certain way which we do not insist upon calling the best—is truthful and taking. It differs from most "sketches of European travel" as the talk of a lively friend who has just come home from abroad differs from the lectures on Wednesday evenings of a pastor who has just returned from his vacation visit to Italy and the Holy Land. "A Sybilline Trio" tells with more fulness than was necessary, or to be expected, of how the writer used at one time to meet in one house Mrs. Browning, Mrs. Somerville, and Mrs. H. B. Stowe. "Some Things in London and Paris" is a rambling article, which would be more interesting if it were more frankly gossipy than it is, concerning some of the changes which are to be noticed in the England of 1869 as compared with the England of 1836. No doubt its author could, if he liked, make several papers composed of reminiscences over which most of us would be very willing to spend an hour or two, and there is no reason why such chat should involve any unfairness to any of the men, American or English, more or less noted, in whose company Mr. Putnam has passed a good deal of time. The other departments of the magazine are well filled this month, though as usual they seem to us to contain too much scrappy information; too many facts about the most of which any given reader cares nothing, and straightway forgets utterly; and too little of thought and criticism. This makes the "Literature, Art, and Science Abroad," for instance, less instructive than it might be, and less attractive.

The *Galaxy* of course begins with the June chapters of Charles Reade's novel. We do not yet find ourselves believing that "Put Yourself in his Place" is going to be one of its author's best works. Perhaps he is now too old, and, advisedly, no longer trusts himself to employ as the motive of his stories the essentially youthful sexual passion and affection which is the root of all his earlier stories, which are no doubt his best; perhaps we are henceforth to expect of him—and to most other writers this would be a high compliment—nothing more than that he shall fall somewhat short of the youthful Charles Reade—the Charles Reade who wrote rather of women and men as such than of social institutions and men and women as affecting each the other. We find, however, that at the end of each instalment of "Put Yourself in his Place," we wish not only for the whole of the story, but for the next instalment of it, and would like it at once—a fact which we suppose may be taken as proof that whatever else Mr. Reade has now become incapable of doing, he is at any rate skilful in contriving how a story shall be fitted for the needs of a monthly magazine.

"'George Eliot' and George Lewes" is by Mr. Justin McCarthy, and is clever and "magazinable," as all his writing is pretty sure to be. It may be doubted whether "George Eliot" is properly to be put so high as Mr. McCarthy puts her. We should say that he is somewhat biased by the way in which the men who manage the English critical press have seen fit to magnify her. She is a sort of incarnate protest against a number of things which believing Englishmen of the thoughtful classes secretly dislike, but openly treat with civility and apparent respect. It is not unnatural, then, that having done work which entitles her to the admiration of everybody who respects talents of the first order, she should reap among the critics a reward proportioned rather to her deserts as an author conjointly with her services to the cause of anti-conventionalism, than to her deserts as an author alone. Then, too, we suppose it is in vain to deny that the fate of an English author who directly or indirectly influences the London press is apt to be different from that of an author without the means of influencing the British Aristarchus or his friends. We do not say we are incapable of seeing and acknowledging great power in "George Eliot;" we have more than once expressed our obligations to her, and our admiration for her; but Mr. McCarthy we think sets her too high, as do most late English journalists of the better sort. We may say, too, that Mr. McCarthy's apparent wonder at the marriage of a woman like Miss Evans with

a man like Mr. Lewes would disappear if he would give a little consideration to the circumstances in which Miss Evans found her future husband. Such things it is perhaps as well not to talk about at all; but now that the matter has been mentioned, we may remind the reader that in accordance with a provision of the English law which seems very severe, but probably might be justified on general principles, Mr. Lewes found himself irrevocably committed, by an act of great mercy on his part, to live with a wife who had been shamefully faithless. Upon the commission of one such offence as hers the law gives to the husband a divorce; but if he is moved to forgive, and the same offence is again committed, he is debarred by his condoning from legal freedom from his bond. Such, unless we are misinformed, were the circumstances under which Mr. Lewes met Miss Evans, and it is not at all hard to see how such a case might enlist the heart of a woman whose intellect already saw reason enough for giving respect to the biographer of Goethe, to the historian of philosophy, to the successful man of science—even to the very unsuccessful novelist, for Miss Evans had not then herself written novels—to the man of multifarious information and of immense agility and quickness of mind. Of the duty of the pair in the circumstances in which they were we do not now say anything at length, or anything except that the fact of a duty's being very hard to perform—hard for others as well as utterly unpleasing to ourselves—is not so much a reason as a sort of an excuse for its neglect or for transgressing the law.

Mr. De Forest's "Duchesne Estate" is very spirited, and, of course, has plenty of local color, and its readers will be older novel-readers than we, or sharper, if they see wholly through the plot before they see the end of the novel. General McClellan's "General Jomini" has some things in it which are new, as being derived from a personal acquaintance with the great strategist; and all of it is easy to read, but it is not peculiarly satisfactory. Perhaps it is a necessity of such subjects as are related to a thousand great things, that all which a man can well tell us of them seems to be but a little part of what might be told, and therefore inadequate.

"The Aurora Borealis, or Polar Lights," an illustrated paper—apparently carefully prepared—by Professor Loomis, of Yale, is the first article in *Harper's*. It is followed by another illustrated paper, "Winter on the Plains," by Mr. Theodore Davis, a deservedly popular reporter of the life of the overland journey to the mountains. "Pawnbrokers and Loan Offices" would have been bettered a little by containing an account of our domestic Mont de Pieté, which has done so much good in Boston by partially superseding the imperfectly responsible fraternity of pawnbrokers. It seems, by the way, very reasonable to suppose that its usefulness, and that of any similar institution, in any of our cities—and not only its usefulness but its profitableness—might be very much increased by the establishment of well-managed branch offices in those regions where the city poor congregate most thickly, and where each lender on pledges has a little domain of wretchedness, in which his sway partakes more or less of the nature of a pervading tyranny. Mr. McCarthy's "My Enemy's Daughter" gives us Mr. Lewes in a fictitious dress, but obviously Mr. Lewes. Mr. Newman Hall's "British Wild Flowers" we must mention, as one of the worst specimens that has ever been anywhere seen of the kind of literature with which the publishers of magazines encumber their pages for the mere sake of a name distinguished or, as one might say, notorious. It is verses that would disgrace Mrs. Leo Hunter. "Leo and Luther" is noticeable as as the work of a new writer who paints with Mr. John S. C. Abbott's brush as well as Mr. Abbott does; and "Deliverance Armstrong" is a very ordinary love-story, which yet has some incidents that are original we think—a thing so little to be expected in a *Harper's* love-story that it produces a somewhat curious and pleasing effect of incongruity.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Auerbach (B.), Villa Eden: a Tale, Part II., swd	(Boberts Bros.)	
Beadle's Letter-Writer, swd	(Beadle & Co.)	$0 10
Bowles (S.), Our New West	(Hartford Pub. Co.)	
Brooks (S.), Aspen Court: a Tale	(Roberts Bros.)

Wood (E. J.), The Wedding Day in all Ages and Countries	(Harper & Bros.)	1 25

In the New Volume by Dickens

THERE IS A

General Index of Characters and their Appearances,

made expressly for Hurd & Houghton's editions, more than eighty pages long, and enabling one at once to find, as in a directory, the name and place of every one of Mr. Dickens's inventions. To this is added an

Index of Fictitious Places, Familiar Sayings, etc.,

Rendering Hurd & Houghton's editions thoroughly furnished, and the most complete ones in the market. The Indexes were compiled with great care by Mr. W. A. Wheeler, the well-known editor of Webster's Dictionary.

MASTER HUMPHREY'S CLOCK. Containing the above. Household Edition. 1 vol. 16mo, cloth, $1 50. Riverside Edition. 1 vol. crown 8vo, cloth, $2 50.

THE UNCOMMERCIAL TRAVELLER (only complete collection in America.) Household Edition. 1 vol. 16mo, cloth, $1 25. Riverside Edition. 1 vol. crown 8vo, cloth, $2.

THE UNCOMMERCIAL TRAVELLER AND MASTER HUMPHREY'S CLOCK. 2 vols. in one. Globe Edition. 12mo, $1 50.

HURD & HOUGHTON, Publishers,

Parsons on the Law of Shipping.

A TREATISE ON THE LAW OF SHIPPING AND THE LAW AND PRACTICE OF ADMIRALTY.

BY THEOPHILUS PARSONS, LL.D.

2 vols. 8vo, $15.

This work embraces that portion of the author's Treatise on Maritime Law relating to the Law of Shipping and the Law and Practice of Admiralty. It also includes the many recent decisions on these subjects. The most important topics are rewritten. In the appendix will be found a complete collection of all the mercantile statutes and statutory provisions of the United States, together with the pilotage laws of New York and Boston; with forms of contract and practice.

Angell on Water-courses.

Sixth Edition. 8vo, $7 50.

Revised and very much enlarged by the addition of new matter to the Text and Notes.

BY HON. J. C. PERKINS.

Besides the numerous additions to the former sections, nearly a hundred and fifty new sections have been added to the present edition. Among the new subjects are "Surface Water and Drainage," "Eaves Drip," and much of the "Subterranean Diversion" of underground streams and implied easements connected with water.

LITTLE, BROWN & CO.,
110 Washington Street.
BOSTON.

"A book which any woman might be proud of having written," says the *Boston Daily Advertiser*, of Miss Alcott's

LITTLE WOMEN.

"A book to be seized upon as a treasure by the young reader," says the *Ladies' Friend*, of Miss Alcott's

LITTLE WOMEN.

"Meg, Jo, Beth, and Amy have become household words. * * * Every child, or grown person either, will be the better for being admitted into the March household," says a lady reviewer of Miss Alcott's

LITTLE WOMEN.

"We hear of staid old gentlemen reading it through at a sitting," says the *Lowell Courier*, of Miss Alcott's

LITTLE WOMEN.

"We could not wish the society of a more genial, unassuming, lively, mischievous quartette than the four heroines of this domestic story. It is no wonder that the old fogies should delight in them," says the *Albany Evening Journal*, of Miss Alcott's

LITTLE WOMEN.

"All children who want to be delightfully entertained to have their little hearts made warm and true and kind, and their little heads filled with good noble thoughts, should get this book and make it one of their favorite companions," says the *New York Evening Post*, of Miss Alcott's

LITTLE WOMEN.

Price of both parts (14th thousand now selling), $3.

New and Important School Books

PUBLISHED BY

WOOLWORTH, AINSWORTH & CO.,

117 WASHINGTON STREET, BOSTON.

111 STATE STREET, CHICAGO.

JUST ISSUED:

HAND-BOOK OF NATURAL PHILOSOPHY,

For School and Home Use. By W. J. ROLFE and J. A. GILLET, teachers in the High School, Cambridge, Mass. With 212 wood engravings and 3 colored maps (illustrating Meteorology). Price $1 25.

The body of the book contains only 229 pages in clear, open type (*with no fine print*), and treats of all the topics of Natural Philosophy. The more theoretical portions of the subject are treated briefly in an Appendix, and descriptions of apparatus and directions for performing experiments are added. *Omitting* the Appendix, the book is not too difficult for Grammar and District Schools. *With* the Appendix, it is exactly adapted to the wants of those High Schools and Academies which have not time for a larger book.

It is not an abridgment of the larger "Natural Philosophy" by the same authors, but it is wholly a new book. It is simple in style and eminently a *practical* book, yet thoroughly scientific, and giving the results of the latest discovery and research. It is sure of a hearty welcome from all teachers who desire a book which shall be brief without being dry, and easy without being puerile.

BY THE SAME AUTHORS:

Hand-book of Chemistry. Price $1 25.

Hand-book of the Stars. Price $1 50.

These are brief elementary manuals of Chemistry and Astronomy, on the same plan as the "Hand-book of Natural Philosophy."

These books are especially adapted to a brief course extending through a single term of school.

ALSO,

The Cambridge Course of Physics. In 3 vols. 1. Chemistry, $2; 2. Natural Philosophy, $2; 3. Astronomy, $2.

These are larger books, by the same authors, and are intended for more advanced classes, or for those devoting a longer time to these branches.

This course has already been officially adopted by the State Boards of Maryland and Minnesota, and is already used in more than fifty cities and large towns, and in nineteen different States of the Union.

FRENCH.—Magill's French Grammar. Key to Magill's French Grammar. Magill's Introductory French Reader. Magill's French Prose and Poetry.

LATIN COURSE.—Preparatory Latin Prose Book. By J. H. Hanson, A.M. Comprising in 1 vol. all the Latin prose required for admission to Harvard and other colleges, with notes and references to Harkness's, Bullions's, and Allen's Latin Grammars.

HAND-BOOK OF LATIN POETRY. By J. H. Hanson, A.M., and W. J. Rolfe, A.M. Selections from Ovid, Virgil, and Horace, with notes and grammatical references.

SELECTIONS FROM OVID AND VIRGIL. A shorter Hand-book of Latin Poetry, by the same authors. An edition of this book, with a complete vocabulary, and references to Allen's and to Bullions's Latin Grammars, as well as to Andrews' and Stoddard's, and to Harkness's, is in press, and will be ready in May.

GERMAN.—A New Elementary German Grammar. By Gabriel Campbell, Professor in State University of Minnesota.

A Practical and Complete German Grammar. By Adolphi Douah, Ph.D. 12mo.

DRAWING.—Bartholomew's Drawing-book. New Series.

This series of books—the most practical and thorough course of instruction in drawing ever published—will be completed in 12 numbers, each containing 12 plates, executed in the highest style of lithographic art, and 24 pages of drawing-paper of a superior quality. Instruction accompanies each book. In connection with the first three books, a guide has been prepared, for the use of teachers and more advanced pupils.

DRAWING-SLATES.—Bartholomew's Primary School Slate, with a series of progressive lessons in writing and drawing. This is a new thing, and will prove the most admirable device for interesting and instructing young beginners in drawing.

PAYSON, DUNTON & SCRIBNER'S

NATIONAL SYSTEM OF PENMANSHIP.

The most practical style and successful system ever published. Revised, newly engraved, and improved. The growing demand for this popular copy-book has necessitated the increase of our manufacturing facilities to the capacity of over two millions per annum.

*** Circulars containing full descriptions, with notices and testimonials from eminent teachers, will be furnished on application.

"MANNERS MAKE THE MAN."

JUST PUBLISHED:

GOOD SOCIETY.

A COMPLETE MANUAL OF MANNERS.

By the Right Hon. the Countess of * * * * * *

Printed on fine toned paper, 300 pages, 12mo, extra cloth, gilt top, $1 75.

CONTENTS:

INTRODUCTORY.—On Good Manners in general: their rise, progress, and social importance.

CHAPTER I. The Arrangement of a Lady's House, and the Management of Servants.
II. Letters on Introduction—Cards—Addresses.
III. Visiting—Morning Calls.
IV. Conversation.
V. Letter-writing—Invitations.
VI. The Lady's Toilet.
VII. The Gentleman's Toilet.
VIII. Riding and Driving—The Promenade.
IX. Morning and Evening Parties.
X. The Ball.
XI. Dinner Parties.
XII. Engagement and Marriage.
XIII. Visiting at a Country House.
XIV. General Hints to both Sexes.
Appendices—Index.

This volume aims to meet a social requirement of long standing; namely, a work of genuine authority on all points of etiquette, ceremonial, and manners. It addresses itself to all classes of society, and, as the above list of contents will show, it embraces all points wherein rules for etiquette are necessary. "The author has endeavored, to the best of her ability, to treat of the subject under all its aspects; to omit no point, however trivial; and to provide her readers with a faithful and judicious guide in every social emergency."

*** Will be sent by mail, post-paid, on receipt of price by the Publishers,

JUST READY:

I.—SPIELHAGEN.

PROBLEMATIC CHARACTERS. Author's Edition. Translated by Prof. SCHELE DE VERE. 12mo, cloth.

"A beautiful and adequate rendering, by one of our most accomplished scholars, of a book which has no superior in German romance for its enthusiastic and lively descriptions, and for the dignity and the tenderness with which its leading characters are invested."—*N. Y. Evening Post.*

"One of the best of modern German novelists."—*Saturday Review.*

"In Germany he is acknowledged to occupy the foremost rank among modern writers of fiction. . . . As a delineator of individual characters, many of them types of different classes of society, as a painter of various situations, scenic and social, he appears to be unequalled by any other modern German writer of fiction."—*Westminster Review.*

II.—TAINE:

ITALY (FLORENCE AND VENICE). Translated by JOHN DURAND. 8vo (uniform with "Rome and Naples"), $2 50.

"One feels at moments as if before this writer there had been no critics, no travellers, observers, or æsthetic inquisitors."—*Nation.*

"M. Taine studies its (Italy's) art from its history, and not its history from its art, as Mr. Ruskin does, for example; and we think he has by far the clearer idea of the time, its people and its works."—*Atlantic Monthly.*

III.—MENTAL PHOTOGRAPHS.

AN ALBUM. 8vo, cloth, $1 50.

This album contains copies of a series of questions, with blanks for answers, the whole calculated to preserve the "mental photograph" of friends.

Some very brief and crude manuscript albums on this system have lately afforded much amusement in some circles, here and in Europe, and have never failed to entertain all, young or old, grave or gay, to whose attention they have been brought.

RECENTLY PUBLISHED:

Auerbach's Black Forest Village Tales. Author's Edition. 16mo, cloth, uniform with the Author's Edition of "The Villa on the Rhine." Price $1 50.

Auerbach's Villa on the Rhine. I.—Four parts, paper. 50 cents per part. Three now ready; the other immediately. II.—2 vols. cloth, uniform with American edition of "Black Forest Village Tales" and "On the Heights." Vol. I. now ready. Price $1 75. Vol. II. immediately.

Biographical Sketches. By HARRIET MARTINEAU. 8vo, cloth, $2 50.

"More instructive and more generally works of art than many more ambitious and diffuse biographies."—*Fortnightly Review.*

"A charming book."—*N. Y. Evening Post.*

Reminiscences of Mendelssohn. By ELISE POLKO. Containing many of "Mendelssohn's Letters" never before published. $1 75.

"This beautiful memorial."—*Boston Transcript.*

For fuller descriptions of these works see our advertisement in "The Literary Bulletin," which may be obtained gratuitously from nearly all enterprising retailers.

**** Harper & Brothers *will send one of the above works by mail, postage prepaid, to any part of the United States on receipt of the price.*

THACKERAY'S NOVELS.

HOUSEHOLD EDITION.

Uniform, Compact, Legible, Handsome, Cheap.

To meet the long-felt want of an edition of Thackeray's Novels at once uniform, compact, handsome, legible, and cheap, Messrs. Fields, Osgood & Co. have prepared a Household Edition of these unsurpassed works of fiction.

The first volume, now ready, is

VANITY FAIR,

of which Dr. John Brown, author of "Spare Hours," says: "Thackeray's greatest work, one of the great masterpieces of genius in our, or indeed in any, language, without doubt is 'Vanity Fair.' This set him at once, and by a bound, in the first rank of fiction. One returns again and again to it, with its freshness, its depth and terrible truth and power, its easy yet exquisite characterization, its living talk, its abounding wit and fun."

Handsomely bound in green morocco cloth, uniform with the popular Household Edition of Charles Reade's Novels, recently published. With fine Portrait of Thackeray. Price $1 25.

**** OTHER VOLUMES WILL FOLLOW IMMEDIATELY.

**** For sale by all Booksellers. Sent post-paid on receipt of price by the Publishers,

FREEMAN & BURR'S NEW RULES FOR SELF-MEASUREMENT enable gentlemen in all parts of the country to order clothing direct from them with entire satisfaction. Perfect fitting guaranteed in all cases.

RULES FOR MEASUREMENT, PRICE LIST, and SAMPLES OF GOODS mailed free on application.

FREEMAN & BURR

REMOVED TO

138 AND 140 FULTON STREET, NEW YORK.

MASSACHUSETTS INSTITUTE OF

TECHNOLOGY offers a liberal and practical education in preparation for active pursuits and the scientific professions. Admission examinations June 7 and Sept. 30. Requisites: Arithmetic, so much of Algebra as precedes Equations of the second degree, Plain Geometry, English Grammar, and Geography. For further information address Prof. G. A. OSBORNE, Secretary of the Faculty, Boston.

INTERESTING TO LADIES.

We have had one of GROVER & BAKER'S machines in our house for twelve years. It has done all our work in the most satisfactory manner, and is never out of order. We unhesitatingly pronounce it the best family machine made. No money would induce us to part with this our pride—a faithful assistant, always ready and never failing us.—*Mrs. S. N. Kellogg, Sherman House, Chicago.*

NATIONAL

Life Insurance Co.

OF THE

UNITED STATES OF AMERICA,

WASHINGTON, D. C.

CHARTERED BY SPECIAL ACT OF CONGRESS.

CASH CAPITAL, $1,000,000,

PAID IN FULL.

BRANCH OFFICE:

First National Bank Building,

PHILADELPHIA,

To which all general correspondence should be addressed

OFFICERS:

CLARENCE H. CLARKE, President.
JAY COOKE, Chairman Finance and Executive Committee.
HENRY D. COOKE, Vice-President.
EMERSON W. PEET, Secretary and Actuary.

This Company, National in its character, offers, by reason of its Large Capital, Low Rates of Premium, and New Tables, the most desirable means of Insuring Life yet presented to the public.

JAY COOKE & CO., of 216 Broadway, new Park Bank Building, are General Agents for this vicinity, with D. C. Whitman and J. U. Orvis, Managers, where applications for insurance on the most favorable terms will be received.

STAMFORD INSTITUTE FOR BOYS.

A family school founded 1850. With a limited number, special encouragement is given to backward or timid pupils, and unusual attention to individual peculiarities. Physical culture a specialty, including Military Drill, Gymnastics, and Boating. Ample grounds, with building and appointments complete, in every respect. Boys fitted for College, business, West Point, or Annapolis. Circulars with references sent on application.

W. C. WILLCOX, M.A., PRINCIPAL, Stamford, Conn.

COLGATE & CO.'S

FRAGRANT TOILET SOAPS.

A variety of kinds of superior excellence for sale by first-class druggists and family grocers, and by all dealers in fancy articles.

THE NATION PRESS, 27 ROSE STREET, NEW YORK.

The Week.

THERE is political activity nowhere in the country now, except in Tennessee and Virginia, but in both those States it is very great, and in the former the excitement is very considerable. The result in neither, so far as concerns the success of candidates, will be of particular interest to the people outside of Virginia and Tennessee. Already the thing of most importance which the contest could effect has been effected—the Tennessee Republicans have been compelled to give up the proscriptive policy which—natural enough, and even not uncommendable, in the years first succeeding the war—has now been too long in force. Mr. Stokes wanted the governorship, and so did Mr. Senter, who has the advantages of having Mr. Brownlow's backing and the present possession of the office, which he fills *vice* Brownlow elected to the Senate. Stokes is said to be very strong in East Tennessee, he being a typical East Tennesseean himself; and when the party to which both he and Senter belong met the other day in convention, the followers of each were so nearly equal in strength, and the opposition of the one to the other so virulent, that the convention split amid the wildest cursing and bawling and giving of the lie and challenging to fight, and each candidate now claims that he is *the* nominee, and was nominated by acclamation—the latter assertion seeming reasonable. It is impossible to tell, at this distance, what will be the result. An event understood to be in Stokes's favor is a decision just made in the State Supreme Court, to the effect that the power to set aside registration for frauds and irregularities, which was attempted to be conferred on the governor by the Legislature, and was actually employed by Brownlow, is a judicial power, and cannot be lawfully exercised by the Executive.

But it is not certain that Senter will lose anything by this decision. It was among the possibilities, of course, that, being governor, he might decide on setting aside the vote of some precincts whose political complexion should displease him; and under the law as it was before the decision, some thousands of voters were disfranchised who now, it is very probable, may not vote for any friend and protégé of the man who disfranchised them. But whoever plays the political game with Brownlow for adviser, may be expected to play a bold game, and Senter, whether or not he was moved thereto by a knowledge of what the court's decision on the registry cases would be, has, all of a sudden, come out as an enemy of proscription and a friend of the enfranchisement of certain of the disfranchised—of an upset of Brownlow's pet policy. Stokes can do no less than follow suit; and so the case stands—a fight that we do not see how Mr. Andrew Johnson, being on the spot, can keep out of at all, yet we hear nothing of his being in it. Whether or not a peace will be patched up before the election we do not know, but in any case nobody will be sorry to hear that the Republicans of Tennessee begin to feel more disposed to trust their late Confederate neighbors, and everybody will hope that some of the other Border States—notably Missouri—may follow the new example Tennessee sets them as they followed the old. As Mr. Greeley writes to the West Virginia Republicans: "*Now* you can amnesty the Rebels. Soon the question will be, Shall they amnesty you?" And this he says because each year a certain number of the disfranchised die and a certain number of their sons, who cannot be disfranchised, take their places—numbers so large that, in West Virginia's case, the "Rebels," Mr. Greeley estimates, will in six years have overcome the present majority against their side. Emigration will interfere with this predicted course of things, and so will new questions; but still the policy is a good one, and the argument has weight. On the other hand, it may not be utterly uncalled for to pray that the late rebels, when newly enfranchised, may not devote themselves to remembering the past of their history and forgetting the future of it—a species of vicious bull which is a Southern favorite.

General Butler has been "interviewed" during the week, and announced—though not for the first time—his belief that the charge of the premature concession of belligerency to the South had no legal basis, owing to Mr. Lincoln's proclamation and to the decision of the Supreme Court in the case of Moran *agt.* the Equitable Insurance Co., delivered eleven days before the Queen's proclamation, in which the court ruled that the blockade was not, as Mr. Sumner says, a pacific, but a belligerent blockade. The General added that he concurred in the remark attributed to Chief-Justice Chase, that "we could not stand five minutes before any court in Europe on the legal positions of Sumner's speech." The General's own charge against England is in fact not a legal one at all, but a political one, namely: that the object of her whole policy was to break down this Government; and his remedy is a strict embargo, so as to stop all importations from her, and stop the export of our bonds to pay for them.

Mr. Laird has come out with a letter, for which the English Government will hardly thank him, showing that his proceedings in the preparation and despatch of the *Alabama* were (municipally) legal, and perfectly open to official inspection from first to last. This helps to bar the escape of the Government from moral responsibility, and at the same time affords an opportunity of affirming in a most decided and decisive way the doctrine for which the United States has contended throughout the controversy, that a state is bound to provide municipal machinery for the fulfilment of its international obligations, and that the refusal of Lord Palmerston to do so, and the public applause which greeted his refusal, were a shameless evasion of a duty, on the performance of which the very existence of international law, in any other character than that of a body of ethical doctrine, depends. The Chamber of Commerce at Liverpool has received Mr. Motley with a good deal of

unction, and it is with no desire to mar the effect of "the interchange of civilities," but with the view of warning adult Englishmen against the bad results of allowing their passions and prejudices to affect their foreign policy, that we mention that the outrageous conduct of the members of the Liverpool Chamber of Commerce during the war, not to resident Americans only, but to every Englishman who professed sympathy with the North, makes their present expressions of cordiality towards the United States bear an unpleasant resemblance to the oriental sign of self-abasement known as "eating dirt." Moreover, we advise the Free Trade League here to request them solemnly to stop petitioning United States Ministers, the minute they land, for free trade. United States ambassadors have no control over the tariff, as Liverpool traders ought to know, and their recommendations of free trade produce much the same effect on the American public as the appearance of Satan would produce at a missionary meeting, if he clothed himself in a gown and bands, and undertook to offer advice as to the conduct of the operations.

The only other additional contributions to the *Alabama* controversy are the appearance of a letter in the London *Times* from Senator Grimes, of Iowa, denying that there was any disposition in this country to go to war with England at present, and alleging that the cause of complaint against her was not the premature recognition of Southern belligerency, but the fact that the *Alabama* was a British ship which in a time of peace preyed on American commerce. The Northwestern States, he said, wanted Canada in order to give them the control of the navigation of the St. Lawrence, but had no desire or intention of taking it by force, and did not see the necessity of doing so. His account of the publication of Mr. Sumner's speech is, that the injunction of secrecy was removed at the orator's own request; but Senator Thayer, of Nebraska, informs the Associated Press that it was removed on the motion of Mr. Chandler, and that the impression was at the time that the speech was endorsed by all—no one, with the exception of McCreery, of Kentucky, dissenting.

Senator Grimes has been severely rebuked by the London correspondent of the *Tribune* for writing to the *Times* without permission, unauthorized correspondence with that journal being, it appears, only permitted to Mr. Motley and men of his literary standing. The same writer administers a sharp and well-deserved rap on the knuckles to Mr. Sumner and other senators for not having taken his (the correspondent's) advice, and appointed Mr. Moran *chargé d'affaires* in London on Mr. Adams's resignation, instead of sending over Mr. Reverdy Johnson. He communicated to the *Tribune* some weeks ago, also, the exclusive and important intelligence that there was a triple alliance on foot against this country by France, England, and Spain. "The fact," said he, "which at this moment dwarfs all other facts is the beginning of negotiations for an alliance, offensive and defensive, between England, France, and Spain against the United States. This I telegraphed to you two days ago. *It is still a secret in London.* I shall say nothing of the sources of my information, *nor can I add much to the original statement.*" As we have since heard nothing of this infamous league from either the *Tribune* or him, we cannot, in spite of our unwillingness to impute improper motives to any brother journalist, help fearing that this silence is not altogether accidental. We know well that it would not suit the purposes of these designing powers to have themselves watched by our enterprising contemporary, and we know, too, that their treasuries are full of the fruits of plunder and oppression.

There is one point in the *Alabama* controversy which has been greatly dwelt on, as an aggravation both of the connivance of England at the operations of the rebel cruisers, and of the operations themselves, and that is that the rebels had no prize courts, and destroyed enemy's property at sea without submitting it to adjudication. This point was touched upon in *Harper's Weekly* last week, and we see it again in a recent letter of the Rev. Dr. Henry to the Hartford *Courant*. Now the fact is, the rebels *had* Courts of Admiralty—their Confederate District Courts exercising admiralty jurisdiction under the Confederate Constitution, just as those of the United States, of which they were an exact copy, did here at the North. Secondly, a belligerent cruiser is not obliged by the law of nations to carry in prizes for judicial condemnation unless there is some doubt or dispute about the title to the captured property. If the ship, and all it contains, be confessedly enemy's property, he may destroy it on the spot. R. H. Dana says, in his edition of Wheaton: "A trial by a prize tribunal is not a right enemies can claim, *nor a duty to them.* They have no standing in court. If it be assumed that all captures are enemy's property, there need be no prize courts." In fact, in all maritime wars, large numbers of vessels have been burnt at sea, by belligerent captors, when for any reason it was inconvenient to take them into port for sale, there being no pretence of neutral interest in the ship or cargo. It was done on both sides during the Revolutionary war and the war of 1812. The principle of international law is, that enemies' property captured at sea vests instanter in the captor, to keep or destroy as he sees fit. Prize courts exist, in fact, for the protection of neutrals.

The Presbyterian General Assembly (New School), now sitting in this city, has had before it for some days a recommendation for prayer for peace between, if correctly reported, the "two great Protestant nations" of the world. It would, we suspect, puzzle any theologian in the country to show that war between two Protestant nations was a whit more repulsive to the Almighty, or more likely to elicit his interference, than war between two Catholic or pagan nations. In fact, if Protestants have more light on questions of international duty than the members of other faiths, their fighting amongst themselves would call for deeper condemnation, and it could hardly come in more appropriate form than in their being allowed to fight it out. The *reductio ad absurdum* was very neatly performed on the proposal, however, by the Rev. Dr. Sunderland, who discussed it on Monday morning last in "a fierce war speech." He expressed his willingness to *pray* for peace, but openly declared his *desire* for war, although it might not be the duty of the United States to undertake it just at this moment. The Assembly seemed to perceive very clearly the impossibility of circumventing either the Lord of Hosts or the God of Peace by a prayer offered in this spirit, and accordingly indefinitely postponed the whole matter.

Of one woman, at least, it may be said that she is not only helping to prove the fitness of her sex for a share in political life, but is, while doing so, helping to "purify and elevate" politics. We mean the present postmistress of Janesville, Wis., for whom we hereby express our hearty admiration. She was unable to get herself nominated or recommended for office by the Congressman of the district—a distinction she shares with almost everybody in the United States who is fit for office—so she determined to fight him; but instead of going about abusing him on the platform, she polled the town on the respective merits of his candidate and herself, and got a majority of two hundred votes in her own favor. Armed with this she went to Washington, where she again beat him, and got the appointment; and now, fresh from the field, she asks Mr. Jenckes's permission to repeat his speech on civil service reform before such audiences as she can get to listen to her in the district. We believe Mr. Jenckes is more sanguine than ever of his final success in carrying his bill. A vigorous agitation of the question in the West next fall has been determined on, and the speakers will now be fortified by the history of the first three months of Grant's administration, and by, we believe, the unanimous testimony of the heads of bureaux, if not of departments, in the public service. We may add that, inasmuch as whatever helps to make office the reward of knowledge and good character simply, naturally helps to lower the importance of the "quality" of sex, no class of persons is more interested in the reform than women; nevertheless, we have yet to hear a word in support of Mr. Jenckes's movement at any of their lectures or conventions. We trust they are going to mend their ways in this respect.

The *Saturday Review* recently, by way of illustrating the low state of morals and manners in the United States, remarked that "the most accomplished journalists vie with the lowest demagogues in unreasoning vituperation. The *Nation*, which stands on the intellectual level of the best European periodicals, descends into a blind and hysterical fury whenever it refers to England." It is very difficult to know how to deal with assertions of this kind. About the meaning of the phrase "a blind and hysterical fury" there can hardly be much difference between us and the *Review*, so that we are reduced to the unpleasant necessity of believing that when the writer predicated any such state of the *Nation*, on any subject, he was at least utterly reckless. Nothing has ever appeared in the *Nation* to furnish the slightest justification for it. What we endeavor to furnish our readers on all questions, is as near an approach to correct information and honest criticism as our means will permit. The public the *Nation* addresses, as far as our knowledge goes, demands as little "fury" and fustian as any public in the world, and it is lucky that it is so, because, if the supply of it ever became essential to the existence of the paper, it would quietly and comfortably disappear. We may add that both America and England have enough journalists and orators in their service able and willing to roar their way to any conclusion in law, politics, or morals which the popular taste or passion at the moment may call for, without our opening our little stall amongst them. We should have no chance, we are glad to say, in that particular market, and we intend to keep out of it.

The Charleston *Courier*, in a voice that has an undertone of lament in it, says that of course South Carolina has always been a barbarous State, but hopes that it will gratify our "DownEast friends" to hear that "we are rapidly assimilating ourselves and our laws to Down Eastern ideas." The particular act of assimilation that called out these remarks was the hearing before Judge Orr of three petitions for divorce, of which two were granted. One decree separated a woman from a man who had deserted her and married another woman in a Northern State, and the second, also in the wife's favor, was granted on the ground of the husband's cruelty, desertion, and bigamy. These are the first divorce cases that ever came up in South Carolina. It is a State which formerly held Northern "isms" in such abhorrence that it had on its statute-books a law regulating the amount of property a man should be permitted to leave his mistress, but the "carpet-bagger" now controls its legislation. Connecticut, meantime, goes on from bad to worse. Divorces in that State are to marriages there as one to ten; and as the Irish population do not patronize the divorce courts, the percentage of annulled marriages to permanent ones must be greater than one-tenth. It is, however, to be remembered that people go from other States to Connecticut for convenience of disjunction, just as they go to Indiana. The report is false, by the way, that the Indiana Legislature have modified the divorce law in the interest of the family. It stands as before, the House not concurring with the Senate's views of marriage, and, as one of our exchanges pleasantly says, "husbands and wives may govern themselves accordingly." Neither in the West nor the East, so far as we can see, does the tendency to experiment with marriage grow weaker.

A correspondent calls our attention, in confirmation of our remarks last week on the effect of the native emigration from New England on the character of the remaining population, to the large number of New Englanders and New Yorkers to be found in all branches of the public service. Of the seven members of the Johnson Cabinet, three were New Englanders—Welles, McCulloch, and Evarts, and three were New Yorkers by birth—Seward, Schofield, and Randall. Of the sixty-six senators of the Thirty-ninth Congress, twenty-six were New Englanders and ten New Yorkers by birth, making six majority of the Senate as it then stood. It was the same in the Fortieth Congress. In the House, of two hundred and twenty-eight members of the Thirty-ninth Congress, one hundred and five were natives of New England and New York. In fact, New Englanders and New Yorkers may be said to conduct the press, the commerce, the railroads and manufactures of the Western States—in other words, to do the work of civilization in them and to lift them from the barbarism of frontier life. Without them there is little doubt that Iowa, and Minnesota, and Wisconsin, in spite of their exemption from slavery, would not have differed so widely from Arkansas and other States of the South-west as they now do. The whole movement is a striking illustration of the immense and unprecedented advantage the United States enjoy of being able to send out their best men to form colonies without losing their services. No other country has been able to plant distant colonies without a proportionate loss of strength and energy at the centre.

The *Tribune* has at last got a correspondent in Cuba, so that we are likely to have some direct and reliable information as to some portion of the fighting at least. He landed on the coast in the bay of Nipe, on the 12th of May—three weeks ago—with a filibustering expedition, which he numbers at 5,000 men, with ten guns, and ammunition to suit, in the steamer *Perit*. The landing, he says, was attended with little or no difficulty. His narrative only comes down to the landing, however, although it is an immense improvement on the "private advices" and "the letters received here" on which we have hitherto been dependent for our information; but it would be much more valuable if he were not so wrapt up in the cause as he seems to be. The temptation to put a good face on everything will be irresistible. To rumor of the old kind we are indebted for the account of the fight which followed the landing. According to it, the Spaniards landed "several hundred soldiers," and took the filibusters in the rear, who retired and abandoned their guns, which fell into the hands of the troops. This appears, at first sight, to be a very extraordinary performance on the part of 5,000 desperate filibusters; but it appears they only "retired for the purpose of re-forming." This little ceremony completed, "they returned in force, made a brilliant charge, and compelled the Spaniards to retreat in disorder." Other Havana despatches say, however, that all accounts of the battle are worthless, as each side claims a brilliant victory. The Jamaica *Dispatch*, too, says that the *Perit* went to Kingston after landing her cargo, and while there "Captain Charles Wright of the Cuban army" gave some particulars of the expedition to the reporters, setting down the number of the filibusters at 350. There are fresh accounts from Havana of the defeats of the Nipe Bay filibusters, but nothing very well authenticated. General Dulce, who has been a dreadful failure, and seems to be conscious of it, and at all events is mortally sick, has been superseded. His successor, Rodas, is a soldier of some distinction, and is not troubled with scruples, and under him a policy of more concentration and greater determination will doubtless be pursued.

The news from Ireland indicates growing discontent on the land question. There have been half a dozen murders during the winter, and there is a kind of panic amongst the landlords. The news comes from Lord Derby's estates—and he is said not to be a bad landlord, from the landlord point of view—that the tenants decline to pay any more rent, and believe that from 1870 the land is to be their own. But The O'Donoghue has shown that it is after all a mistake to suppose that crime is increasing, for there were in 1837 six times as many murders as there have been during the past year, and yet nobody thought an agrarian revolution was impending. How wide apart the landlord and tenant views of their rights are, however, may be inferred from the fact that the Earl of Derby considers himself—and is considered, as we have said—a very good landlord, and yet he conceives himself justified in ejecting the inhabitants of a whole district in case an undetected murder is committed in it. A personage of this sort has, we need hardly say, no place in a modern state. He belongs to the age of flint-locks, and wooden frigates, and stage-coaches. It is amongst the possibilities that if the Irish Church were once settled, there would be a split in the cabinet on the land question, Mr. Bright, at least, and most probably Mr. Gladstone, being well known to hold much more "advanced" views on this matter than most of their colleagues. Strong efforts are already making to push Mr. Bright to the wall, and make him either fight or surrender.

EUROPEAN FINANCE AND AMERICAN SECURITIES.

THE leading English journals, commenting upon the advance in the rate of interest established three weeks since by the Bank of England, admit that the advance was not occasioned by any change in the domestic demand for money, but was mainly adopted as a precautionary measure to stay the increasing tendency of English capital to seek investment in loans to foreign governments and foreign corporations of various kinds. The measure itself seems to have met with almost universal approval, the number of foreign borrowers seeking the use of English capital having increased during the last year in a measure perfectly startling, and well calculated to alarm thoughtful statesmen and far-sighted financiers. Later mails announce the intended introduction into the North German Parliament of a bill prepared by the Finance Committee, taxing all capital invested in loans to foreign governments, or invested in foreign securities of any kind, to the extent of one per cent. per annum. This measure, although vehemently denounced by leading financial authorities, and earnestly combated by cities like Frankfort, whose principal business is that of money-lending, seems, like the advance in the Bank of England's rate of discount, to be, on the whole, warmly approved of. It is evident that many people are beginning to discover indications of danger, or, at least, of inconvenience, likely to arise from the increasing investment of English and German capital in foreign countries. The United States have always been, but of late years have more than ever been, large borrowers of English and German capital, and the evident attempt to prevent us from borrowing more is therefore a subject well worthy of our most serious investigation.

By many persons the act of the Bank of England—intended, as it in part unquestionably was, to stop the increasing investment in American securities—was ascribed to unfriendly feeling produced by the *Alabama* controversy. This feeling may have hastened the action of the Bank, or may have added to the satisfaction with which the measure was popularly regarded; but it needs no profound knowledge of finance to become convinced that such motives had but a very slight influence in producing the measure itself. The proposed action of the North German Confederation, which certainly cannot be suspected of unfriendly feelings towards the United States, though different in its nature, yet evidently identical in its aim, proves conclusively that deeper and wider causes have led alike to the English rise in the discount and the German tax on capital invested abroad. The directors of the Bank of England know from experience that the money lent to foreign countries is apt to be in part taken away from England in the shape of gold coin; and as the ability of the Bank to lend to its domestic customers depends upon its maintaining a liberal supply of coin in its own vaults, and as the gold to be exported can only be obtained from the Bank itself, any export of gold tends to deprive the Bank of its ability to lend to its customers at home, and, if the export is continued, to prevent it even from redeeming its own notes, thereby creating uneasiness, confusion, panic, and widespread distress. If the rate of interest in England is low—say three per cent. per annum, and the rate of interest in America is high—say six per cent. per annum, English capitalists will want to lend their money in America, or, what amounts to the same thing, they will want to buy American securities. If English capitalists want to invest much money in America, or buy many American securities, they will have to do what they did six weeks ago—send English gold to America. But if English gold is sent to America, the coin will be drawn from the Bank of England, and the Bank will lose its reserves; and, as it cannot afford that, it must remove the incentive to invest in American securities by making the rate of interest in England as high as it is here. The Bank of England can accomplish this to some extent by advancing its own rate of interest, which advance being almost immediately followed by all other money-lenders, naturally has, for a time at least, the effect of advancing the rates of interest in all parts of the country. As soon as the rate of interest in England is as high as in America—in other words, as soon as Englishmen can get as much interest by lending their money at home as they can get by lending it abroad, they will, of course, lend it at home; the investment in foreign securities will cease; and no fear need be entertained any longer that gold will be exported, or the Bank lose its coin reserves. The action of the Bank of England is therefore explicable by simple motives of self-interest. The proposed action of the North German Parliament, though less directly traceable to individual self-seeking, is, nevertheless, mainly due to the same fear of disturbance to domestic finances, consequent upon a possible export of specie to pay for the foreign securities purchased.

But both the Bank of England and the North German Confederation are acting under influences which it is not unreasonable to suppose they themselves are scarcely conscious of—influences which we, standing at a distance, and guided by the rapid experience of seven or eight years of the fastest financial living ever indulged in, are perhaps better fitted than they to comprehend, but which even with us are barely beginning to be recognized. We know, as a matter of fact, that money—in the ordinary financial sense of the word—has been cheaper in England, France, and Germany during the last two years than it ever was before for a period of equal length. For months at a time money in England, as the phrase goes, went a-begging at one or one and a half per cent. per annum. Money—still adhering to the ordinary financial sense of the word—was either so abundant or so little wanted, that no one was willing or able to pay even so trifling an interest for it as one and a half per cent. per annum, and large amounts of money were left totally unemployed. The idle accumulations of gold and silver coin in the Bank of France and the Bank of England exceeded by far the largest amounts ever held by them prior to that time, and rose to over $350,000,000—a sum far larger than the largest amount of coin ever held in the United States, not only as an idle accumulation in the banks, but including the total circulation in the hands of the people. This immense accumulation of coin was due mainly to the suspension of specie payments in the United States. Every step towards resumption here is an unconscious and unintentional threat on our part to demand back our coin reserves.

When the United States abandoned specie payments, they virtually threw upon the money markets of the world the whole of the one hundred and fifty or two hundred millions of dollars in gold coin which at that time formed our metallic currency. Not only was there no cessation in the gold production in our Pacific mining States and in Australia—not only was there no stoppage in the ordinary annual addition to the world's supply from these sources—but the whole of our coin circulation was further added to the world's supply. In the first years of the war our coin circulation was largely hoarded at home; and when it began to return from hoards, and to be exported, the immense impetus given to the world's traffic by our war prevented the addition to the world's currency from being much noticed. It was only when, in 1865, the United States gradually resumed their natural position in the world's traffic, and especially when by their cotton supplies they cooled down the raging fever of cotton and other speculation in British India, with its attendant famine and pestilence—it was only then that the great financial centres began to experience the glut which the American coin reserves naturally produced in the narrowed channels of legitimate trade. Then came that wild, insane attempt to make a use for that which was useless; to invent business merely to find employment for money—the English "limited liability" fever. When it was found that no amount of money could make business out of nothing; when the limited liability bubble burst with the explosion of Overend, Gurney & Co.'s failure; when repeated efforts to revive the objectless speculation had resulted disastrously—then, but not until then, the financial world of Europe resigned itself to seeing the precious golden wealth lie idle in the vaults of the two great banks, until the only people that can use it to advantage—the original owners, the people of the United States—should make good their title to its possession by offering it profitable employment. The dulness of the European money markets during the last three years means nothing more nor less than that Europe has no means of giving safe and profitable employment to the coin reserves of the United States, which, owing to our erroneous financial policy, have been forced to accumulate there.

Faint efforts have, it is true, been made, and even with limited success, to induce England, France, and Germany to lend these surplus accumulations to Spain, Italy, Russia, Turkey, and who knows what

other poor and hopelessly bankrupt states. There are even men—and men of ability and influence, too—who are at this very day using such international quarrels as the *Alabama* controversy to cheat Englishmen and Germans into the belief that Turkey, and Spain, and the Pope of Rome are better and safer creditors than the United States. But Englishmen and Germans, who have visited this country, or who have friends and relatives and correspondents here, know better; and hence neither the efforts of the press nor the action of the Bank have so far materially interfered with the steady progress of investment in American securities. In truth, the advance in the Bank of England rate has not as yet produced the effect anticipated from it in advancing the rate of interest elsewhere. On the contrary, outside of the Bank, money seems obtainable almost as cheaply as before; and whatever influence the change has made on other securities, it has not, even combined with the *Alabama* controversy and with the recent ten per cent. rise in gold, depressed the price of American bonds more than one or two per cent. Within the last two weeks large orders for our bonds have again been received both from Germany and from England, and there is every likelihood that the demand will continue. As long as Europe cannot find safe, profitable employment for its money accumulations, so long will its money accumulations tend to seek employment here. As long as money can find safe employment in the United States at six per cent. interest, nothing that banks and governments can do will prevent all money from coming here that cannot be employed at home at as good a profit. What has prevented the even more rapid and more extensive employment of foreign capital here is fear that the essential element of safety is wanting. That element of safety—whatever selfish politicians and over-impatient journalists may say—has been furnished, to the satisfaction of European capitalists, by the administration of General Grant; and the unexpectedly favorable showing of our national accounts is bearing out the anticipations of his warmest admirers. In spite of the extraordinary and unnatural recent advance in the price of gold, in spite of some of Secretary Boutwell's measures which we cannot but consider injudicious, the capitalists of Europe are beginning to regard our financial future with growing confidence. They are beginning to recognize dimly that a large drain of specie from Europe to this country will and must set in so soon as our people are resolved upon returning to a specie currency. It is against this inevitable drain that the North German Government and the leaders of finance in England are instinctively arming themselves.

CONVENTIONS.

We have had, during the month which has just closed, a very fair amount, it will be admitted, of "free discussion" on all sorts of subjects. Convention has succeeded convention, and anniversary anniversary, until there is hardly a point in the body politic and the body social which has not been pinched and kneaded, or a joint which has not been cracked and stretched. The church, the family, property, wages, labor, capital, war, peace, man, woman, and child have undergone a thorough overhauling. Several societies have literally kept open house, somewhat as mediæval nobles did during Christmas week, making everybody welcome, and asking no questions, provided he contributed his share to the common stock of enjoyment, and swallowed a fair amount of whatever was set before him. The interest and *éclat* of these gatherings—we speak more particularly of those which provide what is called a "free platform"—has been heightened of late years by the increasing attention devoted to their proceedings by the press. Meetings which ten or twenty years ago would have met, debated, and dissolved in obscurity, and would have been only too thankful if they had not been interrupted or mobbed, are now reported conspicuously, and often in full, by the daily press, with all sorts of typographical decoration, and the reports are largely read by most people for amusement, but by a large number in the belief that they can find in them "signs of the times." This publicity, of course, helps to increase greatly the size of the audiences; but it also increases the number of the speeches and the variety and "spiciness" of the speaking. There is in every country—and in this, for obvious reasons, more than in most others—a large number of persons of little education and of little or no prehensile power; ignorant of what has already been discovered by others, and unprovided with the means of testing the value of what they think they have discovered themselves; fond of novelty, fond of notoriety, and cursed with the restlessness which the patriarch gave as the secret of Reuben's failure. They occupy themselves mainly either with mechanical inventions or with contributions to social science; and, of course, the present multiplicity of "free platforms" is a god-send to them. The one joy of their existence is the possession of an audience to listen to their last panacea—no easy thing to accomplish, under ordinary circumstances; but, owing to the adoption of the principle of reciprocity by many radical reformers, it is now within the reach of any bore or cracked person who has patience enough to take his turn when the speaking begins, and pay a decent amount of attention to the shallow and imperfect suggestions of the rest of the company. The numbers of this class are, of course, now that notoriety is within so easy reach, rapidly increasing.

At the bottom of all this folly and confusion there is, of course, a substratum of honest and conscientious and thoughtful effort. In every movement there are a number of persons, however small, who know what they aim at, and where they stand, and have reached their conclusions by reflection, and hold to them with deeply rooted conviction; but the fever and excitement of the march have now become so great that the bummers far outnumber the regular troops. There have been several striking examples of what may be done by men thoroughly in earnest, by taking up what seemed extreme positions in politics or society, and holding to them firmly until they had won over the rising generation to aid in their triumph. Amongst the most memorable cases of the effects of this persistence are the destruction of slavery in England and here, the abolition of the corn-laws in England, and the extension of the suffrage there and here, to say nothing of several minor but valuable reforms. All this was accomplished by incessant talk—by talk that to a large proportion of the community was, when it began, wicked or insane, but which, nevertheless, never slackened till the opposition was overcome and the work was done. But the secret of the success of all these agitations was that they were undertaken and carried out by men who were thoroughly persuaded of the feasibility of what they undertook, were well aware of the difficulty of their task, and examined themselves strictly as to their competence for it. Their success has produced on the minds of large numbers of weak admirers and imitators the impression that it was not so much their logic and persistence and familiarity with the subject which carried the day, but the talk itself—in short, that it was not the round-shot which drove the enemy from the field, but the noise of the cannonade; consequently, they think if they can produce a series of noises of equal intensity they can produce similar results. The great importance attached at all the conventions to "free speech" *per se*—that is, to letting everybody speak on any subject, be he wise or foolish—is undoubtedly due to a kind of superstitious reverence for the sound apart from the sense.

The most striking thing in the view most of the speakers at the convention take of society and social arrangements, is their want of confidence in the general progress of society and in the power of right living, as distinguished from right thinking or right legislation. One marked tendency in the speeches, too, is to make the government a kind of almoner or director of a charitable institution, rather than a protector of life and property. Prévost-Paradol, writing recently in his admirable volume on the condition and prospects of his own country, called "La France Nouvelle," says: "If we want to mark well the trait which distinguishes the demagogue from the reformer—the friend of the people—we shall find it in this: the reformer points out a particular evil, and proposes at the same time a practical and special means of curing it; he accepts discussion on this point, even concentrates it on it, and yields to reason if it is demonstrated to him that the social disorder by which his sight is offended cannot be entirely corrected, except, as too often happens in this world, at the cost of a still greater disorder. The demagogue, on the contrary, sticks to vague and incessant declamation on the sufferings of the people, on the enjoyments of the rich, on the inertia or bad will of the government without ever indicating how it could be arranged so that there should be no more poor, and without revealing to the state any means of ex-

tending to all citizens an equal share in the good things of this life." There are not many real self-seeking demagogues amongst the speakers at our reformatory conventions. They are mostly, at worst, ill-informed and ill-balanced zealots, but they begin to draw the demagogues. One finds an increasing number of the latter hanging about the doors or seated in the front benches among the audience, awaiting an invitation to the platform. Letters from them, too, begin to arrive, announcing that, though unable to attend in person, any earnest efforts to run a cheap and well-lighted tunnel for the use of the poor through the centre of the globe shall have their heartiest support in and out of Congress, and advising promoters of the enterprise to be vigilant and persistent, and the day will soon break. They are all a little afraid to have a real, determined radical on their track, and all a little anxious to have an outspoken society or league on their side. There is little doubt, however, that the present somewhat chaotic stage in the reformatory movement will soon pass away. One of the beauties even of great publicity is that it gets crude opinions into print, and print is a terrible solvent. A great deal of platform oratory can no more bear it than a ball-room beauty can bear the garish light of day after a night's dancing; and many a plan for the regeneration of mankind which seemed impregnable when solemnly addressed to the chair, serves only the next day to give hilarity to the national breakfast-table.

WHY FRENCHMEN DO NOT MULTIPLY.

When Dr. Nathan Allen, a year ago, in an article in the *Quarterly Journal of Psychological Medicine*, ascribed the decline or stationariness of population in France to the love of Frenchwomen for "society, amusements, and light literature," and their consequent desire "to make domestic labor and household duties as easy as possible," we ventured to suggest that he would hardly have made this assertion had he been well acquainted with the social condition of France, and that, moreover, the very statistics which he quoted pointed very clearly to other causes for the comparatively small number of births in France than the selfish love of pleasure of French mothers. An able French writer in the English *Medical Times and Gazette* for the month of February discusses the question with a thorough knowledge both of the figures and of his countrymen's way of looking at their social duties, and sustains throughout our objections to Dr. Allen's theory.

The French population—the first shock and disorder of the Revolution over—increased at the very respectable rate of six per cent. per annum from 1801 to 1805. Then began the tremendous wars of the Empire, with their prodigious consumption of life; and the increase from 1805 to 1820 fell to four and a half per cent. The progress was regular at about the same rate to 1846—the country steadily recovering from its exhaustion. Then there was a check, and there was no increase during the ensuing five years, which can readily be accounted for by the Revolution and the alarm and uncertainty it diffused amongst property-holders of all classes. During the last nine or ten years the increase has only been about one and a half per cent. During the last forty years the number of children to a marriage has been constantly declining. In 1821, it was 4·24; in 1865, 3·07. There have been only 135,000 more births than deaths since 1855; and during the Crimean war there was a positive decrease of population.

Now, considering the immense space which France fills in modern civilization, we are all deeply concerned in the answer to the question whether this decline or failure to increase in population is or is not due to a failure of vital power; whether, in short, as Dr. Allen says, the subjugation of the women by tastes and habits in the force of which there is not the least chance of our witnessing any decline, has really caused a diminution of their productive power. The writer in the *Medical Times* says there is no good reason for answering this question in the affirmative. There are striking indications, apart from the steady growth in the duration of life, that the *vis vitæ* is at least as strong as ever. Broca, the anthropologist, shows that the average height of French conscripts has not diminished one-twenty-fifth of an inch since the beginning of the century, in spite of the great loss of life among the able-bodied men; while the physical vigor of the male population has clearly increased. In 1824, 276 men had to be drawn upon in order to furnish 100 sound recruits to the army; in 1866, only 203. This is one sign; another is, that the number of illegitimate children remains pretty constantly the same; that is, there are about as many as there are fathers willing to support them. If the productive power of the women were declining, the result would appear in the decreased number of these unfortunates, as well as in that of the legitimate children.

There are, however, other reasons for believing that the true cause of the decline in population lies, as we argued, where neither legislator nor moralist can reach it—that is, in the will of the people. Among the influences which have operated to keep down population ever since the Revolution is, first of all, the passion for social equality. Everybody who knows the French workmen and peasants testifies to its strength. Every one of them wants to rise in the social sphere; if he cannot do it himself, he desires to have his children do it; and we think, for our part, that there is nothing in the manners of any modern people more touching and more respectable than the thoughtfulness with which Frenchmen and Frenchwomen care for their children's future; the way in which they work for them and save for them; the restraint which parents in other respects worthless will often put on themselves in order to leave their children a good name; and the dread with which, on their account more than on his own, the average Frenchman shrinks from anything which his conventional code pronounces dishonorable or discreditable. It is not the noblest motive of action, of course, but there is something finely human about it. One of its manifestations is undoubtedly the smallness of the families. Men and women will not have more children than they can provide with a fair start, because there is nothing in a Frenchman's life, or in his aspirations, which can compensate him for his children's reproaches or take the place of their gratitude or respect. The laws of inheritance, too, particularly in so far as they affect landed property, do much in restraint of the increase of population. The small farmers, who have to divide their dearly cherished acres equally among their children, shrink from reducing each share to a mere shred, and amongst all persons who have inherited property there is a strong reluctance to bequeath to their children less than they themselves received from their parents.

The same feelings produce late, and increasingly late, marriages amongst the masses. The average marrying age in 1821 was 27; it is now 31; and though the size of the army has something to do with this, frugality and ambition and the great multiplicity of small proprietors have more. The extremes of wealth and poverty are both favorable to productiveness; among thrifty classes, whose incomes are small, and who desire to increase them, the rate of increase is low, as is shown by the state of things in Switzerland and other countries as well as in France; and some striking illustrations of the rule are found in the contrast presented by different provinces of France itself. In Brittany, which is wretchedly poor, the increase is very rapid; in Normandy, which is the most thriving district in the empire, the population is almost stationary. In Alsace, on the other hand, where, we do not know for what reason, the military spirit of the population is very strong—the young men nearly all entering the army, and furnishing nine-tenths of the gendarmerie and two-thirds of the substitutes furnished by well-to-do conscripts—the rate of increase is very high, the prudential restraint being removed by the military drain. All statistics bearing on the distribution of the national wealth, too, and on the popular standard of living, show that in spite of the low state of popular education the masses have within the last forty years made great advances in comfort, decency, and in all the outward signs of national prosperity and self-respect. But the contrasts which one constantly meets with in the French provinces between the material and mental condition of the peasantry are amongst the most curious phenomena of French society. The great number of very wealthy men to be found all over France, especially in the wine districts, with the manners, breeding, and minds of peasants, forms one of the great blots on French civilization.

JUSTICE WITHOUT LAW.

Those well-meaning but ill-judging people who have no patience with "red tape," who detest legal forms, and constantly pray for the advent of a new system, in which abstract justice shall be administered,

regardless of law, may find matter for long and profitable reflection in the last judicial scandal of New York.

One of the ablest and most clear-headed of the judges in this city, having become irritated by the escape from his jurisdiction of a mother with her child while he was considering whether the child should be left with her or given to its father, suspected that two sisters of this woman had aided her escape. For this suspicion he had certainly strong grounds, but not a particle of legal evidence. There was, however, enough evidence before him to show that they kept a house of ill-fame; and upon the strength of this, he issued a warrant for their arrest, under which they were committed to prison. The law requires that all prisoners shall have a speedy examination, and peremptorily forbids their detention for more than eight days without a hearing. These women had been kept for more than this period without any examination, when Mr. John D. Townsend was employed by them to obtain their release. Mr. Townsend presented their statement to the judge who had caused their arrest, when the judge warned him not to touch the case, giving him notice that if he did he need never expect any more judicial favors. Notwithstanding this threat, Mr. Townsend persevered, and obtained a writ of *habeas corpus* for his clients from Judge Clerke, who however made it returnable before Judge Cardozo, who had committed them, having previously promised to do so at the request of the latter judge. When the prisoners were brought before Judge Cardozo, he immediately remanded them for a week without giving them any hearing. At the adjourned day, the District Attorney appeared, with Messrs. John Graham and Edwin W. Stoughton, nominally to prosecute the charge against the prisoners, but really to lend their support to the judge in what they evidently considered a personal quarrel between the court and the prisoners' counsel. The formality of hearing the prisoners' application to be released on bail, and of hearing the evidence, or rather total want of evidence, as to their complicity in their sister's escape, was completed; and then, when all the real business was over, Mr. Graham delivered an oration full of scurrilous abuse of Mr. Townsend for having dared to take up a case which the court had desired him to leave alone, and especially for having published the facts in the newspapers. The prisoners were then released.

We are anxious to make a fair statement of this transaction, because, so far as we have any knowledge of the facts, Judge Cardozo's chief motive was a commendable one. He desired to save a little girl and her mother from a life of infamy; and in the first instance he used perfectly legitimate methods of pressure to accomplish this result. Being thwarted, and, as he believed, through the means of these two women, he allowed his indignation to lead him into measures which are palpably inconsistent with the safety of any citizen, if they are to be precedents for any future action. If a bad woman can be kept in jail for two or three weeks without a chance to vindicate herself, to get a hearing, or to give bail, a good woman may receive the same treatment whenever she happens to displease a judge. If lawyers are to be frightened out of one case, they may be frightened out of another; and no man, however innocent, can get a chance to be heard by counsel, if a judge is under the impression that he is guilty.

These incidents have awakened a profound feeling among the members of the bar of New York, as well they may. The acknowledged bad character of the women who have been the victims in this instance has made it a not particularly agreeable thing to speak in their behalf; but it is universally felt that a precedent has been established which may be used to the prejudice of persons of spotless fame. For our own part, we do not desire to make these facts a text for censure of individual judges, who doubtless believed that they were only acting a little irregularly in a good cause, and doing a kind of summary justice. We see in these events a timely warning against the common error which leads multitudes of good men to desire a suspension, in urgent cases, of those rules of law which secure the guilty, equally with the innocent, the aid of counsel and the means of self-vindication.

Those Republicans who denounced Mr. Evarts for assuming the defence of Andrew Johnson, struck a blow at the administration of justice precisely the same in kind as the warning which Judge Cardozo gave to Mrs. Pearsall's lawyer. When Mr. Bingham talked insolently before the Senate of the "hired advocates" of the President, he set the example for the brutality of Mr. Graham in his onslaught upon the lawyer who had dared to act in opposition to a judge. The justification in the latter case is at least as good as in the former. If Mr. Johnson was "the greatest criminal of the age," the woman Pearsall is certainly no saint. If the ex-President was believed to be conspiring against the welfare of the country, the prisoners in this case were believed by the judge to have conspired to nullify his decrees and to ruin a young girl.

But no guilt on one side, and no goodness of motive on the other, will suffice in either case to excuse the attack made upon the independence of counsel. It is time, however, that we all learned to place their true value upon the precautions of the law against oppression and hasty judgment. Undoubtedly they often enable the guilty to escape; but if they are broken down, everything will be left to the absolute discretion of the courts, and the best of men will be the easiest victims of tyranny.

THE HARVARD AND OXFORD BOAT-RACE.

PERHAPS if a minute philosopher were intent upon assigning all the causes which for so long a period have resulted in the constant victory of Harvard over Yale, he would not omit from his calculation the effect upon nerve, temper, and skill which practice on the Charles River must have on any crew. Between the college "float" and Boston, three bridges span the river, no solid, stone-founded structures, but those most noxious of all bridges to rowing men—the pile-built draw of forty years ago, its spider legs sucking the tide between them in every imaginable direction except the one in which it is naturally running, and the whole ungainly mass dropped into the water in such a way that the open space left under the draw for boats to pass through shall rather resemble in its eddying and shifting currents the Niagara whirlpool than anything else—except always that the motion of the latter is constant, if it is peculiar, while the motion of the Charles beneath the bridges is not only *sui generis*, but never the same for twenty minutes together. So, at least, it strikes the uninitiated oar that shoots them for the first time. Through these draws, however, the Harvard men for years have been pulling every day of their lives; and what strikes the uninitiated freshman as dangerous work—there are only a few feet to spare from the tips of the oars to the sides of the bridge—strikes the experienced senior as child's play. The difficulty overcome is doubled, too, by the practice of steering without a coxswain, throwing upon the bow-oar the responsibility of two characters. The river is, on the whole, one of the most disagreeable in the world, and mastering it practises any crew in the difficult arts of obedience and steadiness. It is over this course that the Harvard four who are to row Oxford now pull every evening.

Of these four, two are already definitely selected, and these are Loring and Simmons, both of Massachusetts, well known to the rowing public as men of the Harvard crew which beat Yale last year over the Worcester course in the unprecedented time of 17 minutes 48½ seconds. The other two will, in all probability, be Rice and Bass, Western men, and new oars, about whom there has, we understand, been an amusing controversy within the college walls—such particulars of which as have leaked out may not inappropriately be mentioned here, though we do not undertake to vouch for the exact accuracy of every word of it. The story goes that a certain set among the undergraduates at Harvard, well enough content to have an international boat-race, were yet sadly displeased at hearing that two Western "sons of the soil" would probably be included in the crew, being of the opinion that the ideal four were not sons of "the soil," but of macadamized or even paved roads. This set started various objections to the race—as that the challenge had been sent without proper authority; that the whole thing had been got up, like the Johnson-Clarendon treaty, with indecent haste, meanwhile privately circulating the scandalous and horrible allegation that Bass and Rice were "not representative men." But the trouble with their case seemed to be that whether Bass and Rice were or were not "representative men," there was, at any rate, the promise in them of remarkably good oars, which to the candid observer appeared to be the main question. The best means possible of settling the trouble were taken—a general meeting of those interested in the question was held, and a vote cast, by which it appeared that a heavy majority of the rowing interest were sound on the main question, and in favor of having the race come off.

The Harvard four of 1869 will therefore in all probability consist of

Simmons, Loring, Rice, and Bass. Simmons will be stroke; Loring, bow as well as captain. The office of captain is one of peculiar responsibility, and has been lately borrowed by Harvard from the English system. The captain is, in one word, dictator; he selects, trains, and directs the crew; he changes their position in the boat; he is absolute; there is no appeal from his decision. He may make the stroke bow, and the bow stroke; he may turn the whole crew out and put other men in their places. It is fortunate, under these circumstances, that Harvard is in the hands of a man twenty-five years old, and a remarkably mature oar at that. And it may be well enough to say here that the prevalent opinion that the Harvard crew will be younger than the Oxford is entirely a mistake. Their average age will be twenty-three.

The Oxford four consist of the stroke and three men who sat behind him in the eight-oar which beat Cambridge in March of this year. Their names are, Darbishire (stroke), Tinné, Yarborough, and Benson (bow). We give below, in tabular form, all the facts which we have been able to obtain about the two crews:

HARVARD.

	Age.	Height. ft. in.	Racing weight. lbs.
Stroke, W. H. Simmons,	20	5 11½	174
2. S. W. Rice,	26	5 11½	165
3. G. Bass,	23	5 10½	164
Bow, A. P. Loring,	25	5 11½	158

The Harvard coxswain is not yet selected, but will probably weigh about 100.

OXFORD.

	Racing weight, March, 1869. lbs.
Stroke, S. Darbishire (Balliol),	160
2. Z. C. Tinné (University),	188
3. A. C. Yarborough (Lincoln),	166
Bow, W. D. Benson (Balliol),	160½
D. A. Neilson (St. John's), cox.,	110

We have numbered the English crew according to the American system, in order that the two may be uniform. In England, bow is No. 1 and stroke is No. 4. With us this order is reversed.

There are several circumstances which make it almost impossible to calculate the chances of the two crews. Harvard will carry a coxswain—a thing unheard of for nearly three college generations, all the boats of late years having been made with a steering apparatus, which the bow-oar manages with his feet. In the second place, a college four-oar has been or a long time almost an unknown boat on American waters. This would not make much difference if there was any English college boat the time of which could be compared with any American college boat. But, while we always pull six oars, they always pull eight. When it is considered, n addition to this, that the Harvard men are accustomed to turn a stake in the middle of the course, and the Oxford always pull a straight course without turning, and that the length of the course in the two countries is never the same, it will be seen that no calculation can determine in advance the probabilities. However, there are one or two facts well authenticated, which serve to show that the Harvard crew need not dread that overwhelming defeat which is predicted for it by the conservative and despondent. The "Henley course" comes nearer being an exact mile in length than any other in England. The "Henley time" made by an eight-oar over this course has the reputation of being the best time made in the country. Now, an average of some nine or ten years of this time shows 5m. 50sec. as the best English eight-oar time on a mile course. Last year the Harvard crew, in their race with Yale at Worcester, made the first mile in a three-mile course in 5m. 30sec. In other words, an American six-oar has done better than the average English eight. It is true that the Henley time is made against a current, but it is a very sluggish one, running not more than half a mile an hour, and it is also true that the American time of 5.30, though made on dead water, was made on a long course on which no crew would dare to use all their power for the first mile.

With regard to "style," or what might be called in less technical language the manner of rowing, there can be little doubt that Harvard will equal and probably excel Oxford. The Harvard stroke, about which so much has been said at one time and another, has very much changed since the day when the object of every man was first to bend far enough forward to touch the bottom of the boat with his lips, and then, recovering himself, to get far enough back to touch the legs of the man behind him with the back of his head. The principle of the Harvard stroke then was length; the longer the blade of the oar could be kept in the water, the better. This system has, however, given way to one in which the aim is to bring the strength of the crew to bear upon that part of the stroke in which force most tells. It seems obvious that if a man bends very far behind an erect position, he will lose a great deal of force in the effort necessary for the recover. Instead of being able to throw himself lightly forward, he must struggle up, as best he may, from the bottom of the boat, in which he is almost lying at full length. And then after he has expended time and strength in this absurd way, he has gained nothing by it. He leaned back in order to give force to the end of his stroke, and it is generally admitted now that strength laid out at the end of the stroke is of little consequence. The important moment is when the crew "catches the beginning"—that is to say, when, letting the blades of their oars sink till the water covers them, they *pull*. It is at that moment that legs and arms and back all tell, and that, according to the best accounts, is the moment for which the Oxford men care most. So, also, is it with Harvard. No one is more alive to the necessity of catching the beginning than the captain of the international four. The Harvard stroke, as at present practised, is effected in this way: the men bend well forward, seize the water with the oar, and then pull until their backs slant a little back of a perpendicular, and then *da capo*, the body moving through an angle of about fifty degrees. We do not believe, from all that can be learnt about the Oxford stroke, that there is much difference between the two. As to the *personnel* of the crews, it may certainly be said that the four men who pull every evening on the Charles look beautifully in a boat, and that the same can hardly be said of the four Englishmen as they appear in a photograph of the Oxford eight which beat Cambridge last March. Tinné looks too heavy even for a man of his enormous weight, and while Darbishire looks finely and Benson prettily, Yarborough, beyond all doubt, looks a positively ugly oar. On the other hand, Simmons and Loring are, in the opinion of all competent critics, "lovely," and Rice and Bass are, in appearance, better than Yarborough and Tinné. Of course, it is to be thought of that, in speaking of the Englishmen, we speak of men whom we have not seen in the flesh.

On the whole, considering that Harvard has the advantage in age; that the crews are very nearly matched in weight; that Simmons and Loring have pulled in eight or nine races; that English rowing has, in the opinion of good judges, deteriorated of late years; and that American rowing has very much improved, we cannot see any reason why anybody should despair of the Republic. No doubt England has had a much longer experience in aquatic sports than we have had, but that deficiency did not prevent the *America*, some twenty years ago, from "teaching the English yachting." On one or two points we feel confident. In the first place, we shall have a lighter boat. For some reason or other, the English builders have not yet learnt the art of turning out light boats; and we may pretty safely say the difference in weight between the Oxford "ship" and the Harvard boat will not be small. In the second place, we feel pretty sure that the manner of rowing of the American crew will be finer than that of their antagonists. It is mentioned in a casual way in one of the accounts of the Oxford and Cambridge race of this year, that one of the men caught a crab and tumbled over into the lap of the man behind. Whether this is an ordinary occurrence in England we cannot say, but if it happened here in a Worcester race, it would not be mentioned in the newspapers as a natural accident. The man in either the Yale or Harvard six who caught a crab and tumbled over into the lap of the man behind would almost be drummed out of civilized society; his friends would blush for him, his acquaintances would try to forget him, his name would be a by-word, and his memory covered with shame. In the light of this "crab," we can perhaps better understand what Mr. Morrison (the Cambridge "coach" of this year) means when he says: "The rowing of the present day is far inferior to that of ten years ago; it has now degenerated into a scramble, although the Oxford crews of the last few years have been good enough to beat those that Cambridge has sent up against them."

In what we have said, we have compared Harvard and Oxford, omitting Cambridge, because much more is known about Oxford, and because that is the winning college, having beaten her adversary steadily for nine successive years. It is not certain, but it is likely rather than unlikely, that Cambridge also will compete; and, in addition to this, the London Rowing Club, the best amateur club in England, has sent a challenge to Harvard, suggesting that as victory over Oxford only might not be sufficient to establish their claim to the championship of the world, the Harvard crew might like also to beat them—the London Rowing Club. This delicately courteous proposal can hardly fail to be accepted, although, the challenge having only just arrived, the question has not yet, we believe, been decided. The summer will, at all events, be an interesting one for all those who care for aquatic sports; and if we are beaten, we must include the damages to our feelings in the *Alabama* claims, and try again.

ART-STUDY IN THE IMPERIAL SCHOOL AT PARIS.

No. III.

THE FÊTE OF THE BIEN-VENUS.

THE treasury of the school, when it had experienced the addition of two or three more "welcomes," betrayed a pressing distension, quite appreciable to the wise ones. One of our oldest heads, Lenoir, confided to me his apprehension that if relief were not afforded to the common bag, it would go off—that is, the treasurer would use it to marry upon, down in the country. This Lenoir, in our distribution of parts, has been chosen for his qualities to be spokesman and honorable ringleader. He can crawl with our petitions up to the Bureau, or he can flourish with our compliments up to the Professor. Yet, at first sight, Lenoir seems to lack the graces of the persuader. He is one of those under-sized youths, with dense, dark flesh and quick and close-set eyes, whom English generalizers have often called the monkeyish or skipping French. For my part, I will never disparage a man who is capable of Lenoir's smile—a smile fathoms deep, and some five inches broad, and one of singular fineness and art. Perhaps this masterpiece is effective because—as I notice when his muscular cheeks work so as to show, as the term goes here, the teeth barefoot—it is really based upon formidable foundations. Here is a slight bodily organization displaying (what is a perpetual development among the Latin families, as a famous dentist has told me) a gorilla-jaw and horse-teeth out of all seeming proportion. When the latest evaporation of race results in a jaw, and the jaw results in a smile, who shall stand before it? One thinks how, several times in Spanish, French, and Italian affairs, the smiles of little men, planted upon these inordinate and insatiable maxillaries, have worried considerable surfaces of the earth. Lenoir is prosperous enough to dress in English style, and comes to the *atelier* wedged in his trowsers and lost in his sleeves.

"We of Paris run after the English mode," he has said to me sagaciously; "though we can only hope for a success of caricature. Would any one take me for a *petit crevé* of Pe-ca-de-le? But, after all, what will you have? It is but a piece of bad historic art. Our masters have no better success. Do you suppose Piloty's Romans look as the Romans really looked? Would an Antwerp burgher of the fourteenth century acknowledge the best archæology of Leys or Tissot? No. Translation is travesty."

This is the philosopher who, clambering upon a stout easel, proposes an investment of the public purse.

"Respect the attitude of Lenoir!" cries the nearest student; "he is waving a handkerchief like the man with a signal in Géricault's 'Méduse.'"

The handkerchief was a paint-rag. The appeal interrupted a favorite game. School was done, and the model was hastily transforming himself, by a fatal assumption of clothing, from a Greek aristocrat to a miserable beggar of the century, and the liberated spirits of the studio, bestriding stools which they caused to gallop, were performing "the Metopes of the Parthenon." Two lines of cavalry, meeting in profile, were charging on these doughty quadrupeds, at the pace of snails, but with a pantomime indicating the stormiest velocity. The miserably slow approach, while the warriors kept up faces of martial satisfaction, and one seemed to rear, and another to lose his hat in the gale, was always a torture of drollery; and this was only augmented when, to stop for the oration, the opponents brought up in a hard trot, bearing back on each other, and pitching in their saddles with harrowing violence before they could halt.

The wooden clatter ceased, and the studio consented to listen. Lenoir, with an ease indicating his relations of trust and confidence with his comrades, described the late magnificent operations of the academic Bourse, and announced an accumulation worth about two francs to each of us. He proposed a *fête*—an afternoon in the suburbs, to wind up with a *matelote* supper. His speech was made with a pleasant oratorical readiness, and was not without a few of those echoes from Latin literature and those scraps or parodies of the French classics which constantly give a certain air of style and civility to colloquial humor in this country. He spoke like Musset's "Enfant du Siècle." A few years ago the type would have been different; the studio orator would have formed himself upon some military hero from Dumas, or imitated the dogmatism and antithesis of Hugo, to an audience smoking the clay pipe and wearing the hair docked *à l'Abelard*. As Lenoir used considerable gesture, the youths at his back fell to imitating him, with studious gravity and boundless exaggeration, until the infection spread, and every one in the room moved to the same wires, each body bending and all arms shooting parallel; while the speaker finished his address without discomposure or any moderation of his action. The motion for a *fête* was carried *nemine contradicente*. The solemn joy of the audience was then expressed by what we call a *Te Deum*. A fragment of an easel forming a large cross was borne along by Blanc, as priest, in a white blouse. This garment is in great demand as a scenic costume, and happy is the participant in a studio *Te Deum* who can find one to borrow; though a trifling solecism in one's ordinary way of dressing affords an acceptable substitute. The choir of rich young voices, slowly chanting "La Femme du Sergent," or something equally improving, to melancholy anthem music, creeps about the room at the heels of the priest. It is his duty to diversify the route by every possible vagary, winding amongst the furniture, mounting or jumping a succession of stools, etc., always trailing after him his ribbon of white-stoled choristers, without intermitting the gravity of the march or the doleful sonority of the music. Lenoir brought up the rear of this procession, likewise in a color suitable to his name; draped in a black surtout belonging to the tallest student, and scattering holy-water, largely fortified with soap and milk, from the big kirsch bottle which served him for *goupillon*, he reached incredibly distant people with his baptism, all the while singing with much gravity and elevation.

On the day following, at a fixed hour, we recruited in front of the Palais des Beaux-Arts. Our number was swelled by several alumni, honorably lost to the school from having passed into professional art. Glaize and Lecomte-Dunouy, whose works sometimes reach America, were among these, and were looked up to with highly-relished awe by the scholars, the great majority of whom had never produced a work able to pass into the *salon*. Lecomte was in a red shirt, and had boots that gave him all the feeling of a pioneer going out to conquer a wilderness; and several wore costumes more or less suggestive of hunting and heroism. Lenoir, the orator, merged easily with us all after his special function was over, merely turning up when there were tickets to buy or people to address.

How daring and superb it seemed, the vacating school at the first recess, leaving our class-room in solitude during study-hours! How we enjoyed our range and freedom! What incidents we found as we trooped off, past the Place de la Bastile, to take our places at the Embarcadère de Lyon! Old Madame Fleuron, publicly frying potatoes in her tiny *boutique*, was amazed to received simultaneous protestations of love from a crowd of suitors that completely darkened her window. She expressed her coyness by means of a dish of cold water that stood at hand; it was calming, and hurt nobody. The carter, hauling stone towards the Mazas prison, must have been stupefied to see the whole troop follow him solemnly, with their hats in their hands, as if his cart were the hearse containing the object of their joint affection. Blanc, snatching the white blouse again, passed on ahead, walked beside him in a ghostly manner, and repeatedly blessed him with two fingers. The man regarded him like Sancho looking at Don Quixote.

The inhabitants of Paris disdain too much, and strangers ignore entirely, the charming peninsula formed by the Marne with the Seine on the eastern side of Paris. Here the former stream, approaching and retreating from and again approaching the woods of Vincennes, essays on a smaller scale the doublings and coquetries which the Seine uses in making for the forest of Saint Germain. In this Vincennes region you have the clean suburban villages nearly touching each other, their limestone houses forming pale silhouettes against the soft hillsides. The ethereal ash and poplar trees, rising in lines like the traceries of cathedral windows or galleries, now branch into the most tender and most immaculate green, fit for the robe of Beatrice. And there is constantly some double of one of the rivers to cross, in a preposterous flat-boat like a bread-tray.

Through this serene Watteau-landscape, after disembarking at a little station half-buried in its proper garden, we tramped for a long afternoon. We were French, and therefore, of course, we were poor-spirited and uninventive. We insulted no passer-by, made no more unseemly noise than some pretty strong choruses, hurt nobody, had no fights among ourselves, and broke nothing except the violin of a wandering Italian, whom we incited to coax more music out of his shell than it was capable of; the ambitious instrument burst in the attempt to please us, and we collected its value among ourselves. We had one good game of ball, and a rather Olympian foot-race. These exercises seemed to kindle our enthusiasm for the *matelote*.

It was a glorious mess of fish, floating and steaming in a bath of greasy wine. While discussing it, we heard a good tenor voice in the next room. Lenoir was despatched to invite the tuneful stranger to share our dessert. The voice soon entered, latent in the person of a little dark, curly, grim-

acing, suburban bourgeois. He found all the banqueters got up like Egyptians of old, the heads all swathed in napkins folded to resemble the cap of the Sphynx, and wine-bottles, like the crown of Sesostris, leaning backward from every fifth occiput. He bowed, puzzled, and was soon made at home and set to sing. Lo! he chose the unlucky air from "La Dame Blanche," "Ah, quel plaisir d'être soldat." The sentiment of this romance is now detestable to young France, and we were obliged to cover his performance with a chorus of our own. This could not be done, of course, noiselessly. We sang Musset's fine growling chorus, "Nous l'avons eu, votre Rhin Allemand," so patriotically and well that an invitation came from the gendarmerie to display our uncommon vocal powers in some other place. The "soldat" got him to a high window, and pursued our departure with his odious refrain. We groaned. Somebody came to the door to see us off, bearing a large kerosene lamp. An enthusiast among us ran lightly up and blew it out, receiving some applause for the supposed witticism.

That poor joke suddenly placed us in the exquisite darkness of an April evening. The broad meadows spread far on either side the Marne, touched with a kind of fluctuating green. The trees lay traced against the sky, each surrounded by a cone of young leaves, like the flame around a taper. The hills were purplish and dark. Lenoir was thought to express completely the whole scene by saying, with rapture: "It is a Daubigny."

Correspondence.

HERBERT SPENCER AND THE EXPERTS.

To the Editor of the Nation:

Sir: In your comments on H. H.'s letter in your issue of yesterday, you try to show that H. H. fails in proving what he expressly disclaims all intention of proving, and what no one cares to prove.

Neither with your critic nor with H. H. is it a question whether Mr. Spencer is an expert or not. The question is whether Mr. Spencer, *as a philosopher*, is "scoffed at" by experts or not. If your critic "did not intend to speak disrespectfully of the only reputation claimed for Mr. Spencer"—that of a philosopher—he must be himself an expert in the art of putting into practice Talleyrand's definition of language. He tells us in plain English that Mr. Spencer will do well enough for the "general public," but that "chemists and physicians" are "disposed to scoff at the new light."

This remark comes under the class which you have elsewhere so happily and judiciously characterized as the "little dig." It means just this: People who are not sufficiently instructed to be able to distinguish the genuine from the spurious, regard Mr. Spencer as an eminent philosopher; while those who are competent to pronounce an opinion on scientific subjects, regard him only as a fit object of derision.

Your critic thus raises a question of fact, which H. H. conclusively answers by showing that at least four gentlemen of vast special knowledge regard Mr. Spencer as a great philosophic thinker. Among "experts" no higher name can possibly be mentioned than that of Prof. Huxley. His testimony, instead of being irrelevant, is just to the point. When he says that the only complete statement of the Law of Evolution has been made by Mr. Spencer, he adds that he accepts the said law, and guides his own researches by it. He proclaims Mr. Spencer as his philosophical leader in his own field of study. We do not scoff at the men whose discoveries we accept as the basis of our own enquiries. I have trustworthy private information that Prof. Huxley's opinion of Mr. Spencer is shared by Prof. Tyndall. Messrs. Darwin, Vogt, Haeckel, Moleschott, Littré, and Bain are leaders in their respective departments. They do not "scoff" at Mr. Spencer. Their more recent works are interspersed with allusions to him as a profound philosophic thinker.

For the past ten years I have been very carefully observing the point now in question; and my conclusion is, that it is not the "experts" who do the scoffing at Mr. Spencer, but almost without exception the literary *dilettanti* who have never received the special scientific training without which Mr. Spencer's works cannot possibly be understood or appreciated. Hitherto Mr. Spencer's reputation has been mainly a reputation with special investigators—such as Messrs. Hooker, Tyndall, and Huxley—and of this reputation the "general public" has within the last five or six years caught the echo. As for the "general public" having *any* opinion of its own about the merits of the "First Principles" or the "Psychology," I imagine it is about as well qualified to have an opinion about Schrauf's "Physikalische Studien" or Schleicher's "Vergleichende Grammatik."

John Fiske.

Cambridge, May 21, 1869.

[The original question in dispute here was, whether, as our critic said, "the chemists and physicians, the painters and the architects, were disposed to scoff" at Herbert Spencer? H. H. asserted that they were not, and quoted, in proof of his assertion, the testimony of Dr. Hooker (botanist) as to the success of some of Mr. Spencer's experiments in botany; of Professor Huxley, as to the value of the "complete and systematic statement made by Mr. Spencer of the doctrine" of evolution; of Mr. Lewes, as to "the extent and profundity of his scientific knowledge;" of Mr. J. S. Mill, as to his acuteness as a metaphysician, and "the encyclopædical character" of his knowledge, and "power of condensation and concatenation," and the vigor and boldness of his thinking. There was in this really nothing for us to answer, but we did answer, pointing out that H. H. had not touched the point. Mr. Fiske, begging his pardon, does not touch it either; and we have only to repeat that it is quite true that the classes of persons of whom our critic spoke *are* disposed to scoff at Herbert Spencer, in so far as their special knowledge of their own field enables them to judge of his attainments in it. Whether an architect who disputes the accuracy of Mr. Spencer's knowledge of the principles of architecture, scoffs at him as a philosopher and an expert, may seem important to Mr. Fiske, but it does not to us. All this we say without finding it necessary or considering it in the least desirable, even if we had the power, to diminish the force of Mr. Fiske's testimony, or that of the philosophers he quotes, to Herbert Spencer's powers and attainments. "The general public" we abandon to its fate.—Ed. Nation.]

Notes.

LITERARY.

Messrs. Roberts Brothers announce for immediate issue a new edition of the famous "Autobiography" of Gibbon—a work which contains what is probably the best known, and the best, bit of literary autobiography in the language—the fine passage which tells how "it was in the day, or rather night, of the 27th of June, 1787, between the hours of eleven and twelve, that I wrote the last lines of the last page in a summer-house in my garden" at Lausanne. The same house have in press, in addition to publications which we have previously announced, "Thorwaldsen," his life and works, translated from the French by Miss Luyster; "Short Sayings and Aphorisms," by Arthur Helps; Landor's "Pericles and Aspasia;" "The Memoirs of Madame de Lafayette," by her daughter; a novel entitled "The Cost of an Idea," by Miss Alcott; and a volume of "Little Men," by the same author, to match her "Little Women."——Messrs. Lee & Shepard will publish a work on Alaska, the result of a visit there by a competent writer, Mr. W. H. Dall; and "An American Woman in Europe," by Mrs. S. R. Urbino.——Messrs. Fields, Osgood & Co. are to issue one after another with rapidity the volumes of their complete edition of Thackeray's works. It is uniform with the Charles Reade set which this house recently published, and the publication is part of the fight just now going on between Messrs. Fields, Osgood & Co. and the Harpers. The latter gentlemen are issuing a paper-covered "Thackeray" at a nominal price, and "Vanity Fair" appears in two forms simultaneously. The great novelist is dead, and loses nothing in this warfare; and the public will probably have at least the satisfaction of at last getting a complete American "Thackeray," which is what it could not do before; but such hostilities between two houses which ought to be chief supporters of the good name of the United States publishing world are much to be regretted, and would be altogether regrettable if it were not that possibly the fiercer the war grows for the right to rob the unfortunate foreign author, the nearer the day may be when his goods will be bought instead of stolen.

—Mr. Edward D. Neill, author of "Terra Mariæ; or, Threads of Maryland Colonial History," has just put out a little brochure of two hundred pages, ostensibly to prove that the first Lord Baltimore's charter for his Maryland colony was anything but "one of the noblest of the works that human hands have ever reared, the most glorious proclamation ever made f the liberty of thought and worship," as "an able and accomplished jurist

of the city of Baltimore" asserted in the teeth of the London *Athenæum*. No wilder talk than this has ever been uttered by any worshipper of the Puritans; but the proof of its folly was already to be found in the published work first-named, and what we have here is really the first instalment of another work, supplementary to the first, on "The Founders of Maryland." Mr. Neill, it would appear, has gone on gathering material, and now wishes to round out the very imperfect outlines of his first volume. But he repeats—sometimes more, sometimes less fully—much of his previous account of Sir George Calvert, and yet is very far from making the later sketch complete or independent of the earlier. We observe, too, frequent differences in the transcriptions of the same passage, and other evidences of carelessness not tolerable in a historian. A certain fact which, in "Terra Mariæ," only serves to prove the good-will of Governor Harvey of Virginia, is made in the pamphlet to prove a fresh visit of Baltimore to that colony. The later supposition does not at least seem more reasonable than the first. The parallel between the Carolina and Maryland charters, with which the pamphlet ends, proves the unoriginal character of the latter, and sets the question of freedom of worship at rest. Mr. Neill is doing good service by his investigations, but ought, in our opinion, to defer publishing until his fragments of history assume more interesting proportions, and can dispense more easily with the critical treatment to which he declines to subject them. A stricter attention to the chronology of his subject would also make his labors more valuable, and relieve them of their present undigested appearance; and he is singularly averse to naming the authorities whom he cites.

—A Philadelphia correspondent writes us as follows concerning the bequest of the late Doctor Rush, and the foundation in the Pennsylvania University of a new professorship: "Dr. James Rush, who died in this city on Tuesday week, aged eighty-three, bequeathed the bulk of his fortune, said to amount to a million, to the Philadelphia Library Company, and together with the money gave a square of ground on South Broad Street as the site for a library building—not a lending, but a free reading library. The old Library Company is a small stock company, with perhaps five hundred members, and they will no doubt keep up their organization for lending, but I believe it is agreed that their number shall not be increased. Dr. Rush was a learned and eccentric person, rather 'cynical,' as people said, who has written a long will, full of peculiar provisions; but his bequest is likely to be a very useful one hereafter. Also, last week, Rev. Dr. McIlvaine, of Princeton, delivered an inaugural address on the establishment of a chair of Political Economy and Social Science in the University. Mr. Stephen Colwell, a wealthy iron-master here, has long been a diligent student of political economy, as well as an occasional author on the subject. His "Ways and Means of Payment" is a learned review of the history and literature of the credit system, and he has written a great many pamphlets on this branch of science, and worked hard on the recent commission from which Mr. David Wells became the special commissioner. Mr. Colwell has collected with great care a large library of works on political economy—about ten thousand volumes—and probably so good a one cannot be found anywhere else in this country. His collection of pamphlets on the Bank of England numbers over six hundred pieces, and on each of the other great European banks—Venice, Genoa, and Amsterdam—his labors have been equally exhaustive. This library he presents to the University, together with a large sum of money, on condition that there shall be established and properly endowed a professorship, and for this he designates Dr. McIlvaine. The money, it is said, is already promised or secured among other merchants and manufacturers here, and the professorship will begin its regular duties in the fall. The University is just now attracting a great deal of attention, by reason of the vigorous efforts making in its behalf. The trustees have begun a plan of endowment, with a view to raise five hundred thousand dollars in one fund for the general purposes of the institution, and already one hundred and fifty thousand dollars have been subscribed."

—Several reports and catalogues of public libraries, not free, that have reached us with this or last year's imprint, are agreeable reminders of the progress which these institutions are making in all parts of the country. Here, for instance, is one from Skowhegan, in Maine, of the latest founded library of all—scarcely a year and a half old; a sort of joint-stock concern, $20 entitling to a share, or $1, $1 75, and $3 securing the privilege of taking out books for three, six, and twelve months respectively Its 2,250 volumes are directly accessible to its patrons, whom no railings as yet shut out from the shelves, and who are earnestly requested by the librarian to remember the place from which they may have taken any book. On the other coast of the continent, at Portland, Oregon, which the citizens call Portland-on-Wallamet to distinguish it from its Down East namesake, is a library, now in its sixth year, with one life, thirteen honorary, and 144 subscribing members, and 2,673 volumes, and (Jan., 1869) a debt of $11 11. Nevertheless, having passed the period when plenty of persons were found to lend their names but no money to the enterprise, the Public Library Association is in good spirits, and has got into comfortable quarters, which include, we may note, a chess-room. People read, we learn from the report, about the same proportions of light and heavy literature on the Pacific as on the Atlantic coast. In the year 1868, there were circulated 6,398 volumes, of which 4,570 were works of fiction. Travels, history, and biography came next, but at a long interval; religion had but seventy-one devotees. Romances form but twenty-three per cent. of the library; their circulation was seventy-three per cent. of the whole. Coming now to the Valley of the Mississippi, we have a bulky, well-printed catalogue of the library of the Young Men's Association of Milwaukee, founded 1847. There are (1868) 2,000 members, who must pay an annual due of $3, unless life-membership is purchased for $50. The number of volumes exceeds 10,000. This institution supports itself handsomely, and has an elegant establishment, in which there has as yet been no demand for a chess-room. One of the principal objects of this association being to furnish public lectures, it has succeeded better with them than the other societies, which have merely resorted to them for temporary gain. Nevertheless, 1867 marked a falling-off in receipts as compared with 1866; Mr. Gough was engaged to speak too often, and there were losses on other speakers in a course which brought Barnum and Bishop Clark cheek by jowl. Finally, the Mercantile Library Association of St. Louis, founded 1846, reports seventeen honorary and 508 life members, 625 proprietors, 1,120 clerks who subscribe, and 1,260 beneficiaries; 29,810 volumes, and a fine property of over $200,000. It challenges comparison for its rooms, a chess-room included; and is evidently proud of its mineral and art collections. It has also a scholarship in Washington (St. Louis) University, and at last accounts was searching without success for a candidate.

—Of catalogues we have two, the Skowhegan and Milwaukee; the former classified on an original plan, the latter both alphabetical and classified. The Skowhegan typography is so wretched that the librarian's scheme probably has injustice done it, nevertheless we are sure that he has subdivided too far, and will perplex instead of aiding his patrons. We recommend him to study the much better executed arrangement of the Milwaukee catalogue. Who, for example, would easily find "Sermons" under the head of *Biblical Evidences, Interpretation, Illustration, and Application?* This is not properly a head but a sub-head of *Religion* or *Theology*, and therefore out of place in the alphabetical order. So the uninitiated would hardly look for "Letters" under E—*Epistolary Writings*. It is properly the sub-head of *History* or *Biography*. Recurring once more to the St. Louis Report, we may remark approvingly the binding up with it of a lecture delivered before the Association by Captain Silas Bent, in January of this year, on the "Thermometric Gateways to the Pole; surface currents of the ocean, and the influence of the latter upon the climates of the world." The lecturer's theory was, that what corresponds to the Gulf Stream on the eastern coast of Asia flows straight through Behring's Straits to the open sea about the North Pole, and if followed would infallibly lead there without the hardships and obstacles which attend any other course. A good many facts are cited to prove the reasonableness of this hypothesis, and Captain Bent asserts that the Gulf Stream is another highway if followed to the east of Spitzbergen instead of to the north—the latter being attempted by the *Germania* in its expedition last year. Captain Bent has probably noticed that M. J. Lamont, a French arctic explorer, who disbelieves in the open polar sea, is about to make a voyage in a steam-yacht of his own to the east of Spitzbergen, and may therefore become a discoverer in spite of himself. The practice of joining to catalogues, which are usually thrown into the waste-basket, some paper of value that will ensure their being preserved, we are glad to praise with this example before us. Whatever may be the correctness of Captain Bent's speculations, they are certainly worth pondering and putting on record.

—The English correspondent of the Boston *Advertiser* has recently been making some remarks concerning the English Catholics, both Anglo-Catholics and Roman, which it was well enough worth while to make. "When an Oxford or Cambridge man goes over to Rome," says the correspondent, "a loud noise is made about it;" but when, as not unfrequently happens, these converts retrace their steps, little or nothing is said. Their friends might be willing enough to spread the news, but they themselves, we suppose, naturally desire that as little as possible should be

heard of their latest change. It is not a particularly hard thing to confess that one has been ignorantly wrong all one's life; but it is hard enough to confess that a deliberate and painstaking pilgrimage in search of the truth as to a particular matter has resulted in discomfiture; nor is the difficulty of the confession lessened by the suspicion that possibly one's feeling rather than one's judgment may have been the inciter of the journey. Our informant goes on to speak of a pamphlet—we presume, "The Church's Creed and the Crown's Creed"—which was not long since published by Mr. Foulkes, the Oxford tutor who followed Dr. Newman into the Roman Catholic Church, and says that it has been put upon the "Index Expurgatorius," having given great offence at Rome, and that its author may very probably return to the English Church, as Mr. Thomas Arnold—a son of Dr. Arnold—did, and Mr. Walford and Mr. Hemans—a son of the poetess—and Mr. F. T. Palgrave. To these names might have been added that of Mr. Sibthorpe, one of those earlier converts who went over at a time when every conversion made a great stir; and that of Dr. J. M. Forbes, of this city, whose conversion made rather more stir than that of any American churchman, unless possibly that of Bishop Ives; and any one who has kept count could increase this list. Mr. Foulkes, however, may or may not recant his Romanism. This pamphlet is not the first of his books that has been upon the Index; his "Divisions of Christendom" had the same fate years since. Pretty much all his time since he left the English Church he has belonged to what some one wittily called "the Roman *dis*obedience," and this last pamphlet is really not so much more out of the way than everything of his has been. It is as good as anything else, we think—and it is mainly for that reason we mention the matter—for the perusal of those who would like to see what is the peculiar attitude towards the Roman Church of several of that knot of Englishmen who, dissatisfied with the church in which they were born, are certainly unsatisfied in the church to which they went. It is they who give some encouragement to the "unperverted" to think that even Dr. Newman may yet be brought back, and to believe it not impossible that his reply to the invitation to assist at the Œcumenical Council may have been really meant to bear two meanings: he sent back word to the effect that the atmosphere of Rome did not agree with him. Doubtless this is what may be called slanderous; but it is not the less true that whether or not the greatest of the English converts to Rome ever returns, some of the men who went away with him have not been much better pleased with their new place than they were with their old, and that some of them let their experience be known. It is noteworthy, too, that those of the leaders in the famous awakening who staid in the English Church as "advanced men" and "Anglo-Catholics," seem to have succeeded in founding a religious school which keeps its believers content. The Puseyites or Ritualists are not, we believe, now losing men to Rome.

—Most people used to be somewhat surprised on finding that Mr. Bartlett's "Familiar Quotations" contained nothing of Dickens's. He has so well succeeded in incarnating typical traits and baptizing them with a name by which we remember them at once as traits and individuals—as when we think of creeping 'umbleness as Uriah Heep—and has given us so many expressions so universally known, that it was strange to most of us not to find them among the familiarly quoted. Mr. Bartlett seems to have thought so too, and in the latest edition of his book Dickens figures with the rest. Looking over the last volume of the "Globe Edition" of Dickens's works, we came on an "Index of Fictitious Places, Popular Sayings, etc.," which certainly we think vindicates the great humorist's claim to a place among the makers of household words. "A demd, damp, moist, unpleasant body" and "gone to the demnition bow-wows," are about as surely familiar as they are quotations; and if this is denied, there is just before them "Barkis is willin'," and just before that—a contribution from Mr. Swiveller—"the balmy." "What larks" we had thought to be known only to us, and to us only as having among our acquaintances a persistent quoter of it, rather than as observers of the general literature of quotation; but its presence here is evidence in its favor. We cannot speak so favorably of "Oh my lungs and liver" from David Copperfield; nor of "I'll eat my head" from Oliver Twist; but there is the immortal "Please, sir, I want some more" of that young workus; and Cousin Feenix's "Not to put too fine a point on it;" and Mr. Mantilini's "One demd horrid grind;" and old Joey Bagstock's "Tough, sir, tough, and de-vilish sly;" and Captain Bunsby's "Overhaul your catechism;" and the same authority's remark that "the bearings of this observation lays in the application of it;" and Mr. Pickwick's "Pickwickian sense;" Mr. Micawber's "In case anything should turn up;" and poor Stephen Blackpool's "It's a' a muddle"—the only one of these more recollectable bits of Dickens which is not of a comic character. After all, however, to run through the other index, "A General Index of Characters and their Appearances," we come more plainly upon the root of that surprise we have spoken of. There is the long bead-roll of names—nearly a hundred pages of pretty fine print—from the African Knife-Swallower, a member of Mr. Crummles's company, down to "The Zephyr," officially known to the authorities of the Fleet Prison as Mivins. And between these names are all the Wellers and all the Micawbers and Captain Ed'ard Cuttle and Mr. Swiveller and Master Bitzer and the unequalled Mrs. Sairey Gamp and young Mr. Bailey, who thought that Sairey had the remains of a fine woman about her, and Mr. Venus, and hundreds more—a list that everybody can fill out, and which are household words in many thousand houses where Mr. Bartlett's admirable little book is not yet known. Dickens's names, by the way, are worth a brief essay. He is as successful a humorist of an aggravated type in his nomenclature, as Thackeray is a satirist in his—as, for instance, when at the end of a "Roundabout Paper," condemnatory of gossiping, he remarks, "By the way, did you see *what* a dress Lady Godiva Trotter had on last night?"

—We have more than once intended to call attention to the new comic—or rather satirical—paper which has been established in London. Its title is the same with that borne by the only American comic paper that ever showed signs of living and at the same time some promise of being fit to live; but as Thackeray's "Vanity Fair"—it was great luck, by the way, that he did not christen that most happily-named novel "Pencil Sketches of English Society"—preceded our New York journal, we need not accuse the English one of borrowing a title from us. The second title of *Vanity Fair* is "A Weekly Show of Political, Social, and Literary Wares;" but the motto on the cover quotes from Bunyan, "We buy the Truth." The legend at the head of the reading matter says: "That which did not a little amuse the merchandisers was that these pilgrims set very light by all their wares." The mottoes seem inconsistent with the journal's name and character; and the inconsistency confounds the merchandisers with the pilgrims. Or are we to understand a subtle, satirical gibe flung out by modern indifferentism at the modern Vanity Fair and the Hopefuls, Christians, and Faithfuls of our day? However that may be, the journal is not particularly successful as an expositor of the doctrine of indifferentism; and certainly it is not particularly successful as representing the earnest faith and hope of our old acquaintances in the "Pilgrim's Progress." It seeks the truth apparently with some willingness; but not, one would say, with over-much of the ardor that sent Christian weeping to Mr. Evangelist. And it is not particularly witty, though it says some bright enough things; and not forcible, but rather at times feeble; and never is marked by anything like the easy superiority of power, and the keenness and the sort of contemptuous good-nature, which the great first painter of the Vanity Fair of the Modern Babylon has taught us to expect of any one who takes his mantle and his name. No doubt, even Mr. Pendennis would have been a somewhat sharper and wittier and cleverer and more scornful sneerer than "Jehu Junior"—though that gentleman is not without an acidity and acridity that his victims will appreciate—or than "Burgee" and "Choker" and their fellow-laborers. But the double nature of the paper occurs to one who takes up this line of remark upon it, and he is in doubt whether it does not propose to itself to be serious and of weight rather than satirically light. However, that is practically of not much consequence; the letterpress of *Vanity Fair* and the ability of its contributors would probably not have kept it alive for any length of time; and the portion of it to which it owes its success, its distinguishing feature, pertains to satire, illustrates the title rather than the mottoes, and would have met with acceptance in the booths and among the merchandisers rather than with Christian and his fellow-travellers. For some three or four months it has had the services of an extremely clever caricaturist, who has prepared for it a series of "Cartoon Statesmen"—colored lithographs—evidently the work of no Englishman, giving admirable caricature likenesses of Disraeli, Bright, Gladstone, Lowe, Foster, Granville, Argyll, Gray, Stansfeld, Cardwell, the Marquis of Hartington, Clarendon, Lord Hatherly, Lord Westbury, and Viscount Sydney. We call them the work of a foreigner because although most of them give us men so British that one might be tempted to say that nobody but a Briton born could have done them, still it is possible to see, we think, that the caricaturist feels the race, so to speak, as well as the personality of his subjects. No Englishman, however, that we know anything about could have been more skilful in the caricature of the men as individuals. The mental and spiritual trait most prominent in each is caught and emphasized with as much success as the mere form and features. The pedagogic Argyll and the fault-finding Grey

very odd things. One, who afterwards had an imitator, we believe—except so far as concerns the waistcoat—at Union College in this State, is referred to, who used regularly to invite the students of his class, in hot weather, to take off their coats, saying: "I should do so myself if I had not a dirty waistcoat on." The same professor did not hesitate to introduce remarks such as this: "You see, gentlemen, this book is so stupid that one might fancy my colleague P. had written it; but no, my colleague O. is the author; it is really so stupid that I should like to fling it against the wall." The days when these things were tolerated are long passed and gone; the jokes professors now allow themselves are mostly very mild—something like that of Professor Erdmann of Halle, who, in his lecture on academical studies, is said to have proved *à priori* that the possession of a big dog was involved in the very conception of a student. Those who wish to understand the ins and outs of a German university—its excellences and defects—ought to read this book. It even deserves translating.

Otto Gumprecht, the highly esteemed musical critic of the Berlin *Nationalzeitung*, has just published a work that deserves the attention of all who love music and wish to understand it and its great composers more fully. It is entitled "Musikalische Charakterbilder" ("Musical Character-pictures"). He sketches the artistic and personal life, in a popular and yet intelligent way, of Schubert, Mendelssohn, Weber, Rossini, Auber, and Meyerbeer. As these eminent composers are looked at in connection with the general development of music, the whole may be recommended as a good survey of what is being styled the *post-classical* period of musical production. A far more pretentious publication, also relating to music, is "Die Tonkunst in der Culturgeschichte" ("The Art of Music in the History of Culture"), by Emil Naumann, of which the first half of Vol. I. has just appeared. The author's purpose is not to write a history of music—for he believes that that has already been well enough recounted more than once—but to exhibit music in its relation to, and influence on, the forms and laws of the development of the life of mind in general and the progress of civilization. A brief summary of the table of contents will show the range of the present volume: Book I. Music in connection with the other arts. Section I. The various modes of grouping the arts: 1. As filling time and space; 2. Relatively to their different material; 3. In view of their different relations to nature; 4. In relation to their age; 5. In relation to the degree of their mutual emancipation. Section II. Art in its unity: 1. The connection between the arts as co-operating towards the same ideal end; 2. In relation to their elementary and fundamental conditions; 3. Identity of their laws of the beautiful; 4. Agreement of the arts relatively to their forms of expansion; 5. Agreement relatively to the styles they have developed. The subsequent three volumes are to treat of the "Common origin and course of development of art, religion, and science," and "Musical art in relation to civilization—amongst the Chinese, Hindoos, Jews, Greeks, Romans, Germans, in Holland, Italy," etc. This is all German enough, outsiders will think; but we find much that is striking and true. A judgment on the work as a whole must be left to professional students of æsthetics.

The events of 1864 and 1866 have to a large extent revolutionized German modes of thinking on political matters. Principles are now recognized as good which a few years ago would have been indignantly repudiated as unworthy and revolutionary. Occasionally, this turning round has taken place in a way that one would scarcely approve, if one attached any worth at all to a high ethical tone in a nation. After all, however, we need not be surprised that such a change should have come over the spirit of German dreams; for not many people are more ready to accommodate their principles to their supposed practical needs than abstract theorizers. Take Hegel as an example. Perhaps no man ever made a grander attempt to deduce all things in heaven and earth *à priori* from the simplest abstract principle; yet he has been often enough reproached with squinting at the practical requirements and wishes of the Prussian court, both in political and theological matters, whilst apparently spurring straight on, with loosened reins, his speculative steed. Varnhagen von Ense, in the book of his which we mentioned in a late number of the *Nation*, says about Hegel: "Our ministers think they have in his philosophy one that is thoroughly *legitimistic*, suited to serve the state, and Prussian."

An outcome of the change in question is a new work by the celebrated Heidelberg professor of law—Dr. Bluntschli—on the "Modern Law of Nations" ("Das moderne Völkerrecht," etc.) Its leading point of view is pretty clearly indicated in the following words: "The law of nations respects the results of history, and treats the relations which show themselves to be the necessary bases and conditions of the life of the peoples not merely as facts to be tolerated, but as *developments of right*." This passage, which we render literally, suggests a world of considerations to any one who has been accustomed to read the phrases "historical right," etc., which were once so common in the mouths of German defenders of the divine or, at any rate, the "historical" rights of rulers as opposed to peoples. Bluntschli, who is a liberal, probably means more than the words quoted distinctly say. His prime intention is clearly, notwithstanding his being a South German, to justify the new order of things created by Prussia; but the principle laid down and the development in the book is, or ought to be, a protest against anything like finality in the political relations of nations. It seems as if we might not unreasonably hope that the law of nations will continue undergoing modifications until the nations themselves form, in effect, a vast confederation of republics, in which the enlightened popular will shall be the supreme earthly law. Bluntschli reviews the whole field covered by the term Law of Nations; discussing the foundation, nature, and limits of the law of nations; states, systems of states, and their organs in relation to the law of nations (*e.g.*, rulers, ambassadors, agents, consuls, etc.; their functions, rights, etc.); treaties; violations of the law, and modes of redress; war; rights of neutrals, etc. An appendix relates particularly to the American Articles of War of the year 1863, which are highly commended for the humane spirit they breathe.

Both jurists and theologians may find something to interest them in Dr. Duschak's "Mosaic-Talmudic Penal Laws" ("Das Mosaisch-Talmudische Strafrecht. Wien: W. Braumüller). It offers many striking points of comparison, and confirms the high estimate formed of the wisdom and depth of the Mosaic institutions recorded in the Old Testament.

An unusual number of works relating to classical philology have made their appearance during the last few weeks; B. S. Teubner in particular has kept up his repute as a publisher of classical works. One which we must mention, and which teachers will thank us for mentioning, is the "Commentary to the First Two Books of Virgil's Æneid," by Dr. A. Weidner, in a large volume of nearly 500 pages. After an introduction, in which the author gives his view of the relation of Virgil to the general culture of his nation and age, touching upon rather than exhausting many knotty points of controversy, he gives us longer and shorter comments on almost every passage that is at all remarkable, and finishes with four excursuses—one on Book I., 755–756; the second on the founding of Carthage; the third on the comparisons in the "Æneid;" the fourth on the cæsura of the Heroic hexameter. The third of these excursuses is very interesting. The whole finishes up with an index of matters and of grammatical points. Ribbeck's masterly text is the one commended, but not printed.

The theme of the next work before us is one which has hitherto been neglected even in Germany, where actual and possible worlds are ransacked for new subjects of investigation. It is the "History of Classical Philology in the Netherlands," by Lucian Müller ("Geschichte der klassischen Philologie in den Niederlanden," etc.) It is divided into two books; the first of which reviews the philological schools of the Netherlands, as, *e.g.*, Louvain, Leyden, Deventer, Amsterdam, Utrecht; and touches on the principal philologians from Erasmus down to the present day. The second book describes the modes of studying the classical languages at the gymnasia and universities. An appendix relates to the Latin versification of the Dutch scholars. It will be a surprise to many to find how numerous are the eminent names the Dutch can boast of as theirs.

Julius Eckardt's "Baltische und Russische Culturstudien aus zwei Jahrhunderten" ("Studies of Baltic and Russian Culture," etc.) is a book of great merit, and worthy of the careful attention of all who wish to understand Russia generally, and especially its Baltic provinces. The work is a miscellaneous collection of essays on such subjects as "History of the City of Dorpat;" "Baltic Immigrants and Emigrants;" "The Orthodox Greek Church of Russia and its Sects;" "The Relations of Ownership in the Rural Districts;" "Ivan Turgeneff, the Poet;" "History of Artemy Petrovitch Volinsky" (a favorite of the Empress Elizabeth). Specially noteworthy is the essay on the Greek Church and its sects, of which far too little is known in the rest of Christendom.

The contribution to the history of German theatres, given by Heinrich Laube in his "Das Burgtheater" (in Vienna), will be very welcome to friends of the drama. Laube has been twenty-eight years connected with theatres in one way and another; and much of the progress made in the technical treatment of dramatic subjects in Germany since 1840 is said to be due to him. The book he has now published contains an account of his efforts to raise the character of the theatre entrusted to his management, and numerous notices—valuable as well as interesting—of dramatic writers,

critics, actors, actresses, plays, court officials, and so forth. He himself is now manager of the new Leipzig Theatre, after having been for eighteen years manager of the famous Court Theatre in Vienna.

A very thorough history of Gustavus Adolphus, King of Sweden, is now publishing by Gustav Droysen, son of the celebrated Berlin historian. The first volume appeared a short time ago. Its author has since then been appointed professor at the University of Göttingen—probably partly in recognition of the value of his work. It is based on a careful study of archival sources, many of which have hitherto been unused. Dr. Droysen's aim is to exhibit the great Swede in connection with, and in the light of, the political movements of his age; and he believes him to have been more influenced in the war he undertook in Germany by motives of policy than by motives of religion. Perhaps, as German theologians have overestimated Gustavus Adolphus's Christianity, so Droysen rather underestimates it. In this respect, the Swede has a fate somewhat similar to that of Cromwell. With this drawback, Professor Droysen must be allowed to have thus far produced a very valuable contribution to our knowledge of European struggles during the period of the Thirty Years' War.

Dr. S. R. Sievers's "Life of Libanius" ("Das Leben des Libanius"), the Rhetor of Antioch, is the fruit of very careful and extensive study, and an excellent introduction to the orations and letters of that learned, but vain and pedantic Syrian. Numerous notes discuss the various persons mentioned in, and chronological and critical questions suggested by, the works of Libanius. But ample material is collected for forming a conception of the position he occupied and the part he played during the reign of the Emperor Julian. It is well known that Libanius was one of Julian's chief friends, and had much to do with the reaction set on foot by him against Christianity. Dr. Sievers gives us many and striking glimpses of the general position of the Rhetors and their Schools, of the education of youth, of intercourse amongst the educated, of public life in a provincial city like Antioch, of the arbitrary and brutal procedure of public officials, and of the entire dissolution of civil order. Ample evidence is in particular supplied that the higher officials were as ready to follow Julian in his paganism as they had been to follow Constantine in his Christianity.

The well-known Jewish author, Dr. A. Jellinek, of Vienna, has just published an interesting ethnographical study of his fellow-religionists, in which he sketches their peculiar characteristics, justifies them against the prejudices everywhere cherished, and tries to account for the marvel of their continued separate existence. He gives us a picture of the inner and outer life of the modern Jew, with constant references to his past history, without which it is of course unintelligible. The chapter on Female Work contains much that is very forcible, and will awaken an echo in every mind that attaches value to the Bible. The section on proverbs is capital. Dr. Jellinek is sometimes venturesome in his statements, but is rarely tedious.

Oskar von Redwitz, the poet of "Amaranth," "Sigelinde," "Der Zunftmeister von Nürnberg," and "Der Doge von Venedig"—a Roman Catholic writer of Ultramontane tendencies—has just appeared in the to him new *rôle* of novelist. His new work is entitled "Hermann Stark: a Picture of German Life," and is decidedly worthy of attention, both for its literary qualities and as an outcome of the writer's ecclesiastical likes and dislikes. We may remark, however, that it evinces less pronounced Ultramontanism than his former productions. The story is meant to give a picture of ordinary life. We follow the hero through all the stages of his life—we see him as a leader among his boyish companions; as a clever pupil at the gymnasium; as a duelling student at the university; as a hard-working official in a subordinate position; as the husband of a lovely girl; in the new character of a business speculator; and, finally, as a popular pleader and political leader. The tale frequently drags, owing to the long reflections indulged in; but it contains many exciting scenes, and as a picture of German life from a Romish point of view will be sure to interest American readers.

A capital lecture on "Language as the Expression of National Peculiarities of Thought" was delivered a short time ago here by Dr. Carl Abel, and has since appeared as a small book. It is very suggestive and readable, and touches on a subject which has hitherto been little discussed. We hear that it forms a portion of a larger work which the accomplished author has in course of preparation.

The well-known traveller, Adolf Bastian, has just issued the first number of an ethnological journal, entitled *Zeitschrift für Ethnologie und ihre Hülfswissenschaften als Lehre vom Menschen in seinen Beziehungen zur Natur und zur Geschichte*, which promises to be of considerable value. It will bring papers on ethnology proper, anthropology, palæontology, comparative psychology, and kindred topics.

The Rifle and the Hound in Ceylon. By Sir Samuel W. Baker. (Philadelphia: J. B. Lippincott & Co. 1869.)—This work did not win Mr. Baker his knighthood, and to read it after having read his two large volumes on the Nile sources and tributaries, is in every way an anti-climax. The character of an explorer and discoverer seems so far above that of the mere sportsman, that we are apt to forget the connection between the two which may so easily unite them in a single career. However distasteful it may be to view in reduced and purely selfish proportions the man whom we have come to regard as a hero and benefactor of mankind, we must admit that the seemingly aimless and luxurious life of Mr. Baker in Ceylon was, as it happened, an excellently good training for his African mission—a word which we may employ without abuse, even if not all that may be hoped from it shall really result from his appointment by the Pacha to go to the regions of the Upper Nile, and prepare the country for civilization. Even so repulsive an act as that described on pp. 241, 242, with the expression of regret that he could not hang the natives whom he did, however, flog without mercy for murdering one of his hounds, was a necessary, if hard, part both of his character and his training. On the Nile he practised the same severity of discipline toward his followers, though generally with more of justification, and in fatally critical moments when to hesitate or to relax was to be lost. And after all, this remains to be said: that putting every semblance of tyranny and inhumanity together, as frankly exposed by Baker in all his works, and throwing in the comprehensive charge which a society for the prevention of animal suffering might bring against every hunter, the reader will not be brought to admit that our author has a cruel disposition or would wantonly give pain or with indifference witness pain in any living creature. We can say this without pretending that he has all the Christian graces, but with the same certainty with which, in spite of some unfavorable expressions about the negro and his capacity for improvement, we decided that he was opposed to slavery and the slave-trade for other reasons than the instability and ruin which they caused wherever carried, or the fact that he was an Englishman—the reason, of course, that he was a humane and honest man.

Full faith in his integrity is necessary to the acceptance of some portions of the narrative before us, and therefore to read this book last has at least so much advantage: we open it prepared to trust implicitly what is written. Nor is it surprising to find Sir Samuel as good a shot in Ceylon as he was in the Soudan. To kill a buffalo as a last resort with small change he happens to have in his pocket, to shoot game through and through at six hundred yards, to make several double shots when two head of game stand in the same range, and generally to be self-possessed, intrepid, and full of resource—this is but the man we knew already. What he really has to teach us is how to bag elephants, buffaloes, elk, and boars in Ceylon, what to consider bad luck—as, six elephants killed out of eleven, p. 210—what sort of rifles to use, the proper breed of hounds, the needful arrangements for camp comfort while on the chase, etc., etc.; and besides this he can make us feel the joy of adventure. The physical features of the island are vividly described, and some account is given of the ancient tribes that peopled it, and of the gigantic remains of their cities and water-works. The adventures related took place in the years 1847–1852, but not without occasional interruptions.

Improved Modern Pocket Dictionary of the French and English Languages. For the everyday purposes of travellers and students, etc. By Ferdinand E. A. Gasc. New edition. (Philadelphia: J. B. Lippincott & Co. 1869.)—Though rather to be called a *handy* than a pocket dictionary, being a fat 16mo, this little work answers the usual purpose of such abridgments as a substitute for the more ponderous dictionaries of reference. It has, besides, the merit which should attach to all new works of this character, of containing the latest additions to the language and the freshest stock of idioms, with a proportion of slang phrases that would be inadmissible in a dictionary of standard literature. On comparing it, for example, with Spiers and Surenne's well-known work, we find it has fuller definitions in many instances, as *berne*, chaffing; *belle*, rubber-game, deciding-hit in fencing; *dormeuse*, lounging-chair, ear-ring, ear-wire; many recent words, like *cocote*; and numerous idioms not given by the larger dictionary, as "c'est le *chat*," for oh, yes, of course!—"sous bénéfice d'*inventaire*" (secondary meaning), to a certain point, conditionally; "*nom* d'un chien," "*nom* d'un petit bonhomme"—"tirer les vers du *nez* à," to pump—"cela lui pend au *nez*," you may expect that—"se faire tirer l'*oreille*," to require pressing, etc., etc. Comparing it, however, with other pocket dictionaries, which is perhaps more just, we find it contains fewer words than one, for

instance, of 1847 which we happen to have, and which, for the sake of making Scott's works intelligible to the French, even goes so far as to embody a Scotch glossary with the English portion. But then, Gasc omits unnecessary words, and his definitions and illustrations are so much the more copious. Thus, under the word *care*, in the English-French portion, the older dictionary gives but two examples against sixteen which are found in Gasc.

The plan of the latter has many excellent features. It rejects "English words for which there is no French equivalent, such as 'cricket' (game), 'valentine' (letter)," etc.; also "every barbarous word from the dead languages, of which there is a good duplicate either in French or in English;" and verbal adjectives which have not acquired a meaning distinct from those given under the verb of which they were participles. Pronunciation is neglected, except that certain signs before words indicate the liquid sound of *gn*, *l*, and *ll*, the aspirated *h*, the two sounds of *qu*, etc. Geographical and personal proper names are distributed through the text. Remembering that this dictionary is not designed for scholars, but for readers and speakers, we may overlook the omission to give the accent of initial letters, such as *é*, when printed in capitals in the vocabulary. The practical inconvenience of this is not great, since the word may generally be found with its accent in the English-French portion by means of some one of the definitions. For the rest, we have discovered no typographical inaccuracies either in the French or in the English, and we are disposed to recommend the dictionary with heartiness as trustworthy, serviceable, and clearly printed.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Anderson (Rev. R.), Foreign Missions	(Charles Scribner & Co.) $1 50

J. B. LIPPINCOTT & CO.'S
NEW PUBLICATIONS.

The Rocky Mountains.

Three Thousand Miles through the Rocky Mountains. By A. K. McClure. Illustrated. 12mo. Tinted paper. Extra cloth. $2 25.

A Poem. By Hon. Roden Noel. Square 16mo. Extra cloth, gilt top, tinted paper. $1.

"It is impossible to read the poem through without being powerfully moved. There are passages in it which for intensity and tenderness, clear and vivid vision, spontaneous and delicate sympathy, may be compared with the *best* efforts of our best living writers."—*London Spectator.*

The White Rose.

A Novel. By G. J. Whyte Melville, author of "Cerise," etc. Cheap Edition. 12mo. Paper cover. 75 cents.

The Science of Rights.

By J. G. Fichte, author of "The Science of Knowledge." Translated by A. E. Kroeger. 12mo. Tinted paper. Extra cloth. $2.

Cottage Piety Exemplified. By the author of "Union to Christ," "Love to God," etc.. 16mo. Extra cloth. $1 25.

A Call to the Laity. By Rev. C. F. Beach. 16mo. Fine cloth. $1.

The Gold Key.

A Dramatic Story. Translated from the French. 16mo. Fine cloth. $1.

The Quaker Partisans.

A Story of the Revolution. By the author of "The Scout." With illustrations. 12mo. Extra cloth. $1 50.

Here and Hereafter. By William H. Holcombe, M.D., author of "Our Children in Heaven," etc. 12mo. Tinted paper. Extra cloth. $1 50.

*** For sale by all Booksellers, or will be sent by mail, postage free, on receipt of price by

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

Now Ready:

I.

COLOR.

By Mme. Elizabeth Cavé, author of "Drawing without a Master." 12mo, cloth, $1.

II.

"A story of remarkable power and interest."

A STRANDED SHIP.

Just Published:

GOOD SOCIETY.

A COMPLETE MANUAL OF MANNERS.

By the Right Hon. the Countess of * * * * * *

Printed on fine toned paper, 300 pages, 12mo, extra cloth, gilt top, $1 75.

CONTENTS:

Introductory.—On Good Manners in general: their rise, progress, and social importance.
Chapter I. The Arrangement of a Lady's House, and the Management of Servants.
II. Letters on Introduction—Cards—Addresses.
III. Visiting—Morning Calls.
IV. Conversation.
V. Letter-writing—Invitations.
VI. The Lady's Toilet.
VII. The Gentleman's Toilet.
VIII. Riding and Driving—The Promenade.
IX. Morning and Evening Parties.
X. The Ball.
XI. Dinner Parties.
XII. Engagement and Marriage.
XIII. Visiting at a Country House.
XIV. General Hints to both Sexes.
Appendices—Index.

This volume aims to meet a social requirement of long standing; namely, a work of genuine authority on all points of etiquette, ceremonial, and manners. It addresses itself to all classes of society, and, as the above list of contents will show, it embraces all points wherein rules for etiquette are necessary. "The author has endeavored, to the best of her ability, to treat of the subject under all its aspects; to omit no point, however trivial; and to provide her readers with a faithful and judicious guide in every social emergency."

MADVIG'S LATIN GRAMMAR.

A Translation and Revision of 8th Edition. By Prof. Thomas A. Thacher, of Yale College. Price to Teachers, post-paid, $2 50. To be published in September.

A volume of about 600 pages 8vo, being the most complete and valuable treatise on the language yet published, and admirably adapted to the wants of Teachers and College Classes.

Allen's Manual Latin Grammar. (Lately published.) Pp. 139. Price $1 25.

Fourth Edition, with Supplement, containing a Chapter on Pronunciation, with full Tables of Inflections.

These two Grammars taken in connection—one for the Uses of the Teacher and the other as a Manual for the Learner—will be found to contain the most complete as well as accurate and authoritative method of instruction in Latin yet published.

Allen's Latin Lessons. 140 pages. Price $1 25.
Allen's Latin Reader. (To be published in August.)

New and Important School Books

PUBLISHED BY

WOOLWORTH, AINSWORTH & CO.,

117 Washington Street, Boston.
111 State Street, Chicago.

Just Issued:

HAND-BOOK OF NATURAL PHILOSOPHY,

For School and Home Use. By W. J. Rolfe and J. A. Gillet, teachers in the High School, Cambridge, Mass. With 212 wood engravings and 3 colored maps (illustrating Meteorology). Price $1 25.

The body of the book contains only 229 pages in clear, open type (*with no fine print*), and treats of all the topics of Natural Philosophy. The more theoretical portions of the subject are treated briefly in an Appendix, and descriptions of apparatus and directions for performing experiments are added. *Omitting* the Appendix, the book is not too difficult for Grammar and District Schools. *With* the Appendix, it is exactly adapted to the wants of those High Schools and Academies which have not time for a larger book.

It is not an abridgment of the larger "Natural Philosophy" by the same authors, but it is wholly a new book. It is simple in style and eminently a *practical* book, yet thoroughly scientific, and giving the results of the latest discovery and research. It is sure of a hearty welcome from all teachers who desire a book which shall be brief without being dry, and easy without being puerile.

by the same authors:

Hand-book of Chemistry. Price $1 25.
Hand-book of the Stars. Price $1 50.

These are brief elementary manuals of Chemistry and Astronomy, on the same plan as the "Hand-book of Natural Philosophy."

These books are especially adapted to a brief course extending through a single term of school.

Also,

The Cambridge Course of Physics. In 3 vols. 1. Chemistry, $2; 2. Natural Philosophy, $2; 3. Astronomy, $2.

These are larger books, by the same authors, and are intended for more advanced classes, or for those devoting a longer time to these branches.

This course has already been officially adopted by the State Boards of Maryland and Minnesota, and is already used in more than fifty cities and large towns, and in nineteen different States of the Union.

FRENCH.—Magill's French Grammar. Key to Magill's French Grammar. Magill's Introductory French Reader. Magill's French Prose and Poetry.

LATIN COURSE.—Preparatory Latin Prose Book. By J. H. Hanson, A.M. Comprising in 1 vol. all the Latin prose required for admission to Harvard and other colleges, with notes and references to Harkness's, Bullions's, and Allen's Latin Grammars.

HAND-BOOK OF LATIN POETRY. By J. H. Hanson, A.M., and W. J. Rolfe, A.M. Selections from Ovid, Virgil, and Horace, with notes and grammatical references.

SELECTIONS FROM OVID AND VIRGIL. A shorter Hand-book of Latin Poetry, by the same authors. An edition of this book, with a complete vocabulary, and references to Allen's and to Bullions's Latin Grammars, as well as to Andrews' and Stoddard's, and to Harkness's, is in press, and will be ready in May.

GERMAN.—A New Elementary German Grammar. By Gabriel Campbell, Professor in State University of Minnesota.

A Practical and Complete German Grammar. By Adolphi Douah, Ph.D. 12mo.

DRAWING.—Bartholomew's Drawing-book. New Series.

This series of books—the most practical and thorough course of instruction in drawing ever published—will be completed in 12 numbers, each containing 12 plates, executed in the highest style of lithographic art, and 24 pages of drawing-paper of a superior quality. Instruction accompanies each book. In connection with the first three books, a guide has been prepared, for the use of teachers and more advanced pupils.

DRAWING-SLATES.—Bartholomew's Primary School Slate, with a series of progressive lessons in writing and drawing. This is a new thing, and will prove the most admirable device for interesting and instructing young beginners in drawing.

PAYSON, DUNTON & SCRIBNER'S

NATIONAL SYSTEM OF PENMANSHIP.

The most practical style and successful system ever published. Revised, newly engraved, and improved. The growing demand for this popular copy-book has necessitated the increase of our manufacturing facilities to the capacity of over two millions per annum.

*** Circulars containing full descriptions, with notices and testimonials from eminent teachers, will be furnished on application.

A Unique Collection of Original Melodies—words and music—obtained among the negroes of the South; preceded by an account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal, by Prof. W. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50.

Sent post-paid on receipt of price. Address PUBLISHER OF THE "NATION," Box 6732, New York City.

JUST PUBLISHED BY

Charles Scribner & Co.,

A GRAPHIC HISTORICAL TALE,

WATERLOO:

A SEQUEL TO THE CONSCRIPT OF 1813.

By Erckmann-Chatrian.

1 vol. 12mo, uniform with "Madame Thérèse" and "The Conscript," with six full-page illustrations, price $1 50.

In this volume Joseph, "the conscript," continues the story so charmingly begun in the work to which this is the sequel. It is characterized by the same exquisite simplicity of style and fidelity to nature which distinguish all the productions of Erckmann-Chatrian, while its description of the battle of Waterloo, coming, as it pretends to do, from a soldier actually engaged in the great struggle, is one of the most vivid and graphic ever written.

By the Same Authors:

Madame Therese; or, The Volunteers of '92. By MM. Erckmann-Chatrian. With ten full-page illustrations. 1 vol. 12mo, price $1 50.

The Conscript. By MM. Erckmann-Chatrian. With eight full-page illustrations. 1 vol. 12mo, price $1 50.

Critical Notices.

"These writers are absolutely unequalled in their own peculiar field. False glory, military ambition, and war never, perhaps, had enemies more powerful appearing in so modest a form."—*New York Independent.*

"More interesting than anything by Miss Mühlbach."—*Lutheran Observer, Philadelphia.*

FOREIGN MISSIONS:

THEIR RELATIONS AND CLAIMS.

By Rev. Rufus Anderson, D.D., LL.D.,

Secretary of the American Board of Commissioners for Foreign Missions. 1 vol. 12mo, price $1 50.

Dr. Anderson's life-long devotion to the cause of foreign missions fits him, beyond any other writer, to discuss their relations and claims. From its broad and comprehensive views and eloquent presentation of facts—many of them new to the large majority of readers—this volume is sure to excite renewed interest in the great work to the discussion of which it is devoted.

Also, Just Published:

Safes to let by the National Park Bank

IN A BURGLAR AND FIRE-PROOF VAULT.—For the safe keeping and protection from fire and burglars of Securities of all kinds, including Stocks, Bonds, Mortgages, Wills and Diamonds, and Valuable Jewelry of every description. An inspection of the vault, constructed by this Bank in their new building, will at once convince all parties interested that the most perfect attainable security has been reached, and at an extremely moderate annual cost to each tenant.

The officers will take pleasure in showing the vault on application.

The Week.

ATTORNEY-GENERAL HOAR has given an opinion on the powers of military courts to try persons for criminal offences in Texas on which we trust the President will act. A negro who had been employed by a man named Weaver left him to work for somebody else, and, after doing so, returned to ask for the wages due him. Whereupon Weaver beat him severely with an ox-bow, and then went deliberately to his house a little distance off, got his gun, and shot the laborer dead in the presence of his wife. The murderer was indicted in the United States District Court; but it being well known that trials before Texan juries in such cases are a farce, General Reynolds had him tried by a military commission, which found him guilty and sentenced him to be hanged. In answer to enquiries as to the validity of the so-called trial and sentence, Mr. Hoar replies that it is for Congress to say both when war exists and when it ends; that until it declares that regular civil government is restored in Texas, it is not restored; that the Act of March 2, 1867, providing for the punishment of crime in the military districts of the South by military courts was constitutional; and that the various declarations made by Congress at different times that the Rebellion was closed, simply pronounced it closed for certain purposes, and as regarded particular business or interests; that it has not declared it closed as regards civil government in Texas; and that, therefore, Weaver has been convicted in a constitutional manner. We hope, therefore, the sentence will now be carried out. Nobody, who has approved of the reconstruction policy of Congress at all, doubts the power of Congress to protect life and property in Texas; and if a deliberate murder of this kind is not punished there, the "military government" of the South is a lamentable farce, and ought to be put an end to everywhere. There is no use in keeping whole districts under military rule merely to see that elections are properly conducted, and there is no use in declaiming about outrages on Union men in Georgia, where we have formally relinquished the right to protect them, if in Texas, where we still claim it, colored men hold their lives at the mercy of the white man's gun and knife.

If there be anybody in the country who does not understand the condition of the public debt, certainly Mr. Boutwell is not to blame. His monthly statements are almost ingeniously clear; that is to say, he makes plain a great many things which none of his predecessors, in spite of their good intentions, ever made plain. On the 1st of the present month we owed $2,107,882,100, bearing coin interest; $67,075,000, bearing currency interest; $412,852,287, bearing no interest; and $5,421,863, on which interest has ceased. The total debt, accrued interest and all, was $2,633,670,653, and it had decreased nearly thirteen millions and a half during the month, and twenty millions since the 1st of March. If things are not going well in the Treasury, it cannot be said they are going ill, except in so far as that there is as yet no sign of specie payments; that, we believe, is held by Mr. Boutwell's friends to be at the end of a coming loan, to be contracted at 4 per cent., if in the meantime we have no more "great speeches."

The St. Louis *Democrat* having asked the New York *Tribune* if it does not think that its habit of treating Mr. Bryant, Mr. Garrison, Mr. Wells, Mr. Atkinson, Mr. Beecher, and others as persons under the influence of "British gold," savors of injustice, the *Tribune* makes a reply which, among other things, sets forth these facts: Mr. Bryant having for a long time—forty-odd years—preached free trade on all occasions, is no doubt an advocate of that policy from conviction, and not by purchase; no shadow is cast on his integrity by the fact that his services to the cause of free trade "have been generously requited;" no candid journalist would allege as against his character for honesty that "our importers" have, "by their advertising patronage, wisely, zealously, sagaciously, made the *Evening Post* the most profitable journal of like circulation in America." But Mr. Bryant often sustains his position by "statements which we cannot reconcile with candor and rectitude." "There may possibly be blockheads who do not know" that Henry Clay did *not* virtually abandon protection in 1833; but Mr. Bryant is not a blockhead, yet he says that Henry Clay *did* abandon protection in 1833. What is Mr. Bryant, then, even if he is not a receiver of British gold?" As for Mr. Wells, "we firmly believe that he is earning—at least, receiving—a great deal more money than is paid him from the Treasury;" and so on, till one is discouraged about human nature.

A Harvard man writes to us to say that we used a rather careless phrase last week when we spoke about the "constant victory" of Harvard over Yale. Harvard, he says, "has not forgotten several defeats received from Yale, nor ceased to fear others." We said "constant for so long a period;" as a matter of fact, however, it is not a very long period; there was a break in a long line of successes so short a time since as 1864. We should imagine that Harvard might very well continue to entertain a healthy fear of their antagonists. And although it would be flat blasphemy to say so in Cambridge, we dare say some of the Harvard men are not in their hearts very unwilling that Yale should beat this year. The commodore, captains, and crews of the "Yale Navy"—(why is Yale a little given to encourage rather high-sounding names for things?)—have just done a generous and courteous thing in voting that Harvard may, if she likes, put Mr. Fay—who is not an undergraduate of the college, but a student in the law department of the university—into the six-oared crew which is to row at Worcester next month. Mr. Fay is an oar to be feared, too, and the concession is not a slight one.

The New York *Times*, in what we cannot help calling a most indecent and uncourteous way, throws doubts on the existence of the "tripartite alliance" between England, France, and Spain against this country, revealed some weeks ago by the London correspondent of the *Tribune*. The *Times* apparently forgets, or, what is much more likely, does not choose to remember, that what that gentleman said was, that the negotiations for such a treaty had been "begun," and that this be-

ginnng of negotiations was "the fact which," at that telegraphing or writing, "dwarfed all other facts." Now it may be, as the *Times* well knows, that the negotiations are still in progress, and that, as we suggested last week, some arrangement has been made either with the celebrated correspondent himself, or with his employers here, to have nothing further said about the matter; or it may be that, finding he has his eye on them, they have given up the business in despair. Moreover, we must remind the *Times* that in the beginning of May, when he wrote his letter, the affair was, as he said, "a secret in London." We have never seen any allusion to it since in any European paper, and it may be, therefore, that it is still a secret, and that the *Tribune* correspondent fears if he refers to it again it will leak out, and his supply of information be cut off. His communication to the *Tribune*, too, was in form at least confidential, and though we spoke of the story ourselves last week, we do not feel quite sure that we were justified in doing so. When we have an agent like him on the track of a parcel of crowned conspirators, it ill becomes us to raise a hue-and-cry in his rear and flush his game before he is ready to bag it. We are pained to see *Harper's Weekly* also scolding this indomitable publicist for abusing Senator Grimes for writing a very clear and sensible letter to the London *Times*. *Harper's Weekly* seems to forget that Mr. Grimes "voted no on the eleventh article," which of course the young lions of the *Tribune* can hardly be expected to forget. Had Mr. Grimes done this while a young man, before his character was formed, it might perhaps be overlooked, but he was fifty when the trial took place, and reform is therefore hopeless, and any "faithful" person who can find a printer has a perfect right to cover him with mud.

Mayor Hall's first message is probably the most readable communication of its kind that was ever addressed to the New York Common Council; the gentleman who does the "head-lines" for the *Sun* might have written it in some of his duller hours. It opens with a dab at the press—for which we hope the Mayor will be interviewed by all the morning papers, one off, another on—for being so busy with the affairs of the municipality; then proceeding, with abundance of incidental bits of audacity, to "our rural legislators," who "concoct tax-puzzles," and to sundry other persons, it takes up what "few matters of government are still vouchsafed to the metropolis," and discourses clearly and lightly of each. Our readers are not necessarily interested in the local affairs of this city; but it might be worth the while of almost any of them to get one more glimpse of the cynical impudence of Tammany Hall, even as exhibited by one of the more decorous proficients. "The Mayor, Comptroller, Street Commissioner, and Chamberlain," the Mayor says, "prepared, upon their local responsibility, tax levies." The "local responsibility" of one of our mayors is much like the necessity of Christian consistency that is laid on Mr. John Allen when in "the dance-house" business. Everybody knows who reads the message, that if it were absolutely necessary for Tammany's best and highest interests to make Mr. Real, or Reddy the Blacksmith, mayor of the city, the thing would be done, and that neither gentleman would necessarily feel very much embarrassed by the consciousness that his constituency had its eye on him. Our docks and piers, we are told, are so bad as they are because of the gross prejudice and peccability of rustic senators and representatives who ignorantly and corruptly hamper the municipal authorities. The message contains no sign of an answer to the important question recently put by the Citizens' Association as to what the Mayor was doing in Albany when two millions were suddenly added to the estimates before the Legislature.

The English papers reveal a great subsidence of the excitement on the *Alabama* question. Lord Clarendon has delivered a speech in the House of Lords—a report of which has not yet reached us, but which the telegraphic summary pronounces "firm and dignified, and yet conciliatory." This means, we presume, that he is ready to submit the *Alabama* case to arbitration, but will not admit that the issue of the belligerency proclamation was dictated by improper motives, and will not apologize for it; in other words, we are just where we were before Mr. Reverdy Johnson began his dining, *plus* Mr. Sumner's speech and several rods of newspaper articles commenting on it and criticising it. Mr. Reverdy Johnson has got home, and has been amusingly "interviewed," and perhaps slightly caricatured, by a correspondent of the *Times* at his house near Baltimore. He dwells with fondness on the hospitality he received in England; asserts, what we have heard from other quarters, that Mr. Sumner wrote to England last January that, had the protocol sent by Mr. Johnson been concluded three weeks earlier, it would have been unanimously approved. He treated Mr. Sumner's speech as a preposterous performance, made some depreciatory allusion "to the man Smalley" who had been abusing him in the *Tribune*, and looks, the correspondent says, for a reaction in his favor on the part of the public.

In the meantime, the Sumner speech seems to be slowly passing from the public mind, which is now turned towards the probable renewal of the negotiations by Mr. Motley in England. The *Pall Mall Gazette* is quite sure that he has gone over with instructions which make Mr. Sumner's speech the basis of his demands; but the *Gazette* is, we are satisfied, mistaken. The various "war speeches" by which Mr. Sumner's have been followed up, such as General Butler's and the Reverend Dr. Sunderland's, appear to have fallen quite flat. We asked a distinguished engineering officer the other day, who knows exactly how things stand, whether our naval and coast defences were in a condition to justify the bloody tone of some of our most gifted popular orators with reference to foreign powers. The man of war answered us with a melancholy smile, and communicated to us some particulars on the state of our armament which we withhold for the present. He was, however, very emphatic in expressing his opinion that, should any trouble come, the Rev. Dr. Sunderland, the Honorable Benjamin F. Butler, and the Honorable Zachariah Chandler ought to be stripped to the waist, and put in charge of a barbette gun on one of our most exposed forts.

The English temperance men have just been defeated in an attempt to enact a "permissive bill," authorizing two-thirds of the rate-payers in any parish to prohibit or make very difficult the sale of intoxicating drinks. The bill was supported by a great number of petitions—the women and the better class of workingmen being almost unanimous in its favor. The debate brought out the usual melancholy statistics with regard to the effects of alcoholic drinks in producing crime and pauperism. On this point there seemed to be no difference of opinion; but some opposed the bill because they thought the measure would be inoperative, and others because, if operative, they feared the effects on individual freedom generally of arming a local majority with power to regulate or control the conduct of the minority with regard to a practice like drinking, which is not in itself wrong, and in fact is only made injurious to the community by excess. Only a small number of members seemed to be influenced by the old British argument touching the atrocity of "robbing a poor man of his beer." The success of the experiment of prohibition in the New England States was spoken of by Sir W. Lawson, the introducer of the bill, as something well ascertained; but we regret to say his knowledge on this point seemed defective. He alleged, for instance, that the Legislature of Massachusetts had recently "re-enacted the old (prohibitory) law by a majority of 129 to 55," but it is, after all, a compromise, cider being excepted from the operation of the law. There were signs in the debate of a revolt on the part of the stay-at-home Englishmen against the authority of "colonels who had travelled a short time in America." The bill was defeated by a majority of 106. Mr. W. E. Forster, of Bradford, opposed it because it made the decision of the majority absolute. He would have supported it had it given the minority the right of appeal.

News from Egypt is to the effect that Sir Samuel Baker is busily engaged in preparing for his Southern expedition, on which he goes with a commission of "generalissimo," a force of 200 cavalry and 1,300 infantry, 14 field-pieces, etc. He has already purchased most of his supplies in England, where three steel vessels are making, to be transported in pieces to a station fifteen miles south of Gondokoro. Thence, to a point on the Nile in latitude 3° 32′ N., he intends building

a first-rate high road, eighty-five miles in length, in order to save annoying delays in navigating the here very tortuous river. This road and the country round about will be well picketed, and stations founded for exchange of merchandise and produce under military protection. From such a base, the voyage up the river to the Lake Albert N'yanza will begin, and it is hoped that in six months from the 1st of July, or by Christmas of the present year, Sir Samuel and his staff will have reached their destination. Other six months remain in which to extirpate the slave-trade—that is, if he continues as sanguine as when he wrote in his first work on the Nile sources that a small garrison and a few gunboats could root up the traffic in a year. A firm and experienced hand like his, clothed as it is with absolute powers, can easily rule the distracted country turned over to it, though it is a pity that Khartoum and Gondokoro are exempted from the new dominion. If the present enterprise succeeds, we may be sure that Baker will not forget the even greater one he has projected, which includes the damming of the Nile, the formation of a port on the Red Sea, the colonization of the Soudan, and the irrigation of the Desert—in short, the creation of a new civilization and new states in the most fertile region on earth.

The Spaniards have settled on their constitution, and it contains everything the most sanguine Liberal could have expected; that is, liberty of worship—although the state support of Catholicism is provided for—liberty of school-keeping, universal suffrage, and of course representative institutions. After a hard fight, the Monarchists carried the day against the Republicans in the Cortes, and had the form of government fixed as monarchical; but the real victory after all remains with the Republicans, because, as we have suggested once before, a monarchy whose expediency has been discussed in a popular assembly, and which has been afterwards set up by a vote of the assembly, can never be anything but a monarchy in name; and the chief of the state in Spain, by whatever name he may be called, will be only the president of a republic if all goes well, and only a military dictator if all goes ill. As yet, nobody has been found willing to take the throne, and Marshal Serrano is therefore going to exercise a "regency" which will probably last for life. The long interval which has been suffered to elapse without filling the throne, and by the very men who pronounced monarchy indispensable to Spain, has been fatal to their arguments, and indeed fatal to their schemes; for the country, having got on for a year without a king, can of course get on for ten years, and, if for ten, for ever. But the constitution has one serious and disgraceful defect, in making no provision for the abolition or prohibition of slavery, in spite of all the efforts of the Republicans; and this resistance, combined with the covert, but none the less determined, opposition which the home Government has always offered to emancipation in Cuba, naturally leads many people to fear that the question is going to be again shelved. The anti-slavery men have well likened "gradual emancipation" to connivance at the gradual relinquishment of human flesh as an article of diet by a savage.

There is at last detailed news of the elections in France. It appears now tolerably certain that the number of the Opposition, which we set down a fortnight ago at 90, will equal fully 100, leaving the Government with not more than 175 "devoted" men, as they call thoroughgoing partisans in France, or "faithful" men, as we call them here. This rise from 5 in 1857, at the second election after the establishment of the Empire, has naturally startled the Emperor and his adherents a good deal. The Opposition candidates of various parties have polled 280,515 votes against 77,943 for the Government; at the last election the Government had 83,500 against 149,496. What is most striking about the election is, however, that the great gains have been made by the "radical democrats," as they call themselves, or the Socialists, as other people call them. The Orleanists and Liberals have been fairly beaten out of the field. Not one of the former has been elected, and the rest, even such men as Jules Favre, Carnot (the son of the revolutionary "organizer"), Marie and Garnier Pagès, the latter heroes of 1848, have lost their seats, or had to undergo a second contest, having failed to secure an absolute majority. Jules Favre was pitted against Rochefort of the *Lanterne*, whose return at one time seemed certain, but the Cable announces that Favre has beaten him on the second ballot. The Imperialists and Socialists may now be said to divide the field of French politics between them; in other words, France is exactly where she was when the Emperor "saved society" in 1851. The canvass has been one of unprecedented confusion and violence. The most extreme men pitted themselves against each other in the larger cities in "leaps ahead," and there is hardly any institution, or custom, or relation known to modern society which some candidate has not promised to abolish. The total absence of party organization left the course open to everybody, and the candidates were, an Oriental would say, as numerous as the sand, and fought each other with rigid impartiality. The Emperor is said to be really scared at finding himself sixty years old, and the Socialist devil still roaming about. Among the amusing election stories is one which describes voters in certain districts as looking on the Opposition deputies as ungrateful and noisy Government functionaries, and another which reports an elector as asking why, after the Emperor had once been elected, he could not choose his own deputies.

A curious controversy has been raging in England through the columns of the *Daily News* touching the possibility of converting Jews to Christianity in any considerable number. It was begun by an Episcopal clergyman, who wrote denouncing the London Society as a humbug, and saying that the conversion of each Jew cost £10,000, and even at that price there could be no certainty as to its genuineness. Whereupon, at the next meeting of the Hebrew Christian Alliance, the chairman denounced him as "a shame and disgrace to the church," and said that society had within a year converted seventy Jews. A foreign Christian Jew wrote, however, supporting the clergyman, and was followed by an English Christian Jew, who charged the society with being "one of the greatest shams of the age," and asserting that "no educated, respectable Jew had been converted through its instrumentality," or any Jew whatever without an accompanying improvement in his temporal condition. Another Jew challenges the society to produce the seventy converts, and the contest seems to wax hotter as it goes. The truth is, however, that the reports of the agents of the Society for the Propagation of the Gospel among the Jews help to strengthen the doubts entertained as to the value of the London society's operations in England. The money spent on the Jews everywhere seems well-nigh wasted. There is, nevertheless, a perceptible *débâcle* in the Jewish body, prosperity and freedom everywhere loosening the bonds of the old faith, just as persecution tightened them; but the educated Jews who come over to Christianity come over quietly, and of their own accord, and dislike notorious conversion or being paraded in public by a missionary as a trophy.

The letter of the Laird Brothers justifying themselves for the building of the *Alabama*, of which we spoke last week, has reached us in full by the last mail. They show that they undertook the building of the *Alabama* in the regular course of their business, and at the ordinary rates; that they never practised the smallest secret with regard to her construction and gave themselves no concern about her destination; and they quote the law officers of the crown, and the ministers of the day, and Chief Baron Pollock as well as Mr. Mellish, a leading counsel consulted by them, to prove that there was nothing unlawful in their bargain or its execution; and they add at the close that Mr. Laird, their father, the Member of Parliament for Birkenhead, was not in the firm when they built the ship. This would be a very effective statement had Mr. Laird, senior, not testified in Parliament the delight he took in his sons having done the deed, and his paternal pride in the exploit, which he rated, he said, much higher than the delivery of Mr. Bright's speeches. Usually, men do not look at ordinary commercial transactions in this way; and it is not unfair to suppose that the Laird sons were as fully impressed as their father with the idea that they were engaged in a work which put them on a level with statesmen and orators, and entitled them to the gratitude of mankind. When people follow trade in a missionary spirit, they must not be surprised if other people refuse to look at their labors as purely commercial transactions.

THE COMING QUESTION.

It is a long while since there was a prospect of so dull a summer, in all that relates to politics, as the one on which we are entering. Nearly every question which has occupied the public mind during the last four years is worn out, and none of the coming questions have yet quite taken hold of it. Reconstruction is all but over, and even if it were not, people have worked too long at it to be much excited about it. Frederick Douglass's admirable advice, to "let the negro alone," begins to be acted on by the entire community; and the negro, we are glad to say, is showing that, as far as he is concerned, he is abundantly prepared to profit by white neglect. The woman's rights question is under a temporary eclipse, owing to the somewhat boisterous character of the late convention, and the exceeding thoroughness of the investigations into the foundations of society and government which were instituted on the platform. The *Alabama* question was roused into temporary activity by Mr. Reverdy Johnson's indiscretions and Mr. Sumner's speech; but Mr. Johnson has passed away from the stage, and the speech is pressing closely on his retreating heels. If it had not been for the excitement it created in England, it would have caused little more than a ripple on the public mind here. All attempts to get up a war fever have failed; and though there is news from Pennsylvania that the politicians of that State are determined to insert a war plank in the platform of their nominating convention, it will probably produce no more disturbing effects than the annual expression of determination to hold sacred the pensions of the soldiers and sailors. The protectionists and free-traders are busy organizing their forces for a desperate conflict next winter, but both sides will probably pass the summer in "camps of instruction," and are as yet only armed with the jack-knives of daily life. The only combatant who keeps up even a show of activity is Mr. Greeley, who has commenced in the *Tribune* an exhaustive series of articles in defence of protection; but if there be one subject more than another from which the human understanding turns away with disgust at the beginning of the hot weather, it is the comparative merits of tariffs for revenue and tariffs for protection. People who have to get through hot days and evenings, whether in the city or the country, generally choose lighter subjects of meditation than the vexed questions of political economy.

One subject which probably occupies people's attention more than any other, and which, being neither difficult nor abstruse, and being presented to them in one way or another every day, will probably occupy them more than ever before during the next six months, is the character of the civil servants of the Government and the way the Civil Service is administered. It is safe to say that when we were discussing Mr. Jenckes's bill last winter, nobody had the remotest idea of the startling illustration of the value of the measure which the incoming of Grant's Administration would afford. Few people—few of his supporters certainly—were prepared for "the clean sweep" which he has made, and fewer still had an adequate idea of what a clean sweep means in these days, when the Government employees are numbered by tens of thousands. We knew what rotation in office meant under Polk and Buchanan, but we did not know, till we saw it, what it meant since the war covered the land with a swarm of functionaries. Moreover, even those of us who had anticipated extensive changes amongst the officers of the Government had not pictured to themselves the possibility of the vacancies being filled by means of Congressional and other "recommendations," in the old style—that is, of every office in the gift of the Government being offered to the competition of between two and three hundred thousand of the least reputable portion of the community—that portion, in short, which in the country of all in which an honest man finds least difficulty in making a livelihood, had failed in getting any place for which character and skill or industry were essential requisites.

The scandals which have resulted from this state of things have been enormous, and have been deeply felt by the whole community. One has hardly time to get over the indignation excited by one story of fraud and abuse when he finds himself face to face with another. The presentation of the State Department, when our foreign relations were in a most critical condition, to Mr. Washburne, as a mere personal compliment, was bad enough, but was, we have always thought, excusable under all the circumstances; but when we heard that Mr. Washburne, knowing his unfitness for it, took it, and held it just long enough to turn out every diplomatic or consular functionary who held a place which any unemployed friend or dependent of his own wanted, and handed it over, after three weeks of this kind of malfeasance, to his successor, with nearly every post of importance, except the great missions, filled with his own creatures, it was hard to know what to say. We suppose, too, that few persons read the story of the political dismissals carried out in the Departments at Washington on hard-working unfortunates, many of them women, for no better reason than that somebody else wished to succeed them—of the daily terror in which poor clerks came down to their offices, fearing to find the well-known brown envelopes on their desks, driving them out suddenly to destitution after years of ill-requited labor—and at the same time heard of the really poor character of many of those who were suffered to step into offices of honor and emolument, without feeling that something should be done to wipe away this great disgrace from the Christian name.

We say deliberately, Christian name. Several meetings of religious people have been held lately for the purpose of advocating the insertion in the United States Constitution of a formal acknowledgment of the existence of God and of the supremacy of Jesus Christ as the ruler of the earth; and many of the speakers—most of whom were clergymen—seemed to be of opinion that the absence of some such statement from the organic law was, and would continue to be, the source of innumerable national calamities. It may well be doubted, however, whether it is not rather late in the day to think of appeasing the Supreme Ruler of the universe by a constitutional recognition of his existence and power, because if nations ever will be called to the judgment-bar, as moral persons, to answer for the use made of their light and capacity, the questions put to them will not be, "What kind of constitution had you?" but, "How did you live under it?" not, "What did you say in your platforms?" but, "What kind of laws did you pass, and how were they executed?" not, "What proportion did your churches bear to your population?" but, "What kind of men did you put in office? Did you do justice and love mercy? Were your judges upright, your tax-gatherers honest, and the taxes taken from the poor well spent? Did you do anything for the spread of civilization, and therefore of my kingdom, over the globe; and, if so, what?"

It will not do to produce in answer to such questions as this a Sixteenth or Seventeenth Amendment to the Constitution, ratified by three-fourths of the legislatures, acknowledging the existence and active interference of Divine Providence in the affairs of men, as long as the administration of the Government is conducted, in all that relates to the selection of its officials, in a way which makes everybody who sees it believe that it considers character, ability, honesty, justice, and charity nothing but empty names—party obligations the highest of all obligations. The material side of this great abuse has been ably exhibited by Mr. Wells and Mr. Jenckes. The moral side has still been only half-considered, and we commend it as a profitable subject of summer musings. We would not have the Government turned into an earthly providence or general trainer in morality, but we do say, that a government which manages its administrative machinery so as not only not to strengthen, but so as to weaken, the popular faith in the value, or even existence, of good faith, integrity, self-sacrifice, industry, diligence, is the greatest enemy that morality and patriotism can have. No man or woman is dismissed summarily from the service, without cause, to make room for another who knows nothing of the duties of the place, without giving young people in the country a lesson in the necessity of fraud and eye-service, and in the worthlessness of fidelity and diligence. No shiftless fellow with damaged reputation ever makes his way into an office of either much or little value, for which many have striven, without diffusing indifference to character, and without increasing the popular confidence in luck, and impudence, and gab. How many churches should we have to build, and how many preachers to set agoing, to neutralize the effect on the rising generation of the choice of an infamous and notorious man, scarred by almost every vice and crime, for one of the

highest places in the gift of the Government—a place in which he represented one great nation to another, both republics, and both passing through crises which should, if anything could, purify and dignify and ennoble their public life?

In short, the question of reforming the Civil Service has far less material than moral importance, and yet its material importance is immense. The events of the last six months have greatly increased its chances of success. Some of the most thoroughgoing party hacks begin to acknowledge its necessity, and all it needs now to triumph is the vigorous pressure during the coming year of those who feel the shame and disgrace of having the Government represent only what is worst in the national life. We have closed the mouths of the repudiators, and the debt is now sure of being honestly paid. It remains now to raise the administrative system to the moral level of American society.

THE CHINESE LABORERS.

It is time that those countries which attend to the police duties of the sea make some investigation into the condition of the coolie trade. There are reasons for believing that the transportation and, in some countries, the employment of coolies are attended with even greater horrors than those which disgraced the slave-trade. We hear every little while of successful mutinies, in which cargoes of Chinese coolies either kill or set adrift the crews of their vessels; we rarely hear of the provocations which lead to these crimes. Recently representations have been made to the Portuguese Governor of Macao which reveal an appalling amount of brutality on one side and of suffering on the other. It seems that vessels carrying "emigrants" to the west coast of South America are packed with their living freight as closely as were the former slave-ships. The food, which consists of rice, is often alive with maggots, and is so insufficient in quantity that the starving passengers are reduced to a condition in which the foul air of the prison-hold and the cramped positions, in a densely packed mass, make them easy victims to scurvy and other ship-diseases. Eye-witnesses state that, in order to make more room and to save the little food needed by dying men, the victims are often thrown overboard while yet alive. The Governor, after having been convinced of the truth of charges of cruelty made against the Spanish-American shippers of coolies, and against South American planters, recently revoked the licenses of those engaged in the traffic to that part of the world from Macao.

It was thought during the past few years that the worst features of the coolie traffic were abolished by the establishment of regulations concerning emigration, under the treaties between China and the principal Western nations. But the whole system needs to be revised and reorganized. Under it at present, the emigrant agents at the principal ports of China have a semi-official position. Depots under Government surveillance are established to receive emigrants previous to embarkation. The engagement to go abroad must be voluntary. The coolie undergoes a medical inspection, a bath, and gets change of clothing, before entering the depot.

The form of contract prescribed by England for the engagement of coolies for British colonies binds the emigrant to work seven hours and a half daily for five years from the time of landing, and allows him at least five holidays yearly, besides Sundays. He receives free passage, and food and clothing on the voyage, four dollars wages for each calendar month, so long as he is employed, during the five years, and free food, house, garden-ground, and medical attendance. At any time during the first year he may, if he choose, arrange to be paid for work by the task; he then finds his own food and clothing, but still has house, garden, and medical attendance free. The contract provides for making advances to him before sailing, and for paying regular allowances, out of wages, to friends in China. He is at liberty to cancel the agreement at the end of any one of the five years, on paying back seventy-five dollars for the passage money, less fifteen dollars for each year served out. The means of corresponding monthly with China free of expense is promised in the contract, and he is encouraged to take out his wife and family, by the offer of free passage to these, together with a gift of twenty dollars to the wife and five dollars to each child, to provide comforts for the voyage. The women are entirely unfettered by any agreement, being left free to accept work or to attend to their own household duties; and it is expressly stipulated that families are not to be separated. The French and Spanish forms of contract are not nearly so liberal as the English. The emigrant is bound to eight years' servitude—ninety-six months of twenty-six days—without the right to cancel the agreement; the length of a day's labor, instead of being fixed, is conveniently made to depend upon the nature of the work; and no encouragement is offered for the emigration of families.

Reforms are not needed very much in the terms of the contracts; the English form is just enough, and the signing of any contract is optional. What is needed is the establishment of some machinery for the protection of the interests of the coolies from the time when they sail from their native shores till they return; otherwise the contract is obviously only a snare with which the Chinaman is entrapped more easily than by the former method of kidnapping. In those countries where the coolie is bound by terms similar to those in the French form of contract, it is clearly the profit of the employer to task his human machine to its utmost capacity during the seven years of indenture. The planter is not responsible for the maintenance of the exhausted laborer; and if the coolie dies from overwork, there is a fresh supply to draw from at the same monthly rate of wages. How much protection does the coolie find, in such countries, in a contract signed ten thousand miles across the ocean? He has one terrible means of escape from oppression: he kills himself. Suicides are horribly prevalent among the coolies in Spanish America. It has been generally supposed that the Chinaman is prompted to this by homesickness and a belief that he will come to life again in his native land. But his motive has nothing so poetic about it. The suicidal mania is the not unnatural consequence of weariness of the bond, combined with bad treatment, insufficient food, and disease on the voyage. On the plantation, years of overworking and cruel punishments make inroads upon the body, while indescribable vices, traceable to an unnatural emigration, unsettle the mind. It should seem, indeed, that the extent of self-destruction in any community of coolies presents a standard by which the abuses of the system under which they labor may be measured.

The evils evidently lie in the system, and are greater in proportion as the bondage of the coolie is greater. On the Central Pacific Railroad, where 11,000 Chinamen were at work as free laborers, there seem to have been very few cases of suicide, if any. The condition of the Chinamen emigrating under indenture is said to be best in the British colonies of tropical America, where it appears that their welfare is somewhat cared for by the Emigration Commissioners. Out of 2,858 Chinese who emigrated thither in 1865, four per cent. died on the long voyage, and there was the same proportion of births. Nearly one-quarter of these emigrants were women, and the encouragement offered for the immigration of families was yearly lessening the disproportion of the sexes.

The Chinese Government signified, not long since, its intention to send commissioners to the different countries using Chinese labor, to ascertain the condition of its subjects. It would be well if it could be impressed with the importance of establishing permanent agents in those countries to watch the interests of its people. This would be a step worthy of their policy establishing permanent missions, and would be a strong additional proof of their progressive spirit.

It is probable that, before long, the overflowing population of China will be largely drawn upon to supply labor for our cotton and rice fields. In view of the fact that the cost of emigration can be met only by an advance of money, and that the repayment of this can be secured only by a lien on the labor of the emigrant, it is highly important to our future social and political welfare that we take, at the outset, such steps as will prevent the contract system from becoming among us only a form of slavery. The terms of the contract should not be less liberal than those prescribed by England; the existing laws affecting emigrant ships should be extended to those carrying coolies, and rigidly enforced; and liberal inducements should be held out for the immigration of families, as the only means of preventing the truly horrible consequences which must arise where the balance of the sexes required by nature is destroyed. The prejudice of race should find no legal encouragement,

and we should guard against repetitions of the disgraceful practice of California, where Chinese testimony is excluded in mixed cases. Contracts cannot be enforced unless the parties appear in court on equal terms. The danger to the life or property of whites, owing to the low moral condition of Chinese witnesses, exists in the imagination only. It is now beginning to be recognized in the legislation of all civilized countries that all testimony should be admitted, and the court left to estimate for itself the allowance to be made for the witnesses' mental or moral peculiarities. We need say nothing of the necessity of beginning as soon as possible to rouse in the Chinamen who come among us a sense of self-respect, and of the value of truthfulness, if not for his protection, at least for our own. The presence of legally degraded races is now well understood to endanger the welfare of the superior race as much as they nourish its pride.

"INSTRUCTION" FOR THE ADMINISTRATION.

THERE is a rumor abroad that the Pennsylvania Republican State Convention, which meets on the 27th of this month, will declare its opinion on the *Alabama* claims in tones sufficiently loud to impress themselves upon the sluggish ears of the Administration. Whether the story is true or not, there can be no doubt that it is extremely probable. Nothing is more to be apprehended than that, during the time which is to elapse before the claims are settled, the Government will receive every possible kind of advice on the subject from every "organization" in every State in the Union. Let Pennsylvania begin, and we shall have ward politicians instructing municipal politicians, and municipal politicians those of the county, and the county statesmen those of the State, while these last will work directly through the great "independent organs of public opinion" upon Grant and Fish at Washington. The Government will be instructed as to what the great heart of the people feels, as to what the relations are between this great heart and the great heart of Mr. Sumner, as to what points Mr. Motley ought specially to insist upon, and what the measure of damages ought to be. Let Pennsylvania once begin, and though we cannot say whether the conventions will go so far as to indicate which edition of Wheaton ought to be used, it may be safely assumed that they will leave nothing unsaid.

From no point of view can we perceive that anything but mischief will come of attempts of this kind to form opinion on the *Alabama* question. There are really only two points of view which it is worth while for intelligent persons to take any note of at all—first, the view of those who are simply interested in getting the largest possible sum out of the English treasury in satisfaction of our demands; and, second, the aim of those interested in healing the breach between the two countries in a manner not derogatory to the dignity of either, and which shall prevent for ever a repetition of the trouble. Those who only care for a good round sum in damages must by this time see that the effect on England of heated expressions of sentimental anger on the part of America is anything but persuasive. From caucuses, conventions, and town-meetings, composed of such gentlemen as do most of our nominating and "resolving" for us, nothing surely can be expected but denunciation of England and the English, which does more to remove all chances of a settlement than anything else in the world, unless it be the outbursts of spleen indulged in aid of a settlement. To belabor a powerful nation with abuse and insult is not the way to make her confess her fault and pay the penalty of it, unless you have fully determined to fight her in case she refuses to accede to your demands. If you take every precaution against going to war, as we have done, by disbanding your army and selling your navy, and, in addition to this, give the most solemn assurances that peace is what you most heartily desire, your subsequent bad language only irritates; it does not frighten. The Senate and the President have both assured England that we do not desire war, and both are interested in settling the *Alabama* claims on terms honorable to the country they represent; the way to prevent their doing it is for the Pennsylvania and other conventions to discuss the matter and pass resolutions about it.

Those who, like ourselves, only desire a settlement honorable to both countries, and one likely to strengthen the obligations of international law, are probably already agreed that the administration is the proper agency for the conclusion of this difficult and irritating business, and not caucuses and conventions of "the men inside politics." The President and Senate are the legally constituted treaty-making power in this country; and until the Constitution is changed so as to give authority in foreign affairs to mass-meetings and managing men who serve on executive committees, these latter can do nothing better than leave them alone. We can imagine nothing more indecent than the spectacle of the politicians of Pennsylvania or New York—most of them steeped in ignorance of law, statecraft, history, and in fact of everything except that worse side of human nature out of acquaintance with which they get their living—attempting to incorporate their passions into the code of international obligations, and to force upon the Government a foreign policy dictated it may be by local jealousy, it may be by mere ignorance, it may be even by a desire to involve the Administration itself in difficulties which shall inure to the advantage of some "statesman" or other in '72 or '76. There is probably no political body in the country which knows so much about the *Alabama* controversy, and the legal bearing of the various questions arising in it, as the Cabinet. They have every fact, every suggestion, every doubt before them; they have the benefit of legal advice. On the other hand, there are undoubtedly no political bodies in the country which have so little knowledge on the subject as the various nominating conventions which will come together in the course of the summer. We see no room for doubt, therefore, that the most unfortunate thing for the country that could happen would be that the *Alabama* case should, by means of the caucus system, come into politics—become a political question which should serve as a test of the "soundness" of candidates. Besides, the interference with the free action of the Government, which is absolutely essential in order that any solution of the question may be reached, in handing the matter over to be discussed by conventions, is simply taking it away from those who know about it and handing it over to men whose whole science of politics is comprised in the arts of manœuvring and intrigue. It is for the interest of every wire-puller, every log-roller, every "ring" in the United States, that the *Alabama* question should be left an open one for as long a time as possible; the longer it remains open, the longer will they be able to use it for the purposes of their own advancement and the confusion of their private enemies, and in aid of stock and gold speculators; and what is for the interest of rings, wire-pullers, and log-rollers is not generally for the benefit of the country they infest.

UNIVERSITY INFLUENCE.

THE universities of the country have been for some time past evidently a good deal puzzled with regard to the course they should pursue touching the rival claims of the old and the new education, as they are called. The friends of the new education, apart from all they have to say for their system as a means of mental training, have had on their side that indescribable force called the "spirit of the age"—one great element in which is undoubtedly a desire of change of all sorts and in all directions. The old education has, on the other hand, had at its back tradition, habit, vested interest, and, what is fully as strong as either, the difficulty of making any change whatever in a machine so complicated and so delicate as a long-established university. The battle has now been raging for several years. The small new colleges have of course borne their share in the fray, and, as might be expected, have generally adhered to the side on which they were likely to find most pupils—these institutions being apt to have a fearfully keen eye for business. In most of the older ones the conservatives have compromised with the enemy, and given him a share in their honors and emoluments. Harvard and Yale, however, have always been the great prizes of the struggle; and it has been evident for some time past that the new school would not be content, as far as these colleges were concerned, with small scientific concessions, but would contend for the entire management on a new basis. We suppose it may be said, without offence to anybody, that the confirmation of Professor Eliot's appointment to the presidency of Harvard indicates that at Cambridge the new school has effected a lodgment in the body of the place, and that its complete conquest is but a question of time.

At Yale, the assailants are, as might be expected, encountering a much more vigorous resistance. We have before us a pamphlet containing an article reprinted from the *New Englander* of April, 1869, in which the friends of prescription in that university hurl defiance at the enemy, in a style which, in these days of timidity, compromise, and concession, is refreshing to witness. The nature of the attacks made on the constituted authorities at New Haven will be sufficiently explained by running through the replies. The writer says that there may be a change needed in the Corporation of the college, but that President Woolsey has himself proposed the only one that is needed, and a better one than any one else has asked for, by substituting six graduates of the university, to hold office for six years, for the six members of the State Senate who now have seats in it, and who, under the operation of the political principle of rotation in office, are changed every year. To the opponents of the clerical element in the board—the ten Congregational ministers who, in fact, do most of the work—the pamphlet says that the lay members are as numerous as the divine, and may attend and vote if they please; that if the clergy have most influence, it is because they do the work; that the "New England colleges were originally designed to be both literary and religious institutions, places where true learning might be gained, and where all who entered them might be pointed to Christianity and to God," and that therefore ministers are the fittest persons to manage them. Ministers, too, are better educated men themselves, and appreciate scholarship more than most of those around them; and they are fully as "progressive" as laymen, and bear as active a part in all reform movements. They are, moreover, just as good managers of money; not a dollar entrusted to the Corporation of Yale has ever been lost—a tale which few institutions under lay management have to tell, and they have raised as large sums for the college as anybody could hope to do in a similar position. That the Board cannot be out of sympathy with the alumni, may be inferred from the fact that in 130 years only twelve of the clerical members have not been graduates of the university. It is doubtless right that Yale should be a "national institution," and it is; but even if it were not, it would not be necessary to give the votes in the election of its officers to all the alumni everywhere, in order to make it so. The mass of graduates do not keep up their interest in the college or in the work of education, or in learning in general; and to admit them all, wherever residing, to a share in the government of the college, would be to place the control of it in the hands of a body of persons who could not be as well acquainted with its work, or as much interested in its welfare, as those who live near it. Moreover, says the pamphlet, the alumni are but children of the college. It has done a great deal for them, and they owe it a great deal of gratitude, but that is no reason why they should be entrusted with the management of its affairs; therefore the only change now needed, or which ought to be discussed, is the substitution of six alumni for the six State senators now sitting in the Board of Trustees *ex officio*.

The answer is very able and vigorous; but still it is impossible not to feel, on reading it, that it is on one point at least hardly complete. The objection to the preponderance of clerical influence in the management of this or any other college is, not that clergymen are not good men, and scholarly men, and able managers of trust funds. Nay, we may add something to the defence of them, made by the writer in the *New Englander*, by saying that they have one high qualification for the conduct of education which is not shared in an equal degree by the men of any other profession, in that they are not traders, and are not interested in money making. They and the college professors may be said to be the only body of men now left in the United States who pursue an intellectual calling for its own sake, and without an "eye to the main chance." What the opponents of the predominance of clerical influence in college government say, is that the reason which two centuries ago everywhere gave the clergy a monopoly of the work of education, has ceased to exist. Colleges and schools were placed in their hands, not simply because they were the only men fitted to teach religion, but to teach anything whatever; they were, in short, the only persons in any community possessing general culture. It would be absurd, of course, to claim this distinction for them now. Moreover, the argument that they ought to retain control of New England colleges, because New England colleges were designed to be religious as well as literary institutions, to have any force, must rest on the assumption that the church does not supply learned laymen competent to maintain the religious character of a university, if placed in charge of it. Now, this is something which we are sure no clergyman would assert. If true, it would give the world a sorry idea of the condition of Christianity in the United States.

Supposing ministers and laymen equally well qualified to impart either religious or literary culture, the relative value of their moral influence on young men would still remain for discussion, and it is here, we suspect, the real issue between the advocates of lay and those of clerical superintendence would be joined. Ministers are compelled either by their own sense of propriety or that of the public to lead what may be called artificial lives—to abstain from a great number of acts, not because they are inherently wrong, but because they are unbecoming, and to look at life *constantly* from a professional standpoint. Their position is one of great isolation. Their habits, amusements, temptations, are different from those of other men. They are incessantly occupied, as most women are, with considerations purely moral; rarely if ever with considerations purely material. The result is the development in the clerical type of character of an intensity of feeling on moral questions which women, for the same reason, are apt to exhibit also, and which furnishes the basis of the sneer, so often indulged in, which consists in putting "the women and the clergy" in the same category, as a class only moderately controlled by their judgments in dealing with great problems of purely temporal interest.

We believe it is now generally conceded, in spite of all that we hear about "the new education," that colleges do not and never will turn out many fully-equipped scholars. Anybody who recollects accurately the stock of *knowledge* he brought away with him from the university, will recollect, no matter how brilliant a student he may have been, that it was comically small. What university training gives is a certain tone of mind, a certain way of looking at things, a certain amount of receptivity, and a useful acquaintance with the relative amount of a man's own powers and acquirements. In short, what it does is to influence the character and the quality of the intellect, rather than supply all that is necessary to be known. The moral influence of the authorities of a college is therefore of fully as much importance as their attainments or teaching capacity. They ought to create its social atmosphere, and to provide standards of criticism which the students will accept; and to do this effectively, under the modern régime of liberty—which treats the student as a man, capable of governing his own life—they ought to lead the students socially as well as intellectually; that is, the students ought to feel that they are men like themselves, living the same lives, governed by the same rules of propriety, amenable to the same tribunals, exposed to the same temptations, and moved by the same impulses.

The question is, therefore, whether a clergyman or any professional moralist—that is, a man part of whose professional duty it is to keep himself apart from the world, to live within narrower bounds than other people, and devote most of his attention to one class of considerations, forming only half of those which men are called on to weigh every day in solving the problems of ordinary life—can ever manage a university in such a way as to give it, in our time, its full value as a source of influence. Nobody who has been a young man himself but remembers that the earliest objects of his admiration, and the most powerful in their influence on his character, were not philosophers or moralists, who had put the world and its joys away from them, but men who lived in it the life he himself proposed to live, and lived it nobly and purely, with a full knowledge of the exact value of its pleasures and the real depth of its pains. In short, we want in colleges more *influence;* the learning will take care of itself. Whether classical or scientific, we suspect the amount of it young men will absorb, and afterwards forget, will always remain pretty much the same. In that direction, the capacity of the juvenile intellect presents an obvious limit to the march of improvement. But there is no conceivable limit to the effect the right kind of collegiate atmosphere might produce on juvenile character; and to this we think hardly enough attention has been devoted, either in framing college government or choosing college professors. It is only within a very few years that it has been even partially recognized that education is an art in itself, and that success in it depends on the possession of qualities totally distinct from those which enable a man to acquire knowledge, and that it should therefore be treated as a profession in itself, and its prizes made the reward, not of learning and morality simply, but of learning and morality united with skill. We do not make these remarks with reference to anything we know or hear of the management of Yale College itself, but because its even implied advocacy of the theory that ministers are any longer entitled *ex officio* to a monopoly of the work of the higher education is, we think, likely to do mischief amongst the minor colleges, and help to retard what is perhaps one of the most desirable of reforms, the conversion of teaching into a distinct and honored calling, of which the charge of colleges and universities shall be the highest step.

ENGLAND.

LONDON, May 28, 1869.

THE excitement created by Mr. Sumner's speech has to a great degree died away. We are beginning to think that we frightened ourselves rather unnecessarily, and that we need not be looking to our weapons or sending reinforcements to Canada just at present. The *Times*, it is true, continues to publish a long series of letters and articles. Sir F. B. Head, the late Governor of Canada, has recalled at some length the circumstances of the rebellion in 1837, and maintained that the ground then taken by the authorities of the United States and of the State of New York would have justified us in complaints quite as strong as those which have been occasioned by the *Alabama*. Messrs. Laird appeared in type yesterday, and gave a long history of their part in sending out that ill-omened vessel, from which it seems that their innocence in the whole affair was something wonderful. However, the controversy is something of the oldest; and I imagine that you will not care to read the thousand-and-first statement of the case until there is some nearer prospect of a solution. I need only repeat that we are now a good deal easier in our minds, and the least in the world ashamed of our previous excitement. I cannot add that it was unnatural under the circumstances. By far the best remarks which it has called forth were contained in a speech by Mr. Forster to his constituents at Bradford. The feeling exhibited was excellent, and the argument, I think, very powerful. I hope that it will be read by all Americans who wish to understand the sentiments on this matter of the best class of English Liberals. Mr. Forster is a man who is gradually rising to a high position. He has an awkward manner and an ungainly figure. No one has less claims to oratorical grace, and he is a most tempting subject for the caricatures. I doubt, however, whether this is really a disadvantage. We have a natural association between roughness and sincerity, which is far from being always justified; the hearty blustering humbug is not much rarer than the smooth-faced villain; but in Mr. Forster's case the assumption seems to be unmistakably current. His rough exterior corresponds, as every one believes, to a thorough sincerity, and to no inconsiderable amount of genuine culture. He is winning that place both in the House of Commons and in public esteem which is always gained, sooner or later, by men of his type; and great common sense and honesty of purpose serve very well in the place of more delicate tact.

The House of Commons met again last night; but there will be little political excitement until the Irish Church Bill reaches the House of Lords. Our legislators take, as you will observe, a very fair allowance of holidays. They have a singular regard, as it would seem, for ecclesiastical propriety. They do not meet till after Christmas, and Easter and Whitsuntide both serve as excuse for a temporary escape from business. Not being myself a legislator, I am unable to say whether their labors are so severe as to make these relaxations necessary. They mark, however, certain critical periods in the session. Before Easter, Parliament sets about its work in high spirits, and promises to get through a prodigious quantity of business. No subject is too vast for its energies, and nothing is so minute as to be neglected. By the time Whitsuntide is reached, anticipations begin to cool. Bills which have not made good progress by this time have rather a bad prospect before them. The long, hot days of summer are approaching; legislation is becoming tedious work; and members are beginning to cast a wistful glance at the moors and salmon rivers which will soon be ready for their amusement. The process of "slaughtering the innocents," as the annual withdrawal of bills is facetiously called, has already begun. Some important bills are mutilated to give them a chance of getting through Parliament; others are being thrown overboard altogether. I may remark that this seems to be the greatest practical defect in our legislative arrangements. Parliament not only insists upon omniscience and omnipotence, but seems to think that it has unlimited time at its disposal. The enormous masses of public and private business which come before it would be enough to tax the energies of half-a-dozen different bodies; yet Parliament not only insists upon doing everything itself, from altering the suffrage down to settling the drainage of a country town, but it does not even organize itself so as to discharge its various functions. Private business is chiefly done by committees; but, in most matters, Parliament appears to think that the whole House must attend to every piece of business that comes before it. Moreover, everything has to be begun over again at the beginning of every session. The consequences are only what might be anticipated. One or two interesting topics absorb the whole attention of the House; a few more are settled without receiving any attention; and a great mass of important business is simply left undone altogether. We frequently declaim against centralization; but this is only centralization with some of its worst evils. One body arrogates to itself such vast functions, and takes so little trouble to fit itself for their discharge, that there is a constantly accumulating mass of arrears.

The Irish Church Bill has taken up the whole disposable vigor of this session; and there is already a whole crop of exciting questions growing up in advance. Some legislation, for example, is urgently required in regard to pauperism and education. A measure in regard to secondary education, which has been brought in by Mr. Forster, has undergone the mutilation of which I have spoken, and not more than half of it will struggle through Parliament. But it seems probable, according to present indications, that another still more exciting topic will first come to the surface. Government has been pressed to declare its intentions with regard to the reform of the Irish land laws. Hitherto it has maintained a resolute silence; but it has declared that it intends to do something, and that that something will not err on the side of incompleteness. The Irish peasantry seem to think that the land will be bodily handed over to them; Irish landlords dread something which, however moderate, they would consider as confiscation; and, in short, a rather uneasy feeling is produced. The intrinsic difficulty of the question is increased by the differences of opinion which it may be expected to develop in the Cabinet. No one can say how Mr. Lowe and Mr. Bright, for example, can be brought into harmony on a matter about which they have publicly expressed the widest divergence of opinion. Meanwhile, a rather curious indication of trouble on a similar topic comes from Scotland. Scotland, as you know, returns an almost unmixed body of Liberal members. At the late elections, the Liberal preponderancy was more marked than ever. It was not, however, the Irish Church Bill which produced this unanimity, although that was ostensibly the great question of the day. The point upon which the Scotch elections really turned was the game-laws. There is a constant difficulty upon these laws between landlord and tenant. A landlord gets up what is called a fine head of game, which interferes with his tenants' crops, and then has three great days' shooting, and sends off the product to market. The hares which he sells have thus been fattened on his tenants' corn. Now it is the custom in a large part of Scotland to let farms by auction to the highest bidder; and, in all cases, the tenant may be assumed to make his bargain with a full knowledge of the liabilities involved. The landlord, therefore, says, very naturally, if you object to game-preserving you should have bargained against it when you took your lease. The tenant, however, persists in feeling aggrieved by a danger which introduces an element of uncertainty into his calculations; and it is natural enough that the result of keeping a number of wild animals running about over a man's farm is to produce a great deal of misunderstanding and ill-blood, even though the case has been contemplated in making the original bargain. At any rate, the farmers have grown angry, with or without cause, and elected members pledged to introduce a reform. The most effectual bill is one which declares that it shall not be lawful to insert a clause for the preservation of game into leases at all. This, it is true, involves a very great interference with the rights of property, and it is doubtful whether it can be passed in a body whose sympathies are so strongly with the landholding class. The question is not a very large one in itself, but it may be significant of coming trouble about the land question in a larger sense.

Indeed, game-preserving and some other of the sports on which we pride ourselves have been carried to an extent in which they are rapidly becoming a scandal. In some parts of the country pheasants are preserved in such quantities that they are as tame as barn-door fowls. Shooting does not imply the pursuit of a wild animal, but the destruction by hundreds of domestic birds which have been carefully bred for the purpose. There is a rivalry between different landlords to produce the greatest possible quantity of game, and there is little more sport in shooting them than in going into a barnyard and practising at the cocks and hens. The whole system becomes daily more artificial in a country so highly cultivated as England, and the charm of genuine sport is entirely lost. This is even more distinctly the case in regard to another amusement of which we are accustomed to boast. All London turned out as usual two days ago to see the Derby. The newspapers indulged in the ordinary talk on the subject; they dilated on the enormous crowds which covered Epsom Downs, on the admirable arrangements made by the railway companies, and on the ennobling nature of our national pursuit. But a strong undercurrent of disapproval is also making itself evident. The whole affair is nothing but gambling on a gigantic scale, with abundant opportunities for cheating of every kind, and opportunities which are by no means neglected. An attempt at reform is indeed being made upon one point. The number of races for two-year-old horses has immensely increased of

late years, with the natural result that the young animals are run off their legs, and that the number of aged horses which are good for anything has as rapidly declined. It is to be proposed in the Jockey Club, as the legislature of the turf, to impose restrictions upon this practice, which simply encourages gambling at the expense of the breed of horses. Whether anything will be done or not is more than I can say, but it is obvious that no reform will be good for much which leaves the turf in the same hands as at present. The evil is not in any details of the system, but in the fact that the persons who manage it are as unprincipled and corrupt a set of gamblers as are to be found in the three kingdoms or, perhaps, elsewhere. A few honorable men still keep horses, but we have daily new illustrations of the truth that it is hard to touch pitch without being defiled. Horse-racing, in the abstract, like several other things in the same condition, may, for anything I know, deserve all that is said of it as an ennobling pursuit—though why it should be particularly ennobling to get one horse to run faster than another, I don't exactly see—but in the concrete, it is exceedingly demoralizing, and though probably more money is spent upon it than ever, it is falling off visibly in general esteem.

Correspondence.

THE GERMAN TAX ON FOREIGN INVESTMENTS.

To the Editor of the Nation:

Sir: In the last number of your esteemed journal, you make a Cable report of a bill said to be submitted to Parliament by the Federal Government of Germany, imposing a tax on all capital invested in foreign securities, the theme for an article of rather far-reaching consequences. No such tax, I beg to say, has been proposed or contemplated. What the Finance Committee of the Federal Council did mature, among other projects, was a tax on sales of stocks and bonds generally, as negotiated at the public exchanges, without discrimination of foreign or domestic paper. But even in this form the project finds favor only with the feudal party and large landholders, while it has evoked the most energetic remonstrances on the part of all commercial communities. The plan was therefore sure to fail, and has failed so far—Parliament having closed the session of this year without acting on it.

Inasmuch as the party of repudiation in this country may avail themselves of the false announcement referred to, with a view to recommend their scheme of taxing the United States bonds contrary to the terms of contract, I felt called upon to make this correction in the interests of the hundreds of thousands of small German capitalists, who had confidence in this Republic during its darkest days, and continue to trust its Government now that it has been firmly re-established.

I shall thank you for accepting my assurance that our Government will as little propose, as our people would sanction, any measure affecting in the least degree unfavorably the interests of this country, and beg to tender you the expression of my high regard as

Your most obedient servant,

Johannes Rösing, Consul-General.

New York, June 5, 1869.

ENGLAND'S INTENT.

To the Editor of the Nation:

Sir: Your correspondent has reopened the discussion on the *Alabama* claims, and, unless you have already set his mind at rest in some number of your paper now on its way to me across the Atlantic, I should like to make a short reply. If he will be good enough to refer to the speech of Mr. W. E. Forster, as reported in the *Daily News* of May 22, he will find the "statement of fact" and the "inference of friendly intent," as he requires. What Mr. Forster there states has long been rumored unofficially in England, but was only stated authoritatively for the first time at Bradford.

Your correspondent will see that in some of the details I was slightly inaccurate; on the main point, I was strictly correct. Any one who reads Mr. Forster's speech, and knows anything at all of his career as a statesman—"an able statesman," as Mr. Sumner calls him—will be able to set his mind at rest on the question of intent.

I hope now that the "fagot" of "America's" complaint will fall to pieces. Certainly the ligature is in fair way of removal.

I have not time, nor do I feel qualified, to answer the rest of "America's" points. You have been good enough already to allow me more space in your columns than I ever expected to claim. If he had been in Lancashire during the Rebellion, he would perhaps feel less positive that England was enriched by your calamity, and pay some tribute of sympathy to the Lancashire men who, through all the dark months of 1863, stood unshaken in their allegiance of love to the Union.

But I will not enter into this question. I only wrote originally with one purpose, and that purpose is answered. "America" has taught me much which I am very grateful to him for.

The quickness of interchange of opinion on this question is the first direct consciousness of the Cable which has burst upon England. Henceforth I earnestly pray the two nations will feel one another's pulses better. Meanwhile thanking you, sir, for your contribution towards this consummation, I am, etc.,

H. Lee Warner.

Rugby, May 26, 1869.

THE BERKSHIRE "GRANITE."

To the Editor of the Nation:

Sir: In your paper of the 27th of May, I find an article on the decay of New England, in which you are pleased to speak of "*the granite hills of Berkshire.*" Now, men and manners may change—the wigwams and hunting-grounds of the wild Indians have long ago given place to the prayerful homes and busy marts of the over-zealous Puritans, and these again must make way, or, to speak more correctly, make room for the broad-shouldered and hard-fisted Celts—but the hills do not change, and those which were limestone twenty years ago we may safely assert are limestone to-day. I believe there is no granite to be found south of the Hoosac range. This is most fortunate for Massachusetts, as the mica slate of which those hills are formed is not so difficult to work out as granite, and that which has well been called the most monstrous Bore in New England would be even more of a bore than it is at present if it were not so. Any one who has seen the beautiful white marble from the quarries of Lee would start with surprise at its being mistaken for the dull gray granite of the more eastern and far less picturesque part of the State. If you will correct this little error, it will gratify the feelings of many lovers of nature and at the same time do justice to

Monument Mountain.

Notes.

LITERARY.

We have more than once spoken in praise of the "Ohio Valley Historical Series," which Messrs. Robert Clarke & Co., of Cincinnati, are publishing. To the "Bouquet's Expedition against the Ohio Indians" and the "History of Athens County, Ohio," there is now added "Colonel George Rogers Clark's Sketches of his Campaigns in the Illinois, 1778-9." Works that will be added to these are the following: "Reminiscential Letters, by the late Daniel Drake, M.D.; a Series of Letters addressed to his Children, giving a Faithful and Graphic Description of Pioneer Life." The editor of these letters is the Missouri Senator, the Honorable C. D. Drake. "Pioneer Biography" is by the late James McBride, and is composed of sketches of the lives of some of the early settlers of Butler County—sketches which include detailed accounts of Harmer's, St. Clair's, and Wayne's campaigns, and of many previous fights with the Indians. The same writer left behind him in manuscript a "History of Hamilton, Ohio," and a "History of Oxford and Miami University," which also are in the press of Messrs. Clarke & Co. The last volume as yet announced of this interesting and valuable series is a reprint of an old work printed in Lexington, Kentucky, in 1799. It has the following title:

"An Account of the Remarkable Occurrences in the Life and Travels of Col. James Smith (now a citizen of Bourbon County, Kentucky), during his Captivity with the Indians in the years 1755, '56, '57, '58, and '59, in which the Customs, Manners, Traditions, Theological Sentiments, Mode of Warfare, Military Tactics, Discipline and Encampments, Treatment of Prisoners, etc., are better explained, and more minutely related, than has been heretofore done by any author on that subject. Together with a Description of the Soil, Timber, and Waters, where he travelled with the Indians during his captivity. To which is added a Brief Account of some very Uncommon Occurrences which transpired after his return from captivity; as well as of the Different Campaigns carried on against the Indians to the Westward of Fort Pitt, since the year 1755, to the present date Written by himself."

——Messrs. J. B. Lippincott & Co. announce as in press "The Adventures of a Baltimore Trader on the Coast of the Pacific," by George Standish; "A Wreath of Rhymes," by Millie Mayfield; "Volume Second of 'Daisy,'"

by Miss Warner of "Queechy;" a new work by Ouida; an anonymous "Evidences of Natural and Revealed Religion;" a revised (the sixth) edition of "The Stomach and its Difficulties," by Sir James Eyre, M.D.; "Hints for Six Months in Europe," by John H. B. Latrobe; a "Historical Sketch of Nazareth Hall," from 1755 to 1869, by William C. Reichel; "The Apostles of Mediæval Europe," by the Rev. Mr. G. F. Maclean; a "Life of Alfred the Great," by Thomas Hughes, M.P.; and a book of "Stories for Sundays, illustrating the Catechism," for which Bishop Coxe stands sponsor, he having revised the work of the author of "Little Henry and his Bearer."——The National Publishing Company shows advertising skill in sending out occasionally tidbits from Mr. E. A. Pollard's forthcoming "Life of Jefferson Davis." We, for our part, are willing enough to be beguiled into repeated notices; the chapters are appetizing, and dispose us to regard the work as not only clever and readable, but honest, though colored by what seems like personal feeling to a degree that will disincline many people to accord it so much confidence as probably is its due; and not only is it clear and readable and honest, but, we imagine, correct in the main, though, of course, many of its statements will be challenged, and some no doubt successfully.

—The Social Science Association has published the first number of a journal containing its transactions, subsequent numbers to follow at we believe irregular intervals—the length of which will depend on the quantity and quality of the material accumulated in the hands of the Committee of Publication. When we speak of the first number of a journal, however, we mean not a small periodical, but a volume of 194 pages, containing ten papers read at different places and periods before the Association during the past year—the topics being: "The Inspection of Country Schools," by John D. Philbrick; "University Education," by Goldwin Smith; "The Texas Cattle Disease," by J. Stanton Gould; "The Supervision of Public Charities," by F. B. Sanborn; "The Method of Diffusing Knowledge," by Horace Greeley; "The Protection of the Ballot," by Charles Francis Adams, jr.; "Civil Service Reform," by Samuel Eliot; "Some Topics in Criminal Law," by Henry W. Torrey; and "People's Banks of Germany," by Henry Villard. Besides these, there is a letter from M. Tourgeneff on the "Economic Results of the Emancipation of the Serfs in Russia," and a variety of intelligence on the progress of social science with notices of economical and sociological publications. When we say that every paper is either from the pen of a specialist or from a man who has established his claim to be listened to with respect on any subject he thinks proper to discuss, we say enough to show that the Association has entered upon a work of the highest value, and, unlike most reformatory work, it is work at which every man and woman in the country can lend a hand. We believe arrangements are in progress for vigorous operations during the coming fall and winter, commencing with a meeting in this city in October.

—From the Boston *Advertiser*—which still maintains its character as the "organ" of Harvard College, and some of the writing for which is still done by members of the college Faculty—we get a piece of news which is as satisfactory as any collegiate news that it has printed for a long time. A year ago the first post-graduate scholarship was founded, and now the good example set has caused the establishment of another. The scholarship will be assigned to such student as the Faculty may select, and will draw from the income of the fund eight hundred dollars a year. Whatever more than this the income amounts to will be added to the principal, until there is income sufficient for the support of two scholarships. The student selected will be obliged to live in Cambridge, and devote himself, not to special studies with a view of preparation for any profession, but to general studies such as the Faculty may approve. To test his progress, the Faculty may from time to time require of him essays and dissertations; and, we suppose, he would not be forbidden to lecture to the undergraduates if he were so inclined; but he must not hold any position of profit in or out of college other than as proctor or as assistant at examinations, on request of the President. The "assisting at examinations" will not, we trust, be construed to mean the helping of proctors in watching the young gentlemen who are preparing their papers, and in seeing that none of them has forbidden learning written on his shirt-cuffs or hidden in his watch-case. And we believe we are inclined to hope that some means will be found of explaining away the clause which prohibits the holding of offices of profit outside the university. There are some good reasons, no doubt, why tutors and professors should not be eligible candidates for the possession of such a scholarship; but why exclude a student of Anglo-Saxon, say, and early English who should also happen to be an assistant librarian at the Athenæum Library, or a salaried secretary of the local Republican or Democratic Committee? Or what harm if a Curator of the Gray Collection, who was a deep student of logic, were to get the scholarship? However, the English practice, carefully examined, would probably furnish a solution of this question. The gentleman who makes the donation is unwilling to be known as the donor. It is a little impertinent, perhaps, in us to say so; but perhaps this delicacy should hardly be imitated. A rich man may not only be excused for desiring to commemorate his name so honorably as by attaching it to a scholarship, but even he may be begged to do so as an incitement to others to follow his example.

—Of new English publications pertaining to Theology and Religion, most of those of the last fortnight, as is usual, are such as to be of more interest to readers belonging to the Church of England than to readers of other communions. Some, however, are of interest to the mere general reader. "How Brother Ignatius became a Monk" is an article in the *Britannia* by Mr. William Gilbert. Mr. Gilbert is a writer who has Defoe's liking for detail without Defoe's power to make detail subservient to other effects than that of photographic realism, and may rather be expected to make an essay concerning the notorious self-styled monk which shall be curious than to make one which shall be adequate; but probably it will be readable. Mr. H. J. Preston, believing that "a determined effort is being made in England to bring the country again under the Papal yoke," has written a work entitled "Rough Notes for Protestants on the Rise, Principles, and Progress of Rome." As the *Spectator* has recently pointed out, a book might be written on the "Progress" of Protestantism—to say the least, whether or not one could be written on the "Rise and Principles" of it—which would very likely have the effect of allaying the fears of those Protestants whom the Pope of Rome terrifies. The "failure of Protestantism" *as a system*—if there has been a failure—is no more a test of the efficiency of Protestantism as a protest than an army's proficiency in the arts of production would be the true standard by which to test its efficiency and value. But it is rather among laymen than clergymen that this view should be expected to be taken. American clergymen may possibly be glad to read what Dr. W. F. Hook has to say concerning "The Disestablished Church in the American Republic." Newman's "Sermons on Subjects of the Day" are to be published—with the editorial care of the Rev. Mr. W. J. Copeland—in a style uniform with the eight-volume edition of the same writer's "Parochial and Plain Sermons." The Rev. Mr. C. T. Collins Trelawney's "Perranzabulœ, or the Church of England not a New Church, but Ancient, Apostolical, Independent; and a Protesting Church near a Hundred Years before the Reformation," goes into a new edition. The widely known if hardly famous Richard Hurrell Froude's "State Interference with Matters Spiritual" is now reprinted—with a certain opportuneness—and is furnished with a preface by W. J. E. Bennett.

—In Science we have, in a thin octavo volume, "An Introduction to the Classification of Animals," by Professor Huxley, and a new book for beginners in geology—"Chips and Chapters"—by Dr. David Page. Mr. Veitch's "Memoir of Sir William Hamilton" will be as interesting to most scholarly students of History and Biography as any of the books of the month which are to be ranged under that head. It tells a pitiful story; it throws additional, though not new, light upon the England in which Lord Macaulay's judgment on Bacon and on Plato was held to be not only worth attention but final; in which "Kit North" was considered a proper occupant of a chair of philosophy, while Hamilton, who at least knew the history of philosophy as few men ever have known it, went begging for a professorship, and his wife was forced to beg for a pension. "Constitutional Progress" consists of seven university lectures on English history by Professor Montagu Burrows, of Oxford, a Conservative in politics, whose party views are said to affect his lectures. The new edition of Coleridge's "Life of Keble" will contain some new matter—some of the letters which the preface of the first edition wishes for. "Lancashire, its Puritanism and Nonconformity," by Mr. Robert Halley, should be a taking title to many Americans—Lancashire Puritanism having spread so wide in Eastern Massachusetts, and, thence, in the West. The work is in two volumes. The second volume of Sir H. M. Elliot's "History of India" is out. Of late books coming under the head of Poetry, none is of much importance; one as attractive as any is, perhaps, "Hood's Early Poems and Sketches," which is edited by the poet's daughter. It includes the "Odes and Addresses to Great Men." There is also a new and revised edition of the "Memorials of Thomas Hood," collected, arranged, and edited by his daughter, with a preface by his son. Mr. William Morris and Mr. E. Magnusson have joined forces to produce a translation of the Icelandic poem, "Grettir's Saga: the Story of Grettir the Strong." "Proposals for, and Contributions to, a Ballad

History of England," is a title worthy of attention, as revealing an odd conception of the possible in present English literature. Even a person very sceptical as to the historical value of old ballads, would confess that our ballads-to-come are likely to be infinitely less valuable as history. What they may be as poetry, it would not be easy to say. Here, as distantly pertaining to poetry, we may mention the fact that Mr. Tennyson, in addition to his other honors, has just been made an honorary fellow of Trinity College, Cambridge. It will be in order by-and-by, probably, to talk of him as a man on whom one of the new life peerages is to be bestowed—he, if literature is to be so honored, being as likely as any one to be asked to accept such a honor; and as safe, we imagine, to refuse. The end of the proposed innovation being to infuse new life into the House of Lords as a legislative machine, and to make the nation better contented with the aristocracy, it would be an end ill enough answered by the bestowal of what one might call nondescript peerages on "available" literary men. While literature, or the body of literary men, would thus receive a slight, legislation would certainly gain only inappreciably; and the secret dissatisfaction of the modern Englishman at the sight of a privileged class would be not much diminished by seeing his idols selected by the powers that be as the objects of a condescending compliment. In Fiction, there seems to be nothing doing that calls for particular notice. There is the usual flood of usual novels, but except the translation of Hugo's "L'Homme Qui Rit"—which makes much less talk among the English than its English "business" might have led one to expect—nothing is published just now in this branch of literature that seems of importance. Dickens is reported to be engaged on a new story.

—Of new English books besides the Theological, Scientific, Poetical, and such others as may be more strictly classified, we may mention as among the Miscellaneous one which will do something to take away the reproach which some of our correspondents cast upon England—of having gone into a rage about Mr. Sumner's *Alabama* speech without ever having read it. Messrs. Stevens Brothers, of London, have in press an edition of the "Speech of the Hon. Charles Sumner, in Executive Session of the United States Senate, against the Ratification of the Johnson-Clarendon Treaty." Over here, by the way, we observe that we do not reverse this order of the negotiators' names, and with politeness say "the Clarendon-Johnson treaty." We civilly forego the pleasures of civility, we suppose, for the sake of implying the culpability of our own negotiator—making him the more prominent to give him the greater share of blame. "Sketches of Young Couples by Quiz, illustrated by Phiz," is a book which is in the midst of a revival of the popularity—such as it was—which it had a generation ago. It is said to be the unacknowledged work of Mr. Dickens—a fact worth the attention of the collectors who devote themselves to Dickens; if, indeed, there be any such collectors. Hazlitt's "Round Table"—perhaps as good, all things considered, as anything of his—reappears as a volume of the pretty and cheap "Bayard Series." For the thirty-seventh volume of their "Standard Library," Messrs. Hurst & Blackett have chosen Mr. Hepworth Dixon's "New America;" and its author, in a new preface, congratulates himself on the fact that in the "young life" of that work it has already achieved, in various languages, the honor of no less than forty editions. There is agreement, however, on the part of all whose opinions as to things of this kind are valuable, that this is not at all a matter for congratulation. Certainly, all such Americans as know that their country—wherever and whatever else it may be—is at least not dreamt of in Mr. Dixon's philosophy or imagination, and is to be seen neither in Utah nor at Wallingford, will think it a thing much to be regretted for the readers' own sakes that there should be readers of forty editions of so misleading and slight a book as Mr. Dixon made up when he went home from this country. We see that one of the London publishing houses is breaking the traditionary rule that new novels shall appear in three volumes. Two stories of about the orthodox length have just been published by Messrs. F. Warne & Co. in a style superior in appearance to our ordinary cloth-bound works of fiction, but the same as the latter in essentials.

—But a French book, which is issued by one of the London publishers—Mr. Trübner—promises to be more valuable than most of the fortnight's "History" of English production. It is "Etudes sur l'Histoire du Droit Criminel des Peuples Anciens—Inde Brahmanique, Egypte, Judée." It is by J. J. Thonissen, a Professor of Louvain. "Many ages before the founding of Rome," Professor Thonissen's prospectus begins, "when Italy and Greece had not yet perceived the first glimmerings of civilization, the vast problems of politics and law had reached on the banks of the Ganges and the Nile the dignity of a science." It is necessary, then, if we would clearly understand the general history of law, to turn our attention to these oriental sources; and fortunately a world unknown to the public of the last century has been laid open by the investigations of Egyptologists, Biblical critics and students of the Talmud, and the researches of the students of Sanskrit philology. Professor Thonissen has not contented himself with an unambitious scheme; and it is as yet soon enough, perhaps, to attempt generalizing, even on the mass of facts which his various fields will afford him; but it is reasonable to expect that his digest may have value for the jurists, the linguistic scholars, and the ethnologists for whom he intends it. As akin to the forthcoming work, we may quote here, from a paper recently read before the Royal Asiatic Society, some remarks made by Mr. N. B. E. Baillie on "The Mohammedan Law of Evidence in connection with the Administration of Justice to Foreigners." The *ultima ratio* on the matter of fact before an English court, Mr. Baillie pointed out, is the opinion of a judge or jury; and all evidence, direct or circumstantial, is introduced and allowed its weight in forming this opinion. According to the Mohammedan procedure, on the other hand, circumstantial evidence is wholly refused; testimony can be received only to one side of the issue; it must be always direct to the point in dispute; and when two or more competent witnesses unite in stating a fact in the same way, their consent is as absolutely conclusive as the verdict of a jury in England. Thus the *ultima ratio* in a Mohammedan court is the opinion of the witnesses. This constitutes the radical difference between the two systems of trying causes, and, together with some minor differences, does not open up a pleasing prospect for Americans and Englishmen should "consular justice" ever be replaced by native justice in Turkey and other Mohammedan countries.

—The annual dinner of the Royal Literary Fund, which took place in London on the 5th of last month, not only gave occasion to the usual amount of speech-making of the usual kind, but Lord Stanley, who acted as chairman, made some remarks which others besides the gentlemen who dined with him will take some interest in hearing. He said that if ever the secrets of the society's charity were made public, most people would be much surprised to see in the lists of beneficiaries so many persons of well-known names. "I noted off," he said, "a list containing over sixty names of those who were assisted, to every one of which the credit of eminence in his or her respective line could not be denied. What I mean by eminence—for the word is vague—is this," he continued: "that of these sixty-odd names, there is not one which would not be familiar—I do not say merely to professed students of literature or science, but to any well-educated individual having acquaintance with the literature and science of the last century." "The last century" covers a period which includes some of English literature's more poverty-stricken days. A hundred years ago Goldsmith had yet five years to live; and when Goldsmith is thought of, one is almost compelled to think of the garret and the landlady—in short, of Hogarth's "Distressed Poet." In 1769, Goldsmith's greatest friend, the Autocrat of Literature, was not so very far removed from the days when he and Mr. Savage—who thereby got his best lodging in literature, at any rate—walked the streets of London all night for want of a room in which to sleep. And in the matter of style of living—however it was as regards style of writing—it is to be feared that for some years after 1769 "Doctor Minor" had more followers than "Doctor Major." We do not know, therefore, whether or not we are called on to be so melancholy as we might be over Lord Stanley's statement of what has happened to sixty-odd of the eminent among literary men and women of "the last hundred years." Just at present the rewards of success in literature are so great, and the possibility of earning a highly respectable living, even without what can be called literary success, is so constantly proved, that our age may be called the literally golden age of literature—or, rather, the golden age of men of letters—though for that matter we have Charles Reade to prove that these are convertible terms, and that if you want literature to be golden, you must give plenty of money to the literary men. It may be doubted, we should say, if most of the sixty-odd names are not those of writers who attained their "eminence" before 1830. As the *Publishers' Circular* (London) points out, the Royal Literary Fund, if it relieves eminent authors, does not entertain many such as its guests. Mr. Anthony Trollope, who was one of the guests, was the only one, the *Circular* says, whose name is familiarly known "to any well-educated person having ordinary acquaintance with literature." That cannot be said of the Rev. Mr. D'Orsey, nor of the Rev. Mr. J. H. Blunt, Mr. Chandos Wren Hoskyns, Mr. C. L. Gruneisen, the Rev. Mr. R. Whiston, nor hardly of Mr. Beresford Hope, though most people know that he is connected with the *Saturday Review*. But we imagine that this absence of celebrated men from the feast is not the fault of the society. We observe that the *Circular*, too, like the rest of the English papers, has its

slap at our late minister to England, whom it speaks of as the "irrepressible Mr. Reverdy Johnson." By the way, another slap at him in which the *Circular* indulges seems not called for; it corrects his English thus: He "stated that one of his pleasantest recollections on his return would be that he had been among" (in company of) "those literary men who had devoted their time," etc., etc., etc. The *Circular's* practice is better than this rather impertinent little bit of its preaching. In the next breath it says, "All honor to these gentlemen for coming amongst authors," etc.

—Mr. August Glaeser, U. S. Consular Clerk at Frankfort, has in mind to translate for the European public a portion of Mr. Tuckerman's "Book of the Artist," having been encouraged to do so by the favor with which his little pamphlet, "Das Lincoln-Monument," was received on the Continent. The character of the latter publication was described in the *Nation* of March 18; but the author, in a private note, suggests that we may have misled people as to his pretensions, by saying that the work did not quite meet our expectations—meaning those excited by an announcement of it we had seen. This, we are free to admit, was our own fault and not Mr. Glaeser's, who made no claim to originality, while nevertheless the first to contribute to German literature a coherent account of American art and artists. In performing this service he could get no assistance whatever from his own countrymen, and of course had to resort to the best American sources or source—the "New American Cyclopædia," with Mr. Sumner's speech for a guide at every step. Hence the limited number of his biographies, and the absence of anything like criticism in them. Mr. Tuckerman's work is, as we pointed out at the time of its appearance, not the best for transatlantic reading, partly because it ministers too much to our national vanity, and therefore may make us ridiculous in foreign eyes, and partly because it ignores a school of art which is very confidently ready to dispute the future with the older (or what, borrowing the analogy from literature, we may call the Knickerbocker) school. However, it is the fullest work we have, and it says all that can be said in favor of the artists admitted to notice; and an abridgment of it would perhaps be even better than an extract.

—Number 20 of the *Journal of the Berlin Geographical Society* offers nothing of very general interest, though, as always, much that is valuable, in its leading articles. In the miscellany we find an epitome of Wallmann's observations on the color of Alpine lakes and streams. Green and blue, of course, ranging through all the tones, form the broadest distinction among the lakes. In not a few both colors are combined. Lago Maggiore is green in its northern arm, and blue in its southern. A great number have the shore-belt, where the water is apt to be shallowest, of a lighter tint than the main body; and those elevated lakes in kettle or pot-shaped basins are frequently light green at the edge, grow more and more darkly green in rings as the centre is approached, and at the centre show a dark-blue core or nucleus. These, which may be called the permanent hues of the lakes, are subject to some variation from temperature and weather, as is a matter of common observation, but the original cause of them is not accurately known. Subterranean springs, reflected and refracted light, shoals, and mountain feeders all affect them to some extent. The last take their own color from the rocks and earths among which they rise. Those descending from slaty formations are a pure greenish-blue; the limestone torrents a blue-gray or a bluish-green; streams from the Alpine lakes an emerald green. Lake Geneva and the through-flowing Rhone are of a beautiful blue color; Lake Constance and the Rhine are green. The glacier-born streams have a milk-and-water appearance, which is intensified in the afternoon and in summer; and during this season they often tinge the elevated lakes with a like cloudiness.

A NEW LIFE OF RALEIGH.*

WHETHER it is true or not, as Mr. Charles Kingsley says, that to Sir Walter Raleigh, "under the providence of Almighty God, do the whole United States of America owe their existence," it is at any rate true that Raleigh was the prime hero of our colonial history—the man of all Englishmen of his day whose name is most indissolubly associated with the planting of English settlements in America. No American will fail, therefore, to welcome a new and complete life of this distinguished man, prepared in great part from wholly new materials, and vindicating his name anew from undeserved obloquy. In his modest and eloquent introduction Mr. Edwards forestalls the charge of presumption in undertaking a task from which many eminent writers have shrunk. After a graphic description of the difficulty—nay, impossibility—of getting full access to documentary records a hundred years ago, he adds (p. xlv.): "The humblest historical enquirer is, in 1868, in a better position as a searcher into records than a retired Prime Minister, with a literary ambition, would have been in 1768, or, indeed, for some two generations later. The concentration of the national records into a single repository at the new Rolls House, with open doors and rapidly accumulating calendars, does more than alter the mere conditions of such a task as that which Edward Gibbon abandoned, about a hundred years ago, for want of trustworthy materials. That concentration of the public archives renders it certain that honest, continued, and painstaking labor will be able to make useful additions to previous knowledge on many a theme of national interest, however modest the amount of literary skill with which the new materials may be handled."

In spelling the name *Ralegh*, Mr. Edwards follows the almost uniform practice of Sir Walter himself, as shown in the letters given in the second volume. In the early part of his life he signed *Rauley*, afterwards *Ralegh*; while his contemporaries adopted any one of a dozen different forms.

The author deserves nearly as high commendation for the use made of his materials as for his industry and honesty in collecting them. His remarks are always candid and judicious, and the work is well laid out and well executed in detail. He is at times over-sedulous to turn a pregnant, elliptical expression into formal grammar; but he does not tamper with his author after the style of Mr. Sparks's substitution of "General Putnam" for "Old Put," but inserts the needed word in brackets; *e. g.*, p. 241, in speaking of the capture of Fayal in 1597, "I stayed so long from landing . . . as [that] I heard mine own company, even at my back, murmer and say that I durst not adventure it." Here the "that," which we take to have been inserted by the editor, adds nothing to the clearness of the sentence; while there is an easy off-hand air about the original expression quite in character with the despatch of a naval commander announcing a victory.

Again, Mr. Edwards is too fond of parentheses, and indulges too often in the fault of *allusiveness*, so common in many writers, as on p. 645, "A great living historian once said of a certain famous event," etc. Why not say, out-and-out, what historian and what event? It is no shame, even to a well-read man, not to be able to identify at sight every familiar passage, even from the most famous writers; but at a quotation like that given, it is impossible not to feel a little rebuked, somewhat as if one were of a sudden unable to remember who discovered America. This habit is even worse when the writer is dealing with events which are so familiar to him that he seems to forget that it is possible some of his readers may have had some other topic on their minds of late. We confess that we have been obliged to have recourse to other books for facts and dates which are essential to understanding the story, but which Mr. Edwards has taken for granted. This fault appears worst of all in the chapters that treat of the great central event of the book—the trial and conviction of Raleigh in 1603. There is a long account given of the two great plots of that year—the "surprising treason" of Lord Grey and others, and Lord Cobham's conspiracy in behalf of Lady Arabella Stuart; and the trial of Raleigh is depicted with much detail and great dramatic effect. But the subject is not clearly introduced; there is no adequate account of the bearing of these events upon each other and upon public affairs, or of the way in which Sir Walter came to be implicated in them. Perhaps it is intended to let the successive events tell their own story, and bring vividly before the reader the confused and contradictory nature of the charges just as they stood before a contemporary. And to a certain extent this is well; but the duty of the historian is something more: he should give not merely the materials for a judgment—which Mr. Edwards has done with great fairness—but so introduce and arrange them as to give his reader an advantage which the contemporary did not have.

The editor has made some very judicious remarks at the close of the chapter upon the trial. After quoting the assertion of one of the judges, made in after years, that "the justice of England has never been so injured and degraded as by the condemnation of Sir Walter Raleigh," he adds, "But the manifest injustice of a conviction is quite a different thing from the absolute innocence of the person accused," and proceeds to discuss briefly some of the probabilities, as well as to notice some problems still unsolved. It is certain that Raleigh had some transactions with Cobham; but it is certain, too, that Cobham's self-contradictory and unsupported testimony can have no weight to convict Raleigh of treason. For our part, while the fact of treason is unproved, we can yet see no treason to England

* "The Life of Sir Walter Ralegh. Based on Contemporary Documents preserved in the Rolls House, the Privy Council Office, Hatfield House, the British Museum, and other Manuscript Repositories, British and Foreign. Together with his Letters, now first collected. By Edward Edwards. London: Macmillan & Co. 1868." Vol. I., Life, 8vo, pp. lvi. and 723. Vol II., Letters, pp. lxxxv. and 530.

in desiring—supposing he did desire—some other succession than that of James Stuart. As our author well shows in his fifteenth chapter, it is very unsafe to infer "sixteenth-century views of 'hereditary right' from eighteenth-century views of it;" and nothing was further from the minds of that generation than the complete acquiescence in James's claim which we are accustomed to. In despair of a substitute, England received him without a contest; but if such a substitute was supposed to exist, and was favored by Raleigh, assuredly the Revolution of 1688 justified his prescience. Mr. Edwards thinks it inconceivable that he could have plotted to put "an empty-headed girl" on the throne; as well, one would say, an empty-headed girl, with men like Raleigh about her, as James the First with his Carr and Villiers.

Mr. Edwards is no victim of the *morbus biographicus*, and yet he has an honest and hearty admiration for his hero; and, what is still more to the point, the power of depicting the character of the man with great vividness and discrimination, but at the same time without any elaborate analysis. He admits his faults—ambition, greed, pride, occasional vindictiveness—ill growths of prosperity, which were partly rooted up in his years of misfortune; admits, too, that he was an unpopular man, and in part deservedly so. But if he was ambitious and self-seeking, it was without dishonor; he sought his own gain, but never by dishonest or disloyal means. Granting that he was guilty in 1603 and afterwards in 1618, it was a guilt uncontaminated by mean or selfish motives. Throughout his life his marked characteristics are great powers as well for counsel as for action, joined with an intense and unswerving devotion to his country. Even James, when he beheaded him to please the King of Spain, was eager to enhance the sense of obligation by calling Philip's attention to the eminence and remarkable capacity of his victim. Undoubtedly the man in the crowd was right who said, when Raleigh's head fell from his shoulders, "We have not such another head to cut off."

Why, then, was Raleigh's life a failure? For, after all, even supposing he had continued to prosper after James's accession, it is obvious that his reputation was already made—that of a brilliant, many-sided man, who shone in splendid achievements, but on the whole accomplished no great work: this is the way we all are wont to think of him at this day. Mr. Kingsley speaks of "the fatal yet pardonable mistake" by which "he tried to be too many men" at once, and explains his want of success by this. Perhaps this was so; but, after all, was it his own fault? Could he have done otherwise? If anything was characteristic of the man, it was his restless activity. He could not be idle. If he could not do what he liked best to do, he would do what lay next his hand; but something he must do. Admiral and colonizer abroad, courtier and administrator at home, in every field of action he was a practical reformer—introducing methods and institutions which have left their mark on all after-time. He could not see a thing going wrong without trying to set it right. Away from public life, he enters with zeal into the improvement of his estate; shut up in prison, he devotes himself to literature.

Nevertheless, the main bent of his mind always directed him towards public life—not as a closet politician, like Burleigh and Walpole, nor as a man of action merely, like Nottingham. More than almost any man of modern times, he reminds us of those great statesmen of antiquity who would carry out on the field what they had counselled in the senate. To read his speeches and pamphlets, one would say that he should have sat always in the Council of State; to follow his brilliant achievements in the fleet, one would wonder that his name does not rank with Blake's and Nelson's, or Turenne's and Marlborough's. Above all, he was a man not merely of ideas, but of one idea—of a *policy*—his whole life was concentrated into enmity towards Spain, and jealousy of her power. Had circumstances favored, he might perhaps have been against Spain what Richelieu was against Austria, and William III. against France.

But no such thing as this was possible in Elizabeth's reign. A minister like Raleigh would not have been to her taste. To be sure, her trusted Burleigh also favored a bold policy—an alliance of the Protestant powers of the North in support of the struggling Huguenots and Netherlanders; and Walsingham wrote earnestly from Paris, just before the massacre of St. Bartholomew, to urge active measures in behalf of the Netherlanders. "As you tender God's glory and her Majesty's safety, see if you can induce her, upon overtures first to be made by the King [Charles IX.] in their behalf, to join with him in yielding assistance. If God had not raised up the Prince of Orange to have entertained Spain, the fire would have been kindled before this in our own home." But Burleigh and Walsingham were of different stuff from Raleigh, and were safe and submissive ministers of her policy, seeing they could not have their own.

It is idle to conjecture how the history of the sixteenth century might have been changed if Elizabeth had had a steady and far-seeing policy, and carried it out faithfully and liberally. The names of Zutphen and Cadiz stand to show what England could do when Elizabeth permitted her to act; what might not William of Orange have accomplished with the hearty co-operation of statesmen like Burleigh and Walsingham and heroes like Raleigh? No one appears to have surpassed Raleigh in discerning either the great duty placed before his country, or the best means of fulfilling it. The fragments of his speeches in Parliament remind one of the words in which Demosthenes pointed out the true means of contending against the Philip of his day.

We believe, therefore, that Raleigh failed only for lack of scope; because a half-hearted and parsimonious queen did not want the best work he had to do, and a worthless king had not sense enough to value the ablest man in his dominions. The closing chapters of the book are almost unexceptionably good, and give strong testimony to the meanness of King James and his eagerness to conciliate Spain. The plot, too, against Raleigh is elaborated much more clearly than the plots of 1603, and the reader is led spontaneously to cast his mind back to that triumphant chapter (the twelfth) which tells of Raleigh's "offences against Spain," and which ends (p. 296): "It was Raleigh who—in Parliament, in the press, and in council; alike in season and out of season—had been the unremitting enemy of Spanish policy wherever and in whatever shape he met with it. It was he who by vast colonial enterprises, extending over twenty years, had defied Spanish pretensions, and spread alarm throughout Spanish settlements. If the time should ever come when a new and weak monarch shall be disposed to bend the policy of England to the policy of Spain; when a king of England shall lay bare to an ambassador of Spain his hatred of a free press and a free parliament—a time when 'the scribes' shall be in power, and the men of war in disgrace—on whose head is it likely that Spain will seek to wreak her revenge for the past?"

Whatever may be our judgment upon the perplexed questions of 1603, it is impossible to read the account of the disastrous voyage of 1617, with Sir Walter's own words, without being convinced that the enterprise was honestly undertaken for the glory and advantage of England, and that when he returned heart-broken to his country, it was as a duty and to fulfil a promise. Whatever claims Spain made to the possession of Guiana, Raleigh did not admit them, but consistently maintained that his early voyages had made it part of the English empire; and, as he forcibly argued in his letter to Lord Carew, "were not Guiana his Majestie's, then mighte I as well have beene questioned for a theefe, for takinge of gould out of the Kinge of Spaine's mines; as the Spa[niards] doe now call me a peace-breaker" (Vol. II., p. 376).

We recognize the distinction drawn, p. 521, between "people" and "populace;" we know the difference, even in our democratic republic; but perhaps Raleigh judged—and perhaps his editor judges—a little unfairly in thinking that "if England, in 1588, had been governed by counting heads or 'votes,' that year would have proved the year of England's agony, not the year of her power and pride." The experience of America, against which Mr. Edwards cannot forbear the luxury of a fling or two, in the year which might have proved the year of her agony, may be set aside. But in Raleigh's own time the great revolution of the Netherlands was accomplished—not, to be sure, by the "populace," but by the unfaltering patriotism of fishermen and artisans, trusting and faithfully upholding a great leader.

THE SCIENCE OF CHARITY.*

ONE of the most marked instances of the progress of the scientific spirit in this age is the increasing control of reason over the management of charities. There is, in fact, springing up a science of charity. The mere sentimental aid of suffering and poverty, without reference to the other effects produced, once held a bounden duty of every conscientious person, is more and more looked upon as dangerous to both giver and receiver. The keen feelings of pity and humanity, though of course underlying all sound systems of charity, are seen to be untrustworthy and perilous, unless under the control of an enlightened judgment and in combination with the rules of a wide experience. The great object of all forms of public charity and aid to the unfortunate and the criminal is more and more seen to be *the development of character*. Where this is not secured or is impeded, no matter what benevolent feelings may be gratified or what touching spectacle of mercy may be afforded, there the scientific organizer of

* "A Half-Century with Juvenile Delinquents; or, The New York House of Refuge and its Times. By B. K. Pierce, D.D., Chaplain of the New York House of Refuge." New York: D. Appleton & Co. 1869.

charity sees only injury done, the laws of society interfered with, and what was intended for a blessing in reality turned to a curse.

To attain this great end, suffering will often be permitted rather than that state help or private assistance should interfere with self-help; the great natural laws will be strictly adhered to; and the motives and individual agencies which everywhere keep society sound and healthful will be applied to the treatment of its exceptional members—the defective, the unfortunate, the orphan, and the criminal. In this view, the great reform of our day in criminal science has been inaugurated—the Irish Prison Reform. To the eye of sentiment, Howard has been a figure for ever hallowed, as he went from prison to prison cleaning the foul places and bringing comparative comfort and decency again to the poor prisoner. But to the scientific student of reform, the almost unknown commander of a distant penal colony, Captain Maconochie, in inventing and first applying his system of marks and gradation of punishment to the most hardened criminals, has done a greater service to the prisoners. He has first demonstrated the possibility of reforming character by infusing hope into the treatment of the most hopeless—the convicts; and the prison, under his able imitator, Sir Walter Crofton, has no longer been a mere place of dull punishment, but also a means of restoring a more industrious producer and a more honest man to society.

The modern science of charity has long ago rejected the idea that children of criminal habits are to be treated like older offenders. In all civilized countries reform has gone hand in hand with punishment for this unfortunate class. But the scientific method has not stopped with this improvement. It has seen that in all branches of reformatory treatment success has only been attained by adhering as closely as possible to the natural laws. Many modes of influencing or improving the young have come down to us from past ages, and, among others, the monastic system—the large institutions where numbers are massed together, and the life becomes artificial and unnatural.

The students of charity in different countries have watched the effects of these large reformatories. They have reasoned that, above all others, children need individual and personal influences, and without these the massing of youth together under general instruction only exposes them to innumerable temptations from each other, and creates at best artificial virtue. For the social opinion of a large institution must always be much stronger than any teaching of the superior officers. Numbers fostered unnatural faults, or cherished hypocritical virtues. The child did not feel the most powerful natural influence—that of a family or a home. He grew up, so far as practical life was concerned, somewhat like a monk—not exposed to its natural temptations, given to hidden indulgences, and entirely unacquainted with its everyday machinery. They urged that the child of the state must expect to live mainly by work in the soil, and to supply his wants, as poor people do, by hand-labor; whereas, in the monastic institutions, he is lighted, warmed, and fed by machinery, and his labor is principally a cheap kind of handicraft.

The results of the congregated system for reformatories have been seen to be so unfavorable that men dissatisfied with it have in different countries opened family reformatories, where the unfortunate little subjects were distributed in groups—each company being in a separate cottage, under individual influence—where the everyday wants are supplied by hand, and the employment is mainly in the garden or on the farm. These establishments—among which we would particularize the Rauhe Haus of Dr. Wichern, at Hamburg; the *Agricultural Colony* at Mettrai, under M. De Metz; and those under Sydney Turner, in Kent, England—are now for practical success the leading reformatories in the world.

Of the opposite system, the House of Refuge in New York is the best example. Mr. Pierce's book, "A Half-Century with Juvenile Delinquents," might in fact be called "A Defence of the Congregated System." Mr. Pierce has been long and favorably known as a most earnest and intelligent worker in juvenile reform: first as Superintendent of the Massachussetts Lancaster Industrial School for Girls, and lately as Chaplain of the New York House of Refuge. He has given the public, in the present volume, a very readable and interesting history of the New York Reformatory, with sketches of the various persons engaged in its work, and also of similar enterprises in the city. The volume abounds in interesting incidents and in valuable discussions of principles. Its only defect as a history is in taking the statements of certain individual charities in the city for truth as to the results accomplished by them—especially its giving credence to the statements of one person whose shortcomings have often been noticed in these columns. There is also too much indiscriminate praise of the large congregated reformatories.

Mr. Pierce's arguments for his favorite system of treatment for criminal and neglected children do not seem to us such as make out a case. We may concede at once that there is no doubt that a large asylum makes a better show to the public; that it is easier to manage, as depending more upon machinery and less upon individual force; that it can organize handicrafts better; that it can sustain more profitable labor; and that it has room for a larger number of inmates. It is equally true that the family asylum is very far from being a true natural family, and that it requires for its success men or women of great devotion and of much personal power. But, when all is allowed, the great effect aimed at by a reformatory—the development of character, the growth of a true manhood, the cultivation of honesty, purity, and industry—cannot be produced to any great extent in a large caravansery of children. A family asylum may not be a true family, but it is nearer to it than a building, like the New York House of Refuge, with a thousand children. It gives opportunity for the play of individual personal influences; it enables each child to be watched, and taught, and influenced as he may personally need; it calls out affection, and gratitude, and friendship between the superintendent of each group and the little objects of his care. There must be under it less bad influence of one lad upon the other, and less of concealed vice. The labor is petty and plain, such as each boy or girl must do hereafter. There seems to us a mistake in Mr. Pierce's statement that lads of this class find farm or garden work slow and dull. The experience of the family reformatories is quite in the opposite direction. All street-boys find steady labor irksome at first; but farm-work soon becomes as attractive as any, and, as the branch where common labor in this country is most needed and best rewarded, it ought to be the first chosen for the children of the state. Moreover, farm-life preserves these lads, when they leave the reformatory, from their most dangerous temptations.

It is not enough to point in reply to the hundreds of youth saved by such congregated houses as the House of Refuge in New York. Wherever devoted and Christian men and women labor personally to benefit an abandoned class of children, there will certainly be rich fruits shown in honest lives and renovated characters. The question is, Would not more fruit be gathered under another system? No congregated reformatory has presented anything like the results of the Mettrai Colony or the Hamburg Rauhe Haus. The failures of Mettrai, if we remember correctly, are less than ten per cent.; there, however, in addition to the influence of small groups and the effect of religion, is brought in that most powerful agency on this class of youth, the love of honor and emulation.

Mr. Pierce's defence of the old system we believe to be that of a hopeless position, and one which the advancing progress of the scientific method in dealing with charities will soon place with the arguments of the past for abuses now happily almost forgotten.

Volcanoes and Earthquakes. By MM. Zurcher and Margollé. Translated from the French by Mrs. Norman Lockyer. (Philadelphia: J. B. Lippincott & Co. 1869. London: Richard Bentley. 1869.)—There seems to be no good reason why this work should have received the honor of a translation; it is a mere compilation of rather indiscriminate quotations tied together by a clumsy thread of narrative, forming one of the least meritorious of the many works on popular science which have appeared in France during the last five years. No pains have been taken to set before the reader the results of the numerous investigations which have given us the science of seismology. Where the reader is so fortunate as to have the facts given him at second-hand from Humboldt, Dolomieu, or other competent observers, his impressions are likely to be correct. Where, however, the authors have not been so cautious as to confine themselves to quotations, the reader runs great risk of acquiring very erroneous ideas concerning earthquakes and volcanoes. No effort has been made to explain the formation of volcanic cones or the transmission of earthquake shocks—the two most fundamental facts connected with the phenomena of which the book treats. Enough is said, however, to lead the reader to believe that volcanic mountains are lifted at once into the air by forces acting from the interior of the earth—a theory long since cast aside by most geologists, and which would have fallen into complete disrepute were it not for the teachings of Elie de Beaumont and one or two other of the older French geologists.

The most remarkable part of the work is the engravings. They are indeed extraordinary productions. One must believe that most of them represent regions where gravitation has ceased to play its wonted part; where volcanic products arrange themselves not according to their usual laws, but in obedience to the ingenious imagination of the draughtsman. It

is quite singular how the angle of slope of volcanic peaks, as represented in all our popular treatises where they are depicted, has gone on increasing from year to year, until the normal declivities of 20° or 25° have been altered to the more picturesque angles of 60° and even 70°. Those whose eyes have been justly offended by these exaggerations, have at least the satisfaction of seeing here the final stage of this absurdity.

It is hardly worth while to notice the many minor errors of style and statement found in this volume. The printer's part of the work is well done; and were it not for careless stitching, the volume before us would be, in all mechanical regards, very creditable. We must say, in conclusion, that it seems a great pity that, while such productions as this are sought for translation, works like the admirable "La Terre" of Elisée Reclus, or the excellent and popular "La Lune" of Guillemin, should not be given a place in our language.

Agnes Wentworth. By E. Foxton, author of "Herman" and "Sir Pavon and Saint Pavon." (Philadelphia: J. B. Lippincott & Co.)—Reading "Agnes Wentworth" revives the general impression which we gained from the author's former novel, "Herman," which we read some years ago, and had forgotten in great part—an impression which is strengthened by this one, and also by the recollection of one or two contributions by the same hand to some of the magazines—that there is little in the way of her achieving some success in literature except the want of vitality in her characters, the suspicion of dulness which makes her writing not altogether easy reading, and what, for want of a pleasanter word, we must call the pretentiousness of her general tone. To set against such faults as these, she has command of a more accurate and refined English style than most of her female contemporaries, and she looks at life from a half-heroic, half-religious standpoint, from which the elaboration of speculations on literature and art and on the relations of the individual to the present and the future world are so naturally to be expected that it troubles nobody to get them. But she is rather staid and self-conscious in her manner, and, if we may say so, she is a little too careful to preserve in the minds of her readers a sense of the irreproachable manners and good-breeding of her characters. Except, for instance, as an illustration of the "habits of good society"—illustrations, we may say in passing, which, on a writer's own account, cannot be too delicately offered—there seems not to be any reason for a remark like this, which is interpolated by "Mr. Foxton" in his account of a little conversation between Agnes and her husband: "They called each other by their Christian names to me, because I knew them both so well, and her from childhood." Now, the most inoffensive reader, on getting an unexpected hint of this nature, might naturally enough—to console himself for a disagreeable impression that the writer thought it might not be wholly thrown away upon him—remind himself that when a man asserts his peculiar refinement and delicacy, some people at once begin to suspect him. When the wayfarer proclaims aloud that he is a man of great probity and sterling integrity, the housekeeper begins to give an eye to her spoons. Such uneasy virtue is too apt to provoke suspicion—which, of course, is often enough unfounded; it is not absolutely always the newest converts who are the most lavish in their display of the Christian emblems.

Except, however, for this too evident tendency to improve her readers, there is nothing objectionable in this story of "Agnes Wentworth." The characters are artificial; one does not, for instance, believe too heartily in the existence of a little girl, even though born in Boston, where enthusiasm for art is known to be prevalent, who makes speeches like this, which occurs in the first chapter of the book: "'Only not to you, dearest Rosamond, only not to you, only this once!' cried Agnes, sliding through her sister's arms to her feet, and clinching her knee with her own clasped hands. 'Oh, Rosamond, this once let me speak; and then, if you must kill my one hope in life, I will build a cold, stony tomb of silence over it. Oh, Rosamond, you are so beautiful and good! He is so noble! He will be so great! He will be a glorious painter. You would be his wife. He would be my brother. He would paint for you. You would work for him. I would help you. He would make fame for you. You would make happiness for him. We would go to Italy, and get away from all the dress and fuss and people here, and lead such a beautiful free life. When visitors came, they would be artists too, and not tell about law-cases and cheating, or eating and scandal, but the splendid statues and pictures and temples they were doing. But if you disappoint him, it will break his heart. He will die, and there will be the end."

Such a little orator—of eleven years of age!—has the general effect of a puppet on a wire, rather than a human being; but as the personages by whom she is surrounded share in great measure the same peculiarity, it is not so noticeable in the general effect. Still, when an author presents ideals of young manhood and young womanhood—which we take to be the object of this and the previous novel—one could wish, in the interest of the actual, that the presentation should be made more attractive, and that the ideals should bear some more positive and appreciable relations to ordinary human nature than in these instances they can be said to do. However, not every author is at once amusing and instructive; and if, considered as a story, "Agnes Wentworth" is not to be called entertaining, and, considered as a study of character, does not command admiration, its moral tone, at least, is unimpeachable, and its ideal of life and duty is commendably high.

Studies in Verse. By Henry Abbey. (New York: A. D. F. Randolph & Co. 1869.)—Mr. Abbey's new book is something of an advance on another book of his that we remember which was published some years ago. That was inspired by the Tennyson of the Claribel days, while this follows after the Tennyson of Dora and Enoch Arden, though it makes an excursion of some length with Maud, and once in a great while takes a step or two with Mr. Browning. But Mr. Abbey has it still to learn that just as profuse flowers of diction did not make "May-day" into "The golden prime of good Haroun Al Raschid," so "Stories in Verse" will not be made into "Idyls of the King" by the closest imitation of that *curiosa simplicitas* which distinguishes Tennyson's elaborately chastened later work. There is always something, precious or otherwise, under the finished workmanship of Tennyson, whether when he is daintiest in ornamentation or when he is ostentatiously plain; but in Mr. Abbey's pieces, so far, we have found nothing of substance. Here is a sample of them:

> "I was a naturalist, and had crossed the sea
> And come to Theodosia to find
> A monstrous spider of which I had heard.
> The people of the town wagged doubting heads
> When asked about it; but one day I met
> A sturdy fisherman who once had seen
> The spider."

Surely, there would never have been any Tennysonites had Tennyson been one—a fruitful truth, and apt to benefit many of us besides Mr. Abbey, if we would pardon its seeming obscurity and ponder it well.

The spider himself above-mentioned is, by the way, the most extraordinary creature we have met with in fiction. He infests the neighborhood of Theodosia. One morning the sturdy fisherman's daughter, a lovely girl, is missing; from her window depends a glutinous rope of five strands, and the villagers know where she has gone. The next night the naturalist is seized by the monster, securely bound, and borne away to a cavern. It is full of gold and gems, and there, fortunately, still living, is the Circassian girl—the naturalist's love since first he saw her. Together the two wait, expecting every moment that the blood of one or both will be sucked, and meantime they watch the spider, of whom this is the personal appearance, or a part of it:

> "The spider's shape was full a fathom long.
> Two parts it had, the fore part, head and breast;
> The hinder part, the trunk. The first was black,
> But all the last was covered with short hair,
> Yellow and fine. Eight sprawling legs adhered
> To his tough breast. Eight eyes were in his head,
> Two in the front, and three on either side;
> They had no eyelids, and were never closed,
> Protected by a strong transparent nail.
> His pincers grew between his foremost eyes—
> Were toothed like saws, were venomous, and sharp,
> With claws on either end."

Luckily for the naturalist, while he is bitterly thinking that he ought to have staid in his own happy home and left foreign insects in peace, his foot strikes against an old sword, and with this he kills his enemy.

> . . . "The chief
> Clasped once again his daughter to his breast.
> Down from the hill we fetched the spider slain,
> And I to science gave these simple facts:
> Spiders have no antennæ, therefore rank
> Not with the insects. As they breathe with gills
> Beneath the body, they possess a heart."

Fame as a naturalist thus won, wealth in his grasp—for the gold is, of course, left to the destroyer of the monster—the hero offers himself to the heroine, and they are happily married.

Mexico and the United States. Their Mutual Relations and Common Interests. By Gorham D. Abbott, LL.D. (G. P. Putnam and Son, New York.)—This book is the work of a book-maker rather than of a writer, and it has the usual faults of its class. Its style is fatiguingly stilted, and its matter is as bad as its style. A good work on Mexico has long been wanted. A well-written work that should take up the history of that unfortunate country at the rising of Hidalgo (1810) and present an intelligi-

ble account of its political severance from Spain, and of its revolutions and wars down to the present day, would be warmly welcomed and bring profit to its publisher and reputation to its author. But it would be in vain that any one would search through Mr. Abbott's work for anything like a clear relation of these events. At page 41 we obtain a glimpse of Hidalgo, and one might imagine himself entering upon such a narrative; but suddenly, without warning or warrant, the author must dash into the origin of the great American idea, and give us a remorseless recital of the conquest and early history of Great Britain, with which end in view he quotes Macaulay and the American Declaration of Independence without stint. The reader may turn to the pages between the forty-third and the forty-seventh for proof of this. Through all the first portion of the book Dr. Robertson, Mr. Hallam, Waddington, Mosheim, Hume, and the records of the Council of Trent are liberally drawn upon, not much to the satisfaction of the reader, however great his respect for authorities, who would like a little information concerning modern Mexico. The worst of it is that Mr. Abbott's authorities are used, and ill used, to cover his own defects of knowledge; he does not appear to have had the advantage of travel in Mexico, nor of familiarity with its language, its institutions, or its history, except at second-hand; and of his ability to make his authorities do duty for himself we may learn something by hearing him quote Las Casas *and* the Bishop of Chiopas without appearing to be aware that they are one and the same person.

As to the author's style, description could only with great difficulty do it justice. He is his own best interpreter. Here is one of his grand strokes—by the way, he is never done striving for effect: "If there had been no continent for Columbus to discover, there would have been, from Spain westward to Japan, one vast, unbroken waste of waters, covering more than two hundred degrees of longitude and an area of some fourteen thousand square miles." Again: "The Eastern portals face the rising sun, stand *vis-à-vis* to Europe, and the golden gates of the West are opening wide towards Asia and Oceanica." Speaking of the late European intervention in Mexico as a "drama in all its acts to the final *exeunt omnes* which has thrilled the world," he says: "But more than that, there was a mighty *arrière pensée* behind the scenes. It was the game of 'all the Cæsars.' It was the 'Old World' defying the institutions of the New. And if they had vanquished what they defied, the results in their vast proportions would have outstripped all the schemes that popes, emperors, or conquerors of past ages ever dreamed of. They would have changed the destiny of the New World, and an overwhelming reflex tidal wave of despotism would have rolled back over the nations of the Old World."

When we deduct the numerous pages of irrelevant quotation from Robertson, Hallam, Waddington, Mosheim, Hume, and many others—good authorities certainly, but away from home in modern Mexico—the long biographical notice of Juarez borrowed from Col. Church (65 pp.), that of Romero from a Swiss publication (11 pp.), several chapters from Abbé Domeneck (55 pp.), sketches of the revolutions of England, France, Spain, and America, together with various constitutions and proclamations, there is really very little left of the book, and that little not its best.

Vingt Ans d'Exil. Par Marco Antonio, Ancien Emigré Vénitien. (Paris. 1868.)—The full name of the author of this curious little book is Marco Antonio Canini—a name not entirely unknown in the literary world, thanks to some petty contributions to comparative philology. We may add that the linguistic abilities and acquirements of the writer are evidently such that had he devoted to his favorite science a considerable part of the time spent in political vagabondage, he might now occupy a conspicuous place among the *savans* of his country, instead of being merely an "ex-refugee," without any other title to the gratitude of his nation or of mankind but that which he founds on a number of abortive attempts at conspiracies against Austria and Turkey. As a professional demagogue—who could not refrain from agitating even in Venice against Manin, while Radetzky was at the gate, and thereby incurred the persecution of the Venetian patriot—as "entrepreneur d'affaires révolutionnaires en Turquie"—as preacher, mostly in secret, of a "mouvement symphone et synchrone" of all the peoples subject to the House of Hapsburg and the Sultan—he spent most of the seventeen years which elapsed between the fall of republican Rome in 1849 and the deliverance of his native city in 1866 in adventurous and, we may believe him, often perilous peregrinations through Greece, the islands of the Archipelago, Asia Minor, Thrace, Roumania, Servia, and Bulgaria, only occasionally returning to Italy. Here playing the doctor, there the great patriot and statesman; here dealing in groceries, and there serving as hand on a boat or begging; here publishing songs of adulation, and there inflammatory articles—in Greek, Roumanian, or Italian—associating now with Constantinopolitan cut-throats and Greek klephts, and now conspiring, or attempting to conspire, with no less personages than Kossuth, Klapka, Garibaldi, Canaris, Garashanin, Prince Michael of Servia, and even Cavour and Victor Emanuel—he, of course, more than once exposed himself to serious dangers, and no less often enjoyed the sweets of fortunate escapes, until the great political changes wrought by the war of 1866 made the continuation of his adventurous career almost as aimless as it had been useless. That such it was, Marco Antonio is far from acknowledging; for few books are written in a strain of greater and more constant self-admiration than his. To believe him, the name of Marco Antonio ought to stand in history side by side with the names of Garibaldi and Mazzini, and decidedly to rank above those of Cavour, Ricasoli, and Manin. Manin, indeed, he works hard to depreciate in the eyes of posterity. His "true republicanism" revolts at the idolatrous respect paid by his compatriots to the memory of his ancient foe. It does not prevent him, however, from treating Victor Emanuel and other non-republicans with impartiality. On the whole, what he says of men, nations, and political conditions is not devoid of instruction; while all he narrates of his own undertakings, adventures, and associations is so peculiarly colored as to preclude the danger of too much belief on the part of the reader, even of him to whom everything Bulgarian, Croat, Roumanian, Transylvanian, Servian, or Turkish is worse than Greek. The reader who is tolerably well informed concerning affairs and tendencies of the communities just east and west of the Adriatic, and north and south of the Balkan, will find the "Twenty Years of Exile" both amusing and instructive; to the ordinary reader it must appear a bewildering maze of strange reminiscences and barbarous incongruities.

The Metaphors of St. Paul. By John T. Howson, D.D., Dean of Chester. (New York: George Routledge & Sons. 1868.)—The promise of this book is much greater than its performance. The widely-leaded pages have little on them in more senses than one. Dr. Howson has been a student of Paul for many years, and in connection with Conybeare has given us an excellent life of the apostle. The cause of his present failure is, therefore, probably due to the intrinsic poverty of his subject quite as much as to any lack of ability on his part. The only thing really proved by our author is that the apostle's metaphors were—what Lowell says all metaphors should be—"windows and not blinds." Their meaning is so plain that they really need no explanation. The well-known obscurity of Paul's style resides elsewhere than here; here all is clearness and transparency. The subject is treated under four heads, namely: Roman Soldiers, Classical Architecture, Ancient Agriculture, Greek Games. At the outset we are told that to understand Paul's metaphors it is necessary to understand the peculiar circumstances from which they are drawn; but as the discussion advances this fails to appear until we come to the last chapter. The military metaphors, the agricultural, the architectural, are anything but local in their coloring. Of course the military metaphors do not anticipate the invention of gunpowder, but they might have arisen in any portion of the ancient world, nor is it necessary to suppose that they grew out of Paul's unpleasant relations with the Roman soldiery. The agricultural and architectural metaphors are decidedly universal in their character; in fact, under the titles Ancient Agriculture and Classical Architecture we have hardly a word spoken on either of these subjects. The chapter on the Greek games is much more satisfactory. Imagery, borrowed from the foot race especially, is seen to be everywhere in requisition. It is of a sort that needs no explanation, but the careless reader would not be apt to notice how much of the apostle's language is purely figurative without some such reminder as the closing chapter contains. Dr. Howson is sometimes amusingly uncritical. St. Paul speaks of grafting the cultivated olive with the wild, and the doctor tells us that Paul knew that such a thing was never done. "Boys notice all such things." Again, on the question, "Does God take care for oxen?"—whatever the Dean of Chester may think on this point, it is very certain that the apostle's way of thinking was quite different from Mr. Bergh's; but because Jesus said, "Not a sparrow falleth to the ground without our Father," the good Dean finds an argument *à fortiori* where it is certain that nothing of the sort ever was intended.

Our Acre and its Harvest: Historical Sketch of the Soldiers' Aid Society of Northern Ohio. By Mary Clark Brayton and Ellen F. Terry. (*Cleveland Herald* Office. 1869.)—When anybody feels unusually depressed or disheartened by watching the performances of "the men inside politics," he cannot possibly resort to a better remedy than

even ten minutes' perusal of any of the many printed records of the operations of the Sanitary Commission or of its branches or feeders. If he fails to be cheered and consoled by it, he may rely upon it that there is something wrong in his mental or moral constitution. We have one of these volumes just published before us now —we had supposed the last had appeared long ago—telling the story of the work done by the women of Northern Ohio in their Soldiers' Aid Society, having its headquarters at Cleveland. The society was composed of and managed throughout by women; and of what their work was some idea may be formed when we say that they issued bedding, clothing, hospital furniture and surgeons' supplies, diet and delicacies to the value of $982,481 25; that they kept accurate accounts, which bore auditing; that there was hardly an honest means of raising money to which they did not resort—fairs, concerts, exhibitions, lectures, begging; and, to crown all, that they kept a small farm, which has given the name to their book. The authors of the history—Misses Mary Clark Brayton and Ellen F. Terry—have let our esteemed friends, "the reportorial corps," into their pages a little too often, and have consequently marred the description of some very interesting incidents; but the narrative, nevertheless, of the way in which the blind enthusiasm of 1861 grew into the organized, disciplined, and really scientific work of 1865, is one of those tales which, we confess, we never read without great dimness of vision, and without finding our faith in the future of the country strengthened, our normal hatred of "the men inside politics" reduced to contempt, and the broad prairies and the inexhaustible mineral resources and untold water-power of our common country sinking into insignificance, in our minds; for no nation boasting the men and women of whom these sanitary histories tell can ever be utterly confounded or brought to naught, though their food were wild berries and their pillows were stone.

715 and 717 Market Street, Philadelphia.

SABIN & SONS'

American Bibliopolist

(Published monthly) affords an excellent medium for ADVERTISEMENTS. It is useful to Librarians for the Lists of New English and American Publications. Book Collectors will find many desirable volumes in Catalogue of New and Old Books, which accompanies each number. Notices of *Rare* or *Curious* Books, and the *Notes and Queries* upon American subjects, will be interesting to every one.

J. SABIN & SONS, Publishers,
84 Nassau Street, New York.

J. S. & Son have recently received a very valuable Collection of American Books—perhaps the finest ever offered for sale. Many of the volumes are illustrated with extra plates, and superbly bound.

HARPER & BROTHERS,

New York,

PUBLISH THIS DAY:

I.

FLAGG'S

EUROPEAN VINEYARDS.

Three Seasons in European Vineyards. Treating of Vine-Culture, Vine Disease and its Cure, Wine-Making and Wines — Red and White, Wine-Drinking as affecting Health and Morals. By William J. Flagg. 12mo, cloth, $1 50.

From the New York Evening Post.

"A pleasant, gossipy book of travels through those portions of France rarely visited by tourists, with fresh pictures, touches of historical lore, glimpses of ancient chateaux buried in trees, of the queer characters one meets with in a diligence, of rural amusements, of firesides in the inn kitchens, of quaint customs and odd sayings, and all related in a simple, natural way, with here and there a touch of humor, must always be acceptable to the general reader. He holds the book lightly in his hand, as if he could lay it down at any moment; but he does not lay it down—a smile lingers on his lips and he enjoys it to the last page.

"Such a book is the one now before us; and if this were its only merit we should say no more. But interwoven with the narrative of travel are some suggestions, hints, and thoughts, drawn from acute observation, which enhance the value of the book ten—or, rather, ten times tenfold. His theme is, Vine-Culture in Europe. His object is to use the long experience of the Old World in this branch of science for the promotion of vine-culture in America. Thus, like a true master, he makes his narrative pleasant to attract readers; his description of vine-culture in Europe minute, accurate, and valuable; and the application of his suggestions to our own methods of this growing branch of home industry he leaves to the sagacity of the reader to use or to improve upon.

"There is probably no person better qualified in this country to write upon this subject."

II.

Thackeray's Virginians.

THE VIRGINIANS, a Tale of the Last Century. With Thackeray's own Illustrations. Complete in One Volume, with nearly 150 Engravings. 8vo, paper, price 75 cents.

The following are among the Illustrations:

A Welcome to Old England—The Family Pew—The Tutor in Trouble—A Stepfather in Prospect—George's Secretary at War—The Wilderness—Dancing Lesson—Gumbo astonishes the Servants' Hall—Gather ye Rosebuds while ye may—A Ministering Angel—Welcome—Farewell—The Dictionary-Maker—The Ruling Passion—Preaching and Practice—A Lay Sermon—A Vice-Queen—A Rencontre in Fleet Street—Bad News from Tunbridge—A Fainting Fit—Harry is Presented to a Great Personage—A Pair of Old Acquaintances—An Apparition—"Whose Voice is that?"—A Prisoner—A Presentation to Madam Esmond—A Young Reprobate—George made much of—Macbeth and Lady Macbeth—George's Friends—Bon Jour, mon Ami—Hetty's Misgivings—A Run for the Boats—Behind Montague House—Mr. Will is presented to his Sister-in-Law—Master Miles Warrington—A Great Lady—The Patron—Miles's Whistle—Flat Rebellion—Warrington Manor—Arbitrium Popularis Aurae—A Rehearsal—Sir George, my Lady, and their Master.

*** Harper & Brothers have also just ready a New Edition of VANITY FAIR, uniform with the VIRGINIANS, to be followed immediately by New Editions of Thackeray's other Novels, illustrated by the Author, at correspondingly low prices.

From the Buffalo Advertiser.

"The Messrs. Harper are supplying a great deal of good reading just now 'dog cheap'—at less than cost, in fact. They have issued all the novels of Charles Reade at ridiculously low prices, and now they are doing the same with Thackeray's works. . . . 'Vanity Fair' is cheaper by far than any book of the same size, weight, and quality of material could be sold at before the war, though paper was so much cheaper then than now. It is far below the actual manufacturing cost. . . . We like to see everything, books especially, and *good* books like the one in question, sold at the smallest profit."

*** Harper & Brothers will send either of the above books by mail, postage prepaid, to any part of the United States, on receipt of the price.

LIGHT LITERATURE FOR SUMMER READING.

GEORGE ROUTLEDGE & SONS,
416 BROOME STREET, NEW YORK,

Call the attention of Summer Tourists to their

Railway Library Editions

of the following Standard Novelists:

WILL BE PUBLISHED SATURDAY, JUNE 12, BY

CHARLES SCRIBNER & CO.,

WOMEN'S SUFFRAGE:

THE REFORM AGAINST NATURE.

By HORACE BUSHNELL, D.D.

1 vol. 12mo.....$1 50

This work will be recognized as one of the most noteworthy contributions yet made to the discussion of the question to the consideration of which it is devoted. It opens with a preliminary chapter, in which the question at issue is stated with characteristic force and clearness. Dr. Bushnell then takes the ground that there is no right of suffrage absolute in man or woman, and in the next place proceeds to argue that women are not created or called to govern—a position which he shows is abundantly sustained by Christian doctrine. He then discusses some subtle mistakes of feeling and argument, and concludes by summing up the report of history, and by sketching some of the results that would surely follow the concession of suffrage to women.

JUST PUBLISHED:

A GRAPHIC HISTORICAL TALE.

WATERLOO:

A SEQUEL TO THE CONSCRIPT OF 1813.

By ERC MANN-CHATRIAN.

1 vol. 12mo, uniform with "Madame Thérèse" and "The Conscript," with six full-page illustrations, price $1 50.

CRITICAL NOTICES.

"The charm of these works is their entire freedom from that straining after effect which characterizes the modern novel. We seem not to be reading fiction at all, and the characters take hold of us as living creatures, while the incidents, however tragical or imposing, are told in a style as far as possible removed from the sensational."—*N. Y. Evening Post.*

"Written in a style of great simplicity, and with much dramatic force."—*Evening Chronicle (Pittsburg).*

"The story of the battle of Waterloo is given for the thousandth time, but it can *never* cease to be interesting."—*Springfield Republican.*

BY THE SAME AUTHORS:

Madame Therese; OR, THE VOLUNTEERS OF '92. By MM. ERCKMANN-CHATRIAN. With ten full-page illustrations. 1 vol. 12mo, price $1 50.

The Conscript. By MM. ERCKMANN-CHATRIAN. With eight full-page illustrations. 1 vol. 12mo, price $1 50.

FOREIGN MISSIONS:

THEIR RELATIONS AND CLAIMS.

By Rev. RUFUS ANDERSON, D.D., LL.D.,

Secretary of the American Board of Commissioners for Foreign Missions. 1 vol. 12mo, price $1 50.

CRITICAL NOTICES.

"The work is written in a simple and pleasing style, and the appendix contains much statistical information concerning missionary societies not to be elsewhere obtained."—*N. Y. Evening Post.*

"The book contains much that is valuable concerning the history of missions to the heathen from apostolic times to the present day; and many observations showing the good results of missionary labor."—*Springfield Republican.*

Attention given to Land-draining; the Construction of Farm Buildings, including Earth-Closets; the Renovation of Worn-out Lands; Road-making, etc.

The Nation Press.

The Proprietors of THE NATION PRESS give notice that they have established a Book, Pamphlet, Job, and Newspaper Printing-Office in this City, and are prepared to execute at moderate prices, for cash, the best of work in any and all of these branches.

For BOOKS they will furnish Electrotype or Stereotype Plates, as desired, and will guaranty unusual accuracy in their preparation.

PAMPHLETS of every description, embracing Prospectuses, Statements, and Reports of Corporations, Statistical, Scientific, and Literary Papers, Law Pleadings, etc., etc., will receive the same attention as books, and be printed with especial care.

JOB WORK, in all its details: Cards, Circulars, Programmes, Bills, Receipts, Forms, etc., will be promptly dispatched, with taste, and in the newest varieties of type.

NEWSPAPERS, MAGAZINES, and other Periodicals will be printed on reasonable terms, and strictly upon time.

In short, the Proprietors undertake to satisfy first-class custom in all that pertains to a general Printing Business.

Orders may be sent to THE NATION PRESS, 27 Rose Street (a few doors North of Frankfort), or to this Office; and estimates will be furnished at either place.

ADDRESS, PUBLISHER OF "THE NATION," BOX 6732, NEW YORK.

PUBLISHING OFFICE, 3 PARK PLACE.

The Week.

THE reports that some of the Pennsylvanian politicians, including Messrs. Curtin, Cameron, and Forney, were going to get up an *Alabama* "issue" for use in the fall elections, which have been rife for a week or two, have as yet received no confirmation from any overt act of the suspected parties. If they seriously entertained the idea of dragging the Republican party into preparations for a foreign war, and there is little doubt they did, the reception the scheme has met with from the press has hardly been of a nature to encourage them. A foreign war, to keep a particular set of politicians on their feet, is a device a trifle too mediæval in its morality for the kind of people of whom the main body of the Republican party is composed. It was confidently expected that the first blast of the trumpet would be blown by Mr. Curtin, in reply to the addresses presented to him by his friends prior to his departure for his post at St. Petersburg; but he has delivered a pair of farewell speeches without the slightest allusion to foreign politics. This reticence is, we are sorry to say, ascribed by some of the Washington correspondents to an advisory note from Mr. Fish, requesting (in substance) the Minister to Russia to attend to his own business, and not embarrass the Minister to England in the conduct of important negotiations by denunciatory and warlike harangues. It would be unfair to abuse Mr. Curtin for speeches he never delivered; but it is safe to say that, if he intended to beguile his journey to his post by public attacks on powers with which we are at peace, it would have been very proper of Mr. Fish to impose silence on him. Whenever our diplomatic service is properly organized, a minister who takes the stump for war, or announces his intention of doing so, after receiving his commission, will be promptly dismissed, as a person having too little sense and discretion for civilized diplomacy. European nations, with whom nearly all our diplomatic intercourse is conducted—and we may say the same thing of China and Japan—do not understand the total absence of any feeling of responsibility for what they say about foreign nations which many of our high functionaries display, and even affect. This is simply an illustration of their general backwardness; but then, as we have to dwell on the same planet with them, treat, fight, and trade with them, we ought to adapt our style of doing business to their feeble intelligence.

A breach of propriety nearly as great as that which Mr. Curtin was accused of meditating was reported the other day about Consul Morse, of London. This gentleman was accused in the usual style, by the London correspondent of the New York *Tribune*, of "sympathizing" with the Confederacy, or with Andrew Johnson, or the anti-impeachers, or with somebody or something of an objectionable nature, and was denounced in the columns of that paper accordingly. So Consul Morse goes hat in hand to the correspondent, explains himself and excuses himself, and finally makes it all right with that functionary, who accordingly publishes an acquittal of the culprit, which we suppose few people, who did not laugh over it, read without blushing at the thought that any American official should be allowed to subject himself publicly to such ridiculous humiliation without being promptly sent about his business by his superiors. The discipline of no service can be in a healthy condition in which officers stand in terror of any fluent young person sent out by "a great daily" to survey the earth for its columns. What this practice may lead to, if not promptly resisted both by the foreign agents of the Government and by the State Department, we have had a useful illustration of in the McCracken case. The Department ought either to pay no attention to charges made by newspaper correspondents, or other rovers, against consuls or ministers, or else make it a rule that they shall address their defence to the Secretary, and not to their accusers. We hope Mr. Fish has by this time given Consul Morse a piece of his mind on the subject. This sort of subservience once begun, there will be no end to it; and our foreign representatives will pass all their time on their knees one day before the emissary of the *Tom-tom*, and the next before an emissary of the *Hammer and Tongs*; and these personages, once made conscious of their power, are not the men to be sparing in the use of it.

If political affairs were transacted *in vacuo*, the St. Louis *Republican* might well enough wonder how cooler people than the Border State men could have tranquilly looked on for two or three years after the war, and seen without grief the proscriptive and violent course which the Unionists of Tennessee and Missouri, for instance, pursued towards the late rebels. But the Tennesseeans and Missourians are men of like passions with ourselves, and politics is a practical business, and things out of season to-day are in season to-morrow; and it was thinking of these facts that the *Nation* declined to condemn the Brownlow men and the Fletcher men of '65, '66, and '67. A policy of lenity could then, we believe, have been as little borne by the one side as the other. We believe, for example, that within the last year or two Mr. B. F. Perry has learned some things that would help him materially to make a useful member of the Legislature in South Carolina, and we believe that it would have been all the better for South Carolina if he could have been kept in perfect quiet during all of 1864 and the succeeding three or four years. So far as our information extends, we have now, at last, a right to be glad that the disfranchising and disabling policy gives signs of coming to an end; probably it is now the mother of more evil than good. In Tennessee, the contest becomes more exciting, as the rival candidates are stumping the State together—shaking hands on the platform before each speech, and then in turn covering each other with mud of all description. Stokes does not yet adopt the doctrine of immediate enfranchisement for the disfranchised, but Senter has adopted it, and the reason seems a plain one. The singular report is current that Mr. Johnson and Mr. Brownlow have made a treaty, under which the ex-President is to go to the Senate, and Senter is to have Johnson's assistance in the gubernatorial fight. Anything in this way is believable of either "the Parson" or "Andy;" their raving and cursing and calling names at each other was never anything more than the familiar Southwestern walking round an antagonist and "cussing"

of him "into a heap" before "clinching." In Virginia, affairs are said to look favorable to Walker, the Conservative Republican candidate; but nobody seems to know.

There is some satisfaction in knowing that Attorney-General Hoar's recent decision as to the authority of military commanders in Texas applies also to Mississippi; and that Colonel E. M. Yerger will probably be tried by a military commission for his murder of Colonel Crane the other day in Jackson. Crane was mayor of the city, and made an official order that a piano of Yerger's should be sold for taxes long in arrears. Yerger returned from Memphis eight days before the sale was to take place, and began sending messages to Crane to the effect that he desired the mayor to divest himself of his official character and walk out into the street, and, meeting him shortly after in a bank, murdered him with a knife in a most brutal way. Yerger is one of the crew of drunken ruffians who infested every Southern city before the war, and who were pleasantly spoken of by their neighbors and the local press, whom they kept in a state of mortal terror, as "high-toned gentlemen." In any civilized community, they would have passed most of their waking hours in some useful form of hard but involuntary labor in a penal institution; but the South was actually proud of them, and treated them as sacred animals. In speaking of this case, one of the Jackson papers disclaims all responsibility for it on behalf of "our people," but our people cannot get off in that way. There is no Yerger at the South for whom the South is not responsible, and for the reason that it never, or hardly ever, hanged its blackguards when they stabbed or shot people. We believe a conviction for murder in any case in which the affair was preceded by a quarrel, or appeared to grow out of a previous "difficulty," was unknown. The "law-abiding citizens" were so much occupied in running off Abolitionists and looking after naughty Abolitionist books that the cut-throats enjoyed practical impunity. We hope the court-martial and the President will now afford the citizens of Jackson the most improving and moral spectacle of the kind they probably ever beheld—an incorrigible ruffian brought to the gallows for a cowardly murder. A similar opportunity may never again offer itself.

A process is now going on in the Treasury Department to which we think the attention of all friends of morality as well as of good government ought to be directed. A Mr. Jackson, a Western lawyer in good practice and excellent standing, and a Republican from the formation of the party to the present hour, threw up his business in 1861 and entered the army. From that moment till August, 1864, he was constantly in the field *and constantly at the front.* His health was by this time utterly broken down, and he came home a wreck, to find his business broken up, his partner gone to Congress, and, what was worse, with his brain affected, as the sequela of disease contracted in service, and he was for two years an inmate of the lunatic asylum. Issuing from this in 1866, a return to the bar was, of course, out of the question, and a number of friends, who admired him, procured his appointment in the Treasury Department, in the Auditor's Bureau. He here displayed extraordinary ability as an examiner of claims, and was rapidly promoted from the first to the second and third class, and was promised, in April, 1868, the first vacancy in the fourth. In April, 1869, immediately after Mr. Boutwell's advent, he was dismissed peremptorily—the reason assigned being that he "had been appointed under Johnson, and endorsed by Democrats, and was intimate with Judge Woodward (of Pennsylvania) and Mr. C. Denison"—these two gentlemen having, with Judge Grier, of the Supreme Court, signed his testimonial, and being, we suppose, whatever their political opinions may be, abundantly qualified to say whether a man was honest and capable. Here, however, came the hitch, and here appears the real beauty or atrocity—whichever one pleases to call it—of the whole transaction. Mr. Stetson, the head of Mr. Jackson's bureau, at once announced to the Third Auditor that his (Jackson's) services were indispensable, and that his departure would paralyze the business of the office. So Jackson was retained, and two young men were put in along with him to learn the business from this broken-down soldier, with the view, as soon as they have acquired it, of taking his place and taking the bread from his mouth, and turning him out on the world. This process is actually to be witnessed this moment at Washington, and will be on view till next April, as it is calculated that it will take a year for the two young men to become fit for Jackson's post.

Here we see a Republican soldier, disabled for the duties of his profession by hardships incurred in the face of the enemy, and who had in the civil service given the highest proofs of capacity, deliberately dismissed from his place because American gentlemen of the highest character and standing, but of an opposite political party, had testified to his moral worth and intellectual ability; and this is done under the superintendence and on the responsibility of a professedly "moral" politician from Massachusetts, who is popularly supposed to be reforming the Treasury Department, and who, as politicians go, is really a man of high character and considerable ability. A better illustration of the iniquity of the system of appointment and promotion was never afforded, and we have not touched upon it till we had satisfied ourselves as to the facts by careful enquiry. The downright inhumanity displayed in keeping a poor man in prolonged agony and anxiety for a year, teaching the persons who are to supersede him, is bad enough; but what shall we say of the deliberate employment at the very financial headquarters of three persons, two of them wholly incompetent to do the work of one?

We have been accused by a great many well-meaning people of "being too hard on Mr. Boutwell;" and we had a day or two ago in the *Sun* an affecting editorial article, showing that he is "a man with a heart," inasmuch as, happening to be on the spot the other day when the accident occurred at Annapolis Junction, "he interested himself in the care of the wounded" in spite of "his grave cares" touching the national finances. We have opposed his appointment simply because he was a thorough-bred politician of the old school, and we therefore felt able to deduce the probable occurrence of such cases as this of Jackson's from his career and antecedents with all but certainty. After thirty years of caucus, wires, and stump, a man could not be a real administrative reformer. The stuff of a reformer has gone out of him. "Fidelity" and "claims" have entered into the very marrow of his bones; and though he may remain, as Mr. Boutwell is, a remarkably good specimen of a class, he cannot do the work this generation will have to do if the Government is to be saved. It would be hard to say what moral obligation, or rule of decency or expediency, is not violated in this Jackson case.

Considering that so much shooting by women is going on in the country, and that the feminine world no less than the masculine is liable to moral epidemics, and that women who edit papers are urging other women to carry fire-arms for their defence, perhaps our male legislators may look about them and see if anything can be done to hedge about the virtue of women with legal terrors. We observe that the Canadian Parliament—moved, possibly, by the late notorious seduction case in Quebec, with its consequent homicide—has recently been giving some attention to a bill for the protection of female chastity. The crime is made a misdemeanor, punishable by imprisonment for any less term than two years, with or without hard labor, and accompanied by a greater or less fine, as the court may see fit. Should the bill pass, this latitude of award which it allows to judges will probably make convictions more frequent than they would be if the penalty were more rigidly defined, or than they would be if it were heavier—death, for example, as some of the women think it should be. It is further provided that the subsequent marriage of the parties to the misdemeanor may be pleaded in bar of conviction, and that is a provision which, on the whole, ought, we think, to be enacted. For in cases of seduction it is not as it is in cases of rape. The ravisher is presumably a murderous ruffian or a wretched man of passions so ab-

normally developed as to make him a lunatic, and, as either the one or the other, society must shut him up, and cannot safely postpone considerations of the general safety to considerations of his victim's "good name." But that the new bill would be conspicuously successful in operation is doubtful. It ordains as to evidence that "no conviction shall be had on the testimony of the woman seduced unsupported by other evidence." This clause would make the act of no avail in the worst class of cases—those in which the woman is affectionate and inexperienced. However, juries might be relied upon with considerable confidence to allow greater or less weight to indirect and circumstantial evidence, according as it should seem best to them, as men acquainted with the parties and the facts, as usually they would be, and practically justice would not suffer so much as might be expected. It will be remarked that the bill looks on the man as alone guilty; but it would be better to say that it contemplated him as the only one of the guilty pair whom the law needs to deal with. The fate of the seduced woman is hard enough, even if the courts leave her alone; and the women who seduce are rare, and the pure hearts they break and the promising lives they injure are even rarer.

There is no fresh news about Cuba, or about Spain, except that President Juarez has been strongly eulogized by Prim in the Cortes, and the early reopening of diplomatic relations with Mexico promised, in spite of the fact that Juarez has been granting belligerency to the Cubans. Cuba itself is in a curious condition, the volunteers ruling the island, *vice* Dulce resigned, and pending the arrival of Rodas, who is on his way out. All the news received of the American filibustering parties is unfavorable, one of them having been, according to one story, betrayed by its guide, and easily destroyed by the Spaniards. From the others we hear nothing, and indeed the rebels appear to be making no movement. Cespedes is busy with the construction of a civil government, but there is, we regret to say, a strangely unreal air about such specimens of his work as we have seen thus far described on paper. In fact, little has as yet occurred to remove the suspicion which has long been current, that the revolutionists keep up just enough rebellion, and are showing just enough civil government, to support the efforts which their friends here are making for recognition, or aid, or something. We are glad to see that their hearty friend, the *Sun*, counsels the well-dressed Cuban patriots, who now abound in this city, to go to the island and serve there at the bloody and uncomfortable front. We threw out hints of the same kind long ago, well knowing they would be unpalatable, because it must be admitted by every candid man that it is a vast deal pleasanter to meet the hated Spaniard in and about Union Square with your tailor on one flank, your washerwoman on the other, and Delmonico's in your rear, than to meet him on a hillside in the insurrectionary districts.

In the North German Federation, the rejection of the new taxes proposed by the Prussian Government, by an overwhelming majority of the Reichstag, is still the all-absorbing topic of the day. The hostile vote, made up as it was of members of all parties, forms the most stunning defeat the ruling powers have sustained since the inauguration of the new order of things in 1866. Both Count Bismarck and the Prussian Minister of Finance exhibited a singular weakness in their advocacy of the tax-measures. The speeches of the former were distinguished by a more than ordinary admixture of indiscretion and sophistry, so that even his usual "bluff-game," which seems to have grown into a regular habit with him, proved for once of no avail. His financial associate was fully convicted of indefiniteness, and vacillation of purpose, and general incompetency, by Herr Loewe, the leading speaker of the Opposition. In any other country making pretence to constitutional rule, a similar discomfiture of the Government would have resulted in a ministerial crisis. But, though rumors prevailed at Berlin for some days after the decisive vote of an impending change in the Ministry of Finance, there seems to be not the least probability of a deviation in the present case from the traditional practice of the Prussian monarchs, to cover their immediate advisers with the shield of their own irresponsibility. Count Bismarck, to be sure, in the course of the debate, made use of his habitual threat to resign in case the Reichstag refused to vote the new taxes. But, though defied by Herr Loewe to carry it out for once, there is as yet no indication of his immediate retirement from public life. Still, if we are to believe a correspondent of the *Herald*, who "interviewed" him after his defeat, the Count is so thoroughly disgusted with the unrelenting hostility of the Opposition elements in the Reichstag that he will certainly withdraw from the public service next fall, unless the North German law-makers become more pliant. We regard the freedom with which he seems to have unbosomed himself to the aforesaid correspondent as certainly an unpromising symptom of his state of mind.

Of even greater importance than the crisis in the North German Reichstag, is the result of the recent elections for the Lower Chamber of Bavaria. It furnishes unmistakable proof of the steady progress the cause of national unity is making in Southern Germany, notwithstanding the illiberal policy of the rulers of the Northern Federation, and the desperate efforts of the Ultramontane and radical democratic parties to foster the old popular prejudices against Prussia. The party in favor of political union with the North, it is true, did not achieve an absolute triumph; but its relative success was even more decided than that of the Opposition in France. Out of 154 deputies it elected 56, against 78 of the Ultramontane or reactionary party and 19 belonging to the faction in favor of maintaining the present unsatisfactory relations to the North. In the last Chamber the national party had hardly any voice. As in France, the cities and larger towns, almost without exception, voted largely against the reactionists and stand-still party, while the ignorant peasantry in the older provinces voted the other way. Even Munich, the most Catholic city in Germany, and until recently a stronghold of Ultramontanism, returned progressive members from every district. The result of the Bavarian elections, in which party lines were more distinctly drawn than ever before, will go far towards hastening the inevitable political unification of Germany.

The excitement in England over the Irish Church Bill is intense, and has been brought to white heat by the appearance of resistance on the part of the Lords. Under the influence of this, the Orangemen of the North of Ireland have been holding large meetings, the numbers of which the reporters have probably magnified twofold, at which the measure and its supporters were furiously denounced. The Tory Lords seem to have been very brave at the outset, and the extreme Radicals had begun to rub their hands with glee over the prospect of seeing "the last hereditary chamber in Europe" rushing into the jaws of destruction. The moderate men of both parties, however, seem to have been perfectly aware of the nature of the crisis; and the *Times* has been awfully warning the Upper House day after day of the folly and danger of even talking of resistance. At the latest dates, wiser counsels seem to prevail, and the bill will be read a second time and then amended, so as to take the sting out of it, if possible—that is, save as much property as possible for the Church. This is the course which finds favor with the Archbishop of Canterbury, and probably with the rest of the bishops, who on this subject find themselves in an exceedingly delicate position. They are hardly strong enough to offer to bear the burdens of the Irish Church, and yet, if they vote for its disestablishment, they expose the flank of the English Church establishment to the enemy. They have on their side, however, as indeed the Irish Church has too, the thorough sympathy which every Englishman feels with a man who has a good thing, and does not want to give it up. There is probably no Englishman who does not frankly acknowledge, either to himself or to his wife, that if he were Archbishop of Canterbury or of Armagh, he would support the connection of church and state, and the sanctity and perpetuity of ecclesiastical endowments, as long as there was a breath in his body. This ability to put one's self in the place of well-to-do persons, and "fancy their feelings," is perhaps the most powerful support the established order of things possesses in England.

THE MANUFACTURE OF "ISSUES."

If there be anything which the political experience of the United States has taught clearly, it is that political parties are produced by the spread amongst large bodies of the people of certain ideas capable of being clothed in legislation; that the spread of ideas capable of furnishing vitality to a party is generally slow, and the result of great labor and of a combination of favoring circumstances; and that, once they have spread sufficiently, the party comes into existence of itself, just as naturally as the corn sprouts after the seed is sown; and that, after the party is formed, it is impossible to use it in the service of any idea except the one which created it; and that, when this idea has triumphed, the party dissolves into its primitive elements and another springs up to take its place. One would naturally suppose that all this was perfectly familiar to every student of political history, and particularly of the political history of this country, and yet it sometimes seems as if even old politicians were quite unconscious of it. There is hardly one of them who is not, at some time or other in his career, seized with a crazy notion that he can make a party himself with a little help from a few friends, if he can only get hold of a good popular "issue" and get it adopted by some caucus of his moulding. Every party which has existed in this country, and made even a respectable show at the polls—Federal, Democratic, Whig, Know-Nothing, and Republican—has been based on a powerful idea, which had grown up gradually in the popular brain, under pressure of external circumstances, or had been bequeathed to it by former generations; but it would have been as impossible to say where or when it originated as to say whence comes the wind or whither it goes. The rise and progress of ideas is, in short, one of the historian's greatest puzzles, and will always remain so. But among the curious episodes in the history of all these parties have been the attempts of knots of politicians either to engraft something of their own invention on the party policy, or else to prolong the existence of the party after it had done its work by some bitters or other stimulant of their own concoction, or else to tempt it to turn aside from its appointed path by stories of hidden treasure in distant mountains. The usual result of these attempts has either been ridiculous failure from the outset—like Messrs. Johnson and Seward's Philadelphia Convention in 1865—or the production of a comical little puppet like the Bell and Everett movement of 1860, or the Butler repudiation movement in 1867.

It seems not at all unlikely that we shall witness something of the same kind during the coming fall. It is casting no extraordinary discredit on the Republican party to say that ever since 1865 it has been losing its hold on the popular affection. It had a very difficult work to do in reconstruction, and one for which the experience of the war had hardly fitted its leaders, and which, from its very nature, was sure to damage the reputation of any party which undertook it. It was enabled to carry it out successfully solely owing to Andrew Johnson's folly and the South's obstinacy and stupidity. How deeply the leaders felt the importance of Johnson's folly to the party was well shown by the frantic efforts made by them and by the party papers to magnify his "crimes" and the gravity of the impeachment trial. In addition to this, the party has had the spending for eight years of enormous sums of money, and has been forced to collect and disburse it without any adequate administrative machinery. The consequence, and the inevitable consequence, has been not only that the party has had to shoulder the responsibility of great abuses, but has had to witness the accession to its ranks of a prodigious number of knaves and adventurers, and to bear the burden of their "loyalty" and "soundness" while entirely unable to put a stop to their plundering and peculating. Some allowance, too, in investigating the causes of the decline of the party in popular estimation must, of course, be made for the weariness of any party which has been long in power which inevitably comes over the public before many years. Many people forget the misdeeds of the Opposition, are constantly fretted by the faults of the Administration, and gradually work themselves first into a belief that any change would be for the better, and then into a determination to have a change of some kind at any cost.

The party was, therefore, in a somewhat sorry plight at the approach of the Presidential election; and if it had made up its mind to discard Grant, and Democrats had made up their minds to take Chase, there is, we believe, little doubt in the minds of careful observers that it would have gone to pieces. Here the folly of the Opposition, combined with the energetic action of the sensible men at the Chicago Convention, postponed the evil day. As it was, Grant may be said to have achieved a respectable victory only by the peculiarities of the elective machinery. Had he been dependent on a direct popular vote, he would have barely escaped defeat. The history of his administration thus far has certainly not been of a character to give the party a new hold on the popular confidence. Indeed, its warmest friends have been forced almost from the first to act on the defensive—to devote themselves, in fact, mainly to the work of proving, not that it has established new claims to popular gratitude, but that it has done nothing to earn popular distrust.

It is not at all surprising, therefore, that the hack politicians, whose presence in its ranks and use of its machinery for their own ends have brought so much discredit on it, should once more begin to feel anxious, and cast about for some means of rekindling the popular enthusiasm in its behalf or procuring a renewal of its lease of power. What is wonderful is that they—not being by any means, in the ordinary sense of the word, fools—should fancy that they can, by holding a meeting and raising a banner, get people to follow them wherever they choose to lead; and what is most wonderful of all is that it is Pennsylvania politicians who should put themselves in the forefront of the new movement. We suppose there is no body of persons so profoundly distrusted by all that is best in the Republican party, or who would find it more difficult to get people to adopt any policy which was likely to give them more money to spend or places to fill.

THE SOCIAL FUTURE AS FORESHADOWED BY THE FRENCH ELECTIONS.

Probably few political events of the last forty years have taken people more completely by surprise than the result of the late elections in France, and it furnishes one more illustration of the difficulty o judging of the exact force and direction of political and social tendencies in a country in which neither the press nor the platform is free. There were several reasons, apparently very good, for believing that moderate liberalism had been making good progress ever since the *coup d'état*, and that it had at last been accepted by Frenchmen of all classes as the only road to salvation. One was the character of the handful of Opposition deputies. They were, except M. Thiers, all radical enough, but they were not socialists, and were reformers of the experimental school—ready to take what they could get, and wait patiently for more, and trust to discussion to secure it. They accepted the Empire as a disagreeable fact—but an accomplished fact, to be made the best of, at least for the present, lest a worse thing should follow any violent attempt to get rid of it. Acting on this plan, they appeared to be successful not simply in keeping up a fair show of healthy political life in France, but in winning the masses into adhesion to their plan of operations. They were returned in 1857, and again in 1863, without opposition and with reinforcements, and apparently with cordial approval, and there was no doubt that they were politicians of whom any country might be proud. Their parliamentary tactics had been as skilful and effective as the constitution they fought under would permit; and finer displays of parliamentary eloquence than Favre and Simon—to say nothing of Thiers, who is on some points a conservative of a worn-out type—have afforded, the annals of no parliamentary body can supply. Though last, not least, they have extracted concessions from the Cæsarists which, though not very great in themselves, seen from any country really free, were truly wonderful considering the nature and origin of the government with which they had to contend. Nevertheless, it turns out now that, in spite of their ten years of labor, the democracy is utterly disgusted with them, and will no more of them. Many of them have been defeated by men never heard of in politics till yesterday, and others have only escaped defeat by a hairbreadth. Nothing can better illustrate the state of popular feeling towards them than the fact that Jules Favre, the glory of the French bar, and who to his forensic fame has added

that of being one of the most patriotic, intrepid, astute, and untiring friends the cause of free government has ever had, has had to fight for his life with Rochefort of the *Lanterne*, a smart Bohemian, who came to the surface a year ago, and whose whole political stock-in-trade consists in his ability to express intense hatred of the government in stinging and epigrammatic personalities. In short, it appears that the radical democracy out-of-doors, so far from being satisfied with the tactics of the Opposition, is disgusted with them for having been, to use M. de Mazade's language, "too moderate, too parliamentary; for not having entered the Corps Législatif in the spirit of conquerors, and put everything to sack and pillage from the first moment."

One other reason for believing that moderate liberalism was in the ascendant in France was the eagerness with which the more intelligent French workmen have, during the last twenty years, turned towards co-operation as the best solution of the labor problem. The spread of the co-operative movement has, in fact, been during all that period the most marked feature of French industrial life; and though the result as compared with the size of the class it was intended to benefit was but trifling, it was great enough to warrant the belief that faith in socialism, as a remedy for existing social ills, was either dead or was confined to the lowest and most ignorant grades of French workmen. Great efforts, too, have of late years been made both by the Government and the educated classes of society to diffuse economical instruction, by means of lectures and pamphlets. Lecturers of ability have been for some time past sent through the provinces to discuss the various social problems of the day from the politico-economical point of view, and the discourses have been generally well attended by the very class they sought to reach.

Lastly, it was believed that the iron-handed restrictiveness of the Empire, its enormous cost, and the terrible mistakes it has committed during the last seven years—mistakes which, in spite of the size of its armaments, have brought far greater humiliations on France than the much-abused peace policy of Louis Philippe in its very worst days—and the growing perception of the uncertainty, and therefore insecurity, of all personal governments, coupled with the failure of the "social and democratic republic," were all telling in favor of the constitutional system, as it is now generally called—that is, of government based upon popular representation, freedom of speech, popular education, free competition in trade and industry, and complete popular control of the national policy at home and abroad.

The elections have made it quite clear that all these beliefs have been mistaken; that all the gains made amongst the French voters during the last ten years have been made by the party which aims not at political reform but at some kind of social reform involving a distribution of property by other than the existing machinery. The radical democracy in France evidently does not care for the victories such men as Prévost-Paradol and Jules Favre sought to win. They do not attach much importance to parliamentary government, or free speech, or ministerial responsibility, unless they are accompanied by an arrangement by which the results of labor shall be diffused through the community in artificial channels, created and kept in order by legislation, and not through channels created by individual freedom or differences in individual intelligence. This is really the kernel of the labor question as French workingmen understand it, and there would seem to be little doubt that they look at it as the working-classes in most countries are coming to look at it, and are seeking to deal with it as the working-classes in all countries in which the suffrage is universal will eventually seek to deal with it. Even if France did not play the prominent part in the world she does play, the fact that, in spite of the great decline in her political influence since 1848, the remarkable intelligence of her workingmen makes her still a social propagandist of the first order, gives the late election an importance for foreigners which its mere influence on the Napoleonic dynasty could never give it. It indicates pretty clearly what many calm observers have long believed, that the principle of universal suffrage in countries largely manufacturing—that is, in which the great centres of population are filled by operatives, living by wages, and amongst whom most of the political activity of the community is sure to be found—will be followed by a movement which neither governmental coercion nor capitalist argumentation will be able to defeat, though it may retard it, towards the trial of experiments having for their object to secure to the laborer by law the things he now seeks to obtain by strikes—that is, no matter by what name it may be called, a legislative division of profits between labor and capital. The Frenchman wants the government to employ him at higher wages than he can wring from the capitalist; the American wants the hours of work cut down, without any reduction of wages; and the Englishman wants legal support for the ordinances of the trades unions; but all in reality seek the same thing in the end. They want a new social order, in which men shall not only be equal before the law, but shall be nearly equal in their style of living and means of enjoyment; and for the idol of the seventeenth century, for political liberty as the Sidneys and Russells and Hampdens understood it, and as the Thiers and Prévost-Paradols now understand it, they care little or nothing; in fact, they treat it as a capitalist toy with which they are not going to be amused any longer.

It seems very doubtful, too, whether any amount of talk or teaching of doctrine will have any immediate effect in counteracting this movement. One of the misfortunes connected with "culture" as an enlightening agency is that to acquire it as it has to be acquired now in every country, a man has to have more or less accumulated capital at his back—which is another way of saying that ninety-nine out of every hundred men of cultivation belong to, or are connected with, the capitalist class; and it is this class which has, like all other sciences, built up the science of political economy; and political economy is therefore suspected by the working-classes everywhere of being an ingenious device of the well-to-do people to provide for the justification and perpetuation of their usurpation and tyranny. Consequently its teachings have produced almost no effect on the class into whose hands the political power of the civilized world is now passing, and they reply coldly to sermons about the relations of wages and capital, and the importance of free competition, by announcements that they have heard enough of these theories; that they are now going to try others of their own, under which poverty will be treated as an evil wholly artificial and therefore unnecessary.

It is safe to say, therefore, that we have entered on a transition period, of which the "disturbance," as it is called, in the relations of labor and capital which we witness all over the world only marks the opening, and which will hardly end without producing profound social and political convulsions. How or when it will end will depend altogether on the vigor, the courage, and the power with which the work of teaching and discussion is done by those who are now in possession of the higher kinds of knowledge. If workingmen are going to govern the world, either they, or their children, or persons drawn from their own ranks, and in whom they have confidence, must be enabled to get access to the higher instruction in vastly greater numbers than at present. The "poor scholar" must have again opened to him the course which was opened to him in the Middle Ages, but which the modern world denies him. A world governed by such lights as now figure on the platforms of labor conventions would be a world in which it is safe to say civilization of a high order could not last long, and in which the higher ends of human existence could only be very slenderly attained. For civilization is the result of culture, and high culture; and it is based on the old and impregnable truth that reason ought to rule; and the better trained it is, the better it rules. The most pitiful spectacle of the modern world is the attempt so often witnessed of the radical reformers to persuade us that this is a mistake, and that, no matter how near the brute a human being may be as regards the condition of his mind, he is just as well fitted to deal with the most intricate problems of sociology as is the most patient student or investigator.

RAILROADS IN THE LEGISLATURES.

One of the last acts of the Legislature of Illinois, which adjourned a short time since, was the passage of a law by which an enormous railroad debt was assumed by the State without any other reason than the one, very good as far as the corporations were concerned, that their credit would be improved by it. There seems to be little doubt that

the nature of the bill was understood clearly; a warning voice was lifted up here and there, as that of the Chicago *Tribune*, for example, but the public, the great tax-paying public, remained apathetic, and the bill passed easily. So, too, in the Legislature of this State, the Erie bill went through a week or two since without opposition enough to have the slightest effect, even on the Governor. And now, in the last days of the Massachusetts General Court, it is understood that one of the most gigantic of "railroad combination" schemes—a scheme which gives two millions to one half-built road, three millions to another not even half-built, and to the rest no one precisely knows how much—that this scheme is going to be hustled through; and yet, though these facts are a matter of general notoriety, the tax-payers of the State are far more interested in the preparations for the Peace Jubilee than in this. The other day, one of the prominent railroad men of Massachusetts testified that he had presented a certain legislator with $10,000 as hush-money; the fact was published, but it attracted no more attention than the weather reports of the day.

Let us mention another fact connected with the same railroad which this financier represents. The Boston, Hartford, and Erie Railroad borrowed three millions of the State two years since, and then commissioners of great respectability were appointed by the Governor and Council to superintend the issue of the loan, and to protect the interest of the commonwealth. The railroad, not satisfied with the amount of money thus loaned, comes now for two millions more, and the bill is referred to the Railroad Committee; this committee summons before it the financier to whose legislative liberality we have already alluded, hears what he has to say, and without another scintilla of evidence before it, without summoning either the State Commissioners or any one except this same person, reports a bill which gives five millions instead of three, and abolishes the commission. This is one of the measures which is to pass on the last day of the session. Speeches of fifteen minutes will be allowed. Nay, the public cares so little about the matter that a committee of this very Legislature has just had the audacity to announce that after a careful investigation it has reached the conclusion that there is no such thing in the State as a corrupt influence on the part of the railroads. This amazing report the respectable papers of Boston endorse, and the only prominent journal in Massachusetts which does not follow their lead, the *Springfield Republican*, reaps its reward in accusations that itself is corrupt.

The curious part of all this is that apathy of the public, and especially that poorer part of the public upon whom taxation falls especially hard. That the inhabitants of large cities, most of them either paupers or people of sufficient wealth to make taxation of little consequence, should be indifferent to proceedings which increase by a few millions the annual levies, is perhaps not surprising; but that the agricultural population, the farmers—all of them of moderate means, and cruelly suffering at the hands of any corporation which increases taxation—should meekly permit this sort of imposition to continue, is one of the most singular facts in the record of human inconsistency. If in any of the States from which we have drawn our illustrations a proposal is brought forward to increase the salaries of public officers, as, for instance, those of the judges, the farming population make such an outcry that the attempt has to be abandoned, although all the intelligence of the cities is in its favor. But the most gigantic legislative operations of railroads fail to attract any save an amused attention on the part of this same class.

That this is not necessarily so; that public interest may be aroused to protect itself against the encroachments of corporations, any one may convince himself by turning back the leaves of the history of America forty years to the period of Jackson's administration and the contest over the Bank of the United States. In the light of the general recklessness of to-day, it is refreshing to find that there was a time when a great party made the corrupt influence of corporations the text of some of their best political homilies. All connection of money-making companies with the Government, all superintendence of them by the Government, was denounced by the Democratic party of those days as necessarily leading to corruption in high places and a general demoralization of the public. Once admit the principle of governmental interference in affairs of this nature, and all the safeguards of liberty were gone. Pictures were drawn of consequences which may be recognized as the actual condition of to-day. There were to be agents—and we have lobbies; there was to be bribery—and we have log-rolling; there was to be unlimited speculation—and we have very little else. Not that we mean to say that these are the consequences of a too lax adherence to the *laissez-faire* theory; but that, whatever the causes are, the facts are patent; and that these very facts, which are now treated by the general public of both parties as of so little interest, are the same facts the apprehension of which forty years since filled half the community with such dread. It may indeed be said that the community which so dreaded the advent of the Fiskes and Lanes and Eldridges was the Democratic party, while now the same organization cares even less about it than its great rival, and if the old foes of governmental interference give up their quarrel, no one else need trouble himself. But we imagine that this line of reasoning about party responsibilities would lead us into a career which might be very easy for the party leaders, but would be terribly unpleasant in the long run for the rank-and-file.

It is inevitable, in fact, that the corruption which is at present so rife should be fastened by common consent upon the party in power. It makes no difference that they can show by instances here and there that the others would be just as bad if they had the reins in their hands. The mass of voters reason, not by facts of inference, but by those of observation; and every new railroad bill which passes a State Legislature is, by those who care anything about it, quietly credited to the account not of the native human tendency to vice, but to the villanous disposition of the dominant party. It is idle to say that this ought not to be so. It is so; and whenever it is not so, one of the surest checks against bad government is removed. The voter may not be able, from a careful study of history, to detect which party is most likely in the long run to protect best the interests which he has at heart; but he can discover without much difficulty that the party in power is or is not doing things which he knows to be iniquitous; and by this discovery he guides his action. Why is it that the Republican party, whose history for ten years has been a perpetual succession of triumphs over all its adversaries, should be as regards popular strength in no better a position to-day than that it occupied when Lincoln was first elected? Without the slightest hesitation, every one admits the reason to be that the corruption which it permits and appears to encourage is in the mind of the intending voter almost as much identified with its general policy as are the enfranchisement of the negro or the payment of the debt. And the intending voter reflects that although he may not bring a better party into power, he can at least do his utmost to turn this one out.

FRANCE.

NAPOLEON III. AND THE SOCIALISTS.

PARIS, May 29, 1869.

SINCE the foundation of the Empire, nothing so grave has occurred in France as these present elections. But it would be to misunderstand their gravity if we were only to attach political importance to them. Here, in Europe, the further advanced any nation is towards the future, the less political it is. In the two leading countries, England and France, pure politics are being left behind, and the problems with which men's minds are busy are social and moral ones. What men are to believe; what is to be their incentive to labor, what their reward for toil; how they are to live in communities where the soil is inadequate to the population; how they are to marry; how they are to be taught; what is to be their relationship to their "neighbor;" what is to constitute capital or fortune, or to regulate wealth—these, and a long list of others of the same kind, are the questions which really occupy the minds of the "million," both in England and in France, and far more as yet in France than in England. The problems of the present hour are social, economical, and moral problems; and this the Emperor Napoleon III. knows, or guesses, perhaps, better than most of the people around him. But here you hit upon one of his greatest difficulties. If you take the trouble to read through the "Idées Napoléoniennes," you will soon perceive that the subjects on which the operative classes throughout Europe are busy are those with which the Prisoner of Ham is most familiar; but if, in the course of these studies, you keep before your eyes, as a rule, the old political tone of the European nations, you will also

come to understand that the pure politicians should exclaim, "Why, sure this man is mad!" I say again, here is the difficulty—and a most tremendous one it is. The Emperor and those who surround him, and the masses of what are termed "the country," are playing at cross-purposes. They do not speak the same language or mean the same things.

A large number of educated men (that is, men who have absorbed a given amount of knowledge of various descriptions) are convinced that the Empire is threatened because the Emperor has not granted a sufficiently large sum of political liberty. They are persuaded that things would go better if they—the "educated men"—had a freer chance of attaining to power; if speech and pen might express thought unhindered; and if the policy of France were clearer, nobler, better defined. These men feel the supremest contempt for the so-called social questions, and will not even condescend to examine them. From *this* point of view, let it be noted that the men who serve the Empire and they who oppose it do, in fact, hold almost identical opinions; and if you were to examine closely M. Rouher and M. Thiers, M. Duruy and M. Favre, you would be astonished to find that *personal* discussions alone divide them—the question of this or that dynasty or of this or that mode of understanding "ministerial responsibility," etc. But if from these men you turn to the genuinely "modern" ones—to Jules Simon, Laurent Pichat, Raspail, and a few more of that sort—then you will see at once where the true divisions lie, and where are the incompatibilities. The absolute incompatibility exists between the *politician* and the *socialist*—nowhere else; and I use the word "socialist" merely as designating the man who believes the social problems are to take precedence now of political ones. A circumstance might occur which should bring into sincere community of action the politicians of the Empire and those of the last two Bourbon monarchies: from M. Guizot and M. Thiers down to M. Forcade la Roquette, all accept certain primordial creeds, and *all* join together in the *same*—the *exact same*—horror of the man of socialistic ideas—the man who has gradually grown out of the modifications of the last twenty years and been influenced by railroads and telegraphs and all the other innovations of modern science. This man is, when energetic, set down as a criminal—as the worst of all criminals; when harmless, regarded as a dreamer or as moonstruck. Now, *this* man it is—the man for whom socialist questions supersede politics—who has shown himself so unexpectedly strong during the recent elections.

The battle has begun already around the chief of the state, and the one thing for which the *entourage* of all shades is fighting is the maintenance of the *status quo*. The Empress and M. Rouher, and M. Forcade and M. de Lavalette and Marshal Niel, *all* understand what danger it is that threatens; for all have been, at some time or other, taken aback, not to say scandalized, by strange words uttered by Napoleon III., indicating that the writer of the "Idées Napoléoniennes" was not altogether extinct in the Cæsar of the Tuileries. What *all* are just now praying for alike is, that "nothing may be done," nothing touched, nothing altered. For the moment the Emperor listens silently, and seems to be impressed. But the man of the "Idées Napoléoniennes" is more than ever there, and in his sudden reassertion of himself at a given moment lies the danger more dreaded than any other by the Emperor's surroundings. Prince Napoleon sees his imperial cousin perpetually, and his advice is in favor of the largest possible amount of liberties; but Prince Napoleon, though one of the most intelligent men in Europe, is less *avancé* far than Napoleon III. if once he is impelled into the full current of his social and moral theories.

What may happen within the next six months no one can surely foretell; but it would be wise to be prepared for almost anything. Although the Emperor does not proclaim his "dreams" habitually to the world, still it is worth while to read in *Le Peuple* the very day after the elections the curious article by M. Clément Duvernois (a new-made deputy), in which he says: "France cares not one straw for self-government; the reforms she needs can only come to her from a stronger and more concentrated *personal rule*—the Emperor must take to himself *more* authority instead of taking less." M. Clément Duvernois is a man whom the Emperor called to himself some months ago, and by whom he caused the new journal *Le Peuple* to be founded, putting him at the head of it. M. Duvernois has been made a deputy by the Emperor's own personal initiative. It is probable that for some months nothing will be done, and that no change will take place before the autumn; it is even a matter for doubt whether or not the short June session for the *vérification des pouvoirs* will be held. The man who is looked upon as a future minister is Émile Ollivier, unless Prince Napoleon were to accept M. Rouher's position, M. Ollivier being merely Minister of the Interior.

One thing, I fancy, may be regarded as certain, and that is, that all notion of war is at an end. Last year, a war, according to old traditionary practice, might have served to divert the so-called "revolutionary" current. This year, and after *these* elections, it is too late. There is no sense in a war; it would have no meaning; it does not apply. But this again increases the Emperor's difficulties; for, if the old traditional remedies are no longer applicable, *what is to be done?* "Leave things alone," as Lord Melbourne used to say? The time has gone by for that too. In the way of "*doing*" anything, all is dangerous; for new ideas must be worked by new men. As I said before, neither Prince Napoleon nor Émile Ollivier is as *avancé*, socialistically speaking, as Napoleon III. himself; but the Emperor is sixty-two, and far older than his years, and resolution was never a characteristic of his speculative nature. He is wedded to his dreams, but willing enough not to realize them. However, the moment is a critical one, and nothing that the Emperor may suddenly do ought to surprise any one.

Correspondence.

ANGRY LETTER FROM "A SO-CALLED 'JEW.'"

TO THE EDITOR OF THE NATION:

SIR: In the last number of your paper I see a paragraph touching the conversion of Jews to Christianity which appears to have been written a little hastily, and without that full information which you generally seem to possess. You infer a connection between the internal dissensions of the Jews and the prospects of converting them, and you speak of educated Jews coming over to Christianity. Did you ever see an educated Jew who came over to Christianity, or did you ever hear of one? Nominal conversions frequently took place in Germany prior to 1848, for the purpose of escaping oppressive civil disability laws, which, in Prussia, for instance, forbade a Jew from being a college professor, and in Austria even went so far as to limit the number of Jewish families, so that a Jew could not obtain a marriage license until some other *paterfamilias* of that faith made way for him by dying. Now, what inducements has an educated Jew to stultify himself in this country? An educated Jew is pretty much the same kind of being as an educated Christian, and, in seven cases out of ten, is, in matter of religion, a nihilist or materialist, and believes, or disbelieves, in company with Huxley, Büchner, Spencer, or some equally rationalistic philosopher. According to a late assertion of Mr. W. E. Dodge, young American merchants, in selecting the sect with which to affiliate, are mainly influenced by business considerations; such an assertion, coming from a pillar in Israel, is a luminous commentary on the piety of our times.

Now, as to the differences of opinion which prevail among the Jews themselves, it is to be noted that the rationalists or materialists, of whom I have just spoken, hold themselves aloof altogether from the dispute, counting both orthodox and reformers as equally ridiculous and antiquated, and, if required to "give tongue" to their sentiments, would probably say, "A plague o' both the houses." The remaining educated men are animated by a vague, romantic, sentimental, feminine kind of aspiration for a universal brotherhood, and are fit consorts for enthusiasts of the pattern of Mr. Frothingham, while they also furnish the wood of which ardent Freemasons and Odd-Fellows are made. These people are at work refining the religion, whittling away the material surroundings to get at the soul of it, which they confidently expect will turn up sooner or later; and as they wield much flaming rhetoric and are amply provided with the *simulacra* of erudition, they have a large following of good and virtuous and comfortable citizens, who desire above all things to be abreast with the times and in full enjoyment of the modern improvements.

There remains the orthodox party, who, like most conservatives, are guided less by reason than by a healthy instinct, and have enough sagacity to perceive that their only safety consists in standing in the old ways and refusing to budge. They believe that if you allow profane hands to be laid on the most insignificant portion of the edifice, the whole sacred structure is in danger, which is perhaps more true than important.

But if any one supposes that the Christian religion can hope to derive any accessions from these squabbles, he is on the wrong trail. The argument turns on questions of ritual exclusively, and not at all on questions of doctrine; and even if it did, the only cause which could profit would be the cause of intellectual liberty. Yours, hopefully,

A SO-CALLED "JEW."

NEW YORK, June 11, 1869.

[What we said was, "There is a perceptible *débâcle* in the Jewish body,

prosperity and freedom everywhere loosening the bonds of the old faith, just as persecution tightened them; but educated Jews who come over to Christianity come over quietly and of their own accord, and dislike notorious conversions or being paraded in public by a missionary as a trophy." What a "so-called Jew" says is, that there is a perceptible *débâcle* in the Jewish body, but that no educated Jews come over in consequence of it to Christianity, either secretly or openly, except for motives of a temporal nature. His assertion, therefore, does not traverse ours, and it is difficult to see where we have betrayed a lack of "full information" on this point, though it is quite possible that we do suffer from it. What we affirm is, that some educated, or at all events wealthy, Jews do come over to Christianity—we know of such cases—*for some reason or other;* that their disposition to come over is increased by the *débâcle* above-mentioned; and that they dislike to be and are not brought over by missionaries; but touching the reality of their conversion we have nothing to say, and do not profess to know anything. A "so-called Jew," by-the-by, ought to have given chapter and verse for the statement he puts into the mouth of Mr. W. E. Dodge, the accuracy of which we take the liberty of doubting. —Ed. Nation.]

Notes.

LITERARY.

Messrs. Little, Brown & Co., of Boston, announce a law-book whose title promises a work of which the non-professional student may wish to hear. It is "A Treatise on the Constitutional Limitations which rest upon the Legislative Power of the States of the American Union;" its author is Judge T. M. Cooley, of the Supreme Court of Michigan.——Messrs. Hurd & Houghton announce Mrs. Mary P. S. Cutts's "Life and Times of the Hon. Wm. Jarvis," her father.——Miss Evans's (Augusta J.) new story is to be called "Inez," and Mr. W. I. Pooley will be the publisher.——Oakley, Mason & Co. have just published a work which we omitted to announce; it is called "The Dance of Modern Society," by Mr. W. C. Wilkinson.——Mr. M. W. Dodd announces as ready immediately his republication of Mr. E. Paxton Hood's "Lamps, Pitchers, and Trumpets," which consists of lectures, illustrated by anecdotes, of every order of pulpit eloquence. A "Juvenile" fit for some older readers is also announced by the same publisher—a book for the season—"Uncle John's Flower-Gatherers," by Jane Gay Fuller.

—Mr. E. Steiger is publishing at 22 Frankfort Street a "Monthly Record of German Literature," in the interest of buyers and readers, with classified price-lists of recent German publications, announcements, book reviews, literary notes, personal items, etc., etc. The first number, though not put forward as a perfect sample, is very readable, and indicates ability in the management. A main object with Mr. Steiger is to foster intellectual activity among the Germans in America—to build up, if possible, a respectable German-American literature, and at least to keep track of the literary productions of the Germans of the United States. It is a question how far this distinctive literature is desirable, and what chances it has of competing with the literature of the Fatherland. German newspapers we have, and perhaps shall always have; and they generally seem to flourish and to be edited well. In Ohio there are upwards of thirty German-and-English public schools; while in Indiana Mr. Steiger is happy to announce the passage of a law authorizing the employment of a German teacher in any school containing twenty-five children whose parents desire them to be instructed in German. Mr. Kapp's historical works are the best, and the best-known, works composed and published in German on this side of the water. His last—a "History of German Emigration to America," which involves the most diligent and laborious research—treats of the Germans in New York in the first volume (already published), and the second will account for the Germans in Pennsylvania and the States south as far as Florida. Mr. Steiger wishes to engage competent writers to complete this history in three divisions, to wit: for Texas; Missouri and the other trans-Mississippi States; Ohio, Indiana, Illinois, Michigan, and Wisconsin. Other German writers to be mentioned with respect are Carl Knortz, of Wisconsin, and Professor Fritschel, of Iowa—both of whom are preparing works on the North American Indians.

—For five hundred thousand dollars, Mr. E. Leurio, of this city, will sell a manuscript which he cannot afford to give away, and which is not dear at the price named if Mr. Leurio describes it accurately. It "discloses a beautiful and an unsuspected method in languages spoken and read by millions of our race. It manipulates the formations of the ancient Greek as things of yesterday; shows the mode of formation of the Latin, German, French, English, and other languages; and ushers in the day when it will be no longer necessary to teach a philology which cannot be thoroughly explained." The author says that in this manuscript "five thousand examples are taken indiscriminately from the Greek, Latin, German, French, and English languages, and their very formation rendered as perfectly plain and familiar as if we had made them ourselves." The circular from which we get this information further informs us that when the Philological Convention meets next month, this new method of Mr. Leurio's will be brought to its notice; by Mr. Leurio probably; if, indeed, that gentleman is allowed admission, which may safely be doubted; the modern bear-garden, the "free platform," will hardly find much favor with the linguists. We may say here that there is excellent prospect that the convention will be successful in every way. The 27th of July is the time of meeting, and, as our readers have been told, Poughkeepsie is the place. We hereby make an unconditional denial of the truth of an assertion of ours—made when we first spoke of the convention—to the effect that Poughkeepsie in summer is the hottest of all cities. On better information, we now state that it is really a cool place—as cool a place as any to be found on the Hudson between New York and Albany; that it abounds in shade-trees; that its site is some two hundred feet above the level of the river; that the country on the opposite side of the river gives the spectator a sense of coolness by reason of the forest with which it is covered; that the surrounding landscape is rolling; and that in every way the city and vicinage, while they would perhaps hardly tempt a tourist, are nevertheless most miraculously well suited for the convention's purposes. More than fifty leading professors and linguists have already announced their intention of attending the sessions, and Poughkeepsie holds herself in readiness to offer hospitality to a much greater number of guests. It is desirable for various reasons, we are told, that those gentlemen who think of being present should send their names either to the local committee—of which Mr. C. J. Buckingham, of Poughkeepsie, is chairman—or else to Professor George F. Comfort, of this city. And as in point of numbers, so in point of interest, the convention promises to be successful. The secretary says that papers enough have been prepared—and prepared by competent persons—to occupy fully all of the time of the sessions which is not taken up by the discussion of the selected questions. Everybody will hope that this first meeting may be the first of a great many. And we renew the expression of our hope that some, at least, of the papers read may be published, together with a good report of the discussions, which will be of particular interest to the American educational world. The Erie Railway Company, we are requested to say, will give free return-tickets over their road to all the delegates, and some other roads may be expected to do the same thing.

—While we are speaking of learned gatherings in pleasant places, it is proper to speak of Salem and the "American Association for the Advancement of Science." The ancient metropolis of "Old Essex" is not richer in historic associations than she is beautiful for situation and fair to look upon. The Cape Ann region of Massachusetts is not, to be sure, fit to live in throughout the whole year; a Salem winter and spring, and half of a Salem autumn, would teach any outsider why Salem "old family" people are of such extreme and perilous pride: to say nothing of generations, to be merely an old individual in such an atmosphere seems justifiable ground for thinking much of one's self. But in the month of August, when the very worst heats are over, and the very first cold affects only a small part of even the seaside days, the shores of Massachusetts Bay are much to be liked, as any of the scientific men may see who will try Rockport or Nahant or Manchester or Marblehead at the season when the sky and land and sea have joined forces to make the natives some partial atonement for the rest of the year. At that fortunate time, the innocent stranger may well be delighted; even *his* heart relents—that of the man who has ballasted his gig with boulders to prevent horse and all from being wafted off the "Gloshter" turnpike by what they call "regular spring weather;" and his who has known "slush" in an Ipswich winter; and his who has felt "pretty hard frost" in Wenham. The Salem people are preparing to entertain at their own houses many of the visitors, for the hotels are few and small; but boarding-houses are numerous enough, and the local committee, who are attending to the lodgings question, desire to know the names of all who intend being present. Of this committee Mr

Henry Wheatland is the chairman. The Permanent Secretary of the Association, Professor Joseph Lovering of Harvard, announces that complete sets of the "Proceedings" may be had of him in Cambridge, and that a volume of "Chicago Proceedings" will be ready in August. The eighteenth day of that month is the day when the session begins. A special circular from Mr. Edwin Bicknell informs us that in making arrangements for the meeting of the Association, the local committee, in order to give encouragement to the general and increasing interest in the use of the microscope, have decided to furnish rooms for the display and comparison of microscopes, objectives, accessory apparatus of all kinds, test objects, and objects of scientific and popular interest; and that it is intended to have as complete a collection as possible of instruments of both American and foreign manufacture. Those, then, who are possessed of microscope stands, objectives, or accessory apparatus in any way remarkable for excellence of performance or design, are requested to bring them to the meeting.

—The Boston Reform League, to whose inception and purposes we have already alluded, has got practically to work in a way already tried with success in the conflict with repudiation by the New England Loyal Publication Society, and, earlier still, by the Loyal Leagues of the chief cities. We refer to the broadsides, sent gratuitously to hundreds of newspapers all over the country, containing arguments and statistics in a readily quotable form, which editors may republish if they choose, and which at all events are likely to set them to thinking. The plan is not very different from that of the broadside compilations of our monthly magazines, except that in the case of the Reform League no credit is demanded for the extracts. They are both a species of editing made easy; but good politics can be much more surely formed in this way than good literature or literary culture. Persons wishing to receive the Reform League's publications regularly can do so by annual subscription.

—We are constantly coming upon illustrations of "how the thing is done" in the matter of getting "notices of the press;" usually we say nothing about them. "But," as the country journals are apt to say, "this last is too good to keep." It consists of a notice of *Appleton's Journal* by a Western paper which makes considerable pretensions, and, in fact, is not bad as papers go. First comes the notice, all according to rule:

"*Appleton's Journal* has now reached its eighth number, and can be judged understandingly. Victor Hugo's story, 'The Man Who Laughs,' has a rich historic flavor, and is satirical on the British monarchy and nobility of a century and a half ago. The articles on scientific subjects are well written, and level to the popular comprehension; some of them are entitled 'Air and Thought,' 'Hereditary Genius,' 'The Physical Basis of Life.' The 'Table Talk' is very fresh and entertaining. There is a series of 'Sketches of Early Life in Boston,' which shows the queer crotchets that afflicted the Puritans. A department called 'The Museum' contains much curious and antiquarian gossip. Every number of the *Journal* has either a cartoon (or panoramic wood engraving), a steel-plate, or an illustrated supplement; one of the cartoons is 'The Levee at New Orleans;' one of the steel-plates is 'Noon on the Sea-shore;' and one of the supplements is 'Coal Mines and Miners'—the engravings in the latter are too horrifying. The paper and typography are superb. Published weekly by D. Appleton & Co., New York, at $4 a year in advance, or ten cents a number."

Then in brackets follows this warning and reminder to the Harpers:

["This *Journal* omitted to exchange with us, after asking and receiving a favorable notice in our columns for its "specimen number," and we *know* that notice was marked and carefully mailed to them. Such has been our experience with the Harpers, in at least two instances; but the Appletons, unlike their overpraised rivals, have now made the *amende honorable* by sending us all the numbers of the *Journal*. It will make an elegant as well as instructive bound volume."]

Obviously a journal will not make "an elegant as well as instructive bound volume" if there are no copies on hand to be bound; and probably the Harpers may be of that opinion henceforth; we are very sorry that we have lost the paper's name, and thus lost the chance of watching its future reviews of the Harpers' books. But none of our readers need be at a loss for frequent examples of the sort of criticism exemplified by the words of criticism and confession we have quoted. The press teems with it, and a good number of our authors are utterly spoiled for real criticism, and resent it with a petulance that is childish, merely because they have been accustomed to laudation, partly deserved, but nevertheless wholly senseless as given. Worse than that, they have been partly spoiled for authorship. There are many Americans of real ability—some, we may say, of genius—who to-day are trying to do literary work that they are unfit for, and who are doing very badly the literary work for which they have marked fitness, merely because ever since they first ventured into print their own publisher at once entered into a conspiracy with the publishers of as many newspapers as he could get hold of to prevent the saying to them of any but smooth things. Our authors have had to be their own critics—a real misfortune; and we may see that most of our very good work has been done by men who were even fastidious, perhaps a little morbidly fastidious, in their literary likings and dislikings. Without this fastidiousness, the clever American writer has too often been ignorantly ambitious, hasty, careless, and has had thousands to help him to be slovenly, to pour out everything there might be in him instead of painfully selecting, to do any and every kind of work instead of rigidly confining himself to what he could do best. Who cannot think of a witty, satirical social observer and theorizer who needs must make two or three volumes of seventh or eighth-rate verses? of another observer of men and manners who must attempt also the creation of characters and the construction of plots? A thousand or two papers, however, told each of them, on the appearance of each new book, that it made "an elegant as well as instructive bound volume."

—Hitherto the Harvard Commencement has been held three weeks or a month after the Class Day of the graduating class, and we suppose we may be pardoned for saying that usually it has been at least as dull as the seniors' holiday has been gay and interesting. This year there is to be a change for the better. The "exercises in the church," instead of being dragged out to a wearisome length, will be comparatively short, and probably the speaking will be worth hearing. There will at any rate be less of it; for of all the essays and orations which the leading scholars of the senior class have prepared only eight are to be delivered, and an hour and a half, or an hour and three-quarters, will cover the whole time of delivery. Then, too, efforts will be made to make the Commencement dinner a somewhat livelier affair than it has been apt to be in former years. The executive committee of the Association of Harvard Alumni have in their hands the decision of the question whether or not there shall be a dinner; and they have decided that Mr. Eliot's having been elected president, and a career of enlarged usefulness having been just newly opened before the university, it will be as well not to wait till the Memorial Hall is ready, but to get together as many graduates as possible and celebrate the occasion. The 29th of June is to be the day; the Hon. William Gray is to preside; Attorney-General Hoar will be present, and may be expected to speak, and so may Mr. George Hillard and other men of mark.

—Lovers of humor who do not know the *San Francisco News-Letter and California Advertiser* have something of a surprise to come in making the acquaintance of the "Town Crier" of that extremely lively journal. One main quality of the humorist—a Rabelaisian audacity which stands abashed at but very few things indeed—the "Town Crier" possesses in fulness; if he is not the most impudent and most irreverential person on the Pacific Coast, then he must have the steady assistance of his most admired friends and acquaintances, for a newspaper page that exhibits less respect for constituted authority of whatever kind than his page parades is not printed in English, so far as we are aware, nor in any other language. What the clergymen of San Francisco think of him only they could tell; he is never more abandoned and seldom seems more cheerful—though he is very frequently more to be admired—than when he is addressing some clerical gentleman with impudence equal to that of a Parisian *gamin*. With the San Francisco editors he takes as great liberties as he allows himself in the case of the clergymen, and as for the members of the city government, from the policemen up, he is what municipal authorities this side of the Plains would consider scurrilously libellous. Exactly what is the standing of the *News-Letter* as a journal, we do not know; it looks very prosperous, however, and although it contains little of what is known as "editorial matter," it manifestly is edited not only with careful attention, but with much more than the usual intelligence. How, then, with these several evidences of "respectability," it can allow itself such license, is a question which somewhat puzzles the Eastern reader, and is unanswerable except by persons who know California better than we. It is not persons alone that are addressed with a hardihood apparently limited by no feelings of awe or respect, and even by no considerations of prudence, but also perfectly careless hands are laid on all institutions, social, political, or other, which may happen to attract the "Town Crier's" attention. Very often there is nothing to be said in his favor; he is frequently not bold merely but recklessly flippant and outrageously scurrilous, and anything but delicately decorous in his morality. He is much rather to be thought of as a personage to be looked at, and to be studied as a part of the Farthest West, than as a member of society to be praised. And perhaps, after all, he is more interesting as a

Californian social phenomenon than as a humorist, though, as it seems to us, a decided pleasure is certainly to be got from him in this latter capacity. We suppose a man is at all events a humorist—whether he is a great one or a small one, a success or a failure—when he produces things like this:

"The world makes few graver mistakes than in supposing a man must necessarily possess all the cardinal virtues because he has a big dog and some dirty children. We know a butcher on Kearny Street whose children are not merely dirty—they are fearfully and wonderfully besmirched by the hand of an artist. He has, in addition, a big dog with a tendency to dropsy, who flies at you across the street with such celerity that he outruns his bark by a full second, and you are warned of your danger only after his teeth are buried in your leg. And yet the owner of these children and father of this dog is no whit better, to all appearance, than a baker who has clean brats and a mild poodle. He is not even a good butcher; he hacks a spare-rib and lacerates a sirloin. He talks through his nose, which turns up to such an extent that the voice passes right over your head, and you have to get on a table to tell whether he is slandering his dead wife or swearing at yourself. If that man possessed a thousand young ones, exaltedly nasty, and dogs enough to make a sub-Atlantic cable of Bologna sausage, you would find it difficult to make us believe in him. In fact, we look upon the big-dog test of morality as a venerable mistake—natural but erroneous; and we regard dirty children as indispensable in no other sense than that they are universal."

It is coarse, and "it bears on hard" in places; and the exaggerated and grotesque are present in force sufficient to please the most British of students of "American humor, in which exaggeration is the principal ingredient;" but still the power of mental detachment and the intellectual playfulness which are chief characteristics of all humorists, are as truly visible, if they are not so manifest, in this chance-begotten "item" as in the masterpiece of Cervantes. And when there is such a sense of fun as this writer displays in his weekly work—from which we do not quote any more, as justice is not done him by brief quotation—it is not easy to believe that we might not also find a degree of that power of spiritual sympathy conjoined with intellectual playfulness which is at the bottom of the performances of the humorists most admired, and to whom the name of humorist should perhaps be preferably given. But however that may be, half a loaf is bread if it is not a whole loaf, and is satisfactory as food whatever we may say about its completeness and perfection; and we are persuaded that our anonymous Californian friend will at least be enjoyed by all lovers of the humorous who read what he writes, though perhaps there are not many even of such persons who will feel compelled to commend him except for his humor—unless, indeed, for his strong sense, when he chooses to exercise it; and his courage; and some of his good theory, which is better than some of his practice; and his apparent capacity for despising some things more "respectable" than really respected.

—A very old name has just reappeared in literature. George Palæolog, a descendant of the brother of the last Emperor of Constantinople, has published at St. Petersburg a book entitled "Notes on Contemporary Questions in Russia." It is well written, and will be appreciated by such political students as Mr. Grant Duff.

—In estimating the relative importance of the literary activity of the nineteenth century, stress has often been laid on the resuscitation of buried and unknown ancient literatures, as, for example, in Finland. But the creation of new literatures deserves no less remark. The modern Finnish and Serbian literatures, and the Russian literatures, are conspicuous examples. Did any one ever hear of a Georgian literature? In the time of Queen Tamar, the only sovereign before Alexander II. who ever succeeded in collecting all the peoples of the Caucasus under one rule, literature and art flourished at Tiflis. But that time was long ago, and the manuscripts that were spared by the Persian incursions have till very recently been secreted in the monasteries. Now, Georgian literature has taken a new start, and the works of one writer are widely known in all that country. This is Prince George Eristavi. Mirza Schaffy would, perhaps, occur to every one as a more prominent example, but Mirza Schaffy never existed except in the fertile brain of the gifted Bodenstedt. Prince Eristavi was born in 1811, and was taught to read and write by his mother, an educated woman—a rare thing in those parts. At ten years old he went to the Tiflis Gymnasium, and soon was seized with a passion for verse-writing. He was subsequently sent to school at Moscow; afterwards, being implicated in the conspiracy of the Georgian princes, he was sent to Poland, where he studied Polish, learned Mickiewicz by heart, and even wrote a poem, "The Maniac," in Polish, which had a great success, and was circulated everywhere in manuscript. Some years after he returned to Georgia, and wrote the first Georgian comedy, "The Decision," which was represented at the Tiflis Gymnasium by amateurs in 1850. It was received with a fury of enthusiasm, its expressions passed into proverbs, and many Georgians even now know it by heart from beginning to end. Eristavi then set about founding a national theatre—"a thing not witnessed since the time of Noah," as Count Sollogul says. He had, however, some difficulty, as few of his actors could read, and as he had to write all the pieces himself. He wrote more than thirty plays—comedies, dramas, and vaudevilles—some of them of excellence, as well as a comedy in Russian, which was acted at Tiflis. Among his poetic works the best are his satires, the translations from Mickiewicz, and "The Wanderer." He also founded the first Georgian journal, the *Dawn*, which he edited from 1852 to 1854. It still exists. Eristavi himself died in 1864. His example has been followed by others, and the Georgian theatre is now an institution at Tiflis.

—Concerning Vámbéry, who for years has been busily employing his pen warning the English against the dangers to their Asiatic possessions arising from the advance of the Russians in Central Asia, we have received the following—from what we should call a Philo-Russian source:

"It seems as if Vámbéry's travels would have to be classed with the African adventures of Le Vaillant, as a work either wholly or in great part of fiction. The Royal Geographical Society of London, which at first patronized Vámbéry, now says that too much confidence must not be placed on what he says. The Berlin geographers go further, and say that there is nothing in his books which has not been taken from others or else invented. It is said that the best motto for his book is his own words: 'I got out of the affair only by my coolness—I mean my effrontery—and the suppleness of my tongue.' Vámbéry is not even the Hungarian he pretends to be, but a Jew, whose real name is Bambarius. Russian embassies, with such geographers as Galkin and Khanikoff in their train, have been at Khiva and Bokhara previous to Vámbéry's journey, and have given many valuable details on those countries. Khanikoff especially, to whom Vámbéry does not allude, even gave plans of the cities of Bokhara and Samarkand. Since the capture of Samarkand by the Russians, there have been several detailed descriptions of that city, written by travellers, which contradict Vámbéry in nearly every respect. He confuses the palace and citadel; he describes the 'green stone' of Timour in a loose way—asserting that he saw it; Gen. Kaufmann says that it is not green at all, but that it is covered by an ornamental slab of marble placed there by a succeeding caliph; and Kostenke, writing from Tashkend, denies other parts of the description of the hall. The details about the Koran written by Osman, the third—and not the second—caliph, are also incorrect. It is kept in a different place, and is written on rice-paper. The interview of Vámbéry with the Emir is also probably imaginary. All Mussulmans are obliged to fall on the ground before him, and not even to look him in the face. The reception of the Russian ambassadors in 1866 was equally humiliating; and then the Emir only came and looked through a window, as strangers were not allowed to enter the same room with him. In general, Vámbéry has greatly exaggerated the difficulties of travelling in Central Asia. Russian merchants, speaking Tartar incorrectly and known to be foreigners, have travelled freely everywhere with moderate precautions, and say that robbery and violence on the roads are things unknown. Khludoff even in 1866 was in Kokand, which was then more dangerous than Samarkand; and Medyntzeff went there alone twice in 1867. Vámbéry's book is full of the clanking of the chains of the captives among the Turkomans; but the Turkoman tribes are well known by the Russian officers and geographers to have no iron and very little wood; if chains were used for the captives, they were probably leather thongs or cords of twisted wool. It, however, must be admitted that Vámbéry has very well got up his subject, and that he can talk intelligently on Central Asiatic affairs. His knowledge and his skill are, however, now chiefly used in endeavors to stir up a strife between Russia and England."

Before adopting as our own this opinion of the merits of Vámbéry's "Travels," we shall have to learn in what terms the Royal Geographical Society expresses its modified view of the formerly patronized traveller; who "the Berlin geographers" are who go so much further in repudiating his authority; and whether the new (Russian) descriptions of Samarkand, and the sayings about it, do not emanate from persons who have national prejudices to subserve in undermining the credit of a celebrated anti-Russian writer. We, on our part, have as yet met with hardly any indication of a growing disbelief on the part of English, French, or German writers in the correctness of the Hungarian traveller's accounts of Central Asia. On the contrary, we find him often quoted as an authority by authors and publicists of merit. The Leipzig *Unsere Zeit*, and other journals of good reputation, publish his latest communications in foreign languages. On the other hand, we are far from denying that the whole tenor of Vámbéry's narrative of his travelling adventures has laid him open to the suspicion of a want of veracity. He who, without necessity, enters upon a course where lying and effrontery are the chief means of safely getting through, can hardly expect to be implicitly believed when relating the story of his adventures. As regards his nationality, the Russian critics have evidently been carried too far by their animosity against the un

friendly Hungarian. Vámbéry, who never denied having been a Jew—we believe him now to be neither Jew nor Christian nor Mussulman—or having changed his name from Bamberger—not "Bambarius"—into the more sonorous Magyar trisyllable he now bears, is just precisely "the Hungarian he pretends to be." He is a native of Hungary—of the Magyar town of Szerdahely, near the Danube—has received his education in Hungary, is a Magyar scholar, and a member of the Hungarian Academy—a literary body, by-the-by, which contains more than one member of non-Magyar blood bearing an adopted Magyar name. The veteran secretary of the Academy himself, Francis Toldy—the greatest literary historian of Hungary—originally bore the German name of Schedel. The lexicographer and grammarian Ballagi—originally Bloch, and a Jew—is another instance. Hungary's greatest literary name, Petöfi, is a Magyar modification of the Servian Petrovich. Few persons, we presume, this side of Russia would now be inclined to exclaim, speaking of Meyerbeer: "He was not even the German he pretended to be—he was a Jew, whose real name was Beer;" or of Halévy: "He was not the Frenchman he pretended to be, but a Jew, of the house of Levy." In the eyes of "Orthodox" and Philo-Slavic Russian critics, Vámbéry labors under the triple disadvantage of being a Jew, a Magyar, and a friend of England.

—Those interested in the history and progress of Babism will find a résumé of the subject, based on the very latest intelligence and appreciation of this remarkable sect, in the newest issue of *Zell's Universal Cyclopædia, sub verbo.* As this important work progresses in monthly parts, we have been pleased to see other evidences of a purpose to keep the articles abreast with the knowledge of the present time; and, although there must needs be more or less coming short of this standard amid the numberless particulars of such a combination of dictionaries, the spirit in which the cyclopædia is edited is what it should be, and the errors are, as we pointed out in our review of it, comparatively few and inconsiderable.

—The international convention which met at Geneva in 1864 sought, it will be remembered, to mitigate the horrors of war by obtaining protection, as neutrals, for non-combatants expressly organized to relieve the wounded on the field of battle, and distinguished by a uniform and appropriate insignia. This humane principle has meantime received an extension—at least, its extension is strongly desired—so as to embrace engagements by sea. But as the want of data from recent experience is seriously felt, the Prussian Central Committee proposes prize essays (of one hundred louis) on the following topics: (1) Under what circumstances, in what mode, and with what success has private philanthropy already attempted, in naval engagements, to contribute to the rescue of the shipwrecked and the care of the sick and wounded of the hostile fleets? (2) By what expansion and on what conditions can the [land] Aid Commissions propose this problem to themselves with a prospect of success? (3) What preparation is necessary in peace to solve it according to the claims of humanity? (4) How far may the solution of it be furthered and secured by establishing closer relations between the Aid Commissions for the care, on the field, of sick and wounded soldiers, and the existing associations for the rescue of shipwrecked mariners? The writers for the prize, say the committee, should consult and bear in mind the point of view set forth in the proceedings of the international conference at Berlin, April 23, 1869, a report of which will be sent on application to the office of the Prussian Central Committee, No. 4 Linksstrasse, Berlin. The essays may be written in English, French, or German, and must be anonymous, with a motto attached. A sealed envelope bearing this motto must accompany the essay and contain the writer's name and address. The essays will be due at the above office by May 1, 1870, at the latest, and the prize, as determined by a jury, will be awarded September 30. The successful writer may publish his essay, if he choose, within six months from the award; if he neglects to do so, the right will then vest in the committee. We need not dwell on the peculiar advantages which we Americans have had for gaining and for giving information on the topics proposed for discussion.

LECKY'S HISTORY OF EUROPEAN MORALS.*

Mr. Lecky's books are remarkable in themselves, and remarkable in an even higher degree as illustrating the change which has in recent years come over the tone of English literature. The title of his former work upon "the rise and influence of rationalism" suggests one of the most marked tendencies of the time, of which Mr. Lecky is himself a conspicuous example. Twenty, or even ten, years ago the same books would have called forth fierce denunciation. The opinions which he avows are far more radically opposed to the orthodox schools than those which, when enunciated by Bishop Colenso or the writers of "Essays and Reviews," excited a kind of universal shudder. They remind us more naturally of Mr. Buckle than of any recent writer. The smallness of the sensation produced by Mr. Lecky is due partly to the facts that he is by no means comparable to Mr. Buckle in vigor of thought, and that he does not occupy the official position which rendered episcopal heresies doubly startling to the clerical world. Yet this is not enough to explain the favor with which his writings have been received by the most respectable part of the English press. Scarcely a stone has been cast at him; no voice is raised to warn the public against the pernicious tendencies of his teaching; and a writer who explains the rise of Christianity with the same calmness with which he would account for Mormonism or Mohammedanism is admitted, without a protest, to all the honors of high literary rank. This toleration is undoubtedly due in part to the absence from Mr. Lecky's nature of anything approaching to bitterness or direct hostility to orthodox opinion. He is remarkable for a singular tolerance, which at times amounts almost to weakness. He shows no traces of the old Voltairian hostility to accepted theory; he is no iconoclast; and, if he does not worship at the ancient shrines, treats them with sincere respect, and shows a generous appreciation of their claims upon our respect. In this he conforms to the best school of modern thinkers, who are sufficiently free from revolutionary passion to regret the spirit of wholesale desecration which animated the freethinkers of the last century, and who are anxious to recognize fully and frankly whatever was good in the past. It is evident that this mental attitude towards the old theology so far harmonizes with the general tone of thought amongst the upper classes in England that a very able expositor of its consequences excites no real opposition. Mr. Lecky's book is not too strong meat for their digestion. They have become perfectly accustomed to a school of thought which a few years ago would have startled them out of their propriety. Any one who has observed the opinions expressed with perfect impunity by the writers in the *Fortnightly Review*, and by such distinguished thinkers as Mr. Mill, Professor Huxley, and Mr. Herbert Spencer, will perceive that Mr. Lecky, in spite of his very free dealing with orthodox notions, is by no means an advanced type of English opinion. Those who have recently visited the English universities, or mixed with the liberal part of English society, will agree that he is more likely to be accused of mildness than of extravagance in his views. Indeed, he appears to believe in God and in a future life.

It is impossible, in the narrow space of a review, to give any adequate idea of the scope of Mr. Lecky's argument. Probably the best plan would be simply to reprint his index; but as that might prove dry reading, and would be an apparent evasion of the judicial duties, we will advise our readers to consult the book itself, and will refrain from stating his argument at length. In a few words, however, we may indicate its principal points. Mr. Lecky begins with a discussion of the rival merits of the utilitarian and intuitional schools of morality. He next proceeds to describe very shortly the tendencies of paganism, and dwells at some length upon the great moral schools, and especially upon the Stoics. He explains the causes which restrained the practical influence of these schools upon the mass of the people, and then, in a very remarkable chapter, which may be considered as a pendant to the famous chapters in Gibbon, proceeds to account for the conversion of the Empire to Christianity. He next treats at considerable length of the good and evil results of the mediæval style of excellence. The merits of Christianity and of the Church in the dark ages are freely acknowledged, though Mr. Lecky takes some pains to prove that they have been unduly credited with benefits resulting from very different agencies. He insists, also, with much vigor, upon the many evils connected with asceticism, and upon the total disregard for truth which he holds to have been characteristic of the Church in its most flourishing period. On the whole, he is distinctly hostile to the attempts which have been made alike by Catholics and Positivists to exalt the merits of the mediæval church. In a final chapter, he deals with the position of women, and the position given in opinion and practice to chastity and the allied virtues. From this exceedingly brief sketch, or, rather, hint at the general design, of the book, it will be seen that Mr. Lecky covers a very wide area, and plunges into some very profound enquiries. Those who have read his book on rationalism will be prepared to expect a very graceful style, chargeable at worst with a certain excess of sweetness and deficiency of vigor, and a narrative always picturesque and flowing, but occasionally wanting in concentration. They will, we think, admit that the present book

* "History of European Morals from Augustus to Charlemagne. By W. E. H. Lecky." New York: D. Appleton & Co.; London: Longmans. 2 vols. 1869.

is a decided improvement on its predecessor. Mr. Lecky, though a young man, is obviously a man of great learning; he is full of delicate perception and quick sympathy with various modes of thought; and he shows a width of toleration which is worthy of all praise. Every intelligent reader, in fact, will follow his guidance with lively pleasure; and there are probably few who will not confess that their mental horizon has been extended by the process. But, on the other hand, it is impossible to say that Mr. Lecky shows much philosophical vigor, or that he occupies that commanding point of view which is necessary to give unity to so vast a subject and to reduce his generalizations to a coherent system.

This weakness is most evident in the opening chapter upon different theories of morality. It is, we think, perfectly clear that Mr. Lecky does not understand the opinion which he undertakes to refute; or, to say the least, that he attacks it not in its strongest, but in its weakest shape. Mr. Lecky, for example, persistently argues on the supposition that the utilitarian theory implies that every man is to act simply with a view to his own personal interests. With an arrogance very unusual in him, he ventures flatly to contradict one of the most eminent of modern reasoners upon this point, and talks about the "transparent sophistry" of an argument which he entirely fails to understand. After quoting Mr. Austin's words, "The question is, if acts of this kind were generally done, or generally forborne or omitted, what would be the probable effect on the general happiness or good?" Mr. Lecky proceeds: "The question is nothing of the kind. If I am convinced that ability alone constitutes virtue, and if I am meditating a particular act, the sole question of morality must be whether that act is on the whole useful and produces a net result of happiness." The question, if we may venture to retort upon Mr. Lecky, is nothing of the kind. The uniform definition of virtue given by Bentham, Mill, and Austin, and every modern utilitarian, is precisely that implied in the quotation which Mr. Lecky attacks. The test of the morality of an action, according to them, is its conformity to certain rules—those rules being such as tend, in the common phrase, to produce "the greatest happiness of the greatest number." The rule against murder is founded on the fact that murder, if generally practised, would diminish the sum of happiness. A particular murder might increase it; but it would still be a criminal act, because it would be against the general rule. What Mr. Lecky calls a "transparent sophistry," repeated *ad nauseam* by utilitarians, is in fact their fundamental principle, laid down and illustrated by every sound thinker of the school. He has, as will be seen, fallen into the too common blunder of confounding the test of morality with the motive which is supposed to induce men to be moral. Mr. Lecky might fairly ask utilitarians by what sanction they expect to enforce morality; but he is falling into a "transparent sophistry" when he assumes that they would answer that the sanction is the selfish interest of the individual.

The misconception will be made clearer by another argument of Mr. Lecky's. It is a common argument against the intuitional school that as the standard of morality varies at every age, we cannot suppose that the truths which it embodies are necessary and self-evident. A savage thinks it quite right to kill another savage in order to deprive him of a deer. Therefore the rule, Thou shalt do no murder, cannot be evident to the intelligence of the savage. But, replies Mr. Lecky, even in that case the duty is recognized, though it is restricted. The mind already "recognizes the unselfish and benevolent motives as essentially and generically superior to the selfish and cruel." No utilitarian would think of disputing this; of course the savage, and even the animal, have certain rudimentary instincts, which, as society progresses, are developed into the highest virtues of civilization. The fact that there are such instincts explains the mode by which a moral code comes to have some binding force on mankind. Mr. Lecky obviously supposes that utilitarians disbelieve in the existence of unselfish instincts; on the contrary, they affirm them as essential parts of their scheme. What they deny is, that mankind have an *à priori* perception of certain general truths, and can affirm them independently of experience. In their view, moral truths, like all others, are discovered by the slow progress of observation and inductive reasoning; but that they are founded upon the existence of benevolent instincts is admitted by everybody. If all that Mr. Lecky does with his moral sense, when he has got it, is to affirm that in a general way benevolence is more virtuous than its opposite, the utilitarians will make no objection to his doctrine; they will only add that it is perceived to be better because it obviously increases the general happiness of mankind. To take a parallel case, Mr. Mill asserts that even mathematical truths, such as the axioms of Euclid, are learnt by experience, not by intuition. It would in no way combat this theory to show that even savages have a dim perception that parallel lines will never meet. Mr. Lecky would apparently argue that Mr. Mill denies not only that these truths are founded on intuition, but even that men have intellects fitted to discover them. In short, he is beating the air throughout this chapter, and combating the theories, not of Bentham or Austin, but of some such exploded and paradoxical writer as Mandeville.

We will not go further into an argument which is, after all, irrelevant to the main purpose of Mr. Lecky's book. We have noticed it because it will indicate at once to persons conversant with such matters a certain weakness in Mr. Lecky's speculative powers. Taken by itself, however, it gives a very unfair impression of his ability. He is not a very clear or accurate thinker, and many of the generalizations which he throws out at random seem to be ill-digested and very slightly connected. Thus, in the middle of his second volume, he suddenly notices what he calls "one of the great landmarks of moral history" hitherto unmentioned by historians. This is the fact, that whereas the utilitarian spirit was formerly hostile to political activity, it has now become "one of the most active and influential elements of political progress;" whereas the reverse change has taken place in the opposite school. This is a striking, and may be a true, remark; but a man who stopped to assimilate what he had learnt would scarcely throw it out as a kind of *obiter dictum*, and tack it roughly on to a disquisition of not very obvious relevancy. He should have brought it into relation with other truths; have considered how far it was well founded; at what time the change took place; how it is to be accounted for; and have worked it into the substance of his book. Coming upon it disconnectedly, and without any reference to it before or afterwards, it gives us an unpleasant impression of a want of thoroughness. It seems as if Mr. Lecky was more anxious to make a brilliant generalization than to satisfy himself of its validity or to pursue it into its consequences. In fact, it looks rather as if he had kept a commonplace-book, put down any reflections that occurred to him, and then turned them loose upon society without due preparation.

Yet, after all deductions are made, Mr. Lecky's book is really a remarkable production. It is full of brilliant suggestions, and opens many lines of thought even when it does not thoroughly follow them out. To illustrate its method, we will give a short account of what is in some respects its most important chapter, that on the conversion of Rome. Mr. Lecky begins by remarking on the singular indifference of the Pagan writers to the change which was going on before their eyes. Down to the very eve of the triumph of the Church, amongst a crowd of details as to the dresses, games, vices, and follies of the court, the numerous writers of the period only give us six or seven short notices of the religion which was transforming the world. He proceeds to show with much force that there is no real ground for the common hypothesis that the later moralists show traces of Christian influence. The approximation of opinion, which is in some cases evident, was obviously due to more general causes, and not to any conscious borrowing. How, then, did Christianity penetrate the Empire, as it were, by a kind of subterraneous burrowing? The notion that it influenced the philosophic classes is absurd. Was it by the direct influence of miraculous proofs? To meet this question, Mr. Lecky diverges at some length into the general question of the evidence of the miraculous. Miracles, he says, are not impossible in the sense that spiritual beings of powers far exceeding our own may occasionally interfere in the world. Nor do we disbelieve them from want of such evidence as would be sufficient to establish facts of an ordinary kind. At the same time, educated people have entirely given up all faith in the existence of the miraculous. In spite of the assertion of Tacitus and Suetonius, we refuse altogether to believe that Vespasian cured a blind man by a word. And the decay of belief is due in a general way to the progress of physical science and the consequent revelation of what the Duke of Argyll has called the "reign of law." This, however, is an entirely modern feeling. Down to the Revolution of 1688, it was believed by educated people in England that the king had the power of curing scrofula by a touch. Learned books were written, and much evidence adduced, in support of the notion. It disappeared rapidly, not by force of argument, but under the weight of the general presumption against the miraculous amongst the thinkers of the eighteenth century. Now, in the Roman Empire these conditions were reversed. Everybody believed in miracles. Augustus begged through the streets in obedience to a dream. Earthquakes and thunderstorms were held to be ominous, even by scientific observers. Pliny, after an eloquent eulogy on the great men who had freed us from superstition by explaining eclipses, proceeds to declare that comets were undoubtedly ominous. Every philosopher was held to be a magician. Apollonius, of Tyana, raised the dead and healed the sick. Apuleius, though he expressly disclaimed it,

was credited with the same power. Porphyry expelled demons; Iamblichus was raised from the ground when he prayed. The oracles were held to be supernatural not only by the Pagans, but throughout the Middle Ages.

Mr. Lecky characteristically evades any inference as to the truth of the Jewish stories; but he says very forcibly that when there was such a predisposition to the miraculous, the claim of miraculous power could exercise little influence. In fact, none of the early apologists, except Arnobius, give the miracles any prominent place in their arguments. The miracles with which the writings of the fathers are filled were worked "for the exclusive edification of confirmed believers." The only exception is the remarkable one of exorcism, which is easily explicable by the natural influence upon lunatics and epileptics of imposing ceremonies. Even this died away when power to exorcise was limited to bishops by a wise decision of the Church. Hence it is impossible to suppose that miracles did much to convert people who were perfectly ready to accept the fact and deny the inference. The world was held to be full of miracles, and the possession of miraculous power only indicated the interference of some demon, good or bad. The causes of the conversion, says Mr. Lecky, "were the general tendencies of the age. They are to be found in that vast monument of mingled scepticism and credulity, in that amalgamation or dissolution of many creeds, in that profound transformation of habits, of feelings, of ideas," which he has described in the preceding chapter. He shows how Oriental religions were swarming in every part of the Empire; how specially fitted were the doctrines of Christianity to satisfy the feelings of mankind; and, after an eloquent passage upon this topic, declares emphatically that "the conversion of the Roman Empire is so far from being of the nature of a miracle or suspension of the ordinary principles of human nature, that there is scarcely any other great movement on record in which the causes and effects so manifestly correspond." The marvellous efflorescence of Greek art and the permanent success of Mohammedanism are, he says, events far more inexplicable. He carefully explains, however, that he is not speaking of the rise of Christianity in Judea, but of its subsequent success in the Roman Empire.

There is still the argument that Christianity must have been miraculously aided to surmount the Roman persecutions. After an interesting discussion as to the causes of that persecution, showing incidentally that it did not imply generally a disposition to crush the rising creed, but a desire to meet certain collateral results, he gives a history of the persecutions, showing that as a fact they were neither frequent nor intense enough to be seriously dangerous. In this part of his subject he is chiefly following the steps of Gibbon, though in a less hostile spirit, and, it need not be added, with less historical power.

The outline we have given will show, though imperfectly, how many matters come within the scope of the book, but cannot show how much learning is brought to bear upon them, and with how much spirit the discussion is conducted. He avoids, as will be remarked, some delicate topics, although the tendency of his remarks is sufficiently obvious. We have had too many histories which are simply vast accumulations of facts; amorphous masses, scarcely even arranged in intelligible order. It is time that writers of a different class should begin to breathe a little life into these dry bones, and from bare records of battles and dynasties draw a few of the conclusions which alone can make history valuable. We cannot conscientiously say that Mr. Lecky discharges this duty in a thoroughly philosophical spirit; but he at least does much to stimulate thought and to prepare the way for more powerful intellects. The philosophy of religion, as founded upon historical enquiry, will not, it is probable, be explained in our time; but we may perhaps say that Mr. Lecky and writers of his stamp are sketching preparatory studies, from which the great artist of the future may derive assistance in composing a satisfactory whole. Humbler people may be content with the conclusion that Mr. Lecky has written a singularly interesting and suggestive book.

COLERIDGE'S LIFE OF KEBLE.*

Sir John Coleridge, the writer of this "Life of Keble," was for many years one of the Judges of the Court of Queen's Bench, is now a Privy Councillor, and may be regarded almost as the lay head of the High Church party in England. Sharing Keble's opinions, and entering into all his feelings, he is at the same time himself always a man of the world and a man of sense. Add to these qualifications his intimate and lifelong friendship with the subject of his work, and we have reason to expect a biography at once appreciative and judicial. Such a biography, in fact, we have; one full of sympathy, yet free from exaggeration, and a good lesson to biographers in general. The intimacy of the friendship between the writer and his subject might have interfered with his impartiality and repelled our confidence if the case had been more complex and had made greater demands on the inflexibility of the judge. But in the case of a character and a life so perfectly simple, pure, and transparent as the character and the life of Keble, there was but one thing to be said.

The author of "The Christian Year" was the son of a country clergyman of the Church of England, and was educated at home by his father, so that he missed, or, as he would probably have said himself, escaped, the knowledge of minds differently trained from his own which a boy cannot help picking up at an English public school. At a very early age he became a scholar of Corpus Christi, a very small and secluded college of the High Church and High Tory University of Oxford. As the scholarships led to fellowships—the holders of which were required to be in holy orders—and to church preferment, almost all the scholars were destined for the clerical profession. Of Keble's student friendships one only seems to have been formed outside the walls of his own college, and this was with Miller, a student of Worcester College, who afterwards became a High Church clergyman. Among the students destined for the Anglican priesthood in the Junior Common Room of Corpus Christi College, there was indeed one whose presence strikes us like the apparition of Turnus in the camp of Æneas—Thomas Arnold. Arnold was already Arnold, and he succeeded in drawing the young champions of the divine right of kings and priests into a struggle against the divine right of tutors, which "secured the liberty of the subject" at Corpus—the question at issue between the subject and the ruler being by which of two clocks, one of which was always five minutes before the other, the recitations should begin. The friendship between Arnold and Keble, however, was merely personal; Arnold evidently never exercised the slightest influence over Keble's mind; and even in this "great rebellion"—the only rebellion, great or small, of his life—Keble was induced to take part, as he has expressly recorded, at the instigation of Coleridge, a middle term between Arnold and himself. The college teachers were all clergymen; and the university curriculum in their days was regulated and limited by clerical ascendancy, and consisted of the Aristotelian and Butlerian philosophy, classics, and pure mathematics, without modern history or physical science. The remarkable precocity of Keble's intellect enabled him to graduate with the highest honors both in classics and mathematics at an age almost miraculously early, even making allowance for the comparative youthfulness of students in general in those days. He was at once elected a Fellow of Oriel, and translated to the Senior Common Room of that College—another clerical society consisting of men for the most part considerably his seniors, among whom, in spite of the presence of Whately, High Church principles probably predominated even at that time, and were destined soon to predominate in the most extreme sense, for the college presently became the focus of the Ritualistic and Romanizing movement. Thus, up to twenty-three, Keble's life had been that of a sort of acolyte, not ascetic (for his nature appears to have been always genial and mirthful), but entirely clerical in its environments and its aspirations. At twenty-three he took orders, and put round his neck, with the white tie of Anglican priesthood, the Thirty-nine Articles, the whole contents of the Anglican Prayer-Book, and all the contradictions between those two standards of belief. For some time he held a tutorship in his college; then he went down to a country living in the neighborhood of a cathedral city, where he spent the rest of his days. His character was so sweet and gentle that he could not fail to be naturally disposed to toleration. He even goes the length of saying that some profane libellers whom his friend Coleridge was going to prosecute, were not half so dangerous enemies to religion as some wicked worldly-minded Christians. But it is no wonder, and implies no derogation from his charity, that he should have regarded the progress of opinions different from his own as a mediæval monk would have regarded the progress of an army of Saracens or a horde of Avars. All his poetic sympathies could not hinder him from disliking the rebel and Puritan Milton.

Thus it was impossible that he should be in a very broad sense a poet of humanity. His fundamental conception of humanity was essentially mediæval; his ideal was that of cloistered innocence, or, still better, the innocence of untempted and untried infancy. For such perfection his "Lyra Innocentium" was strung. When his friend is thinking of the profession of the law, he conjures him to forego the brilliant visions which tempted him in that direction for "visions far more brilliant and

* "The Life of Keble. By Sir John Coleridge." London. 1869.

more certain too; more brilliant in their results, inasmuch as the salvation of one soul is worth more than the framing the Magna Charta of a thousand worlds; more certain to take place, since temptations are fewer and opportunities everywhere to be found." These words remind us of a passage in one of Massillon's sermons, preached on the delivery of colors to a regiment, in which the preacher, after dwelling on the hardships and sufferings which soldiers are called upon to endure, says that a small portion of those hardships and sufferings, undergone in performance of a monastic vow, would merit the kingdom of heaven. If souls are to be saved by real moral influences, Sir John Coleridge has probably saved a good many more souls as a religious judge and man of the world than he would have saved as the rector of a country parish; and if character is formed by moral effort, he has probably formed a much higher character by facing temptation than he would have done by flying from it.

Whatever of grace, worth, or beneficence there could be in the half-cloistral life of an Oxford fellow of those days, or in the rural and sacerdotal life of a High Church rector, there was in the life of Keble at Oriel and afterwards at Hursley. The best spirit of such a life, together with the impression of a character rivalling in spiritual beauty, after its kind, that of Ken or Leighton, is found in Keble's poetry, and for this we may be, as hundreds of thousands have been, thankful.

The biographer declines to enter into a critical examination of the "Christian Year," but he confidently predicts its indefinite reign, founding his prediction on the causes of its original success. He justly describes it, in effect, as rather a poetic manual of devotion than a book of poetry for continuous reading. It is, in truth, so completely out of the category of ordinary poetry, that fairly to estimate its intrinsic merits would be a very difficult task. Sir John Coleridge indicates this, in fact, when he cites as an appropriate tribute to the merits of the book the practice of the Worcestershire clergyman who used, every Sunday afternoon, instead of a sermon, to read to his congregation the poem of the "Christian Year" for the day. Keble himself, as his biographer attests, had a very humble opinion of his own work, seldom read it, hated to hear it praised, consented with great difficulty to its glorification by sumptuous editions. It was his saintly humility, suggests the biographer, which made him feel that the book which flowed from his own heart would inevitably be taken for a faithful likeness of himself; thus he would be exhibiting himself in favorable colors, and be in danger of incurring the woe which had been pronounced on the good opinions of the world. If this account be true, it is another proof of the mediæval and half-monastic mould in which Keble's religious character was cast.

The comparative failure of the "Lyra Innocentium" is probably to be attributed not only to the difference of intrinsic merit, but to the fact that whereas the "Christian Year" has as little of a party character as any work of devotion written by an Anglican and High Church clergyman could have, the "Lyra Innocentium" was the work of a leading party man. The interval between the two publications had been filled by the great reactionary movement among the clergy which formed one of the back-streams to the current of political and intellectual progress which had begun to grow after the termination of the great French war, and came to a crisis in the Parliamentary Reform Bill of 1832. In this movement Keble was the associate of Hurrell Froude, Newman, Pusey, and other conspicuous "Tractarians." A sermon which he preached before the University of Oxford was regarded by Newman as the beginning of the movement. He contributed to the "Tracts for the Times," though as a controversialist he was never powerful; sweetness, not strength, being the characteristic of his mind. Keble had embraced, as it seemed to us, all the extreme and essentially Romanizing principles of the school. The posthumous alteration made in the "Christian Year" by his direction shows that he held a doctrine respecting the Eucharist not practically distinguishable from the Roman doctrine of Transubstantiation. A poem intended to appear in the "Lyra Apostolica," but suppressed at the time in deference to the wishes of cautious friends, and now published by his biographer, proves that he was, as a Protestant would say, putting it plainly, an advanced Mariolater. He was a thoroughgoing sacerdotalist and believer in the authority of the Church in matters of opinion. He was always deploring the loss of auricular confession. He regarded the cessation of prayers for the souls of dead founders and benefactors as a lamentable concession to Protestant prejudice. Like his associates, he repudiated the very name of Protestant. He deemed the state of the Church of England, with regard to orthodoxy, most deplorable—"two prelates having distinctly denied an article of the Apostles' Creed," and matters going on altogether so that it was very difficult for "a Catholic Christian" to remain in that communion. Why then did he not, with John Henry Newman, accept the logical conclusions of his premises, and go to the place to which his principles belonged? His was not a character to be influenced by any worldly motives, or by the sense of his own ecclesiastical position, which we suspect has sometimes had its influence in making Romanizing leaders of the Anglican clergy unwilling to merge their party and their leadership in the Church of Rome. There was nothing in his nature which would have recoiled from any self-abnegation or submission. The real answer is, we believe, that Keble was a married man. This it was, probably—not any distinction more or less supersubtle between Real Presence and Transubstantiation, or any misgivings as to the exact degree of worship to be paid to the Virgin, or doubts as to the limits of the personal infallibility of the Pope, or objections to practical abuses in the Church of Rome, which of course do not prevent her from being the true Church—which kept Keble, and which has kept hundreds of Romanizing Anglican clergymen, from becoming Roman Catholics. Nor is the reason, if analyzed, one of which their philosophy need be ashamed; for the claims of home and humanity are the best answer to the claims of the Church of Rome.

Keble stopped his ears with wax against the siren appeal of his seceding chief, John Henry Newman, and refused at first to read the "Essay on Development." When at last drawn into the controversy, he constructed for his own satisfaction, and that of other waverers who looked up to him for support and guidance, an argument founded on the Butlerian principle of probability as the guide of life. But Butler, with deference to his great name be it said, imports into questions of conscience and into the spiritual domain a principle really applicable only to worldly concerns. A man will invest his money, or take any other step in relation to his worldly affairs, if he thinks the chances are in his favor; but he cannot be satisfied with a mere preponderance of chances that he possesses vital truth and that he will escape everlasting condemnation.

It is singular, but consistent with our theory as to the real motive which tacitly prevented Keble from joining the secession, that he should have determined, if compelled to leave the Church of England (a contingency which, from the growth of heresy in that Church, he distinctly contemplated), to go not into the communion of the Church of Rome, but "out of all communion whatever." He would have gone, we suppose, into some limbo like the phantom Church of the Nonjurors. It is difficult to see how such a course can have logically commended itself to the mind of any member of the theological school which held that the individual reason afforded no standing-ground whatever, and that the one thing indispensable to salvation was visible communion with the true Church.

Sir John Coleridge deals with the question as to the posthumous alteration in "The Christian Year," the discovery of which caused so much scandal among its Protestant admirers, and brought to a stand, it was said, the subscription for a memorial college in honor of its author. It is made clearly to appear that the alteration was in accordance with Keble's expressed desire, and the suspicion which was cast upon his executors and those who were about him in his last moments is proved to be entirely unfounded. But, on the other hand, we cannot think that the biographer (or rather Keble, who speaks for himself in this matter) will be successful in convincing many people that the alteration was merely verbal. The mental interpolation of "only" after "not" in the words "not in the hands," is surely a *tour de force;* and it must be remembered that the passage occurs in the lines on the "Gunpowder Treason," and is evidently pointed against the Roman Catholic doctrine of the Eucharist. The Roman Catholics do not deny that the Eucharist is received "in the heart;" but the Protestants deny that it is received "in the hands" at all; and the vast majority of Keble's readers could not fail to construe the passage as an assertion of the Protestant doctrine. Sir John Coleridge does not face the real difficulty, because he does not give the two versions side by side, or exhibit the passage in its context. A more rational account of the matter is suggested by a letter of Keble, written when he was contemplating the publication of the "Lyra Innocentium," and included in the present memoir. In that letter he says:

"No doubt, there would be the difference in tone which you take notice of between this and the former book; for when I wrote that, I did not understand (to mention no more points) either the doctrine of Repentance *or that of the Holy Eucharist* as held, *e. g.*, by Bishop Ken, nor that of Justification; and such points as these must surely make a great difference. But may it please God to preserve me from writing as unreally and as deceitfully as I did then; and if I could tell you the whole of my shameful history, you would join with all your heart in this prayer!"

The biographer, while he proves his integrity by giving us the letter,

of course protests against our taking seriously the self-accusations of a saint. We certainly shall not take seriously any charge of deceitfulness against Keble, whether made by himself or by any other human being; but he was liable, to a certain extent, like all other human beings, to self-deception. His opinions, like those of his associates, on theological questions in general and on the question of the Eucharist in particular, had been moving rapidly in a Romanizing direction during the interval between the publication of "The Christian Year" and that of the "Lyra Innocentium." In the passage just quoted, we see that he was conscious of this; but it was not unnatural that he should sometimes forget it, and that he should then put upon the words in "The Christian Year" a construction in conformity with his opinions as they were in their most advanced stage. It is strange, however, that he and the rest of his party, if they were even dimly and at intervals conscious of the fact that their own creed had undergone so much change, should still have been able to take the ground of immutability and infallibility in their controversies with other parties and sects.

It has been almost forgotten that Keble held for ten years a (non-resident) Professorship of Poetry at Oxford. His lectures were unfortunately written, as the rule of the Chair then was, in Latin. He thought of translating them, and Sir John Coleridge seems still to think that the task would be worth undertaking. For the examples, which are taken from the Greek and Latin poets, it would be necessary to substitute translations or examples taken from the modern poets. Mr. Gladstone chooses the apt epithet when he calls the lectures "refined"—refinement rather than vigor or depth was always the attribute of Keble's productions. His theory of poetry, however, as the vent for overcharged feelings or an imagination oppressed by its own fulness—as a *vis medica*, to use his own expression—if it does not cover the whole ground, deserves attention among other theories.

To the discredit, perhaps, rather of the dogmatic spirit than of either of the persons concerned, religious differences were allowed to interfere with the personal friendship formed in youth between Keble and Arnold. With this single exception, Keble's character in every relation—as friend, son, tutor, pastor—seems to have been all that the admirers of "The Christian Year" can expect or desire. The current of his life, but for the element of theological controversy and perplexity which slightly disturbed his later days, would have been limpid and tranquil as that of any rivulet in the quiet scene where the years of his Christian ministry were passed. He and his wife, the partner of all his thoughts and labors, and the mirror and partaker of the beauty of his character, died almost on the same day; she dying last, and rejoicing that her husband was spared the pain of being the survivor. Assuredly, it may be said of them if of any heirs of humanity—*requiescunt in pace.*

MISS MARTINEAU'S BIOGRAPHIES.*

Perhaps the most marked characteristic of this latest volume from Miss Martineau is its distinctly ethical style of biography. "What is the lesson taught by this man's life?" is a question which seems to have been constantly in the author's mind. Indeed, in a preface which she has written for the second English edition of the work, she admits that it was with forethought, and because she believed it to be the only true method, that she made her essays didactic; and she adds that, in her opinion, the popular approval which they have received is attributable to her chosen fashion of treatment. Doubtless we need not agree with her on this point. A volume full of biographies of eminent men and women, who, having died within the last quarter of a century, have not yet quite got into written history, but whose names have been in all our mouths, must be made very much inferior in several ways to these vigorous, sensible, honest, and instructive essays if it is to escape being welcomed and applauded by the public. Everybody is willing to read what one of their cleverest contemporaries—an old ally or antagonist of many of them; a close and acute observer of some of them; a person with excellent means of information—may say about such people as Hallam, Landor, De Quincey, Croker, Macaulay, Rogers, Charlotte Brontë, Lockhart, Whately, Brougham, Raglan, Denman, Lady Byron, Sir William Napier, Father Matthew, Joseph Hume, Lord Lyndhurst, the Duke of Newcastle, the Czar Nicholas, Metternich, and a dozen other persons equally well known in literary, political, military, and social life.

And as regards the first point above-mentioned—Miss Martineau's conception of true biography, as being above all things else ethically didactic—we may there also safely permit ourselves to hesitate before assenting to her opinion. Few persons of judgment would disagree with her when she says: "To me it appears that persons of social prominence enough to be subjects of published biography have given themselves to society for better, for worse—not their deeds only, but themselves." Proverbial phrases are proverbially liable to abuse; the employment of them is so convenient a substitute for thought and argument that it is no wonder this should be so; but the proverb which directs us to speak only good of the dead is perhaps pre-eminent among its brethren for the amount of useless and bad work it has been compelled to perform. To the case of the newly dead, whose lives have for years been public property, so to speak, it may always be applied with some propriety. The history of nobody's life is a record of unmixed evil or unmixed good; and in the life of a distinguished man there has usually been exhibited some praiseworthy virtue, or, at any rate, some power and capacity which claim our admiration, and may claim our praise, as having increased or confirmed our pride in human nature. And usually for the sake of his surviving friends—to say nothing of the legitimate gratification of our own gentler or more amiable emotions—it is as well, while he is but just gone, not to lift up our voices among the mourners and bear testimony against him. However, the sin of harsh speaking over the corpse is not so common in the case of great men that an occasional rather stern disregard of the merciful precept may not be profitable; and Miss Martineau, if she seems a little hard sometimes, is nevertheless a just judge, so far as she sees—and she sees with exceptional clearness.

But her theory of biography we are disposed to think defective. The man whose life is written has some rights too, as well as we others who write it; and we submit that he has a right to complain if he is made a mere means of inculcating good advice and getting sound views as to this or that into the rest of us. Very able indeed the preacher ought to be who should take it into his hands to give a just description of a fellow-creature while at the same time taking him as a text with which to enforce certain doctrines dear to the heart of the minister and the congregation. Burns—to take the common test-case when discussions of this kind come up—seduced more women than one; was habitually a hard drinker; was not altogether cleanly in his writings any more than in his life; was not the best either of tenants or of husbands; was at times what might be called recklessly idle; and finally died in needless poverty, as well as prematurely, in consequence of sickness and disappointments which he may be said to have brought on himself by his indulgence of his passions and his lifelong carelessness and want of forethought. This is one side of the picture, and the poet should receive severe condemnation whenever his biography is written; he merits it; and we on our part need that it should be given by way of warning and example: *de mortuis nil nisi bonum* is a proverb that has no application here. But the Eastern proverb—which says that no man is a good man who, before he dies, has not made other men better—implicitly contains the complete justification of all the biographers who put Burns's faults and mistakes into the background, and demand that on the whole we should give him hearty praise and admiration. It must be far higher than ordinary ethical biography—as ethics are understood by the merely ethical—which in writing of Burns shall be either just to its subject or do its duty toward us who read. For what we want is the man, and not a sermon—be it never so useful—on his demerits; good biography is, in a sense, the best of sermonizing, but the reverse is not true; we desire to know what he was, what he counted for in his life, and what, as exactly as may be, he is now to us. And usually, if we are rather men and women than partisans of some kind, political, religious, or other—if we are intellectual beings eager for the truth concerning this or that fellow-being whose exceptional nature has made him an object of our curious regard, rather than eager for the advancement of some particular cause, perhaps even more eager for such truth than for the moral improvement of mankind—we shall find that the ethical biographer is not the one who has been most satisfactory in the long run. In the case of this book, it will be found, then, we think, that if any one considers it unsatisfactory, it will be for what it fails to do and not for anything that it does. Its faults are faults of defect; what it does say is usually admirable for clearness, force, and for its taking quality; we have not in a long time seen a book of biography which we found more easily readable. But that it always says enough—that its deficiency is not sometimes a great defect—no one, for instance, who knows what De Quincey was will not be forced to maintain very emphatically. That wonderfully subtle logician, deep student of philosophy, broad humorist, poetic and eloquent rhapsodist, delightful stylist, a most remarkable nature, is dismissed with a few words, mainly about his improvidence, his opium-eating, and his ill behavior to Miss

* "Biographical Sketches. By Harriet Martineau." New York: Leypoldt & Holt. 1869.

Martineau's friends, the Wordsworths. This is good enough biography of the low ethical kind, but certainly it is bad biography of any very excellent kind; and Miss Martineau's theory, as exemplified in this case—it is an extreme case, we are bound to say—is seen very plainly to be faulty.

Hand-book of Chemistry, for School and Home Use. By W. J. Rolfe and J. A. Gillet, Teachers in the High School, Cambridge, Mass. (Boston: Woolworth, Ainsworth & Co. 1869.)—So long as the fashion holds of cramming the youthful mind with a mass of dry husks of scientific knowledge, instead of nourishing it with the digestible kernels suited to its years, books like this one will be written, and chemists and schoolboys will mourn. Yet the book, though not excellent, is meritorious in several respects, and is greatly to be preferred to many chemical text-books which find ready sale. But, after all, it is a book meant to be learned by heart, and it is in our judgment much better fitted to load the student's mind than to store or inform it. Learning by rote is an excellent thing in its place, in spite of the abuses to which it is liable. No matter how offensive the practice may seem to many progressive moderns, it is really valuable both as a kind of mental discipline and as a means of packing the mind with goods. The power of easily committing to memory things useful or beautiful is a distinct advantage to any man, no matter what his profession or trade may be. But chapters of dry chemical facts and generalizations are ill suited to strengthen or cultivate this faculty. The intelligent teacher in want of a stiffish and wholesome subject for his purpose, may be excused if he drop the chemistries and betake him to Lord Bacon's essays, to Ecclesiastes or the Book of Job.

Most of the statements and descriptions in the book are well and clearly written, and would doubtless be perfectly intelligible to an advanced chemical student; but they are much too concise and technical for beginners. In any subject which, like chemistry, has a special language and peculiar characters of its own, it is difficult to be concise without being technical, and impossible to be technical without being obscure to beginners. This fault of undue conciseness is conspicuous in the opening chapters. When, for example, the student is told on page 10 that, "according to the atomic theory, an atom of chlorine weighs 35·5 times as much as an atom of hydrogen; an atom of oxygen weighs 16 times as much as one of hydrogen; and an atom of nitrogen 14 times as much as one of hydrogen," without premonition or explanation of the manner in which these truths have been arrived at, there is no probability of the boy's comprehending the meaning of the statement, or gaining any just idea of that law of combining proportions which, more than anything else, distinguishes chemistry from the other sciences. On the other hand, too much importance is attached to the conception of an "element." At the best, the idea which chemists seek to express by this term is hypothetical, incidental, and provisional. The idea is by no means one of pre-eminent importance; yet it is apparently for the sake of defining it that the authors, upon the first page of their hand-book, plunge boldly into the analysis of a substance so unfamiliar to the student as muriatic acid. The supposition, or hope, that matters thus presented will be comprehended by the ordinary run of schoolboys can hardly be founded upon any wide experience in teaching science.

On the first and second pages of the book the tender mind of the beginner is presented with a perfectly inconclusive argument about the composition of muriatic acid. From a few rough and inadequate experiments the conclusion is drawn: "Muriatic acid, then, contains nothing but hydrogen and chlorine." That this conclusion is true, as a fact, only renders it the more probable that the boy's mind will be vitiated by the false logic. He will fail to perceive the insufficiency of the premises and the looseness of the reasoning. It would be very unfair, however, to imply that the little hand-book before us is more deficient in logical method than most manuals on scientific subjects. Unfortunately, the great bulk of text-books on natural and physical science are liable to the charge of habitually violating some of the simplest rules of sound reasoning. Impatience of close demonstration is not a fault of enthusiastic reformers and sentimental politicians alone. Partisans of the "new education" have here a hard nut to crack.

The book is, on the whole, commendably free from errors of fact. But we notice here and there loose and careless statements, such as might be made by a writer not practically familiar with the details of his subject. Thus, at the end of the list of names and symbols of the elements, the reader is urged to take notice "that in some cases the symbol is an abbreviation of the *Latin* name of the element." In reality, the rule that symbols are derived from the Latin names of the elements is a general rule, applicable in all cases. The authors meant, no doubt, to call attention to the fact that the Latin names of several of the elements differ widely from their English names. Again, on page 13, we are told that "SO_2 is often *improperly* called sulphurous acid." There is not the slightest objection to Messrs. Rolfe and Gillet's calling the gas produced when sulphur burns by the name *sulphurous anhydride;* but they err in condemning, in set terms, the name by which the gas in question is commonly known wherever the English language is spoken.

For our part, we have grave doubts as to the propriety of employing in any school-book terms so wholly technical and unusual as "ammonic nitrate" and "zincic sulphate" in alluding to substances so well known as nitrate of ammonia and sulphate of zinc. If the scanty stock of scientific knowledge which the average American boy can gain at his high school is to avail him anything in after-life, it must be connected or welded in some way with facts of everyday occurrence. When the dentists, doctors, painters, and apothecaries who use the salts in question begin to call them by their inverted names, and these names are met with in standard works of reference like Appleton's "Encyclopædia"—the chemistry of which is, by-the-by, excellent in the main—or the dictionaries of Ure and Brande, it will be time enough to use them in school-books prepared for the education of unprofessional persons. That the chemical notation which has been employed since the beginning of this century is now undergoing a change, is a fact exceedingly interesting and important to the professed student of chemistry, but of comparatively little significance to the school-boy. Hints of the changes which are likely to be adopted may very properly be suggested to the general student, but great care should be exercised that no meaningless word perplex or useless jargon repel him. We observe that the series of hand-books to which this chemistry belongs is rather ingeniously called "The Cambridge Course of Physics." Inattentive people might easily fall into the error of supposing that the university at Cambridge had something to do with them.

Three Thousand Miles through the Rocky Mountains. By A. K. McClure. (Philadelphia: Lippincott & Co.)—Colonel McClure's work is made up of two series of letters written in 1867, as the author passed through Colorado, Utah, and Montana. Originally addressed, the one series to a newspaper in New York and the other to a periodical publication in Pennsylvania, the same incidents and descriptions are often repeated. At the time the letters first appeared, the actuality of many of their subjects (the great Indian outbreak was then raging) gave them an interest which is now dimmed and dulled by fresher accounts of later travellers.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Barnes (W.), Poems of Rural Life	(Roberts Bros.)	$1 00

M. W. DODD

WILL PUBLISH NEXT WEEK

THREE NEW BOOKS.

I.

LAMPS, PITCHERS, AND TRUMPETS.

Lectures on the Vocation of the Preacher. Illustrated by Anecdotes—Biographical, Historical, and Elucidatory—of every order of Pulpit Eloquence, from the great Preachers of all ages. By E. Paxton Hood, Lecturer in Spurgeon's Pastors' College. 1 vol. large 12mo, price $1 75.

A book of remarkable interest, overrunning with anecdote and out-of-the-way fact, and striking passages from the greatest preachers of all ages. Written in an uncommonly racy and vigorous style. It is a book of rare interest for all classes.

The following is the contents of one of the chapters (VII., on *Wit, Humor, and Coarseness in the Pulpit*):

The Functions of Humor—Singular Personal Applications—Story of a Welsh Preacher—The Devil and the Herd of Swine—The Foolish Preaching of Good Men—Robert South—The Sermon to the Fishes—The Pulpit Droll—John Berridge—Jacob Kruber—The Humor of Rowland Hill—Bold Tom Bradbury—The Folly of Learned Sermons—Humorous Juxtaposition of Ideas—Strange Freaks of Speech in the Pulpit.

II.

A BOOK FOR THE SEASON.

UNCLE JOHN'S FLOWER-GATHERERS.

A Companion for the Woods and Fields. By Jane Gay Fuller. 1 elegant volume 16mo, beautifully illustrated with nine engravings, price $1 50.

This beautiful volume has been prepared with great care, and will, it is believed, meet an acknowledged want. In an interesting narrative is given information such as children—older ones, too—will enjoy and appreciate about Plants and Flowers, and how they grow and bloom.

III.

PHILIP BRANTLEY'S LIFE WORK, AND HOW HE FOUND IT.

By M. E. M. 16mo, illustrated, price $1 15.

A very attractive story, suitable for the Sunday-school Library. It is a book of unusual merit, and much above the average of its class.

*** A Descriptive Catalogue of all our Publications sent to any address.

M. W. DODD, Publisher,

506 Broadway, New York.

LIBRARY OF EDUCATION.

LOCKE (JOHN), "SOME THOUGHTS CONcerning Education," Essays on "Study," "Reading," "A Tutor's Business," "Knowledge: Its Extent and Measure," "Error;" with a Life. 2 vols. 32mo, paper. Price 40 cents, or 50 cents by mail.

MILTON (JOHN), "A TREATISE OF EDUcation," being his letter to Master Samuel Hartlib; with a Life. 1 vol. 32mo, paper (Vol. II. of the Library of Education.) Price 20 cents, or 25 cents by mail.

MANN (HORACE), "ON THE STUDY OF Physiology in Schools," being his Annual Report for 1842; with a Life. 1 vol. 32mo, paper (Vol. III. of the Library.) Price 20 cents, or 25 cents by mail.

In Press, ready July 15:

MILL (J. S.), "ST. ANDREWS ADDRESS." 1 vol. 32mo, paper (Vol. IV. of Library.) Price 20 cents, or 25 cents by mail.

FROUDE (J. A.), "ST. ANDREWS ADdress." 1 vol. 32mo, paper (Vol. IV. of Library.) Price 20 cents, or 25 cents by mail.

CARLYLE (THOMAS), "EDINBURGH ADdress." 1 vol. 32mo, paper (Vol. IV. of Library.) Price 20 cents, or 25 cents by mail.

For an appreciation of the character and object of this series, see the *Journal of the American Social Science Association*, No. 1, just published by Leypoldt & Holt.

647 Broadway, New York.

ANTHONY TROLLOPE'S NEW STORY,

"The Vicar of Bullhampton."

Now Ready,

THE JULY NUMBER

OF

Lippincott's Magazine,

Commencing Vol. IV.

CONTENTS:

I.

THE OPENING CHAPTERS OF

"The Vicar of Bullhampton,"

A NEW NOVEL OF GREAT INTEREST.

By Anthony Trollope,

Author of "Phineas Finn," "Orley Farm," "The Claverings," "The Belton Estate," etc.

WITH A FULL-PAGE ILLUSTRATION.

II. Thorwald's Lament. By the late Edward Everett.
III. Annexation of Nova Scotia. By a Nova Scotian.
IV. My Summer Pets.
V. Inside a Chinese Gambling-Hell.
VI. The Watcher: a Poem. By Edgar Fawcett.
VII. Beyond the Breakers: a Novel—Part VII. By Hon. Robert Dale Owen.
VIII. The Housekeeper's Millennium.
IX. The Philosophy of Absurdity. By Walter Edgar McCann.
X. Princess and Page: a Poem. By Lucy H. Hooper.
XI. Only no Love: a Tale after the German. By Mrs. A. L. Wister. (Concluded.)
XII. The Devil's Cave: an Adventure in Mexico.
XIII. Our Relations with England. By Henry Flanders.
XIV. Fancy Signatures. By Carl Benson.
XV. The Art of Getting to Sleep.
XVI. Our Monthly Gossip.
XVII. Literature of the Day.

*** For sale at all the Book and News Stores.
Yearly Subscription, $4. Single Number, 35 cents.

CLUB RATES.—Two copies, $7; five copies, $16; ten copies, $30; and each additional copy, $3.

Specimen Number, with Premium List, sent to any address on receipt of Thirty-five cents. Address

NEW BOOKS.

I.

Good Society.

A Complete Manual of Manners. By the Right Hon. the Countess of ******** Printed on fine toned paper, 300 pp., 12mo, extra cloth, gilt top, $1 75.

"Quite a marvel of typographical beauty."—*New York Citizen.*

II.

Poems and Romances.

By GEORGE AUGUSTUS SIMCOX, author of "Prometheus Unbound." Printed on tinted paper, 12mo, extra cloth, gilt top, $1 75.

III.

Primeval Man.

An Examination of some Recent Speculations. By the DUKE OF ARGYLL, author of "The Reign of Law." 16mo, cloth, $1 25.

IV

The Legende of King Arthur

And his Knights of the Round Table. Compiled and arranged by J. T. K. Dedicated to Alfred Tennyson. 16mo, cloth, $1 25.

*** The above works will be sent by mail, post-paid, to any address, on receipt of price by the Publishers,

GEORGE ROUTLEDGE & SONS,

416 Broome Street, New York.

STRETTON.

A NOVEL BY HENRY KINGSLEY,

Author of "Ravenshoe," "Geoffrey Hamlyn," etc. 8vo, cloth, $1 50; paper, $1.

THE HABERMEISTER.

A NOVEL BY HERMAN SCHMID.

16mo, cloth, $1 50.

Herman Schmid is attracting attention as one of the first living writers of fiction. His novels are all based on actual historical institutions or national peculiarities. "The Habermeister" was the chief of the *haberfeld*, a secret tribunal (something like the famed *Vehmgerichte*, or *francs juges*) which until lately has almost ruled Bavaria. The characters and events of the novel bearing this name are dramatic in the extreme, but are kept from being sensational by wonderful truth and tenderness.

LEYPOLDT & HOLT.

TAINE'S ITALY (FLORENCE AND VENICE).

Translated by JOHN DURAND. 8vo (uniform with "Rome and Naples, by the same author), $2 50.

"One feels at moments as if before this writer there had been no critics, no travellers, observers, or æsthetic inquisitors."—*Nation.*

"M. Taine studies its (Italy's) art from its history, and not its history from its art, as Mr. Ruskin does, for example; and we think he has by far the clearer idea of the time, its people and its works."—*Atlantic Monthly.*

LEYPOLDT & HOLT, Publishers,

NEW YORK.

PUBLICATIONS OF THE GEOLOGICAL SURVEY OF CALIFORNIA.

FACTS FOR THE LADIES.

I learned the use of my Wheeler & Wilson Machine, without personal instruction. It has been used nearly twelve years, without repairs, by myself and seamstresses doing my family sewing, estimated at $300 annually, and bids fair to do as good service for a lifetime. My needles are never broken, but really worn up too short for use. The actual value of my machine cannot be estimated commercially, nor expressed in words. Those only can properly appreciate it who have attempted family sewing by hand.

INTERESTING TO LADIES.

In 1854, I purchased a Grover & Baker Sewing Machine, which has been in almost constant daily use ever since. Fifteen years of arduous labor on every variety of material used in a family, seems to have no more effect on its movements than the labor of so many days. It has been a faithful, tireless, uncomplaining, and inexpensive servant, never having needed the slightest repairs, and is still capable of doing the sewing for another generation.—*Mrs. Bartol*, 1900 *Spruce Street, Philadelphia.*

Safes to let by the National Park Bank

IN A BURGLAR AND FIRE-PROOF VAULT.—For the safe keeping and protection from fire and burglars of Securities of all kinds, including Stocks, Bonds, Mortgages, Wills and Diamonds, and Valuable Jewelry of every description. An inspection of the vault, constructed by this Bank in their new building, will at once convince all parties interested that the most perfect attainable security has been reached, and at an extremely moderate annual cost to each tenant.

The officers will take pleasure in showing the vault on application.

The Week.

THE event of the week at home has been the death of Mr. Raymond of the *Times*, of whom we have spoken more at length elsewhere. The press, we are glad to say, has been unanimous in testifying in the strongest terms not simply to his professional ability, but to his political honesty; and Henry Ward Beecher, in preaching the funeral address—which, by the way, was admirable—referring to the charge of "trimming" so often brought against Mr. Raymond in his lifetime, spoke in feeling terms of the courage, consistency, and devotion displayed by Mr. Raymond during the war as a full answer to all the sneers and abuse called forth by his political mistakes subsequently. While touching on this point, let us suggest—though we really dislike to "improve the occasion"—that the testimony which men of all parties are now bearing to Mr. Raymond's political integrity, in spite of the acknowledged frequency of his changes of opinion, ought surely to be a warning to all party bravoes to be more sparing of their billingsgate when men of acknowledged merit and tried fidelity to great principles now and then make a blunder. After the Philadelphia Convention, the abuse poured both on him and on Henry Ward Beecher was a disgrace to journalism, and was enough to make any decent man blush who remembered how bravely the first of its victims had stood by the flag during the darkest days of the war, and through how many dreary years the second had toiled in the cause of which the war brought the triumph. Surely it ought not to be so often necessary for rational beings to wait till a man is in his grave to do even partial justice to his character and motives. Putting Mr. Raymond's opinions altogether aside, it is almost impossible to overestimate his loss to the profession to which he belonged, as far at least as this city is concerned. The *Times*, under his management, never went on a moral or intellectual "bender" and turned up after a crisis with battered hat, soiled linen, and torn coat, and an abundance of *ex post facto* wisdom and piety. We hope it is going to keep up his traditions.

We make no pretence of being able to throw any light on the state of things in Cuba, and we are unable to say where any trustworthy information about it is to be found. Peru has recognized the insurgents as belligerents, which has mightily offended the Spanish Minister at Washington, and has caused him to break off the negotiations he was carrying on, through the State Department as mediator, for the settlement of the Spanish differences with Peru. There have been no more reports of battles, and while the friends of the insurgents say the insubordination of the volunteers is so great as to be bringing Spanish affairs on the island to the verge of ruin, the Spanish Minister says the troubles they cause are very trifling, and will soon be suppressed. Several members of the "Junta" sitting in this city have been arrested and held to bail on charge of fitting out hostile expeditions and recruiting men for the insurgent service. The "Junta" seems to be an organization not unlike the War Department of the Irish Republic, and all interference with it is deprecated as earnestly as was the Government's proceeding against President Roberts of the Brotherhood. The Government, however, seems determined to execute the law, and the officials here are evidently not disposed to wink at anything. The Spanish cruisers have at last succeeded in catching a vessel laden with arms and ammunition which had cleared from Boston; but apparently because she put on an innocent air, pretended to be bound to Jamaica, and refused to run away. The general tenor of the published accounts, however, is all unfavorable to the Spaniards, but none of them seem worth much attention. We had hope of *news*, even if colored news, from the *Tribune* correspondent who landed in Nipe Bay some weeks ago; but he seems to have vanished into the interior, and nothing more has appeared from him. He is probably busy slaughtering Spaniards, and scorns the peaceful quill.

We suppose the country may be congratulated on the fact that the long trouble in Georgia about the right of negroes to hold office is at last over. A way out of it is, at any rate, opened, and it depends on the Democrats to say whether or not it shall be blocked up again. When the State constitution was adopted, it was freely said, not only by the anti-ratification party but by such Republicans as ex-Governor Brown, that, while it provided for the negro's voting, it excluded him from office, and it is probable that the new instrument might have been rejected if it had not been for these assurances. "Joe Brown's" influence with the small farmers was always very great. No one had much right to be surprised, then, when the negro members of the Legislature were expelled the House and Senate. The Supreme Court of the State has now decided, however, by implication, that that famous act of purging was in violation of the constitution, and that the colored Georgian and the white are on precisely the same footing in the matter of office-holding as in all other matters. Some of the more violent Democrats advise an overhauling of the fundamental law; but this, it seems to be evident, would be a piece of almost pure sentimentalism on the part of the Georgians at least, and on the part of the people of most of the Southern States. Where it might seem to be desirable that it should be done it cannot be done, for the negroes are in a majority; where it can be done, why should it be thought worth while to do it? No one doubts that it will be but a very short time before the white Virginians and Georgians, and, indeed, all the Southerners except, perhaps, the South Carolinians, will hold in their hands the disposal of every important office in their States, or of nearly every one. The appeal has been made in Georgia to the highest tribunal that can pass on the question which has made so much difficulty; and if the Southerner will now leave off being the "Southron" and permit a certain small number of representatives of what after all must be an important part of the body politic to sit in the Legislature with him, he will do a much more sober-minded and reasonable thing than if he listens, like a boy, to the Augusta *Constitutionalist* and the like.

We have latterly to a great degree lost sight of these organs of Southern Conservative opinion, and indeed the most of them have not

been specially noticeable in any way, but some of them are as truculent as ever, and no doubt are at the bottom of a good deal of what political violence is still displayed. Why, for example, is the Montgomery *Mail* not to be called with great probability an accessory before the fact to the next political crime, or in fact the next lawless act of any kind which takes place within the reach of its influence? Our readers will remember how Colonel Yerger, of Jackson, Mississippi, recently cut Mayor Crane to pieces with a "thug knife" for daring to order his piano attached for taxes long in arrears. A week ago to-day the *Mail* thus referred to this brutal and deliberate murder of an unarmed man: "What shall we say of the petty tyranny of this military despot at Jackson, stealing the piano of a girl under the forms of carpet-bag law, and rousing the father to the desperate deed of cutting the tyrant to the heart?" It is this kind of talk which produced the "high-toned gentleman," and which will probably perpetuate him. He grew out of it—knife, pistol, whiskey bottle, and all—as naturally as weeds out of a manure-heap.

It seems that some thirteen years since an American vessel, the *Canada*, was cast away in Brazilian waters, and was boarded by a party of Brazilian soldiers, who took possession of her, whereupon the Brazilian authorities sold her. After much talk and examination of witnesses, and years of delay, Mr. Seward directed General Webb to demand $400,000 by way of reclamation, and this he did in 1867. The Brazilian Minister of Foreign Affairs decided to apply to Mr. Seward to re-examine the case and modify General Webb's instructions, and, applying directly to Mr. Seward through the Brazilian Minister at Washington, this was done. Whereupon General Webb got very angry, and told the "imperial"—the slighting quotation marks are his—government of Brazil that it was a government "based upon the institution of human slavery;" and wrote to Senhor Paranhos, as his diplomatic opinion of the Brazilian character, that he well knew that "dislike of all foreigners is a national trait;" and, after doing a number of other things, he demanded in high dudgeon that his passports should be given him "and the customary permit to pass his effects through the custom-house." The Brazilian Government seems to have, whether intentionally or unintentionally, put a slight on the General in the first instance; if intentionally, it could hardly have selected a victim more likely to give trouble, inasmuch as there is probably nothing he enjoys more than "demanding his passports;" but it must be admitted that a less choleric plenipotentiary than he would have fired up at a refusal to discuss with him a question he had been expressly commissioned to settle.

Colored men have been summoned to serve both on the grand and petty juries in Washington, which is a real advance. We doubt whether the opponents of capital punishment would say the same of the execution of a colored murderer by a colored sheriff and a band of colored deputies the other day in South Carolina, particularly as the work was not well done, and indeed was marked by some highly novel features. The sheriff and his deputies in the first place had an animated discussion in the criminal's presence, after his arrival at the place of execution, as to whether he should be allowed to fall three feet or only a foot and a half. To enable him to fall either of these distances, a hole had to be excavated in the ground, and not being found deep enough, had to be dug out still further while the man was suspended. There is nothing more extraordinary in connection with these scenes, which often seem to be made as revolting as possible, as if to furnish illustrations for anti-capital-punishment arguments, than the fact that, though the process of executing criminals is described month after month with the most painful minuteness by the newspapers, sheriffs hardly ever seem to possess any familiarity with this odious branch of their duties.

Mr. Eugene Casserly, one of the Senators from California, has just been making a curious speech to some of his constituents in San Francisco. Of course, "he scored the Radical party" at the beginning of his address; but soon he turned his attention to the Fifteenth Amendment, which he hoped California would reject by a larger majority than it had ever cast for or against anything before. It was a measure, he said, the effect of which would be to elevate the Chinese and negro races, and amalgamate them with the white race. Already negroes were claiming the best seats in our hotels, and railroad-cars, and theatres; the hordes of Asia would overrun the Pacific coast if the Amendment were adopted, and Chinese labor would come into fatal competition with that of the white man; he would rather the Pacific Railroad had never been built than that Chinamen should have been imported to build it; it was the clear duty of all classes of men to unite and break down the system of importing Asiatics; just at present the Chinaman was in contact only with the day-laborer, but soon he would be in competition with the mechanic and artisan, etc., etc.

He concluded with an appeal to the Democracy to stand firm for the policy of exclusion. Some of Mr. Casserly's other reasons for opposing the inevitable are among the good answers to those we have quoted: "The Chinese," he warned his hearers, "were the most frugal, industrious, and ingenious people on earth; they would labor for half the wages of white men"—and he might have added that, as a rule, they will do considerably more work at this lower rate of compensation. Mr. Casserly's countrymen—whether he is an Irishman or an American—are not above the suspicion of "sojering" when at work for wages, and are apt to want a certain part of the day entirely for themselves; while the Chinaman, trained in a different school, considers his whole time his employer's, and, by the steadiness of his industry, accomplishes more, even of the heaviest work, in a given number of hours, than the robuster white. There is no information, so far as we know, that the average Chinaman is less moral than his Christian neighbor; and if he is more ingenious, more industrious, more saving, and equally good, what call is there for all classes of men, or any class, to rise up and do anything to keep his cheap labor out of a country that cries aloud for it? And how does a Senator of the United States, speaking in a State where, as is currently reported, there are numerous secret leagues pledged to drive out the Chinese by all sorts of violence, justify himself for inciting ignorant men to cruelty and law-breaking? A demagogue is often compelled by his trade to be most wicked and seem most stupid; but a worse performance than this of Mr. Casserly's is hardly to be matched by anything in the history of slavery.

The extraordinary treatment experienced by Mr. Townsend, of the New York bar, from Judge Cardozo, has called forth, according to the New York *Times*, some talk of a "Lawyers' Protective Association," or some similar league, partly for the protection of lawyers against the bench, and partly for the enforcement of some kind of discipline amongst themselves; but we venture to say that even if such an association were formed, it would not do much good; first, because the judges care every year less and less about what the bar thinks; and, secondly, because each member of the bar cares every year less and less about what the others think. The judges are less dependent than ever they were on professional reputation for their places. The opinion of their brethren does not put them on the bench, and cannot bring them down from it. Admission to the bar, too, is so easy that there are swarms of men in its ranks who have neither knowledge nor experience enough to make the opinion of other lawyers of any consequence to them. They pursue their calling as they would keep a store, and would despise the efforts of their rivals over the way to call them to account. The fact is that the character of the bar, like the character of every other body of persons, can never be better than the average character of the individual members, and the thing to be done to raise it is to keep the knaves out, rather than discipline them after they get in. The best of all means of discipline, however, is an upright judiciary. A judge ought to be the terror of knavish practitioners; if he is not, they are sure to laugh at the efforts of their brethren to correct their manners and excesses. When the Law Institute here tried to keep out or turn out Edwin James on learning that he had been disbarred in London for professional misconduct, he valiantly took the stump and showed that the movement against him was due simply to the hatred of a corrupt and bloated aristocracy for a friend of freedom and of man; that his wife, whom he had recently married, despised the accusations brought against him; and in fact so wrought upon the feelings of a

crowded meeting of the younger jurists that they hailed him with enthusiasm as the victim of an odious tyranny, and he is at the bar to this day, practising furiously.

The news from Nova Scotia is of unwonted interest to such Americans as pay any attention at all to Provincial affairs, although it is, no doubt, easy to overestimate its importance. It will not be this year or next that we shall see the American flag flying over the Halifax citadel. But there undoubtedly is a vigorous and, we do not doubt, a growing party in the Province who have decided to speak out boldly and regularly and preach annexation as hitherto, for a year or more, they have been preaching repeal. Several of the ablest journals in the Province have declared in favor of making it a State in the Union as soon as may be. Entire dissatisfaction with the Canadians, whose yoke, in the way of taxes, is heavy, and is growing heavier—for the Dominion annually falls behindhand—united with the prostration of all business consequent upon the repeal of the reciprocity treaty—which they bitterly attribute to Canadian sympathy with our rebels—has overcome the scruples born of traditional loyalty, and the Nova Scotians have decided to talk, at any rate, in a loud and businesslike manner about cutting the English connection. On this side of the line, the waiting will be patient, though no doubt the welcome would be hearty. If they can get England to give up Halifax, and will take a share of our national debt, three hundred thousand citizens of the same race, religion, and education as the majority of the American people will be a welcome addition to the body politic.

The House of Lords, after much threatening and vaporing, seems to have come to the conclusion that discretion is the better part of valor, and has read the Irish Church Bill a second time, by a majority of thirty-three. But a theory was devised to cover its retreat, which not only meets the present case, but, like all theories of any value, will meet all other cases of the same kind that will ever arise, viz., that the House of Lords, though a branch of the legislature—and indeed a co-ordinate branch—has for its special function the restraining of the House of Commons whenever it attempts to act in hostility to the will of the nation. To be sure, there is nothing so unlikely as the persistent opposition of the Commons to the will of the nation, unless it be the concurrence of the Lords with the nation on any question whatever against the Commons; but then it is hardly worth while to examine too closely the figments with which the Lords seek to disguise the real nature of the change which is coming over the House. It is falling, not, as Burke anticipated, before revolutionary violence, but by natural process of decay. The peers have lost all interest in their functions. They have now for thirty years refused either to judge or legislate, and the younger men have grown up without the feeling that they have any duties to perform. They accordingly devote themselves steadily to amusements, particularly gambling on horses, and house after house is going down on "the turf." The Duke of Newcastle's ruin has been accomplished within the last month, making the second great peer who has been brought to grief within a year. His creditors are now fighting with his mother-in-law over his wife's diamonds, and the reverence of the people for "the order," we need hardly say, is not growing, nor is the popular conviction of its value to the government. However, there is but little danger that the House of Lords will disappear from the government. It costs but a trifle, and adds considerably to the splendor of the monarchy, and provides, or is likely to provide, a convenient and brilliant mode of rewarding successful talent as soon as the life peerages come into vogue.

All other questions in English politics have faded into insignificance in the popular mind, owing to the excitement over the Lords. There is a disposition in all quarters to let Mr. Motley severely alone for the present, the experience of the public in the matter of entertaining Mr. Johnson having inspired salutary caution. But should a treaty be drawn up and ratified, there will probably be an outburst of rejoicing which will beggar relation, and Mr. Motley can hardly do better than prepare his digestion for an ordeal of unusual severity. There is some discussion going on still on both sides of the Atlantic as to the extent to which Mr. Motley's instructions vary from Mr. Sumner's speech, but, after much sifting, it appears to be now established that Mr. Sumner's estimate of the amount of damages due has not been adopted. There has been some dispute as to whether Mr. Sumner claimed damages for the proclamation of belligerency, and persons who said he had have been freely charged with misrepresenting him. We have read the speech a great many times, and have examined it carefully on this point, and advise anybody who entertains any doubt about the matter to look at what he says on the "rule of damages." His application of the "law of nuisance" to the case seems to have been due to forgetfulness of the fact that international usage rests on the hypothesis of the equality of nations, and the absence of any superior among them capable of issuing and enforcing a command, and that therefore all talk of the exaction of penal damages or "smart money" *under the law*—or, in fact, in any way except as a penalty levied by a conqueror—is in a diplomatic controversy out of place. The whole matter, however, now seems to be in a fair way of settlement, and may as well, until it presents some new phase, be let alone by the press—a conclusion which, indeed, the press on this side of the water at least seems to be rapidly reaching. The anxiety about it is undeniably all in England, as well it may be if the doctrines laid down and acted on by Earl Russell be indeed law.

The news from Spain is simply that Serrano has been installed as regent, and has taken the oath to respect the constitution. The chances of Montpensier for the throne seem to improve slightly, but only slightly, and the future continues to look as uncertain as ever. The debates in the Cortes are in the meantime revealing the existence of a good deal of oratorical talent amongst the Republicans, who seem to be gaining ground steadily, not so much owing to their success in demonstrating the fitness of Spain for a republic, as to the failure of the monarchical party to provide a king and the continued maintenance of order without a king. A sort of test-measure, in the shape of an act providing for the expulsion of the Duc de Montpensier from Spain, was introduced into the Cortes by the former, and its rejection seems to show that the monarchists have not given up hope, and that Bourbons are not so obnoxious as they seemed.

The King, as the latest advices gave us reason to anticipate, has prorogued the Italian Parliament, and such was its demoralization, in a political sense, that the best thing it could do was to separate. The attendance had been shamefully dropping off, in spite of the important measures under consideration, and the number of factions had multiplied. The new ministry had utterly failed to secure confidence or a following, and the good results which it was hoped would flow from the reconciliation of the *Permanente* have been far from realized. The men who gained by it an entrance into the Cabinet appear to have retained their opposition even for their new colleagues, and to have robbed the ministry of a unity which it would also have lacked from the temporary and conditional acceptance of certain members. Cambray-Digny, the reputed author of the arrangement, has so little profited by it that his financial scheme has been promptly rejected; but this is perhaps the least evil consequence of a coalition not founded on a real *rapprochement* of parties. The parliamentary dulness occasioned by all this division and distrust, and the continual crumbling and repair of the ill-constructed Cabinet, was relieved for a single session by a speech of the deputy Civinini, whose character had been assailed without proof by Crispi. In a long and fiery address the former challenged the latter to declare then and there the facts on which he rested his constant insinuations; but Crispi, though much agitated, declined to say more than that he could, if he chose, implicate others, among whom Civinini's case would be "but an incident." The Chamber was so carried away by the eloquence of the accused deputy that it was obliged to take a recess before it could proceed to business. This incident, and the scene in the Cortes after Castelar's speech, prove that the Continental peoples have not lost their impressibility to oratory, however true it may be, as the *Spectator* lately represented, that in England the day had passed when great speeches took Parliament off its feet and rendered an adjournment necessary.

THE ŒCUMENICAL COUNCIL.

The preparations for the Œcumenical Council at Rome are still going forward; and if the Pope lives and no political convulsion occurs in Italy, it will meet in due course in December next. The invitation to the Greek Church to send representatives to it met some time ago with a decided rebuff, the Patriarch at Constantinople refusing to allow it to be read to him, owing to the assumption in it of superiority on the part of the Pope, while expressing his willingness to accept it if the Pope, to use a profane expression, would consent to come down off his high horse and meet the other bishops as his equals. The Protestant Churches have either turned a deaf ear to the summons or scornfully rejected it. In any event, however, the gathering will be a great one; and the presence of bishops from all parts of the world will curiously enough furnish at every session a striking illustration of the power and progress of the science which it is one of the objects of the Council to abase and bring to naught. All the bishops are willing enough to attend, so far as is known, as they all have troubles in which they need either the counsel or support of their brethren. In Austria and Italy they occupy a position of antagonism towards the state which is subjecting them to daily humiliation and annoyance, but from which they cannot be released without the authority of the Holy See. In France they are nominally the clergy of the state religion, but in reality the state has no religion, and they have no control over education or anything else, and the honors accorded them by the functionaries are therefore little less than a mockery. In England and Ireland and the United States all is going well with them, or, at least, as well as they have any right to expect, as far as regards their temporal affairs; but here, as in all other countries, modern society is in a condition, both moral and religious, which calls for a fresh adjustment of the relations of the Church to the world. It is to effect this adjustment, and furnish the clergy with a fresh set of instructions, that the Council is called. The growth of materialism, the increasing resistance to clerical education, the growing laxity of the marriage bond, and the revival in many countries of the practice of abortion, after fifteen hundred years of practical extinction, and the general hostility to "the principle of authority," are amongst the evils which the Church feels just now in a special manner required to combat, and against which the Council is expected to furnish them with new weapons, or, at all events, new inspiration.

The perplexity of the clergy is increased in every country, too, by a singular and rather novel defect in the ecclesiastical organization, which has only shown itself within the last twenty years, which calls for a prompt remedy, and which is daily attracting so much attention as to amount almost to a scandal. This defect consists in the fact that—if we may be allowed again to resort to a profane simile—while the enemies of the faith are all armed with needle-guns, its defenders in the Catholic ranks still carry the arquebuses and flintlocks of the seventeenth and eighteenth centuries. Against the Protestants, who, when changing their faith, simply substituted one infallible guide for another, the clergy were able to make a valiant stand, even with the old mediæval armament; and to the scoffing, and licentious, and ignorant infidels of the eighteenth century they opposed a vigorous resistance by the aid of holy living, great literary culture, thorough acquaintance with the history of philosophy and with science as it then stood. We do not mean to say, of course, that every parish priest was a match for the philosophers; but the Church had constantly in its service a corps of writers and orators who, in all departments of learning, as learning was a century ago, were able to hold their own against the men of the world. She had her historians, metaphysicians, natural philosophers, and philologists, who were always able to give a good account of the enemy.

This is now completely changed. In the field of historical and philological criticism, in which such heavy blows have been dealt at the faith, the Catholic clergy seem incapable of resistance, and confine themselves to angry denunciation, the enemy all the while pushing his approaches to the very gates of the city. In Germany, they have, unless we are greatly mistaken, only one champion, the Archbishop of Mayence, von Ketteler, to hold the field against the host of enemies which that country has produced. In France and England, they have absolutely nobody to speak for them. In the department of natural science, from which the Church is suffering most, we believe there is not a single clergyman who can raise his voice against the Huxleys, Büchners, and the like, without exposing himself to overthrow. In history, through which so much damage is done to ecclesiastic tradition, they are equally helpless, and there is growing up about them a generation which looks on the clergy with contempt for their ignorance. To retain any hold, therefore, on any portion of society but the peasantry, some means must be devised of foiling the enemy, either by the formation of a special corps, such as the Jesuits were once, for direct attack, or by working a diversion—such as getting up some kind of moral revival. Of the ability of the Catholic Church to produce critics or natural philosophers equal to "the demands of the age," every one will of course form his own opinion. At all events, the whole subject of the best mode of combating the materialism of the age will of course furnish the Council with a subject of anxious discussion.

The Pope, however, is up to the present moment the person most interested in it, and most confident in its efficacy. He is a man of very moderate ability and no culture, who passed his life till the age of fifty-three in an Italian convent, and possesses absolutely no knowledge of the world or its ways. His opinion of its condition may be learnt from the famous "Syllabus." He thinks men are all on the road to damnation; that religion is falling into contempt; that the zeal of the clergy is waxing cold, and their discipline relaxing; and he thinks the only remedy lies in a General Council, and has accordingly summoned it. His difficulties, however, are great, and his own simplicity and ignorance render his position very perplexing. A French writer, supposed to be officially inspired, has published a pamphlet, showing that the first eight General Councils of the Church were summoned by the Emperor, either on the Pope's request, or in defiance of him, and he denies the competency of the Pope to summon one on his own motion. To which Monsignor Nardi has been ordered to reply, and he accordingly knocks down his enemy at the first charge, and proceeds to strip his body, alleging that the pamphlet was written by an Italian, and printed at Florence in the royal printing-office for General Menabrea, and then shows that the writer is an ignoramus; that the Popes summoned all the Councils that ever met, and that, if they did not, it was their right to do so, and that the only business a layman of any rank has with the Church is to obey its teachings. The Pope's expectations are said not to be shared by anybody of those about him except his chaplain, and the French bishops will, it is feared, give trouble. Their own Government and they are at loggerheads on a variety of questions. The Emperor is opposed to the Council, and unwilling that they should attend it. Should they do so, and make their position in France the subject of complaint, it will lead, it has been more than hinted, to the withdrawal of the garrison, and the abandonment of the assembled ecclesiastics to the tender mercies of the Roman population. Threats of this kind are, however, said not to trouble the Pope seriously. He believes that the temporal power has been ordained by Providence for the preservation and the independence of the Holy See, and that in some way or other care will always be taken that His Holiness does not become the subject of a temporal ruler, and to the Papal territory outside Rome he attaches no special importance. That the Church is in any serious danger, none of its pillars think. Having survived so many revolutions, they say, it is not likely to succumb in an age of perfect freedom; and they are right. The question is, what is to be the amount of its influence on society?

"HOW THE THING IS DONE."

We do not believe that the popular readiness to be taken in by high-sounding names in the least diminishes the guilt of those who avail themselves of it. On the contrary, we are rather inclined to think that the frauds perpetrated by men of reputation are amongst the worst. But we do believe that the readiness of people to be swindled seems to increase every day instead of diminishing, and that there seems to be a fascination about certain methods of swindling, and about certain names in the history of swindles, that lures not only fresh victims to destruction, but brings whole troops of former victims with

gleeful haste to a second and more deadly sacrifice. Such a fascination appears to be exercised upon the public mind by the name of Mariposa, which has, as we see from the daily papers, been recently gathering in its fourth or fifth crop of smiling victims. We are acquainted with no better instance of perverse infatuation than is presented by the history of this company.

In the year 1858, General Frémont's title to the Mariposa estate was confirmed by the Supreme Court of the United States, and in a few weeks thereafter commenced the series of events which have made the name of Mariposa for ever famous. The expense of carrying on the suit for this estate had involved Mr. Frémont in debt; one of his creditors obtained judgment against him in one of the State courts of California, attached the estate, and caused it to be sold by the sheriff—the creditor himself becoming the purchaser. This happened in the fall of 1859. Another of Mr. Frémont's creditors—a San Francisco banker—in order to secure his own claim, then paid off the first claimant, and entered into an agreement with Mr. Frémont that he, the banker, would retransfer to Mr. Frémont *seven-eighths* of the estate if by a certain time his advances were fully repaid him, retaining, we suppose, one-eighth of the estate as a bonus for his loan. This happened in 1860, and from that time forward Mr. Frémont has not, so far as the public are aware, had any right, title, or interest to the famous Mariposa estate, save the right to redeem seven-eighths thereof upon the payment of various sums of money, amounting to about $300,000 in gold.

On the 25th day of June, 1863, the Mariposa Company was "organized under the laws of the State of New York," with a board of directors containing the names of several "well-known citizens of New York," whose "high reputation for honesty, skill, and business tact" was alone sufficient to ensure success to any enterprise. These gentlemen assumed gratuitously the responsibility of supervising the affairs of this company for the benefit of the widows, orphans, retired capitalists, and others who, by means of flourishing advertisements, editorials, and encouraging notices in "financial columns," to say nothing of morocco-bound, gilt-edged pamphlets, were invited to secure, while there was yet time, a share in this promising investment. And certainly it was a promising investment. Had not the Mariposa Company a splendid bargain when they purchased of Mr. Frémont for the trifling sum of ten millions of dollars the immensely valuable privilege of redeeming from pawn seven-eighths of the Mariposa estate on payment of only $300,000 in gold? Of course the investment was a promising one, although scarcely sufficient care was taken by the well-known citizens forming the board of directors to acquaint the share-purchasing public with the fact that said public was really purchasing only so many millionth parts of an overdue pawn-ticket. But where such complete mutual confidence prevails as existed between the Mariposa directors and the public, there is no need of stickling for petty formalities. Where such distinguished citizens come forward and offer the public an opportunity to participate in their most profitable investments, the public has no right to be inquisitive. And the public was not inquisitive. And of course the investment was profitable for somebody.

It is a remarkable fact that the public was never really invited to subscribe to the stock of the company; that no subscription-books were ever opened; but that the whole capital of ten millions was subscribed by a very small number of persons, principally the aforesaid directors, who thereby displayed equal confidence in the profitableness of the enterprise. For these half a dozen gentlemen, who divided among themselves ten millions of dollars' worth of overdue pawn-tickets, called Mariposa shares, did not pay for them in cash; they paid for them by their services in organizing the company, in lending their names to its board of directors, in pledging their reputations for its future good management. They organized the company, printed ten millions of stock, gave some of it to Mr. Frémont to pay him for what after all had a real, substantial value—the right to redeem seven-eighths of the Mariposa estate, and then divided the rest among themselves.

Here, then, we have the Mariposa Company, with ten millions of shares out, with not a dollar of money, but with the inestimable, priceless right of redeeming from pawn seven-eighths of the Mariposa estate on payment of $300,000 in gold, and with a board of directors equal to any emergency. No one has a right to enquire what the gentlemen who owned the ten million shares did with them. The shares were probably not given away, for they brought from sixty to seventy-five cents on the dollar in Wall Street; they were dealt in at the Stock Exchange, were quoted in all the daily papers, and, one way or another, five or six millions were got out of the public for them.

Of course the investment was a splendid one. The company immediately began to pay large dividends from the working of its valuable mines—or at least it would no doubt have done so, had not some minor difficulties arisen. In the first place, the company had no money to work its valuable property; and, in the second place, it had not any valuable property to work. The "ten millions" so far had only procured to the company the right to redeem the valuable property from pawn. The directors were equal to the occasion. The estate was in pawn for $300,000. To pay off these $300,000 and redeem the estate from pawn, and make the ten millions of shares worth a little something more than waste paper, it became necessary, by what is now known as the Mariposa arithmetic, to raise $1,500,000. Nothing easier. Somebody that did not own the estate, of which only seven-eighths appear anyhow to have had any owner whatsoever, suddenly contrived to mortgage the whole estate to somebody else—all well-known citizens, however—for the needed sum of a million and a half; and against this mortgage, as security, the company issued one million and a half of first mortgage bonds, which, under the guidance of the well-known citizens, a confiding public greedily purchased at par. What could be a better investment than a mortgage for a mere nominal sum on an estate just purchased for ten millions of dollars? Of course, nothing could be better; only, unfortunately, the mortgage was not a mortgage, and the man who made the mortgage did not own the estate, and the estate had not been purchased for ten millions of dollars, but continued to belong just as much as ever to the California banker who had bought it at the sheriff's sale, and who did not care one pin how many mortgages people put upon his property, so long as he did not consent to them. It is evident that these first mortgage bonds were not a good investment for the confiding public. In fact, they constituted "Operation" No. 2, only the public would not see it. There is one remarkable feature about these first mortgage bonds: if the proceeds had been properly employed in redeeming the estate from pawn, many of the subsequent iniquities would have become unnecessary and impossible. But with the fatality peculiar to Mariposa arithmetic, it was speedily discovered that the fifteen hundred thousand dollars were not sufficient to pay off the whole three hundred thousand dollars for which the property was pledged; and the well-known citizens, scorning to do things by halves, decided to pay off none; and in fact, so far as known, the lien remains unpaid until this day, and the great Mariposa estate to this day remains in pawn. What other uses the money provided for its redemption was put to does not clearly appear.

Of course, during all this time the company was paying magnificent dividends on its stock—or, at all events, it would have been, if it only had had a little more cash capital with which to develop the magnificent property of the San Francisco banker, in which the company had such a strong contingent interest. Now that the money had been raised to pay off the San Francisco banker—although, as we have said, it never was paid—the company was supposed to have a real, sound, genuine title to the property; and it was easy to induce a confiding public to buy a couple of millions more of bonds—this time second mortgage bonds. And, again, a little later, some money was needed for some purpose or other, and eight or nine millions of preferred stock was created, which the confiding public could have in exchange for their original shares on payment of so much per share. The confidence of the public was not to be shaken; they paid up once more, and took the preferred shares in place of the others. And then, after a while, it began to leak out that the company could not pay the coupons on its first mortgage bonds, and that the holders would not have much redress at law if they should seek it, inasmuch as these first mortgage bonds were not much of a mortgage after all, since no one at the time they were issued had any right to mortgage the San Francisco banker's valuable estate except himself, and he was not aware of having mortgaged it. But if the holders of these so-called mortgage bonds would

take a new bond in exchange for the old, and pay up a liberal sum in cash, the company was now prepared to place a real mortgage upon the San Francisco banker's estate, with his consent or without. The confiding public paid up its cash, surrendered its old bonds and took away its new bonds, which were and are precisely as good a mortgage as the old.

In these various ways a number of persons, their successors and assigns, calling themselves the Mariposa Company, did actually succeed in selling to a community of business men some seventeen or eighteen millions of dollars of securities based upon a property *to which they never had a title, and for which they never paid a cent.* Is it an exaggeration when we say that the public *wants* to be swindled, that there is at times a positive demand for swindlers which must be satisfied, no matter whose reputation is sacrificed? Of course, finally the company came to grief. Some of its friends had to come forward and state its position to the public; and the facts, as we have given them, were printed and reprinted, and it became very generally known that the company had no title to the estate, never had had, that all its securities were so much waste-paper, that there was no mortgage on the estate, and that the estate had belonged always to its rightful owner—the San Francisco banker—until it was sold at sheriff's sale for unpaid taxes. There was, however, a method by which all might yet be saved. If a confiding public would only furnish cash enough to pay the overdue taxes and redeem the estate, and to pay two or three hundred thousand dollars of other claims accrued against it, then the real owners of the property were prepared to surrender it, not to the Mariposa Company, but to third parties, who should hold it for the joint benefit of the real owner and of the parties contributing the cash. A confiding public did contribute the cash, it surrendered its bonds and shares and paid up its cash, and received in exchange a new document, this time called a "trust certificate." This arrangement, which seemed to deliver the company finally from all possible chance of ever acquiring possession of the valuable property after which it was named, seemed at the same time to revive all the former confidence of the people in the immense value of the shares which did not represent it. The preferred shares of the company, which at one time were not worth eight dollars a share, suddenly began to advance in price; all the people who had been sufficiently unfortunate to lose money by buying Mariposa shares or bonds before were now advised to buy again, certain that this time they could not lose, but would regain all their former losses. A confiding public did buy; Mariposa preferred shares advanced from eight dollars a share to thirty, and from thirty to fifty, and from fifty to fifty-two, and the higher they went, the more a confiding public bought them; the property improved immensely at the same time, the mines yielded more liberally than ever, the "new machinery" worked to perfection, and although this had nothing to do with the shares of the Mariposa Company, which did not own the estate, still, by some mysterious process of sympathy, the improvement in the estate caused a steady improvement in the shares, until one fine morning a confiding public discovered that the persons who had advised them to buy were themselves selling. The usual result ensued: the public became frightened and wanted to sell likewise; everybody wanted to sell; there were no buyers, and in forty-eight hours Mariposa preferred shares declined from fifty-two to thirteen dollars per share, and the eighth or ninth batch of Mariposa victims was suddenly reduced from wealth or comfort to poverty or ruin. We are curious to see what contrivance will now have to be invented in order to raise the wind once more.

The whole story is both marvellous and valuable, even if it ended here; which it probably will not. Somewhere in the country another batch of dupes is doubtless waiting to be entrapped.

MR. HENRY J. RAYMOND.

As one of the three men who may be said to have given New York a metropolitan press, Mr. Raymond would have occupied a very prominent place in the history of American journalism, even if he had not played a prominent part as a politician during one of the most eventful periods in the history of the country. He made his appearance in the political arena just as the Republican party was in process of formation, he had a leading share in its organization, and he served it faithfully till the close of the war. He may be fairly said, indeed, to have come out of the war in the position of one of its foremost and most trusted leaders. Although he had never been a thoroughgoing party man, and had never been looked on by party managers as a person to be counted on in all contingencies, and had retired to his tent in a somewhat soured mood after the defeat of Frémont in 1856, there was probably nobody in its ranks who could, in 1865, when Lee surrendered, show stronger titles to its confidence. The reason was that, though he doubted much in debate, when it is allowed to the wisest men to doubt, when the moment for action came, he never doubted at all. It is a good deal to say of a journalist in Mr. Raymond's position, that is, a position in which he was in such close relations with the men in power that he learned what the people happily did not know—how much the crisis puzzled them, how dark their path seemed to them, and how completely they were at the mercy of circumstances—that from the day on which South Carolina seceded till the day on which Richmond fell, he persistently, unceasingly, and vigorously preached the indissolubility of the Union, and the duty and possibility of saving it by force of arms. In other words, in the presence of the most tremendous problem statesmen have in any age or country had to face, he never hesitated about the course to be pursued, and advocated it as cheerfully and courageously in the darkest as in the brightest hours; and the course he advocated proved the best of all possible courses. When the fighting was over, his tendency to hesitate once more showed itself, and it showed itself, unfortunately for him, at a period when party feeling ran unusually high, and entire freedom from doubt on any political subject whatever was considered the highest qualification of a statesman. The consequence was that he fell from the party eminence the war had won him, and made no effort to regain it, satisfied by this time that the constitution of his mind unfitted him for the struggles of the political arena.

That he should have been seduced into taking part in them by his readiness and brilliancy as a debater was his greatest misfortune, not only because he wanted the thoroughgoing temper which was necessary to victory, but because it in some degree interfered with his usefulness as a journalist. He was as an editor constantly trammelled by his sense of the necessities and limitations of his position as a politician, and the habit thus bred lasted after he had ceased to be a politician. But for this he would probably have been the most successful journalist that has ever been seen. As it was, it would be difficult if not impossible to find his equal—to say nothing of his superior. His ability in statement was always marvellous, and so were the skill and vigor with which he was able to crowd the points of a case into a column or two of a newspaper, and not the least of his virtues as a writer was his admirable English. The very vividness, however, with which he saw that side of any question which he had taken up for presentation seemed to alarm him after he saw his article in print; but it was not the alarm either of a "trimmer" or time-server or demagogue, but of a sensitive, conscientious, and kind-hearted, and, let us add, very modest man. He feared, in the first place, doing opponents injustice; he doubted, in the next place, his own processes of argumentation, or, if he had full faith in his conclusions himself, doubted their acceptance by other people. Whatever there was of infirmity in this was intellectual infirmity, but it was atoned for twice over by a delicacy of the moral fibre not often found amongst editors. Nobody was more profoundly sensible than he of the defects and dangers of journalism as a profession—defects and dangers which nearly everybody sees but editors, and which it would be well if editors saw oftener—the recklessness, haste, indifference to finish and accuracy and abstract justice which it is apt to beget in the minds of those who pursue it, and especially of those who pursue it eagerly. Let us add that nobody has done more, we doubt if anybody has done so much, for the elevation of the profession. In the art of making a good newspaper, we need hardly say, he was a master. The *Times* under his management probably came nearer the newspaper of the good time coming than any other in existence: in this, that it encouraged truthfulness—the reproduction of facts uncolored by the necessities of "a cause" or by the editor's personal feelings—among reporters; that it carried decency, temperance, and moderation into discussion, and banished personality from it; and thus not only supplied the only means by which rational beings can get at the truth, but helped to abate the greatest nuisance of the age, the coarseness, violence, calumny, which does so much to drive sensible and high-minded and competent men out of public life or keep them from entering it. Moreover, it rendered journalism and the community the essential service of abstaining from the puffery of worthless people, which does so much for the corruption of our politics.

Mr. Raymond paid the penalty in his latter years of having worked

too hard in his youth. He had overtaxed his nerves, and this, combined with a constitutional tendency not precisely to despondency but to hopelessness, led him to doubt the efficiency of nearly all reformatory efforts. Nearly everybody whose business it is to preach and persuade has seen how slowly reason makes her way amongst men, by how much baseness, and meanness, and selfishness the noblest causes are hindered, and needs both to be extraordinarily hopeful and extraordinarily healthy to avoid turning aside, now and then, in weariness and disgust. Journalism is probably, to anybody who needs positive or palpable results, day by day, to keep his ardor alive, the most discouraging of professions; nothing but either strong faith or a great deal of self-confidence is sufficient to satisfy a man that he is really doing more than increasing his list of subscribers. Mr. Raymond achieved everything in it that can be called success, except his own satisfaction with the result of his exertions. There was nobody who knew him well who did not rate it more highly than he, or who will not feel that his loss is an irreparable loss both to the calling which he did so much to dignify and to the country.

THE BOSTON PEACE JUBILEE.

JOINING the immense throng which on Tuesday, the 15th, at three o'clock in the afternoon, was setting like some tidal wave towards the Coliseum, we soon found ourselves, after a successful passage of the wild waters of the Public Garden, and a providential avoidance of the temptations of the numerous "emporiums" which on every side were offering their wares—as our friend said at the time, "to the unwary"—we soon found ourselves, we say, gradually wending our way over the once tumultuous but now solidly bricked and mortared Back Bay to the doors of the building. The first thing, therefore, that attracted one's attention was the crowd; and the chief result of the most protracted investigation of this subject begun in the streets, continued and completed in the Coliseum, was that the crowd was a big crowd. It was not a noisy multitude—on the contrary, it was orderly and polite; nor was it a funny throng—not a word of chaff of any kind did we hear from a solitary individual; nor was it an excited throng except, as we shall hereafter notice, at the playing of the "Inflammatus" and the "Star-spangled Banner." Nor was there any difference between the city people and those from the country. All were dressed alike, from Chicago to Cambridgeport—though here, too, we must admit the exception noticed by our friend, of a little boy whose throat was tied up in a star-spangled cloth of many colors, and who, it must be said, looked so uncomfortable in it as to make it evident that he considered himself in a false position. And even with regard to him, there was necessarily a doubt whether he was not an advertisement. On the whole, one found in the crowd just that accustomed monotony which all the philosophers, from Tocqueville to Mill, have taught us to expect as the legitimate growth of democratic institutions. There was, therefore, a sober gladness in the thought that here was new evidence that feudalism was still far, far away from our happy land. Blessed monotony! we reflected, which assures to us those other blessings of life, liberty, and the pursuit of happiness, which less favored countries—governed it may be by kings, it may be by emperors, it *must* be by despots—can never know!

Perhaps the most noticeable fact about the crowd, next to its size, was the marked absence of the "American type"—of that long-haired, cunning-eyed creature, with high cheek-bones, eagle nose, and fatal mouth, who has for so many years been the model for caricaturists on both sides of the Atlantic. If you look at *Punch* or any of the recent American caricatures of the *Alabama* claims difficulty, you will see Brother Jonathan represented just as he was forty years ago. But the character has ceased to exist—if it ever existed—and with the character has gone the face. It would have been as difficult to find the type of which we are speaking in the Coliseum on Tuesday as it would be, we fancy, to discover among the rising English generation the typical John Bull of other days. There was the "modern face" in abundance, with its thin lips, hungry eyes, hollow cheeks, and altogether Pre-Raphaelite cast; there were foreigners of all kinds; there were New Yorkers; but Brother Jonathan, having disappeared from off the face of the earth, was not there. The ordinary rule about speaking no evil of the dead can hardly apply to a dead type, and we "gladly avail ourselves of this opportunity" to express our deep satisfaction that he is gone. He was not a happy type, nor a benevolent type, nor a very profoundly intelligent type, 'cute as he was. In fact, he was rather a mean type, with his provincial assumption, and his tendency to cheat, and his calculating disposition, and his unnecessary contempt for all types but his own; and his disappearance may be acquiesced in, we should say. Of course we know how much can be said in his behalf by a certain Yankee poet who has celebrated his praises as well as sung his defects; but it is Birdofredum Sawin of whom we have been speaking, and not Hosea Biglow. That the Sawin family is going out would be reason enough of itself for another Peace Jubilee by their successors.

This being so, and the Gilmore family not being in any way, so far as we know, connected with the Sawins, why was it that the Peace Jubilee should have been got up so much in the old Sawin manner? Suppose that the leader of a Locally Celebrated Brass Band does indulge the natural desire to extend his fame over a larger area of the earth's surface than it has heretofore covered. If a jubilee will do it, and if the prominent hotel-keepers, and steamboat-captains, and pop-corn vendors find their account in a jubilee, surely there is something finely human about a jubilee basing itself, as this one would, on the laudable desire of pop-corn vendors, steamboat-captains, hotel-keepers, and musicians to increase their reputation and to provide for themselves and families. But why, in that Sawin manner, go and endeavor to persuade the public that your sole object is to herald the return of peace and the election of Grant? The old maxim that the people wish to be deceived, and therefore should be, is surely inapplicable nowadays.

Once in the building, there was a charming surprise. The art-critic of the *Tribune* should have been there to see the only building in America deserving better than contempt. The interior, unspoiled by paint, was decorated in every possible way with flags and festoons. The gallery, by means of a light-colored border which ran beneath it round the building, was relieved of that portentous heaviness which galleries generally labor under. The seats were simple benches with backs, and the general air of the place was that of an impromptu tent. There was no appearance of that striving after the impossible which generally ends in the tawdry and undesirable.

The music performed on the first day of "Jubilee Week" consisted of some very simple selections and some very difficult ones. To show the range which the performance took, we may say that "Tannhäuser" and the "Anvil Chorus" were both given. As we have already mentioned, the "Inflammatus," of Rossini and the "Star-spangled Banner" called out the most riotous applause, and, so far as we could observe, the emotions among the audience excited by each were precisely the same. How to account for this we do not know; but it is certainly a singular fact that all large American audiences, when deeply moved, exhibit emotions on a very different plan from the one consecrated by convention. The only expression which you can count upon is a fierce exhibition of delirious joy over the music or allusions of patriotism. On all other occasions it seems mere chance what is done. When Jefferson was acting Rip Van Winkle the other day, the audiences kept up roars of laughter through the most pathetic passages, and atoned for the mistake by becoming indifferent as soon as the acting became amusing. So with the "Inflammatus;" it seemed to extinguish for the moment the emotions it was intended to excite, and to bring into activity their exact opposites. We do not understand the phenomenon, and we leave it to be explained by those who do.

If the managers intended to make the Jubilee excel all previous concerts in volume of sound, they certainly failed. There was very little more noise, except now and then, than an ordinary orchestra and chorus produces. Indeed, other things being equal, there is no reason why a note struck on a hundred instruments should bring out a louder sound than the same note struck on one. The sound is the result of a certain number of vibrations, and the number of these vibrations is determined, not by the number of instruments, but by the note. The real reason why a thousand instruments do make more noise than one is that the distance of each from the ear is slightly different, and therefore the vibrations, interfering with one another, confuse and multiply the sound. Besides this, the time grows more imperfect as the number of instruments increases. If a thousand violins were arranged in a circle round a single listener, and the same note was to be struck at once on each, the listener would hear nothing more than one note. Of course, the experiment is practically impossible, for the same note would not be struck on each at precisely th same time. The audience seemed to be rather disappointed at this lack o noise, for they had been promised not only quality but quantity; and now, though they had the biggest drum ever made, and the biggest crowd ever got together, and the biggest building ever built, and the biggest chorus and orchestra, still they had not the loudest noise. However, when the guns fired, and the bells rang, and the hundred real anvils were beaten in exact time with the music, the audience was quite carried away, and the performance closed amid such enthusiasm as it is only given to great crowds to manifest.

ART-STUDY IN THE IMPERIAL SCHOOL AT PARIS.

No. IV.

A DINNER TO M. GÉRÔME.

ONE day, after I had been playing truant with some American friends for half a week, Lenoir and my compatriot Tom East took the trouble to beat me up in my retirement. "We invade this paradise of *chic*," Lenoir said, surveying with satire the chandeliers and mirrors of Voisin's eating-house, where they had detected me, "to invite you to invite the *patron*. You ask us handsomely enough to dine; will you ask M. Gérôme? We are soliciting funds for the pupils' annual dinner." And the extremities of his mouth, as he set down his glass of Macon, preserved an insinuating angle that would have opened the purse of Harpagon.

"I see," remarked the new contributor, in an aside expressed in his native language, which is so easily supercilious; "a table with Apollo at it; the feast of reason and the flow of soul."

"No such luck, I believe," said East; "and the dinners, I'm told, are but plain ones; but they bring out the whole pantheon of our pupils, past and present. And it's a study of character; for I observe that, among our friends of Bohemia, every man produces his own individuality without being afraid, like the statues of the Greek divinities."

Lenoir treated the affair less analytically. "It is a decent homage to the *patron*," said he; "we submit once a year; it is feudal."

Perhaps mankind cannot exist without a religion. Coming away from many beautiful and touching forms of faith in my own land, I missed for some time the corresponding development when plumped into the midst of the Latin Quarter. I have described the hardy humor with which our fellows will take off the mummeries of a church which they consider a pricked bubble, a disillusion. They will not only sing ribald songs in their *Te Deums*, but, what is going much further, will chant the most solemn words with absolute innocence and callousness. Again, the sense of bravado which gives zest to our ordinary English profanity is quite gone, and the students hardly ever swear, and never with the least enjoyment—there is nought of faithfulness to feel a shock; there are no oaths, as there is none of the complementary piety. Christianity, of course, as most of us understand it, is as invisible to them as the ether around the stars; for they know nothing of our Protestant faith; and if I express my belief, they indulge me just as they do the priest-ridden women of their families, as a passive victim domineered by the thinnest and most obvious of bugbears. In the literary cultus, they are at present equally prone to scepticism. The old enchantment of Victor Hugo, for instance, is now effectually dispelled; their demonstrations at the revival of his plays were political, and they will smile at his airs of martyrdom just as we do; and he has no successor. Their phase of patriotism is a difficult study. I find it hard to detect anything beyond the general pride in being as Parisian and civilized as possible; there is none of that adoration of the state felt by the Athenian of old, or by the citizen of South Carolina in our own time. Centralization and the modern distaste for military service have almost turned their ideas topsy-turvy. Contemplating my comrades, then, and finding them lacking in matters of theology, letters, and politics, and knowing that they were not advanced enough to have examined the philosophies of the day, I almost felt as if I had discovered a race without the soul and its necessities. One fine day, however, I bethought me that my new friends were artists; and immediately the delicate instincts of religion became visible all around me, springing up everywhere, with their exquisite need of clinging. It appears to me there is an unfeigned respect, a confiding homage, extended to their teacher that is much like a devotional feeling. Perhaps the strange captivation which led the young imaginations of Oxford a few years back to parcel themselves amongst Keble, and Pusey, and Newman respectively, is the best illustration to draw from our own race. The habit of obedience is too much lost in my native country for it to furnish any parallel. I am scarcely less than serious, then, when I claim that these honest fellows devote to their professor some of the sacrifices taken from religion. What other outlet have they for the universal need? They bring their sketches, their *motivi*, up to the confessional, and endure scourgings and humiliation with strange meekness. The criticism of the professor, however severe, is a mighty boon. The art-faculty or the inspiration of the muse they call, without affectation, divine; and the trusted professor shares this dignity. It is hard to treat this with any gravity. But it was treated gravely enough not long ago in the little artist haunt kept by Père Gann at the village of Barbizon, in the Forest of Fontainebleau. A band of young sculptors met a band of painters, and engaged in a dispute on the relative dignity of Phidias and Titian. Unable to decide the argument, champions were chosen, who stripped and fought it out, Bayard against Saladin, with all the sincerity of the crusades, in Gann's little parlor, that is covered with sketches by the best artists of Paris. So that Lenoir, who never errs on the side of credulity or superstition, was almost dignified in defining the banquet as an act of feudal homage.

The residence of M. Gérôme is at the foot of Montmartre, in the Rue de Bruxelles. In order to incommode him as little as possible, his students chose a restaurant of that neighborhood, gallantly throwing over all their prejudices in favor of the Rive Gauche. It was after the slow drag up the hill, therefore, that I found myself at the entrance of a large and showy eating-house, where a waiter in black, and two arbor-vitæ bushes in green, stood as sentinels at the bottom of a freshly-waxed stairway leading to the hall. Up-stairs, in a large, bleak ante-room, most of the students, so far as I knew them, were waiting in the utmost extremity of nervousness, unable to sit down, holding their arms rigid like dolls' arms, and catching at their sleeves with the tips of their fingers. Each had managed to appear in black; and friendly criticisms on the cravats, the hair, and the waistcoats of the new arrivals were freely proffered.

"There is the spaniel who enters with his ears curled and a silver-plated collar!" in allusion to some preposterous jewel or locket hanging from the neck of the individual in question, whose waving red hair scattered a perfume as he passed.

"Caduc has had his boot mended; which gives such a distinguished air to the foot of Caduc!"

"Where were thy habiliments purchased, my Alcides?" "This pantaloon of mine was confectioned by the *Belle Jardinière;* but my habit was the triumph of the *Bon Diable*."

"As for me, my only confectioner is the *Bon Pasteur;* he holds the single intelligent pair of shears in Paris."

"But regard then the elbow of Caouchouc! I offer an observation: Caouchouc is the hero of the entertainment!"

The youth so designated, a tall, slowly-moving Creole, entered with a singular tourniquet or bracelet on his arm. On examination it proved to be of purple ribbon, all ruffled and stuck with glass pearls, and surrounded with a motto in gold embroidery: *J'aime qui m'aime comme j'aime quand j'aime.* Was it a cravat, a necklace, an affair to warm the wrist? Alas! its size and construction told the tale too plainly. Caouchouc was a novel kind of peer of the order of the garter.

An excited group had formed around the dingy nobleman, and the room had insensibly filled with about seventy black coats, when Gérôme entered with his usual quick movement, handed in by a little group of his most prosperous and respectable pupils. Lenoir appeared among these, calmly wearing an unheard-of cambric shirt and a smile. Somebody darted up and took the hat of the master, who passed into the adjoining dining-room on the arm of his principal disciple, M. Glaize.

His medium-sized, alert figure; his peculiar walk with his head bent and darting about a little, like an explorer dodging the branches of a forest; his quick, black eye, that drove at every object in turn with a frank and direct demand—these were the attributes of his school-room visits; and these alert, darting, and driving qualities he now directed so promptly to the banquet, that we flocked after him and tumbled into our places with almost guilty celerity, and the calm, black figures of the waiters began to serve and feed us with the energy of clockwork. Gérôme is certainly a striking and even a handsome man: his great dark eyes, planted far apart under firmly-marked brows, are cutting when in action and searching in repose. His head expands above the ears into a wonderful dome, the frontal part of which is peculiarly noble, broad, seamed with thought, and canopied with tumbled hair; the premature grayness of the latter has that interesting suggestion of toils gone through which we naturally receive when we find the sable silvered over a comparatively youthful face; the latter in Gérôme is dark, thoughtful, and forms a triangle under the swelling temples, the point of which, a firm and advancing chin, is capped by a moustache like a circumflex accent.

Gérôme, whose worldly success has depended upon his never shirking anything, faced this poor man's dinner with grave determination when he might have dined, no doubt, in comfortable luxury at home. At the proper time he made a little speech. They had thoughtfully placed before him, instead of an épergne, a droll affair in silver and looking-glass, representing a lake surrounded with little laurel-trees, and encircled with a heavy balustrade of the gleaming metal. This ponderous bit of scenery, being low in its proportions, interfered with nobody's view of the master's head. I happened to be placed where the spaniel's ambrosial "ears" cut out effec-

tually, with their curly fringes, my view of the *patron's* visage; but I could see it floating helplessly in the mirroring lake, as if in a tureen, with its eyes intent and unnatural in their reversed position, and its moustache dipping and wagging upside down, the while I received my share of my master's thanks for attention to the duties of the school, for personal respect to the instructor, for order and obedience, and for this elegant and complimentary banquet.

When our half-dozen courses and half-dozen wines were rather quickly despatched, the waiters abandoned us to our champagne, after having wheeled-in a very tolerable piano to a station opposite the *patron's* seat. The entertainment now took the character of a series of efforts to entertain our honored guest, each pupil trying what he could do, and levelling his performance straight at the eyes of the *patron*, who liberally led the applause. There were some very creditable voluntaries on the instrument, some ballads, and some old traditional student-glees, in which Gérôme joined without any squeamishness. It was pleasant to see the young fellows essaying their very best for the diversion of the professor, and spending lungs and perspiration generously for his advantage. One got himself up in a very recognizable caricature of Gérôme himself, emerging from the dressing-room with the brisk step of the master, and criticising imaginary "academies" for each of us with a good many well-understood and enjoyable hits. Blanc leaped upon a chair and declaimed a comic story; and we who were around him made great fun of his toes, which pointed determinedly upward in their coarse, well-blacked shoes.

At eleven Gérôme left, with great good-humor and relief, and East and I busied ourselves in getting home to his parents a dear little pink-and-white brother of ——, who had slyly drunk all our wine while we dosed him with stories about the Red-skins and the Rocky Mountains. When we had lifted the limber figure of the youth from the chairs over which it hung, and pitched it down-stairs into a carriage, the assembly was breaking up, and the black costumes were preparing to go into retirement, perhaps in some cases until the next Gérôme banquet.

Correspondence.

A SEQUEL TO "A TRUE CONSULAR STORY."

To the Editor of the Nation:

Sir: The appeal of the *Nation* "to everybody who has any regard for the country," etc. (No. 199), to do what he can towards frightening Congressmen into supporting Mr. Jenckes's bill, has just reached me, who include myself in the above category.

I cannot pretend to frighten the controllers of the national destinies, but perhaps my *argumentum ad hominem* may in some way touch the legislatorial conscience.

As the readers of "A True Consular Story" (see *Nation* for some week in February) may know, I was at one time consul for the U. S. A. at Rome ("X." of "Consular Story"), and was transferred thence to Canea, to silence my complaints against an iniquity Mr. Seward didn't choose to correct.

We arrived in Crete the January preceding the outbreak of the late insurrection, and found that for the first year of peace and low prices the salary of $1,000 sufficed to enable us to live in a very simple way. During the progress of the intrigues and agitations which culminated in war, I kept up a copious official and private correspondence, with the object of enlightening official and public opinion on the real nature of the dispute and the crime against civilization which was preparing in Crete. I was approached by the agent of the Viceroy of Egypt, with offers of any compensation I should ask, to assist him to arrange a petition from the Cretans for the transfer of the island to Egypt. I exposed the whole affair immediately to Mr. Morris, our minister at Constantinople, and he to the English ambassador, by whom the projected transaction was effectually quashed. My denunciations of the intrigue and of the injustice employed to drive the Cretans into insurrection, as well as my open remonstrances with the local authorities, excited the especial hostility of the latter, and though it was perfectly known to all in the island that my utmost exertions were employed to induce the Cretans to submit to any injustice rather than fight, I was denounced at Constantinople and to the world as a stimulator of the insurrection, and a system of persecution inaugurated in which, from the Divan down to the *canaille* of Cretan Mohammedanism, every hostile influence was directed against me. I was menaced with the withdrawal of my *exequatur*, I was denounced in the philo-Ottoman journals, in the despatches of the French consul (the most mendacious and corrupt Levantine I ever met), bullied and insulted by the local authorities, openly menaced with assassination by the Mussulman mob, a picket of Zaptiés at my front door and another at the back, to examine everybody who left my house, and, though this surveillance in months had found no fact on which to accuse me, the accusations were no less virulent. From the first shot, I had no further intercourse with the insurgents, but, through my letters, official or other, the outside world knew what was passing in the island. This is the sole offence against the Turkish Government to which I plead guilty; but this was enough to maintain a persecution which had, I doubt not, as its sole object to drive me from the island. So irritated was the Mussulman population against me that I received frequent private warnings not to be out of my house after sunset, and not to move without a guard. For two weeks we were ready for barricading and defending the consulate at any moment, and scarcely crossed its threshold; and when, weary of this prison-life, I hired a house which had a garden attached, where we and our children might breathe without danger from the rifle-balls that more than once had whistled by me, the governor, on learning that I had taken it, compelled the owner to withdraw the lease, though my chattels were partly in the house. My employees were insulted, beaten, denied recognition, and, in some cases, compelled to abandon my employ.

In vain I represented this state of things at Washington; no notice was deigned me. Two or three times men-of-war came to Crete, whose officers mostly sympathized openly with the Turkish authorities as against the Cretans, and impliedly against me, and in one case carried their hostility to me so far that none of them except the captain and assistant-surgeon paid me a visit. Add to this, our worthy and time-honored Secretary of Legation and dragoman at Constantinople joined in the hue-and-cry against me, attacked me and his chief, from whom alone I had ever received support and protection, in the American and European journals, entered into the conspiracy to drive me from the island, and gave the local authorities, with whom he was in correspondence, to understand that I was not and would not be sustained by the Government.

The second year I asked a leave of absence; for the position was unendurable. This was refused; why, I could never understand, except to make me resign. I endeavored to persuade my wife to go to Greece with the children, but she refused; and, as a last resource, I hired a little yacht for the summer months, to get away for ten days at a time out of the polluted air of Crete.

Meanwhile, famine and famine prices had come into the island. All articles of food had doubled and trebled in price, and many were not to be got. Healthy meat was rare. The other consuls were favored by the Government butcher; I alone must fare with the people whose friend I was. I concluded to resign; but the friends of Crete, holding meetings and passing resolutions across the Atlantic, begged me to hold on, as my departure would be a moral blow to the insurrection which might be fatal; and as this was true to a certain extent, I did hold on, and, under many promises of support from the friends of a cause I held dear, I allowed my expenses—now more than double my income (what with charity and increase of prices)—to rise in an accumulation of debts before me which the industry of years will not remove. "Congress will help you," wrote one; "We will support you in your difficulty," wrote another; and so I held on against debt and sickness, my own strength failing every day, resisting all in the faith of a justice promised and coming, until, near the end of the past year, the peremptory orders of the physician to leave instantly, if I would save the lives of my family, induced me to take advantage of a leave of absence given conditionally on a crisis being arrived at in the affairs of the island, and to go to Athens, the only refuge near enough to enable me to get back to my post at brief notice. Even from this asylum our worthy representative at the court of the King of the Hellenes endeavored to drive me, and, failing that, to diminish my favor here by representing (as I know officially) to the Greek Government that my conduct in Crete had not been approved by my own Government.

The private miseries of no man are subject of public interest save as they are due to public causes; and only on this ground, hoping to make our public realize what misery their wretched service may bring on those who enter it, I follow my story away from my post. We arrived here all invalids—one of my children hung for weeks between life and death; my own nervous system was utterly shaken and my working power all gone; my wife so broken down, so unnerved by three years of unquiet, of excited sympathy, of harassed days and nights, that her reason yielded, and in an attack of insanity she committed suicide, her last troubles being for the miseries she had witnessed and could no longer alleviate.

Of my encouraging friends from the other side the Atlantic I have

heard nothing since the decline of the insurrection; and, my home destroyed and with debts of at least $2,000 (gold), I return to private life; for I just learn that I am dismissed the consular service, which is my least regret—my greatest is that I ever entered it. I thank President Grant and the Senate for the liberty to sign my name, no longer a civil servant,

Yours truly, W. J. Stillman.

UNIVERSITY INFLUENCE, ESPECIALLY AT YALE.

To the Editor of the Nation:

Is there not something a little misleading in the article upon "University Influence" in your issue of the 10th inst.?

The spirit of the entire article is candid, and the mention of Yale is most kind, and yet by implication, I think, there is an approach to a *non-sequitur*. This comes, if at all, from a failure to distinguish between the Corporation and the Faculty of the college. The discussion has respected the former; and reasons *pro* and *con* as to a preponderance of clerical influence in the Board of Corporation have been given. Then follow some well-put statements about the effect of "the moral influence of the authorities of the college upon the students," in which it is said that "they [the authorities] ought to create its *social atmosphere*, and to provide standards of criticism which the students will accept."

Next follow some objections to a successful exertion of said *social* influence from clergymen, based upon considerations such as this, viz., a clergyman is "a professional moralist"—*i.e.*, "a man part of whose professional duty it is to keep himself apart from the world, to live within narrower bounds than other people, and devote most of his attention to one class of considerations, forming only half of those which men are called upon to weigh every day in solving the problems of ordinary life." I doubt whether this is a correct description of American clergymen, who are not generally recluses, but men of large practical activity, meeting all classes of men and all orders of events as they accomplish their pastoral duties; but even if your description be accordant with facts, does it at all apply to the "authorities" at Yale? On reference to the catalogue of the Faculty in '67 (the only one at my command), of the fifty-two instructors named only nine were clergymen, and of these nine six were exclusively attached to the Theological Seminary—*i.e.*, of forty-six instructors in the university, the theological department being excluded, only three were clergymen, and of these three at least one has never been actually engaged in the active duties of his profession. Does this look as though those forming, as far as the college authorities are concerned, the *social atmosphere* the students breathe are to any truthful extent clergymen?

Perhaps I misapprehend the import of your article, but in any case it may be well to keep before the minds of those debating the question of university management these two things:

1. That clergymen, as a class, are not in this good year 1869 any more one-sided and professionally hidebound than other professional men; but, if there be any difference, are less so.

2. That the acting authorities at Yale—*i.e.*, those who create its social atmosphere as far as the college authorities influence this—are not clergymen in the excessive degree that some opponents of the present college system would have the public believe.

E. L. H.

June 18, 1869.

[What we were discussing was really the completeness of the answer in the article from the *New Englander* to the objections made by various persons to the management of colleges by clergymen. We were well aware that, owing to the fact that the article was written in defence of Yale in particular, our criticism of it would probably bear the appearance of being pointed at Yale, and we endeavored to guard against this, and supposed we had succeeded in doing so by expressly denying that Yale was the object of our remarks. We may not have succeeded in explaining ourselves clearly touching the influence of clergymen as educators of young men, as it would be impossible for us to say all we have to say in reply to "E. L. H.'s" first point without writing another article. But one or two rough illustrations may perhaps throw a little more light, if not on the subject, on our meaning. Take the common forms of dissipation to which young men are exposed in university towns; we need not enumerate them. A clergyman condemns them *ex officio* as a professional duty; his exhortations against them therefore cannot, do not, produce the same effect as those of a layman who disliked them on general and unconventional grounds. A clergyman, for instance, denounces the theatre; a young man says, "Oh! of course he does—he must; society expects it of him;" but the young man would not say this of a lawyer or doctor who did so.—Ed. Nation.]

Notes.

LITERARY.

Mrs. Emma D. E. N. Southworth has written a new novel, which her publishers, Messrs. T. B. Peterson & Brothers, will issue next Saturday. Its title is "The Bride's Fate," and it will be fully equal to "The Changed Brides" or to "How He Won Her," which are both by the same author. The same firm do themselves credit by getting for their lists the title of Hans Breitmann's works. They publish in one volume, bound in muslin or in half-calf, all of the ballads, "bolidigal" or other, in which Mr. Leland has celebrated the famous Dutchman.——Messrs. William Wood & Co. announce among their medical works which are of interest chiefly to medical men, one that may probably be interesting to many other readers—namely, "A Report on the Progress of Practical and Scientific Medicine," by Dr. Horace Dobell and numerous coadjutors.——Messrs. Robert Carter & Brothers will republish "An Autobiography and Memoir of the Rev. Dr. T. W. Krummacher."

—"Arrangements are in progress for a new journal which shall deal with new works strictly according to their merits," and it is in England, we are happy to say, which is situated in the centre of the world's commerce, and not in the Fortunate Islands or in Utopia, that this miracle is to appear. The authors are to do the writing for it, we suppose. For nearly five thousand years, even if we take Archbishop Usher's chronology, which is now generally given up, the authors have felt that there was imperative need of a journal which should take up new works and deal out to them strict divine justice—tempered, of course, "with the courtesy common among gentlemen, though very frequently ignored"—by this and that critic. And it is the poorer authors upon whom this need has pressed most heavily, and who have been most frequent in their complaints of the working of the present fallible system. But the movement seems premature, and we cannot entertain great hopes that it will prosper. A good "Retrospective Review" ought first to be set on foot and made successful, both pecuniarily and in point of the desired freedom from error. None such has yet been produced, though we have had attempts, and though the works noticed have been hundreds of years old, and have been read by many generations, and have had thrown upon them the light of the thought and feeling of hundreds of able men of many nations, of many creeds, of all diversities of taste. Now, we may safely say that, until the race gets into such a condition that five hundred years after the man x, say, who wrote poetry in an undetermined city; who was of no known political party; whose faith was a belief in a mythology long vanished; whose views on the Woman Question and the Eight-Hour Question "have eluded the researches of his ablest commentators"—until the time has come when we can find critics who will review this comparatively inoffensive poet without giving evidence of ill-temper and partisanship, to say nothing of bad taste, and ineffective thinking, and other evils which are under the sun—we certainly may give up expecting to see a critical journal which Mr. Smith shall edit, in which the steaming hot pamphlet of Mr. Jones, tax-payer, Democrat, Free Trader, tenant, member of the club—Smith's fellow-member of modern society, in short—shall not get a little more than justice or a little less. Honest criticism is sometimes too severe in tone, and has the effect of depressing authors; it is sometimes not sufficient in ability, and unwarrantably injures an author either in reputation or in purse, though usually the ignorant critic is laudatory, and helps to fill the author's pocket; but as a general thing it remains true, nevertheless, that the childishness of the poorer class of authors is the cause of most of the outcries against critics. We speak of criticism written in honesty; as we have hinted, the dishonest critic is not the one of whom the authors complain. Then, again, it is always to be remembered when this matter is talked of, that—looking at the critic's functions from as practical a point of view as that taken by most authors and artists when they attack him for incompetency—a great part of the critic's business is to stand between the workman's work and the body of possible buyers, and talk—not to the workman, so that he shall be helped to produce better works hereafter, nor yet so that future workmen shall produce better works—but to these same buyers who

know even less than the critic. The honest critic, in his relations with the author, at his very worst is, we would suggest, only a more or less noisy, more or less influential member of the audience that the artist or artisan has been working for. Or does the artist turn on us here after a fashion that obtains among artists of some descriptions, and say that the artist works for something other than his audience's money or praise? In that case, we have not been talking to him; any more than he, probably, has been talking of the critics.

—We do not remember a more elegant reprint than Messrs. John Sabin & Sons' "Nova Britannia: Offring most excellent fruites by planting in Virginia. Exciting all such as be well affected to further the same." This tract was originally printed in London in 1609, and, being third of those known to relate to early Virginia, has a market value of $100 at the present time—twenty times as much as is asked for the reprint in facsimile, which, by the way, was executed in London, and appears to have been four years in preparation. It is nothing but the report of a speech delivered by one of the body called Adventurers to his fellow-capitalists and speculators, in praise of the natural resources of the new territory, and arguing the certainty of a handsome profit in money and lands for whoever should invest in the enterprise, and hurry forward colonists and material supplies. The speaker does not give evidence of having been in Virginia, though he may have been; and his remarks, dealing very generally with the topography of the country about the James River, are chiefly devoted to the practical work of stimulating his hearers to take shares in the plantation at twelve pound ten. In the course of this, he seeks by historical quotations to establish the English title to *Nova Britannia*, the national duty of expanding English commerce by creating trade with the New World, and the right of making summary disposition of the red men in case they decline to be civilized and Christianized. "Wee had continued brutish poore and naked Brittans to this day," he observes, "if Julius Cæsar, with his Romaine Legions (or some other), had not laid the ground to make us tame and civill." The missionary spirit in which the undertaking should be carried on is dwelt upon at length, part of it consisting in "weeding out" any "Papists, professed or Recusant," that might have slipt into the nascent colony. The material for a population was to be found in the "swarmes of idle persons, which having no meanes of labour to releeve their miserie, doe likewise swarme in lewd and naughty practizes, so that if we seeke not some waies for their forraine emploiment, wee must provide shortly more persons [prisons?], and corrections for their bad conditions;" . . . "such as lie at home, pestering and infesting one another, with vice and villany, worse than the plague it selfe." But Mr. Ruskin's aristocracy supported at the public expense was also provided for—"every extraordinarie man, as Divines, Governors, Ministers of state and Justice, Knights, Gentlemen, Phisitions, and such as be men of worth for speciall services," . . . "to bee maintained at the common charge, and are to receive their Divident (as others doe) at seven yeeres end."

—A more forcible contrast to this curious old pamphlet of the day of small things we could hardly select than Professor M. F. Maury's "Physical Survey of Virginia: Her Geographical Position; its Commercial Advantages and National Importance"—of which Mr. D. Van Nostrand publishes a second edition. Besides page upon page of statistics going to prove how much nearer the Atlantic seaboard is *via* Norfolk than *via* New York, to a large portion of the interior—how much vaster and richer this back country is, and better the harbor and water-channels—the author illustrates, with the aid of three maps, the practicability of affording uninterrupted water communication between any foreign port (like Flushing in Holland) and the head-waters of the Mississippi and all its tributaries; and also between the Gulf of Mexico and the Ohio River (and consequently the James River, when the canal now in progress to the Kanawha is completed) *via* the Alabama and Tennessee Rivers. We find all this a very pleasing and not so very visionary prospect; but we are grieved to see that Prof. Maury not only admits a sad heresy into his title, but in the body of his work insists again and again that the system of railroads and canals which he is advocating is a "*national* necessity," and that these "are girders necessary to bind and hold the Union together." Mr. Henry B. Dawson will share our chagrin at this falling away from the good old Southern and Virginian doctrine that the United States is not a nation, but a simple, loose federation of nations, each sovereign; and at the sudden interest in the integrity of a Union whose capital is not to be at Richmond. However, let us be extremely glad of this backsliding, and even rejoice that Professor Maury goes further—he quotes General Wilson to prove that, unless the Mississippi and the Lakes are connected by a canal permitting the passage of gunboats, the Government must "prepare for the annexation or conquest of Canada." This hard necessity will be relieved, says our author, when the Northwest's independence of the St. Lawrence outlet for its commerce is assured by the canal which binds the Ohio and the James together, and leads to a harbor unobstructed by ice, and beyond the control of hostile fleets. We commend his arguments on this and other heads to all who would be glad to see Virginia resume her old importance to the Union, and the Union itself be stronger than ever.

—We have had a good deal of writing about Andersonville, and very little of it has been even readable, but surely of the thirty-odd thousand men who were eye-witnesses of the most heart-sickening scene of human wretchedness that our age has had to show, some must have survived who might hand down to posterity an impressive picture of it. To say nothing of the loss to the cause of humanity, it will be a deplorable loss to literature if the story of the prison should not be adequately told by some one of its victims; and it is to be feared that it will not be. Thucydides, Boccaccio, De Foe, no writer who ever realistically narrated enormous horrors might not be surpassed by a hand really skilled which should delineate the scenes behind Wirz's dead-line and in the Andersonville hospital and graveyard—if those names may anyhow be given to the festering pits and trenches where the dead were flung and the "hell of hells," as it has been called, where most of the men died. We see that the *Michigan University Magazine* is now publishing some reminiscences by a student who was one of the prisoners, and whose sketches are worth attention, as having the vividness—occasionally dimmed by fine phrases—of what seems like the simple truth. We quote a few sentences:

"Nor can we tell of three great causes of strife among us. First, who should have the rations of the dying. Second, who should have his rags when dead. Third, who should have the privilege to carry the dead body away. The fortunate one who carried out a dead body could then breathe pure air, see green grass, and bring back some wood. Robbers were charged with knocking sick men on the head to get their bodies. Dead bodies were fought over, bought, traded, and stolen like any other commodity. We talked familiarly of trading each other off for wood as soon as one or the other should die. A body was worth from $20 to $30, Confederate money.

"Before being loaded on wagons, the corpses were daily collected at a place outside of the pen. Here spectre-like guards watched them as closely as they did the living, because, once on a time, a dead Yank arose and ran away. The same wagons which brought in our food carried away our dead—the wagons never being cleansed, that we know of. Men, laughing, chatting, and smoking—one at the head, another at the feet—tossed the bodies promiscuously into the wagons or hay-racks, and, with naked skeleton arms, legs, and heads dangling over the sides, they drove off the dead. Thus, in about one year, they wheeled away 13,000 men; but 13,000 is not at all the number of the dead. Men dug their own graves when their tunnels caved in and buried them. Many lie in swamps, killed by bloodhounds. We scattered them all along the railroads in leaving Andersonville. We buried them in the sea."

There have been men who, having had the experience of this young man, would have devoted years to the study of literature, in the higher and lower significations of the term, and produced a book secure of life. And, as we have said, the cause of humanity as well as literature would gain if such a record of misery were made. For ages, no one could have read it without feeling a grief and an indignation equally sanitary.

—We had already intended to call attention to the thorough and convincing exposure of "Worman's Complete German Grammar" in the May and July numbers of the *American Educational Monthly* (by Prof. Gustavus Fischer), when requested to do so by Dr. H. von Holst, editor of *Steiger's Literarischer Monatsbericht*, who says of the work in question:

"It is but one specimen of an innumerable host of equally bad schoolbooks imposed upon the public by impudent and utterly illiterate bookmanufacturers and—to use a most lenient term—careless publishers. Eighty-two professional gentlemen and ladies of the best renown have endorsed this book, which is one of the most shameful literary productions I ever met with. To the honor of these endorsers, it must be assumed that they never took pains to open the book or to throw a hasty glance at its contents, else its most complicated nonsense and appalling perversions of German diction could not have escaped their eyes. They evidently have followed the same principle so many gentlemen in Washington are accustomed to act upon—recommending whosoever wishes to be recommended by them. Many people will be disposed to judge leniently such a proceeding, taking for their device the old maxim, 'Live and let live.' I cannot help considering it much worse than the worst humbug; it betrays a much to be regretted laxity of moral principle, the effect of which is an involuntarily committed *crime*, for these endorsements afford the means of swindling the public of their money and of their time, and of burdening them with a gross amount of most perverted knowledge when they are anxiously striving to improve their education. We Germans rejoice to see the Americans devote themselves more and more to the study of the much-beloved and justly-praised language of our 'fatherland,' in order to be capable of availing themselves of the rich treasures of the German litera-

ture. But so much the more we deem it our sacred duty to expose such daring attempts to impose upon their honest credulity a strange messwork pretending to be a 'Complete Grammar of the German Language.'"

—The publishers of the work thus referred to in strong but not exaggerated reprobation resorted, after Prof. Fischer's first criticism, to tactics not so uncommon with their calling as they ought to be: they published the list of "endorsers" to whom Dr. von Holst alludes, as a sufficient answer to the most minute and specific allegations of error and ignorance, accompanied by irrefragable proofs. They added to this list the usual charge of spitefulness, misrepresentation, etc., against the critic and his publishers, who were simply discharging one of their most obvious duties to the public—duties none the less obvious, let us remark, because too often neglected by the educational journals *par excellence*. The action of the *Monthly* is all the more creditable because, as Dr. von Holst points out, the study of the German language is rapidly spreading in this country. In the *Sonntagsblatt* of the N. Y. *Staats-Zeitung*, of June 13, is a communication by Prof. W. Notz, of Gettysburg, Pa., as to the extent to which German is taught in our principal colleges. He compared the catalogues of forty-five colleges in the New England, Middle, and Western States, and found that only four, and these of the second grade, made no provision for the study of German; fifteen made it obligatory, eleven elective, and the rest partly obligatory and partly elective. It formed the main branch in three Lutheran Colleges, and, in a fourth, German was also the language of instruction. The catalogues examined show a great advance in those of the same institutions of only a few years back. The University of Vermont, for example, paid no attention whatever to German in 1856–57, whereas now the language forms one of the principal studies. We believe the case is much stronger than Prof. Notz has presented it, and that if the courses of private schools were known, it would reveal a very wide instruction in German. Speaking from what we know of Boston and vicinity, we incline to think the French has fewer devotees in that part of the country and perhaps elsewhere; and considering the comparative difficulty in reading the two languages, this must be taken as proof of an extraordinary preference for the German.

—Mr. Philip Gilbert Hamerton, in a late number of the *Fortnightly Review*, undertook to prove etching to be the short-hand of art—the appropriate vehicle of transient ideas, of studies for after-elaboration, etc. Undoubtedly this is a true view to take, especially of etching as an instrument of original creation—etching by a master, in other words. But it seems to us to have other quite legitimate uses. An etching, off-hand, by Rembrandt of a landscape is undoubtedly a precious souvenir of the fleeting impression made upon him by nature; but may we not also prize, even if in a less degree, a skilful etching after one of the very few oil landscapes which he has left us? We certainly felt so in seeing such a copy in a late number of the *Zeitschrift für bildende Kunst*, and we are confirmed in this sentiment by two masterly etchings from the same hand —W. Unger's—in the last issue (Vol. IV., No. 8) of the above journal, just received. They are from portraits by Antonis Moro and Frans Floris, of the Dutch school, dating from *circa* 1540 and 1548. They were among the spoils of the first Napoleon, and were deposited, at the restoration which followed his fall, in the Brunswick Gallery, though not taken thence —a restoration, the *Zeitschrift* points out, which is still characterized, in the latest editions of the official catalogue of the Louvre, as accomplished "against all right and law" and "by force of bayonets." The first portrait is of an unknown scholar, of sweet and noble countenance, who might well have been one of

"The grave, severe Genovese of old."

The second is of a falconer, bird in hand and just unhooded; altogether so pleasing a subject and so effective that we dislike to be told, as we are, that the etching does not do justice to the original. The *Zeitschrift* also describes a great number of plans of the proposed new cathedral at Berlin, with a wood-cut of one elevation. In the supplement we are pained to notice an obituary of the learned and agreeable critic, Théophile Thoré—better known by his German *nom de plume* of W. Bürger, although he was not able to compose a sentence in German. Knowledge of the Dutch school was his forte, and he brought to light many obscured names that deserved remembrance, and caused numerous changes to be made in the commonly accepted authorship of esteemed works of art. He had a very extensive acquaintance with museums and galleries, using well for this purpose the exile consequent on his political affiliations in '51. He returned to Paris after the amnesty granted by the Emperor, and contributed frequently to the *Zeitschrift*, the *Gazette des Beaux Arts*, the *Indépendance Belge*, etc. In the last-named journal he criticised the art-galleries of the Exposition of 1867, and was one of the few foreign critics who gave much attention to the pictures from the United States. He had the discernment to select for praise Mr. Homer's "Prisoners from the Front"—to our mind the best, on the whole, of any we sent over, and still better than any foreigner could judge it. Thoré died on the 20th of April at the age of 62.

DR. BUSHNELL ON WOMEN'S RIGHTS.*

Dr. Bushnell has made, in the small octavo before us, a really valuable contribution to the literature of the women's rights question, because although his solution is, as we think, incomplete, any attempt at solution from a calm and candid observer cannot but help to clear the ground. He acknowledges that women have wrongs, and that these wrongs are largely the result of that tendency to oppression which marks all power. Amongst these wrongs he enumerates the inequality of modern legislation as regards woman's property; and her exclusion by law or public usage from modes of employment and productive industry that are equally appropriate, or even more appropriate, to women than to men; and the separation of the sexes in education. Were the sexes educated together, he thinks women would gradually escape their "unrighteous disabilities," and obtain an equal footing in all employments for which they are fitted, and he thinks all legal restrictions to their entrance into the various trades and professions should be removed. They would then naturally assume a large proportion of the work of educating the young; they would practise medicine in all branches except surgery; they would probably practise that portion of the law which consists "in silent, indoor office-work—the investigation of authorities and citation of precedents," and the drawing of "deeds, contracts, and pleadings," and the exercise of the functions of notaries and clerks of courts of record. In the church, they would properly become deaconesses, as they did in the primitive days; and Paul's objection to their speaking in assemblies for worship—"the shame" of it—being no longer operative, they would also act as ministers or exhorters. In literature, of course they would shine as they do now. They would, too—their business faculties being sharpened—become clerks, book-keepers, and the like; and, ere long, managers of hotels, bank-tellers, brokers, actuaries of insurance companies, private bankers, type-setters, and overseers of printing. In all these positions, Dr. Bushnell not only expects but desires to see them.

Then follows a powerful chapter on the "natural right" of either men or women to the suffrage, which we should like to see put into a pamphlet, and put in the hands of every young man and woman in the country. The day the framers of the Declaration of Independence caught up the unmeaning phrase of the French speculators, about "all men being born free and equal," and stuck it at the head of the immortal instrument, they introduced the transcendental method of treating political questions into the United States; and the general hold it has now got on the public mind we look on as not only one of the greatest of existing obstacles to reform, but as the source of one-half our political abuses. It cannot be too often said that men have *no* "natural rights" in society; that no society ever existed, or could exist, which recognized such rights; that nobody has been able to say what a man's or woman's natural rights are; and that all claims to the suffrage, or to anything else, based on the assumption that such rights exist, are simply a snare and delusion.

Having thus pointed out the places in society which woman properly may and probably will fill, and having discarded the *à priori* method of proving anybody's right to the suffrage, Dr. Bushnell proceeds to give his reasons why she should not have it. It must be remembered that the class of persons to whom he is denying any share in forming the laws under which they live may be, according to his own admission, composed largely of lawyers, doctors, ministers, bankers, brokers, actuaries, book-keepers, teachers, professors, hotel-keepers, printers. It is a class, in short, which might do the whole mental work of a thriving town, take charge of its health, its morals, its religion, its banks, schools, charities, insurance companies, and the most important portion of its legal business. Nevertheless, in such a town Dr. Bushnell would allow nobody to vote but the male laborers and mechanics, the judges and *nisi prius* lawyers. The banker's porter who swept the bank might vote, but the banker could not. The actuary's gardener might vote, but the actuary could not; the hotel waiters might, but the hotel-keeper not; the hodman engaged in building the broker's house might, but the broker not. Why not?

First, Dr. Bushnell says, because "woman is not created or called to govern." This is an excellent specimen of the very kind of argu-

* "Women's Suffrage: The Reform against Nature. By Horace Bushnell." New York: C. Scribner & Co. 1869.

ment he has been condemning in his second chapter, showing that there is "no absolute right of suffrage in man or woman." He here asserts that there is an absolute or natural right in men to exclusive political power, because women, he says, were not "created or called to govern." He proves that they were not created or called to govern, first, by their physical conformation; secondly, by the assumptions that "masculinity carries in the distribution of sex the governmental function;" that women were born with a sense of man's superiority, and enjoy it; that there is nothing degrading in woman's subordination; that "force, by its own nature, always and of course subordinates beauty;" that women agitating for the right of suffrage are in "fact voting to be weighed in the gross weight-scales of force, making nothing of that higher, finer nature by which God expects it of them to flavor the world;" and that "the male and female natures together constitute the proper man, and are therefore both represented in the vote of the man." Dr. Bushnell calls all this "argument;" how he fails to see that it is a begging of the question, we do not understand.

He, however, profoundly sympathizes with the endeavor of the woman's rights agitators, and understands women's discontent with their lot. A better statement of the causes of their dissatisfaction we have seldom seen than the following:

"If I were a woman, in the present lot of women, I think I should certainly wish to be a man, and that any change giving but a semblance of a chance that way I should hail with delight and accept with eagerness. The wages allowed their industry are so unequal; their employments so restricted; their subjection, so often, when married, to an overbearing tyrant will they have no counter-force to resist; the crime it is for them to be heart-broken, and publish their woes by the sad look of their silence; and, what is worst and saddest of all, the worse than broker's corner wherein all unmarried women are penned by restrictions they cannot escape—unable to work, because it will humble their position; unable to venture on great operations in trade, because a woman cannot get the necessary credit; subject to indignities and much laughter when they undertake a profession; wanting marriage as the proper woman's place, with a conscious ability to fill it, and with no ambition save to be the ornament and cherished love of a worthy and true husband, yet chained fast under bonds of delicacy which well-nigh forbid so much as the being approachable by a man. When, I say, these things are duly considered as pertainings of a woman's lot, we might almost justify them in a riot against natural sexhood itself, if there were anything to be gained by it."

Dr. Bushnell's remedy for the difficulty women find in getting married, or in getting, as he says, into "a proper woman's place," is singular enough. He proposes to have women make advances towards men with a view to marriage, or, as he expresses it, "so far mitigate the present ironclad modesty as to let feeling feel its way and carry on its own courtship;" and he even suggests the formation of an organization of some kind, apparently in connection with churches, in the nature of a matrimonial brokerage, to make matches, "working only for names that are given, or by friends suggested, and presuming only under strictest bonds of secresy to suggest, commend, and prepare acquaintance in the ways of proper delicacy." It will strike most readers as curious that a writer who thinks women's exclusion from a large number of the most important fields of labor is purely conventional, and that her exclusion from the franchise is natural, should nevertheless doubt whether the basis of the custom which dooms marriageable women to wait for men to woo them is not largely artificial. One of the misfortunes connected with the woman question is that, to treat it thoroughly in all its phases, one would need to speak much more plainly than would be agreeable or perhaps useful. There is probably no incident of woman's condition which is more clearly natural than her passivity in all that relates to marriage. In waiting to be wooed, she not only complies with one of the conventional proprieties, but obeys what appears to be a law of sex not amongst human beings only, but among all animals. There is no peculiarity in her circumstances with regard to which sentiment and physiology are in such complete concord. So that there is, in our opinion, not the least hope that her facilities for getting married can be increased by any special exertions on her part towards that end. She must look in other directions for improvement in her lot; and if there be growing reluctance on the part of men to marry, there must be growing exertions on the part of women to become independent of marriage. Nay, we think it not at all unlikely that nothing will do so much towards solving the marriage problem as the increasing ability of women to dispense with it as a means of support. For the same reason that women with fortunes now find it easier to get husbands than women without them, women with trades and professions will find it easier to marry than women who can only fold their hands and wait, and will raise the position of the whole sex in men's eyes by diminishing the pressure at the matrimonial gate.

When Dr. Bushnell comes to discuss the probable consequences of female suffrage, for the purpose of finding in them arguments against it, he gets down once more on the solid ground of reason and experience. One listens to an opinion as to the probable results of a social or political change with more pleasure and hope of profit than to assertions as to what social arrangements are "natural" and foreordained, and what are not. About the intentions of woman's Creator with regard to her exercise of the franchise, neither Dr. Bushnell—we say it with perfect respect—nor anybody else has anything to tell us; but when he begins to talk of what reason and experience teach us to expect from her voting, we are bound to listen. The probable effects of her voting will be, he thinks—first, she will grow, perhaps, "taller, brawnier," and more certainly "thinner, sharp-featured, lank, and dry;" secondly, she will grow coarse and violent and excitable; thirdly, she will take part in political corruptions "with prone-minded human frailty;" fourth, her presence will increase the disorder and indecency attendant on the working of the electoral machinery; fifth, her presence in political assemblies, and especially legislative assemblies, will introduce into them a moral disorder, the nature of which Dr. Bushnell indicates by citing "the Bourbon courts" in illustration; and, lastly, that her participation in politics will increase the tendency to treat marriage as a temporary partnership, dissoluble at the pleasure or convenience of the parties. All these are serious, weighty objections, and are worthy of grave consideration, but we have not space to give it them here. We shall probably recur to some of them at least.

CREASY'S HISTORY OF ENGLAND.*

Sir Edward Creasy is certainly right in thinking that a history of England of moderate size is still a desideratum; and if the other four volumes which he promises prove to be as well done as the present, he may fairly claim to have supplied the want. It is an eminently *well-balanced* book, showing good judgment in the selection of matter and in the proportion of parts; it is in a clear and easy style, so as to be interesting reading, while at the same time the author has not been afraid to demand thought on the part of the reader; and it has peculiar merit in the fulness with which contemporary events are treated and the relations of England to the states of Continental Europe are described. It has, perhaps, been no serious disadvantage to a work of this scope and general nature that the author has been for several years at a distance from libraries while holding the governorship of Ceylon. He has had the use of the best authorities, and has not needed inferior ones. We are surprised, however, to see no mention of Mr. Freeman's history of the Norman Conquest, the first volume of which, one would think, must have been within his reach. This we think a pity; for, to say nothing of other points, Mr. Freeman has some very valuable and suggestive remarks upon the original nature of the Teutonic institutions—and especially upon the form that these institutions assumed in England—by which we cannot help thinking that Sir Edward Creasy would have been aided.

For his chapter upon the Anglo-Saxon Institutions is, on the whole, not quite so good as the average, and its defect is precisely in the point where Mr. Freeman is so surpassingly good. The terms *eorl* and *thane*, which have given occasion to so much discussion, are quite inadequately defined. "The free population of Saxon England . . . . consisted of nobles called Eorls, and of commoners called Ceorls." This is all right, and universally agreed to; but he goes on: "The upper class, the Eorls, are also often called the Thanes" (p. 167). Again, in another place, p. 171, he speaks of "the Thanes, the class above the Ceorls;" and this last, too, is all right; but he does not say, at any rate does not say distinctly, that the two definitions apply to different periods; that the distinction between Eorl and Ceorl belongs to early history; that between Thane and Ceorl to the times subsequent to the Danish Conquest. The rank of *eorl* was an hereditary one, and reaches back into the farthest antiquity. As Mr. Freeman says: "The difference of the Eorl and the Ceorl is a primary fact from which we start; it is as old as the earliest notices of Teutonic institutions." *Thegnhood*, on the other hand, consisted, in its origin, in a purely personal relation to the lord, corresponding to the Latin *comitatus*, a "nobility of service," which "gradually supplanted the elder nobility of immemorial descent." In another place, Mr. Freeman compares these two kinds of

* "History of England from the Earliest to the Present Time. In five volumes. By Sir Edward S. Creasy, M.A. Emeritus Professor of History in University College, London; late fellow of King's College, Cambridge." Vol. I., being the history of England to the end of the reign of Edward I. London: James Walton, bookseller and publisher to University College, 137 Gower Street. 1869. 8vo, pp. 520.

nobility to the *patricii* and *nobiles* at Rome; a ceorl could become a thane, although he could never become an eorl, just as many plebeian families belonged to the Roman nobility, while they could not become patrician. But the English patriciate was less durable than the Roman for several reasons. First, there were no ceremonial offices specially retained in its hands, like the Roman dignities of *flamen* and *rex sacrificulus*. Next, in the time of the Danish kings the title *Earl* came to be used in its Danish sense as governor of a province, in place of the English *Ealdorman*, so that its old meaning would fall into disuse all the more speedily. Thirdly, the Norman Conquest swept all these native aristocracies together into oblivion.

One of the most instructive paragraphs in the book before us is that on page 83, which shows that the modern nobility was mainly derived from the Roman institution of the *comitatus*—"not from the Celts or Germans." Perhaps the author undervalues the influence of the German custom of personal followers of a chief described by Tacitus; both had a share in the institution of nobility. But we are apt to look too exclusively, as Mr. Freeman does, at the Teutonic relation, and overlook the existence of an imperial nobility, deriving its rank "from the personal grant of the sovereign." Now, it was this principle, existing alike in Imperial and Teutonic institutions, that lay at the foundation of *thegnhood*.

We do not think it worth while to be over-particular about names and spelling; still there are cases in which a word or a letter carries with it a fundamental error. Thus, without going so far as to discard altogether the convenient term *Anglo-Saxon* with Mr. Freeman, we certainly agree with him that the use of the word *Saxon*, as equivalent to Old English, is incorrect and misleading. This is Sir Edward Creasy's constant practice. For instance, in the account of the Battle of Hastings, the terms *English* and *Saxon* alternate, with utter disregard, as appears to us, of historical propriety. It was the *English* that were fighting against the French or Normans; if there were Saxons in Harold's army, there were Angles and Danes as well. In like manner, although for a different reason, we object to the use of the meaningless term *Carlovingian*, for which we believe the best authorities are now agreed to substitute the correct word *Carolingian*. Neither can we agree to the repetition (p. 126) of the old statement that "Clovis may be regarded as the founder of the French monarchy." Perhaps there is exaggeration in Mr. Freeman's counter-statement, that "modern France has nothing to do with either of the two dynasties whose associations she so persistently usurps—the Karlings and their predecessors the Merwings." Still, this last has more truth in it than the other; for certainly modern France did not exist until the German house of Laôn had been superseded by the French house of Paris.

We find a clumsily worded sentence on p. 131 which we feel sure would mislead any person who did not already know the fact which is intended to be stated: "Scandinavia, the general name of the great peninsula of north-eastern Europe, and of the islands and small peninsula at its south, which now make up the kingdoms of Norway, Denmark, and Sweden." Surely any reader would understand the relative *which* to refer merely to "the islands and small peninsula."

In regard to the question discussed in the long note on p. 217, whether William the Conqueror introduced the feudal system into England, as is usually held, or Henry II., as maintained by Sir Francis Palgrave and Mr. Freeman, Sir Edward Creasy's arguments show that it is, at any rate, in considerable degree, a question of definition. William abolished allodial property, and made all land to be held of himself in fee. This was certainly one essential element of the feudal system. But sub-infeudation is an equally essential one (according to Hallam—"Middle Ages," ch. ii., note xi.—*the* essential one); and our author does not say that this too existed under William. Indeed, the very act by which the Conqueror reduced all the land in England into fiefs appears to have made sub-infeudation impossible; for he "compelled every landed proprietor in England to acknowledge him as the lord of whom the land was held, and to do fealty to him, not merely as subject pledging loyalty to sovereign, but as landholder to superior and ultimate master of the land." It would follow from this that every landholder held directly of the King—in other words, was a tenant-in-chief; a state of things inconsistent with sub-infeudation, and therefore with the fully developed feudal system. It is certainly true, however, that William took the last step introductory to the establishment of the feudal system.

It is a pity that the volume contains no chronological tables and lists of contemporary sovereigns and events. Brief tables of this nature are always serviceable, and in case the book is republished by any American house we hope they will be added.

THE MAGAZINES FOR JULY.

THE most striking article in this month's number of *Putnam's* is an anonymous attack on the Roman Catholic Church as it is among the politicians of this State. Its purpose is to point out to the reader the danger there is that before this generation has passed away the Roman Catholic will be the Established Church of the State of New York; nay, that already it may be said to be Established, and that soon it will wield an absolute power. The essay is too ironical; perhaps it would be so, being ironical at all. To serve efficiently any cause which depends for success on the support of a majority of the legal voters, on its getting for adherents twenty-six electors out of every "forty-nine fools and one wise man" in all the precincts, the popular orators and advocates cannot be too careful to shun the fine-drawn and the subtle and trust to plain and direct statements and hard hammering of argument. The clever writer in *Putnam's* certainly succeeds, however, in making an impressive case. One point that he brings out we are apt to overlook. When told that we here in New York are under Roman Catholic rule, we usually point to the Seventeenth, Sixth, and similar wards, and explain everything by saying that our Democratic politicians pander to the immense Irish Catholic majority in this city. That answer would account for our decking the City Hall with the Harp of Erin on St. Patrick's Day, and for the fact that our city Congressmen—even of "advanced views"—are pew-holders in some Catholic church or churches; and for the appearance of Mayor Oakey Hall in a suit of grass-green on Irish festive days; and for all the things which mark the victory of the true faith in this metropolis over the sects. But for the victories which it is constantly obtaining at Albany, the carelessness of some and the corruptness of others of the rural legislators must be held responsible. There is an anti-Catholic majority in the State at large. Why, for instance, unless apathy on the one side and astuteness on the other is the cause, should it have been allowed that a majority of the last Senate Committee on Charitable and Religious Societies should be Roman Catholics? Among their other labors, one was the drafting of a bill of which this, in substance, is the first section: When in any town or city there shall be established any free school, of not less than two hundred pupils, the town or city must pay the school's expenses. In other words, the State's well-considered intention that the schools for which it pays shall be non-religious, or at all events non-sectarian, is to be skilfully set aside, and the taxpayers are to support schools in which the children are made Roman Catholics. We suppose that the average citizen, fully persuaded as he is that on the whole good Roman Catholics make bad Republicans, or that, at any rate, good Roman Catholicism makes bad republics, only needs to understand the scheme which the clergy of that sect are now carrying out, in order to resist it by all reasonable means rather than put his hand in his pocket to further it. At all events, no harm can be done by his understanding the matter thoroughly, and we hope the country press may take it up and ventilate it. Here, by the way, is a glimpse of the constitution of our city and county government. The foreign friends of effete monarchies, who are so apt to "know the man is American from his name—O'Flaherty," will be pleased with this summary: At the end of 1868, our Sheriff was an Irish Catholic; so was our Register; so were our Comptroller, our City Chamberlain, our Corporation Counsel, our President of the Croton Board, our Acting-Mayor and President of the Board of Aldermen, our President of the Common Council, our Clerk of the Board of Councilmen, our President of the Board of Supervisors, four of the Justices of our Courts of Record, all our Civil Justices, all but two of our Police Justices, all our Police Court Clerks, three out of four of our Coroners, three out of five State Senators, eighteen out of twenty-one Members of Assembly, fourteen-nineteenths of the Common Council, and four-fifths of the Board of Supervisors.

The opening article in this number of the magazine, "That Night at Fort Wagner," is noticeably good, and gives a picture vivid in details, though not specially clear as a whole, of one of the cruellest engagements of the whole war. The writer produces some evidence, not before printed we think, concerning the death and burial—to call it so—of Colonel Shaw and of Cabot J. Russell and Captain Simpkins. Another article of some interest is M. Charles Hugo's account of the manner in which his father abashed and put to shame the constables of St. Heliers when those officials, in servile obedience to the "Anglo-French" government of my Lord Palmerston—with "Monsieur Bonaparte" behind it—informed Citizen Hugo, Citizen Cahaigne, and twenty-odd others of The Exiled, that they must depart from within the jurisdiction of the Lieutenant-Governor of the Isle of Jersey on or before such-and-such a day. The account is offered as a contribution to history; and while we would not say that it is as unfounded on fact as some other contributions to history which have been

made by the Hugo family, we may remark, in the way of Saxon criticism on a Frenchman, that it has a little bit of that dramatic manner in which, as the theatre may teach us, history ought to get itself enacted. Let us, by the way, remark in regard to this article, as we have remarked in regard to others in *Putnam's*, that it has some annotation which it was not necessary to make, and which, in any case, is not done in such a way as to do the magazine any credit.

Of Caroline Cheesebro's "Lavinia" and Miss L. M. Alcott's "Scarlet Stockings" it is hardly worth while to say anything; or, perhaps, we ought not to say that. We may better say that it would not be worth while to speak of those stories, if it were not that in the world of magazines—and especially in the world of American magazines—a writer of repute is subject to a temptation to sell his name to publishers. But with the name he is obliged to sell something in the shape of a story or essay or poem, and whether what he sells is good or bad the publishers care very little, or not in the least. It happens, then, unless the writer has rare self-control and decided critical ability, that after he has once made a success, we who are readers get from him poor reading; he is encouraged to print all the poor writing he may have done, and to do more of it; literature suffers, and nobody gains anything but the publisher. It may, to be sure, be nobody's fault but their own that the two clever writers whom we have just mentioned have come before the public with work so much inferior to other work which they have done. Probably enough, they are not very good judges of the relative value of their own things. But, we fancy, there is not much room for doubt that eager purchasers of literary wares have offered them mercantile inducements to part with goods which their own artistic sense might have admonished them to keep unsold. Supposing it to be the case that the author of "Little Women" and the author of "The Foe in the Household" esteemed "The Scarlet Stockings" and "Lavinia" as really worthy of their powers, or of anybody's attention, then of course they are to be absolved from all suspicion of blame; but the duty of telling them that they are mistaken—that they have done so much better than in these last pieces that they ought to refuse to print any pieces like these last—is not therefore removed from the shoulders of the reader who criticises.

The July *Galaxy* has for its most valuable article a paper, by Mr. R. Pumpelly, entitled "Our Impending Chinese Problem." The problem, according to Mr. Pumpelly, is something like this: We shall certainly receive into our Pacific coast territory during the next ten years a very great number of Chinamen; it is possible, and not highly improbable, that before 1880 we may have several millions of Mongolian fellow-citizens, or, rather, fellow-inhabitants of the United States. What shall we do with them? Shall we let them come? Shall we let them vote when they do come? If we do make citizens of them, what will be the effect upon our political and social life? Mr. Pumpelly's opinions on these questions are those of a man who knows the country from which the Chinese come—for he has lived in China for years—and who also knows the country towards which the stream of Chinese emigration is directed; for he has been a manager of mines in our El Dorado. The California Irishman's estimate of the Chinese, as being yellow negroes, who are maliciously fond of low wages and all manner of vice, is considerably further from Mr. Pumpelly's than the estimate which Voltaire and his friends used to set forth, and which used to give us "the Chineses" as mild-eyed philosophers, who got along in the most pastoral and polished manner without any other religious observances than adorning the graves of their ancestors, and repeating on all occasions the wise words of the sage Con-fut-zee. In fact, Mr. Pumpelly is inclined to doubt if we should be any the worse off for a very large infusion of the Chinese element into our body politic and social. "The spirit of the Chinese," he says, "as shown in their enterprise and energy as colonizers, in their commercial character and faculty of organization, in their democratic idea of the political equality of man, in the practical decentralization of their government" (and this is a point worth the attention of those lovers of freedom who think of the Chinaman as a worshipper of the Brother of the Sun and Moon), "in the universality of education, and the making of education a necessary qualification for office, is a spirit in harmony with the spirit of the age." It is to be hoped that Mr. Pumpelly's views may meet with due consideration west of the Rocky Mountains. Meantime, we fear that we need not fear lest the Chinamen should not be put to the proof as to their ability to live alongside of the Americans. We hear already of a secret society in California, which proposes to itself the banishment, by means of incendiarism and murder if necessary, of our whole Chinese population. We ardently hope to hear—so valuable has Chinese labor become, and so wide is the field, extending from Boston laundries to Texas plantations, in which it may profitably be employed—that "Vigilantes" may be enrolled who shall introduce our murderous fosterers of the white man to the criminal courts.

"A Light Man," by Mr. Henry James, jr., is a piece which is ill-named, with a borrowed name, not made for it; but it is a good study of the worst side of an interesting character. We should say that Mr. James did well to relent a little at the end; ambition, of whatever kind, should be made of sterner stuff than any that is to be found in the composition of such people as Max, who is not, and cannot be, so much a self-seeker as a student of himself.

"Put Yourself in his Place" perhaps has more "sensation" in it this month than anything else, but it is nevertheless likable as well as very readable. If Mr. Reade is not burdening himself rather too heavily with Jael Dence—rather too heavily for his heroine's good—he has more resources at his command than we had been giving him credit for. For the rest, the *Galaxy* has nothing very noticeable. Mrs. Edwards's "Susan Fielding" goes on towards completion, and is worse than her other stories if it is not quite well worth reading by all habitual novel-readers. Mrs. S. M. B. Piatt, in "A Woman's Last Gift," shows rather a woman's capacity for abnegation of self than a capacity for poetry; her thought is woman's prose to be sure; but still it is prose merely, and putting it into verse does not make poetry of it. "The Practical View of Spiders' Diet" is by Doctor B. G. Wilder, who contends that the labors of the silk-worm very probably may be supplemented by that of the *nephila plumipes*. It is usually safe to sneer for some years at the efforts of inventors; so we feel at liberty to say that we have never been averse to Doctor Wilder's giving himself innocent amusement with his spiders from Folly Island. We may say, also, in the interest of seriousness, and civility, and strict truth, that the record of his experiments is pleasant reading as an exhibition of perseverance and ingenuity. Mr. J. M. Bundy's "Last Chapter in the History of the War" tells of a visit made, four years ago last April, by him and another officer of General Pope's staff, to General Kirby Smith's headquarters, in Texas. It has some historical value, for hitherto nobody has had much to say about Kirby Smith's satrapy west of the Mississippi, and it is decidedly interesting.

Lippincott's opens with Mr. Anthony Trollope's "Vicar of Bullhampton." The squire, and the rector, and the courted young woman, who regularly worry each other in this author's stories, are visible at full length in these first chapters, and the new novel bids fair to be as interesting as any of the stories in which Mr. Trollope photographs the outside, and the outside part of the inside, of English life.

"The Annexation of Nova Scotia" is an article by "A Nova Scotian," who apparently resides, at the time of writing, on the other side of the boundary line. If we are not mistaken—and we are only partially familiar with the drift of public opinion in the Province of Nova Scotia—he speaks the secret mind of a good majority of his fellow-citizens. Our observation has led us to believe that, irrespective of the irritation caused by the enforced union of the maritime colonies with Canada—and even the English Colonial Office never did a much stupider thing than when it tied together the bundle of crooked sticks which compose the Dominion—irrespective of the anger which the compulsory and tyrannical merging of all the Provinces in Canada has occasioned in Nova Scotia and New Brunswick, the people of these colonies have long been well enough convinced that their interests all urge them to take a place in the Union. An influential minority, composed of the classes that make most noise in the papers—a minority consisting of the native and foreign office-holders, the clergy of the Church of England, a certain proportion of the men of other professions, some of the merchants, and more of the merchants' wives and daughters—will oppose, and may very probably long delay, the admission of Nova Scotia and New Brunswick as American States. But that a working majority of the people are willing to come we entertain little doubt. Indeed, we are not altogether sure that a majority of the fighting men of Nova Scotia and New Brunswick are not to-day earning wages on this side of the line; it might be doubted if we have not already annexed the best part of the Provinces; and certainly there seems to be no doubt that it is the Provinces and not the States that lose by the arbitrary division of the English-speaking race on this continent.

"Thorwald's Lament;" by the late Hon. Edward Everett, is curious as resuscitating, "with all his armor on," a man of letters who had gone irrevocably, as one might have said, to the tomb. It takes us back to eighteen hundred and twenty-odd—to forgotten days, and other things, and such men as are not now—to read verses like this one:

"Brothers, the fatal dart,
With aim too just, has flown:
It sinks in Thorwald's heart—
My course is done."

So discourses Thorwald the Viking, for many stanzas, lamenting his death by the "dart" which some Indian "sank" through him near Point Alderton, in Massachusetts Bay, a thousand years ago. At the end of his monody he comforts himself with a facility that all writers of poetry for magazines will appreciate, and will envy a little, perhaps, by seeing in a vision one of his name who distinguishes himself by giving "immortal fame to lifeless clay." This is Thorwaldsen, of course, the Danish sculptor. There is nothing else, we believe, in the July *Lippincott's* that calls for particular remark. "Our Relations with England" takes the ground that ninety-nine out of a hundred of the recent articles called out by Mr. Sumner's speech have taken; "The Philosophy of Absurdity" has nothing to say about the philosophy of absurdity, though it gives a good number of old and new absurd sayings and doings; "The Devil's Cave" tells a story which may or may not be true about the great lake which drains the city of Mexico. It would be easier to believe, perhaps, if the writer's name were given.

The *Atlantic* has nothing in it which is particularly good, and nothing that is particularly bad; probably there has never been a more level number. Mr. Keeler's "Three Years as a Negro Minstrel" one might perhaps call particularly good; the description of the destruction of the wharf-boat at Cairo is decidedly impressive. A negro ruffian who had made it his habitation had long been obnoxious to the citizens, and had constantly eluded, by means of secret passages from one part of the vessel to another, their best attempts to secure him. They resolved, therefore, to set the boat afire, cut it adrift, and kill the negro when he took to the water. Such was then Astræa's reign in the Valley of the Mississip', as its friends with affectionate familiarity used to call it. Any of the sensational novel-writers might have been very glad to hit on this scene—and not unlikely more than one of them may use it yet:

"When the wharf-boat was well into the stream, the negro appeared boldly at the place which, in the middle of all river craft of that kind, is left open for the reception and discharge of freight. And now a scene occurred so sensationally dramatic, so easily adaptable to the stage of these latter days, that I would not dare to relate it for truth if I had not witnessed it with my own eyes. The negro was not discovered till he had rolled a large keg of powder into the middle of the open space just mentioned. As he stood in the light of his burning craft, it could be seen by the people in the small boats in the river that he had a cocked musket with the muzzle plunged into the keg of powder. Then the negro dared them to come on and take him, pouring upon them at the same time such horrible oaths and curses as have rarely come from the lips of man. The small boats kept at a proper distance now, their occupants caring only to prevent his escape into the water. As the flames grew thicker around him, there the negro stood, floating down into the darkness that enveloped the majestic river, with his cocked musket still in the keg of powder, and cursing and defying his executioners. He was game to the last. We heard the explosion down the stream, and saw the wharf-boat sink. The next day I spoke with the leader of the band in the small boats—a short, wiry little man, with a piercing eye. He said that he had not the heart to shoot the 'nigger,' because he showed such pluck. He even confessed that, for the same reason, he felt almost sorry for the victim, after the explosion had blown him into eternity."

"Our Inebriates, Harbored and Helped," comes from Binghamton, and is a not very pleasant thing to read. Mr. Parton's visit to the asylum in that town has brought on the magazine reader a flood of articles which ought to do something, we should suppose, to "promote the cause" of delirium tremens. In all of them the drunkard appears as so fine a person and lives in such clover that it seems almost a pity to ask him to get cured as soon as he can and meantime hold his tongue; but we believe we are disposed to make one at any rate if not both of these requests to him. It may very well be doubted if a man is in a fair way of attaining control over himself when he can recount with minuteness and fluency the circumstances of his full and partial recovery from a degrading bondage. At all events, for this and other reasons, it is painful to see him in the act of doing it. Mr. Henry James, jr., begins in this number of the *Atlantic* a careful love-story, distinguished by what seems like a skilful and successful management of local color; Mr. G. S. Hillard—whose competency to estimate with accuracy the rank of a sculptor need not be at once conceded—writes a eulogy of Crawford; "The Restored Picture" is an excellent piece of magazine poetry; Mr. Higginson is clever and fanciful in his "Greek Goddesses;" and "Birch Browsings," by Mr. Burroughs, ought to send many men—and women, too, for that matter—into the Adirondacks and our other camping-out regions.

Hours at Home contains a paper by Mr. C. Lemprière, containing reminiscences of great English lawyers of late days. It is not particularly well done; far better stories are told of Mr. Justice Maule, for instance, than any that Mr. Lemprière sets down. However, it is under the great law of compensation, we suppose, that it always happens to gentlemen who delight to make jokes on other people, that they shall at the last appear, in the mouths of their friends even, as persons with more than the ordinary capacity for fatuity; they have their good things in their lifetime, but the most lachrymose of us has the advantage of them when they become subjects of historical reminiscence. Prof. A. J. Curtis's "Romances of Arthur" is continued from the last June *Hours at Home*, and will repay perusal; so, too, will "A Day on the Other Side of Jordan," unless one has had a surfeit of Palestine; and so will not—we being judge—the "Sunny Bank Papers."

Force and Nature. Attraction and Repulsion: The Radical Principles of Energy, discussed in their Relations to Physical and Morphological Developments. By Charles Frederick Winslow, M.D. (Philadelphia: J. B. Lippincott & Co. 1869.)—This work is an attempt to show that there are two forces at work in nature, attraction and repulsion, and that such undue prominence has been given to the former that our attention has been diverted from facts proving the existence of the latter. According to our author, Newton's view of nature, as expressed in the law of gravitation, was one-sided. "The fact that the force of gravitation may be proved by the calculus to act with certain fixed laws, does not by any means disprove the existence, nor even imply the non-existence, of another force. It is the existence and phenomenal capacity and power of *this other force* which I propose to discuss in the following pages, tracing it into its broadest expansions, applications, and connections with other forces and all forms of matter."

The introductory chapter, from which we have thus quoted, seems to declare that the immaterial world also is to be included in the new philosophy; but inasmuch as the only allusion to this metaphysical application of the theory is contained in a few sentences which we confess we find obscure, and as the fuller treatment of it is reserved for the thirteenth chapter, which is not yet published, we say no more about it here.

In the chapter on space, the theory that space is filled with an attenuated ether is pronounced a gross error. The existence of such a medium is declared unnecessary either to account for the retardation of Encke's comet or to explain the propagation of light and heat. Both of these phenomena are due to the force of repulsion. The commonly received idea that light and heat are radiated *in all directions* from the luminous body is rejected—light and heat being the results of forces acting only between matter and matter. As the presence of matter is necessary as an object for the action of gravity, so there can be no emission of light or heat in space where there is no matter to be heated or lighted. This novel theory conflicts with the belief in the "immense waste of solar light and heat into space" of which Sir John Herschel speaks, since, according to the new theory, the sun's beams are solely directed to the members of our solar system and other celestial bodies.

The work covers a wide field, and presents in a new light a large collection of phenomena in the various branches of molecular physics. Science must gain something from every new theory upon such subjects as heat, light, electricity, cohesion, volcanoes, earthquakes, tides, aurora borealis, magnetic storms, spectral analysis, solar spots, meteors, zodiacal light, and so on. These subjects are ably discussed, and the reader, if not converted to the views of the author, must receive many new and valuable suggestions. We notice the curious fact that earthquakes are more frequent when the earth is near its perihelion than when near its aphelion.

The part of the book most open to animadversion is the chapter on cosmical repulsion. Newton's principle of the inertia of matter is declared erroneous:

"Such a principle or entity we may now safely affirm (and most philosophers will sustain the view) has no existence in nature. It is purely an abstract assumption, entirely imaginative and theoretical, without essence or existence in fact—although, without such an hypothesis, dynamical enquiries would be almost impossible. The term must be regarded as a relic of a period of philosophical speculation when the subtle spirit of enquiry *assumed* in discussions errors for facts, while scholars were positively ignorant of the true nature and relations of matter and force."

Again, the author says:

"In the present state of physical knowledge, matter cannot be demonstrated nor imagined to exist independent of immanent, active force. A molecule has power within itself and of itself to move, and to move other molecules near enough to it to receive the influence of its own living force; else matter of itself has absolutely no existence, and force alone exists."

By rejecting the doctrine of inertia, the author makes room for the

introduction of his theory of the simultaneous action of two forces in the motions of the planets. What is known as centrifugal force—which is only one form of the force of inertia—is superseded by the omnipresent force of repulsion. Thus, if a planet revolves about the sun in a circular orbit, a force of attraction tends to draw it towards the sun, and an equal force of repulsion tends to urge it from the sun. So, when a weight attached to a cord is swung around the hand, the resistance felt, which produces the tension of the cord, is, by this new system of mechanics, an active force of repulsion between the weight and the hand. Whatever reason there may be for believing in the existence of intermolecular repulsion in physics, we had supposed that the perfect agreement of the theoretical results of the law of universal gravitation with observed facts implied the non-existence of any other interplanetary force; and the author, evidently feeling the difficulty of introducing another force in celestial mechanics where none was needed to account for the observed motions, seizes upon Newton's centrifugal force, and, declaring false his doctrine of inertia, which lies at the foundation of centrifugal force, replaces it by an equal force called cosmical repulsion. The old faith of Newton and Laplace will not lose many of its adherents, we should say, by the presentation of such a forced theory as this.

Our New West. By Samuel Bowles. (Hartford Publishing Company. 1869.)—Mr. Bowles's book is mainly made up of his two previous publications—"Across the Continent" and "A Summer Vacation in the Parks and Mountains of Colorado." Both these works have already been noticed favorably in our columns, and we may add that in this republication they are improved by rearrangement, correction, and amplification. Besides telling us of Colorado and Utah and Montana, Mr. Bowles gives us pleasant and instructive glimpses of California, Nevada, Idaho, Wyoming, Oregon, and British Columbia.

We observe that the Springfield *Republican* represents us as having said, in a review of Mr. Bowles's "Summer Vacation," that "he ought to have known that Long's Peak was 14,506 feet." But what we said was more mild; precisely, it was that "information could readily have been obtained" as to the height of certain mountain peaks, etc. Mr. Bowles had referred to the height of Pike's, Long's, and other peaks as being but very vaguely known. But we had seen the height of these same peaks specifically stated by experienced travellers and by scientific men of reputation—by Colonel Meline, for instance, in his "Three Thousand Miles on Horseback," and by Doctor C. C. Parry—and therefore, we said that Mr. Bowles on this subject "might have furnished more accurate information." Here, for instance, is some of the information that was readily accessible: In the "Transactions (1865) of the Academy of Science of St. Louis" there is published a detailed and interesting account of the ascent of Long's Peak made by Dr. Parry in the summer of 1864. Dr. Parry says (Transactions, pp. 281, 282): "On one of the highest points of this ridge (Velie's Peak) the barometer was set up, and a series of observations taken, giving an elevation of 13,456 feet above the sea. The estimated height of Long's Peak above this observed station was about 600 feet, which would give to this culminating point an elevation of 14,056 feet." Now there is good reason to repose confidence in the accuracy of Dr. Parry's statements, and this confidence is not lessened by the fact that, although Dr. Parry's authority is disposed of rather slightingly by the *Republican*, Mr. Bowles in his last work—"The Far West" (1869)—says of him that he "has been, so far, *the most thorough scientific explorer* of the higher mountain regions of Colorado." Such a surveyor's figures, even when they do not profess to be exact, are better than guesswork. But, after all, this question of mountain heights is almost as delicate a one as the age of a fine lady is, or used to be. Barometrical observations are necessarily attended with difficulties and uncertainties. Estimates vary; and when we speak from the most reliable authorities of our day—or, in other words, the best knowledge attainable—we surely may do so without undue presumption. With the authorities before us for stating 14,056 feet, which we wrote, we regret that a transposition of type made us say 14,506 feet.

Ellen: a Poem. By George H. Calvert. (New York: Sheldon & Co. 1869.)—This poem was published anonymously two years ago, and now reappears under its author's name. It is a work which Mr. Calvert need not be ashamed to own, full as it is of mechanical faults and others worse than merely mechanical; for it shows not only force and delicacy of feeling, but, as we think we said at the time of first reading it, it shows a depth of spiritual insight which is far from common, and the chief situation seems to be well invented and is certainly striking. Its essential truth commends it to the reader's regard, and whether the scheme of the poem is "founded on fact." or to be credited to Mr. Calvert's imaginative power, is not really of importance. The story is of a girl rescued from a life of shame by a young man who has been beguiled by a trifler of a friend into visiting the place where the girl lives—a place with a fair outside, but full of all evil; a house which—the reader must study the parsing of this stanza—is like

> "A sunny brook, on whose clean floor the stones
> Sparkle unstained that suddenly befoul,
> Deep at its fountain-head, putrescent bones,
> Thrust there by murder done beneath night's cowl
> On trustful travellers, whose unpitied moans,
> Heard but in heaven, were married to the howl
> Of wolves,—the brooklet's laughing life bedimmed,
> Its glad, pellucid pools with poison brimmed;"

or it is like a sod covered with flowers blackening and withering as we look; or like

> "What image else can hang within your eyes
> Nature disrupted, thwarted, maimed, and bleak—
> Ocean senseless to wind, a Paradise
> Ravished of blossoms?—such will faintly speak
> What were these youthful women who in guise
> Of modest maidenhood, so flattering meek,
> Welcomed Horatio, whose unhardened skin
> Flushed ruby at the sudden thought within."

These stanzas, which we quote as fairly illustrative, read like the work of a young man rather than an old one; and even of a young man enamored of Keats's early manner, and less careful of finish than of ornament; but they are a long way ahead of most of the minor poetry of the day, and a certain genuine poetic pleasure can be got from the poem in spite of its deforming grammatical intricacies and its more or less mystical, vague theorizing, and other defects.

Captain James Box's Adventures and Explorations in New and Old Mexico: being the Record of Ten Years of Travel and Research. By Captain Michael James Box, of the Texan Rangers. (New York: James Miller. 1869.)—Why, when, and how Captain Box was in Mexico is not stated in this work, which can only be serviceable or interesting as a guide-book or itinerary for the trader in Durango or Chihuahua. Of adventures there are none more exciting than the Captain's progress from *hacienda* to *hacienda*, or from one mine to another. At page 216, indeed, our hopes were somewhat excited by his accounts of an offer made to his "company" by the Governor of Durango, of ——— thousand dollars for twenty days' service of "the party" to fight the Indians. Who, what, and how many were this company or party, we are not told. They accept the Governor's offer, and on the next page we see the gallant troop, well mounted, starting out after the Indians; but we are coolly informed that, "as in mentioning our Indian adventure I had no design of inflicting my personal experiences upon the reader, further than to show where it led me into the country, I shall again change my course and describe," etc. Here, however, is a piece of information that may interest some of our readers: "The owners of Santa Guia are four maiden ladies, who have expressed a determination to have none but American husbands. They each have a portion of five hundred thousand dollars in cash, deposited in the treasury at the capital of the state. The ladies are not bad looking, and appear to be in good marriageable condition" (pp. 221–2). The captain cannot be too severely blamed for giving us no indications whatever as to whether he discovered this state of things two years ago or twenty. In fact, for various reasons, there is some inconvenience in a book of travel that is totally destitute of dates. Of New Mexico proper, there is nothing in the book but the announcement on the title-page.

114 Main Street, Cincinnati, O.

The Occupations of a Retired Life.

By EDWARD GARRETT. Crown 8vo, cloth, price $1 75.

The great success which this most popular story has met with in its cheaper form has influenced the publishers in preparing a new edition. It has been printed on a very fine-toned paper, and bound in extra cloth, uniform with GEORGE MACDONALD'S celebrated novels (new editions of which are also now ready), viz.:

The Annals of a Quiet Neighborhood.

$1 75.

The Seaboard Parish.

$1 75.

*** The above works will be sent by mail, post-paid, to any address in the United States on receipt of price by the publishers.

GEORGE ROUTLEDGE & SONS,

416 Broome Street, New York.
